Punta Oeste. 62°27' S, 60°47' W. A point NNE of the beach the Chileans call Playa Nibaldo, on the N coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno, during ChilAE 1991–92, because it is oriented toward the west.

Offe Peak. 66°29' S, 52°53' E. About 18 km S of Mount Codrington, in Enderby Land. Named by ANCA for Lyall A. Offe, geologist with the ANARE Enderby Land Survey Party in 1976.

The Office Girls. 72°20' S, 160°01' E. Also called Bray Nunatak. 2 prominent nunataks along an ice cliff, 11 km SW of Welcome Mountain, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for the women office workers in the USA who provided support for USARP.

Offin, James. b. 1880, Northfleet, near Gravesend, Kent. His origin is somewhat complicated in that his mother, whose name was Sarah Ann Offin, became pregnant by an unknown man (at least, unknown to history), and just as the baby (James) was born, she married (on June 1, 1880) another man, cement miller James John Cameron, and they moved to 20 The Shore (in Northfleet), registering the child as both James Offin Offin (sic) and James Offin Cameron. Mr. Cameron raised James as his own son, and then had four more children by Sarah. During the 1880s they moved to 58 Gordon Road, Rosherville (part of Northfleet). As a teenager, James joined the Merchant Navy, as a trimmer in the engine room of the *Omrah*, an Orient Line ship out of Glasgow, for her London to Sydney run, and he also reverted to his original

name of James Offin. In between runs on ships such as the *Omrah* and the *Orizaba*, he became an able seaman, and over the next several years was a regular AB on that Antipodean run on ships such as the *Ortona*, the *Oruba*, the *Oroya*, and the *Orama*. Along the way, in Kent, he married Amy Hilda Carter, and they had a couple of children. On Nov. 5, 1913, he signed on to the *Aurora* as an able seaman, at £5 per month, for the 3rd and last trip south during AAE 1911-14. He left the expedition on March 19, 1914, with a £5 bonus, which was just as well, as his marriage to Amy was coming to an end. She would marry again, to Henry John Greener, in 1919, and die in Kensington in 1932. James continued sailing to Australia. What happened to him after this is not known, but is possible, just possible, that this is the James O. Cameron who died in Nottingham in 1962, aged 82.

Offset Ridge. 71°41' S, 68°32' W. A ridge, extending W from Triton Point to Gateway Pass, at an elevation of about 800 m, on the N side of Neptune Glacier, between that glacier and Venus Glacier, in the E part of Alexander Island. It is effectively formed of 2 ridges offset from one other by a kink in the middle. Surveyed by BAS between 1961 and 1973. Mapped by the (British) Directorate of Overseas Surveys, and named by UK-APC on Dec. 20, 1974. US-ACAN accepted the name in 1975, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Ogara, Alicio Eduardo. Captain of the *King* during ArgAE 1947. He was a naval attaché, a great friend of Perón's. He was leader of ArgAE 1953-54, and ArgAE 1954-55.

Nunataki Ogarëva. 70°21' S, 63°48' E. A group of nunataks, due W of Mount Turnbull, in the Prince Charles Mountains. Named by the Russians.

Ogden Heights. 73°58' S, 161°40' E. Flattish, mainly ice-covered heights, 11 km long, they form part of the S wall of the upper Priestley Glacier, to the SE of Tantalus Peak, between that peak and Foolsmate Glacier, in Victoria Land. Named by the Southern Party of NZGSAE 1962-63, for Lt. John H. Ogden, USN, pilot who airlifted the party to a point near these heights, flew in their re-supply, and later flew the party out again. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

Ogi Beach. 69°08' S, 39°26' E. At the head of the cove in the S part of Rumpa Island, in the E part of Lützow-Holm Bay. Mapped by Japanese cartographers from JARE ground surveys and air photos, and named by them as Ogi-hama, or Oogi-hama (i.e., "fan beach") on Nov. 22, 1973. US-ACAN accepted the name Ogi Beach in 1975.

Ogi-ga-hara. 71°41' S, 35°44' E. A vast moraine field extending northwestward from Mount Gaston de Gerlache, in the S part of the Queen Fabiola Mountains. Surveyed by JARE in 1960, and named by the Japanese on March 22, 1979, for its shape (name means "fan field").

Ogi-hama *see* **Ogi Beach**

Ogi-hyoga. 71°38' S, 35°36' E. A glacier flowing southwestward betweem Mount Derom and the moraine field the Japanese call Ogi-ga-hara, in the S part of the Queen Fabiola Mountains. Surveyed by JARE in 1969, and named by the Japanese on March 22, 1979 (name means "fan glacier"), in association with Ogi-ga-hara.

Ogi-no-mon. 71°38' S, 35°32' E. An interrupted place of a moraine ridge extending from the moraine field the Japanese call Ogi-ga-hara. Surveyed by JARE in 1969, and named by the Japanese on March 22, 1979 (name means "gate of fan"), in association with Ogi-ga-hara.

Ogives. Bands, or "waves" across the surface of a valley glacier, arched in the direction of the flow.

Ogle, Alexander. Marine corporal on USEE 1838-42. He joined the expedition in the USA, and on Aug. 12, 1839 he died at sea (not in Antarctic waters) of an inflammation of the brain. Buried at sea, with honors.

Ogled Peak. 63°30' S, 58°18' W. An ice-covered peak rising to over 700 m in the N foothills of the Louis Philippe Plateau, 3.66 km NW of Tintyava Peak, 12.11 km N of Hochstetter Peak, and 10.76 km NE of Lardigo Peak, it overlooks Bransfield Strait to the N, on Trinity Peninsua. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Ogled, in southern Bulgaria.

Ogley, Reuben Neville. Known as Neville. b. Nov. 8, 1931, Westwoodside, Lincs (near Doncaster, Yorks), son of carpenter turned civil engineer Reuben George Ogley and his wife Ethel Hircock. His apprenticeship as a motor mechanic was interrupted by two years national service in the REME, and then he was back to complete his apprenticeship. He saw an ad for FIDS, in the *Daily Telegraph*, applied, went to London for the interview (by Johnny Green), was accepted, as a diesel electric mechanic, and on Oct. 4, 1954 left Southampton on the *John Biscoe*, bound for Montevideo. Then on to Port Stanley, and, still on the *John Biscoe*, to Base G, where he spent the summer, before the *John Biscoe* came back to pick him up and take him on to Base F, where he wintered-over in 1955. In 1956 he went all the way home on the *John Biscoe*, via South Georgia (where the ship was delivering mutton picked up at Port Stanley; the ship ran into a severe tempest off South Georgia). In 1956, back in the UK, he joined the Post and Telegraph Department of the Colonial Service, and in 1958 went to Lagos, and from there drove to his new post in Northern Nigeria, where he stayed until 1962. Unsettled back in the UK, he joined a construction company and went out to the Sudan. He finally retired in the UK.

O'Gorman, Fergus Anthony. Occasionally in Antarctica they called him "Fog." b. Nov. 26, 1934, Dublin, son of Martin O'Gorman and Kathleen Swan. He joined FIDS in 1957, as a zoologist, and left Southampton on the *Shackleton* on Oct. 1, 1957, bound for Montevideo. Although he was in Antarctica in 1957-58, he did not winter over in 1958. However, he did winter-over at Signy Island Station in 1959. In 1962, in London, he married Sheila M. Scott. His second wife (1976) was Frances Hardiman. He was later professor of zoology at University College of Dublin, and wrote *The Irish Wildlife Book*.

O'Gorman, Hugh Magee. b. Sept. 11, 1923, co. Donegal. Radio officer in the Royal Navy from 1943, serving on oil tankers during World War II. He joined BAS in 1962, and wintered-over as radioman at Halley Bay Station in 1963, and at Base F in 1964. He worked on research ships until he retired in 1984. He died in Oct. 1990, in Taunton, Somerset.

O'Gorman Rocks. 68°34' S, 77°57' E. Two small rocks in water off the Vestfold Hills, 0.8 km S of Trigwell Island, and about 1 km from Davis Station, between that station and Anchorage Island. Plotted by Australian cartographers from ANARE air photos taken in 1957 and 1958. Named by ANCA on July 4, 1961, for Michael "Mike" O'Gorman, weather observer who wintered-over at Davis Station in 1959. US-ACAN accepted the name in 1965.

Ogosta Point *see* **Piedras Point**

Ogoya Glacier. 63°27' S, 58°01' W. A glacier, 8 km long and 3 km wide, NE of the hill the Chileans call Cerro Morro del Paso, N of Misty Peak, and NW of Dabnik Peak, it flows northward to enter Bransfield Strait E of Cockerell Peninsula, on Trinity Peninsula. Mapped by the British and Germans in 1968. Named by the Bulgarians on June 3, 2010, for the settlement of Ogoya, in western Bulgaria.

Ograzhden Cove. 62°35' S, 61°11' W. A cove, 650 m wide, it indents the NW coast of Ray Promontory for 600 m, between Essex Point and Perelik Point, on Byers Peninsula, Livingston Island, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for Ograzhden Mountain, in southwestern Bulgaria.

OGS-Explora Mounds. 75°54' S, 165°58' E. An area, 40 by 30 km, and with a depth of between 400 and 900 m, characterized by an unusual concentration of submarine mounds between 700 and 2500 m in diameter, and between 50 and 100 m in height, in the W part of the Ross Sea. Discovered in 2005-06 during the geophysical expedition aboard the OSG-*Explora* (hence the name). 15 of these mounds, as well as two mud volcanoes (*see* **Vulcano di Fango Iulia** and **Vulcano di Fango Tergeste**) were discovered. Named by the Italians on Dec. 6, 2007.

O'Hara Glacier. 70°49' S, 166°40' E. Just W of Ackroyd Point, it flows NW into the S side of Yule Bay, Victoria land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Norbert Wilhelm O'Hara (b. 1930), geologist on the Ross Ice Shelf in 1965-66.

O'Hare, John Lawrence. b. Jan. 10, 1912, perhaps in Ireland, although he didn't have an Irish accent. His origins thus remain somewhat obscure. He had been an RAF officer during World War II, and, in 1947, he joined FIDS as a radio operator, leaving Tilbury on the *John Biscoe* on Dec. 19, 1947, bound for Port Stanley, and wintering-over at Base D in 1948. He was out sledging and got back to find the hut burned down

and two dead bodies. One hears that when he got back to Britain his wife divorced him, and he duly became an alcoholic. He returned to Antarctica with FIDS in 1951, this time as a diesel electric mechanic (maintaining the generators). In Port Stanley, on the way down, he got into a fight, and was arrested. Arthur Mansfield, base leader at Signy Island Station (where O'Hare was due to winter-over) was alerted to the O'Hare problem by a secret letter from Sec-FIDS (i.e., the Secretary of FIDS), and before O'Hare arrived at Signy on the last *Biscoe* trip into the station that season, Mansfield gathered his men around, warned them, and proposed the unusual remedy that every time O'Hare took a slug, the others should match him, so O'Hare would not stand out. That particular base had, aside from its usual rum ration, about 12 bottles of hooch, of which they would crack one a month. However, during the 1952 winter at Signy, O'Hare would attack the gin every night he could until he was smashed. Despite having a bad back, he was an aggressive drunk, and, without warning, would slug anyone he saw. At that point the rest of the Signy boys would jump him and restrain him. However, with O'Hare's experience in Antarctica, Mansfield and the others relied on him quite heavily for things like sledging techniques, how to use tools, etc., and were glad to have him. When the *Biscoe* arrived, Capt. Bill Johnston again warned Mansfield about O'Hare, but the warning was redundant; Mansfield and the other lads had had to put up with O'Hare for a year. On the way back to England from Port Stanley, on the *Fitzroy*, in 1953, they stopped at South Georgia. O'Hare had been drinking, of course, and flew at a member of the South Georgia station. The *Fitzroy* arrived in London on Feb. 3, 1953, and almost immediately he married Jean M. Walter, in Southend. In the July of that year he received his Polar Medal. He lived in Leigh-on-Sea for a while, then moved to Nottinghamshire, and was there until the early 1980s. He died in Brent, Mdsx, in Aug. 1995.

Ohau Peak. 77°30' S, 168°42' E. A sharp rock peak, rising to about 2400 m, about 3 km NE of the summit of Mount Terror, it is the central one of 3 aligned summits 1.3 km N of Mount McIntosh, on Ross Island. Named by NZ-APC on Feb. 20, 2001, after a peak near the locality of Tekapo (*see* **Tekapo Peak**), in NZ. US-ACAN accepted the name later in 2001.

O'Higgins *see* **General Bernardo O'Higgins Station**

O'Higgins Land. Named for the Chilean liberator, Bernardo O'Higgins. More properly Tierra de O'Higgins, it is the Chilean name for the area of Antarctica claimed by that country. This is the same area claimed by Argentina (they call it Tierra San Martín) and by Great Britain (they call it Graham Land). The Americans (who did not claim it) used to call it Palmer Land. It is now called the Antarctic Pensinsula.

Ohnemüller, Kurt. b. 1906, Braunschweig, Prussia, but raised partly in German Southwest Africa, son of Margaret Ohnemüller. Sailor on the *Schwabenland* during GermAE 1938-39.

The *Ohio*. A 126-ton, 2-masted schooner built in Baltimore in 1840, and owned by Gilbert Chase of Newport, RI. On July 14, 1841 she left Newport with 16 men, all from Newport, under the command of William Smyley, and in Feb. 1842 she picked up the two thermometers left by Foster on Deception Island 13 years before. As the *Ohio* left Deception Island the place was erupting. The ship arrived back in New York on July 28, 1842, Smyley then bought into the vessel, and captained her again, wrecking her (accidentally) off the South American coast on March 2, 1843.

Camp Ohio. 84°52' S, 114°20' W. An American camp (a 16' × 16' Jamesway hut) established in the Ohio Range, in the Horlick Mountains, in Nov. 1961. It was used until Jan. 1967. It later became known to history as Camp Ohio I.

Camp Ohio II. 86°00' S, 127°00' W. An American camp built near a crashed R4D airplane, in the Ohio Range of the Horlick Mountains, in Nov. 1962, to supplement Camp Ohio, which now became known as Camp Ohio I. The new one was dismantled in Jan. 1965.

Ohio Range. 84°45' S, 114°00' W. About 50 km long and 16 km wide, it consists primarily of a large snow-topped plateau with steep N cliffs, and several flat-topped ridges and mountains, it extends in a WSW-ESE direction from Eldridge Peak to Mirsky Ledge, just to the E of the Wisconsin Range, and forms the NE end of the Horlick Mountains. Mount Schopf, at 2990 m, is the highest mountain in this range. Surveyed in 1958-59 by the Horlick Mountains Traverse Party, and investigated in 1960-61 and 1961-62 by geologists from the Institute of Polar Studies, at Ohio State University, hence the name given by US-ACAN in 1962.

Isla Ohlin *see* **Ohlin Island**

Ohlin, Axel Gabriel. b. 1867, Lund, Sweden. Educated at Lund University, as a zoologist he came to notice as part of the expedition sent to find the missing Swedes Björling and Kallstenius in Greenland in 1894. He was with Nordenskjöld on the Patagonian expedition of 1895, in 1896 became a lecturer in zoology at Lund, and was with Nathorst in the Arctic in 1898. He was on SwedAE 1901-04, but became sick and was sent home from the Falkland Islands on a British steamer in 1902, dying of tuberculosis in a sanitarium in Sweden in July 1903.

Ohlin Island. 63°30' S, 60°05' W. A tiny island, but rising to an elevation of 170 m above sea level, about 11 km W of the N end of Tower Island, to the N of Charcot Bay, in the Palmer Archipelago, off the coast of the Antarctic Peninsula. This is probably the feature roughly charted by Bransfield on Jan. 20, 1820, and named by him as Tower Island or Tower's Islands (sic). The name Tower was later transferred to the bigger island. It was seen by Palmer on Nov. 17, 1820. The island was roughly located by the *Chanticleer* Expedition in Jan.-March 1829, "being laid down by one Bearing only, from Deception Island, and estimated distance therefrom." During that expedition, Foster named it Baily Island, Bailys Island, and Baily's Island (it appears all three ways on his charts), for Francis Baily (*see* **Baily Head**). Further charted in 1902 by SwedAE 1901-04, and named by Nordenskjöld as Ohlin Island, for Axel Ohlin. On Capt. Johanessen's chart of 1919-20 it appears as Baylys Island, but as "Ohlin Island (Bailys Island)" on a 1921 British chart. It was further charted by the Discovery Investigations in 1930-31, and appears as Ohlin Island on their chart of 1931. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer, and on a 1962 British chart. It was photographed aerially by FIDASE in 1956-57. The Argentines were calling it Isla Ohlin since at least 1908, and that name appears on a Chilean chart of 1947. It was the name accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. In the 1974 British gazetteer it appears erroneously as Ohlin Islands.

Ohlin Islands *see* **Ohlin Island**

Ohoden Col. 63°51' S, 59°12' W. An ice-covered col extending for 950 m at an elevation of about 900 m above sea level, linking Ivory Pinnacles to the N with the Detroit Plateau to the S, and surmounting Pettus Glacier to the E, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Ohoden, in northwesterm Bulgaria.

Öhre, Jørgen. Norwegian whaling captain, manager of the Nor Company, 1909-13, and then manager of the Hektor Whaling Company's station on Deception Island from 1913 to 1928. He was present for the earthquake of Jan. 4, 1925, and still there to welcome Sir Arnold Hodson, governor of the Falklands, in Feb. 1928.

Ohridski *see* **St. Kliment Ohridski Station** (under **Saint**)

Mount Ohridsky. 69°31' S, 71°30' W. An ice-covered mountain with a partly ice-free S slope, rising to about 1500 m, and extending 7 km in a NW-SE direction, 8 km S of Mount Braun, in the S part of the Sofia Mountains, 6 km E by S of Mount Wilbye, in the Lassus Mountains of Alexander Island. The Bulgarians say it is the highest ridge in the Sofia Mountains. Geological work was done here in Feb. 1988, by BAS and the 1st Bulgarian Antarctic Expedition. Named by the Bulgarians on Oct. 5, 1989, as Vrah Kliment Ohridski (i.e., "mount Kliment Ohridski"), for St. Kliment Ohridski University, in Sofia. UK-APC accepted the name Mount Ohridsky (sic) on May 13, 1991, and US-ACAN followed suit.

The *Ohtsu Maru*. A huge, 58,263-ton Japanese Marine Fisheries Resources Research Center bulk ore carrier, built in 1969, and capable of 15 knots. She was off the Wilkes Land coast in 1977-78, with a fleet of 10 trawlers, looking for krill. Captain Katzuto Ohkubo.

Lake O-ike. 69°01' S, 39°34' E. A small lake just SE of Showa Flat, in the E extremity of Ongul Island, on the Prince Olav Coast. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on Oct. 1, 1962, as O-ike (i.e., "big pond"),

because it is the largest lake on the island. US-ACAN accepted the name Lake O-ike in 1968. The Norwegians call it Stortjørna (which means the same thing).

Oil exploration. Not a big deal at the moment, but it could be. Offshore drilling would pose major problems with icebergs, etc. Oil looks most promising near Coats Land, the Adélie Land coast, and the George V Land coast. There is no petroleum.

Mount Ojakangas. 77°36' S, 86°15' W. An elongated mountain rising to about 2450 m, 3 km NW of Mount Washburn, in the N part of the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN in 1982, for Richard Wayne Ojakangas, professor of geology at the University of Minnesota, at Duluth, a usarp with the Ellsworth Mountains expedition of 1979-80.

Islote Ojo. 68°48' S, 67°20' W. A small island off the N coast of Keyhole Island, on the SW side of Mikkelsen Bay, off the Fallières Coast, on the W coast of Graham Land. Named by the Argentines (it means "eye islet"), in association with Keyhole Island.

O'Kane Canyon. 74°19' S, 162°30' E. A large, steep-walled canyon at the head of O'Kane Glacier, it indents the E side of the Eisenhower Range between Mount Baxter and Eskimo Point, in Victoria Land. Named by the Southern Party of NZGSAE 1962-63, for H.D. O'Kane, photographer at Scott Base in 1961-62. He had made several reconnaissance flights to provide aerial photos of the area. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

O'Kane Glacier. 74°26' S, 163°06' E. A steep glacier, 24 km long, it flows SE from the E wall of the Eisenhower Range between Mount Baxter and Eskimo Point, and terminates at the N extremity of the Nansen Ice Sheet, in Victoria Land, opposite the mouths of Priestley Glacier and Corner Glacier. Named by US-ACAN in 1968, in association with O'Kane Canyon, at the head of the glacier.

Okanogan Nunatak. Nickname given to a nunatak in the Patuxent Range of the Pensacola Mountains. It is not yet an accepted name.

O'Keefe Hill. 70°20' S, 64°24' E. An isolated, ice-covered hill, 2.5 km S of Baldwin Nunatak, and 13 km (the Australians say 19 km) SSW of Mount Starlight, in the Prince Charles Mountains of Mac. Robertson Land. Mapped by Australian cartographers from 1965 ANARE air photos. Named by ANCA on Aug. 10, 1966, for John O'Keefe, cook at Mawson Station for the winter of 1964. US-ACAN accepted the name in 1970.

O'Kirwan, John *see* **Kirwan, John**

Okitama-iwa. 68°24' S, 41°44' E. A rocky hill with erratics, in the central part of Temmondai Rock, on the coast, at the E side of the terminus of Higashi-naga-iwa Glacier, in Queen Maud Land. It was surveyed by a Japanese geological team in 1981, and named by them on Nov. 24 of that year.

Okkenhaugrusta. 74°45' S, 11°32' W. A mountain ridge running E and N from Jahntinden, in Skjønsbergskarvet, in the SW part of Sivorgfjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians after Arne Okkenhaug (b. 1909), teacher, and member of the Resistance during World War II.

Okol Rocks. 62°22' S, 59°46' W. A group of rocks in the Aitcho Islands, on the W side of English Strait, 600 m N of Jorge Island, 800 m E of Kilifarevo Island, 900 m S of Chaos Reef, and 800 m W of Passage Rock, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlements of Upper and Lower Okol, in western Bulgaria.

Morena Okruzhnaja. 66°23' S, 100°30' E. A moraine, in the area of Apfel Glacier, just S of the Bunger Hills, on the Knox Coast of Wilkes Land. Named by the Russians.

Gora Okskaja *see* **Okskaya Nunatak**

Okskajanabben *see* **Okskaya Nunatak**

Okskaya Nunatak. 71°58' S, 13°47' E. An elongated nunatak, rising to 2295 m, at the very NE end of Rimekalvane Nunataks, in the Weyprecht Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Discovered by GermAE 1938-39, and photographed aerially by them. First plotted (but not named) from these photos by Norwegian cartographers. It was surveyed from the ground by NorAE 1956-60, and photographed again aerially in 1958-59, during the same expedition. The Norwegians mapped it again from these efforts. SovAE 1960-61 mapped it again, and the USSR named it in 1966, as Gora Okskaja (meaning "of the Oka River, in Russia"). US-ACAN accepted the name Okskaya Nunatak in 1970. The Norwegians call it Okskajanabben.

Oksøy *see* **Cook Island**

Lednik Oktjabr'skoj Revoljucii. 71°31' S, 12°20' E. A glacier in the Mittlere Petermann Range, in the Petermann Ranges of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Russians after the October Revolution.

Oku-hyoga-iwa *see* **Oku-hyoga Rock**

Oku-hyoga Rock. 70°06' S, 39°01' E. The farthest south bare rock (the Norwegians describe it as a nunatak) exposed along the E side of Shirase Glacier, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on Oct. 1, 1962, as Oku-hyoga-iwa (i.e., "inner glacier rock"), in association with nearby Oku-iwa Rock. US-ACAN accepted the name Oku-hyoga Rock in 1968. The Norwegians call it Indre Brenabben. *See also* **Brenabbane**.

Oku-iwa *see* **Oku-iwa Rock**

Oku-iwa Glacier. 68°42' S, 40°46' E. Flows to the sea just W of Oku-iwa Rock, about 18 km SW of Cape Omega, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on May 1, 1963, as Oku-iwa-hyoga (i.e., "inner rock glacier"), in association with nearby Oku-iwa Rock. US-ACAN accepted the translated name Oku-iwa Glacier in 1968. The Norwegians call it Indrebergbreen, which means the same thing.

Oku-iwa-hyoga *see* **Oku-iwa Glacier**

Oku-iwa Rock. 68°42' S, 40°50' E. A rock exposure on land just E of Oku-iwa Glacier, at the innermost part of a minor embayment (a slight indentation, really) about 26 km SW of Cape Omega, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on Oct. 1, 1962, as Oku-iwa (i.e., "inner rock"). US-ACAN accepted the name Oku-iwa Rock in 1968. Also called Pinboko Rock. The Norwegians call it Indreberget, which means the same thing.

Okuma Bay. 77°50' S, 158°20' W. An iceport, about 5 km wide, indenting the coast of Edward VII Peninsula for 6 km, where that peninsula meets the Ross Ice Shelf, about 130 km NE of the Bay of Whales. Discovered in 1902 by BNAE 1901-04, but named by Shirase in 1911-12, for his patron, Count Shigenobu Okuma (1838-1922), the great Japanese statesman, and a supporter of the Japanese expedition. In 1929 Byrd, during ByrdAE 1928-30, named it Hal Flood Bay, after his mother's brother (*see* **Flood Range**). However, after Byrd learned that Shirase had already named it, he withdrew his proposed name. US-ACAN accepted the name Okuma Bay in 1947.

Oku-Shirase-daira. 71°00' S, 41°00' E. An ice field on Mizuho Plateau, between 1500 and 2000 m above sea level, caused by an accumulation of ice coming from Shirase Glacier. Surveyed by JARE in 1960-61, and named by the Japanese in May 1963 ("inner Shirase flat").

Olaisen, Morten. Seaman on the *Deutschland*, during GermAE 1911-12.

Olalla, Juan L. *see* **Órcadas Station**, 1928

Olander Nunatak. 74°25' S, 72°07' W. One of several somewhat scattered nunataks which rise above the ice, 8 km E of Tollefson Nunatak, and 45 km NNW of Sky-Hi Nunataks, in eastern Ellsworth Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. It is usually grouped together with Tollefson Nunatak, Horner Nunatak, and the Sky-Hi Nunataks, for cartographic purposes. Named by US-ACAN in 1968, for Raymond Edward "Ray" Olander (b. Feb. 15, 1935. d. Dec. 4, 2002, Baldwin, NY), who joined the U.S. Navy on Feb. 20, 1955, and who was electronics technician at Eights Station in 1963. He was buried in Arlington National Cemetery. UK-APC accepted the name on Dec. 20, 1974.

Olanuten. 73°23' S, 14°10' W. A peak, mostly snow-capped, on the S side of Dagvola, in the N part of the Kraul Mountains, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Ola Steine, Norsk Polarinstitutt topographer and geodesist, a member of NorAE 1968-69.

Olaussen, Ole Martin. b. Oct. 16, 1874, Larvik, Norway, son of Swedish immigrant stone worker Olaus Jonasen and his wife Marte Andrea

Jonasen. Carpenter, sail maker, and able seaman on the *Antarctic* during SwedAE 1901-04. Immediately after the expedition, he married Marie, and they raised a family in Larvik.

Mount Olav Bjaaland *see* **Mount Bjaaland**

Olav Prydz Bukt *see* **Prydz Bay**

Old Antarctic Explorers Association. Abbreviated to OAEA. Based out of Pensacola, and run by (arguably) the world's leading expert on Antarctica, Billy-Ace Penguin Baker, himself many times on the ice.

Old Mans Head. 72°22' S, 60°45' W. A dark headland which marks the S side of the entrance to Wüst Inlet, on the E coast of Palmer Land. Discovered and photographed aerially in Dec. 1940 by members of East Base, during USAS 1939-41. In Nov. 1947, RARE 1947-48 photographed it aerially, and they and Fids from Base E surveyed it from the ground in December of that year. It was named descriptively by FIDS. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the British gazetteer of 1955. In 1966-69 the U.S. Navy photographed it again aerially.

Old Penguin Rookery. 77°33' S, 166°10' E. A local name for the penguin rookery to the N of Black Beach, near Cape Royds, on Ross Island. Named by BAE 1907-09. The name appears in the 1958 NZ provisional gazetteer.

Old Wallow. 68°36' S, 77°56' E. A seal wallow in the Vestfold Hills, about 50 m by 20 m, with prominent walls of seal fur, hair, and droppings. Named by the Australians.

Mount Oldenburg. 82°04' S, 87°55' W. A partly snow-covered mountain, 0.8 km E of Mount Helms in the E part of the Martin Hills. It was sketched by Cam Craddock in Jan. 1963. The name was suggested by Ed Thiel (among others), to honor Margaret Oldenburg (1892-1972), St. Paul, Minnesota heiress and botanist, who, over the years, sent to the lads at IGY stations and other Antarctic places gifts of books, photos, and other things. She was also a well-known authority on Arctic flora. Thiel and Craddock conducted an airlifted geophysical traverse along the 88th meridian near this feature, in 1959-60. US-ACAN accpted the name in 1964.

Mount Oldfield. 66°50' S, 50°38' E. A coastal mountain, on the E side of Amundsen Bay, close W of Mount Hardy, in the Tula Mountains. Photographed and mapped by an ANARE flight of 1956, and visited by Graham Knuckey, of ANARE, in Nov. 1958. Named by ANCA for Robert Eric Thomas "Bob" Oldfield (b. Jan. 28, 1929), RAN telegraphist until 1949, and later commercial pilot and air traffic controller, who was radio officer wintering-over at Mawson Station in 1958. He became a lieutenant commander in the RANR. US-ACAN accepted the name in 1961.

Oldham Island. 67°32' S, 61°42' E. In the E part of the Stanton Group, off the coast of Mac. Robertson Land. Photographed by LCE 1936-37, and mapped from these photos in 1947 by Norwegian cartographers, who called it Andøya (i.e., "duck island"). Re-named by ANCA for Wilfrid Hugh Oldham (known as Hugh) (b. July 25, 1924), biologist and magnetician at Mawson Station in 1955. He had also wintered-over at Macquarie Island Station in 1951. The island was first visited by an ANARE party led by John Béchervaise, in Aug. 1955. US-ACAN accepted the name in 1965.

Oldroyd Island. 68°32' S, 77°54' E. A small island, about 400 m NW of Magnetic Island, off the Vestfold Hills, in the E part of Prydz Bay. Photographed by LCE 1936-37, and mapped (but not named) from these photos, by Norwegian cartographers in 1946. Re-mapped by ANARE in 1957-58, and named by ANCA for Keith C. Oldroyd, weather observer (radio) from Melbourne, who wintered-over at Davis Station in 1960. US-ACAN accepted the name in 1965.

Olds Peak. 84°40' S, 174°41' W. Rising to 1480 m, 10 km NE of Mount Kenney, in the S part of Longhorn Spurs, in the Queen Maud Mountains. Named for Cdr. Corwin Anson "Curly" Olds (b. July 8, 1925, East Corinth, Maine), who joined the U.S. Navy in June 1944, and who was scheduled to be officer-in-charge of McMurdo for the winter of 1962, but instead wound up being there for 3 consecutive summers, 1962-63, 1963-64, and 1964-65. He retired from the Navy in Feb. 1968.

Mount Ole Engelstad *see* **Mount Engelstad**

The *Ole Wegger*. A former Eagle Oil Company tanker, bought by Thor Dahl's Ørnen Company in 1928, She conducted pelagic whaling in Antarctic waters in 1928-29, as a help-cookery ship. In 1929 Lars Christensen (Dahl's son-in-law) converted her into a huge, 12,201-ton whaling factory ship, complete with stern slip, and she was back in West Antarctica waters in 1929-30, and 1930-31, operating pelagically. In 1932-33 her skipper in Antarctic waters was David Andersen. She was back in Antarctic waters in 1933-34, 1934-35, 1935-36, 1936-37, 1937-38, 1939-40. In the summer of 1940-41, in company with the *Solglimt* and the *Pelagos*, she was back in Antarctica, and on Jan. 13, 1941 was seized by Germans (*see* **The *Pinguin***). The crew and everyone else on board came to 187 persons, including: Kristian Evensen (captain; aged 50); Atle Sverre Nielsen (secretary; 48); Jacob Forseth (doctor; 73); Alf Sigurd Nilsen, Egil Larsen, and Johan Karlsen (patient caretakers); Anders Christensen (1st mate; 54); Hans M. Hansen (2nd mate; 46); Mandus Hansen (3rd mate; 51); Ole Johansen (4th mate; 51); Benedikt Benediktson (43) and Nils Mogensen (53) (bosuns); Henry Swanstrøm (radio operator; 34); Arne Gullstrom (2nd radio operator); Edvard Olsen and Ingvald Mathisen (64) (carpenters); Olav Steinbråten (37), Arnt Løve Hansen (29), Trygve Halvorsen (23), Finn Jacobsen (28), Einar Haugen (34), Karl E. Kristiansen (36), Grant Mathisen (31), Peter Grimstvedt (36), and Thorleif Larsen (35) (able seamen); Valter Kristiansen (21), Lars Olsvold (24), Åge Skåra (21), Gotfred Åsrum (28), and Leif Saebø (ordinary seamen); Juel Johansen, Willy Hoverød, Henry Nilsen (18; recently promoted from mess boy), and Ragnvald Halvorsen (18; recently promoted from mess boy) (junior ordinary seamen); Håkon Andersen (chief engineer; 65); Martin Halvorsen (2nd engineer; 52); Anders Larsen (3rd engineer; 54); Gustav A. Eriksen (4th engineer; 51); Herman Mathiessen (donkeyman; 48); Hans K. Halvorsen (electrician; 40); Leif M. Jacobsen (1st blacksmith; 43); Ole Boesen (2nd blacksmith; 34); Johan Anton Sørensen (repair man; 64); Willy Berg Olsen (pump man; 23); Neubert M. Nilsen (steward; 46); Gustav Winge (69), Emanuel Østby (35), Hjalmar Johansen (37), Einar Christensen, and Albert Martinsen (steward's assistants); Oddvar Nilsen, Anfinn Nymoen (22), Øistein Samuelsen (17), Alf Hugo Bogen, Rolf Winge (17), Øivin Jensen, Odd Eliassen (17), Øistein Farmen, Oskar Brurok, Hans Larsen, Jan Pedersen, Håkon Hansen, and Martin Grønn (mess boys); Karl Kristian Larsen (1st cook; 46); Abraham Berntzen (2nd cook; 30); Jens K. Nilsen (3rd cook; 29); Fredrik Schjerven (baker; 42); Helge Norli (butcher; 45); Henrik Andersen (19) and Jørgen Gulbrandsen (23) (galley boys); Arthur Arntzen (32), Einar Andersen (41), Erling Mogensen (25), Olav Tveitan (38), Jørgen Kristiansen (44), Ole Karlsen (35), Marthinius Lauritzen (45), Alf Larsen (30), Bjørn Olsen (33), Claus Olsen (44), Ole H. Winnem (31), and Thor Trygve Sømo (25) (stokers); Oscar Jakobsen (sharpener; 45); Anton Kristiansen (46), Olaf Christian Pettersen (63), Thorvald Andersen (46), Peder M. Olsen (45), Håkon Gulliksen (43), Hans M. Antonsen (42), Soren S. Bjønness (51) (cookers); Ole Larsen Dansen (30), Georg Gulbransen, Nils Auby (38), Gunnar Knutsen Wang (39), Morten Eilefsen (40), and Håkon Trevland (2nd cookers); Harald Andersen (44), Josef Ingvaldsen (38), Anker Hovland (39), Lorentz Andersen (46), Ole Tvede (41), Severin Johansen (50), Magnus Skjeggestad (44), Andreas Beitnes (53), Thor Klavenes (49), Karsten Ringdal (33), Lars Ludvigsen (36), Fredrik N. Moe (40), and Thoralf Larsen (49) (flensers); Gudmund Hansen (37), Johan Alfred Gulbransen (48), and Knut Hansen (26) (separators); Nils N. Jacobsen (66) and Hans J. Karlsen (46) (whale waste men); Peder Andreassen Eidsten (32), Martin Kjaer, Olaf Allum, Einar Stokke Skarsholt, Georg Enersen (37), Johan Johannesen, Einar Sandar Tvetene (35), Ole Olsen, Hans B. Bredal (26), Alfred Andersen (26), Holger Svendsen (40), Kristen Karlsen (51), Olaf Dahl (33), Ludvig Hansen (42), Håkon Johannessen (39), Hans Jakobsen (30), Peter Knutsen (53), Trygve Andreassen (26), Hans Jørgen Østby (39), Thoralf Røsholdt (29), Arvid Andersson (54), Olai Gutu (44), Nils W. Gether (37), Alf Johannessen (29), Morten Nilsen (29), Anders Austen (42), Karl Farmen (36), Hans Halvorsen Istre (36), Sverre Olsen, Paul Kongsnes (50), Dagfin Jørgensen (40), Hartvig Halle, Ingemar Jansen, Thorbjørn Børresen (42), Kolbein Rønnevik, Einar S. Thøversen (24), Nils Anton Larsen (24), Josef Tveitan (34), Einar L. Kvelle (31), Harald W. Arnesen, Jørgen Johansen Løve, Kristian K. Johansen (39), Andreas Kvamme (37), Knut Andersen, Einar Gutormsen (37), Ottar Lund (41),

Martin Trolsås, Søren Holtan (28), Sivart Sivarsen, Hans Mathisen (30), Johan Torp (36), Georg Hansen (26), Arnt Ekvall (38), Borger Bjerkelund (43), Erling Tolnaes (34), Sigurd Løvås (33), Olaf Olsen (29), Kristian Hansen, Karl Tveten (42), Herman Halvorsen (30), Arne Solberg (34), Asbjørn Nilsen (26), Alf Fevang, Thorleif Johansen Løve, Martinius Bolt (54), Karsten Anker Sørensen (41), Karsten Abrahamsen (31), Nils Bøe (26), Johan A. Bøe, Petter Fossen (39), Trygve Naess (33), and Arnt Bjønnes (37) (laborers). After capture she was taken back to Bordeaux, used by the Germans as a block ship, and was scuttled in the Seine on Aug. 22, 1944. She was raised in Aug. 1945 and broken up in Sweden in 1947. *See also* ***Pol VIII***, ***Pol IX***, and ***Pol X*** (her whale catchers).

O'Leary Peak. 84°27' S, 179°14' W. A partly snow-covered peak rising to 1040 m (the New Zealanders say 990 m), it is the most northerly summit along the E wall of Erickson Glacier where that glacier enters an embayment on the E side of the Ross Ice Shelf, to the E of the terminus of Ramsey Glacier. Discovered and photographed aerially by USAS 1939-41, on the flight of Feb. 29-March 1, 1940. Named by US-ACAN in 1962, for Paul V. O'Leary, USNR, builder, a member of U.S. Naval Support Force, Antarctica, 1959-60 (*see* **Deaths**, 1959). NZ-APC accepted the name.

O'Leary Ridges. 70°58' S, 67°19' E. Three partly snow-covered ridges, with a steep rock face on the SE side, and extending for 8 km in a line NW-SE, 30 km (the Australians say about 43 km) SE of Mount Bunt, in the Prince Charles Mountains. Plotted by Australian cartographers from 1960 ANARE air photos. Named by ANCA for Raymond Arthur "Ray" O'Leary (b. Jan. 19, 1926), officer-in-charge at Wilkes Station in 1964. US-ACAN accepted the name in 1967.

Olech Hills. 62°04' S, 57°54' W. In the area of Three Sisters Point, they reach an elevation of between 50 and 60 m above sea level. Named by the Poles for Maria Olech, of the Institute of Botany, at Jagiellonian University, Krakow, who worked various seasons at Arctowski Station.

The *Olenek*. Soviet ship, part of SovAE 1973-75. Skipper was Mikhail Andreyevich Petrov.

Olentangy Glacier. 86°00' S, 127°20' W. Flows S from the sector of the Wisconsin Plateau ENE of Sisco Mesa, into McCarthy Glacier and the larger Reedy Glacier, to the SW of Mount McNaughton, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by the Ohio State University explorers in 1964-65 for the river which flows through their campus back home. US-ACAN accepted the name in 1966.

Oleona *see* **Post Offices**, **Ronne Antarctic Research Expedition**

Oleschnunatak. 80°26' S, 21°41' W. A somewhat isolated nunatak, but due E of Blanchard Hill, on the Pioneers Escarpment, in the Shackleton Range. Named by the Germans.

Nunatak Oliden. 66°03' S, 60°47' W. One of the many, many nunataks on the Jason Peninsula named by the Argentines.

Gora Olimpijcev. 73°52' S, 63°14' E. A nunatak, SW of Keyser Ridge, in the southern Prince Charles Mountains. Named by the Russians.

Oliphant, Robert. b. 1883, Strathmiglo, Fife, son of farmer Francis Oliphant and his wife Helen Ritchie. He couldn't take the excitement of being a banker's clerk, and became a merchant seaman. On Oct. 27, 1910, he pulled into Sydney as an able seaman on the *Delphic*, out of Liverpool, and joined the *Terra Nova*, for the first part of BAE 1910-13. On his return to Lyttelton, NZ, he joined the *Waihora*, on the run to Sydney, and then settled down in Lyttelton, marrying Mrs. Ryder, the owner of a sweet shop. He died in 1919, during the great flu epidemic.

Oliphant Islands. 60°44' S, 45°38' W. A group of small, ice-free islands and rocks, extending in a N-S direction off the S side of Gourlay Peninsula, at the SE extremity of Signy Island, in the South Orkneys. Dove Channel runs through this group generally from E to W. Roughly charted by Petter Sørlle in 1912-13, and again in 1933 by the Discovery Committee, but in more detail. Surveyed between 1947 and 1949 by FIDS, and named by them as Oliphant Islets, for Marcus Laurence Elwin "Mark" Oliphant (1901-2000), great Australian scientist and inspiring Poynting professor of physics at the University of Birmingham, 1937-50, who helped in obtaining scientific equipment for Signy Island station in 1947. He was knighted in 1959, and, from 1971 to 1976, was governor of South Australia. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. However, on July 7, 1959, UK-APC re-defined them as the Oliphant Islands, and US-ACAN went along with this change in 1963.

Oliphant Islets *see* **Oliphant Islands**

Punta Oliva. 62°27' S, 60°47' W. A point NE of the beach the Chileans call Playa Alcázar, on the N coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno, who took part in ChilAE 1984-85, for Doris Oliva Eklund [*see* [2]**Punta Doris**].

Olivar, Ambrose W. *see* **USEE 1838-42**

Rocas Olivares *see* **Jagged Rocks**

Olivecrona, Knut *see* **Órcadas Station**, 1911

Bahía Oliver *see* **Gibson Bay**

Canal Oliver *see* **Lewis Sound**

Mount Oliver. 84°56' S, 173°44' W. A high peak, rising to over 3800 m (the New Zealanders say about 3900 m), with its surface descending to the SE, 3 km SE of Mount Campbell, in the ridge along the Mount Wade-Mount Fisher massif, about 11 km SE of Mount Wade itself, in the Prince Olav Mountains, in the Queen Maud Mountains. Discovered and photographed aerially by USAS 1939-41, on Flight C of Feb. 29-March 1, 1940. Surveyed by Bert Crary in 1957-58, and named by him for Norman Oliver, of the Air Force Cambridge Research Center, who was Antarctic project leader for aurora operations, 1957-60. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Oliver, Frank. b. Northumberland. A former shepherd. He joined FIDS in 1956, as a diesel electric mechanic, and wintered-over at Base W in 1957 and 1958. A quiet, introspective individualist, by mid 1957 he had isolated himself from the rest of the lads, and it was a surprise that he stayed on a second year. In early June 1958, he, John Rothera, Dick Hillson, and Jim Young, formed the 4-man search party to look (unsuccessfully, as it turned out) for the three missing Fids from Base Y. According to Henry Wyatt, Oliver went to Israel, diving.

Oliver Bluffs. In the Dominion Range. A term no longer used. *See also* **Oliver Platform**.

Oliver Glacier. 82°34' S, 163°45' E. Flows from the area W and S of Mount Christchurch, into Lowery Glacier, just N of the Taylor Hills. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Edward J. Oliver, USARP glaciologist at Pole Station in 1961-62.

[1]**Oliver Island** *see* **Midas Island**

[2]**Oliver Island**. 69°19' S, 68°37' W. The largest of the Mica Islands, outside the entrance to West Bay, and 10 km NE of Cape Jeremy, in the S part of Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Named by US-ACAN in 1978, for David L. Oliver, USN cook at Palmer Station in the winter of 1972. UK-APC accepted the name on May 21, 1979.

Oliver Nunatak. 84°06' S, 66°08' W. Rising to 620 m, it is one of the Rambo Nunataks, 3 km S of Sowle Nunatak, on the W side of the Foundation Ice Stream, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Thomas H. Oliver, electronics technician who wintered-over at Plateau Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

Oliver Peak. 77°37' S, 161°03' E. A prominent peak, rising to 2410 m, 6 km NNW of Round Mountain, in the Asgard Range of Victoria Land. Named by US-ACAN in 1976, for Leon Oliver, of NZ, chief driller on the Dry Valley Drilling Project, 1973-74, and drilling superintendent on it in 1974-75.

Oliver Platform. A geologic structure in the Dominion Range, composed of the Upper Oliver Platform and the Lower Oliver Platform. *See also* **Oliver Bluffs**.

Oliver Schneider, Carlos. b. Sept. 15, 1899, Canelones, Uruguay. He moved to Chile, became a famous naturalist, and from a young age was director of the Museum of Natural History, at Concepción. He was a geologist on ChilAE 1946-47, and died in Concepción, on June 12, 1949. *See* **Northstar Island**.

Montaña Olivero *see* **Montaña Gillmore**

Punta Olivina *see* **Olivine Point**

Olivine Point. 60°40' S, 45°29' W. The S end of the low-lying peninsula which forms the E

entrance point of Iceberg Bay, on the S coast of Coronation Island, in the South Orkneys. Surveyed by Fids from Signy Island Station in 1948–49, and so named by them because the mineral olivine occurs in the igneous dikes intersecting the peninsula just N of the point. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. The Argentines call it Punta Olivina.

Olliver Peak. 84°34' S, 173°33' W. A rock peak rising to 630 m along the edge of the Ross Ice Shelf, at the E side of the mouth of Barrett Glacier, it is the most northwesterly summit in the Gabbro Hills. Named by US-ACAN in 1966, for Cdr. George R. Olliver, USN, who was injured in the crash of an Otter aircraft on Dec. 22, 1955, following take-off from Cape Bird.

Olrog, Trevor. b. June 11, 1934. Radio tech at Wilkes Station in 1967.

Cape Olsen *see* **Cape Kjellman**

Olsen, A. b. Bergen, Norway. Seaman taken on the *Fram* at Buenos Aires in Sept. 1911, for the 2nd half of NorAE 1910–12. He was the keeper of the pigs on board.

Olsen, Anton Oluf. b. 1861, in the little village of Ula, near Thjødling (later spelled Tjølling), near Larvik, in Norway, son of seaman Ole Andresen and his wife Karen Andersdatter. He went to sea as a teenager, and became a whaler. He inherited the farm at Ula from his father, and in 1891 married a Larvik girl, Anna Kristine Johannesdatter. Apparently he was in Antarctic waters with Carl Anton Larsen, on the *Jason*, in 1893. He was bosun on the *Antarctic* during SwedAE 1901–04. His name is almost always seen as Anton Olsen Ula, and that may well be because, when the Norwegians adopted real surnames, he chose the name of his village, as a lot of Norwegians did.

[1]**Olsen, Hans**. b. Jan. 17, 1869, Norway. Whaler in the South Shetlands in the summer of 1911–12, who was the only fatality when the whale catcher *Hafnen* struck an iceberg on Dec. 10, 1911, at Port Lockroy, and went down. He was buried in the Whalers Bay Cemetery. However, verification of the existence of this man, and also of the *Hafnen*, have eluded this researcher. However, whatever the name of the catcher, she was catching for the *Svend Foyn*.

[2]**Olsen, Hans**. Skipper of the *Dias* for the three seasons in which that vessel relieved Órcadas Station —1931–32, 1933–34, and 1941–42.

Olsen, Hartvig. b. 1887, Norway. Whaler who went to sea in 1912. He was on various whaling expeditions to the Antarctic in the 1920s, and was skipper of a passenger ship, working for the Fred Olsen Line, when he became first mate on the *Wyatt Earp* during Ellsworth's expeditions of 1933–34 and 1934–35. In 1935–36 he was captain of the *Wyatt Earp* during Ellsworth's most successful expedition. Father of Magnus Olsen.

Olsen, Hjalmar. Skipper of the whale catcher *Ravn*, which ran areef on Ravn Rock in 1908–09, while catching for the *Vesterlide*. *See* **Cape Kjellman**.

Olsen, Johan Christian. Known as Christian. b. July 15, 1876, Kragerø, Norway. A professional engineer and boiler maker, he was working at Jensen and Dahl's shipbuilding yard at Fredrikstad when he became 1st engineer on the *Southern Cross* during BAE 1898–1900. On his return, he married Karoline Theodora, and went to work for Nyland Verksted, in Christiania (Oslo).

Olsen, John *see* **Olsson, John August**

Olsen, Karinius. b. 1889, Strengsdal, Notterøy, Vestfold, Norway, son of Ole Kristian Andersen and his wife Pauline Margrethe Jacobsdatter. He was cook on the *Fram* during Amundsen's NorAE 1910–12, and the youngest member of the expedition, and also did carpentry, but was not one of the shore party. Amundsen said, "This was well done for a lad of 20. I wish we had many like him." After the expedition he was one of the group who returned to London on June 29, 1912, on the *Highland Scot*, from La Plata. He continued as a merchant seaman, serving as a steward mostly on the *Bergensfjord* and the *Stavangerfjord* out of Oslo, and calling in to New York countless times in in the dozen or so years after the end of World War I. In 1919 he married, in Nøtterøy Church, to Julie Konstanse Johansen. He died on Nov. 10, 1944, in Stepney, London. His death record lists him as Kristian Olsen, aged 54, but it's our man.

Olsen, Karl Anton. Seaman on the *Deutschland*, during GermAE 1911–12.

Olsen, Magnus Lauritz. b. 1913, Norway, son of Hartvig Olsen. He went to sea at 14, and was a crewman on the *Wyatt Earp* during the 1933–34 and 1934–35 expeditions of Lincoln Ellsworth, and 2nd mate on the more successful 3rd expedition of 1935–36. His book on the expedition, *Saga of the White Horizon*, was published in 1972.

Olsen, Victor. Despite constant reporting in the newspapers in 1928–30, during the Wilkins-Hearst Expedition, that this was the name of the radio operator picked up by the expedition in Montevideo for their journey to the ice, this man does not exist. He was actually Viggo Holt (q.v.).

Olsen Crags. 86°12' S, 160°48' W. Rugged crags surmounting a small but conspicuous mountain block that projects into the E side of the Amundsen Glacier, just N of Epler Glacier, in the Queen Maud Mountains. Amundsen had named a mountain in this general area Mount K. Olsen, for Karinius Olsen. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Modern geographers cannot be quite sure which mountain Amundsen meant, so they arbitrarily selected this one, in order to preserve Olsen's name in this area. US-ACAN accepted this situation in 1967.

Olsen Névé *see* **Olson Névé**

[1]**Olsen Peak**. 77°32' S, 86°29' W. Rising to 2140 m, 3 km NW of Mount Wyatt Earp, near the N end of the Sentinel Range. Discovered aerially by Ellsworth on Nov. 23, 1935. Named by US-ACAN in 1961, for Hartvig Olsen.

[2]**Olsen Peak**. 79°40' S, 155°31' E. A peak with local relief of about 200 m, between Mason Nunatak and Score Ridge, in the Meteorite Hills, in the Darwin Mountains. Named by US-ACAN in 2001, for Edward Olsen, of the Field Museum of Natrural History, in Pittsburgh, co-investigator with William Cassidy (*see* **Cassidy Glacier**) on a search for meteorites in the Allan Hills during the summer season of 1976–77.

Olson Glacier. 72°49' S, 166°41' E. A tributary glacier flowing westward from the Malta Plateau into Seafarer Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Richard D. Olson, NSF official who was at McMurdo in 1967–68, in research administration activities.

Olson Island. 77°14' S, 153°17' W. The largest, and most northerly, of the ice-covered White Islands, in the S part of Sulzberger Bay. In 1928–30 Byrd roughly delineated it as "low ice cliffs" that rise above the ice shelf in that part of Sulzberger Bay, but the Americans re-defined the feature in the early 1960s, and it was mapped in detail by USGS, from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Michael L. Olson, ionosphere physicist who wintered-over at Byrd Station in 1968, and summered-over at Plateau Station in 1968–69.

Olson Névé. 82°07' S, 158°00' E. On the NW side of the Cobham Range, it feeds Lucy Glacier and Prince Philip Glacier, in the Churchill Mountains. Discovered and mapped by the Holyoake, Cobham, and Queen Elizabeth Ranges Party of NZGSAE 1964–65, and named by them for Lt. Dennis Alvin Olson (b. Dec. 29, 1933, Minneapolis. d. Nov. 27, 2008, Walnut Creek, Calif.), USN, and of VX-6, who flew the party in, and supported them during the summer. He retired as a commander, after 23 years in the Navy. US-ACAN accepted the name of the feature in 1966. The name is seen spelled (erroneously) on some maps of the late 1960s, as Olsen Névé.

Olson Nunatak. 74°55' S, 162°28' E. An ice-free, bare rock nunatak, at the S side of the terminus of Reeves Glacier, 6 km N of the summit of Mount Gerlache, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for James J. Olson, USARP geophysicist on the Ross Ice Shelf, in 1961–62.

Olson Peaks. 79°16' S, 160°05' E. Two peaks close together, the higher one rising to 1335 m, 6 km W of Cape Lankester, on the N side of Bertoglio Glacier. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1965, for Gary D. Olson, a member of the U.S. Army Aviation Support Unit for Topo North and Topo South, 1961–62, which conducted the tellurometer surveys.

Olsson, John August. b. Feb. 28, 1895, Göteborg, Sweden. Known as "Yon" or "the silent Swede," he went to sea, as a merchant marine, and was one of the firemen taken on the *Eleanor Bolling* for ByrdAE 1928–30. After the first phase of the expedition, rather than hang around in NZ for 6 months in between seasons, he and 11 others decided to head for San Francisco in the

Tahiti, reaching the USA on April 12, 1929. He returned for the 2nd half of the expedition.

Olsson, Maj Brita. b. Nov. 2, 1912, Norrköppings Sankt Johannes, Östergötland, Sweden. In 1937-38 she was one of the three stewardesses on the *Terje Viken* (*see* **Women in Antarctica**).

Olstad, Ola. b. 1873, Toten, Norway, son of Ole Andersen Olstad. He went to sea at 15, became a zoologist, and as such conducted zoological and geological research in the South Shetlands and the Palmer Archipelago in the summer season of 1927-28. He used various whaling ships to get around (cf. Olaf Holtedahl), most notably being part of Horntvedt's 1927-28 expedition on the *Norvegia*. The next season, 1928-29, he was chief scientist on the *Norvegia*, under Nils Larsen. On Feb. 2, 1929 he made the first landing on Peter I Island, and claimed it for Norway. He died in 1956.

Olstad Glacier. 68°50' S, 90°41' W. A small, but heavily crevassed glacier, flowing to the S part of the coast the Norwegians call Lazarevkysten, on the W side of Peter I Island, about 3 km S of Tofte Glacier. Named by the Norwegians as Olstadbreen, for Ola Olstad. US-ACAN accepted the translated name Olstad Glacier in 1952.

Olstadbreen *see* **Olstad Glacier**

Rocas Oluf *see* **Oluf Rocks**

Oluf Rocks. 63°42' S, 60°10' W. A small group of 5 rocks in the Gilbert Strait, 2 of them located 12 km E of Cape Neumayer, Trinity Island, and the other 3 in the sector between the E and SE of the same cape and 13 km distant from it. Roughly charted by Capt. Johannessen in 1919-20. Together with (what later became known as) Ryge Rocks and Sven Rock, they appear on his chart as Trinity Land. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for the *Oluf Sven*. US-ACAN accepted the name later in 1960. It appears on a British chart of 1962. The Argentines call it Rocas Oluf. This feature was named Rocas Paredes by ChilAE 1946-47, named for Luis S. Paredes Uribe (b. 1915), Chilean naval cook on that expedition. He also wintered-over at Soberanía Station in 1947. It appears as such on a Chilean chart of 1961, and was the name accepted by the 1974 Chilean gazetteer. *See also* **Trinity Land** and **Sven Rock** for a more complete history of the naming process.

The *Oluf Sven*. A 950-ton Danish freighter under the command of Capt. Jan Ryge (*see* **Ryge Rocks**). Pedersen was 1st engineer. She was chartered by FIDASE in 1955-57, and converted to take 20 men more than normal. She left London on Nov. 10, 1955, transporting the 36-man expedition (14 of those were crew members) to Deception Island for the 1955-56 season, and was used throughout the expedition as a mobile base for operations by ground survey parties. On the first trip out she carried 60,000 gallons of aviation fuel, two S.51 Westland Sikorsky helicopters, a tractor, several engines and spare parts, plus ready-made living quarters for the men. John Huckle was ice pilot in 1956-57. Eddie Dagless says that the worst meal he ever had in his life was aboard the *Oluf Sven*.

The *Olympic Challenger*. Formerly the T2-class tanker *Herman F. Witton*, she was bought in 1949 by Aristotle Onassis's newly formed Olympic Whaling Company (which was registered in Uruguay), re-built and lengthened at the Howaldt-Kiel Shipyards, in Germany, and renamed *Olympic Challenger*. Mr. Onassis also acquired some old corvettes and converted them into catchers (the *Olympic Victor*, the *Olympic Lightning*, the *Olympic Fighter*, and the *Olympic Conqueror*), and registered the vessels themselves in Panama. The fleet headed down to Antarctica in 1949-50, to mark the Greek tycoon's entrée into the whaling business, much to the dismay of the Norwegians. Onassis's whaling manager at that time was former legendary gunner Lars Andersen, and top gunner was the equally legendary Cap'n John Borgen. Wilhelm Reichert was skipper of the *Challenger*. The fleet was back for the 1950-51, 1951-52 (*see also* **The *Ariston***), and 1952-53 seasons (the *Olympic Leader* was a new catcher by 1952), and then ran into trouble with the Peruvian authorities. By this time the whaler was using a helicopter for spotting. There was an aborted season in Antarctica, 1954-55, then once more to Antarctic waters in 1955-56, and then Onassis sold that fleet to the Japanese, the 13,019-ton *Olympic Challenger* winding up with the Kyokuyo Hogei Company, and being renamed the *Kyokuyo Maru 2*.

The *Olympic Conqueror*. One of four former corvettes converted into whale catchers by Aristotle Onassis, and forming part of his Antarctic fleet between 1949 and 1954. The others were the *Olympic Fighter*, the *Olympic Lightning*, and the *Olympic Victor*.

The *Olympic Fighter* *see* **The *Olympic Conqueror***

The *Olympic Leader*. Added to the *Olympic Challenger*'s fleet of whale catchers by 1952. On Dec. 10, 1952, she visited Deception Island, to inspect abandoned whaling stations at Whalers Bay.

The *Olympic Lightning* *see* **The *Olympic Conqueror***

The *Olympic Victor* *see* **The *Olympic Conqueror***

Mount Olympus. 80°13' S, 156°46' E. A rectangular, flat-topped, ice-covered mountain, rising to over 2400 m, it stands about 8.5 km E of Mount Henderson, on the divide between Hatherton Glacier and Byrd Glacier, in the Britannia Range. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for the *Mount Olympus*. ANCA accepted the name.

Olympus Range. 77°29' S, 161°30' E. A primarily ice-free mountain range between Victoria Valley and McKelvey Valley on the N, and Wright Valley on the S, in Victoria Land. It has peaks over 2000 m, named for figures in Greek mythology — Electra, Dido, Orestes, Circe, Boreas, Hercules, Jason, Cerberus, Peleus, Theseus, and Aeolus. Mapped by VUWAE 1958-59, and named by them for the home of the Greek gods. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Omai. b. ca. 1752, Society Islands. Name perhaps more correctly Mai, but also seen as Omiah and Omy. A man from Raiatea (an island Cook called Ulietea), in the Society Islands (loosely speaking, Tahiti). He was befriended by Joseph Banks during Cook's first voyage, 1768-71, and when Cook pulled in to the island group during his 2nd voyage, 1772-75, he found that Omai, although married for the 4th time, had been dispossessed of his belongings by a group of rival islanders. In Sept. 1773 Furneaux took him on board the *Adventure*. Although he was a curiosity, he also worked as a deck hand. As the *Adventure* returned to Cape Horn she passed into 61°S, thus making Omai one of the select group of Society Islanders ever to find himself in Antarctic waters. On arrival in London, where the ideal of the "noble savage" was in full flourish, he was made much of, presented to the King, and John O'Keefe dashed off a celebrated Christmas pantomime called *Omai*, in which the hero has been transformed into the king of Tahiti. He lived with his friend Banks in London, and finally Cook took him back to Tahiti on his 3rd voyage, and deposited him on the island of Huaheine with two Maori retainers, making an agreement with the chiefs for a grant of land for Omai. Cook was well aware that Omai couldn't possibly last long in Huaheine, and in 1788, when the *Lady Penrhyn* came to Huaheine asking for the celebrity, he was dead. Richard Connaughton wrote a book about him, *Omai: The Prince Who Never Was*.

Bahía Ombú *see* **Bahía Howard**

Cape Omega. 68°34' S, 40°59' E. A prominent bare rock cape, with a remarkable moraine at its inland side, it is located between Omega Glacier and Daruma Rock, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE between 1957 and 1962, and named by the Japanese on Oct. 1, 1962, as Omega-misaki, because of its shape as seen from the sea. US-ACAN accepted the translated name Cape Omega in 1964. The Norwegians call it Kapp Omega.

Isla Omega *see* **Omega Island**

Kapp Omega *see* **Cape Omega**

Omega Cove. 68°39' S, 78°10' E. A small cove, about 200 m in diameter, almost fully enclosed by 2 moraine ridges on the S side, in the Vestfold Hills. Named by ANCA.

Omega Foundation High Antarctic GPS Expedition. 2002-03. A climbing expedition on Livingston Island, led by Australian Damien Gildea. There was another one, in 2005-06, which conducted GPS surveys of peaks in the Sentinel Range. Stephen Neville Chaplin was on that one (*see* **Chaplin Peak**), as were Manuel Begeuño (*see* **Begueño Pinnacle**) and Camilo Rada (*see* **Rada Peak**).

Omega Glacier. 68°37' S, 41°01' E. Flows to the coast just S of Cape Omega, on the Prince Olav Coast of Queen Maud Land. Mapped by JARE ground surveys and air photos taken between 1957 and 1962. Named by the Japanese on May 1, 1963, as Omega-hyoga, in association with Cape Omega. US-ACAN accepted the

translated name Omega Glacier in 1964. The Norwegians call it Omegabreen (which means the same thing).

Omega-higasi-iwa. 68°34' S, 41°05' E. An eastern rock exposure on Cape Omega, on the coast of Queen Maud Land. Named by a Japanese geological and geodetic survey of 1977 ("eastern Omega rock"). The Japanese accepted the name officially on March 22, 1979.

Omega-hyoga *see* **Omega Glacier**

Omega Island. 64°20' S, 62°56' W. A completely snow-covered island, of regular and even relief, 3 km long, with gentle hills and with coasts formed of ice-covered cliffs, immediately S of Eta Island, it is the largest feature in the SE part of the Melchior Islands. Roughly surveyed by the Discovery Investigations personnel on the *Discovery* in 1927, and again, in more detail, in 1941, by USAS 1939-41, who named it Lystad Island, after Capt. Isak Lystad. It appears as such on Berlin and Shirley's 1941 chart of the expedition. It was surveyed yet again in 1942 and 1943 by the Argentines, who named it in 1946 as Isla Omega, for the Greek letter. It appears as such on their 1946 chart. It appears on a British chart of 1947, as Omega Island, and that was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN in 1956. It appears as such in the 1955 British gazetteer, and on a 1962 British chart. It appears as Isla Sobral on 1948 and 1949 Argentine charts, named after José Sobral, and that was the name accepted by the 1970 Argentine gazetteer. The Chilean gazetteer of 1974 accepted the name Isla Omega. In 2003 a channel was found separating the island from Bremeninsel (q.v.), a piece of land until then thought to be part of Omega Island, but, with the existence of the channel, proved to be a separate island.

Omega-misaki *see* **Cape Omega**

Omega-naka-iwa. 68°34' S, 41°04' E. The central rock exposure on Cape Omega, on the coast of Queen Maud Land. Named by the 1977 Japanese geological and geodetic survey here (name means "central Omega rock"). The Japanese accepted the name officially on March 22, 1979.

Omega-nisi-iwa. 68°35' S, 41°02' E. The western rock exposure on Cape Omega, on the coast of Queen Maud Land. Named by the 1977 Japanese geological and geodetic survey here (name means "western Omega rock"). The Japanese accepted the name officially on March 22, 1979.

Omega Nunatak. 81°55' S, 29°12' W. An isolated, flat-topped nunatak, rising to about 1300 m, 35 km SSW of Whichaway Nunataks, in Coats Land. First mapped by BCTAE 1955-58, and so named by them because it is the southernmost rock outcrop in the area, and was the last rock outcrop seen on the way to the Pole in 1957-58. South Ice (q.v.) was 6 km to the SE of this nunatak. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Omega Peak. 72°09' S, 166°03' E. Rising to about 2600 m, 1.5 km NE of Le Couteur Peak, between Head Peak and Inferno Peak, in the N portion of the Millen Range, and overlooking the Pearl Harbor Glacier névé. Named by the Southern Party of the New Zealand Federated Mountain Clubs Antarctic Expedition of 1962-63 because this was the last major peak climbed by them, on Jan. 2, 1963. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Omegabreen *see* **Omega Glacier**

Bukhta Omel'chenko. 68°30' S, 151°47' E. A bay, NW of Krichak Bay, in the W part of the Cook Ice Shelf, in George V Land. Named by the Russians, for Anton Omel'chenko.

Omel'chenko, Anton Lukich. b. 1883, Bat'ki, near Poltava, Ukraine, into a peasant farming family, he became a groom on the local estate of Mikhail Pekhovskiy. In 1909 he was a jockey in Vladivostok, and was picked up by Cecil Meares while the latter was looking for ponies for BAE 1910-13. He worked as pony groom and dog driver under Capt. Oates, and with Cherry-Garrard he tried to relieve Scott's doomed Polar party in 1912. After the expedition was over he fought in the Russian Army, and later the Red Army, and then returned to his home town, where he helped to establish a collective. He was killed by lightning in 1932.

Omiah *see* **Omai**

Grupo Ómicron *see* **Omicron Islands**

Islas Ómicron *see* **Omicron Islands**

Omicron Islands. 64°21' S, 62°55' W. A group of small islands and rocks close SE of Omega Island, in the Melchior Islands, in the Palmer Archipelago. Surveyed in 1942 and 1943 by the Argentines who, in 1946, named them Islas Ómicron, for the Greek letter. They appear on a British chart of 1947 as Omicron Islands, but on one of their 1950 charts as Omicron Islets. That latter name was the one accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. On July 7, 1959, UK-APC redefined them as the Omicron Islands, and US-ACAN followed suit in 1963. There is a 1948 reference to them as Grupo Ómicron. ArgAE 1952-53 named them Islas Silveyra, probably after a member of the expedition. A 1957 Argentine chart shows them as Islas Capitán Turrado, named after 1st Lt. Manuel Turrado of the Argentine Air Force, killed in a plane crash during the events of 1955. Another of their charts from the same year has the feature as Isla Primer Teniente Turrado, and a 1959 one has it as Islas Capitán Turrado. The 1970 Argentine gazetteer accepted Islas Capitán Turrado. The Chilean gazetteer of 1974 accepted the name Islas Ómicron.

Omicron Islets *see* **Omicron Islands**

Bahía Ommanney *see* **Ommanney Bay**

Ommanney, Francis Downes. b. April 22, 1903, son of solicitor's clerk Francis Frederick Ommanney and his wife Olive Caroline Owen. From 1926 to 1929 he was lecturer in zoology at Queen Mary College, and in June 1929 applied to fill a vacancy on the scientific staff of the Discovery Investigations, and from 1929 to 1939 he was a zoologist on the staff. He went to South Georgia in 1929, on the *Antarctic*, to become a whaling flenser there for 7 months, and in 1930-31 did the same bloody awful job for 5 months. He was on the *Discovery II* for its 1931-33 and 1935-37 cruises. He wrote, among other books, *South Latitude* (1938). After RNVR service during World War II he worked with the Mauritius-Seychelles Fisheries Survey (1947-49), then 6 years with the Colonial Research Service, and from 1957 to 1960 was reader in marine biology at the University of Hong Kong. He died on June 30, 1980, in Cobham, England.

Ommanney Bay. 60°33' S, 45°32' W. A bay, 3 km wide, between Prong Point and Foul Point, on the N coast of Coronation Island, in the South Orkneys. Discovered and roughly charted by Powell and Palmer in Dec. 1821. Re-surveyed by personnel on the *Discovery II* in 1933, and named by them for Francis D. Ommanney. It appears on their chart of 1934, and was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer. The Argentines were calling it Bahía Ommanney as early as 1951 (and maybe slightly before that), and the 1970 Argentine gazetteer accepted that name. It was re-surveyed by Fids from Signy Island Station between 1956 and 1958. The bay, and the hinterland S of a line joining Conception Point and Foul Point, were designated SPA #18.

Ommanney Glacier. 71°32' S, 169°29' E. A valley glacier, 30 km long, which meanders northward through the Admiralty Mountains into the middle of Relay Bay, on the W side of Robertson Bay, along the N coast of Victoria Land. Charted in 1899 by BAE 1898-1900, and named by Borchgrevink for Admiral Sir Erasmus Ommanney (1814-1904), RN, Arctic explorer. US-ACAN accepted the name, and NZ-APC followed suit.

Ommundsen Island. 66°20' S, 110°22' E. Just W of Midgley Island, in the Windmill Islands. First mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1963, for Audon Ommundsen (b. Sept. 22, 1932, Norway), transport specialist at Wilkes Station in 1958. ANCA accepted the name.

Mount Omond *see* **Mount Susini**

Omond House. Bruce's stone hut on Laurie Island, in the South Orkneys, during ScotNAE 1902-04. Sufficient wood could not be brought down on the ship, so the men had to quarry about 60 tons of rock right there on the island. The thinnest walls were 4 feet thick, and the four corners were buttressed with thick turrets. The roof had a double-layer of tarred canvas, and on top of that were placed 1-inch boards covered with felt. The floor was formed out of the substantial 'tween-deck hatches of the ship, and the 2-inch 'tween-deck bulkheads. There was a shed to the W side of the house, two windows, and a door protected by a porch. The house could accommodate 6 men. It was named for Robert Traill Omond, famous Scottish meteorologist and supporter of the expedition. It was the first scientific station (as such) in Antarctica, and was taken over by the Oficina Meteorológica Argentina on Feb. 22, 1904, and in Jan. 1905 was re-named Órcadas Station.

Omurtag Pass. 62°37' S, 60°11' W. A pass,

running at an elevation of about 720 m above sea level, between Mount Bowles and Ticha Peak, in Bowles Ridge, Livingston Island, in the South Shetlands. It is part of an overland route between the area around Wörner Gap and the upper part of the Kaliakra Glacier. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for Khan Omurtag of Bulgaria, who ruled 814-31.

Omy *see* **Omai**

Ona Refugio. 68°06' S, 67°02' W. Argentine refugio built near General San Martín Station in 1995.

11 de Septiembre Refugio. 63°37' S, 57°30' W. Chilean refuge hut, built on Eyrie Bay, Trinity Peninsula, off the Antarctic Peninsula.

Ondori Island. 69°00' S, 39°32' E. A small island, 1.5 km N of Ongul Island, and 1.3 km W of Nesøya, in the NE part of Lützow-Holm Bay. Photographed aerially by LCE 1936-37, and roughly mapped (but not named) by Norwegian cartographers working from those photos in 1946. Mapped much more accurately by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962, and named by them on June 22, 1972, as Ondori-jima, or Ondori-zima (i.e., "rooster island"), in association with nearby Mendori Island. US-ACAN accepted the name Ondori Island in 1975.

Ondori-jima *see* **Ondori Island**

Ondori-zima *see* **Ondori Island**

One Day Islet *see* **Hedgehog Island**

150-mile Depot. A depot set up in 1929 by ByrdAE 1928-30, 20 miles SE of Prestrud Inlet, in Marie Byrd Land, i.e., 150 miles from Little America.

105-Mile Depot. 78°17' S, 155°32' W. Established 105 miles E of West Base by the depot-laying team headed by Warner in late Sept. and early Oct. 1940, during USAS 1939-41. It was to be used by the mountains sledging parties from West Base that year.

The *One Ocean Navigator* *see* **The *Plancius***

172.5 West Automatic Weather Station. 78°18°S, 172°30' W. An American AWS on the Ross Ice Shelf, at an elevation of 42 m, installed in 1984.

One Ton Depot. 79°28' S. It was laid by Scott on Feb. 17, 1911, and contained a ton of food. It was 150 miles from Hut Point, and was the depot that Scott was less than 11 miles away from when he died in 1912.

O'Neal Nunataks. 79°01' S, 85°00' W. A small linear group of nunataks which mark the S end of the Bastien Range, in the Ellsworth Mountains. Named by the University of Minnesota geological parties to the Ellsworths, for Jerry O'Neal, aerographer with these parties in 1963-64 and 1964-65. US-ACAN accepted the name in 1966.

O'Neal Point. 64°42' S, 62°18' W. On the E side of Arctowski Peninsula, between the entrances of Beaupré Cove and Piccard Cove, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Named by US-ACAN for James D. "Jim" O'Neal (b. Dec. 3, 1926. d. Nov. 1, 2008, Bethesda, Md.), cartographer with the Special Maps branch of USGS, who was U.S. observer with ChilAE during OpDF II (Oct. 1956 to April 1957), working in the South Shetlands and the NW part of the Antarctic Peninsula. The SCAR gazetteer has a separate and distinct feature named Punta Zufriategui, in exactly the same coordinates, which one suspects is really this cape (the Argentine terms "punta" and "cabo," for "point" and "cape" are somewhat interchangeable, as they are, but perhaps to a lesser degree, in the English language). Colonel Pedro Zufriategui (1783-1840), was captain of the Port of Montevideo.

O'Neal Ridge. 72°48' S, 168°45' E. A high ridge, trending NE-SW, bounded by Ingham Glacier and Humphreys Glacier, in the Victory Mountains of Victoria Land. Named by US-ACAN for Russell D. O'Neal, member of the National Science Board, 1972-77. He was in Antarctica in 1975.

Mount O'Neil. 85°40' S, 136°20' W. Rising to 2090 m, just NE of Mount Ratliff, at the N side of Kansas Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Robert J. O'Neil, utilitiesman who wintered-over at Byrd Station in 1961.

O'Neill, Boris Kopaitic *see under* **Kopaitic**

O'Neill, Vincent Michael "Vince." b. 1928, Kilpatrick, Dunbarton, Scotland. He joined FIDS in 1956, from the Diplomatic Radio Service, as a senior radio operator, and wintered-over at Base O in 1957. He was a member of the 3-man party that circumnavigated Bryde Island by dinghy in 1957. He then wintered-over at Base B in 1958. His parents were living near Southampton at the time. According to some, he was a great guy, very popular, and one of the best of all the FIDS radiomen. According to others, he was a real bastard, not too popular on the base. He would wear other men's shoes, just for the hell of it, because they looked better than his. Perhaps the Fids who didn't like him were confusing him with his black mongrel dog Negro (pronounced in the Spanish way). Vince decided that Negro had to be shot, and Pete Hodkinson was given the task, but fluffed it. Clem Clements it was who finally did the deed. As late as 2001 Vince was still cycling, but then began to suffer from Alzheimers, and later lived in a sheltered accommodation in Southsea, Portsmouth.

O'Neill Peak. 74°05' S, 77°14' W. Rising to about 850 m (the British say about 800 m), it is the highest point in the FitzGerald Bluffs, on the English Coast of Ellsworth Land. Geological field work was done here by a USGS party in Dec. 1984. Named by US-ACAN in 1985, for John Michael O'Neill, USGS geologist, a member of the party. UK-APC accepted the name on Nov. 13, 1985.

O'Neill Point. 64°49' S, 63°06' W. The extreme N point of Lautaro Island, 2.5 km WSW of Lemaire Island, in the Gerlache Strait, off the Danco Coast, on the W coast of Graham Land. Surveyed by Fids from Base O in 1957-58. Named by UK-APC on Feb. 7, 1978, for Vince O'Neill. US-ACAN accepted the name. Around 1978, the Argentines began calling it Punta Independencia, after their (declaration of) independence from Spain, July 9, 1816. The Chileans call it Punta Ladislao, for stoker Ladislao Gallegos Trujillo, on the *Yelcho* in 1916 when Shackleton's party was rescued from Elephant Island.

Skaly Onezhskie *see* **Onezhskiye Nunataks**

Onezhskiye Nunataks. 71°35' S, 7°03' E. A small group of nunataks, 15 km NNE of Sletteffjellet, in the Mühlig-Hofmann Mountains of Queen Maud Land. The largest is Storkvarvsteinen Peak. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Remapped by SovAE 1961, and named by them as Skaly Onezhskie, for the Onega River in the USSR. US-ACAN accepted the name Onezhskiye Nunataks in 1970.

Ong Valley. 83°14' S, 157°37' E. A mainly ice-free valley, 8 km long, just W of Kreiling Mesa, and just S of Argosy Glacier, in the Miller Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for John S. Ong, American traverse engineer on the South Pole Traverse of 1962-63. ANCA accepted the name.

Ongal Peak. 62°40' S, 60°07' W. A sharp, glaciated peak, rising to 1149 m, in Levski Ridge, 550 m N of Levski Peak, 1.8 km SE of Zograf Peak, and 2.5 km WSW of Plana Peak, in the Tangra Mountains of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians, and named by them on April 11, 2005, for the historical Ongal region of the First Bulgarian Kingdom, located in the Danube delta area and N of the Black Sea.

Isla Ongley *see* **Ongley Island**

Ongley Island. 62°26' S, 59°53' W. A small island, 4 km W of Dee Island, just off the N side of Greenwich Island, in the South Shetlands. Charted by the personnel on the *Discovery II* in 1935, and named by them, for Leonard Thomas Ongley (1899-1944), a cartographer in the Admiralty Hydrographic Department at the time. It appears on their 1935 charts, and also on a 1948 British chart, and was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears in the 1955 British gazetteer. The feature was photographed aerially by FIDASE in 1956-57. It appears on an Argentine chart of 1957, as Isla Ongley, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

Ongul *see* **Ongul Island**

Ongul Island. 69°01' S, 39°32' E. An island, 2.5 km long, it is the largest of the Flatvaer Islands, just within the E side of the entrance to Lützow-Holm Bay, on the Prince Olav Coast. Photographed by LCE 1936-37. Norwegian cartographers, working off these aerial photographs in 1946, determined it to be connected to what

is now East Ongul Island, and gave the name Ongul (i.e., "fishhook"), which is descriptive of the two islands together. In 1957 the Japanese, landing here for the first time, found that a passage (which they were to call Naka-no-seto) separates the two islands, and re-defined the area accordingly. US-ACAN accepted the name Ongul Island in 1971. On March 12, 1977 the Japanese accepted the name Nisi-Ongul-to (i.e., "west Ongul Island").

Ongul Islands *see* **Flatvaer Islands**

Ongul-oki-no-sima. 69°04' S, 39°29' E. A small island at the W of the Te Islands. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Named by the Japanese on March 22, 1994 (name means "island off Ongul").

Ongul Sound. 69°02' S, 39°38' E. Also called Ongul Strait. A sound, 3 km wide, between the E shore of Lützow-Holm Bay and the Flatvaer Islands. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Ongulsundet, in association with nearby Ongul Island US-ACAN accepted the translated name in 1971.

Ongul Strait *see* **Ongul Sound**

Ongul-syoto *see* **Flatvaer Islands**

Ongulgalten *see* **Ongulgalten Island**

Ongulgalten Island. 69°04' S, 39°36' E. The most northerly of 3 aligned islands, 1.5 km SE of the Te Islands, at the S end of the Flatvaer Islands, off the Prince Olav Coast. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Ongulgalten (i.e., "the fishhook boar"), in association with Ongul Island. US-ACAN accepted the name Ongulgalten Island in 1968.

Ongulkalven *see* **Ongulkalven Island**

Ongulkalven Island. 69°01' S, 39°27' E. An island, 1.5 km W of Ongul Island, in the Flatvaer Islands, in Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Ongulkalven (i.e., "the fishhook calf"). US-ACAN accepted the name Ongulkalven Island in 1966.

Ongulknappen. 69°03' S, 39°31' E. A small island about 1.5 km S of the W part of Ongul Island, off the Prince Olav Coast. Named by the Norwegians in association with Ongul Island.

Onguløy *see* **Partizan Island**

Ongulsundet *see* **Ongul Sound**

Onley Hill. 67°43' S, 63°03' E. A bare rock eminence rising to 840 m from surrounding high drifts, about 1.75 km S of Mount Henderson, in the NE part of the Framnes Mountains, in Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Sørkollen (i.e., "the south knoll"). Visited by ANARE parties since 1954. Re-named by ANCA on Oct. 11, 1960, for Leslie W. "Les" (also known as "Wacky") Onley, weather observer at Mawson Station in 1959. US-ACAN accepted the name in 1965.

Onlooker Nunatak. 71°54' S, 162°22' E. An isolated nunatak protruding prominently above the ice of the Rennick Glacier, immediately S of Tenterhooks Crevasses, and just SE of the Morozumi Range. Named descriptively by the Northern Party of NZGSAE 1963-64 (the name is suggestive of the aspect of this feature), in association with Spectator Nunatak and Bystander Nunatak. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Onnum Ridge. 80°07' S, 156°25' E. A mountain spur descending NE to McCraw Glacier, 5 km S of Derrick Peak, in the Britannia Range. Named in association with the range by a geological party from the University of Waikato (NZ), 1978-79, led by Mike Selby. Onnum is a historical name, formerly used in Roman Britain. NZ-APC accepted the name, and US-ACAN followed suit.

Onnum Valley. 80°06' S, 156°21' E. An ice-free valley between Derrick Peak and Onnum Ridge, in the Britannia Range. Named by Mike Selby's 1978-79 University of Waikato (NZ) geological party, in association with the ridge. NZ-APC accepted the name, and US-ACAN followed suit in 2001.

The *Onnuri*. A 1422-ton, 63.5-meter (209 feet) South Korean research and supply ship, built in 1991, at Bergen, in Norway. She entered Korean service on March 20, 1992, went on a cruise in the Pacific, and then took down the 6th South Korean Antarctic Expedition, 1992-93. Her skipper that season was Dai-Kee Kim. She had a cruising speed of 15.4 knots, had a crew of 16, and could take 25 scientists. She supplied King Sejong Station in 1999-2000 (her skipper that year was Suk-Ki Kim), and every season since.

Ono-jima *see* **Ono-zima**

Ono-zima. 69°14' S, 39°41' E. A small island, with a highest elevation of 17.8 m above sea level, E of Oyayubi-zima, just off the Langhovde Hills, in the E part of Lützow-Holm Bay. It looks like an axe-blade, hence the name given by the Japanese on July 10, 2008. It is also seen as Ono-jima.

Onoe-jima *see* **Onoe-zima**

Onoe-zima. 69°15' S, 39°40' E. A small island, with an elevation of 22 m, close off Onozima, just off the Langhovde Hills, in the E part of Lützow-Holm Bay. Name means "the haft of an axe," and was given by the Japanese on July 10, 2008, in association with Ono-zima.

Onogur Islands. 62°21' S, 59°41' W. A group of nine islands, as well as some islets and rocks, adjacent to the NW coast of Robert Island, between Carlota Cove to the SW and Clothier Harbor to the NE, and 700 m SE of Cornwall Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement of Onogur, in northeastern Bulgaria (home of the Onogur Bulgars of the 5th-7th centuries).

The *Onrust II*. Yacht in Antarctic waters in 1996-97, and again in 2002, both cruises under the command of Dirk Tober.

Onset D Camp. 80°46' S, 125°47' W. A USAP camp built in 2000, in Marie Byrd Land, removed in 2003, and taken back to McMurdo.

The *Ontos*. The name means "thing" in Greek, and it looked like a "thing," a 145 hp light-armored, tracked, anti-tank vehicle tried as a method of transportion by the Americans during IGY (1957-59). It looked like a tank with 6 huge guns on it, and you didn't want to be behind it when it fired. In the end, it failed, being too heavy.

Onville Escarpment *see* **Orville Coast**

Onyx River. 77°32' S, 161°45' E. An evanescent meltwater stream (rather than a real river), which flows westward for 31 km through the Wright Valley from the terminus of Wright Lower Glacier to empty into Lake Vanda, as that lake's major source of water. It flows intermittently and only during the warmest parts of the austral summer, and consists mainly of meltwater from Wright Lower Glacier and the alpine glaciers that are present along the valley walls. Mapped and named by VUWAE 1958-59. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Oogi-hama *see* **Ogi Beach**

Oom, Karl Erik. b. May 27, 1904, Chatswood, Sydney, 4th child of Swedish immigrant draftsman Gustaf Peter Ludwig August Oom, and his English-born wife May Isabel Le Guay. In 1918 he entered the Royal Australian Naval College and graduated in 1921. He was on the *Moresby* as a hydrographer, and was promoted to lieutenant in 1927. He was cartographer during the 2nd half of BANZARE 1929-31, and over the next decade charted much territory around Australia and New Guinea, and was loaned on different occasions to the British Navy. He was promoted to lieutenant commander in 1935. In London, on June 17, 1939, he married Evelyn Margaret Stewart Mocatta, née Jeffrey. In 1941 and 1942 he commanded the *Gleaner* in the North Sea, doing anti-submarine and escort duties. In 1942 he went back to Australia to command a series of ships, and in 1943 was promoted to commander. In Nov. 1947 he was placed in command of the *Wyatt Earp*, and in charge of Antarctic surveys, and from 1948 to 1951 was the RAN's hydrographer. He never made captain, and was invalided out in 1952. His wife having died, he re-married in Sydney on March 14, 1955, to Jean Miriam Kearney, née Wells. Oom suffered from cirrhosis of the liver, and died of a pulmonary thrombosis on June 22, 1972, at his home in Turlinjah.

Oom Bay. 67°26' S, 60°44' E. Also called Uksvika. A well-defined bay, 3 km wide, indenting the coast of Mac. Robertson Land between Mount Bruce and Campbell Head. Discovered on Feb. 18, 1931 by BANZARE, and named by Mawson for Karl Oom. US-ACAN accepted the name in 1947, and ANCA followed suit on Nov. 28, 1955.

Oom Island. 67°24' S, 60°39' E. A small island, about 0.8 km across, 4 km NE of Campbell Head, on the W side of Oom Bay, off the coast of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Uksøy. Re-named by ANCA on Feb.

18, 1958, for Karl Oom. US-ACAN accepted the Australian naming in 1965.

Mount Oona. 83°09' S, 162°36' E. Rising to 2170 m, at the N end of the ridge between Helm Glacier and Lowery Glacier, in the Queen Elizabeth Range. Named by US-ACAN in 1966, for Henn Oona, Estonian-born aurora scientist with the Arctic Institute of North America, who wintered-over at Pole Station in 1964. He was the brother of Hain Oona (*see* **Oona Cliff**).

Oona Cliff. 72°27' S, 160°09' E. A north-facing rock and ice cliff, about 6 km long, just NW of Mount Walton, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Hain Oona, who wintered-over as ionosphere physicist at Pole Station in 1968. He was the brother of Henn Oona (*see* **Mount Oona**).

The *Oosterschelde*. Dutch tourist vessel, with a carrying capacity of 24 passengers, in Antarctic waters in 1997-98, 1998-99, and 1999-2000, visiting the South Shetlands and the Antarctic Peninsula, under the command of Dick Van Andel.

Opaka Rocks. 62°18' S, 59°35' W. A group of rocks, the main one being situated 700 m N of Henfield Rock and 3.44 km E of the Pordim Islands, off the N coast of Robert Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the town of Opaka, in northeastern Bulgaria.

Opalchenie Peak. 78°34' S, 85°35' W. A peak, with precipitous and partly ice-free S slopes, it rises to 4600 m at the S extremity of the Vinson Plateau, on the Vinson Massif, 2.66 km SSE of Silverstein Peak, 990 m S of Fukushima Peak, 7.49 km NW of Mount Rutford, 4.09 km N by E of Mount Slaughter, and 7.41 km E of Brichebor Peak, in the Sentinel Range, in the Ellsworth Mountains. The peak is of low prominence, except to the S, where 2 parallel ridges descend steeply southwestwards with Donnellan Glacier flowing in between and Mount Slaughter rising on the more southerly ridge. Named by the Bulgarians on Dec. 6, 2010. The word "opalchenie" signifies "volunteer force." Those specifically in mind were the Bulgarian Volunteer Force in the 1877-78 Russo-Turkish War, and the Adrianople Volunteer Force in the 1912-13 Balkan Wars.

Bukhta Opasnaja *see* **Opasnaya Bay**

Opasnaya Bay. 67°39' S, 45°49' E. On the coast of Enderby Land, just NE of Molodezhnaya Station. Photographed aerially by ANARE in 1956, and by SovAE 1957, and named by the latter as Bukhta Opasnaja (i.e., dangerous bay"). ANCA translated it.

Utësy Opasnye *see* **Bain Crags**

Obryv Opasnyj. 70°51' S, 67°40' E. A bluff at the N end of the pass the Russians call Kar Lovushka, SW of Glukhoy Glacier, in the Aramis Range of the Prince Charles Mountains. Named by the Russians.

Islotes Opazo *see* **Chatos Islands**

OpDF *see* **Operation Deep Freeze**

Operación 90. The code name for the 1964-65 Argentine Army land traverse to the Pole, achieved by 10 Argentine soldiers from General Belgrano Station. Col. Jorge Edgard Leal led the expedition. Capt. Gustavo Adolfo Giró was scientific leader, and 2nd-in-command of the expedition. Mechanics were: Ricardo Bautista Ceppi (principal enlisted man), and Julio César Ortiz, Alfredo Florencio Pérez, and Jorge Raúl Rodríguez (all sergeants). Topographers were: Sgt. Roberto Humberto Carrión and Sgt. Adolfo Óscar Moreno; radioman was Sgt. Domingo Zacarías; and Óscar Ramón Alfonso (a cabo patrullero). The sledge team that went out to lay depots as far as the 83rd parallel (despite the fact that the team was known as Patrulla 82) were: Lt. Adolfo Eugenio Goetz (leader), 1st Sgt. Ramón Villar, and Marcelo Enoc Álvarez and Leonardo Isabel Guzmán (both 1st cabos). Three men at Sobral Station gave logistical and radio-electrical support: Lt. Pedro Ángel Acosta (leader), and Carlos Guido Bulacio and Hugo Orlando Britos (both sergeants). The Pole party set out in Sno-cats from Belgrano on Oct. 26, 1965, two days after Lt. Goetz's depot-laying party had set out. On Nov. 4, 1965, they arrived at Sobral Station, in brilliant sunshine, but with a temperature of -33°F. Bulacio was dropped from the team because of a cut on his hand, and would remain at Sobral. On Nov. 18, the team separated from Patrulla 82. On Dec. 9, 1965, after a stint of 28 hours, they arrived at a point 45 km from the Pole. On Dec. 10, 1965, after a 45-day total trip, Leal got down from his tractor, "Salta," and planted the Argentine flag at the Pole. They left the Pole on Dec. 15, and arrived back at Belgrano on Dec. 31, 1965. The entire trek took 66 days.

Operation Baby Face. RAGS, a ham radio station in Syracuse, NY (*see* **Radio**), faxed down to Little America and McMurdo pictures of children newly-born to fathers wintering-over in Antarctica. The first fax was received on May 5, 1957, at Little America. Calvin Larsen had a baby girl, Sonya. McMurdo received their first fax on May 30, 1957.

Operation Deep Freeze. The greatest peacetime operation ever launched by the U.S. Navy, it was the code name for the Navy's ongoing involvement in Antarctica from 1954 to 1998, headed by the Commander, United States Naval Support Force, Antarctica (q.v.), who led military units from the Navy, Army and Coast Guard between late September and February every austral summer, to provide the technical backup services necessary to USARP (later called USAP), not only for each summer's work but also to prepare the men who would winter-over between each operation. Technically, the term "Deep Freeze" also covered the winterings-over in Antarctica. And also, after the Navy got out of Antarctica, in the late 1990s, and private companies were hired by the NSF in their place, for logistical support in Antarctica, the term OpDF continued (although somewhat half-heartedly, as the term had really been so much associated with the Navy, without whom, incidentally, something in the way of spirit went out of Antarctica). By 1954 it had been agreed that several countries would open up the hitherto virtually unknown continent of Antarctica. This multi-national effort would be part of the International Geophysical Year (q.v.) (1957-59), known as IGY, and each country then set about its plans to send scientific and exloring personnel down to Antarctica, to build bases there, to make a good showing. The Americans, of course, made the biggest and best showing of all, Operation Deep Freeze. Captain George Dufek (later admiral) reported in as commander of Task Force 43 on Aug. 16, 1954. The U.S. knew, going into this, that it would be a 4-year involvement, IGY to end in the spring of 1959, and that this involvement might well extend beyond that period, so originally it was called Project Longhaul, a name changed by Dufek in Jan. 1955 to Operation Deepfreeze. Admiral Byrd was placed in charge. The old Post Office building in Washington, DC, was chosen as headquarters, at least in the first year, 1954-55. Someone had to take the hundreds and hundreds of men, and the thousands of tons of equipment down to Antarctica, and, frankly, there was only one organization that could do it — the U.S. Navy. The Navy's involvement was called United States Naval Support Force, Antarctica, with Admiral George Dufek in charge. Dufek, in effect, thus became, in reality, the director of OpDF. In 1954-55 the *Atka* was sent down on a mission to explore the coasts for likely sites for the two initial bases (*see* **United States Navy Antarctic Expedition**). Dufek selected 7 ships and an air arm, and this became known, on Feb. 1, 1955, as Task Force 43 (q.v.). Then the first real phase of OpDF began, known as Operation Deepfreeze. However, the Amana Corporation informed the Navy of a copyright infringement, so the name was changed to Operation Deep Freeze (two words), about Oct. 1956. Although they had been referring to Operation Deep Freeze I and II, and so on, from the very beginning, it was only when it became absolutely certain, by March 1956, that there would be a second Operation Deep Freeze in 1956-57, that they started officially numbering them, OpDF I, OpDF II, etc. This system was changed for the 1959-60 season, which should have been Operation Deep Freeze V, but, instead was known as Operation Deep Freeze 60, and that is the system that has been used since then, i.e., with the last two digits of the year representing the year in which each summer operation ended. And so it went on, year after year, but things began to change in the 1960s. In 1965 and 1966 the U.S. Navy transferred all the icebreakers to the U.S. Coast Guard. About that time, the Navy and the National Science Foundation (responsible for the science side of things), started exploring the possibilities of private contractors taking over the Navy's role. This was largely due to the worry about defense spending at a time when the Vietnam War was beginning to eat up the country's finances. In 1967 one of those present at these meetings was Rodney Gray, of ITT. In 1968, Holmes & Narver was awarded the support contract for McMurdo, and took over that

role from the Navy for the 1968-69 season. The Navy's gradual exit from Antarctica had begun. On July 1, 1971, the NSF took over, from the Navy, the responsibility and the funding management for the U.S.A.'s involvement in Antarctica. Again, this was was because Vietnam had taken so much money from the Department of Defense. Holmes & Narver supplied the first civilian crew at the new Siple Station, for the winter of 1973, and, on Dec. 1, 1973, they assumed from the Navy the operation of Palmer Station, and also, on a 5-year contract, operation of the NSF's ship *Hero*. That summer, 1973-74, the Navy found itself short of building specialists for the new, domed, South Pole Station. Holmes & Narver helped out, with 33 such specialists. The next season, 1974-75, the last Navy crew turned over construction of the Pole Station to Dick Wolak and his Holmes & Narver boys. Wolak was the first civilian manager at Pole Station, and his crew had the new dome ready by Jan. 1975. 1974 saw the first-ever all-civilian crew winterering-over at Palmer Station. On July 1, 1974 Task Force 43 became Task Force 199 (q.v.). By the late 1970s it was deemed necessary to have one contractor doing all the support work in Antarctica. Bids went out for the contract, and ITT won the first 10-year contract. The support wintering-over crews of 1980 came from them. In 1990 Antarctic Support Associates (ASA) took over the contract, and throughout the 1990s the U.S. Navy really began to get out of Antarctica. The last Navy crew left the ice during the 1997-98 season, and on March 12, 1998, at Port Hueneme, Calif., U.S. Naval Support Force, Antarctica, was disestablished, thus bringing Operation Deep Freeze to an end, the way it had been, that is. In 2000 Raytheon took over the contract for the running of the physical, support side of American research in Antarctica, while the NSF continued, as always, to run the science side, and to mastermind the entire project.

Operation Deep Freeze I. 1955-56. The United States Navy Antarctic Expedition (q.v.) (the *Atka*'s 1954-55 trip to scout out sites for U.S. bases for the upcoming International Geophysical Year), was a prelude to the Naval invasion which began in late 1955 as Operation Deep Freeze (1955-56), under Admiral George Dufek (Adm. Byrd was technical director). Task Force 43 (the Navy group itself which comprised the logistical, support part of Operation Deep Freeze — as opposed to the scientific personnel) had, as its objectives, to construct Little America V (the operation's headquarters) at Kainan Bay, on one side of the Ross Ice Shelf, and on the other side, at Hut Point, a runway and Air Operational Facility McMurdo (*see* **McMurdo**), to set up an airfield at McMurdo Sound, as well as to establish a base in Marie Byrd Land (this was Byrd Station, and this objective would not be achieved until the following year). Thus, 1800 Navy volunteers supported the U.S. scientific involvement in Antarctica during the 104 days of OpDF I, and 7 ships took part: the *Glacier*, the *Edisto*, the *Eastwind*, the *Arneb*, the *Greenville Victory*, the *Wyandot*, and the *Nespelen*, as well as the two oilers *YOG-34* and *YOG-70*. There were 14 planes (4 twin-engine R4Ds, 4 twin-engine P2Vs, 2 Skymasters, 4 Otters), helicopters, and 9235 tons of equipment for the two bases, including a 3-ton generator at Little America. **Oct. 19, 1955**: The massive icebreaker *Glacier* left Davisville, RI, bound for Norfolk, Va. **Oct. 31, 1955**: The icebreaker *Edisto* sailed out of her home port of Boston, headed south. This really marked the beginning of OpDF I. **Nov. 3, 1955**: The *Glacier*, the lead ship of the expedition, left Norfolk, Va., bound for the Panama Canal, with 20 officers and 249 men aboard, under the command of Captain Pat Maher, and including Jack Ketchum, deputy commander of Task Force 43 (in charge of overall administration and icebreaker operations), Jack Bursey (who had been in Antarctica with Byrd), Dr. Oliver Austin (ornithologist and USAF observer), Bernard Kalb (the *New York Times* reporter) and 120 Seabees, led by their commander Herb Whitney. The *Glacier* was carrying 3 Weasels, 2 Sno-cats, 2 Sikorsky HO4S-3 helicopters (there was a helipad aboard), and she was also towing the oiler *YOG-34* (which had 25 men and more than 200,000 gallons of fuel aboard). Another oiler, *YOG-70*, was towed down from Seattle, then towed from Panama to NZ, and then to McMurdo Sound, by the *Edisto*. Admiral Byrd and Paul Siple flew down to NZ, to pick up the *Glacier* from there. **Nov. 10, 1955**: The *Arneb* left Davisville, RI, for Norfolk, Va. **Nov. 14, 1955**: Dufek left Norfolk on his flagship *Arneb*. The *Wyandot* left as well. **Dec. 10, 1955**: The *Glacier* left Lyttelton, NZ, bound for McMurdo Sound, 2600 miles away, its mission — to lay out an air base on the ice. **Dec. 17, 1955**: After effortlessly chopping her way through 440 miles of pack-ice (cf. Shackleton and the *Endurance*), the *Glacier,* with Byrd aboard, arrived at McMurdo, after 54 days out of Boston, and 12,500 miles. This was the first time anyone had been at McMurdo since 1948, in fact since Ketchum himself had led a 2-ship exploratory expedition into the sound during OpHJ. That very day, Dec. 17, the *Arneb*, *Wyandot*, *Greenville Victory*, and *Nespelen* left Lyttelton, NZ, headed south. **Dec. 19, 1955**: The *Edisto* arrived at McMurdo, towing *YOG-70*. The Seabees pitched their tent at Hut Point, and waited for the 2500 tons of equipment to be unloaded. **Dec. 20, 1955**: Two twin-engine P2V Neptunes and two 4-motor R5D Skymasters (70,000 pounds each) flew from NZ to Antarctica, the first time planes had flown in to Antarctica from another continent. Two twin-engine R4D Dakotas and two twin-engine Albatrosses had had to turn back to Wigram Field, in NZ, due to heavy winds. The Albatrosses never got to Antarctica. Because there was no landfall below the flight path of the planes, 7 Navy ships were picketed in the ocean, 250 miles apart, on 170°E, between NZ and Antarctica, just in case. 25 fliers arrived in all. At that point the runway had no buildings and no beacons. **Dec. 22, 1955**: An Otter crashed near Cape Bird. The blame was laid at the feet of the pilot, Capt. Trigger Hawkes (q.v. for details of this flight). **Dec. 23, 1955**: A flock of tents huddled around Scott's 1902 hut, on Hut Point. That day Dave Baker and the dog drivers arrived there. **Dec. 24, 1955**: Chief Slaton was baptized on the *Wyandot* by Father Condit. **Dec. 25, 1955**: Seabee commander Herb Whitney, with Vic Young, George Moss, and construction mechanic Willie Burleson, set out by Weasel with timbers to bridge a crack on the ice 20 miles out. The Weasel fell into a crack, wind blew to 70 mph, and they had to build a tent from a parachute. **Dec. 26, 1955**: The ships of Task Force 43 left McMurdo. The *Glacier*, the *Greenville Victory*, and the *Arneb* went to scout out sites for Little America V, which was to be the headquarters for the U.S. participation in IGY. **Dec. 27, 1955**: Whitney's stranded party were found by a helicopter. **Dec. 28, 1955**: The cargo ships *Arneb* and *Greenville Victory* arrived at Little America. **Dec. 29, 1955**: Dufek selected the site for Little America V, 30 miles from Byrd's old site. **Dec. 30, 1955**: The *Arneb* and *Greenville Victory* moored to the ice at Kainan Bay, and began to offload material for Little America V. A supply dump was established on the ground, on the seaward side of the tidal crack (see below), 4 miles from Little America and 3 miles from the sea, and Herb Whitney began construction of Whitney Highway (q.v. for further details), running from the edge of the ice to the base site. This meant, among other things, filling in deep crevasses and bridging tidal cracks in the ice. **Jan. 1. 1956**: Chief Slaton retrieved Whitney's Weasel from the week before. **Jan. 3, 1956**: Hal Kolp flew an R5D transport over the Pole, the 3rd ever flight to the Pole (*see* **South Pole** and **Kolp, Hal**). **Jan. 4, 1956**: The *Glacier* returned to Kainan Bay from its oceanographic mission. Byrd commissioned Little America V. The *Glacier*, with Byrd aboard, sailed for Little America, where the cutter was sorely needed. **Jan. 5, 1956**: Hank Jorda flew 2115 miles in 13½ hours in a Skymaster, discovering 2 new mountain ranges. The *Glacier* returned to McMurdo from Little America. **Jan. 7, 1956**: A Skymaster flew over the South Magnetic Pole, 71°S, 140°E. This was a first. The *Glacier* had, by now, cut the ice so that Hut Point was only 7 miles away. Ketchum called off Cape Evans as a site, and they were back to Hut Point. Another flight, in a P24 Neptune piloted by Trigger Hawkes, and with Jack Torbert as co-pilot, flew 2700 miles across the Antarctic Circle, in what was believed to be the longest flight in Antarctic history to that point. The 14-hour photographic flight took in Wilkes Land and the Knox Coast. **Jan. 8, 1956**: Byrd, who was not a well man and appeared quite frail, flew over the Pole, for the 3rd time in his life, this time in a Skymaster which circled the Pole for 15 minutes and dropped a U.S. flag (*see* **South Pole**). **Jan. 11, 1956**: Dufek switched his flag from the *Arneb* at Little America, by P2V Neptune, to the *Glacier*, and Byrd shifted his flag to the *Wyandot*. That same day, construction began at AirOpFac McMurdo. **Jan. 13, 1956**: Hal Kolp flew a Skymaster over the Pole (*see* **South Pole**). Jack Torbert and a 6-man crew

flew from McMurdo to Vincennes Bay, on the Knox Coast, and then back, 14½ hours and 2900 miles, non-stop. **Jan. 15, 1956**: The *Nespelen* (q.v. for details) was struck by an ice floe. **Jan. 17, 1956**: The *Greenville Victory* arrived at McMurdo from Little America. Planes scheduled to fly to NZ could not, due to bad weather. The first buildings went up at McMurdo. **Jan. 18, 1956**: With the ice cracking up, the two R5Ds and two P2Vs took off expeditiously for NZ (11-hour flight), where they arrived without incident. The *Eastwind* left her ocean station bound for McMurdo. **Jan. 20, 1956:** The first shell of a building was completed at McMurdo. **Jan. 23, 1956**: The *Eastwind* returned to McMurdo, and began helping the *Greenville Victory* transport cargo to the men on the ground. There was a celebration at McMurdo to celebrate the completion of the first permanent building there. Father Condit played the accordion. **Jan. 24, 1956**: The snow melter produced the first 600 gallons of water at McMurdo. The welders completed the fuel tanks for the power house. **Jan. 25, 1956**: The 2nd storage building was completed at McMurdo. **Feb. 2, 1956**: 10 prefabs had been constructed at Hut Point. **Feb. 3, 1956**: At 1 P.M. the *Arneb*, with Byrd, Siple, Murray Wiener, and Stevan Mandarich (Byrd's aide) aboard, and escorted by the *Edisto*, sailed from McMurdo, bound for NZ. **Feb. 5, 1956**: The *Edisto* (q.v. for details) broke away from the *Arneb*, and continued on to Cape Adare. 13 completed building shells at McMurdo had heat. **Feb. 9, 1956**: The first heated "head" was completed at McMurdo, and the permanent mess hall was completed. **Feb. 11, 1956**: The tank farm was completed at AirOpFac McMurdo, and a pipeline laid to it across the bay ice. **Feb. 12, 1956**: The *Nespelen* fueled the tank farm, then left, without escort, for NZ. The *Wyandot* also left. **Feb. 13, 1956**: The garage shell at McMurdo was completed. **Feb. 15, 1956**: The Navy issued a call for volunteers for the 1957 winter. They got no takers. **Mid-Feb. 1956**: The *Wyandot* sailed for NZ, and then to Norfolk. **Feb. 19, 1956**: The *Edisto* returned to McMurdo, and that evening sailed for NZ, leaving the *Eastwind* the only Task Force 43 vessel at McMurdo. **Feb. 20, 1956**: The *Glacier* left Christchurch, NZ, towing the *YOG-70*, bound for McMurdo, via a mail drop at Campbell Island. **Feb. 29, 1956**: 29 buildings dotted the McMurdo landscape. **March 2, 1956**: The *Glacier*, towing the *YOG-70*, arrived at McMurdo, and, after casting off the tow, and unloading, began to smash a way through the ice to Winter Quarters Bay, where it was hoped that the YOGs would be moored for the 1956 winter. They were actually moored in Arrival Bay (*see* ***YOG-34*** for details). **March 9, 1956**: Dufek praised everyone, then he, the *Glacier*, and the *Eastwind* left for Wellington, NZ, leaving 93 men behind. **March 12, 1956**: Lt. Canham gave Father Condit permission to build Chapel of the Snows. **March 29, 1956**: OpDF I ended when the last ship left Antarctica. It had built the two stations, and stockpiled 500 tons of cargo for Pole Station and Byrd Station, both to be built the following season. For more in-depth study *see* **McMurdo**; **Byrd Station**; **Dufek**; **Little America V**; **Seabees**; **United States Naval Support Force, Antarctica**; **VX-6**; **Williams Field**.

Operation Deep Freeze II. 1956–57. As early as Jan. 1956 it was already being called Operation Deep Freeze II. **Oct. 4, 1956**: OpDF II began, again led by Adm. Dufek, this time with 3400 men, and 11 ships: the *Glacier*, the *Atka*, the *Arneb*, the *Staten Island*, the *Northwind*, the *Wyandot*, the *Curtiss*, the *Towle*, the *Nespelen*, the *Greenville Victory*, and the *Private Joseph F. Merrell*. **Oct. 5, 1956**: The *Glacier* left Valparaíso. The mission was to build 5 new stations, and have them fully functional by July 1, 1957 (the beginning of IGY). **Oct. 6, 1956**: NZ was full of U.S. planes and personnel, including Admiral Dufek. **Oct. 16, 1956**: Dufek flew on the first flight from Christchurch, NZ, in an R5D piloted by Hank Jorda. **Oct. 17, 1956**: Dufek arrived at 7.35 A.M., on a clear day, with 2400 feet to spare, bringing with him 500 pounds of mail. Dr. Bucky Harris came in on that flight too. **Oct. 18, 1956**: The 2nd plane in from Christchurch, a P2V flown by Lt. David Carey, arrived at McMurdo in bad shape, and crash landed. Carey, radioman Charles S. Miller, and engineer Marion O. Marze were killed instantly. Ray Hudman, U.S. Marines, died a few hours later. Also in the plane were air controlman 1st class John McCoy and radioman Richard Lewis. Coming in fast behind the crashed P2V was Ed Ward flying a Skymaster, with Hank Hansen as co-pilot, and Dick Swadener as navigator. There was also a reporter on board. They had been in the air 14 hours, it had been a hairy flight, and now they were almost out of gas and had about 175 yards visibility. Ed requested a straight-in landing, but then, when he was 50 feet above the runway, he saw the P2V miss the runway, and so he started circling again. This would take 6 minutes of fuel he didn't have. Don Guy, the UP reporter, was on that flight. *See* **Deaths**, 1956. **Oct. 18-19, 1956**: Four R4Ds came in, in waves, from Dunedin, NZ to McMurdo. They would normally have come from Wigram Field, in Christchurch, but from Dunedin it was shorter hop, in order to conserve fuel. Harvey Speed flew one, and Gus Shinn flew another. Roy Curtis flew the last one in, in a whiteout. Among the passengers was John Hanessian, head of the IGY Antarctic staff, and several press boys. **Oct. 20, 1956**: The first of 8 Globemaster C-124 transport planes left NZ, bound for McMurdo Sound. Col. Horace A. Crosswell, pilot. Also on this flight was Major Merle Dawson, trailblazer. **Oct. 21, 1956**: The first Globemaster arrived at McMurdo, the biggest plane ever to land in Antarctica to that date. Wheels only, no skis. The 2nd Globemaster left NZ, carrying, among others, Paul Siple, who had left Boston on Oct. 4, 1956. The flight took less than 12 hours. Both Globemasters carried an Otter. Altogether, on these first Globemaster flights, 44 Americans flew into McMurdo, with 14 tons of cargo. **Oct. 25, 1956**: Gus Shinn made the first inland flight of the season, in a twin-engine transport, with Doug Cordiner and Trigger Hawkes. They flew to the bottom of the Beardmore Glacier, scouting for a place to make an airdrop for the planned Beardmore Glacier Camp. **Oct. 26, 1956**: A Globemaster, piloted by Maj. Gen. Chester McCarty, dropped a Grasshopper and 5 tons of oil fuel at the Pole, the first (real) airdrop ever at the Pole. Trigger Hawkes was also on this flight. **Oct. 29, 1956**: The *Glacier* arrived, the first OpDF II ship in at McMurdo. It was the earliest date ever in the season that a ship had got through the pack-ice, beating the *Kainan Maru*'s record of Dec. 7, 1912. Gus Shinn and Ed Frankiewicz flew 4 men to Beardmore Glacier Camp (or rather that is the camp that these 4 men would now build; there was nothing there when they arrived). The 4 were Mike Baronick, Ron Hill, Dick Prescott, and John Zegers. This team would be increased to 7 men. There would be two tents. **Oct. 31, 1956**: Dufek flew to the South Pole to scout out a site for the South Pole Station (*see* **South Pole Station**). This was built that season, as were Wilkes, Ellsworth, Hallett, and Byrd Stations. The Seabees got hazardous pay this season (whereas they hadn't for OpDF I). For dates of Pole Station's construction, *see* **South Pole Station**. **Nov. 3, 1956**: The *Staten Island* (Francis Gambacorta, skipper) left Davisville, RI, heading toward the Panama Canal. **Nov. 4, 1956**: The USAF moved its personnel back to NZ, taking 10 Seabees back with them for furlough. **Nov. 9, 1956**: The *Wyandot* (James Elliott, skipper) left Davisville, RI, heading toward the Panama Canal. She would meet up with the *Staten Island* there, and the two ships, which comprised Task Force 43.7 under the command of Capt. Edwin McDonald, would sail together down the west coast of South America, through Valparaíso, Punta Arenas, across the Drake Passage, to the Weddell Sea, to set up Ellsworth Station. **Nov. and Dec. 1956**: The setting up of Pole Station (*see* **South Pole Station** for details). **Nov. 13, 1956**: The Globemasters began landing at McMurdo, from NZ. **Dec. 4, 1956**: Six tractors left Little America to establish Byrd Station. Vic Young led the party. **Dec. 10, 1956**: The *Towle* and the *Nespelen* left NZ, bound for Antarctica. **Mid-Dec. 1956**: The Globemasters were withdrawn from Antarctica to NZ. **Jan. 28, 1957**: Charlie Bentley's Traverse to Byrd Station set out from Little America. **Jan. 29, 1957**: Lt. Robert K. White led the tractor train out from Little America, hard on the heels of Bentley's party, all bound for Byrd Station. **Feb. 11, 1957**: Ellsworth station was commissioned. **Feb. 25, 1957**: Dufek and his staff left Antarctica. **April 25, 1957**: End of OpDF II.

Operation Deep Freeze III. 1957–58. Began in Nov. 1957, again led by Adm. Dufek, and at the end of it he handed over as commander to Adm. Tyree. The ships were: *Glacier*, *Greenville Victory*, *Atka*, *Towle*, *Burton Island*, *Nespelen*, *Arneb*, *Wyandot*, *Westwind*, and *Brough*. Little Rockford Station was established. Ellsworth Station was transferred to Argentina, and Wilkes to Australia.

Operation Deep Freeze IV. 1958-59. Led by Adm. Tyree. The ships were: *Glacier*, *Brough*, *Edisto*, *Staten Island*, *Northwind*, *Alatna*, *Arneb*, *Wyandot*, and *Nespelen*. Capt. Edwin MacDonald was in charge of ships. **Operation Deep Freeze 60**. 1959-60. Led by Adm. Tyree. The ships were: *Eastwind*, *Arneb*, *Atka*, *Glacier*, *Peterson*, *Burton Island*, *Towle*, and *Alatna*. Capt. Edwin MacDonald was in charge of ships. **Operation Deep Freeze 61**. 1960-61. Led by Adm. Tyree. The ships were: *Eastwind*, *Edisto*, *Glacier*, *Staten Island*, *Wilhoite*, *Alatna*, *Arneb*, *Towle*, *Greenville Victory*. Capt. Edwin MacDonald was in charge of ships. **Operation Deep Freeze 62**. 1961-62. Led by Adm. Tyree. The ships were: *Atka*, *Burton Island*, *Eastwind*, *Glacier*, *Chattahoochee*, *Elkhorn*, *Mirzar*, *Arneb*, *Private Joseph F. Merrell*, and *Vance*. Capt. Edwin MacDonald was in charge of ships. The nuclear power plant at McMurdo was installed. **Operation Deep Freeze 63**. 1962-63. On Nov. 26, 1962 Adm. Tyree handed over to Adm. James R. Reedy, who led this one. The ships were: *Glacier*, *Edisto*, *Eastwind*, *Staten Island*, *Eltanin*, *Chattahoochee*, *Mirfak*, *Arneb*, *Tombigbee*, and *Private Joseph F. Merrell*. **Operation Deep Freeze 64**. 1963-64. Led by Adm. Reedy. The ships were: *Glacier*, *Atka*, *Burton Island*, *Eastwind*, *Wyandot*, *Chattahoochee*, *Private J.F. Merrell*, and *Towle*. C130E Hercules aircraft used fo the first time. **Operation Deep Freeze 65**. 1964-65. Led by Adm. Reedy. The ships were: *Chattahoochee*, *Private J.F. Merrell*, *Towle*, *Glacier*, *Mills*, *Edisto*, *Staten Island*, *Wyandot*, and *Eastwind*. **Operation Deep Freeze 66**. 1965-66. In April 1965 Adm. Reedy had handed over to Adm. Fred Bakutis, who led this one. The ships were: *Glacier*, *Burton Island*, *Atka*, *Eastwind*, *Calcaterra*, *Alatna*, *Petrarca*, *Towle*, *Thomas J. Gary*, *Wyandot*, and *Eltanin*. **Operation Deep Freeze 67**. 1966-67. Led by Adm. Bakutis, who on Feb. 25, 1967 handed over to Adm. J. Lloyd Abbot, Jr. The ships were: *Glacier*, *Westwind*, *Eastwind*, *Staten Island*, *Eltanin*, *Wyandot*, *Towle*, *Alatna*, *Thomas J. Gary*, *Mills*. **Operation Deep Freeze 68**. 1967-68. Led by Adm. Abbot. The ships were: *Glacier*, *Westwind*, *Southwind*, *Burton Island*, *Eltanin*, *Wyandot*, *Towle*, and *Alatna*. **Operation Deep Freeze 69**. 1968-69. Led by Adm. Abbot. The ships were: *Hero*, *Eltanin*, *Glacier*, *Edisto*, *Southwind*, *Burton Island*, *Wyandot*, *Towle*, and *Alatna*. **Operation Deep Freeze 70**. 1969-70. On June 19, 1969 Adm. Abbot had handed over to Rear-Adm. David Fyfe Welsh, who led this one. The ships were: *Hero*, *Edisto*, *Eltanin*, *Glacier*, *Burton Island*, *Wyandot*, *Towle*, and *Maumee*. **Operation Deep Freeze 71**. 1970-71. Led by Adm. Welch. The ships were: *Hero*, *Towle*, *Burton Island*, *Staten Island*, *Wyandot*, and *Mauemee*. **Operation Deep Freeze 72**. 1971-72. On Aug. 16, 1971 Adm. Welch had handed over to Adm. Leo B. McCuddin, who led this one. The ships were: *Hero*, *Eltanin*, *Towle*, *Wyandot*, *Maumee*, *Staten Island*, *Northwind*, and *Southwind*. **Operation Deep Freeze 73**. 1972-73. In 1972 Adm. McCuddin had handed over to Capt. Alfred N. Fowler, who led this one. The ships were: *Hero*, *Towle*, *Maumee*, *Burton Island*, *Glacier*, *Northwind*, and *Mirfak*. **Operation Deep Freeze 74**. 1973-74. Led by Capt. Fowler. The ships were: *Hero*, *Towle*, *Staten Island*, *Maumee*, and *Glacier*. **Operation Deep Freeze 75**. 1974-75. On June 25, 1974 Capt. Fowler had handed over to Capt. Eugene W. Van Reeth, who led this one. The ships were: *Hero*, *Towle*, *Burton Island*, *Maumee*, and *Glacier*. **Operation Deep Freeze 76**. 1975-76. Led by Capt. Van Reeth. The ships were: *Hero*, *Towle*, *Burton Island*, *Maumee*, and *Glacier*. **Operation Deep Freeze 77**. 1976-77. Led by Claude H. Nordhill. The ships were: *Hero*, *Melville*, *Schuyler Otis Bland*, *Maumee*, and *Northwind*. **Operation Deep Freeze 78**. 1977-78. Led by Claude H. Nordhill. The ships were: *Hero*, *Melville*, *Burton Island*, *Maumee*, *Glacier*, *Schuyler Otis Bland*, and *Polar Star*. **Operation Deep Freeze 79**. 1978-79. Led by Darrel E. Westbrook, Jr. The ships were: *Hero*, *Melville*, *Knorr*, *Schuyler Otis Bland*, *Polar Star*, *Maumee*, and *Glacier*. **Operation Deep Freeze 80**. 1979-80. Led by Darrel E. Westbrook, Jr. The ships were: *Hero*, *Towle*, *Maumee*, *Glacier*, *Northwind*, and *Polar Sea*. **Operation Deep Freeze 81**. 1980-81. Led by Jare M. Pearigen. The ships were: *Hero*, *Melville*, *Polar Star*, *Southern Cross*, *Maumee*, and *Glacier*. **Operation Deep Freeze 82**. 1981-82. Led by Jare M. Pearigen. The ships were: *Hero*, *Southern Cross*, *Yukon*, *Glacier*, and *Polar Sea*. **Operation Deep Freeze 83**. 1982-83. Led by Brian Hall Shoemaker. The ships were: *Hero*, *Polar Star*, *Southern Cross*, *Maumee*, and *Glacier*. **Operation Deep Freeze 84**. 1983-84. Led by Brian Hall Shoemaker. The ships were: *Hero*, *Knorr*, *Melville*, *Westwind*, *Maumee*, *Polar Sea*, and *Southern Cross*. **Operation Deep Freeze 85**. 1984-85. Led by Brian Hall Shoemaker. The ships were: *Polar Star*, *Maumee*, *Glacier*, *Green Wave*, and *Polar Duke*. **Operation Deep Freeze 86**. 1985-86. Led by David A. Srite. The ships were: *Polar Star*, *Paul Buck*, *Glacier*, *Green Wave*, *Polar Duke*, and *Melville*. **Operation Deep Freeze 87**. 1986-87. Led by David A. Srite. The ships were: *Polar Sea*, *Gus W. Darnell*, *Glacier*, *Green Wave*, and *Polar Duke*. **Operation Deep Freeze 88**. 1987-88. Led by Dwight D. Fisher. The ships were: *Polar Star*, *Gus W. Darnell*, *Green Wave*, *Polar Duke*, and *Polarsirkel*. **Operation Deep Freeze 89**. 1988-89. Led by Dwight D. Fisher. The ships were: *Polar Sea*, *Green Wave*, *Paul Buck*, and *Polar Duke*. **Operation Deep Freeze 90**. 1989-90. Led by Joseph D. Mazza. The ships were: *Polar Star*, *Green Wave*, *Paul Buck*, and *Polar Duke*. **Operation Deep Freeze 91**. 1990-91. Led by Dwight D. Fisher. The ships were: *Polar Sea*, *Green Wave*, and *Polar Duke*. **Operation Deep Freeze 92**. 1991-92. Led by Dwight D. Fisher. The ships were: *Polar Sea*, *Richard G. Matthiesen*, and *Green Wave*. **Operation Deep Freeze 93**. 1992-93. Led by Dwight D. Fisher. The ships were: *Polar Star*, *Green Wave*, *Polar Duke*, and *Nathaniel B. Palmer*. **Operation Deep Freeze 94**. 1993-94. Led by Dwight D. Fisher. The ships were: *Polar Sea*, *Green Wave*, and *Polar Duke*. **Operation Deep Freeze 95**. 1994-95. The ships were: *Polar Sea*, *Polar Star*, *Nathaniel B. Palmer*, *Polar Duke*, *Green Wave*, and *Richard G. Matthiesen*. **Operation Deep Freeze 96**. 1995-96. The ships were: *Polar Star*, *Nathaniel B. Palmer*, *Green Wave*, and *Polar Duke*. **Operation Deep Freeze 97**. 1996-97. The last season that the U.S. Navy was involved in Antarctica. The ships were: *Polar Sea*, *Nathaniel B. Palmer*, and *Green Wave*. **Operation Deep Freeze 98**. 1997-98. The ships were: *Polar Sea*, *Nathaniel B. Palmer*, and *Green Wave*. **Operation Deep Freeze 99**. 1998-99. The ships were: *Polar Sea*, *Nathaniel B. Palmer*, *Green Wave*, and *Laurence M. Gould*. **Operation Deep Freeze 2000**. 1999-2000. The ships were: *Polar Star*, *Nathaniel B. Palmer*, *Green Wave*, *Richard G. Matthiesen*, and *Laurence M. Gould*. **Operation Deep Freeze 01**. 2000-01. The ships were: *Polar Sea*, *Nathaniel B. Palmer*, *Green Wave*, and *Richard G. Matthiesen*. **Operation Deep Freeze 02**. 2001-02. The ships were: *Polar Sea*, *Nathaniel B. Palmer*, *Green Wave*, and *Richard G. Matthiesen*. **Operation Deep Freeze 03**. 2002-03. The ships were: *Polar Sea*, *Nathaniel B. Palmer*, *Green Wave*, and *Richard G. Matthiesen*. **Operation Deep Freeze 04**. 2003-04. The ships were: *Polar Sea*, *Nathaniel B. Palmer*, *Green Wave*, and *Richard G. Matthiesen*. **Operation Deep Freeze 05**. 2004-05. The ships were: *Polar Sea*, *Nathaniel B. Palmer*, *Green Wave*, and *Richard G. Matthiesen*. **Operation Deep Freeze 06**. 2005-06. The ships were the *Polar Sea* and the *Nathaniel B. Palmer*, assisted by the chartered *Krassin* and *Kapitan Khlebnikov*. **Operation Deep Freeze 07**. 2006-07. The ships were the *Polar Sea* and *Nathaniel B. Palmer*, assisted by the chartered *Krassin*. **Operation Deep Freeze 08**. 2007-08. The ships were the *Polar Sea* and the *Nathaniel B. Palmer*.

Operation Deep Sweep. On Aug. 19, 1983, the *Samuel P. Lee,* under the command of Capt. McGlenahan, left California to begin a 12 million dollar operation that would spend a complete year at sea, conducting extensive geophysical examinations in the Pacific Ocean, from Pole to Pole, to look for sources of energy and minerals at the bottom of the ocean, and to collect scientific data. In the austral summer of 1983-84 she found herself (by pre-arrangement) in NZ, and from there she headed for Antarctic waters, first off Wilkes Land, the Adélie Coast, and George V Land, and then through the Ross Sea to McMurdo. This was the first time the USGS Marine Geology Branch had ever been in Antarctica. On Feb. 1, 1984 the *Lee* arrived at the edge of a very thick pack-ice, 6 miles from McMurdo. She was late making her rendezvous with the *Southern Cross* and the *Polar Sea*, the two ships that would escort her into McMurdo. She waited 12 hours for the *Polar Sea* to reappear, but even then the cutter couldn't get her through to McMurdo. During the re-fueling maneuver on Feb. 2, 1984, her rudder was damaged, but they didn't realize the extent of it until later. On Feb. 4, 1984 they were conducting survey work in the Ross Sea when their hydrophone streamer got snagged by a jagged iceberg, and was sliced in two, lost for ever but for the smart maneuver

of Capt. McGlenahan, who got back to the berg just in time to snare the streamer before it sank. If it had sunk, the expedition might have been canceled. As it was, with the damage done to the streamer, the expedition was somewhat hampered from then on. In April 1984, after repairs, she left Antarctica.

Operation Gangotri. Indian oceanographic, glaciologic, meteorologic, seismologic, and magnestism research expedition sent to the Enderby Land coast, on the hired ship *Polarsirkel* in 1982. The 20-man team put ashore at 70°45' S, 11°38' E, on the Princess Astrid Coast, and this landing place is now a historic site (q.v.). They set up a temporary camp at 70°03' S, 41°02' E, and began operations in Jan. 1982. Data were transmitted back to India via satellite, and they left behind weather stations. *See* **India**.

Operation Highjump. 1946-47. Correct name — U.S. Navy Antarctic Developments Project. It was originally going to be called Operation Pole Vault, but then that was thought to be too revealing (there were Russians out there, somewhere, everywhere, listening). OpHJ was the largest assault on Antarctica to that date. It consisted of 13 sea vessels (including an aircraft carrier and a submarine), 23 aircraft (19 of them fixed-wing, and 4 helos), 8 Weasels, 10 caterpillar tractors, Cletracs, jeeps, and tracked landing vehicles (LVTs). Over 4,700 men took part, and there were 11 journalists, 24 civilian scientists and observers, and 16 military observers. Icebreakers and helicopters were used in Antarctica for the first time. Bigger than all previous Antarctic expeditions put together, it was basically an aerial expedition. Its mission was to train personnel and to test equipment under Antarctic conditions, to consolidate and extend the basis for U.S. claims in Antarctica (should U.S. claims ever be made), plan for bases, carry out air operations, and conduct scientific studies. Admiral Byrd was technical leader (officer-in-charge) of OpHJ, and Admiral Cruzen was tactical leader and commanding officer of Task Force 68 (q.v.), the U.S. Navy armada that would make the expedition possible. Trigger Hawkes headed the air squadron. **Aug. 26, 1946**: The operation was established. Only 7 weeks later it was under way, and Task Force 68 was ready to sail — a phenomenally fast piece of organization. The operation was split into 3 groups (each of which would deploy around the Antarctic continent), each group organized around a ship with aircraft-carrying facilities. The Central Group (Task Group 68.1), led by Cruzen, had 2 icebreakers (the *Burton Island*, commanded by Jack Ketchum; and the *Northwind*, commanded by Charles W. Thomas), 2 supply ships (the *Yancey*, commanded by J.E. Cohn; and the *Merrick*, commanded by John J. Hourihan), a communications ship (the *Mount Olympus*, commanded by R.R. Moore), and a submarine (the *Sennet*, commanded by Joseph B. Icenhower). The *Burton Island* and the *Northwind* each had a single-engine amphibian plane and a helicopter. The *Mount Olympus* carried a Norseman ski plane, a helo, and 2 OY Grasshoppers. The Western Group (Task Group 68.2), led by Charles Bond, had the *Currituck* (commanded by John E. Clark), the *Henderson* (commanded by Claude Fenn Bailey), and the *Cacapon* (commanded by R.A. Mitchell). The *Currituck* carried 3 Martin Mariner seaplanes — *Baker-1*, *Baker-2*, and *Baker-3*. She also carried a 2-engine seaplane and 2 helos. The Eastern Group (Task Group 68.3), led by George Dufek, had the *Pine Island* (commanded by Henry Howard Caldwell), the *Brownson* (commanded by H.M.S. Gimber), and the *Canisteo* (commanded by Edward K. Walker). The *Pine Island* carried 3 Martin Mariner seaplanes — *George-1*, *George-2*, and *George-3*. She also carried a 2-engine seaplane and 2 helos. The Western Group was to go around the continent until it met the Eastern Group at the Ross Sea. The Eastern Group would set out from 90°E and go around the continent the other way until it met the Western Group. **Dec. 2, 1946**: The first ships left Norfolk, heading south: the *Mount Olympus* (the flagship), the seaplane tender *Pine Island*, the icebreaker *Northwind*, and the destroyer *Brownson*. They were to head down through the Panama Canal, meeting up at Balboa with the *Canisteo* and the submarine *Sennet*. The *Currituck* and the *Henderson* sailed from San Diego, as did the *Cacapon* from San Pedro, and the *Yancey* from Port Hueneme, Calif. **Dec. 5, 1946**: The *Merrick* sailed from the USA. **Dec. 8, 1946**: The *Mount Olympus* tied up at Balboa after passing through the Panama Canal. **Dec. 9, 1946**: The slower *Northwind* passed through the Panama Canal. **Dec. 10, 1946**: All ships left Balboa. **Dec. 23, 1946**: The Western Group saw their first iceberg. **Dec. 24, 1946**: The Eastern Group saw their first iceberg, in 62°41' S, 99°30' W. **Dec. 25, 1946**: The Eastern Group crossed the Antarctic Circle, heading south. **Dec. 26, 1946**: The first Martin Mariner was launched, unsuccessfully, from the *Pine Island*. **Dec. 29, 1946**: *George-1* flew off the *Pine Island*, with Dufek aboard. **Dec. 30, 1946**: *George-1* crashed and killed 3 (*see* **Deaths**, 1946). The ships of Central Group met at Scott Island. **Dec. 31, 1946**: The Central Group entered the astonishingly thick Ross Sea pack-ice. **Jan. 1, 1947**: Bunger's 4½-hour flight over the coast and the Balleny Islands. **Jan. 2, 1947**: Byrd left Norfolk bound for Antarctica aboard the *Philippine Sea*. **Jan. 4, 1947**: Two planes photographed the coast of Victoria Land. **Jan. 5, 1947**: Bunger's flight over Victoria Land in *Baker-3*. *George-3* flew off the *Pine Island* to look for *George-1*. **Jan. 6, 1947**: Kreitzer's flight over Victoria Land in *Baker-1*. **Jan. 11, 1947**: *George-2* flew off the *Pine Island* in a new search for *George-1*. **Jan. 12, 1947**: Survivors of the crashed *George-1* were rescued by the *Pine Island*. **Jan. 14, 1947**: The Central Group broke through into the Ross Sea itself. **Jan. 15, 1947**: The Central Group arrived at the Bay of Whales. For the next 3 days the *Northwind* smashed up about 15 million tons of pack-ice in the Bay of Whales. **Jan. 16, 1947**: Cdr. Clifford M. Campbell landed a party at Little America. **Jan. 17, 1947**: Paul Siple landed a party at Little America, and work on Little America IV began. The *Brownson* joined the *Pine Island*, and they headed south. **Jan. 18, 1947**: The *Yancey* moored at the Bay of Whales, and unloading at Little America began. In only 7 weeks the Central Group would establish Little America IV at the Bay of Whales, and an airfield was also built there. **Jan. 19, 1947**: The *Merrick* moored in the Bay of Whales. The helo in which Dufek was an observer crash landed; no one was hurt. **Jan. 22, 1947**: The *Mount Olympus* moored in the Bay of Whales. Bunger and Rogers of the Western Group flew 2 planes over Wilkes Land. **Jan. 23, 1947**: *George-2* and *George-3* photographed Marie Byrd Land. **Jan. 25, 1947**: The aircraft carrier *Philippine Sea*, commanded by Delbert S. Cornwell, and with Admiral Byrd aboard, reached Scott Island. **Jan. 26, 1947**: Kreitzer flew *Baker-1* as far east as Commonwealth Bay. *George-2* and *George-3* photographed Marie Byrd Land again. **Jan. 27, 1947**: Rogers and Bunger flew their planes over Wilkes Land again. The *Pine Island* met and re-fueled from the *Canisteo*. An iceberg entered the Bay of Whales, and forced the temporary withdrawal of the 3 ships servicing Little America IV. **Jan. 28, 1947**: Rogers and Kreitzer flew over Wilkes Land. **Jan. 29, 1947**: Byrd took off from the *Philippine Sea* in a plane, for Little America, 600 miles away. Trigger Hawkes was at the controls. Another plane accompanied them. This was a first — two airplanes flying off a carrier in Antarctica. This ship carried six R4D Dakota airplanes (goony birds). "Well, back home again," said Byrd as he landed. **Jan. 30, 1947**: Rogers and Bunger flew over Wilkes Land again. The *Pine Island* abandoned an attempt to reach Peter I Island. The remaining R4Ds flew off the *Philippine Sea* to Little America, and the *Philippine Sea* headed for home. **Feb. 1, 1947**: Kreitzer flew over the Budd Coast. **Feb. 2, 1947**: Bunger and Kreitzer flew over Wilkes Land. Kreitzer discovered the Windmill Islands. **Feb. 6, 1947**: The 3 ships in the Bay of Whales sailed for home. The *Burton Island* arrived at the Ross Sea pack-ice, having come from the USA. **Feb. 8, 1947**: *George-2* and *George-3* attempted a flight over Charcot Island. **Feb. 9, 1947**: *George-2* flew over Marguerite Bay, and *George-3* flew over Charcot Island and Alexander Island. **Feb. 10, 1947**: Dufek unsuccessfully attempted a landing on Charcot Island. The *Currituck* met the British whaler *Balaena* at the edge of the pack-ice. **Feb. 11, 1947**: Bunger and Rogers flew over Wilkes Land. Bunger discovered the Bunger Hills (or Oasis, as they called it then). This "Shangri-la" caused a sensation back home. **Feb. 12, 1947**: The Rockefeller Mountains Tractor Party set out from Little America. **Feb. 13, 1947**: Bunger landed in the Bunger Hills. Kreitzer aerially explored Enderby land. **Feb. 14, 1947**: The first of 10 long flights took off from Little America IV. **Feb. 15, 1947**: At 11 A.M. Byrd set out on his 2nd flight over the Pole (his first had been in 1929, and his 3rd would be later, during OpDF, although he never — ever in his life — actually set foot at the Pole itself). He, and another plane, flew for 12 hours at an average speed of 144 mph,

and circled the Pole for about 10 minutes at 12,000 feet above sea level (i.e., 2000 feet above the Polar ice). He dropped 54 flags over the Pole in a carton (all the UN countries). The temperature in the planes was -72°F. No heating, no oxygen. For crews and futher details of this flight, *see* **South Pole**. **Feb. 16, 1947**: The *Burton Island* arrived at McMurdo Sound. **Feb. 17, 1947**: Aerial photography of Victoria Land began. **Feb. 18, 1947**: The Rockefeller Mountains Tractor Party left the mountains, heading back to Little America. **Feb. 19, 1947**: The tractor party arrived back at Little America. That day 4 planes set off from Little America, bound for McMurdo Sound. Three had to turn back. The plane that made it was piloted by Lt. Erwin Spencer (of Dearborn, Mich.), and the co-pilot was Trigger Hawkes. They circled Mount Erebus, and then returned to base. **Feb. 20, 1947**: The *Burton Island* left McMurdo Sound. Admiral Cruzen visited Scott's Hut, at Hut Point. That day, an R4D, piloted by Trigger Hawkes, flew over the Cruzen Range for the first time. Co-pilot and navigator was Lt. Cdr. Herbert Salyer. **Feb. 22, 1947**: The *Burton Island* arrived at the Bay of Whales to take the Central Group back to NZ. Kreitzer flew over the Sør Rondane Mountains. Rogers flew along the coast of Enderby Land. **Feb. 23, 1947**: The *Burton Island* sailed out of the Bay of Whales, with all aboard. **Feb. 26, 1947**: The *Burton Island* and the *Mount Olympus* rendezvoused at Scott Island. Rogers flew over Enderby Land. **Feb. 27, 1947**: The *Pine Island* crossed the Antarctic Circle. Bunger and Kreitzer flew over Enderby Land. **March 1, 1947**: *George-1* and *George-2* launched over Queen Maud Land. The Western Group quit operations. **March 2, 1947**: *George-1* and *George-2* launched again over Queen Maud Land. **March 3, 1947**: All ships of the Western Group rendezvoused. **March 4, 1947**: The Eastern Group quit operations, and, under Dufek, left Antarctica. **March 7, 1947**: Byrd arrived at Wellington, NZ, on the *Mount Olympus*. Accompanying him were the *Burton Island* and the *Northwind*. **March 14, 1947**: Petty Officer Joseph L. Hollingsworth, 24, and seaman James Eason, 19, both from the Currituck, were killed in a car crash in Sydney. **April 14, 1947**: Byrd and Cruzen arrived back in Washington, DC. As a sort of summary of the expedition, the Eastern Group was the first party to set foot on Ross Island since 1917. Earle Perce was already well known, but several other pilots came to prominence on this expedition: Lt. Cdr. David E. Bunger (the most well-known at the time, due to his discovery of the Bunger Oasis), Lt. Conrad S. "Gus" Shinn (the most famous over the years), Lt. Cdr. William M. "Trigger" Hawkes, Lt. Cdr. William J. Rogers, Jr., Lt. W.R. Kreitzer, Lt. Fred L. Reinbolt, Lt. Cdr. James C. McCoy, Maj. Robert R. Weir, Lt. George H. Anderson, Capt. Eugene C. McIntyre, Lt. Robert J. McCarthy, Lt. George W. Warden, Lt. (jg) William K. Martin, Lt. (jg) Erwin Spencer, Lt. (jg) Harry W. Summers, Lt. Robert H. Gillock, Lt. James C. Jennings, Lt. James C. Stevenson, Lt. Cdr. John D. Howell, Lt. (jg) Ralph P. LeBlanc, Lt. (jg) William H. Kearns, Jr., Lt. (jg) James L. Ball, Lt. (jg) Robert G. Goff, and 1st Lt. Pitman. Aide and chief of staff was Capt. Robert S. Quackenbush, Jr., USN, and chief of staff Antarctic Developments Project was Capt. H.R. Horney, USN. Capt. George F. Kosco was in charge of aerology and special projects. Capt. M.A. Norcross was in charge of logistics. Other names of note: Fred Dustin, Cdr. Clifford M. Campbell, Lt. Cdr. J.C. Heide (hydrographic officer), Lt. Charles C. Shirley (photographic officer), Vernon D. Boyd (transportation officer), John H. Roscoe (photogrammetric officer), Paul Siple (senior representative, War Department — already famous), Bud Waite, A.J.L. Morency (boat maintenance), Murray Wiener (air sea rescue), Capt. C.H. Harrison (meteorologist), Lt. C.A. Schoene (Coast and Geodetic Survey), B.C. Haynes (Weather Bureau), J.R. Balsley and Dr. A.D. Howard (USGS), J.E. Perkins and R.M. Gilmore (Fish and Wildlife Service), Dr. Charles McAdams, and Lt. Halvor Iverson (commander of Underwater Demolition Team 4). John Hostinsky, who had been on the *Bear* during USAS 1939-41, was part of the crew of the *Burton Island*. All in all 49,000 aerial photographs were taken, 60 per cent of the Antarctic continent was photographed aerially on over 100 flight missions, and 350,000 square miles of previously unknown territory was discovered. Byrd was to have led a sequel, Operation Highjump II (q.v.), but it was canceled on Aug. 16, 1949. Instead, and in between Highjump I and the proposed Highjump II, Operation Windmill (OpW) followed, in 1947-48.

Operation Highjump II. 1949-50. Never happened. Task Force 66 would comprise 7 ships, 3500 men, to strengthen the U.S. claim on Antarctica (if such a claim ever became necessary, which it didn't). Byrd, Siple, and Dufek would all operate in the roles they had had during OpHJ 1946-47. Finn Ronne would explore Gould Bay, in the Weddell Sea, for a base site. But the cost of the proposed operation was too high, and it was canceled on Aug. 25, 1949, by the Chief of Naval operations, after spending $1.3 million.

Operation Ice Cube. A yearly NZ operation begun in 1965, and enumerated as Operation Ice Cube I, Operation Ice Cube II, etc. The RNZAF would fly into Williams Field, at McMurdo Station, with mail, passengers, and high priority cargo for Scott Base.

Operation Sea Mob *see* **Pakistan**

Operation Tabarin. 1943-45. A British secret military operation of World War II, and it remains a secret to this day. There are files held by the British government that are not to be released until 2012, and others not until 2032. What is in those files, if anything? Uranium, perhaps? The search for uranium. One does not hold one's breath waiting for such files to be opened, as there is almost always nothing excitingly new in them. But there may be important details about the operation, interesting details. And, after all, who knows! The operation was organized jointly by the Admiralty and the Colonial Office, ostensibly to establish two Antarctic bases, one at Deception Island in the South Shetlands, and another at Hope Bay; to visit Signy Island, and leave a record of the visit; to maintain a watch in the Antarctic during the rest of World War II; to thwart the persistent Argentine and Chilean claims in the area; and to deny to the enemy Antarctic waters and the shelter afforded by abandoned Norwegian whaling stations. The fact that the personnel had time to conduct scientific work was somewhat incidental. Aside from the German menace, there was also the fear that the Japanese might swing around South America and jump the Falklands, to use as a base against Europe. However, a close examination of what we have to research with, has led scholar Alan Carroll of the FIDS to speculate that the whole operation might well have been a disinformation exercise, i.e., to let the Germans think that the Allies had not broken their Shark code. One thing seems certain — Winston Churchill knew nothing of the plan before it was put into effect (he was away, overseas). And besides, what good would 14 men (that's how many wintered-over) have been against German raiders? Lt. Cdr. Jimmy Marr, RNVR, was picked (at a salary of £810 a year) to head Naval Project 475, as it was called then, and, spanning a period of 3 months, 14 recruits — volunteers all — were brought back to London from all over the world, armed forces and civilians. It was very hush-hush, no telling wives, etc. No one was told why they were going south. The Admiralty purchased the small, wooden, square-rigged 250-ton sailing ship (with auxiliary power) *Godthaab* from the Norwegian government in exile in London, and renamed her the *Bransfield*. She would be the vessel that would take the men south. A panel of three experts provided polar guidance for the operation — James Wordie, Brian Roberts, and Neil Mackintosh. Roberts named the scheme Operation Tabarin because, in the planning stages anyway, the office confusion reminded him of the Paris nightclub Bal Tabarin, where espionage had always been rife and the comings and goings of everyone was so confusing. Also, for a company of men about to spend a long, dark, mysterious night in Antarctica, it seemed doubly appropriate. There were originally going to be 15 field operatives, but one, a minerals geologist by name Buck, was sick, and aside from that, once having seen the disrepair of the *Bransfield*, simply refused to go. This left 14: Marr (zoologist and leader), William Flett (geologist), Sub Lt. Gordon Howkins, RNVR (meteorologist), Surgeon Lt. Eric Back (medical officer and meteorologist), Ivan Mackenzie Lamb (botanist), Capt. Andrew Taylor of the Royal Canadian Engineers (surveyor), Fram Farrington and Norman Laythe (radiomen) Lewis "Chippy" Ashton (carpenter), Tom Berry (stores), Jock Matheson and Taff Davies (handyman), and Charlie Smith and Ken Blair (cooks; the cooks at a salary of £225 a year). **Nov. 1943**: The *Bransfield* left Tilbury Docks, under the command of Capt. Victor Marchesi. Taylor and Howkins had been

detached, to ease the pressure on the *Bransfield*, and went to Liverpool, where they boarded a meat ship, the *Marquesa*, bound for Buenos Aires. However, the *Marquesa* did not get very far before she hit a wreck and tore her bottom out. She struggled back to Liverpool, and Taylor and Howkins, after all that, took the train down to Falmouth to wait for the *Bransfield*. **Nov. 29, 1943**: The *Bransfield* had sprung a leak and was in at Portsmouth Docks, and a few days later at Falmouth, the last British port of call before Freetown, Sierra Leone. There was no time to patch her up. The Governor of the Falkland Islands, Sir Allan Cardinall, offered as a replacement vessel the *William Scoresby*, then based at Port Stanley, sweeping mines in the South Atlantic. In addition, the Admiralty chartered the *Fitzroy* from the Falkland Islands Company. So now there were two ships at Stanley, waiting to assist the secret agents if and when they arrived. The difficulty with the *Scoresby* and the *Fitzroy* was that they couldn't winter-over in Antarctica, as had been the plan for the *Bransfield*. **Dec. 14, 1943**: The 14 men, plus Marchesi, hitched a ride from Avonmouth, Bristol, on the South American meat ship *Highland Monarch*, which was going to the Falklands to relieve the British garrison there. **Dec. 25, 1943**: Christmas Day at Gibraltar, on the *Highland Monarch*. **Jan. 26, 1944**: The *Highland Monarch* reached Port Stanley. Marr and Marchesi slept that night at Government House. **Jan. 29, 1944**: The *William Scoresby* (under the command of Marchesi, who also became 2nd-in-command of the operation overall) and the *Fitzroy* (under Capt. Keith Pitt), left Port Stanley together, with the agents on board. Marr led Naval Party 475, and Marchesi led Naval Party 476 (i.e., the crew of the *Scoresby*; although only Marchesi, 1st mate Paddy Fleck, and 2nd mate Ian Graham from the ship, were officially part of Operation Tabarin). *See also* **Mount Roberts**. **Feb. 2, 1944**: The ships arrived, in dense fog, at King George Island. **Feb. 3, 1944**: They sailed past Livingston Island, to Deception Island, where they found that the Union Jack run up the year before by the crew of the *Carnarvon Castle* had been taken down by the Argentines, and an Argentine flag had been painted on one of the oil tanks. So, they ran up the Union Jack again, and, with red oxide, painted over the offending foreign image. **Feb. 6, 1944**: The shore party established Base B, using the old Norwegian whaling buildings at Whaler's Bay. The two ships then left for Hope Bay, to establish the 2nd base, leaving behind Flett, Howkins, Layther, Matheson, and Smith at Deception Island. **Feb. 7, 1944**: While the *Fitzroy* waited 12 miles out (Pitt was justifiably afraid to go in), Marr and Captain David Roberts, of the Falkland Islands Company (he was an observer, at the very least), transferred to the *Scoresby*, and that ship sailed into Hope Bay. However, ice conditions and lack of materials prevented the establishment there of Base D, so the ships sailed south, looking for a new site for the second station. **Feb. 10, 1944**: They examined Charcot Bay and Hughes Bay, but both proved inaccessible. **Feb. 11, 1944**: They arrived at Port Lockroy, on Wiencke Island, in the afternoon. There they found evidence of the *Primero de Mayo*'s landing of a year before. They started unloading supplies for Base A, at Port Lockroy, including the Boulton & Paul huts. **Feb. 15, 1944**: The radio at Base A went into operation, with call sign GNME1. Much of the FIDS radio equipment that had come from England was smashed, and it was only thanks to the co-operation of the radio boys on the *Scoresby* and the *Fitzroy* that they were now able to get a radio base working. Also on board the *Scoresby* was Falkland Islands radio operator Tim Hooley, his wife Gladys, and their 14-year-old daughter Dawn. They were on their way to South Georgia. The two ladies came ashore and Dawn did an impromptu maypole dance around the mast that Farrington had erected. There was also a dog on board. **Feb. 17, 1944**: The ships left Port Lockroy, leaving behind Marr, Back, Lamb, Taylor, Farrington, Davies, Berry, Ashton, and Blair. **March 19, 1944**: The *William Scoresby* returned to Port Lockroy with more stores and supplies, and with Falkland Islander Johnny Blyth to replace Ken Blair. Blair was a bit of a problem. He was black, and it seems for this reason (rather than Marr's official statement that he was not sure if Blair was up to the tasks ahead), it was judged unwise to allow him to winter-over, so he returned to Stanley on the *Scoresby*, and was replaced by Blyth. **March 23, 1944**: The post office was established at Bransfield House. **March 24, 1944**: The *Scoresby* left for the Falkland Islands. On board was Blair. **April 17, 1945**: The *Scoresby* arrived for a final time at Port Lockroy. **April 18, 1945**: The *Scoresby* left Port Lockroy. **April 24, 1944**: BBC Overseas Service for North America blew the secret cover of the operation; while not mentioning the location of the bases, it did tell the world what was happening. These early stages of the operation, and the 1944 winter-over at the two bases, comprised Phase I of Operation Tabarin. Phase II was 1944-45. The main aims of Phase II were to relieve the winterers from Phase I; to have the *Eagle* finally establish the base at Hope Bay (Base D), with Andy Taylor in command and Flett as his 2nd-in-command; and for Marr, Matheson, and three newcomers to set up a new base at Marguerite Bay (which did not happen that year, as it turned out, due to Marr becoming increasingly unwell; the stores proposed for that base were put into Hope Bay). **Nov. 22, 1944**: The *Deseado* left Britain, bound for Lisbon. Aboard were supplies and 25 sledge dogs for Phase II of Tabarin, as well as 5 new men — Sub. Lt. Jock Lockley, RNVR (meteorologist and zoologist; he would be base leader at Port Lockroy), Capt. Freddy Marshall, REME (destined to be zoologist at the new Hope Bay station), Capt. Vic Russell, of the Royal Engineers (also destined for Hope Bay), Lt. David James (to be assistant surveyor at Hope Bay), and Tommy Donnachie (radio operator). They had tried for a 2nd cook, but it wasn't in the budget. **Nov. 25, 1944**: The *Eagle* left Trinidad. She had become the 3rd Tabarin ship, was chartered by the Colonial Office, and was under the command of Capt. Bobby Sheppard. **Dec. 1, 1944**: The *Deseado* left Lisbon, bound for Montevideo. **Dec. 7, 1944**: The *William Scoresby* left Deception Island, bound for Port Lockroy, with supplies. Marchesi came ashore, with the Port Stanley postmaster, an Army dentist, and members of the crew. **Late Jan. 1945**: The *William Scoresby* and the *Fitzroy* returned to relieve the first winterers at the two bases, Base B and Base A. The two ships were accompanied by the *Eagle*. The new wintering party at Base B (Deception Island) were: Sub Lt. Alan Reece, RNVR (meteorologist and base leader), Fram Farrington, Sam Bonner (handyman), and Charlie Smith (cook). **Feb. 3, 1945**: Port Lockroy was relieved, and the men taken off. **Feb. 4, 1945**: The Phase I Port Lockroy winterers were back at Deception Island. The Phase II wintering party at Port Lockroy were: Jock Lockley, Norman Layther (who had come over from Deception Island), John Biggs (handyman), and Frank White (cook). **Feb. 7, 1945**: Andrew Taylor in conference at Base B with Colonial Secretary Bradley and Jimmy Marr. Much to Taylor's surprise, Marr resigned, sick. The disease was never specified. **Feb. 8, 1945**: Marr officially handed over to Taylor as Tabarin commander. Taylor received no instruction of any kind. **Feb. 9, 1945**: Marr left on the *Scoresby*, at 9 in the morning. Taylor never saw Marr again. Marr would go to Port Stanley, and then on to Montevideo, on the *Scoresby*. Strangely (and fortunately), Marr's condition, whatever it was, and of which he had so stoically never complained (or even hardly mentioned), improved greatly once he was out of Antarctica. **Feb. 11, 1945**: The *Eagle* left Deception Island, to establish Hope Bay Station. **Feb. 12, 1945**: The *Eagle* arrived at Hope Bay, this time free of ice. **Feb. 13, 1945**: Unloading began at Hope Bay. **Feb. 20, 1945**: The *Scoresby*, under the command of Marchesi, arrived at Moreton Point, on Sandefjord Bay, on Coronation Island, in the South Orkneys. Their intention was to build Base C (just a hut, really). **Feb. 21, 1945**: The crew of the *Scoresby* worked from 8 in the morning until 9 at night, building Base C. **Feb. 22, 1945**: Base C was finished at 4.30 P.M. It was never occupied due to lack of available personnel. **Feb. 23, 1945**: At 1.55 P.M. the *Scoresby* left Sandefjord Bay, bound for Órcadas Station. However, at 2.40 fog closed in, and at 3.30 P.M. they were anchored again at Sandefjord Bay. **Feb. 24, 1945**: At 1.20 P.M. the fog cleared, and the *Scoresby* set out again, arriving at Órcadas at 6.10 P.M. They gave the Argentine lads 1000 cigarettes and half a sheep. There had been no cigarettes at Órcadas for 4 months, and no fresh meat for even longer. **Feb. 25, 1945**: Marchesi was shown around Órcadas Station. **Feb. 27, 1945**: The radio at Hope Bay went on the air. The 13 boys at Hope Bay were: Andrew Taylor (surveyor, leader, and new overall leader of the operation), Finkle Flett, Dr. Back, Ivan Mackenzie Lamb, Chippy Ashton, Jock Matheson, Tom Berry, Johnny Blyth, and Taffy Davies, as well as newcomers Vic Russell

and David James (surveyors), Tommy Donnachie (radioman), and Freddy Marshall. They also had 25 dogs. **March 1, 1945**: The *Scoresby* left Órcadas Station. **March 8, 1945**: The *Scoresby* arrived at Port Lockroy, bringing the 4th winterer-over, John Biggs. **July 1945**: After the war had ended, responsibility for the British sector of Antarctica was transferred from the War Office to the Colonial Office, and the area became administered by the newly-formed FIDS (*see* **Falkland Islands Dependencies Survey**).

Operation Windmill. 1947-48. Officially called the U.S. Navy Second Antarctic Developments Project. After the operation was over, it was nicknamed "Windmill," due to the large amount of helicopter exploration conducted during it, and also due to the speed — in 23 days they surveyed 9 points along a 600-mile stretch of coastline, as well as landing a team by helicopter at the Bunger Hills and other places. The missions of Operation Windmill were to train personnel and to test equipment in Antarctica, as a follow-up to the objectives and achievements of Operation Highjump the season before, to check on Little America IV, to carry out scientific and exploratory work, and (perhaps most important) to survey from the ground 30 major features (most notably the Bunger Hills) which had been photographed aerially by OpHJ. The 69-day expedition was carried out by Task Force 39, led by Cdr. Jack Ketchum, USN. There were two icebreakers — the *Edisto* (Cdr. Edward C. Folger, commanding) and the *Burton Island* (Cdr. Edwin A. McDonald, commanding). Lt. Cdr. C.L. Browning was chief staff officer, and Capt. Vernon D. Boyd was among the 14 staff officers. There were 3 Army officers and 10 civilians as observers. One of these was cartographer John H. Roscoe. There was no press. The *Burton Island* carried 2 helicopters — a Sikorsky HO3S-1 and a Bell HRL-1. The *Edisto* carried a HO3S-1 helicopter and a Grumman J2F-6 amphibian airplane. 500 men took part in the operation, and 4 Weasels were used as land transport. **Nov. 1, 1947**: The *Edisto* left Boston, for Norfolk, Va. **Nov. 6, 1947**: The *Edisto* left Norfolk bound for the Panama Canal, and then Samoa. **Nov. 20, 1947**: The *Burton Island* left San Pedro, Calif., bound for Samoa. **Dec. 2, 1947**: The *Edisto* arrived at American Samoa. **Dec. 3, 1947**: The *Burton Island* rendezvoused with the *Edisto* at Samoa. **Dec. 5, 1947**: The two icebreakers making up Task Force 39 left Samoa, bound for Antarctica, traveling 20 miles apart. **Dec. 14, 1947**: They sighted their first iceberg of the season, in 60°46' S, 177°29' W. **Dec. 15, 1947**: They encountered light pack-ice. **Dec. 16, 1947**: Their first objective had been to get to Scott Island, but this had to be abandoned 40 miles N of the island due to the by-now much thicker pack-ice. **Dec. 18, 1947**: They were now back out of the pack-ice. **Dec. 24, 1947**: They met the whaler *Southern Harvester* off Wilkes Land. **Dec. 25, 1947**: They reached the pack-ice again, but later that day broke through toward the Davis Sea. **Dec. 26, 1947**: Helicopters discovered open sea for their ships. **Dec. 27, 1947**: The ships got into the Davis Sea and parted company. **Dec. 28, 1947**: The *Burton Island* landed a party on Haswell Island, and the *Edisto* landed a party 25 miles W of Haswell Island. **Dec. 31, 1947**: The Haswell Island party was evacuated. **Jan. 1, 1948**: The *Burton Island* landed a party at the Gillies Islands. **Jan. 2, 1948**: Lloyd Tracy, USN, completed 12 helicopter flights in 36 hours. **Jan. 3, 1948**: All observations of Operation Windmill were completed in the Davis Sea. **Jan. 6, 1948**: The *Edisto* and the *Burton Island* joined up again in the pack-ice and headed toward the Bunger Hills. **Jan. 7, 1948**: They got through the pack ice into the open water. **Jan. 8, 1948**: They headed back into the pack-ice in 102°E. **Jan. 12, 1948**: They landed men in the Bunger Hills. **Jan. 15, 1948**: The Bunger Hills party were evacuated. **Jan. 16, 1948**: The *Edisto* and the *Burton Island* met up again. **Jan. 18, 1948**: The *Edisto* landed a party on the Knox Coast. **Jan. 19, 1948**: The Knox Coast party were evacuated. **Jan. 20, 1948**: The ships left Vincennes Bay. **Jan. 25, 1948**: They met the *Hashedate Maru*. **Jan. 26, 1948**: They turned into the Ross Sea. **Jan. 29, 1948**: They visited Ross Island. **Jan. 30, 1948**: They headed toward Little America. **Jan. 31, 1948**: They moored at the Bay of Whales, and parties went ashore. **Feb. 4, 1948**: The *Edisto* set out north to pave a way through the pack-ice. **Feb. 5, 1948**: The shore parties at Little America were evacuated by the *Burton Island*. **Feb. 6, 1948**: The *Burton Island* joined the *Edisto* in the pack-ice. **Feb. 14, 1948**: Due to pack-ice, Operation Windmill abandoned plans to go to Thurston Island, and instead headed for Peter I Island. **Feb. 16, 1948**: They left Peter I Island for Marguerite Bay. **Feb. 19, 1948**: They arrived at Marguerite Bay. **Feb. 20, 1948**: The two ships freed RARE's expedition ship, *Port of Beaumont, Texas*, from the pack. **Feb. 23, 1948**: The ships, along with the *Port of Beaumont, Texas*, left Antarctica. **Feb. 24, 1948**: The ships separated, Task Force 39 headed for Callao. **March 12, 1948**: Task Force 39 arrived at Callao. **March 17, 1948**: The *Edisto* set sail for Norfolk, Va., and the *Burton Island* for San Pedro, Calif. **March 28, 1948**: The *Edisto* arrived back at Norfolk. **April 1, 1948**: The *Burton Island* arrived back at San Pedro. Operation Windmill was generally a success, and established 17 geodetic positions, and conducted a considerable amount of oceanography.

Operose Peak. 80°06' S, 156°14' E. Rising to 2130 m above Onnum Valley, to the SW of Derrick Peak, in the Britannia Range. The steep lower slopes of the peak are of Beacon sandstone; the summit is made up of a thick dolerite sill. Named by ANCA on March 7, 1991. The word operose is Latin, signifying "laborious," and reflects the slope's steepness. US-ACAN accepted the name in 2000.

OpHJ *see* **Operation Highjump**

Gora Opornaja. 72°42' S, 68°12' E. A nunatak on the SE edge of Barkell Platform, at the N end of the Mawson Escarpment. Named by the Russians.

Mys Opornyj *see* **Opornyy Point**

Opornyy Point. 69°48' S, 13°00' E. An ice point along the W side of the Lazarev Ice Shelf, about 24 km N of Leningradskiy Island, in Queen Maud Land. Mapped by SovAE 1959, and named by them as Mys Opornyj (i.e., "support point") because the ice shelf here rests on the ocean floor. US-ACAN accepted the name Opornyy Point in 1971.

Oppegaard Spur. 84°29' S, 177°22' W. A narrow ridge-type spur with much rock exposure, 3 km (the New Zealanders say about 6 km) long, extending NW from the SW portion of Mount Speed into a tributary of the Kosco Glacier, just to the E of the Kosco, where that glacier enters the Ross Ice Shelf. Discovered and photographed on the flight of Feb. 29-March 1, 1940, during USAS 1939-41. Named by US-ACAN in 1962, for Richard D. Oppegaard, seaman apprentice, USN (*see* **Deaths**, 1957).

Oppkuven *see* **Oppkuven Peak**

Oppkuven Peak. 72°37' S, 0°24' E. A peak, 3 km N of Gavlen Ridge, in Roots Heights, in the S part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Oppkuven. Oppkuven does mean "the ascent peak," but this feature was named for the famous knoll in Norway. US-ACAN accepted the name Oppkuven Peak in 1966.

OpW *see* **Operation Windmill**

Orbansen, Peter John. b. Aug. 24, 1962, Queensland. ANARE builder and carpenter who wintered-over at Casey Station in 1988 and 1990, at Mawson Station in 1993, and at Davis Station in 1997 and 2004. He died at Davis on Nov. 19, 2005, and his body was taken back to Australia on the Aurora Australis. There were rumors of suicide.

Orbell, Reginald John "Jack." b. 1903, NZ. Very early radio pioneer, he served with the RNZ Signal Corps in Europe during World War I. In 1924 he went to England to join General Electric there. On his return to Auckland, he joined the original NZ Broadcasting Company, and in 1927 joined Radio, Ltd., as chief engineer. In Dec. 1929, Byrd invited him to go on the *City of New York* for the 2nd half of ByrdAE 1928-30. The telegram read, "Would you agree join Byrd expedition ship City of New York as assistant radio operator leaving January reply urgent Tapley Dunedin." Tapley was Harold L. Tapley (*see* **Tapley Mountains**). The senior radioman was Lloyd Berkner. Orbell brought with him the "Ultimate" all-wave receiver he had helped develop. He built radios en masse for the troops during World War II, and in 1944 went to England to work in the new radar technology. He died in 1957.

Orca *see* **Killer whale**

Islotes Orca. 64°22' S, 62°58' W. A group of small islands off the SW side of Omega Island, in the Melchior Islands. Named by the Argentines.

Orca Mount. 67°30' S, 68°12' W. A peak, 1 km N of Stork Ridge, on Wright Peninsula, Adelaide Island. So named by UK-APC on Dec. 16, 2003, because of its resemblance in outline to the dorsal fin of a killer whale (*Orcinus orca*).

Orca Seamount. 62°26' S, 58°24' W. A submarine feature in the Bransfield Strait, near King George Island, in the South Shetlands. The name was proposed by Óscar González-Ferrán in 1987, and accepted by international agreement in June 1999. *Orcinus orca* (i.e., the killer whale) is often seen here. There is, somehow, an alternative name for this feature, Viehoff Seamount. This name was proposed by G.B. Udintsev, of the Vernadsky Institute of Chemistry, and was accepted, it seems, by international agreement, in June 1995, named for Thomas Viehoff (1957-1994), a remote sensing specialist in marine sciences. It was studied and mapped by the *Polar Stern* in 2005.

Orca Sound. 61°53' S, 58°00' W. Between False Round Point (on King George Island) and Ridley Island, in the South Shetlands. Named by the Poles in 1984, for *Orcinus orca* (the killer whale).

Base Órcadas *see* **Órcadas Station**

Islas Órcadas del Sur *see* **South Orkneys**

Órcadas Station. 60°45' S, 44°43' W. Year-round Argentine scientific base. At the turn of the 20th century, the head of the Servicio Meteorológico Nacional, in Buenos Aires, was Walter G. Davis, a Bostonian (*see* **Point Davis**). In 1904 he brought over pretty much all of the personnel from the recently dismantled Ben Nevis Observatory, in Scotland, and on Feb. 21, 1904 the Servicio took over ScotNAE 1902-04's Omond House Station on Jessie Bay, Laurie Island, in the South Orkneys, in Jan. 1905 renaming it Base Órcadas (Órcadas means "Orkneys" in Spanish). Since then it has been manned continuously by personnel sent down by (at first) the Argentine Ministry of Agriculture. Each and every year there has been a handful of winterers, including a cook. Since 1951 it has been known officially as Destacamento Naval Órcadas del Sur (Naval Detachment South Orkneys), but more commonly known still as Base Órcadas. Below is a year by year account of the station. First the season is given, with the ship that brought down the new personnel, took the old personnel out, and re-supplied the station. Then comes the winter year, with the personnel (base leader given first; 2nd in command second; cook last). Several of these expedition members, especially the men from the earlier expeditions, have been individually biographized in this book. **1904 winter**: Robert Mossman (Scottish), Hugo Acuña (Argentine), Luciano Valette (Argentine), Edgar Szmula (Polish), and William Smith (Scottish). **1904-05**: The *Uruguay* arrived at Órcadas on Dec. 31, 1904, with the new wintering-over party. **1905 winter**: Otto Diebel (German), James A. Percy (Scottish), Olaf Paulsen (Norwegian), William A. McKinley (Scottish), and W. Thomas (British). Herr Diebel died in Sept. 1905, and was buried next to Allan Ramsay. Mr. Percy took over command. **1905-06**: The *Australasia*. **1906 winter**: Albin Lind (Swedish), Nils Hessling (Swedish), Gastón O. Talamón (Argentine meterologist), and Fredrik Thomander (Swedish). Scotsmen Angus Rankin and William Bee also came down, to set up a new meteorological station on Booth Island. **1906-07**: The *Uruguay*. **1907 winter**: Angus Rankin (Scottish), Olaf Paulsen (Norwegian), John Meldrum (Scottish), and W. Thomas (British). **1907-08**: The *Uruguay*. **1908 winter**: William R. Bruce (Scottish), H. Jennings (British), Sandy Miller (Scottish; *see* **Miller, Ernest Alexander**), and F. Holm (Norwegian). **1908-09**: The *Uruguay*. **1909 winter**: Alexander Lindsay (Scottish), Karl Wasserfall (Norwegian), Harald Wiström (Swedish), and Guido Salvadori (an Argentine, born in Austria). **1909-10**: The *Uruguay*. **1910 winter**: Olaf Paulsen (Norwegian), John Elieson (Norwegian), Sigurd Stranger (Norwegian), H. Christiansen (Swedish), and N. Axel Berg (Danish). Elieson died on Aug. 20, 1910. **1910-11**: The *Uruguay*. **1911 winter**: Five Swedes — Harald Wiström, Karl Stalhandske, Knut Olivecrona, Alfred Wiström, and Ernst W. Andersson. **1911-12**: The *Undine*. **1912 winter**: Sigurd Stranger (Norwegian), Gustaf Adolf Söderström (Swedish), Gustav Erasmie, George Michaelson (Swedish), and N. Axel Berg (Danish). **1912-13**: The *Deutschland*, chartered by the Argentines from Filchner's GermAE 1911-12. **1913 winter**: Five Swedes — Harald Wiström, Karl Stalhandske, Anton Stuxberg, J.L. Berg, and Ernst W. Andersson. Wiström died on May 7, 1913, and his 2nd-in-command, Stalhandske, took over for the rest of the winter. **1913-14**: The *Uruguay*. **1914 winter**: Richard Blüthgen (German), Wilhelm Kopelmann (German), Fritz Fachon (German), Carl E. Berg (Swedish), and N. Axel Berg (Danish). **1914-15**: The *Uruguay*. **1915 winter**: Hartvig Bache-Wiig (Norwegian), Anton Stuxberg (Swedish), Thorleiff Hoxmark (Norwegian), J. Bayon (Swedish), and Ernst W. Andersson (Swedish). Bache-Wiig disappeared on April 30, 1915, and his 2nd-in-command, Stuxberg, took over for the rest of the winter. **1915-16**: The *Uruguay*. **1916 winter**: Olaf Lützow-Holm, C. Stäl von Holstein (Swedish), N. Furnheim (Norwegian), Carl E. Berg, and S. Strid (Swedish). **1916-17**: The *Undine*. The whale catcher *Karl* also visited the station. **1917 winter**: Anton Stuxberg (Swedish), Hugo Valentiner (Danish), Baron Stiernblad (Swedish), J. Schutz (Swedish), and S. Strauss (Swedish). **1917-18**: The *Uruguay*. **1918 winter**: Olaf Lützow-Holm (q.v.), N. Hammaren (Swedish), Thorleif Hoxmark (Norwegian), Carl E. Berg (Swedish), and Otto Haase (German). **1918-19**: The *Uruguay*. **1919 winter**: Hugo Valentiner (Danish), Sigurd Schjaer (Danish), Hans L. Wange (Danish), John Røtter (Norwegian), and Robert Plagge (German). **1919-20**: The *Uruguay*. **1920 winter**: Wilhelm Kopelmann (German), Bruno Collasius (German), Augusto Tapia (Argentine geologist), Alejandro J.B. Boracchia (Argentine observer), and Georg Piper (an Argentine, born in Germany). This was the famous year when Kopelmann had to amputate part of Tapia's anatomy (*see* **Amputations**). **1920-21**: The *Uruguay*. **1921 winter**: Hugo Valentiner (Danish), Carl Budde (Danish), José Reynoso (Argentine), Elías Reynoso Sosa (Argentine), and Robert Plagge (German). **1921-22**: The *Uruguay*. **1922 winter**: Bruno Collasius (German), Sigurd Schjaer (Danish), Hans L. Wange (Danish), A. Antona (naturalized Argentine), and Otto Hess (German). **1922-23**: The *Rosita*. **1923 winter**: Hugo Valentiner (Danish), Ernst Bruhns (German), José Manuel Moneta (Argentine), Robert Plagge (German), and Otto Zeiger (German). **1923-24**: The *Rosita*. **1924 winter**: Vladimir de Dobrovolski (Russian), Carl E. Berg (Swedish), Alfredo C. Witt (Argentine), Horst Irrgang (German), and Otto Hess (German). **1924-25**: The *Karl*. **1925 winter**: Ernst Bruhns (German), José Manuel Moneta (Argentine), Alejandro Guerra Boneo (Argentine), Alberto Tolnay (Argentine), Georg Piper (German). **1925-26**: The *Don Ernesto*. **1926 winter**: Carl E. Berg (Swedish), Alfredo C. Witt (Argentine), Horst Irrgang (German), Jacob Orlovski (Russian), Edmund Müller (German). **1926-27**: The expedition set out from Argentina on the whaler *Tijuca*, on Nov. 26, 1926, with 4 dogs. 21 days later they were at South Georgia, sailing south from there on Dec. 20, 1926, on the whaler *Orwell,* arriving at Órcadas on Dec. 27, 1926. Two days later they began unloading. From this time on most of the personnel were Argentines. Those who weren't, are indicated. **1927 winter**: José Manuel Moneta (the first Argentine leader of this base), Miguel Ángel Jaramillo, Pedro Martín Casariego, Luis Fállico, Emilio Baldoni (radioman and a sub-officer with the Marina de Guerra; this was the first time a telegraphist was on one of these expeditions), and Konrad Becker (German). On March 30, 1927, Baldoni made the first-ever contact between Órcadas and Ushuaia. **1927-28**: In March 1928 the *Orwell* came back to pick them up, and replace them with the 1928 winterers. They went home via South Georgia, where they waited 2 weeks before the *Tijuca* came to pick them up and take them back to Argentina. **1928 winter**: Ernst Bruhns (German), Alfonso Chakí, Carlos V. Rodríguez, Juan L. Olalla, Fortunato Escobar, and Edmund Müller (German). Escobar died on Oct. 27, 1928. **1928-29**: The *Primero de Mayo* arrived at Órcadas on Feb. 4, 1929. **1929 winter**: José Manuel Moneta, Félix Celestino y Monti, Jorge Páez Montero, Jacob Orlovski (Russian), Carlos Kahl (telegraphist; born 1908), and Rómulo Devoto. **1929-30**: The *Primero de Mayo*. **1930 winter**: Carl Berg, Alejandro J.B. Boracchia, Bernardino Matos, Alfonso Chakí, F. Bruno, and D. Gaudio. **1930-31**: The *Primero de Mayo*. **1931 winter**: Ernst Bruhns (German), J. Reynoso, Félix Celestino y Monti, Edmund Müller (German), R. Semino, and Rómulo Devoto. **1931-32**: The *Dias*. **1932 winter**: Ernst Bruhns (German), Bernardino Matos, Félix Celestino y Monti, Juan Carlos Lynch, J. Bermúdez, and J. Carieiro. **1932-33**: The *Pampa*. **1933 winter**: Bruno Collasius (German), Juan Carlos Lynch, Armando S. Pico, Lucio Correa Morales, J. Collin Grant, and Germán Spika. **1933-34**:

The *Rata* was meant to relieve the base, but couldn't get in because of the ice. The sealer *Dias* was used again. **1934 winter**: Carl Berg, Juan Carlos Lynch, Félix Celestino y Monti, M. Barbieri, and Rómulo Devoto. **1934-35**: The *Pampa*. **1935 winter**: Bruno Collasius (German), Armando S. Pico, Alfredo De Martino, José C. Lovisolo, and Nicolás Contursi. **1935-36**: The *Pampa*. **1936 winter**: Aage J.W. Johansen, Félix Celestino y Monti, Carlos A. Fluguerto, Humberto Papa, and Rómulo Devoto. **1936-37**: The *Pampa*. **1937 winter**: Bruno Collasius (German), Delfín Díaz Vieyra, Diego García Goyena, Rodolfo Placke, Nicolás Contursi. **1937-38**: The *Pampa*. **1938 winter**: Aage J.W. Johansen, Armando S. Pico, Melchor B. Martínez, José Manuel Hualde, Carlos Luis Capart. **1938-39**: The *Pampa*. **1939 winter**: Félix Celestino y Monti, Rafael Alberto Pastoriza, Guillermo Nieva, Nicolás Contursi. **1939-40**: The *Pampa*. **1940 winter**: Alfonso Chakí, Pablo Hugo Bisso, José Conchiglia, Ángel Guillermo Nicolás Luis Gusberti. **1940-41**: The *Pampa*. **1941 winter**: Aage J.W. Johansen, Rafael Alberto Pastoriza, Eulogio González, Carlos A. Pessaro. **1941-42**: The *Dias*. **1942 winter**: Alfonso Chakí, António Villalón, Santiago Hidalgo, Ángel Guillermo Nicolás Luis Gusberti. **1942-43**: The *Pampa*. **1943 winter**: Armando S. Pico, Armando Ferrari, José Gallardón, Carlos Luis Capart, Enrique Poveda, Carmelo Messina. **1943-44**: The *Pampa*. **1944 winter**: Aage J.W. Johanssen, Rafael A. Pastoriza, Celso Meneses, Gregorio Villalón. **1944-45**: On Feb. 28, 1945 the *Chaco* arrived in Uruguay Cove at 11.45 A.M. **1945 winter**: Armando S. Pico, Carlos Luis Capart, José Cestau, Emilio Fermín Ramos, Enrique Poveda, Cesáreo Labusta, Lucio Eduardo Lombardi, and Teodoro Nitti. **1945-46**: The *Chaco*. **1946 winter**: Alfonso Chakí, Jorge Zawels, Fernando Berreta, Luis Risso, Attilio Pincardini, and Marcelo Castiglia. From this time on, the station was relieved by the annual ArgAE. **1947 winter**: Luis Alberto Lombán, Rafael Alberto Pastoriza, Alfredo Torres, Leyva Sixto, José Tedaldi, Lucio Eduardo Lombardi, and Gregorio Villalón. **1948 winter**: Carlos Roberto González, José F. Medina, Reynaldo Soto, Domingo Ángel María Roque Abregú Delgado (he would winter-over at San Martín Station in 1951), Martín M. Marina, Enrique Poveda, Valentín Cicchetti, and Antonio Moro. **1949 winter**: Rafael Alberto Pastoriza, Abel Moisés Horenstein (he would later winter-over, 1957, at San Martín Station), Aníbal Gregorio Llamazares, Homero Alberto Di Russo, Alfredo Torres, Carlos Colson, Luis Óscar Maurice, and Ismael Tomás A. Flores. **1950**: The station became the responsibility of the Air Force. **1950 winter**: Primer teniente aviador Enrique de los Sagrados Corazones Smith Estrada, Aviation Lt. Dr. Lauro Vigil, Reynaldo Soto, Benito Petronilo Rodríguez, Baltazar Silva, Alejandro Dubini, Salvador Américo, Osvaldo Castrogiovanni, Emilio Escobar, Orlando Arturo Angio, and Jacobo Leitman. **1951 winter**: Teniente de fragata Ifigenio Sanz, Dr. Alberto Rubén Torres, Cabo mayor José Alvárez, Cabo principal Carlos Antonio Rojas, Marinero primera clase Feliciano Aguaysol, Marinero segunda clase Ricardo González, meteorological observers Eduardo Ramón Leyton (who in 1957 would winter-over at Esperanza Station) and Armando S. Pico, Rogelio Souto, and Enrique Poveda. **1952 winter**: Teniente de fragata Guillermo Coelho, Teniente de fragata Dr. Rolando Morgavi, Juan Bossio, Ramón José Portillo, Aroldo Mansilla, Florentino Loyola, Rafael Alberto Pastoriza, and Gerónimo Soto. **1953 winter**: Teniente de fragata Jorge H. Suárez, Dr. Guillermo Angli, Ventura Correa, Héctor Ullua, Héctor Sánchez, Italo Rigoni, Eduardo Ramón Leyton, and Abel Moisés Horenstein. **1954 winter**: Teniente de fragata Arnoldo Capelletti, Óscar Alberto de Lelles, Osmar Rodríguez, Rodolfo Anderch, Argentino López, Ramón Almirón, Miguel Maldonado, and Luis María Fontana. **1955 winter**: Teniente de navío Luis Messiga, Mario Clemente Cavalli, Alberto Rosetti, David S. Cachagua, Domingo Villafañe, Ismael Barraza, Mario Leguizamón, Raúl R. Longones, and Sixto Mario Ricarte. **1956 winter**: Teniente de corbeta Domingo Lucero, Dr. Alberto Cassani, Hiliberto Moliner, Emilio Romero, Óscar Malán, Lorenzo Roldán, Darío Peralta, and Pedro Mujica. **1957 winter**: Teniente de corbeta Miguel J. Gurusiaga, Dr. Antonio Mosca, Francisco Rubiolo, José Komar, José Eduardo Jarek, Pilade Viviani, Juan Molinari, Santos Bravo, Juan Robles, Claudio Pérez, Roberto Gómez, and Óscar Moyano. **1958 winter**: Teniente de corbeta Alejandro José Giusti, Dr. Jorge Horacio Villagra, José Eduardo Jarek, Juan Ramón Lukacs, Juan Robles, Eduardo Cabrera, Ernesto Juan Gaddi, Hugo Abregú, Eugenio Vega, Rodolfo Miksa, Luis María Fontana, Aldo Julio Irusta, Miguel Alfredo Ovejero, and Juan Francisco Morales. **1959 winter**: Emilio Filipich, Dr. Jaime Laham, Juan Ramón Lukacs, Pablo Eber Moreno, Orestes Pellis, Astolfo Díaz, Raúl Alberto Macchiaroli, Walter Soto, and Gregorio Enelso Soto. **1960 winter**: Teniente de fragata Ariel A. Giuntini, Jorge Cirilo Aversano, Pablo Oyhamburu, Pablo Bravo, Luis Alberto Villagra, Eloy José Custodio, Luis Alberto Olmedo, Armando Teodoro Guzman, Sixto Mario Ricarte, and Teodoro Omar Valenzuela. **1961 winter**: Teniente de corbeta Óscar Roberto Padilla, Dr. Daud Roberto Óscar Mamet, Carlos Antonio Astarloa, César Gustavo Ojeda, Óscar Antonio Atienza, Francisco Burzi, Óscar Raúl Albarracín, José Remilio Morales, Juan Miguel Fernández, and Alejandro Bazar. **1962 winter**: Teniente de corbeta Juan Carlos Moneta, Dr. Amílcar César Valle, José Gerónimo Godoy, Pablo Bravo, Luis Alberto Villagra, Fernando del Carmen Tula, Cristóbal López, Leo Luis Koch, Roberto Gómez, Ángel Miselli, Pedro Clemente Mujica, Mamerto Flores, and Demetrio Voznesensky. **1963 winter**: Guardiamarina Julio César Alvárez, Dr. Mario Hernando Soria, José Eduardo Jarek, Hugo Raúl Abraham, Ricardo Atilio Aliendro, Nelson Porter, Virgilio David Luque, Domingo Agustín Almada, José Alcides Sarmiento, Carlos Borrero, Alberto Teófilo Martín, Ricardo Giménez, Rito Idilio López, and Demetrio Voznesensky. **1964 winter**: Antonio Moccelini, David Berdeal, César Gustavo Ojeda, Benjamín Lujan, Serafín Ferreira, Velenín Simonetti, and Pablo Bravo, Gil Alfaro, Tomás Lemos, Luis Barbeito, Antonio Chiniquez, Carl Budde, Jorge Fontana, Juan Mercedes. **1965 winter**: Miguel Sosa, Pedro Di Matteo, Eugenio Marzucchelli, Francisco Abdajian, José Eduardo Jarek, Abel Aguirre, Hugo Abraham, Juan Salvetti, Blas Ruíz, Eustaquio Carreras, Eduardo Sterte, and Virginio Verza. **1966 winter**: Rodolfo Ludueña, Ladislao Endrei, José Godoy, Pedro Chamorro, Victor González, José del Barrio, Juan Fernández, León Leiva, Hipólito Tapia, Hugo Hinojosa, Bernardo Salas, Fabio Portada, and David Gunsch. **1967 winter**: Osvaldo Pedro Astiz, Julio Badie, Jorge Stanich, Alberto Barraza, Tristán Alberti, Rodolfo Orellana, Roberto Brizuela, Julio López, Matías Fleitas, Juan Fernández, and Eugenio Schor. **1968 winter**: Arturo M. Quintana, Ricardo Covani, Casimiro Jurgín, Carlos Benítez, Juan Nieto, Nelson Alassia, Roberto Elías, Celso Medina, Aníbal Martínez, Antonio Larsen, León Leiva, Salvador Ramallo, Humberto Carranza, Óscar Cecia, Edelmar Ramallo, Mario Egles, and Caludio Escudero. **1969 winter**: Reynaldo Cappa, Juan Posada, Osvaldo Mascioni, Sebastián Nicolosi, Rolando Barrios, José del Barrio, Hugo Abraham, Jorge Ritter, Servando González, Victor Gauna, Constancio Vega, Pedro Meza, Orlando Petrucci, José Romero, Roberto Sosa, Mario Hakanson, Daniel Cáceres, Carlos Beítez, Berto Almada, and Alberto Vázquez. **1970 winter**: Ernesto I. Tenconi, Raúl Aranda, Sebastián Nicolosi, Daniel Cáceres, Alfredo Giovannini, Juan Zaremba, Mario Amestoy, Fernando Tula, Aníbal Martínez, Argentino Salazar, Antonio Larsen, Pedro Gorriti, José Rodríguez, Óscar Cecia, Osvaldo Fariña, Roberto Orellana, Julio Arce, Mario Hakanson, Osvaldo Moreno, and Carlos Nuñez. **1971 winter**: Vicente Manuel Federici, Santiago Boschero, Basilio Martinovich, Francisco Cárdenas, Nelson Alassia, Dolores Sánchez, Alberto Barraza, Horacio Fernández, Raúl Borja, Melitón López, Francisco Ferreira, Luis Rossa, Tomás Quinteros, Hector Vergara, Jorge Barbetta, Rodolfo Tom, Armando Abregú, Rubén Bianchini, Rubén Marko, Ricardo Sosa, José Pedrozo, and Aníbal Lucero. **1972 winter**: Raúl Comelli, Carlos Quiñones, Rubén Berzano, Mario Muñoz, Juan Brotini, Mario Gómez, Juan Carlos Sánchez, Vitor Gauna, Jorge Rodas, Juan Delaygue, Florencio Ruíz, Hugo Meier, Héctor Vergara, Hugo Sánchez, Carlos Cruz, Rodolfo Tom, Armando Abregú, Rubén Blanchini, Rubén Marko, Ricardo Sosa, José Pedrozo, and Aníbal Lucero. **1973 winter**: Guillermo Escorihuela, Pedro Larama, Juan M. Silva, Ricardo Romano, Jorge L. Barbetta, Francisco H. Cárdenas, Osvaldo C. Soodini, Luis Pesce, Carlos D. Dabín, Sebastián Nicolassi, Luis O. Arnowil, Carlos O. Varela, Luis Peralta, Rodolfo Rojas, José R. Santucho, Mario Galarza, Hugo D. Leiva, Emilio Sánchez, Raúl F. Rodríguez, José M. Pico, and Inocencio B. Sopérez. **1974 winter**: Daniel Fitipaldi,

Miguel Ángel Giulietti, Alberto Francese, Miguel Garone, Rubén Berzano, Ernesto Pissane, Fidel Guaraz, Rubén H. Gay, Pío R. Fernández, Victor Rodríguez, Antonio López, Domingo Aymone, Hamilton Orellana, Juan Brotini, Rolando Origosa, Damlacio Córdoba, David Sardina, José Carrizo, Ramón Ríos, and Santos Abrego. **1975 winter**: Héctor Pascual Perraro, Jorge Rolando Barracco, José Luis Ruíz Díaz, Miguel Zorzoni, Hugo Óscar Ledesma, Eloy Enrique Hernández, Edgar B. Castagno, Manuel B. Usatinsky, Mauricio F. Ramos, Mariano E. Jiménez, Guillermo Balbastro, Lorenzo J. Beleizan, Carlos A. Marconi, Luis T. Cuestas, Ricardo Romano, Guillermo J. Montes, Carlos Daniel Dabín, Juan Carlos Ortiz, Ercole Fioramonti, Roberto Orellana, Rodolfo Tom, Ricardo N. Sosa, Ricardo García, Alberto Velázquez, Héctor Dimas Sosa, Rodolfo Reischi, and Juan Carlos Lacurto. **1976 winter**: Jorge Arias, Juan Carlos Mansilla, Juan Carlos Silva, Mario Alancay, Roberto Pujales, Julio Zarate, Antonio Villafañe, Hipólito Portells, Antonio García, José Menséguez, Herman Chiple, Óscar A. Cornejo, Miguel A. Garone, Pedro R. López, and Aldo E. Carrizo. **1977 winter**: Gustavo Richardson, Alberto F. Blázquez, Julio Chávez, Juan Osores, Jorge Rodas, Jacinto López, Luis Márquez, Aldo Arguello, Rubén Magnano, Carlos Sánchez, José Frutos, and Victor Domínguez. **1978 winter**: Jorge Luis Laboro, Luis Cavalloti, José Martínez, Raúl Rivero, José Riquelme, Melchor Agüero, Nicanor Gómez, Carlos Rivero, Antonio Vargas, Leonidas Narvaez, Juan Carlos Rodríguez, Aldo Canchi, Gabriel José Sánchez, Alberto Francese, Luis Mondino, Arnaldo Raúl Molina, Alfonso Benavidez, Luis Noriega, Roberto Orellana, and R. Crespo. **1979 winter**: Eduardo E. Nasine, Jorge Sandoval Reyna, Héctor A. Roberto, Hugo Moreno, Evaristo Sarapura, Bernardo Verón, Julio Conenti, Ubaldo Biggeri, Ricardo Eussner, Ramón Araoz, Mario Alvárez, Ramón Soto, Humberto O. Tagliente, Francisco Médico, Miguel Erbetta, Santos Domínguez, Luis Sulleiro, Mario Barbero, Roberto González, and Anuncio López. **1980 winter**: Miguel Ángel Pereira, Carlos Alberto Pulido, José María Atencio, Carlos Ramón López, Juan Carlos Díaz, Victor Hugo de los Ríos, Hermelindo Guardia, Eladio Ruíz Díaz, Carlos O. Arrúa, Juan C. Suárez, Cecilio A. Luna, Héctor R. Rombola, José L. Grammatico, Andrés Rojo, Ercole Fioramonti, Carlos A. Cruz, Pablo Mantello, Félix Picasso, Raúl O. Molina, and Rubén R. Lareau. **1981 winter**: Juan Carlos Diez, Miguel Dalmiro Guardia, Antonio Moio, Óscar Rubén Denis, Juan Carlos Pérez, José Luis Orellano, Óscar A. Orazi, Carlos Alberto Heritier, Omar Balcochea, Héctor Paradiso, Jorge Alberto Gramaglia, Luis Claudio Fontana, Martín Gómez, Daniel Primo Fontani, Alberto Infurna, and Antonio Marques. **1982 winter**: Mario Huica, Miguel A. Poteralo, Domingo Cruz, Esteban Senosian, Daniel Alonso, Carlos Viamonte, Juan Carlos Heredia, Esteban Giménez, Francisco del Carpio, Roberto Eduardo Sampi, Antonio Sopsato, Luis Noriega Gutarra, Savino Baheza, Hugo Venditti, Roberto Avellaneda, and Jorge Aldemiro. **1983 winter**: Rodolfo E. Seoane, Carlos F. Soria, Jorge Pizarro, Pedro R. Salvidia, Enrique Gigena, José Alvárez, Néstor Aschemager, Hugo Comba, Hugo González, Juan Martiteguí, Ramón Godoy, Obdulio Moreno, Fernando Panieri, and Diego M. Torres. **1984 winter**: Jorge Cerqueira (leader). **1985 winter**: Guillermo M. Palet (leader). **1986 winter**: Eduardo Brousson (leader). **1987 winter**: Guillermo Tarapow (leader). **1988 winter**: Luis Mario Devicenti (leader). **1989 winter**: Eduardo Pisciolari (leader). **1990 winter**: Jorge A. Garabentos (leader). **1991 winter**: Marcelo Enrique Flores (leader). **1992 winter**: Marcelo Enrique Flores (leader). **1993 winter**: Marcelo Enrique Flores (leader). **1994 winter**: Josué Alfredo Nuñez (leader). **1995 winter**: Fabian Gustavo Giudice (leader). **1996 winter**: Humberto Dobler (leader). **1997 winter**: Alejandro Olivieri (leader). **1998 winter**: Capitán de Corbeta Alejandro Hormanstorfer (leader). On March 31, 1998, Hormanstorfer, aged 38, Sub oficial auxiliar aeronaútico Daniel Néstor Tavella, and Cabo primera clase Ricardo Álvez, all set out in a small boat to circumnavigate Laurie Island. They never came back. Manelo Uberti took over as leader. **1999 winter**: Esteban Alberto Rucci (leader). **2000 winter**: Osvaldo Toscano (leader). **2001 winter**: leader unknown. **2002 winter**: Lt. Antonio Serangell (leader). **2003 winter**: leader unknown. **2004 winter**: capitán de fragata Ricardo Gardé (leader). **2005 winter**: Comandante Cristián Paternóster (leader). **2006 winter**: Fernando Díaz (suboficial). **2006-07**: the *Almirante Irízar*. **2007 winter**: Teniente de corbata Ernesto Acosta (leader), Teniente de fragata Federico Orgaz (medical officer and 2nd-in-command), Suboficial primero Esteban Raúl Ruiz (base manager), Suboficial segundo Gustavo Lucero (mechanic), Suboficial segundo Juan Carlos Arrieta (electrician), Suboficial segundo Hugo Oviedo (land vehicles), Hugo Ariel Peixato and Juan Francisco Gramajo (both cabos principales and both cooks), Cabo principal Carlos Sebastián Silva (development, electrical repairs and maintenance), Cabo primero Diego Cayo (radioman), Cabo primero David Zini (waiter, tailor, laundryman, and barber), Air Force suboficial principal Luis Daniel Franco (geomagetician), Air Force suboficial auxiliar Raúl Alejandro Amaya (chief of the met station), and Carlos Guillermo Canosa (met observer). **2008 winter**: leader unknown. **2008-09**: the *Canal de Beagle*. **2009 winter**: 13 personnel, including Capitán de corbeta Gustavo Enzo Lancellotti (leader), Mariano Spisso and Emilio Daher (park wardens). **2010 winter**: Capitan de fragata Ricardo Gardé (leader).

Orchard, David John. b. April 27, 1946, Maidstone, Kent, son of John F. Orchard and his wife Mona J. Hopperton. BAS meteorologist who wintered-over at Base F in 1972, and at South Georgia in 1973, 1975, and 1977, the last time as base commander.

Orchard, Robert "Bob." He wintered-over at Casey Station in 1982, at Davis Station in 1984, at Mawson Station in 1989, at Macquarie Island Station in 1992, and at Mawson again in 1994.

Orde-Lees, Thomas Hans "The Colonel." b. May 23, 1877, Aachen, Germany, of Anglo-Irish stock, while his parents were on vacation. His name was actually Thomas Orde Hans Lees. His eccentric father, Thomas Orde Hastings Lees, was Chief Constable of Northampton, and his mother was Grace Bateman, daughter of Joshua W. Bateman, secretary of the Duchy of Cornwall. Young Thomas was educated in Guisborough, Northants, where he chose to be known as Orde Lees. Then he went to Marlborough, the Royal Naval School, and Sandhurst. He joined the Royal Marine Light Infantry, and, as a captain, served in the Boxer Rebellion, and was then superintendent of physical training at the naval college in Portsmouth. On Oct. 14, 1902 he married a jealous and alcoholic widow, Rhoda Isabel Musgrove, some years older than himself, who had two almost grown children by her remittance man first husband who had died of delirium tremens in South Africa, but she and Thomas had a daughter, Grace Isabel Renée, born in 1909. A skier, acrobat, trick-cyclist, and mountain climber, he tried unsuccessfully to go on Scott's BAE 1910-13, and was finally seconded as storekeeper to the *Endurance* during BITE 1914-17, during which he was formally the motor expert, and informally, the most unpopular man on the expedition, even though the expedition used some of the tractors that he had designed, and even though he would often take his bike on the ice and do stunts. On June 18, 1916, he wrote in his diary, "There is a clique up against me to whom Wild gives too much head. I am called a Jew." On Aug. 15, 1916, he wrote, "Strong cliques are now formed. This is bad." Many years later, he reported that if the party trapped on Elephant Island had had to revert to cannibalism, he would have been the first meal. After World War I he converted to Catholicism, and on Feb. 17, 1917 had an audience with the Pope. He joined the Royal Flying Corps, developing parachutes and ballooning, and retired as a lieutenant colonel, OBE, and as the most accomplished parachutist of his time. His contribution to parachuting cannot be overstated. He lived in Japan from 1921 onwards, taught English, was a correspondent for the *Times*, an assistant at the British Embassy, and for 20 years read the English-language news on the radio in Tokyo. On Feb. 12, 1922 he and H. Crisp became the first men to climb Mount Fuji in the dead of winter. His wife Isabel died on July 23, 1930, in Paddington, and he married again, to Ellaline Hisako Hoya, by whom he had a daughter in Kobe on Dec. 11, 1936. In 1941 he was reluctantly evacuated to NZ, where he took a job as office assistant with the NZ Correspondence School, and may have been a British spy. In the mid-50s he helped organize the NZ end of BCTAE 1955-58. He died of senility in a mental hospital in Wellington on Dec. 1, 1958.

Ore Point. 62°04' S, 58°25' W. A small promontory composed of ore vein (hence the name),

on the W coast of Keller Peninsula, Mackeller Inlet, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980.

Oread Spur. 72°35' S, 168°53' E. A rock spur on the S side of Tucker Glacier, 16 km W of Crater Cirque. NZGSAE 1957-58 established a survey station on the cirque, at a height of 1185 m (this is the height US-ACAN gives; NZ-APC says 1180 m; a small difference perhaps, but a difference that indicates an error somewhere). They named the spur for the Greek mountain nymph. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Monte Oreja Izquierda *see* **Mount Allo**

Roca Orejas de Burro *see* **Asses Ears**

Orejas Negras *see* **Gateway Ridge**

Orel Ice Fringe. 64°46' S, 62°35' W. A strip of coastal ice piedmont bordering the S side of Errera Channel between Beneden Head and Porro Bluff, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and also from ground surveys conducted by Fids from Base O that same season. Named by UK-APC on Sept. 23, 1960, 1960, for Eduard von Orel (1877-1941), Austrian surveyor. US-ACAN accepted the name in 1965.

Islas Orella *see* **Vize Islands**

Banka Oreshek. 67°39' S, 45°57' E. One of 2 banks occupying the same coordinates immediately W of Cape Feoktistov, in the Thala Hills of Enderby Land, both named by the Russians. The other is Banka Koljuchka.

Mount Orestes. 77°28' S, 161°55' E. A prominent peak, rising to over 1600 m (the New Zealanders say 2100 m), just E of Bull Pass, in the Olympus Range of Victoria Land. Named by VUWAE 1958-59 for the Greek mythological character. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Orestes Glacier. 77°27' S, 161°53' E. A narrow glacier within Orestes Valley, aligned along the valley's N wall, in the Olympus Range of Victoria Land. Named by US-ACAN in 1997, in association with the valley. NZ-APC accepted the name.

Orestes Valley. 77°28' S, 161°55' E. A small, ice-free valley on the N side of Mount Orestes, in the Olympus Range of Victoria Land. Orestes Glacier flows within it. Named by Parker Calkin, U.S. geologist here in 1964, in association with the mountain. US-ACAN accepted the name in 1970.

Punta Orford *see* **Orford Cliff**

Orford, Michael James Herbert "Mike." b. Oct. 10, 1928, West Africa, son of mining superintendent Herbert Charles Orford and his wife Lily Stoney. He was a textile agent in Nigeria in the early 1950s, and left Lagos on the *Aureol*, bound for Liverpool, where he arrived on Aug. 15, 1955, in order to join FIDS, as an assistant surveyor, wintering-over at Base W in 1956. In 1958 he went to Cape Town, as a school teacher, and remained there, marrying Elizabeth. He died in June 2010.

Orford, William. His mother was Sarah Orford, of 103 Brock St., London. On Feb. 11, 1772, he joined the *Resolution* as ship's carpenter, for Cook's 2nd voyage, 1772-75. He died in 1799.

Orford Cliff. 66°55' S, 66°29' W. A coastal cliff, overlooking the E side of Lallemand Fjord, just E of Andresen Island, on the coast of Graham Land. Surveyed by FIDS in 1956, and named by them for Mike Orford (q.v.) of the FIDS, a member of the party which found a route from Detaille Island to Avery Plateau, via Orford Cliff and Murphy Glacier. UK-APC accepted the name on Feb. 12, 1964, and US-ACAN followed suit that year. The Argentines call it Punta Orford.

Orford Cliff Refuge. 66°55' S, 66°30' W. A wooden satellite hut, on Orford Cliff, Lallemand Fjord, on the Loubet Coast, on the W coast of Graham Land, built on a rock surface, and used by personnel from Base W, occupied on and off from Feb. 21, 1957 to Jan. 10, 1959. Also known (temporarily) as Johnston's Point, its purpose was surveying and geology. It was demolished and removed on March 25, 1997, and only the foundations remain.

Organ Peak. 66°56' S, 67°00' W. Rising to about 400 m, it is the most northerly peak on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Surveyed by Fids from Base W between 1956 and 1959, and so named by them because the fluted appearance of this peak resembles the pipes of an organ. Mapped by FIDS cartographers in 1960 from those surveys. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit in 1965.

Organ Pipe Cliffs. 68°25' S, 149°04' E. A line of coastal cliffs in the form of palisades of columnar dolerite (hence the descriptive name given by Mawson when AAE 1911-14 discovered them). They overlook the sea to the W of Cape Wild. US-ACAN accepted the name in 1947, and ANCA followed suit.

Organ Pipe Peaks. 86°03' S, 150°00' W. A row of aiguille-type rock peaks, 11 km long, just N of Mount Harkness, at the E side of Scott Glacier, in the Gothic Mountains, in the Queen Maud Mountains. Named descriptively by Quin Blackburn in 1934, on his geological survey during ByrdAE 1933-35. US-ACAN accepted the name in 1968.

The Organ Pipes. 82°37' S, 52°42' W. Notable rock cliffs (formerly described as a mountainous ridge), rising to about 1900 m on the NW side of the Jaeger Table, S of Cairn Ridge, in the Dufek Massif, in the Pensacola Mountains. USGS did field work here from 1965. Named descriptively by Art Ford (q.v.), leader of the USGS's Pensacola Mountains survey party of 1978-79. The appearance of the feature is caused by weathering along prominent vertical joints in the gabbro rock. US-ACAN accepted the name, and UK-APC followed suit on May 21, 1979.

Organa Peak. 63°03' S, 62°38' W. Rising to 1270 m, 6.9 km NE of Cape James, and 1.66 km SSW of Riggs Peak, it overlooks Letnitsa Glacier to the E and SE, in the Imeon Range, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for Organa, the 7th-century regent of the Bulgars, and uncle of Khan Kubrat.

Organic Lake. 68°28' S, 78°11' E. A hypersaline lake in the Vestfold Hills, wonderfully described by ANCA (who named it descriptively) as "richly served by organic inputs from penguins." As a result, crusts of dead algae surround the lake, and the water has an earthy smell.

Organpipe Nunatak. 63°59' S, 58°07' W. Rising to about 150 m in the glacier that flows W into Holluschickie Bay, in the NW part of James Ross Island. BAS did geological work here in 1985-86. Named descriptively by UK-APC on Feb. 15, 1988, for the excellent columnar jointing exhibited on this feature. US-ACAN accepted the name. Plotted by the UK, in late 2008.

Organpipe Point. 62°28' S, 60°09' W. A prominent, jagged headland, rising to about 60 or 70 m above sea level, and aligned E-W, between Charybdis Cove and Griffin Cove, S of Aspis Island, off Livingston Island, in the South Shetlands. It is formed of doleritic rock showing very conspicuous sub-vertical, continuous columnar joints resembling organ pipes. Named descriptively by UK-APC on Dec. 12, 1997. US-ACAN accepted the name in 1998.

Orheim Point. 79°23' S, 84°19' W. A rock point at the end of Inferno Ridge, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Olav Orheim, Norwegian glaciologist on South Pole — Queen Maud Land Traverse II (1965-66). Mr. Orheim led various Norwegian expeditions (*see* **Norway**).

Oriana Ridge *see* **Igloo Spur**

The *Oriental Bluebird*. Japanese whale cargo ship and fuel tanker, until 1992 known as the *Hiyo Maru*. In the first several years of the 21st century, she serviced the *Nisshin-Maru* in Antarctic waters (*see* **The *Arctic Sunrise***).

Origin of the name Antarctica. The Arctic was associated with the northern Bear constellation (Arktos, in Greek). The Ancient Greeks reasoned that because there was land in the extreme north, there had to be also in the extreme south, in order to balance the Earth. This they called Antarktos, and so listed it on their maps, even though they had no way of actually proving that it existed.

Pico Origone. 74°27' S, 67°07' W. An isolated peak, SE of Lang Nunatak, on the Lassiter Coast, on the SE coast of Palmer Land. Named by the Argentines.

The *Orión*. Ecuadorian ship, built at the Ishikawa-jima-harima Yards, in Japan. Her keel was laid on Feb. 25, 1981, and she became part of the Ecuadorian Navy on Dec. 10, 1981. She took down the Ecuadorian Antarctic Expedition of

1987-88. Her skipper that year was Bécquer Picco Bargas. She also took down the Ecuadorian expeditions of 1989-90 (Capt. José Olmedo Morán), and 1997-98 (Capt. Gonzalo Montenegro).

The *Orion*. Australian cruise ship registered in the Bahamas, and with a carrying capacity of 106 passengers, She was first in Antarctic waters in 2003-04, and was back again in 2005-06.

Montaña Orión *see* **Frigga Peak**

Paso Orión *see* **Orión Passage**

Punta Orión *see* **Orión Point**

Orion Massif. 70°24' S, 66°49' W. A prominent massif, 22 km long, with a complicated network of peaks, passes, ridges, and cirques, and rising to 1910 m (in Mount Rigel), 6 km ENE of Scorpio Peaks, between the upper parts of Meiklejohn Glacier and Millett Glacier, in Palmer Land, at George VI Sound. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, after the constellation. US-ACAN accepted the name later in 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Orión Passage. 62°26' S, 59°48' W. A navigable passage running E-W, S of Dee Island, and N of Greenwich Island, in the South Shetlands. Named by the Ecuadorians in 1990, as Paso Orión, for their Antarctic relief ship. UK-APC accepted the translated name on Sept. 19, 2005. Plotted by the UK, in late 2008.

Orión Point. 62°27' S, 59°44' W. A point, W of Canto Point (what the British call Spark Point), Greenwich Island, in the South Shetlands. Named by the Ecuadorians in 1990, as Punta Orión, for their Antarctic relief ship. UK-APC accepted the translated name on Sept. 19, 2005. Plotted by the UK, in late 2008.

Canal Orleans *see* **Orléans Strait**

Orléans Channel *see* **Orléans Strait**

Orléans Inlet *see* **Orléans Strait**

Orléans Strait. 63°48' S, 60°10' W. A strait, 16 km wide, and running WSW-ENE for 30 km, it separates Trinity Island and Tower Island from the Davis Coast, on the W coast of Graham Land. Discovered by Palmer on Nov. 16, 1820, or possibly by Bransfield around the same time. The SW entrance, between the SW part of Trinity Island and the mainland, was roughly charted as an inlet by James Hoseason (1st mate on the *Sprightly*) in 1824, and named by him as Hoseason's Harbour. The broad NE entrance, between the S part of Tower Island and the mainland, was roughly charted in Feb. 1838, by FrAE 1837-40, and named by Dumont d'Urville as Canal d'Orléans, for the French House of Orléans, and Dallmann sailed through that same entrance in 1873-74. Dallmann may have been the first to navigate the strait in its entire length. Charted in greater detail by SwedAE 1901-04, and referred to by them as Orléans Inlet, describing it as a deep gulf. It appears on U.S. Hydrographic Office charts of 1916 and 1920 as Orléans Inlet. UK-APC accepted the name Orléans Channel on Sept. 20, 1955, and US-ACAN followed suit in 1956. However, on Sept. 23, 1960, UK-APC redefined it as Orléans Strait, and US-ACAN followed suit that year. Today the Germans tend to call it Dallmannstrasse. The Argentines call it Canal Orléans, and the Chileans call it Canal Orleans (i.e., without the accent; in Spanish, an accent is not needed).

The *Orlova*. Correct name: the *Lyubov Orlova*. Named for the Russian actress who died in 1975. A 4251-ton, 298-foot Russian ice-strengthened motor tourist ship built in Yugoslavia in 1976, registered in Malta, with a crew and staff of 70, a carrying capacity of 124 passengers (108 for Antarctic tours), 59 outside cabins, and a cruising speed of 12 knots. Sister ship to the *Maria Yermalova*. She was refurbished in 1999, and went to Antarctica for the 1999-2000 and 2000-01 seasons (Capt. Aleksandr Babenkov both times). She was upgraded in 2002, and was in Antarctic waters in 2002-03, and again in 2005-06, typically doing an 11-day cruise out of Ushuaia, to the Antarctic Peninsula and the South Shetlands, and then back to Ushuaia. She carried a fleet of Zodiac landing craft. In the fall of 2006 she underwent extensive renovations, and was back at the Antarctic Peninsula for the 2006-07 season. However, on Nov. 27, 2006, while in Whalers Bay, visiting Deception Island, she ran aground, and had to be rescued by the Spanish navy ship *Las Palmas*, there on support duty at Gabriel de Castilla Station. She had to be towed, but finally made her way back to Ushuaia, whence the tourists were flown back to Buenos Aires. She was back in 2008-09.

Gory Orlova. 74°07' S, 6°17' W. A group of nunataks, NE of the mountain the Norwegians call Sørfløya, in the SE part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Named by the Russians.

Orlovski, Jacob *see* **Órcadas Station**, 1926, 1929

Mount Ormay. 70°44' S, 66°42' E. A razorback rock ridge-like mountain, about 1.75 km S of Mount Butterworth, in the Aramis Range, in the Prince Charles Mountains of Mac. Robertson Land. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for Peter Ivan Ormay (b. April 3, 1938, Hungary), Australian carpenter and plumber who wintered-over at Wilkes Station in 1963. He wintered-over at Macquarie Island (not in Antarctica) in 1965, and then spent the summer of 1965-66 at Wilkes again. He was back at Macquarie for the winter of 1967. US-ACAN accepted the name in 1967. The Russians call it Gora Dobrovol'skogo.

Ormehausen *see* **Ormehausen Peak**

Ormehausen Peak. 72°01' S, 14°38' E. A small mountain, at the N end of the Linnormen Hills, in the Payer Mountains, in the Hoel Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Ormehausen (i.e., "the serpent's head"). US-ACAN accepted the name Ormehausen Peak in 1966. The Russians call it Gora Bagrickogo (i.e., Mount Bagritskogo).

Ormerod Terrace. 77°19' S, 160°34' E. A ramp-like rock platform, 3 km long, with a median elevation of 1600 m, paralleling the S flank of McSaveney Spur, it rises 300 m above Caffin Valley, in the Willett Range, and declines moderately toward Webb Glacier, in Victoria Land. Named by US-ACAN in 2005, for Robin Ormerod, editor of the NZ magazine *Antarctic*, 1984-95. NZ-APC accepted the name on Sept. 12, 2005.

Ormeryggen. 72°04' S, 14°33' E. The 3 major hills, partly snow-covered, forming the central portion of the Linnormen Hills, SE of Skavlhø Mountain, in the Payer Mountains, in the Hoel Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them (name means "the serpent's back"). US-ACAN accepted the name without modification in 1966. The Russians call it Gora Fersmana.

Ormesporden *see* **Ormesporden Hill**

Ormesporden Hill. 72°05' S, 14°19' E. At the SW end of the Linnormen Hills, in the Payer Mountains, in the Hoel Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Ormesporden (i.e., "the serpent's tail"). US-ACAN accepted the name Ormesporden Hill in 1966. The Russians call it Skala Venera-3.

The *Ørn*. Norwegian floating factory whaling ship of 3216 tons, formerly Nelson & Donkin's British steamship *Florida*, and sister ship of the *Bombay*, she was bought by Chris Christensen's Ørnen Company in 1908 as a condemned vessel, fixed up, and was in Antarctic waters in 1908-09, under the command of Capt. Julius Paulsen. In 1909 she effectively replaced the *Admiralen* as the company's flagship in Antarctica. She was back again every season until 1912-13, and was replaced by the *Ørn II*. In 1913 she was sold to the Rethval Company, her name was changed to the *Falkland* (to replace the old *Falkland*, which had been Rethval's factory whaler between 1911 and 1913). Unfortunately, the new *Falkland* (i.e., ex-*Ørn*) was wrecked in Nov. 1913.

The *Ørn II*. A 4353-ton Norwegian whaling factory ship, formerly the *Falkland*, owned by Chris Christensen's Ørnen Company (to replace the *Ørn*), she operated in Antarctic waters, mostly the South Shetlands and Graham Land, between 1913-14 and 1928-29 (she was at Deception Island in 1920-21, 1921-22 and again in 1927-28 and 1928-1929). In 1918 her skipper was Capt. Thorvald Larsen. In 1929 she was sold to the Pontos Company, of Tønsberg, and renamed the *Pontos* (q.v.).

Mount Orndorff. 84°37' S, 175°26' W. A peak, rising to 1520 m, 8 km S of Nilsen Peak, at the W side of Massam Glacier, in the Queen Maud Mountains, overlooking Shackleton Gla-

cier. Named by US-ACAN in 1966, for Howard J. Orndorff.

Orndorff, Howard James. b. April 17, 1922, Clark, W. Va., son of pipe line laborer Fred Orndorff and his wife Rosa, a glass factory worker. He joined the U.S. Navy in Oct. 1942, and was a lieutenant commander when he became military leader of Little America during the winter of 1957, until Nov. 28, 1957. In 1963 he wintered-over at McMurdo. He retired from the Navy in June 1969, and died on Feb. 2, 1992.

Puerto Orne *see* **Orne Harbor**

Orne, William B. Baptized Sept. 10, 1769, Marblehead, Mass., son of William Orne and his wife Rebecca. He was skipper of the barque *Pompey* in 1805, and of the schooner *Betsy* from 1810, the *Hannah* from 1810, and the *Endeavor* from 1812. During the War of 1812 he was on the *Betsy* when she was captured by the *Guerrière*, and on that ship when she in turn was taken by the *Constitution*. After the war he was on the brigantine *Hope*, and was captain (and part owner) of the *General Knox*, 1818–21, during the Salem Expedition (q.v.) to Antarctica. His son, Alfred Augustus Orne, accompanied the expedition in the South Seas for the first 2 seasons, 1818–19 and 1819–20, but left at the Falklands and returned to the USA to take another ship to India, thus not getting to Antarctica.

Orne Harbor. 64°37' S, 62°32' W. A cove, about 1.25 km wide, which indents the Danco Coast for about 2.3 km in a SSE direction, 3 km (the Chileans say about 6 km) SW of Cape Anna, on the W coast of Graham Land. Spigot Peak forms the SW entrance point. The harbor is divided into 2 parts by a point projecting from the head of the harbor out toward the NW. The Chileans call this point Punta Formas. Discovered, roughly sketched, and photographed in Jan.-Feb. 1898, by BelgAE 1897-99, and it appears on Lecointe's 1903 map of the expedition. Used as an anchorage by whalers from 1912 on, and further charted by them. Thay may have been the ones who named it. It appears on David Ferguson's 1918 chart as Orne Harbour, that chart reflecting his 1912–13 survey. If they did name it, then the name (as shown on Davidson's chart) is presumably a corruption of Ørn, signifying one of the major Norwegian whaling factory ships in the area at that time, rather than being named for, say, William Orne, the old sealing skipper, which is what the Chileans propose. It is hard to imagine early 20th-century Norwegian whalers naming a feature after an early 19th-century New England sealing captain. However, there is a (remote) possibility that it was named long before that, in which case it may well have been named for Capt. Orne. It appears on a 1943 U.S. Hydrographic Office chart as Orne Harbor. UK-APC accepted the name Orne Harbour on Sept. 4, 1957, and it appears as such on a British chart of 1959. It appears on an Argentine chart of 1949 as Puerto Orne, and that was the name accepted by the 1970 Argentine gazetteer. It was re-charted by Fids on the *Norsel* in April 1955, and photographed aerially by FIDASE in 1956–57. US-ACAN accepted the name Orne Harbor in 1963.

Orne Island *see* **Orne Islands**

Orne Islands. 64°40' S, 62°40' W. A group of small islands close N of Georges Point, Rongé Island, off the Danco Coast, on the W coast of Graham Land. First roughly surveyed (but not named) in Jan.-Feb. 1898, by BelgAE 1897–99, it appears on Lecointe's expedition map of 1903. Further charted by whalers in the area from 1912, and named (apparently) by them, in association with Orne Harbor. It appears on David Ferguson's 1918 chart, reflecting his survey of 1912–13. There is a 1921 map showing the main island as Orne Island. UK-APC accepted the name Orne Islets on Sept. 4, 1957, and US-ACAN followed suit in 1958. The feature appears as such on a 1959 British chart However, after re-surveying by Fids on the *Norsel* in April 1955, and FIDASE air photos taken in 1956–57, UK-APC, on July 7, 1959, redefined the feature as the Orne Islands, and US-ACAN followed suit in 1963.

Orne Islets *see* **Orne Islands**

[1]**The *Ørnen***. Supply ship to the *Jason*, the *Hertha*, and the *Castor* during the 1893–94 whaling expedition to the South Shetlands and South Orkneys. Capt. Carl Englund was skipper.

[2]**The *Ørnen***. A 103-ton whale catcher, designed by Søren L. Christensen, and built in 1901 by Christen Christensen's shipyard, Framnaes Mek. (Framnaes Mekaniske Vaerksted) of Sandefjord, Norway, for the Haabet Company (Christian Christensen and Johan Bryde), indeed, the first whale catcher ever built by Framnaes Mek. With the *Hauken* she was one of the first two modern whale catchers. She could take 32 men and move at 12 knots. She was launched on Jan. 18, 1902, and went whaling off the coast of Finnmark, with the famous Søren Sørensen as whale gunner, and they caught the first whale at Spitsbergen using modern methods. For a season she was one of the factory ship *Admiralen*'s whale catchers in the Arctic, and on Oct. 21, 1905, she and the *Hauken* (q.v.) left Sandefjord accompanying the *Admiralen* to the South Shetlands, 1905-06. It was from this catcher, with Bernt Sørensen as skipper, that the first whale was harpooned in the South Shetlands. In 1906, when the *Admiralen* returned to Norway, the two whale catchers remained in Port Stanley, in the Falkland Islands, laid up for the winter. She was with the *Admiralen* in the South Shetlands again in 1906-07. On Aug. 23, 1907, she arrived back in Sandefjord, was de-commissioned, and sold to the South African Whaling Company (which was really a Norwegian company, managed by Johan Bryde). On Aug. 25, 1908, she left Norway for Durban, in company with the whale catcher *Jupiter*, and that season caught the first whale in South African waters using modern methods. In 1910 she was at the Kerguélen Islands, with the factory ship *Mangoro*, and in 1911 was sold to the Norwegian-Canadian Whaling Company, and re-named the *Lopra*. In 1915 she was sold to J.J. Egelund of Durban, and re-named the *Roitelet*.

Rocas Ørnen *see* **Ørnen Rocks**

The Ørnen Company. Founded by Chris Christensen, of Sandefjord, Norway, in 1903, originally for whaling in Spitsbergen, this company ran several whaling vessels in the South Shetlands from 1905 onwards — the *Admiralen* (which was the first one), the *Vesterhilde*, and the *Ørn*. In 1912 the Ørnen Company merged with another of Christensen's companies, the Nor Company, but each would maintain their own banners, and they continued to run the *Ørn* for a year or two, as well as the *Pisagua* and the *Ørn II*. Thor Dahl had a company called the Ørnen Company, in the late 1920s and early 1930s, running the *Ole Wegger*. Lars Christensen (his son-in-law) managed the company.

Ørnen Rocks. 62°01' S, 57°34' W. A group of rocks in water, some submerged, some above the water level, 2.5 km NNE of Cape Melville, King George Island, in the South Shetlands. Named for the *Admiralen*'s whale catcher, the *Ørnen*. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit in 1963. The Chileans and Argentines call this feature Rocas Ørnen. Last plotted by the UK, in late 2008.

Ornithologists Creek. 62°10' S, 58°28' W. Between Ecology Glacier and Penguin Ridge, S of Arctowski Station, on King George Island, in the South Shetlands. Named by the Poles in 1980, for American ornithologists Wayne Z. Trivelpiece and Nicholas J. Volkman, exchange scientists at Arctowski during PolAE 1977–78. Later, the creek changed its course to form 2 new creeks, Czech Creek and Vanishing Creek.

Orpheus Nunatak *see* **Willan Nunatak**

Orpheus Pass. 62°39' S, 60°15' W. A pass, 250 m wide, and running at an elevation of just over 560 m, bounded by Pliska Ridge to the SE and by Burdick Ridge to the NW, in the E part of Livingston Island, in the South Shetlands. It is part of the overland route which runs between the Balkan Plateau via the nameless saddle between Willan Nunatak and Burdick South Peak, and then via Orpheus Pass to the area of Mount Friesland and the upper Perunika Glacier. The midpoint of the pass is 6.1 km E of Sinemorets Hill. The name Orpheus Nunatak was originally applied in 1995 to a neighboring peak, but the British had already named that one Willan Nunatak, so the name Orpheus was re-applied to this pass by the Bulgarians on Oct. 29, 1996. UK-APC accepted the name on April 29, 1997, and US-ACAN followed suit that year. Plotted by the UK, in late 2008.

Chenal des Orques *see under* **D**

Orr, John *see* **USEE 1838–42**

Orr, Neil Wallace Morison. b. Aug. 8, 1931, Neyyoor, in southern India, son of medical missionaries Dr. Ian Morison Orr and his wife Marjorie Bentall. At 6 he was back in Scotland, and then alternated between there, Surrey, and Lancashire, somewhat dependent on his father's movements, although he did go to Loreto School in Edinburgh. After Cambridge he did his clinical work at St. Thomas's, in London, and went on the first 20th-century British expedition to Socotra. The secretary of St. Thomas's suggested FIDS, and 18 months later, in 1958, he joined,

as a medical officer, and, after 6 months at the Medical Research Council, planning his trip, he left Southampton in October 1958, on the *Shackleton*, bound for Montevideo and Port Stanley, and then down to the FIDS bases. As ship's doctor he stayed most of that summer on the "*Shack*," and then the vessel broke her rudder, and had to go to South Georgia for repairs. Dr. Orr went to Montevideo, and made his way from there back to Port Stanley on the *Darwin*, then took the *Protector* to Hope Bay, where he had to be helicoptered in from the ship due to the ice. He wintered-over at Base D in 1959, and again in 1960 when he was also base leader. In 1961 the *Shackleton* came to pick him up, and he went via South Georgia and Tristan da Cunha (they took on evacuees after the volcano erupted) to Cape Town, where they spent about a month. He hitchhiked around South Africa (he has been back many times since), and then back to the UK. He spent a year writing up his Antarctic report, and, indeed, after training dogs and sledging with them for 3500 miles in Antarctica, his studies of nutrition of men and dogs changed the face of, among other things, caloric allotment per man on FIDS bases. He became a surgeon, married Sarah Josephine Chappell in 1968, and in 1969 moved to Colchester.

Orr, William *see* **USEE 1838-42**

Orr, William H. b. NY, Aug. 1914, Brooklyn, but raised partly in Garden City, NY, son of Irish immigrants, accountant William H. Orr and his wife Sarah. Messman and galleyman on the *Jacob Ruppert* during ByrdAE 1933-35.

Orr Glacier. 71°36' S, 162°52' E. A tributary glacier draining the large cirque between Mount Moody and Mount Bernstein, in the Lanterman Range of the Bowers Mountains, and flowing W into the Rennick Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Major Thomas L. Orr, U.S. Army assistant logistics officer on the staff of the commander, U.S. Naval Support Force, Antarctica, 1968 and 1969.

Orr Island. 77°38' S, 149°36' W. An ice-covered island, 8 km long, 5 km SW of Grinder Island, in the Marshall Archipelago, off the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Lt. Cdr. Thomas E. Orr, VX-6 supply officer and pararescue team leader during OpDF 68 (i.e., 1967-68).

Orr Peak. 83°29' S, 157°49' E. A peak overlooking Marsh Glacier (it falls in vertical cliffs on the E side of that glacier), in the Miller Range, and forming the E salient in the bluffs southward of Argo Glacier. Discovered on Dec. 26, 1957, by the NZ Southern Party of BCTAE, and named by them for Reginald Herbert "Herb" Orr (b. 1927, Christchurch, NZ. d. 1978), technician with the department of Industrial and Scientific Research, and IGY scientist who wintered-over at Scott Base in 1957. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA accepted the name on May 18, 1971.

Islote(s) Orrego Vicuña *see* **Runaway Island**

Orsoya Rocks. 62°18' S, 59°32' W. A group of rocks, extending for 650 m in a NW-SE direction and 500 m in a NE-SW direction, WNW of the Mellona Rocks, NNE of the Milev Rocks, and ENE of the Opaka Rocks, off the N coast of Robert Island, in the South Shetlands. Their center is 4.78 km N of Newall Point. Mapped by the British in 1968, and by the Bulgarians in 2009. Named by the Bulgarians on Sept. 14, 2010, for the settlement of Orsoya, in northwestern Bulgaria.

Cerro Ortega. 63°57' S, 57°57' W. A hill, rising to about 844 m at the N end of Massey Heights, on the W coast of Croft Bay, on the NE coast of James Ross Island, off the E coast of the Antarctic Peninsula. Named by the Chileans for Air Force chaplain Francisco Ortega, who was on the *Piloto Pardo* during ChilAE 1962-63. The Argentines wanted to honor this chaplain, but couldn't do it by name (the father being a Chilean), so, in 1978, they generously named it Cerro Padre.

Punta Ortiz. 62°27' S, 59°43' W. A point between Punta Serrano and Punta Riquelme, in the NE entrance to Discovery Bay, Greenwich Island, in the South Shetlands. Named by ChilAE 1946-47, for one of the members of the expedition.

Rada Ortiz. 64°21' S, 56°58' W. A harbor, opening on the NE coast of Snow Hill Island, SE of James Ross Island, in the Weddell Sea. Named by the Chileans for Capitán de corbeta Marcos Ortiz Gutmann, skipper of the *Lientur* in 1961-62 (*see also* **Ortiz Island**, and **The *Lientur***).

Ortiz, Irving Spencer. b. Dec. 7, 1891, Rhode Island, but raised mostly in Foxboro, Mass., son of New York-born machinist Joseph E. Ortiz and his wife Anna R. Brown. He joined the U.S. Navy as a teenager, and served on the *Chester*. He then went into the merchant marine, as a ship's electrician, and was a crewman on the *Jacob Ruppert* for the 2nd half of ByrdAE 1934-35. After the expedition, he continued on at sea, and died in Siskiyou, Calif., on Aug. 29, 1962.

Ortiz Island. 63°18' S, 57°54' W. In the Duroch Islands, about 315 m S of the E end of Largo Island, and about the same distance from the N coast of Trinity Peninsula, off Cape Legoupil. Charted (but, apparently, not named) by ChilAE 1947-48. Named by Martin Halpern (*see* **Halpern Point**) for Marcos Ortiz Gutmann (*see Rada Ortiz*, and **The *Lientur***), skipper of the Chilean ship that supported Halpern's University of Wisconsin field party here in 1961-62. US-ACAN accepted the name in 1964, and UK-APC followed suit on Dec. 15, 1982. It appears in the 1986 British gazetteer.

Ortiz Refugio *see* **Conscripto Ortiz Refugio**

Orton Cave. 66 22 S, 110 27 E. In the W wall of Cape Ravine, Ardery Island, in the Windmill Islands. Discovered in Oct. 1961 by Dr. Mervyn Noel Orton (known as Noel) (b. Dec. 28, 1920, Camberwell, Vic.), medical officer at Wilkes Station that winter, and named for him by ANCA. US-ACAN accepted the name in 1963. *See also* **Cave Landing**.

Orton Reef. 66°16' S, 110°33' E. A reef, or shoal of rock, about 45 m in diameter, and with a least depth of 2 feet (the Australians say 61 cm), in the N part of Newcomb Bay, 0.8 km N of Molholm Island, and 3.7 km from the summit of Shirley Island, in the Windmill Islands. Discovered and charted in Feb. 1957 by Tom Gale, during an ANARE hydrographic survey of Newcomb Bay and its approaches led by Phil Law on the *Thala Dan* in 1962. Named by ANCA for Noel Orton (*see* **Orton Cave**), who assisted with the party. US-ACAN accepted the name in 1963.

Acantilados Orville *see* **Orville Coast**

Orville Coast. 75°45' S, 65°30' W. That portion of the coast of Antarctica lying between Cape Adams and Cape Zumberge, it forms the NW coast of the Ronne Ice Shelf, at the foot of the Hauberg Mountains, in Ellsworth Land. Discovered aerially on Nov. 21, 1947, during RARE 1947-48, and named by Finn Ronne as Orville Escarpment, for Capt. Howard Thomas Orville (1901-1960), head of the Naval Aerological Service, 1940-43, and deputy chief of naval operations, 1943-50, who was largely responsible for formulating the meteorological program for the expedition. It appears as such on Ronne's map of 1948, plotted between 75°10' S and 77°30' S, and between 63°00' W and 71°30' W. With those coordinates it also appears on the American Geographical Society's map of 1962. There is a 1956 Chilean reference to it as Acantilado Orville (i.e., "Orville escarpment"), and it appears as Acantilados Orville on a 1962 Chilean chart. That latter name was the one accepted by the 1974 Chilean gazetteer. Re-mapped by USGS from USN air photos taken between 1965 and 1967, and it appears as Orville Coast (as now defined) on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. The name Orville Coast was accepted by US-ACAN in 1968, and UK-APC followed suit on Dec. 20, 1974. It appears as such in the 1976 British gazetteer.

Orville Escarpment *see* **Orville Coast**

Orvin Mountains. 72°00' S, 9°00' E. A major group of mountains, extending about 104 km from Djupedalen Valley in the W to the glacier the Norwegians call Somoveken in the E, between the Wohlthat Mountains and the Mühlig-Hofmann Mountains, in the central part of Fimbulheimen, in Queen Maud Land. First photographed aerially by GermAE 1938-39, and roughly plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Orvinfjella, for geologist Anders Kristian Orvin (1889-1980), Arctic explorer, director of the Norsk Polarinstitutt, 1945-48, and under-director after 1948. US-ACAN accepted the translated name Orvin Mountains in 1966.

Orvinfjella *see* **Orvin Mountains**

[1]**The *Orwell*.** Norwegian transport ship owned by the Tønsbergs Hvalfangeri. On July 30, 1915, commanded by Ingvar Thom, she arrived in Cardiff from South Georgia, after the 1914-15 whaling season. In 1918 she was skippered by Capt. Gulbrandsen. She left South Georgia at the end of the 1918-19 season, and on April 11, 1919, on her way back to Norway, she pulled in to Dartmouth, in England. Her first season south of 60°S seems to have been 1921-22. Under the command of Capt. Thom (and under the management of Søren Berntsen), she worked in the South Orkneys in 1922-23 (and also whaling pelagically; a very early example of this; Falkland Islands customs officer William Rumbolds was aboard), and again in 1923-24, and 1924-25 (same skipper and manager on all three occasions). Her catchers (that first season, anyway) were the *Husvik* and the *Ruggen*. She was also in Greenland in 1924, a rarity for an Antarctic whaler. In 1925 she was replaced by another ship of the same name (see below), and sold, becoming the *Whale*. She was later sold again, becoming the *Congo* (q.v.).

[2]**The *Orwell*.** Formerly the British ship *Knight Templar*, she was bought by the Tønsbergs Hvalfangeri Company, of Norway, re-named *Orwell* (she was the second ship of that name to belong to that company), and converted at Rotterdam into a 7698-ton whaling transport ship. Under the command of Capt. Ingvar Thom (although Søren Berntsen commanded the overall whaling fleet), she anchored at Signy Bay in 1925-26, 1926-27 (the year she took down the 1927 winterers at Órcadas Station), 1927-28 (she picked up the 1927 winterers from Órcadas Station in March 1928), and 1928-29. That last season she had 198 men aboard. In April 1929 she pulled in to Liverpool, on her way back to Norway. She anchored again at Signy Bay in 1929-30 and 1930-31. In 1938-39 she was converted into a tanker.

Ensenada Orwell *see* **Orwell Bight**

Orwell Bay *see* **Orwell Bight**

Orwell Bight. 60°43' S, 45°23' W. A body of water S of the E half of Coronation Island, between Cape Hansen and South Cape, in the South Orkneys, it is bounded on the W by Signy Island and on the E by the Robertson Islands. A whaling anchorage, its general nature was first delineated by Petter Sørlle, who roughly charted it in 1912-13. Surveyed by the Discovery Investigations in 1933, and agaain by Fids from Signy Island Station between 1947 and 1949. Named by UK-APC on March 31, 1955, for the *Orwell*. US-ACAN accepted the name in 1956. It was further surveyed by Fids from Signy between 1956 and 1958. The Argentines call it Ensenada Orwell. The Chileans call it Fondeadero Ventisquero (a name that roughly means "glacier bight").

Orwell Glacier. 60°43' S, 45°38' W. A small glacier, less than 0.8 km long, it descends steeply from the S slopes of the Snow Hills, flows in a NNE direction, and terminates in 20-meter high ice cliffs, on the S margin of Elephant Flats, at Cemetery Bay, on Borge Bay, in the E part of Signy Island, in the South Orkneys. Surveyed by personnel on the *Discovery* in 1927, and named by them for the *Orwell*. It appears on their 1929 chart. Re-surveyed by Fids from Signy Island Station in 1947. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Orwell Lake. 60°43' S, 45°37' W. A small lake in Moraine Valley, SE of, and marginal to, Orwell Glacier, in the E part of Signy Island, in the South Orkneys. The lake has developed with the retreat of the Orwell Glacier in recent years. BAS conducted freshwater biological studies here from 1970 on. Named by UK-APC on Dec. 9, 1981, in association with the glacier. US-ACAN accepted the name.

Oryahovo Heights. 62°32' S, 60°45' W. Ice-covered heights rising to 340 m, extending for 6 km in a N-S direction in the central and E parts of Ioannes Paulus II Peninsula, on Livingston Island, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Nov. 4, 2005, for the town of Oryahovo, in northwestern Bulgaria.

OSA-Bucht. 70°47' S, 166°40' E. A bay on the N side of O'Hara Glacier, and S of Yule Bay, on the N coast of Victoria Land. Named by the Germans.

Mount Osborne. 78°37' S, 84°47' W. Rising to 2600 m, on the SW side of Thomas Glacier, 8 km E of Mount Craddock, in the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Thomas M. "Tom" Osborne, USN, builder from Pennsylvania, who helped build South Pole Station in early 1957, even though he wasn't one of the original group of Seabees that did. He wintered over there in 1957, and again in 1963.

Caleta Óscar *see* **Oscar Cove**

Punta Óscar. 62°28' S, 60°47' W. A point, on the W part of which stands the hill the Chileans call Morro Inach, N of Playa Del Canal, about 350 m NNW of Punta Antonio, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for Óscar Pinochet de la Barra (*see* **Playa Pinochet de la Barra**).

Oscar Cove. 64°55' S, 62°55' W. A cove, about 2.3 km wide, next W of Garzón Point, between that point and Stony Point, indenting the SW corner of Paradise Harbor for about 1.5 km, on the Danco Coast, on the W coast of Graham Land. Suárez Glacier flows into the head of this cove. Roughly surveyed by whalers in the area from 1912 on, this is probably the cove that was named by them as Coughtrey Cove, and which appears as such on David Ferguson's 1918 map. *See* **Coughtrey Peninsula** for the probable origin of this name. The British Imperial Antarctic Expedition of 1920-22 charted it again, naming it South Bay. Named Caleta Óscar by ArgAE 1949-50, Óscar being the first name of the 2nd-in-command of the *Chiriguano* during that expedition. It appears as such on their 1950 chart, and on a 1953 Argentine chart, and was the name accepted by the Argentine gazetteer of 1970. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base O. It appears on a 1961 U.S. Hydrographic Office chart, translated as Oscar Cove, and that was the name accepted by US-ACAN, and by UK-APC on Feb. 7, 1978. It appears as such in the 1980 British gazetteer. The Chileans call it Caleta Carmona, for Raúl Carmona, intendente of the province of Magallanes, in Chile, who took part in ChilAE 1962-63.

Oscar Island *see* **Inexpressible Island, Oscar Point**

Oscar Lakes. 62°55' S, 60°40' W. Several crater lakes on the N coast of Telefon Bay, Deception Island, in the South Shetlands. Named by the Poles on Sept. 1, 1999, for Óscar González-Ferrán (*see* **Mount González** and **Gonzalez Harbor**).

Oscar Point. 74°35' S, 164°53' E. A small rock point along the N shore of Terra Nova Bay, 1.5 km NW of Markham Island, in Victoria Land. Discovered by BAE 1898-1900, and named by Borchgrevink as Oscar Island, for the King of Norway and Sweden. It was also called Inexpressible Island for a while, and was later redefined as a point, joined to the coast. US-ACAN accepted the name Oscar Point in 1966, and NZ-APC followed suit.

Costa Óscar II *see* **Oscar II Coast**

Oscar II Coast. 65°45' S, 62°30' W. That portion of the E coast of Graham Land between Cape Fairweather and Cape Alexander. Discovered and roughly charted by Larsen in Dec. 1893. The part of the coast lying in about 66°S was named by him as Kong Oscar II Land, or Kong Oscars Land, for the King of Norway, Oscar II (1829-1907), who reigned from 1872 to 1907 as king of Sweden, and as king of Norway from 1872 to 1905. Note: The word "kong" is Norwegian for "king." It appears as such on Larsen's map of 1894. At the same time the name Moderlandet (i.e., "the mother land") was applied to the part of the coast lying W of Jason Peninsula. On the English language version of Larsen's maps what Larsen called Kong Oscar II Land appears as King Oscar II's Land, or King Oscar II Land, and with that latter name it appears on Bartholomew's map of 1898, as well as on British charts of 1901 and 1916. All the interested nations translated it accordingly. For example, BelgAE 1897-99 mapped it as Terre du Roi Oscar, and Dr. Frederick Cook's English language version of that expedition's map has it as King Oscar Land. Irízar's Argentine map of 1903 has it as Tierra Rey Óscar II, and Sobral's 1904 map has Tierra del Rey Óscar, while a British chart of 1921 has it as King Oscar II Coast. Its extent has varied over the years (on charts and maps), but in 1947, US-ACAN accepted the name Oscar II Coast with coordinates pretty much as they are today, with UK-APC following suit on Nov. 22, 1951. It appears as such in the 1955 British gazetteer. The Chileans and Argentines both tend to call it Costa Óscar II, while the Germans call it König Oskar II Land.

Mount Oscar Wisting *see* **Mount Wisting**
Gora Osechka *see* **Osechka Peak**

Osechka Peak. 71°31' S, 15°26' E. A small peak rising to 1740 m, 10 km S of Vorposten Peak, in the Lomonosov Mountains of Queen Maud Land. Mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during that same long expedition. Re-mapped by SovAE 1960-61, and named by the Russians in 1966 as Gora Osechka (i.e., "misfire mountain"). US-ACAN accepted the name Osechka Peak in 1970.

Osen *see* **Osen Cove**

Osen Cove. 69°27' S, 39°40' E. A lake-like cove that indents the N part of Skarvsnes Foreland, and opens into Byvågen Bay at the E side of Lützw-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Osen (i.e., "the outlet"). US-ACAN accepted the name Osen Cove in 1968.

Osgood, Alan Arthur A. b. 1910, Fareham, Hants, son and only child of Arthur Henry Osgood, who died in Mesopotamia in 1917, during World War I, and his wife Isabella. He joined the Merchant Navy at 18, as a cleaner on the *Majestic*, for her Southampton to New York run, and became an ordinary seaman on the *Discovery II*, 1929-33, and able seaman on the same vessel, 1933-37. After the latter expedition, he continued on as an able seaman, on the *Berengaria*, for several transatlantic runs into 1938. In 1940, in Portsmouth, he married Margarita Bernardine Warren, and they settled in Gosport, where he died in 1962. Margarita died in 1992.

Mount O'Shea. 70°15' S, 65°35' E. About 3 km NNW of Mount Albion, and 7 km W of Mount Jacklyn, in the Athos Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for Alan J. O'Shea, assistant diesel mechanic at Mawson Station in 1964. US-ACAN accepted the name in 1967. The Russians call it Gora Rozhkova.

O'Shea Peak. 70°26' S, 66°31' E. A small peak just S of Mount McCarthy, in the E part of the Porthos Range, in the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. An astrofix was obtained here by Syd Kirkby in 1956. Named by ANCA for John H. O'Shea, radio officer at Wilkes Station in 1962 and 1964. He was also at Macquarie Island in 1966. US-ACAN accepted the name in 1967.

Oshiage Beach. 69°38' S, 39°27' E. On the NE side of the Skallen Hills, between those hills and the terminus of Skallen Glacier, on the coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1962-69, and named by them on June 22, 1972, as Oshiage-hama, or Osiage-hama (i.e., "raised beach"). US-ACAN accepted the name Oshiage Beach in 1975.

Oshiage-hama *see* **Oshiage Beach**
Osiage-hama *see* **Oshiage Beach**

Osicki Glacier. 84°41' S, 170°45' E. A narrow, deeply entrenched glacier, just S of Mount Deakin, in the Commonwealth Range, it flows W into the Beardmore Glacier. Named by US-ACAN in 1966, for Kenneth J. Osicki, USARP biologist at McMurdo in 1963.

Oskar II Coast *see* **Oscar II Coast**
Oskeladden *see* **Oskeladden Rock**

Oskeladden Rock. 71°18' S, 11°27' E. About 1.3 km S of Pål Rock, in the Arkticheskiy Institut Rocks, at the NW extremity of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Oskeladden. US-ACAN accepted the name Oskeladden Rock in 1970. *See* **Pål Rock** for more details about the origin of the name.

Nunataki Oskolochnye. 70°17' S, 65°20' E. A group of nunataks, named by the Russians, and plotted by them in the same coordinates as occupied by Foale Nunatak, about 6 km NNE of Moore Pyramid, in the Athos Range of the Prince Charles Mountains. The Russian name is in the plural, indicating a group of nunataks, but as no one else has named a group of nunataks in this area, it may be assumed that this is a synonym for Foale Nunatak, despite the pluralization.

Osmand, Daniel *see* **USEE 1838-42**

Osmar Island. 69°22' S, 76°01' E. The largest of the Firling Islands, about 3.5 km NW of Stornes Peninsula, in the NW portion of the Larsemann Hills. The Firling Islands were photographed aerially by LCE 1936-37, mapped from these photos in 1946 by Norwegian cartographers, and named by them as Firlingane. The Australians accepted the translated name Firling Islands, and named the largest one Osmar Island, on Sept. 29, 1988, for Egmont Dorkin Osmar White, Australian journalist known as Osmar White (b. April 2, 1909, Feilding, NZ. d. May 1991, Melbourne), who, as the sole Australian press representative on ANARE 1957-58, landed in the Larsemann Hills from the *Thala Dan* on Feb. 7, 1958. Mr. White came to fame as the war correspondent covering the New Guinea campaign during World War II, working with Damien Parer and Chester Wilmot on the Kokoda Trail. He wrote a fictional TV play called "Manhaul" set in an ANARE Antarctic station.

Osmar Strait. 63°09' S, 62°24' W. A strait, 27 km wide, between Smith Island and Low Island, in the South Shetlands. Named by the Bulgarians on June 3, 2010, for the settlement of Osmar, in northeastern Bulgaria.

Osogovo Bay. 62°39' S, 61°12' W. A bay, S of Laager Point, it is bounded by the S coast of Rugged Island, by Astor Island, and by the W coast of the Byers Peninsula, on Livingston Island, in the South Shetlands, and is entered between Benson Point and Devils Point. Named by the Bulgarians on Nov. 4, 2005, for the region of Osogovo, in western Bulgaria.

Seno Osores *see* **Seno Ulises**
Bajo Osorno *see* **Pesky Rocks**
Banco Osorno *see* **Pesky Rocks**

Monte Osorno. 62°28' S, 59°48' W. A snowy mountain rising to 634 m above the icy gullies on the N coast of Greenwich Island, in the South Shetlands. Named by ChilAE 1947-48, for the volcano in Chile.

Osøya. 69°27' S, 39°37' E. An island in the middle of Osen Cove, on the N coast of Skarvsnes Foreland, on the E side of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it in association with the cove. The name means "the outlet island." US-ACAN accepted the name without modification in 1968.

The *Ospray*. New Bedford sealer in at the South Shetlands in 1820-21, under the command of Lloyd Howland. He made it back to the USA, and on Nov. 3, 1821, left New Bedford again, bound for Valparaíso. After this trip, Howland took the *Ospray* to Rotterdam, and then on to France, bringing her back to New Bedford in April 1824. Later that year she was on the sugar run to Belize. He was still skipper in 1829, but that year Capt. Grinnell took command.

Nunataki Ostancovye. 70°43' S, 67°00' E. A group of nunataks, named by the Russians, and plotted by them pretty much in the same coordinates as Francey Hill, about 5 km S of Mount McKenzie, in the Aramis Range of the Prince Charles Mountains. Either this is a synonym for Francey Hill, which is unlikely (the Russian name being in the plural), or the Russians are implying that there is a group of nunataks here, Francey Hill being the main one (in which case, why they did not also name Francey Hill is a puzzle).

Ostbucht. 66°49' S, 89°37' E. A bay, due E of Posadowsky Bay, on the coast of Wilhelm II Land. Named by the Germans.

Mount Ostenso. 78°18' S, 86°11' W. Rising to 4180 m, 3 km S of Mount Giovinetto, in the main ridge of the Sentinel Range, in the Ellsworth Mountains. Named by Charles Bentley in 1957-58 for Ned A. Ostenso (b. 1930), traverse seismologist at Byrd Station in 1957, and a member of Bentley's Marie Byrd Land Traverse Party of 1957-58 which first mapped this feature. First climbed on Jan. 12, 1957. US-ACAN accepted the name in 1960.

Montes Osterrieth *see* **Osterrieth Range**
Monts Osterrieth *see* **Osterrieth Range**
Osterrieth Mountains *see* **Osterrieth Range**

Osterrieth Range. 64°40' S, 63°15' W. A high, cliffed mountain range running NE-SW along the SE coast of Anvers Island, from Clifford Peak to Billie Peak, in the Palmer Archipelago. Its highest peak is (or at least, used to be, when the extent of the range was charted as greater than it is today) Mount Français, and other features include Mount Camber, Copper Peak, and Molar Peak. Discovered and roughly charted on Feb. 8, 1898, by BelgAE 1897-99, and named by de Gerlache as Monts Osterrieth, for

Anna Osterrieth, a patron (*see also* **Cape Anna**). This was translated as Osterrieth Mountains by Frederick Cook on his 1900 English language version of that expedition's map, and also on a 1908 British chart. The feature was further charted by FrAE 1903-05, and by the Discovery Investigations in 1927. Misspellings abounded, of course, but they are always recognizable. It appears as Osterrieth Mountains on a 1948 British chart (still including Mount Français). It was surveyed by Fids on the *Norsel* in April 1955, and also by Fids from Base N that same year. The name Osterrieth Mountains was accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. On a 1949 Argentine chart the feature appears as Montes Osterrieth, but on one of their 1953 charts it appears as Montañas Osterrieth, and that latter name was the one accepted by the Argentine gazetteer of 1970. It appears on a Chilean chart of 1962 as Montes Osterrieth, and that name was the one accepted by the Chilean gazetteer of 1974. Today, the Argentines call it that too. The feature was later more correctly defined as a range, and the name Osterrieth Range was accepted by UK-APC on July 7, 1959, and by US-ACAN in 1960.

Östliche Petermann Range. 71°26' S, 12°44' E. One of the Petermann Ranges, it trends N-S for 24 km from Per Spur to Gornyy Inzhenery Rocks, in the N part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Östliche Petermannkette, for its eastern location ("östliche" means "eastern" in German). US-ACAN accepted the name Östliche Petermann Range in 1970. The Norwegians call it Austre Petermannkjeda, and the Russians call it Hrebet Zavarickogo.

Östliche Petermannkette *see* **Östliche Petermann Range**

Östliches Hochfeld *see* **Austre Høgskeidet**

Östre Shelf-Is *see* **Ekström Ice Shelf**

Nunataki Ostrëkina. 72°42' S, 75°02' E. A group of nunataks, immediately N by NE of Truman Nunatak, and N of Mount Harding, in the Grove Mountains, in Princess Elizabeth Land. Named by the Russians.

Bukhta Ostrovnaja *see* **Ostrovnaja Bay**

Ostrovnaja Bay. 66°14' S, 100°53' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Bukhta Ostrovnaja. ANCA translated the name on Jan. 19, 1989.

Gora Ostrovok *see* **Summers Peak**

Skaly Ostrovskogo. 71°52' S, 12°43' E. A group of rocks N by NW of the Horteflaket Névé, at the head of Musketov Glacier, between the Petermann Ranges and the Weyprecht Mountains, in Queen Maud Land. Named by the Russians.

Terrasa Ostrye Kamni. 70°25' S, 64°35' E. A terrace on the NW side of Corry Massif, in the Porthos Range of the Prince Charles Mountains. Named by the Russians.

Cape Ostryj. 66°18' S, 100°46' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Mys Ostryj (i.e., "angular point"). ANCA translated the name on Jan. 19, 1989.

Mys Ostryj *see* **Cape Ostryj**, **Ostryy Point**

Pik Ostryj. 82°51' S, 53°17' W. A peak, SE of the Cordiner Peaks, in the Pensacola Mountains. Named by the Russians.

Ostryy Point. 69°55' S, 12°00' E. A point projecting from the ice shelf that fringes the coast of Queen Maud Land, and which forms the W side of the entrance to Leningradskiy Bay. Mapped by SovAE 1959, and named by the Russians as Mys Ostryj (i.e., "angular point"). US-ACAN accepted the translated name in 1970.

Osuga Glacier. 72°34' S, 166°55' E. A tributary glacier flowing NE into Trafalgar Glacier, just E of Mount Burton, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for David T. Osuga, biologist at McMurdo in 1966-67.

Pico O'Sullivan *see* **O'Sullivan Peak**

O'Sullivan, Thomas Patrick "Tom." b. June 9, 1924, Anerley, London. He joined the RN in 1941, and after training at HMS *Collingwood*, served as an ordinary seaman on the *Charleston*. In 1942 he was commissioned as a midshipman, trained on the *Excellent* and at the light coastal forces base at Fort William, in Scotland, and was appointed to the motor torpedo boat MTB 621, based in Yarmouth, in 1944 being transferred to Gosport. In mid-1945 he was a sub lieutenant in the RNVR, on a photographic interpretation course, when he met Cdr. E.W. Bingham, leader of what was about to become FIDS, who induced him to join. He sailed on the *Trepassey* for St. John's, Newfoundland, where they picked up huskies, and he and Stewart Slessor left there on Nov. 20, 1945, bound for Port Stanley, in the Falklands, looking after the dogs. He wintered-over at Base D in 1946, as assistant meteorologist. He would have done a 2nd winter in Antarctica, but his father died in 1947, and he returned home, from Montevideo on the *Condesa*, arriving in London on April 5, 1947, with fellow Fids George Hardy, John Featherstone, and Dennis Crutchley. He lived at Anerley for several years, went into business, and in 1950, in Bromley, married Maureen Wainwright, and had two children. He died on Sept. 8, 1998, in Anerley.

O'Sullivan Peak. 71°26' S, 62°10' W. An ice-covered peak, rising to 1765 m (the British say 1840 m), it forms the highest point (and is near the S end) of an ice-covered ridge trending N-S, 17.5 km W of the N arm of Odom Inlet, on the Black Coast, on the E coast of Palmer Land. Photographed aerially in Dec. 1940, by USAS 1939-41, and also probably seen from the ground by a party who explored this coast during that expedition. First charted in Nov. 1947 by a combined sledging team comprising personnel from RARE 1947-48 and Fids from Base E. Named by FIDS for Tom O'Sullivan. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Pico O'Sullivan, and that is what the Argentines call it today. Photographed aerially by USN in 1966, and surveyed from the ground by BAS personnel from Base E in 1972-73. The SCAR gazetteer has the Chileans calling it Pico Sullivan, but this is not so. They call it Pico O'-Sullivan.

Otago Glacier. 82°32' S, 161°10' E. A glacier about 30 km long, with many branches, flowing from the NE side of Mount Markham, to enter the Nimrod Glacier just E of Svaton Peaks, at the N end of the Queen Elizabeth Range. Named by the Northern Party of NZGSAE 1961-62, for Otago University in NZ. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Otago Spur. 84°45' S, 114°10' W. A small spur projecting northward from the Buckeye Table, W of Discovery Ridge, in the Ohio Range. Mapped by USGS from ground surveys, and USN air photos taken in 1958-59. The spur was studied by an NZARP geological party in 1983-84, and named by them for Otago University, the alma mater of Jonathan Aitchison, a member of the field party. NZ-APC accepted the name, and US-ACAN followed suit.

Caleta Otaño. 63°31' S, 56°54' W. An inlet, S of Hope Bay, on the E side of Tabarin Peninsula, Trinity Peninsula. Named by the Argentines for Luis Otaño, fogonero (stoker) 1st class on the *Uruguay*, 1903.

Otariids *see* **Eared Seals**

Gora Otdalënnaja. 70°55' S, 67°25' E. A nunatak, NE of O'Leary Ridges, in the Aramis Range of the Prince Charles Mountains. Named by the Russians.

Nunatak Otdalënnyj. 81°40' S, 27°49' W. A nunatak, SW of the Whichaway Nunataks, in Coats Land. Named by the Russians.

Gora Otdelënnaja. 72°18' S, 68°25' E. A nunatak due N of Styles Glacier and the Mawson Escarpment. Named by the Russians.

Gora Otdel'naja *see* **Gløymdehorten Nunatak**

Mount Otis. 75°05' S, 136°13' W. A small, rocky summit along the N side of Kirkpatrick Glacier, 2.5 km SE of Mount Sinha, at the SE margin of Erickson Bluffs, in the McDonald Heights of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Jack Otis, biologist here in 1971-72.

Bukhta Otkrytaja *see* **Otkrytaya Bay**

Gora Otkrytaja *see* **Mount Meredith**

Otkrytaya Bay. 68°27' S, 78°13' E. A bay indenting the N part of Langnes Peninsula, in the Vestfold Hills. Discovered and photographed aerially during LCE 1936-37. Re-photographed aerially during OpHJ 1946-47, and again by SovAE 1956. The Russians named it Bukhta Otkrytaja. It was photographed again, aerially, by ANARE in 1957 and 1958. ANCA translated the name on Nov. 27, 1973.

Bukhta Otkrytij. 70°10' S, 6°20' E. A bay due W of Pryamougol'naya Bay, along the ice shelf that fringes the coast of Queen Maud Land. Named by the Russians.

Sklon Otkrytij. 81°27' S, 26°26' W. A slope, due N of Nunatak Malyj, in the area of Recovery Glacier. Named by the Russians.

Otlet Glacier. 65°48' S, 64°38' W. A glacier, 14 km long, flowing W along the S side of Fontaine Heights, to Barilari Bay, on the Graham Coast, on the W coast of Graham Land. Roughly charted by BGLE 1934-37, and more accurately mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57 and from ground surveys conducted by Fids from Base J that same season. Named by UK-APC on July 7, 1959, for Paul Otlet (1868-1944), Belgian who pioneered the classification of polar infomation. It appears on a British chart of 1960. US-CAN accepted the name in 1971. The British plot it in 65°49' S, 64°33' W.

Otohime-iwa. 67°58' S, 44°08' E. A rocky hill, rising to 137.5 m above sea level, in the area of Cape Ryugu, on the coast of Queen Maud Land. Mapped by Japanese cartographers from JARE air photos taken in 1962, and from 1977-78 JARE ground surveys, and named by them on March 22, 1979 ("Otohime rock"). Otohime is the princess in the dragon's palace under the sea in a Japanese folk tale.

Otome-no-hana *see* **Otome Point**

Otome Point. 68°08' S, 42°36' E. A promontory extending southwestward for 3 km from the ice-free area of Cape Hinode, on the coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1962 and 1973, and named by them on Nov. 22, 1973, as Otome-no-hana, or Otomenohama (i.e., "girl's nose point"). US-ACAN accepted the translated name Otome Point in 1975.

Skala Otradnaja. 71°12' S, 13°34' E. A nunatak in the N part of the Gruber Mountains, in Queen Maud Land. Named by the Russians.

Gora Otsechënnaja. 72°53' S, 68°40' E. A nunatak in the Grove Mountains of Princess Elizabeth Land. Named by the Russians.

Nunatak Otshel'nik. 73°05' S, 75°12' E. In the Grove Mountains, of Princess Elizabeth Land. Named by the Russians.

Ott, Ludwig. b. April 8, 1876, Höchst-am-Main. He became a merchant seaman, working for the Hamburg South American Steamship Company, and was 3rd officer on the *Gauss* during GermAE 1901-03. He later lived in Buenos Aires, as a sea captain with the Hamburg-South America Line.

Ottehallet *see* **Ottehallet Slope**

Ottehallet Slope. 72°12' S, 0°13' W. An ice slope between Straumsvola Mountain and Brekkerista Ridge, in the Gburek Peaks, at the W end of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Ottehallet (i.e., "the early morning slope"). US-ACAN accepted the name Ottehallet Slope in 1966.

Rocas Otter *see* **Otter Rock**

Otter Glacier *see* **Armstrong Glacier**

Otter Highlands. 80°38' S, 30°00' W. A group of peaks and ridges rising to about 1160 m, and extending NW-SE for 27 km from Mount Lowe to Wyeth Heights, W of Blaiklock Glacier, and forming the W end of the Shackleton Range. The feature also includes MacQuarie Edge, Mount Haslop, Trey Peaks, Mount Homard, Mount Pivot, and Turnpike Bluff. Surveyed in Oct. 1957 by BCTAE. Named by UK-APC on Jan. 5, 1972, for the Otter aircraft that supported the expedition. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Otter Pass *see* **Otter Passage**

Otter Passage. 80°37' S, 23°00' W. Also called Otter Pass. In the Shackleton Range. Named by the Russians, who plotted it in 80°40' S, 23°00' W. Not yet accepted as a term by anyone else.

Otter Plain. 71°30' S, 7°30' E. A large glaciated ice plain to the N of the W part of the Orvin Mountains, between Sigurd Knolls on the N and the Mühlig-Hofmann Mountains and the Drygalski Muntains on the S, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Otterflya, for the Otter aircraft used on the expedition. US-ACAN accepted the translated name Otter Plain in 1967.

Otter Rock. 63°38' S, 59°12' W. A high, distinctive rock, rising to 95 m above sea level, 5 km N of Notter Point, Trinity Peninsula. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for the Otter aircraft used by BAS. US-ACAN accepted the name later in 1964. The Argentines call it Rocas Otter (i.e., in the plural).

Otterbukta. 70°10' S, 2°23' W. A small bay in the Fimbul Ice Shelf, on the Princess Martha Coast of Queen Maud Land. Named by the Norwegians for the Otter aircraft used so extensively in Antarctica. The name means "Otter bay."

Otterflya *see* **Otter Plain**

The *Ottern*. A 138 foot 5 inch Norwegian whale catcher, built in 1937 at Smith's Dock, Middlesbrough, for Thor Dahl's Odd Company. In 1942, for a brief while, she was chartered by the U.S. Coast Guard, but, otherwise, spent the rest of the war catching whales. In 1948-49 she was catching for the *Thorshammer*, in Antarctic waters. In 1960 she was sold to Elling Årseth, for whale catching off the Norwegian coast. In 1966, she was sold again, and became the *Jadar*. Between 1968 and 1970 she was converted into a fishing vessel, and in 1970 sold again, and became the *Moflag Senior*. In 1985 she was sold again, and became the *Midøy Viking*. In 1988 she was renamed the *May*, but was condemned later that year, and in 1989 was deliberately sunk.

Gory Otto Grotevolja *see* **Südliche Petermann Range**

Otto von Gruber Gebirge *see* **Gruber Mountains**

Ottoborchgrevinkfjella *see* **Mount Borchgrevink**

Ottosenknatten. 74°40' S, 11°20' W. A small nunatak at the N side of Sirinuten, in the NW part of Sivorgfjella, in the Heiemefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Kristian Ottosen (1921-2006), Norwegian writer and Resistance leader in Bergen during World War II, arrested in 1942.

Gora Otvesnaja. 72°03' S, 66°55' E. A nunatak in the Prince Charles Mountains. Named by the Russians.

Otway Massif. 85°27' S, 172°00' E. A very prominent, mainly ice-free massif, about 16 km long and 11 km wide, at the NW end of the Grosvenor Mountains, at the head of Mill Glacier, at the confluence of that glacier and Mill Stream Glacier. The massif is a landmark for aviators flying up the Mill Glacier. The Southern Party of NZGSAE 1961-62 were landed at a plateau 3 km to the SE of the massif, on Nov. 6, 1961, and climbed the massif's highest peak (3900 m above sea level) a few days later, suffering extreme discomfort due to altitude sickness. They surveyed the massif, and named it for Peter Miles Otway (b. 1936, Lower Hutt, NZ), a member of the party. He had also been assistant surveyor with the Northern Party of NZGSAE 1960-61, and had wintered over at Scott Base in 1961. Later, he was working in Iran when he was captured by bandits and shot. His father's binoculars were hanging around his neck, and deflected the bullet. Lucky Otway. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Ouellette Island. 64°47' S, 64°25' W. An island, 0.8 km W of Howard Island, in the S part of the Joubin Islands, off the SW part of Anvers Island, in the Palmer Archipelago. Work was done here by USARP personnel from Palmer Station from 1965. Named by US-ACAN in 1975, for Gerald L. Ouellette, chief engineer on the *Hero* on its first voyage to Palmer in 1968. UK-APC accepted the name on Dec. 20, 1974.

Cap Ouest *see* **Moreton Point**

Chenal Ouest. 66°40' S, 140°00' E. A channel in the Géologie Archipelago, between Pétrel Island to the E and Les Sept Îles to the W. Named by the French.

Outback Nunataks. 72°30' S, 160°30' E. A series of bare rock nunataks and mountains which are distributed over an area about 60 km long and 30 km wide, S of Emlen Peaks of the Usarp Mountains, and W of Monument Nunataks and the upper part of Rennick Glacier, adjacent to the featureless interior plateau. Discovered by the U.S. Victoria Land Traverse Party of 1959-60. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for their remote position at the posterior side of the large mountain belt that extends from the Ross Sea to the interior ice plateau.

Outcast Island *see* **Outcast Islands**

Outcast Islands. 64°48' S, 64°09' W. Two small islands, little more than rocks, and 0.8 km apart, as well as about 14 surrounding rocks, on the N side of Bismarck Strait, 5 km SW of

Palmer Station, off the SW coast of Anvers Island, in the Palmer Archipelago. Surveyed by FIDS in 1955, and named by UK-APC on Sept. 4, 1957, as Outcast Islets, for their somewhat isolated position in relation to the other islands in the vicinity of Arthur Harbor. US-ACAN accepted the name in 1958, and it apears on a 1958 British chart. On July 7, 1959, UK-APC redefined the feature as the Outcast Islands, and it appears as such on a British chart of 1960. US-ACAN accepted that new name in 1963. It appears erroneously as Outcast Island in the 1974 British gazetteer.

Outcast Islets *see* **Outcast Islands**

The *Outeniqua*. A 14,000-ton logistics ship, the largest vessel in the South African Navy, built in the Ukraine in 1991, and launched in September of that year as the *Aleksandr Siezyuk*. In April 1992 she was bought by a shipping company, and renamed *Juvent*. In Feb. 1993, she was bought by the South African Navy, renamed *Outeniqua*, and went with the *Agulhas* to Sanae Station, 1997-98. She was decommissioned on July 30, 2004, bought by an Israeli company, renamed the *Paardeberg*, and was based out of Cape Town. In 2005-06, she took down the 25th Indian Antarctic expedition. In 2006 a Scottish company bought her, renamed her *Ice Maiden*, and used her as a floating hotel for oil rig workers in the North Sea.

Outer Island. 60°43' S, 45°35' W. An island, fringed by submerged rocks, 0.5 km E of Berntsen Point, on the E side of Signy Island, in the South Orkneys. Surveyed in 1933 by personnel on the *Discovery II*, and named by them as Outer Islet, for its position close outside the entrance to Borge Bay. It appears as such on their 1934 chart, and it was the name accepted by US-ACAN in 1953, and by UK-APC on Sept. 20, 1955. However, on July 7, 1959, UK-APC redefined it as Outer Island, and it appears as such in the 1961 British gazetteer. US-ACAN accepted the new name in 1963. It was further charted by an RN Hydrographic Survey unit on the *Protector*, 1964-65.

Outer Islet *see* **Darbel Islands**, **Outer Island**

Outlaw Rock. 67°53' S, 68°53' W. An isolated rock, awash at low tide, W of the Dion Islands, in Marguerite Bay, off the S end of Adelaide Island. First charted by an RN Hydrographic Survey unit on the *Protector*, in 1963. Named by UK-APC on Feb. 12, 1964, for its isolated position, and also in association with the names of the other islands in the Dion Islands. US-ACAN accepted the name later in 1964. It appears on a British chart of 1964.

Outlet glaciers. An outlet glacier is one that drains an inland ice-cap or which flows through a gap between mountains.

Outlook Peak. 85°59' S, 150°50' W. A low peak that rises steeply, 3 km SE of Mount Zanuck, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by NZGSAE 1969-70, who, from here, got a good outlook of the next stage of their trip. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

The Outpost *see* **Vorposten Peak**

Outpost Nunataks. 75°50' S, 158°12' E. Three aligned nunataks, 6 km SW of Brimstone Peak, and about 26 km SW of the Ricker Hills, in the Prince Albert Mountains of Victoria Land. Mapped by the Southern Party of NZGSAE 1962-63, and so named by them because of this feature's position near the edge of the Polar Plateau. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA accepted the name on May 18, 1971.

Outrider Nunatak. 69°28' S, 156°23' E. A prominent nunatak, rising to 1249 m, in the north-central part of Arkhangel'skiy Nunataks, just S of the largest of that group, in George V Land. Photographed aerially on Jan. 4, 1947, during OpHJ 1946-47. Re-photographed aerially by SovAE 1958, by ANARE in 1959, and by USN between 1960 and 1962. The summit of the nunatak was intersected by members of USGS's Topo West Traverse of 1962-63. So named by NZGSAE 1963-64 because of its forward position in the group. NZ-APC accepted the name, and ANCA followed suit on May 18, 1971. US-ACAN accepted the name in 1973.

Oval Lake. 68°32' S, 78°17' E. Roughly oval in shape, 1.3 km NE of Club Lake, on Breidnes Peninsula, in the Vestfold Hills. Named descriptively by ANCA on Nov. 27, 1973.

Ozero Oval'noe *see* **Oval'noye Lake**

Oval'noye Lake. 67°40' S, 45°53' E. Near Molodezhnaya Station, on the coast of Enderby Land. Photographed aerially by ANARE in 1957, and also by SovAE 1957, and named by the Russians as Ozero Oval'noe. ANCA translated the name on July 31, 1972.

Ovbratten *see* **Ovbratten Peak**

Ovbratten Peak. 72°47' S, 3°44' W. A pyramidal rock peak, with a steep S side, about 3 km SW of Høgfonna Mountain, on the N side of Frostlendent Valley, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Ovbratten. US-ACAN accepted the name Ovbratten Peak in 1966.

Nunatak Ovcyna. 71°07' S, 66°16' E. One of several nunataks NW of Mount Woinarski, in the Prince Charles Mountains. Named by the Russians.

Ove Peak. 72°11' S, 3°27' W. The most northerly of the group at the W side of Wilson Saddle, near the SW end of Ahlmann Ridge, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Ovenuten (i.e., "Ove peak"), for Ove Wilson. US-ACAN accepted the name Ove Peak in 1966.

Ovech Glacier. 62°58' S, 62°27' W. A glacier on Smith Island, in the South Shetlands, flowing ESE for 3.5 km from the SE slopes of Imeon Ridge, ESE of Drinov Peak, into the Bransfield Strait. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for Ovech, the medieval fortress in northeastern Bulgaria.

Ovenuten *see* **Ove Peak**

Overflow Glacier. 77°47' S, 163°11' E. A small, steep tributary glacier, about 3 km long and 3 km wide, just E of Briggs Hill, in southern Victoria Land. Named descriptively (it overflows, rather than flows, into Ferrar Glacier from the S) by Grif Taylor's Western Journey Party during BAE 1910-13. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Øverlandnosa. 74°35' S, 10°47' W. A hill, mostly snow-capped, in the northernmost part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for poet Arnulf Øverland (1889-1968), arrested in 1942 for his anti-Nazi Resistance activities.

Mount Overlook. 71°28' S, 163°26' E. A mostly snow-covered mountain rising to about 2010 m, and overlooking the middle portion of Sledgers Glacier from the N, in the Bowers Mountains of Oates Land, in Victoria Land. So named by Malcolm Laird, leader of an NZARP geological party in this area in 1981-82, because the party obtained an excellent view from the summit. NZ-APC accepted the name in 1982, and US-ACAN followed suit.

Mount Overlord. 73°10' S, 164°36' E. A very large extinct stratovolcano, rising to 3395 m, at the NW limit of Deception Plateau, just NE of the head of Aviator Glacier, in northern Victoria Land. So named by the Northern Party of NZGSAE 1962-63, because of its dominance in the area. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Overthrust Bluff. 64°57' S, 62°53' W. About 800 m high, on Mount Inverleith, above Leopard Cove, at Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named by the Poles on Sept. 1, 1999, for a very visible thrust surface separating the Upper Permian-Triassic Trinity Peninsula Group metasediments from the Lower Cretaceous Antarctic Peninsula Volcanic Group lavas.

Overton Peak. 69°41' S, 71°58' W. Rising to about 550 m in the Desko Mountains, at the SE end of Rothschild Island, off the NW extremity of Alexander Island. Named by US-ACAN for Cdr. Robert H. Overton of the U.S. Coast Guard, executive officer on the *Westwind* during OpDF 71 (i.e., 1970-71). UK-APC accepted the name on June 11, 1980.

Overturn Glacier. 79°54' S, 157°15' E. A short, steep, crevasse-free glacier, a tributary of the Hatherton Glacier, immediately E of Dark Tower, about 5.7 km W of Junction Spur, in the Darwin Mountains. Named by a NZARP field group who had a dramatic overturn with their toboggan while descending this glacier. ANCA accepted the name on March 7, 1991, and US-ACAN followed suit in 2000. NZ-APC accepted the name on Feb. 20, 2001.

Overwintering *see* **Wintering-over**

Caleta Oviedo *see* **Oviedo Cove**

Oviedo Cove. 64°13' S, 56°35' W. A cove opening out at the extreme NE end of Seymour

Island, SE of Cape Wiman, opposite the E coast of Trinity Peninsula. Named by the Argentines in 1978 as Caleta Oviedo, for Jorge Oviedo, who died in the Antarctic (*see* **Deaths**, 1977). The Chileans call it Caleta Andonaegui, for Sub-Lieutenant Alfred Andonaegui A., officer on the Chilean navy ship *Yelcho*, who helped rescue the crew of the tourist ship *Lindblad Explorer* in Admiralty Bay in 1972. In the 1980s USARP personnel here referred to it in texts and on maps as Larsen Cove, however UK-APC accepted the name Oviedo Cove on May 13, 1991, and US-ACAN followed suit.

The *Oviri*. French yacht, skippered by Hugues Delignières, which visited the South Shetlands and the Antarctic Peninsula in 1988-89. She was back in Antarctic waters in 1989-91, wintering-over at Pléneau Island in 1990. She was back, same skipper, same basic places, in 1992-93, except she didn't winter-over this time.

Øvre Sandvatn. 70°50' S, 12°07' E. A lake in the E part of the Schirmacher Hills. Named by the Norwegians ("upper sand lake"). *See also* **Nedre Sandvatn**.

Øvrebrekka. 72°15' S, 13°30' E. An ice-fall, in the S part of the Weyprecht Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the upper slope").

Øvreknatten *see* **Collins Nunatak**

Øvrenuten. 66°41' S, 55°27°E. The most southeasterly of three nunataks in a row, in the Nicholas Range of Kemp Land. *See* **Nedrenuten** for more details.

Övresjöen *see* **Lake Ober-See**

Øvrevollen *see* **Øvrevollen Bluff**

Øvrevollen Bluff. 72°11' S, 3°45' E. A rock and ice bluff, with crags on the N side, just S of Festninga Mountain, in the southwesternmost part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Øvrevollen (i.e., "the upper wall"). US-ACAN accepted the name Øvrevollen Bluff in 1966.

Isla Owen *see* **Owen Island**, **Tartar Island**

Monte Owen *see* **Mount Owen**

Mount Owen. 74°25' S, 62°30' W. Rising to 1105 m (the British say 1135 m), 3 km NW of Kelsey Cliff, at the S side of Johnston Glacier, near the head of Nantucket Inlet, on the Lassiter Coast, on the E coast of Palmer Land. Photographed aerially on Dec. 30, 1940, during USAS 1939-41, and described by them as one of "several isolated mountains." As such, it appears on a 1943 U.S. Hydrographic Office chart. On Nov. 21, 1947, it was re-photographed aerially by RARE 1947-48, and found to lie farther N than was previously reported. In Dec. 1947, it was surveyed from the ground by a combined sledging party of personnel from RARE and Fids from Base E. Named by Finn Ronne in 1948 as Mount Arthur Owen, for Art Owen. It appears as such on the 1948 American Geographical Society's map of 1948, but shown incorrectly at the head of Gardner Inlet, in 74°30' S. It appears as Mount Owen on Ronne's map of 1948. US-ACAN accepted that name in 1949, and UK-APC followed suit on Jan. 28, 1953. It appears as such on a British chart of 1954, and in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Monte Owen, and that is what the Argentines call it today. Re-mapped by USGS from USN air photos taken between 1965 and 1967. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land.

Owen, Arthur Earl "Art." b. May 6, 1927. He had been an Eagle Scout, a mountain climber (just after World War II, at the age of 18, he had organized a mountain climbing expedition to Mount Popocatépetl), and a signalman in the Navy during World War II, and was a freshman at Lamarr College when he and another Boy Scout were up for the competition to go with Ronne on RARE 1947-48. Ronne picked Owen, but the other lad went with them as far as Panama. Owen was trailman and deckhand on the expedition. He later became a petroleum geologist with the Sinclair Oil & Gas Co., moved to Buffalo, NY, and died there of cancer, on May 13, 2000.

Owen, Russell "Russ." b. Jan. 8, 1889, Chicago, but raised in New England, son of William Owen and his wife Annie. In 1906 he went to work for the New York *Sun*, as a reporter, on April 12, 1913 he married Ethel Jean McGregor, and in 1921 became a Pulitzer Prize-winning *New York Times* correspondent. Famous for his coverage of the Scopes trial from Dayton, Tenn., in 1925, he covered various Arctic explorations, Lindbergh, and many of the big stories of the day, and was one of the shore party of ByrdAE 1928-30. In 1945 his headline, from Oak Ridge, Tenn., was "From Monkey Trial to the Atomic Age." His wife died in Jan. 1948, and on March 10, 1949, in NYC, he married Marjorie Bryant, Charles Bryant's widow. He died of a heart attack on April 3, 1952, in Cleveland.

Owen, Thomas Gwilym. Known as Gwilym. b. May 2, 1928, Pontardawe, near Swansea, Wales. He joined FIDS in 1952, as a radio operator, and wintered-over at Signy Island Station in 1953. He died in Swansea, in June 2004.

Owen Hills. 83°44' S, 169°50' E. An area of rugged, ice-covered hills, on the W side of the Beardmore Glacier, between Socks Glacier and Evans Glacier, in the Queen Alexandra Range. Named by US-ACAN in 1966, for George Hodges Owen (1913-1974), Washington lawyer and long time member of the Foreign Service, director of the State Department's visa office from 1967 to 1972, and special assistant for Antarctica in that department, 1959-62. He helped negotiate the Antarctic Treaty in 1959.

Owen Island. 61°56' S, 58°23' W. An island, about 0.7 km long, about 4 km WNW of Round Point, between that point and Pottinger Point, about 1 km off the N coast of King George Island, in the South Shetlands. Charted in 1934-35 by personnel on the *Discovery II*, and, it seems, named by them, although no one knows for whom or what. The British gazetteer has put forth the theory that it was named for Vice Admiral Sir William FitzWilliam Owen (1774-1857), naval hydrographer. It appears on a British chart of 1945, and was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears in the British gazetteer of 1955. Photographed aerially by FIDASE in 1956-57. It appears on two separate Argentine charts of 1957, as Isla Round and Isla Redonda, respectively. The latter name was the one accepted by the Argentine gazetteer of 1970. Over the years this feature has been often confused with Tartar Island. Last plotted by the UK, in late 2008. *See also* [1]**Jagged Island**.

Owen Peak. 71°53' S, 63°08' W. Rising to about 1700 m, inland from Hilton Inlet, on the S side (i.e., near the head) of Gruening Glacier, on the Black Coast, on the SE side of Palmer Land. Discovered and photographed aerially on Nov. 21, 1947 by RARE 1947-48, and plotted by them in 71°50' S, 63°00' W, and named by Ronne as Mount Russell Owen, for Russell Owen. US-ACAN accepted that name, but it was amended by them in 1966. USN re-photographed it aerially between 1966 and 1969, and, with new coordinates, it appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on July 21, 1976.

Owen Ridge. 79°50' S, 84°50' W. A very high and rugged mountain ridge, 35 km long, it extends SSE from Mount Strybing, and forms the most southwesterly part of the Sentinel Range. It includes Mount Southwick and Lishness Peak. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1960. Named by US-ACAN in 1975, for Thomas B. Owen, NSF official.

Pico Owlshead *see* **Owlshead Peak**

Owlshead Peak. 66°19' S, 65°49' W. A peak rising to about 300 m, 2.5 km ESE of Cape Bellue, on the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, roughly surveyed from the ground by Fids from Base W between 1956 and 1959, and mapped by FIDS cartographers from these efforts. So named by UK-APC on Sept. 23, 1960 because, when seen from Crystal Sound and Darbel Bay, it looks like the head of an owl. US-ACAN accepted the name in 1965. The Argentines call it Pico Owlshead.

Owlston Islands *see* **Owston Islands**

Islotes Owston *see* **Owston Islands**

Owston Islands. 66°23' S, 66°06' W. Also spelled (erroneously) as Owlston Islands. A group of small islands 1.5 km W of the Darbel Islands, in Crystal Sound, off the Loubet Coast of the Antarctic Peninsula. ChilAE 1946-47 grouped these islands together with the Darbel Islands, and called the whole group Islas Quirihue, named for the town in southern Chile. As such, they appear on the 1947 chart of the expedition, and it was the name accepted by the Chilean gazetteer of 1974. The Chileans appear to maintain this position today (*see* **Darbel Islands**). After air photos taken by FIDASE in 1956-57, and ground surveys conducted by Fids

from Base W in 1958-59, it was found that the group consisted actually of two separate groups, and consequently, on July 7, 1959, this one was individually named by UK-APC for Philip George Owston (1921-2001), British crystallographer who interpreted x-ray diffraction work on ice in terms of the structure and movement of molecules. It appears on a British chart of 1961, and US-ACAN accepted the name in 1969. However, it does appear erroneously in the 1974 British gazetteer, as Owston Island (i.e., in the singular). The Argentines call them Islotes Owston.

Oyako-ike. 69°28' S, 39°37' E. Two small lakes at the SW of the W head of Osen Cove (which indents the N coast of Skarvsnes Foreland), on the E side of Lützow-Holm Bay. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1962 and 1973, and named by them on Nov. 22, 1975 ("parent and child ponds").

Oyako Islands. 68°28' S, 41°24' E. Two small islands immediately N of Cape Akarui, on the coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on Oct. 1, 1962, as Oyako-shima, or Oyako-zima (i.e., "parent and child islands") because one of the islands is tiny. US-ACAN accepted the name Oyako Islands in 1968. The Norwegians call them Hjonøyane (which actually means "husband and wife islands").

Oyako-shima *see* **Oyako Islands**

Oyako-zima *see* **Oyako Islands**

Oyayubi-ike. 69°14' S, 39°40' E. A small pond in the S part of Oyayubi Island, just off the Langhovde Hills, in the E part of Lützow-Holm Bay. Mapped by Japanese cartographers from JARE air photos and ground surveys taken between 1957 and 1962. Named by the Japanese on June 22, 1972, in association with the island (name means "thumb pond").

Oyayubi Island. 69°14' S, 39°40' E. A narrow rock island, 2.5 km (the Japanese say 3.5 km) long, forming a dock-like, or finger-like landscape together with Cape Nakayubi and Cape Koyubi, close off the Langhovde Hills, 3 km S of Mount Choto, in the E part of Lützow-Holm Bay. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them as Oyayubi-jima (i.e., "thumb island") on June 22, 1972, in association with Oyayubi Point, the S point of the island. US-ACAN accepted the name Oyayubi Island in 1975.

Oyayubi-misaki *see* **Oyayubi Point**

Oyayubi-one. 71°51' S, 24°41' E. At an elevation of 1725 m, it is the northeasternmost of the 5 mountain ridges stretching northward in Brattnipane Peaks, in the Luncke Range, in the north-central part of the Sør Rondane Mountains. Photographed aerially by JARE in 1981-82, and surveyed from the ground by JARE in 1984-85. So named by the Japanese ("thumb ridge") on Oct. 18, 1988, because they compared Brattnipane Peaks to a left hand. The Norwegians call this feature Eyskenshuken (i.e., "the Eyskens hook").

Oyayubi Point. 69°15' S, 39°39' E. A rocky point marking the S end of Oyayubi Island, close off the Langhovde Hills of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos by Norwegian cartographers in 1946. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them as Oyayubi-misaki (i.e., "thumb point") on June 22, 1972, in association with Cape Nakayubi, which lies immediately northward. US-ACAN accepted the name Oyayubi Point in 1975.

Oyayubi-zima *see* **Oyayubi Island**

Mount Øydeholmen. 67°24' S, 55°41' E. A mostly ice-covered mountain, 6 km (the Australians say about 9 km) WSW of Rayner Peak, southward of Edward VIII Bay, in Kemp Land, in Enderby Land. Discovered in Feb. 1936, by personnel on the *William Scoresby*. Mapped by Norwegian cartographers in 1946 from air photos taken during LCE 1936-37, plotted by them in about 67°32' S, 55°33' E, and named by them as Øydeholmen (i.e., "the desolate islet"). US-ACAN accepted the name Øydeholmen Island in 1947. Re-plotted by Australian cartographers from ANARE air photos taken in 1959, which showed it to be a mountain, and not an island, and re-named by ANCA as Mount Kernot, for William Charles Kernot (1845-1909), inaugural member of the Australian Antarctic Committee in 1886. US-ACAN accepted the new name Mount Øydeholmen.

Øydeholmen Island *see* **Mount Øydeholmen**

Øydesteinen. 71°56' S, 17°58' E. A small nunatak in the glacier called Borchgrevinkisen, to the W of the Sør Rondane Mountains, between those mountains and Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the desolate stone").

Øygarden *see* **Øygarden Group**

Øygarden Group. 66°58' S, 57°25' E. Also called Øygarden Islands, and the Guardian Islands. A group of rocky, irregular islands, anywhere between 17.5 and 31 km in extent, and lying in an E-W direction, in the S part of the entrance to Edward VIII Bay, off the coast of Kemp Land. They include Ackerman Island, Alphard Island, Borg Island, Depot Island, Håkollen Island, Karm Island, Rigel Skerries, Shaula Island, and the Sirius Islands. They were discovered in Feb. 1936 by the Discovery Committee personnel on the *William Scoresby*, and considered by them to be part of the mainland. Photographed aerially in Jan. and Feb. 1937, by LCE 1936-37, and mapped as islands by Norwegian cartographers working from these photos in 1946. Named Øygarden (i.e., "guardian islands") by the Norwegians, this being a descriptive name in Norwegian for a protective chain of islands lying along and off a coast. They were first visited by an ANARE party led by Peter Crohn, in May 1956. US-ACAN accepted the name Øygarden Group in 1965.

Øygarden Islands *see* **Øygarden Group**

Ozawa, Keijiro. b. Jan. 28, 1922, Japan. After graduating from the Imperial Fisheries Institute in 1944, he joined the staff of that institution, as a polar oceanographer, and was 1st officer on the *Umitaka Maru,* during that vessel's first Antarctic trip, 1956-57. He was promoted to captain in 1958, and commanded the *Umitaka Maru* in 1961-62, 1964-65, and 1966-67, each season in Antarctic waters. In 1968 he became a professor at the University of Fisheries, in Tokyo, and died on Oct. 14, 1971, after a long illness.

Holmy Ozërnye. 66°31' S, 99°57' E. A hill in Queen Mary Land. Named by the Russians.

Zaliv Ozhidanija *see* **Ozhidaniya Cove**

Ozhidaniya Cove. 70°44' S, 11°39' E. A cove, 0.8 km E of Tyuleniy Point, on the N side of the Schirmacher Hills, in Queen Maud Land. Nadezhdy Island lies across the mouth of the cove. Mapped by SovAE 1961, and named by them as Zaliv Ozhidanija (i.e., "anticipation cove"). US-ACAN accepted the translated name Ozhidaniya Cove in 1970.

Ozone. The Earth's ozone layer, located in the stratosphere, screens out biologically harmful ultraviolet rays from the sun. Whether one believes in Creation or Evolution, it is a very pleasant thing to have above us. If this ozone layer were to thin out, or if a hole were to appear, we could be in trouble. A true "hole," as such, could melt the Antarctic ice, and that could mean, due to the fantastic amount of water that would be released throughout the world, that people now living inland anywhere could, over the course of centuries, even perhaps decades (but not all of a sudden), find themselves coastal dwellers. It has often been stated that it was in 1975 that the ozone layer over Antarctica started to thin, and that this was discovered in 1977 by BAS, who kept it quiet for fear of panicking the world; Joe Farman (q.v.) and his fellow BAS scientists did not release the information until 1985. However, in mid-winter 1969 Charles S. Dziura (only in America could this name be pronounced Dizura), USARP meteorologist at Byrd Station, found irregularities during a test, which indicated a hole in the ozone layer directly above Byrd. However, if this information was at all taken norice of, it was, again, kept very quiet. In 1974 F. Sherwood Rowland and Mario Molina began issuing warnings about the harmful effects of CFCs on the atmosphere. Since 1983 the ozone layer above Antarctica has thinned by half. A "hole," about the size of the USA, appears in late August, and patches up again in November. However, the "hole" is gradually lasting longer and longer, but this is not a constant. Some years are better than others, but there is a gradual worsening of the situation. Actually it is a springtime decrease in the ozone layer, and thus allows more potentially ultraviolet radiation into Antarctica. The "hole" seems to be caused by chlorofluorocarbons (man-made chemicals) in the atmosphere, merging with the intense cold in the lower stratosphere, a strong polar vortex centered over the South Pole, and the presence of polar stratospheric clouds. Since 1986-87, when the Montreal Protocol went into effect banning ozone-killing gasses, there have been

National Ozone Expeditions (NOZE I, NOZE II, etc) from the USA each summer. In addition, a smaller "hole" has appeared over Spitsbergen, in the Arctic. That was the situation in 1990, when this article was written for the first edition of this book. Since then nothing changed until 2007, when it was reported that the hole had definitely shrunk considerably in size. Scientists are as clueless as they were then, but, in order to compensate, they have begun predicting that the healing up of the hole "may" cause massive melting in Antarctica, and life-threatening flooding of American coastal cities. This sort of alarmism sells papers, but is not real.

Pointe P. Curie *see* **Curie Point**

Mount P.L. Smith *see* **Mount F.L. Smith**

Pa Tio Tio Gap. 76°25' S, 161°57' E. A glacier-filled gap at 1000 m, trending E-W between Robertson Massif and Endeavour Massif, in the Kirkwood Range of Victoria Land. Originally US-ACAN were going to name it Belgrave Gap, after Vince Belgrave. However, instead, Mr. Belgrave lent his name to Mount Belgrave and this gap was named by NZ-APC on Nov. 12, 1999 (name is Maori, and means "frozen over"). US-ACAN accepted the name in 2000.

The *Paal*. Norwegian whale catcher, belonging to the Thule Whaling Company (Capt. Melsom), usually working for the *Thule*, in the South Orkneys in the 1911-12 and 1912-13 seasons. Petter Sørlle made his investigations of these islands from this vessel in those years, being a gunner during the latter expediton. Sometimes (erroneously) recorded as the *Palmer* (*see also* **The *Powell***), and the name does, indeed, sound like both Powell and Palmer. *See also* **Pauls Hole**.

Puerto Paal *see* **Paal Harbor**

Paal Harbor. 60°43' S, 45°36' W. A small bay, 0.75 km S of Borge Bay, between Polynesia Point and Rethval Point, along the SE side of Signy Island, in the South Orkneys. A whaling anchorage, it was named, probaly in 1911-12, and certainly for the *Paal*, and appears on a 1913 chart (as Paal Hr.) based on a running survey conducted of the South Orkneys in 1912-13 by Petter Sørlle (on the *Paal*). It was re-charted by the Discovery Investigations team in 1933, and appears on their 1934 chart. It appears as Puerto Paal on an Argentine chart of 1933, and that was the name accepted by the 1970 Argentine gazetteer. It appears as Paal Harbor on a 1943 U.S. Hydrographic Office chart, and that was the name accepted by UK-APC on on Sept. 8, 1953 (but with a "u" in "Harbor," of course), and by US-ACAN later that year. It appears in the 1955 British gazetteer and the 1956 American gazetteer. The Russians have a tendency to call it Pål Harbor.

Paalnibba. 74°46' S, 11°36' W. A mountain peak S of Jahntinden, in Skjønsbergskarvet, in Sivorgfjella, in the Heimefront Range, in Maudheimvidda, Queen Maud Land. Named by the Norwegians for Paal Olav Berg (1873-1968), chief justice of the Supreme Court of Norway, 1929-46, and Resistance leader during World War II.

Paape, Frank Mitchell. b. 1907, Invercargill, NZ, but raised partly in Dunedin, son of Australian-born Arthur Paape, local politician and owner of the Grand Hotel, on High Street, Dunedin, by his wife Mary Anne Janet Mitchell. Frank was working as a bank clerk when, on Feb. 18, 1929, he sailed south on the *Eleanor Bolling* as an able seaman during ByrdAE 1928-30. On Jan. 20, 1930, he sailed south again on the *Eleanor Bolling*, for the last Antarctic relief trip during ByrdAE 1928-30. On March 11, 1930, he signed on again, for the trip to the USA. He experienced immigration difficulties when the ship arrived at NYC on June 19, 1930, and, after the expedition, he was deported. This is a lot less glamorous than the story he told of working in some of the leading hotels in the USA and Canada, of studying hotel management in the States, and going on a walking tour from El Paso to Mexico City. "There was much dirt," he said of his walk, "but the missionary homes were very interesting." Whichever version preceded the deportation, he set sail for England, where he worked for eight months in London, with Southard's, the wine merchants. Of course, he went to the Derby, and even visited Paris before his return to NZ. Once back, he married Claire, and went to work at the Grand, for his father. Two of his brothers died as flyers during World War II. Frank took over the Grand when his father died, in 1948, and also ran the Excelsior, in the same town (on the corner of Princes & Dowling Streets).

The *Paardeberg* *see* **The *Outeniqua***

Islote Pabellón *see* **Pabellón Island**

Pabellón Island. 64°19' S, 62°57' W. The more southerly of 2 islands close off the NW tip of Omega Island, between that island and Eta Island, and marking the S side of the W entrance to Andersen Harbor, in the Melchior Islands, in the Palmer Archipelago. Roughly surveyed by Discovery Investigations personnel in 1927, and further surveyed in March 1941 by USAS 1939-41, who gave the collective name Transit Islands to the two islands. It is possible that the DI or USAS called one of the islands Flag Island (although it wasn't charted as such), or something like that, because, when the feature was surveyed by ArgAE 1946-47, and they named it Islote Pabellón, for their flag, which they flew from a mast that they erected on the island (pabellón is the Spanish for "national flag"), there is some suggestion (and this comes from the Argentines themselves) that they were only using a translated name of one that had been used before. Islote Pabellón was the name accepted not only by the 1970 Argentine gazetteer, but also by the 1974 Chilean gazetteer. It appears as Pabellon Islet (i.e., without an accent mark) on a British chart of 1947, and that was the name accepted by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The British added the accent mark on Sept. 4, 1957. On July 7, 1959, UK-APC redefined it as Pabellón Island, and that name is seen on a British chart of 1960.

Pabellón Islet *see* **Pabellón Island**

Islotes Pablo *see* **Paul Islands**

Cabo Pacheco. 67°11' S, 67°37' W. A cape at the point where Gunnel Channel, Barlas Channel, and Tickle Channel all meet in The Gullet, between the E extremity of Adelaide Island and the W coast of the Antarctic Peninsula. Named by the Chileans for Suboficial Eduardo Pacheco R., a crewman on the *Baquedano*, one of the men who landed at Sandefjord Cove, on Peter I Island, looking for a site for an automatic weather station, during ChilAE 1955-56. The Argentines call it Cabo Cuadrilátero (i.e., "square cape").

Punta Pacheco *see* **Crabeater Point**

The *Pacific*. Sealing schooner from New London, which was in South Georgia (where they left a sealing gang for 8 months), the South Sandwich Islands, and the South Shetlands for the 1829-30 and 1830-31 seasons, commanded by Capt. James Brown. They spent 10 days on Zavadovskiy Island (South Sandwich Islands). On Aug. 5, 1834, the *Pacific* left New London, bound for the South Shetlands, teaming up with the *Talma*, which had left port on July 16, 1834. Daniel Carew of the *Talma* led the expedition. Crew of the *Pacific* that season were: Jonas Horn (captain), John Green (aged 22), Evan Evans (21; a Welshman living in Stonington), Giles H. Holt (27), John Montgomery (21; of Paterson, NJ), Harvey Turner (18; of Trumbull, Conn.), Isaac L. Comfort (23; of Jackson, Pa.), James D. Bull (19; of Troy, NY), James Morgan (34; of NYC), Benson Hyde (22), Francis A. Wilcox (18), Daniel T. Woodward (21), Sylvester L. Sullivan (22; a Canadian living in NY), John Quick (20; from NJ), John D. Schoonmaker (24; from NY), Erwin Chase (17; from NY), John L. Egbert (22; from Newark, NJ), James A. Palmer (25; black, from NYC), John Saunders (25; black, from Albany, NY). They spent the 1834-35 season there. The *Pacific* continued to seal in southern waters (but not in Antarctica) in various oceans throughout the 1840s, then switched to whaling, which she conducted well into the Civil War period.

Pacific-Antarctic Basin *see* **Southeast Pacific Basin**

Pacific-Antarctic Ridge. Also called Antarctic Pacific Ridge, South Pacific Rise, and South Pacific Ridge. A submarine feature between 54°30' S and 61°30' S, and between 130°W and 161°E, and centering on 58°S, 145°30' E. US-ACAN accepted the name in 1971, and with a new plotting — 62°S, 157°W, in order to bring the feature within the boundaries of the Antarctic Treaty. In 1993 its center was re-appraised in 60°S.

Pacific South Polar Basin *see* **Southeast Pacific Basin**

Pack-ice. Ice forming a pack in the sea around Antarctica. The cold-air masses coming off the continent freeze the ice in this manner: When the temperature of the water reaches -1.86°C, frazil ice is formed. As long as the temperature remains below -2°C this forms into grease ice, and then into pancake ice, which eventually forms into floes, then pack-ice. The pack-ice around Antarctica is in constant motion, retreating in the summer, advancing in the winter, pushed by the winds and currents. It reaches N to about 56°S in the Atlantic and to about 64°S in the Pacific, and because of its variation in area,

it may play a great role in world weather. As long as humans have been going down to Antarctica, their ships have been getting caught in the pack-ice. Some have been merely pinched by it, some have been freed by other ships — if they were were lucky. Sometimes vessels would be beset for several months at a time, traveling with the pack until the thaw came. Even icebreakers get caught occasionally. However, only 4 recorded ships have ever been crushed and sunk by the pack: the *Antarctic* in 1903; the *Endurance* in 1915; the *Gotland II* in 1981; and the *Southern Quest* in 1986. If you are going down to the ice in a vessel, it is best to make sure an ice pilot is on board. If not, the easiest passage through the pack is in 178°E.

Packard Glacier. 77°21' S, 162°10' E. Just W of Purgatory Peak, it flows S into the E part of Victoria Valley, in the Saint Johns Range of Victoria Land. Named by VUWAE 1958-59 for Andrew Packard (b. 1929), VUW zoologist who worked here with the NZ party of BCTAE the season before. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Padda *see* **Padda Island**

Padda Island. 69°39' S, 38°20' E. Near the W side of the entrance to Havsbotn, in the inner part of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped in 1947 from these photos by Norwegian cartographers, who named it Padda (i.e., "the toad"), because of its shape. US-ACAN accepted the name Padda Island in 1962.

Paddack, Alexander. b. Dec. 30, 1797, Nantucket, Mass., son of Peter Paddack and his wife Judith Bunker. In April 1821, in Nantucket, he married Avis Swain. A whaler and sealer, he was commander of the *Geneva*, 1836-37. He and his wife were still alive into the 1880s, living in Nantucket.

Cerro Padre *see* **Massey Heights**, **Cerro Ortega**

Padre Balduino Rambo Refugio. 62°10' S, 58°58' W. Known as Balduino Rambo, or as just Rambo. Refuge hut built by the Brazilians in 1984-85, on Fildes Peninsula, King George Island, in the South Shetlands, open most seasons (*see* **Brazilian Antarctic Expeditions**), and dismantled in 2004.

Paéz Montero, Jorge. b. Argentina. Just 2 years out of agricultural school at Casilda, he wintered-over at Órcadas Station in 1929.

Pagano Nunatak. 83°41' S, 87°40' W. Also called Semper Shaftus. A notable and relatively isolated rock nunatak with a pointed summit of 1830 m, 13 km E of the Hart Hills and 130 km NNE of the Ford Massif in the Thiel Mountains. Examined and sketched by Ed Thiel during the course of an airlifted seismic traverse along the 88°W meridian in 1959-60. Named by US-ACAN in 1962, for Chief Warrant Officer Gerald Pagano (1913-1981), U.S. Army, assistant for plans and operations on the staff of the commander, U.S. Naval Support Force, Antarctica, 1960-65. He was also a staff member with the Center for Polar Archives, National Archives, 1972-81.

Cabo Page *see* **Cape Page**

Cape Page. 63°55' S, 60°18' W. A cape, 22 km SW of Cape Kater, it forms the N tip of the Wright Ice Piedmont, on the Davis Coast, on the W coast of Graham Land. It was shown roughly (but not named) on a chart drawn up by SwedAE 1901-04. ChilAE 1947-48 named it Cabo Comandante Byers, or Cabo Comdte. Byers, for Enrique Byers del Campo, Air Force squadron leader on the expedition. Both names appeared on Chilean mapping until 1957, when it was decided to shorten the name to Cabo Byers. In its shortened form it appears on a Chilean chart of 1961, and also in the 1974 Chilean gazetteer (after they had rejected the longer name, Cabo Comandante Byers). It was photographed aerially by FIDASE in 1956-57, and mapped from those photos by FIDS, who named it for Sir Frederick Handley Page (1885-1962), pioneer aircraft designer and president of the Royal Aeronautical Society, 1945-47. UK-APC accepted that name on Sept. 23, 1960, and US-ACAN followed suit that year. It appears as such on a British chart of 1962. The Argentines call it Cabo Page.

Page, William. b. April 16, 1871, Berwick-upon-Tweed. He was living in Sheffield when he became a leading stoker 2nd class in the RN, and was serving on the *Royal Adelaide* when he transferred to the *Discovery*, for BNAE 1901-04. In July 1901 he had 6 teeth filled and 9 pulled out. He was very strong and sang a good comic song. He returned home in the *Morning*, in 1903. He died in Sheffield, in 1930.

Page Bluff. 69°38' S, 66°11' W. Rising to about 1250 m, at the E end of Crescent Scarp, on the Fallières Coast, on the W coast of Graham Land. Photographed aerially in 1940 by USAS 1939-41, and surveyed by FIDS in 1958. Named by US-ACAN in 1977, for John H. Page, a geodesist with the U.S. Army Topographic Command, and scientific leader at Palmer Station for the winter of 1969. It appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on May 21, 1979.

Page Rock *see* **Jester Rock**

Pageant Point. 60°44' S, 45°36' W. The central and highest of 3 ice-free points at the E end of Gourlay Peninsula, between Pantomime Point and Gourley Point, on the SE part of Signy Island, in the South Orkneys. Surveyed in 1933 by personnel from the Discovery Committee, and again in 1947 by Fids from Signy Island Station, who named it for the pageantry seen in the penguin rookery there. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Cerro Paglietino *see* **Saddleback Ridge**

The *Pagoda*. A 362-ton British barque, the vessel of the 1844-45 British government expedition led by Lt. Capt. Thomas E.L. Moore, to make magnetic observations south of 60°S, and between longitudes of 0°and 100°E, in previously unnavigated seas, or to put it another way, to complete the job that the Ross expedition of the few years before had started. Another mission was to look for the elusive Bouvet Island. The ship left Liverpool on July 16, 1844, bound for the Cape of Good Hope, was fitted out with great care under the direction of Admiral Percy at Cape Town, and left Simon's Bay in Jan. 1845, heading SE. On Jan. 25, 1845 they encountered their first icebergs, in 53°30' S, and on Jan. 30, 1845 they came up against Pagoda Rock (q.v.). They crossed the Antarctic Circle on Feb. 5, 1845, in 30°45' E, and on Feb. 11 reached the edge of the pack-ice. Their farthest south was 67°50'S, 30°54' E. Moore thought he saw land, probably Enderby Land. After voyaging 14,000 miles in 140 days, the expedition arrived back in South Africa. Not one man had even been sick. On July 24, 1845, the *Pagoda* left Simon's Bay, bound for Mauritius, and from there back to Leith, in Scotland.

Pagoda Peak. 83°56' S, 166°45' E. A sharp, stepped peak, rising to over 3048 m, at the head of Bell Glacier, and between the heads of Tillite Glacier and Montgomerie Glacier, 5 km N of Mount Mackellar, in the Queen Alexandra Range. Named by the Northern Party of NZGSAE 1961-62, for its shape. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Pagoda Ridge. 71°53' S, 68°33' W. A ridge running NNW-SSE at an elevation of about 900 m above sea level, between Phobos Ridge and Deimos Ridge, on the N side of Saturn Glacier, in the SE part of Alexander Island, it has a small peak looking like a pagoda at its summit, and for this reason was named by UK-APC on Dec. 20, 1974. Mapped from trimetrogon aerial photography done by RARE 1947-48, and from ground surveys conducted by FIDS between 1948 and 1950. Surveyed again by BAS between 1961 and 1973. US-ACAN accepted the name in 1975, and it appears on a 1979 USGS sketch map of the N part of Palmer Land.

Pagoda Rock. Sighted on Jan. 30, 1845, in 60°11' S, 4°43' E, by the *Pagoda* expedition, and estimated by them at 1600 tons in weight (!). It has never been seen since. There can be no reason to doubt Capt. Moore's "large, rocky islet surmounted by a quantity of snow or ice," so the reasonable explanation is that it was, indeed, a huge rock, embedded near the top of a submerged iceberg that just happened to be floating around. Subsequent to the *Pagoda*'s chance visit, the berg would have disintegrated, and the rock should now be lying at the bottom of the ocean somewhere. It made its first appearance on an Admiralty chart in 1918, but its existence was pretty much disproved by Shackleton during the *Quest* expedition of 1921-22, and by the *Norvegia* expedition of 1930-31.

Pagodroma Gorge. 70°50' S, 68°08' E. About 5.5 km long, 150 m deep, and steep-sided, it joins Radok Lake with Beaver Lake, at the E end of the Aramis Range, in the Prince Charles Mountains. Photographed by ANARE aircraft in 1956, and traversed in Jan. 1969, by Alex Medvecky, ANARE geologist with the Prince Charles Mountains Survey party. Named by ANCA for the snow petrels (*Pagodroma nivea*), which nest in the weathered sandstone walls of the gorge. US-ACAN accepted the name in 1971.

Pagodromen. 73°45' S, 14°45' W. A mountain in the S part of the Kraul Mountains, in the W part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for *Pagodroma nivea*, the snow petrel which is to be found here.

Nunatak Pahtusova. 71°08' S, 66°30' E. In the Prince Charles Mountains. Named by the Russians.

Mount Paige. 76°20' S, 144°42' W. A mountain, 5 km W of Mount Carbone, in the Phillips Mountains of Marie Byrd Land. Discovered and mapped aerially during ByrdAE 1928-30. Named by US-ACAN in 1966, for David Paige.

Paige, David Abbey. b. May 15, 1901, Turkey. In 1911 he came to live with his uncle in Fitchburg, Mass. He taught at the Museum School, in Boston, and then worked as a commercial artist and interior decorator in NY. He created the cyclorama at Luna Park, in NY, depicting ByrdAE 1928-30, and was the official artist on ByrdAE 1933-35, on which he did not winter-over. After the expedition, he edited the films of the expedition at Republic Studios, in Hollywood, and from 1947 to 1970 was a cinematographer. He died in Beverly Hills on Aug. 9, 1979.

Pain Mesa. 73°08' S, 163°00' E. A large mesa (or tableland) just N of Tobin Mesa, in the Mesa Range of Victoria Land. Named Pain Tableland by the Northern Party of NZGSAE 1962-63, for Kevin Pain, deputy leader of this party (*see also* **Pain Névé**). NZ-APC accepted the name. US-ACAN preferred the name Pain Mesa, and so named it in 1967.

Pain Névé. 84°36' S, 174°20' E. An extensive névé, about 250 sq miles in area, between the Commonwealth Range to the W and the Hughes Range to the E. To the N, the névé ends in precipitous icefalls into Canyon Glacier and its tributary glacier, but most of the ice drains southward, into Keltie Glacier, which, in turn, flows from here into the Beardmore Glacier. Surveyed by the Southern Party of NZGSAE 1961-62, and named by them for Kevin Patrick Pain (b. Christchurch, NZ), field assistant with the party. He then proceeded to winter-over at Scott Base in 1962, and was active again in the summer of 1962-63 (*see also* **Pain Mesa**). NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Pain Tableland *see* **Pain Mesa**

Mount Paine. 86°46' S, 147°32' W. A massive, flat-topped mountain, rising to 3330 m, it forms a buttress-type projection of the W part of the La Gorce Mountains, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35 and named by Byrd, initially as Mount Katharine Paine, for Stuart Paine's mother. The name was later shortened. Katharine Douglas Lansing was born on Feb. 29, 1872, in Burlington, NJ, daughter of Edward S. Lansing. On Nov. 28, 1894, she married Sherman Morse, business manager of the Gazette Publishing Company, of Niagara Falls, and had two children by him. Not a decade later, she met Ralph Paine, fell in love with him instantly, and divorced Morse so she could marry Paine on April 5, 1903. US-ACAN accepted the name in 1947.

Paine, Stuart Douglas Lansing. b. Oct. 17, 1910, Dover, NH, a twin with his brother Philbrook ten Eyck Paine, but grew up in Durham, NH, son of correspondent, writer, and politician Ralph Delahaye Paine and his wife Katharine (see the entry above, **Mount Paine**). After Phillips and Yale, he was navigator, radio operator, and dog driver on Quin Blackburn's party to the Queen Maud Mountains, in Nov. and Dec. of 1934, during ByrdAE 1933-35. He joined the U.S. Navy 3 days after Pearl Harbor, served in World War II and Korea, married Margaret, retired in 1955 as a commander and very successful businessman, and died on March 13, 1961, in Burlingame, Calif. He wrote a book called *The Long Whip: the Story of a Great Husky* (about Jack — q.v.), and the book *Footsteps on the Ice: The Antarctic Diaries of Stuart D. Paine, Second Byrd Expedition*, was edited by his daughter, and published in 2007.

Paine Ridge. 71°50' S, 162°00' E. A saber-shaped ridge, composed largely of bare rock, extending southward from DeGoes Cliff at the SW end of the Morozumi Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Roland D. Paine, Jr., public information officer of the NSF, who was at McMurdo, 1961-62, and 1968-69.

Painted Cliffs. 83°50' S, 162°20' E. On the N side of the upper Bowden Névé, they extend SW from Mount Picciotto, and mark the SE edge of the Prince Andrew Plateau. Named by the Northern Party of NZGSAE 1961-62, for the alternating layers of colored sedimentary and dark igneous rock volcanics exposed on the face of this irregular line of cliffs. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Painted Hill *see* **Painted Peak**

Painted Lake. 67°45' S, 62°50' E. A long, narrow, permanently frozen lake, 22.6 hectares in area, on the W foot of the North Masson Range. Named by ANCA in association with nearby Painted Peak.

[1]**Painted Peak**. 67°45' S, 62°51' E. Also called Painted Hill. A prominent peak, rising to 710 m, on the N spur of the North Masson Range, in the Framnes Mountains of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers (who did not name it). Visited by an ANARE party in 1955, and named by ANCA for its notable red-brown coloring. It was used as a tellurometer station by Dave Carstens, surveyor at Mawson Station in 1962. US-ACAN accepted the name in 1965.

[2]**Painted Peak**. 72°27' S, 163°45' E. Rising from the N part of the Russet Hills, in Gallipoli Heights, in the Freyberg Mountains, in Oates Land, in Victoria Land. P.J. Oliver, NZARP geologist, studied this feature in 1981-82, and suggested the name. Ignimbrite (of red, blue-gray, and yellowish color) and dacite breccia cut by dikes of andesite and dacite give the peak many colors. NZ-APC accepted the name in 1982, and US-ACAN followed suit in 1983.

Painters Cove. 62°11' S, 58°14' W. Between Martins Head and Malczewsky Point, below Matejko Icefall, Legru Bay, on the S side of King George Island, on the Bransfield Strait, in the South Shetlands. Named by the Poles in 1980, for the painters Jacek Malczewsky (*see* **Malczewsky Point**) and Jan Matejko (*see* **Matejko Icefall**).

Punta Pairo *see* **Punta Abovedada**

Mount Paish. 66°51' S, 52°48' E. About 2.8 km E of Mount Torckler, and 45 km SW of Stor Hånakken Mountain, in Enderby Land. Plotted from ANARE air photos taken in 1957. Named by ANCA for Peter G. Paish, who wintered-over as weather observer at Wilkes Station in 1961 and at Mawson Station in 1963. US-ACAN accepted the name in 1965.

Vrah Paisy *see* **Paisy Peak**

Paisiy Peak. 62°38' S, 59°54' W. Rising to about 550 m, on Delchev Ridge, 500 m N by W of Elena Peak, 5.1 km WSW of Renier Point, and 3.9 km E by S of Rila Point, it surmounts Sopot Ice Piedmont to the N and E, in the Tangra Mountains, on Livingston Island, in the South Shetlands, Mapped by the Bulgarians, and named by them on Feb. 17, 2004, as Vrah Paisy, for St. Paisiy Hilendarski (1722-73; also known as St. Paisius of Chilendar), a famous figure of the Bulgarian national Renaissance. The name was translated into English as Paisiy Peak.

Paisley, John. b. Oct. 29, 1932, Johannesburg, South Africa, son of sales rep Robert Paisley and his wife Florence Isabel Davis. When the boy was 2 the family returned to Glasgow, and then to Essex when World War II broke out. His two years at veterinary college played a very definite second fiddle to his passion for mountain climbing in Wales, then he did 2 years in Germany in the RAF, as a radio mechanic. In 1956 he saw an ad for FIDS meteorologists, and applied, spending 6 months training in met work at Stanstead, and then left Southampton on the *John Biscoe*, bound for Montevideo and Port Stanley, and then on to winter-over as base leader at Base B in 1957 and at Base Y in 1958. On his return to the UK in 1959 he instructed at the Plas y Brenin Outdoor Centre, in North Wales, and, in 1963, married a Danish lady, Jytte Andreasen. As his job called for single men only, he was terminated, and went to college in Crewe, to train as a craft and technical teacher. He taught for a while at Appley Park, a state boarding school in Shropshire, and then, in 1970, became the first warden of the Lagganlia Centre for Outdoor Education, in Kincraig, Inverness-shire. In 1978 he married Sheila McDonald, and retired in 1986. They bought a church, Kingbeg, and converted it into a home and workshop, and John taught crafts. In 2005 they sold up and moved to Newtonmoor, and he died of lung cancer on Jan. 26, 2008.

Pakaru Icefalls. 77°38' S, 166°39' E. Between Cape Evans and Turks Head, on the SW shore of Ross Island. The feature comprises a very irregular and broken glacial area to the N of Turks Head Ridge, with ice descending to Erebus Bay. Named by NZ-APC on Nov. 12, 1999 ("pakaru"

means "broken" in Maori). US-ACAN accepted the name in 2000.

Pakira Nunatak. 77°24' S, 160°23' E. Rising to 2400 m, at the N end of Metcalf Spur, on the plateau of the Willett Range, 3 km NW of Shapeless Mountain, in Victoria Land. Named descriptively by NZ-APC on Sept. 12, 2005 ("pakira" means "bald head" in Maori). US-ACAN accepted the name in 2006.

Pakistan. Pakistan's interest in Antarctica, so the country states vehemently, is purely scientific (i.e., surely it has no military objectives there). The first Pakistani Antarctic expedition was called Operation Sea Mob, and took place in 1990-91, led by Wasim Ahmad (commander) and Muhammad Mu'azzam Rabbani (chief scientist) on the *Columbia Land*, under the aegis of the Ministry of Science and Technology through the the National Institute of Oceanography, and Jinnah Station was built that season, in Jan. 1991. On June 15, 1992, Pakistan became an associate member of SCAR, even though the country had not acceded to the Antarctic Treaty. The second Pakistani Antarctic expedition was 1992-93, going south on the *Mangem*, under Muhammad Anwar (commander) and Mr. Rabbani again as chief scientist. The summer research station Jinnah II was built this season, as well as Iqbal Observatory, an automatic met station in the Sør Rondane Mountains. Both expeditions had the logistic support of the Pakistani Army and Navy. Plans are on the table for a year-round station as well. The ongoing (but sporadic) effort is conducted by the Pakistan Antarctic Research Program (PARP). In Jan. 2008 the remarkable Namira Salim (who lives in Dubai) reached Antarctica. She had been the first Pakistani woman to reach the North Pole, and was now at the Patriot Hills, in Antarctica, as a stage in her preparations for her flight into space.

Pål Rock *see* **Pål Rock**

Pål Harbor *see* **Paal Harbor**

Pål Rock. 71°18' S, 11°26' E. Between Per Rock and Oskeladden Rock, in the Arkticheskiy Institut Rocks, at the NW extremity of the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Pål, the name signifying Paul, one of the brothers of Oskeladden (name almost always seen as Askeladden — it means "the ash lad") in the fairy tale. *See also* **Per Rock** (i.e., Peter and Paul). US-ACAN accepted the name Pål Rock in 1970.

Palais Bluff. 77°19' S, 166°33' E. An ice-free coastal bluff rising to over 400 m, and overlooking Wohlschlag Bay between the terminus of Shearwater Glacier and Quaternary Icefalls, in the NW part of Ross Island. Phil Kyle suggested the name, for Dr. Julie Michelle Palais (b. Sept. 2, 1956, Mass.). As a PhD student at Ohio State University, she collected snow samples and short ice core on Ross Island, and conducted field research for five seasons at Dome Charlie and Mount Erebus, between 1978 and 1989. From 1991 she was program director for polar glaciology, at the NSF's Office of Polar Programs, and from 1994 has been a member of US-ACAN. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001. *See also* **Chuan Peak**.

Palais Glacier. 78°02' S, 161°19' E. A broad glacier, about 13 km long, flowing N between the Wilkniss Mountains and the Colwell Massif, to enter Ferrar Glacier, in Victoria Land. Named by US-ACAN in 1995, for Julie Palais (*see* **Palais Bluff**).

Palakariya Cove. 64°00' S, 61°58' W. A cove, 3.2 km wide, indenting the NW coast of Liège Island for 2 km S of Bebrish Point, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for the River Palakariya, in western Bulgaria.

Punta Palaver *see* **Palaver Point**

Palaver Point. 64°09' S, 61°45' W. On the W side of Two Hummock Island, in the Palmer Archipelago. Photographed by FIDASE in 1956. Named by UK-APC on Sept. 23, 1960, for the palaver created here in the penguin rookery. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. The Argentines call it Punta Palaver.

The *Palawan VI*. American aluminum ketch, one of 7 with the name *Palawan* (after the Philippine island), designed by Sparkman & Stephens, built by Abeking & Rasmussen, and launched in 1984. After a trip to the Baltic, she headed to the South Shetlands and the Antarctic Peninsula, in the summer of 1985-86, skippered by the famous Thomas John "Tom" Watson, Jr. (b. Jan. 14, 1914. d. Dec. 31, 1993, Greenwich, Conn.), ex-head of IBM. She was bought by racing driver Jochen Mass, and he sold her to Zimmerman Marine, Inc., in 1999. For Tom Watson's even more famous father, *see* **Watson Escarpment**.

Gora Palec. 73°12' S, 63°04' E. A nunatak, SE of Mount Scherger, in the S part of the Prince Charles Mountains. Named by the Russians.

Skala Palec *see* **Palets Rock**

Paleosols. Buried soils, usually those which developed during an interglacial period, and were buried by later ice deposits.

Punta Palermo. 65°04' S, 63°36' W. A point on the W shore of Azure Cove, in the SW part of Flandres Bay, on the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Palestrina Glacier. 69°21' S, 71°35' W. About 17.5 km long, and 13 km wide, it flows SW from Nichols Snowfield and Russian Gap into Lazarev Bay, between the Havre Mountains and the Lassus Mountains, in the NW part of Alexander Island. Photographed aerially on Nov. 23, 1947, by RARE 1947-48. Finn Ronne used the name Tufts College Valley (or Tufts Valley) collectively to signify this glacier, Tufts Pass, and part of Nichols Snowfield. Mapped in 1960 by Searle of the FIDS, working from the RARE photos. This glacier was individualized and named by UK-APC on March 2, 1961 for the Italian composer Giovanni Pierluigi Da Palestrina (1525-1594). It appears on a 1961 British chart. US-ACAN accepted the name later in 1961. It was further delineated from U.S. Landsat images of Feb. 1975.

Skala Palets *see* **Palets Rock**

Palets Rock. 70°46' S, 11°36' E. An isolated rock rising above the ice midway between Aerodromnaya Hill and the Schirmacher Hills of Queen Maud Land. First photographed, aerially, during GermAE 1938-39, and roughly mapped from these photos. Remapped by SovAE 1961, and named that year by the Russians as Skala Palec, or Skala Palets (i.e., "toe rock"). US-ACAN accepted the name Palets Rock in 1970.

Palindrome Buttress. 71°06' S, 70°28' W. A conspicuous rock buttress rising to 905 m (at first it was measured at about 500 m), it marks the S end of the N group of the Walton Mountains, in the W central part of Alexander Island. Discovered aerially on Nov. 23, 1935 by Ellsworth, and first roughly mapped by U.S. cartographer W.L.G. Joerg, using Ellsworth's photos. Re-photographed aerially in Nov. 1947, by RARE 1947-48; using these photos Searle of the FIDS plotted it in 70°59' S, 71°17' W. So named by UK-APC on March 2, 1961, because its shape is recognizable from quite a distance from all angles. US-ACAN accepted the name later in 1961. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and with those new coordinates it appears in the 1977 British gazetteer.

Palisade Nunatak. 64°04' S, 58°15' W. Rising to about 150 m, just N of Röhss Bay, and 3 km SE of Hidden Lake, this substantial and distinctive ridge-backed rock nunatak with a vertical columnar structure is the largest outcrop of hard obtrusive rock on James Ross Island (it is in the W part of the island). Surveyed by Fids from Base D between 1958 and 1961, and named by them for its resemblance to a palisade. UK-APC accepted the name on Feb. 12, 1964, and US-ACAN followed suit that year.

Palisade Valley. 79°47' S, 158°26' E. About 3.5 km long, and rising 1000 m in height (the Australians say 900 m), at the SW side of Pleasant Plateau, and about 5 km NE of Bastion Hill, in the Brown Hills, it is dominated for its entire length by a large dolerite sill. Discovered and explored by VUWAE 1962-63, who named it for its resemblance to the Palisades bordering the Hudson River in New York. NZ-APC accepted the name, and US-ACAN followed suit in 1968. ANCA also accepted the name.

The Palisades. 82°50' S, 159°10' E. A steep escarpment (the Australians call it a narrow range) at the W side of Cotton Plateau, in the Queen Elizabeth Range, it borders on the Nimrod Glacier to the NW of Mount Markham, and overlooks the lower Marsh Glacier. Discovered by the Northern Party of NZGSAE 1961-62, and named by them for its resemblance to a protective wall at the junction of 2 rivers. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA also accepted the name.

Pallas Peak. 72°06' S, 69°43' W. A steep, triangular peak rising to about 500 m, which forms

part of an impressive ridge midway between the Ceres Nunataks and Stephenson Nunatak, at the head of Stravinsky Inlet, in the S part of Alexander Island. The W face of this peak is seamed with many gullies, but the E side has a gentle slope of snow and rock. Surveyed by BAS between 1961 and 1973. Mapped by the (British) Directorate of Overseas Surveys from satellite imagery provided by NASA and USGS. Named by UK-APC on Dec. 20, 1974, for the minor planet (cf **Ceres**). US-ACAN accepted the name in 1975.

Punta Pallero. 62°36' S, 59°53' W. A point on the E coast of Half Moon Island, which is in the SE entrance to Moon Bay, on the E coast of Livingston Island, in the South Shetlands. Named by the Chileans for Neftalí Pallero Rojo, Air Force meteorologist who took part in ChilAE 1955-56. The Argentines call it Punta López.

Pallid Crest. 72°23' S, 96°13' W. A solitary, whitish (hence the name), ice-covered ridge, 3 km W of the base of Tierney Peninsula, in the SE part of Thurston Island, it is visible from a considerable distance and various directions. Named descriptively by US-ACAN in 2003.

Pallid Peak. 84°37' S, 178°49' W. A small peak, rising to 1500 m, along the W side of Kosco Glacier, 11 km SW of McGinnis Peak, in the Queen Maud Mountains. Named descriptively by Ed Stump of the USARP Ohio State University party which geologically mapped this peak on Dec. 3, 1970. Composed entirely of white crystalline marble, the peak lacks contrast with the snow that skirts it to a high level. US-ACAN accepted the name.

Palma, Emilio Marcos. The first human being to be born on Antarctic terra firma (*see* **Births**). This Argentine was born at Fortín Sargento Cabral, at Esperanza Station on Jan. 7, 1978, the fourth of five children of Capitán Jorge Emilio Palma, head of the military detachment there that season. The infant weighed 7½ pounds. Mr. Palma grew up, of course, as something of a celebrity, receiving visits and messages from illuminati from all over the world, and was eventually offered a scholarship into the Army, to study engineering. He turned it down to become a computer guru in Buenos Aires.

The *Palmer*. Norwegian whale catcher which, in 1911-12 and 1912-13, worked for the *Falkland*.

Archipiélago de Palmer *see* **Palmer Archipelago**

Bahía Palmer *see* **Palmer Bay**

Cape Palmer *see* **Mount Palmer**

Costa (de) Palmer *see* **Davis Coast**

Ensenada Palmer *see* **Palmer Inlet**

Mount Palmer. 71°46' S, 98°32' W. An ice-covered mountain, visible from the sea, it surmounts the N end of Noville Peninsula, on Thurston Island. Delineated from air photos taken in Dec. 1946, during OpHJ 1946-47. Named by US-ACAN in 1968, for James Croxall Palmer. Originally thought to be a cape, plotted in 71°40' S, 98°52' W, and called Cape Palmer. Later re-defined and replotted.

Palmer, Alexander Smith "Alex." b. Jan. 26, 1806, Stonington, Conn., son of Nathaniel Brown Palmer and his wife Mercy Brown, and brother of the famous Nat Palmer. He was on the *Alabama Packet*, at Deception Island, in 1821-22 (as part of the Fanning-Pendleton Sealing Expedition), served on various ships as mate or master, and was then commander of the *Penguin*, 1829-31, in Antarctica (he had been mate on this ship, 1827-29, but not in Antarctica). He was back again in the South Shetlands, in the *Charles Adams*, 1831-33. In 1837 he married Priscilla D. Dixon. He made his last trip in 1847, and went into the shipping business. Between 1854 and 1857 he operated a fleet of tugs and barges out of New Orleans, up the Mississippi, and then settled down to 20 years in Connecticut politics, rising to state senator. He died on Oct. 22, 1894, in Stonington.

Palmer, Cyril Hugh "Pidge." b. 1929, Salford, Lancs, son of Cyril Palmer and his wife Doris M. Savage. He joined FIDS in 1954, as a radio operator, and was base leader at Base B for the winter of 1955, and returned in 1956 to be (just) radio operator at Base O in 1956. When he peed in the ice, he would sign his name "Pidge." He later lived in Hove, Sussex, and was still alive in 2007.

Palmer, James Croxall. b. June 29, 1811, Baltimore, son of merchant Edward Palmer and his wife Catherine Croxall. He graduated in medicine from the University of Maryland, and in 1834 joined the U.S. Navy, as an assistant surgeon, and in that capacity went on USEE 1838-42, first on the *Relief*, 1838-39, and then, at the Straits of Magellan, he transferred to the *Peacock*, 1839-41. After the *Peacock* was wrecked, he commanded a shore detachment, and was promoted to surgeon on April 27, 1842. In 1843 he wrote *Thalia: A Tale of the Antarctic*, and in 1868, *The Antarctic Mariner's Song* (*see* the Bibliography). In between books he served at the Washington Navy Yard, and in the Mexican War. In 1857 he was on the *Niagara* during that vessel's attempt to lay a trans-Atlantic cable, and during the Civil War he commanded the medical department at the Naval Academy (which had been relocated to Rhode Island for the duration). He was on the *Hartford* during the Battle of Mobile (1864), and from 1866 to 1870 was head of the naval hospital in Brooklyn. In 1871 he was promoted to medical director, and on June 10, 1872 became surgeon general of the U.S. Navy. On June 29, 1873 he retired, and he died in Washington, DC, on April 24, 1883. His brother, John Williamson Palmer, also a doctor, led a fascinating life.

Palmer, Nathaniel Brown "Nat." b. Aug. 8, 1799, Stonington, Conn., son of shipbuilder and shipyard owner Nathaniel Brown Palmer and his wife Mercy Brown, and brother of Alex Palmer. Nat went to sea at 14, and was 2nd mate on the *Hersilia* during her 1819-20 voyage to the South Shetlands. The following season, 1820-21, he was a major part of the Fanning-Pendleton Sealing Expedition, in which he was captain and part owner of the *Hero*, and co-owner of the *Express*, at the age of 20. On Nov. 17, 1820 he sighted the Antarctic Peninsula, and on Feb. 6, 1821 he met von Bellingshausen (q.v. that entry for details). Yet again, in the following season, 1821-22, he was back in the South Shetlands, as commander of the *James Monroe*, and on Dec. 6, 1821, with British sealer George Powell, discovered the South Orkneys. Powell, unlike Palmer, was not part of the Fanning-Pendleton Sealing Expedition of that season. In 1829-31 Palmer and Ben Pendleton led the Palmer-Pendleton Expedition to the same area, with Palmer commanding the *Annawan*, which he co-owned. At the end of the expedition Palmer's vessel was boarded by pirates. Later Palmer became a clipper ship master and designer, and on Dec. 7, 1826, at Stonington, he married Eliza Thompson Babcock. He died on June 21, 1877, in San Francisco.

Palmer, Robert "Bob." b. March 24, 1916, Providence, RI, but raised partly in Cincinnati, son of Lindley Guy Palmer and his wife Louella Hill. After the University of Cincinnati, he graduated from Miami University in 1938. He was supply officer and assistant to the meteorologist at East Base during USAS 1939-41. On July 29, 1940, while wintering-over, he got the news that his fiancée had run off with someone else and married. Undeterred, after the expedition, in 1942, he married Dorothy Ellen "Debbie" Bauer, and in the July of that year was commissioned an ensign in the U.S. Naval Reserve. In 1944 he graduated in meteorology from the U.S. Naval Academy's Post Graduate School, and flew over the hump in China toward the end of World War II, later serving in the Atlantic. After the war, for 30 years, he lived in Lake Forest, Ill., working in the private sector, and retired to Naples, Fla., where he died on June 30, 2003.

Palmer Archipelago. 64°15' S, 62°50' W. Also called Antarctic Archipelago, and Palmer Islands. A group of numerous dirty-looking, largely inaccessible islands (due to the rocks scattered around the general perimeter) NW of the Danco Coast, and separated from it by the Orléans Strait and the Gerlache Strait, off the W coast of Graham Land, and separated from the Wilhelm Archipelago by the Bismarck Strait. It extends from Tower Island in the NE to Anvers Island in the SW. The N part of the archipelago and the N coast of Trinity Peninsula were discovered on Nov. 17, 1820, by Nat Palmer, and, later, the name Palmer's Land was applied to these discoveries. In 1829, during the *Chanticleer* Expedition, Foster named the N part of this archipelago together with the N part of the Danco Coast, as Prince William's Land, for the Duke of Clarence. It was Dallmann's 1873-74 expedition that proved this feature to be an archipelago. Explored in 1898 by BelgAE 1897-99, and named by de Gerlache for Nat Palmer. US-ACAN accepted the name in 1947, and UK-APC followed suit on Sept. 15, 1953, but both did so with the limits being Hoseason Island and Anvers Island. In 1962 UK-APC fixed its limits to those we know today. The South Americans call it Archipiélago de Palmer. Some of the main features of this group are (with the really main ones in bold): Abbot Island, **Anvers Island**, Babel Rock, Bauprés Rocks, Beaumont Skerries, Bernard Rocks, Bills Island, Bob Island,

Brabant Island, Breaker Island, Breakwater Island, Buff Island, Capstan Rocks, Casabianca Island, Catodon Rocks, Cetacea Rocks, Chance Rock, Chanticleer Island, Chionis Island, **Christiania Islands**, Christine Island, Cobalescou Island, Cormorant Island, Davis Island, D'Hainaut Island, Dobrowolski Island, Doumer Island, Dream Island, Dumoulin Rocks, False Island, Farewell Rock, Fournier Island, Fridtjof Island, Gand Island, Goetschy Island, Gossler Islands, Haller Rocks, Guesalaga Island, Green Reef, Grinder Rock, Guépratte Island, Halfway Island, Harry Island, Hermit Island, **Hoseason Island**, Huemul Island, Humble Island, Hydrodist Rocks, Hydrurga Rocks, Janus Island, Joubin Islands, Judas Rock, Jurien Island, Kendall Rocks, Klo Rock, Lajarte Islands, **Lecointe Island**, **Liège Island**, Lion Island, Litchfield Island, Lobodon Island, Minerva Rocks, Ohlin Island, Oluf Rocks, **Paul Islands**, Pearl Rocks, Physeter Rocks, Ryge Rocks, Spert Island, Tetrad Islands, **Tower Island**, **Trinity Island**, **Two Hummock Island**, Vázquez Island, **Wiencke Island,** Yoke Island, Zigzag Island.

Palmer Basin. 64°57' S, 64°24' W. A basin on the W margin of the Antarctic peninsula, SW of Palmer Station, Name proposed by Margaret Knuth, of the NSF, in association with Palmer Station, and approved by international agreement in Jan. 2007.

[1]**Palmer Bay**. 60°37' S, 45°20' W. About 1.5 km wide, immediately W of Crown Head, on the NE coast of Coronation Island, in the South Orkneys. Discovered in Dec. 1821 by Nat Palmer and George Powell, and named by Powell as Palmer's Bay, for Palmer. It appears as such on Powell's 1822 chart. It appears on a British chart of 1839 as Palmers Bay. There is a 1908 Argentine reference to it as Bahía Palmers, and it reappears as such on a 1930 Argentine chart. Petter Sørlle, on his chart of 1912-13, refers to it as Palmer Bay. The bay was re-surveyed by the Discovery Investigations in 1933, and appears on their 1934 chart, but (wrongly) signifying the bay between Findlay Point and Crown Head. US-ACAN accepted the name in 1947, and UK-APC followed suit on Sept. 8, 1953, but correctly referring to the smaller bay immediately W of Crown Head. It appears as such in the 1955 British gazetteer, and also on a 1967 British chart. It appears on a 1945 Argentine chart as Bahía Palmer, which is the name used by the Argentines today, even though the 1970 Argentine gazetteer accepted the name Bahía de Palmer. The bay was surveyed again by Fids from Signy Island Station between 1956 and 1958. *See also* **Stygian Cove**.

[2]**Palmer Bay** *see* **False Bay**

Palmer Coast *see* **Davis Coast**

Palmer Inlet. 71°15' S, 61°08' W. A rectangular, ice-filled inlet, 11 km long, and bordered by almost vertical cliffs, between Cape Bryant and Cape Musselman, on the Black Coast, on the E coast of Palmer Land. Photographed aerially and surveyed from the ground in Dec. 1940, by members of East Base during USAS 1939-41, and named Robert Palmer Bay, for Bob Palmer. The name was subsequently shortened to Palmer Bay, and that is how it appears on a 1943 U.S. Hydrographic Office chart and photograph. Re-surveyed by Fids from Base E in Nov. 1947, and determined to be an inlet, rather than a bay. US-ACAN accepted the name Palmer Inlet in 1952, and UK-APC followed suit on Jan. 28, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Bahía Robert Palmer, but on one of their 1958 charts as Ensenada Palmer, and that (Ensenada Palmer) was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by USN in 1966, and re-surveyed from the ground by BAS personnel from Base E in 1973.

Palmer Inseln *see* **Palmer Archipelago**

Palmer Islands *see* **Palmer Archipelago**

Palmer Land. 71°30' S, 65°00' W. The half of the Antarctic Peninsula S of an imaginary line joining Cape Jeremy (the S end of the Fallières Coast) and Cape Agassiz (which forms the junction of the Bowman Coast and the Wilkins Coast). The S limit of Palmer Land is defined by an imaginary line joining Rydberg Peninsula (in 73°S, 80°W) to the grounding line of the Evans Ice Stream (in 76°34' S, 75°W). Until 1964 the USA officially used the name for the entire Antarctic Peninsula (see that entry for an explanation of this). Supposedly discovered by Nat Palmer, for whom it was supposedly named, supposedly in 1820 by von Bellingshausen (*see also* **Graham Land**, and **Antarctic Peninsula**). However, *see* **Palmer Archipelago** for more details of Palmer's discovery.

Palmer-Pendleton Expedition. 1829-31. Also called the American Sealing and Exploring Expedition. A private expedition organized by Edmund Fanning, it was a forerunner of USEE 1838-42, in that it was government-sanctioned, being organized after a proposed U.S. Naval expedition was canceled. Jeremiah N. Reynolds was a major fund-raiser for it, public subscriptions making it possible. The organization of the expedition was undertaken by the South Sea Company, which comprised Ben Pendleton, Edmund Fanning, Capt. Leslie, James E. Bleecker, Benjamin Rodman, and Nat Palmer, and the scientific program was sponsored by the Lyceum for Natural History of the City of New York. Sealing was conducted, in order to bring in some revenue. Technically, there were only 2 vessels — the *Seraph*, commanded by Ben Pendleton (the actual field commander; in reality, William Noyes, the 1st mate, would do most of the skippering), and the *Annawan*, commanded by Nat Palmer. However, a 3rd vessel, the *Penguin*, left Stonington on its own expedition, but would become part of the major expedition. **Aug. 31, 1829**: The *Seraph* left New York, bound for Stonington. **Oct. 2, 1829**: The *Penguin* left Stonington, Conn., under the command of Alex Palmer, Nat's brother. **Oct. 17, 1829**: The *Annawan* left New York, bound for Block Island. **Oct. 21, 1829**: The *Seraph* left Stonington, bound for Block Island, to meet up with the *Annawan*. **Nov. 14, 1829**: The *Annawan* arrived at Cape Verde, and waited for the *Seraph*. **Nov. 23, 1829**: Both ships left Cape Verde. **Jan. 20, 1830**: The *Penguin* and the *Annawan* arrived together at Elephant Island, in the South Shetlands, and conducted some exploring, sealing, and scientific studies. The scientists James Eights, John Frampton Watson, Jeremiah N. Reynolds, and 2 others unidentified, were on the *Annawan*, although Eights was the only real scientist, and they managed to collect 15 chests of specimens. **Jan.-Feb. 1830**: The *Seraph* sealed in the South Shetlands. **Feb. 22, 1830**: The 3 vessels left Antarctica and went sealing in South American waters. **June 1, 1830**: The *Annawan* and *Seraph* were separated in a gale west of Cape Horn. **June 22, 1831**: The *Penguin* arrived back in Stonington. **Aug. 6, 1831**: The *Annawan* arrived back in NY. **Aug. 8, 1831**: The *Seraph* arrived back in NY, minus 6 deserted crew members. Basically due to the desertions, the expedition was a failure. For a list of the crew of the *Seraph*, *see* that ship.

Palmer Peninsula *see* **Antarctic Peninsula**

Palmer Point. 69°43' S, 74°02' E. A prominent rock point on the S side of Sandefjord Bay, 3 km W of Strover Peak, and about 14 km WNW of Mount Caroline Mikkelsen, on the coast of East Antarctica. Photographed aerially during OpHJ 1946-47, and visited by Ian McLeod, geologist with the ANARE Prince Charles Mountains Survey of 1969. Named by ANCA on Oct. 22, 1968, for John R. Palmer, helicopter pilot off the *Nella Dan* during ANARE 1968. US-ACAN accepted the name in 1971.

Palmer Station. 64°46' 27.771" S, 64°03' 15.753" W. U.S. scientific station on Gamage Point, at Arthur Harbor, Anvers Island. Palmer is 2360 miles from McMurdo Station, and is 25 feet above sea level. This is the new site, anyway; the old one, now called Old Palmer, was located at Norsel Point, at 64°46' S, 64°05' W, in the same general area. The site for the original was selected out of 26 sites surveyed and closely examined between Jan. 18 and March 5, 1963, by the crew of the *Staten Island*. During the summer of 1963-64 further study was done by the *Eastwind*, and they finally settled on the site, which was actually on the site of the burned down Base N, which the British had closed in 1958. In Feb. 1964, they built a hut here. **1964-65 summer**: The *Edisto* arrived with the Seabees from MCB-6 on Jan. 12, 1965, and work began on Jan. 16, the Seabees being assisted by crew members and helicopters of the *Edisto*, and the station was opened 2 weeks ahead of schedule on Feb. 25 that year, being named for Nat Palmer. The main building was 82 by 30 feet on a bluff N of Arthur Harbor, an interim facility while the main station was designed and built. The old British Base N was converted into the biological lab. About 40 people in the summer and a maximum of 10 in the winter study marine life and birds. There is no permanent runway and the station no longer wlecomes visitors — the tourists' fault, not Palmer's! It is now known as Palmer LTER (Long-Term Ecological Research) study area. **1965 winter.** 9 men. The first wintering-over crew were: Navy personnel: Charlie

Axworthy (hospital corpsman and station leader; *see* **Mount Axworthy**), Charles Ferguson (electrical & mechanical; *see* **Ferguson Nunataks**), Jack Cummings (radioman; *see* **Mount Cummings**), and Thomas Adkins (cook; *see* **Mount Adkins**). The scientists were: Ohio State glaciologists William Ahrnsbrak (*see* **Ahrnsbrak Glacier**), Charles Plummer (*see* **Plummer Glacier**), and Art Rundle (chief scientist; *see* **Rundle Peaks**), and 2 biologists from the Bernice E. Bishop Museum — George Lippert (*see* **Lippert Peak**) and Jack L. Strong. They went on several expeditions, opened up the trail inland for 30 miles, and built a Jamesway hut 8 miles along the trail, but this was soon covered by snow. **1966 winter.** 8 men. Navy personnel: Donald Skelly (hospital corpsman and non-commissioned officer in charge; *see* **Skelly Peak**), Vernon Nance (radioman; *see* **Nance Ridge**), Richard Wrigley (equipment operator; *see* **Wrigley Bluffs**), and Paul Murch (cook; *see* **Mount Murch**). The scientists were: USARP glaciologist Arthur Rundle, from Ohio State (station science leader; *see* **Rundle Peaks**); two other USARP scientists from Ohio State, surveyor Lawrence Brown (*see* **Lawrence Nunatak**) and meteorologist Steve DeWitt (*see* **DeWitt Nunatak**); and biologist Verne Peckham, of Bishop Museum (*see* **Peckham Glacier**). **1966-67 summer**: Construction on the new station began. The pier, the fuel tanks, and the distribution piping were all completed. **1967 winter.** 9 men. Navy personnel: Richard Campleman (petty officer in charge; *see* **Mount Campleman**), Clifford Woods (medical officer; *see* **Mount Woods**), Dennis Stout (radioman; *see* **Stout Spur**), Harry Phillips (cook; *see* **Phillips Ridge**). There were 2 USARP glaciologists from Ohio State — John E. Bruns and Ian Whillans (*see* **Mount Whillans**); Ohio State also fielded meteorologist Rudy Honkala (q.v.) (chief scientist) and Lynn Suydam (*see* **Mount Suydam**), while biologist James Lowry (*see* **Mount Lowry**) was from the Virginia Institute of Marine Science. **1967-68 summer**: New Palmer Station (still called Palmer Station) was commissioned on March 20, 1968, 2 km away across Arthur Harbor. Work on the new Biolab had begun in Jan. 1967. It was now more accessible from the sea. Old Palmer remained as an emergency refuge until the early 1990s, when it was removed and the site cleaned up. For most of its early history New Palmer was resupplied by the *Hero*. **1968 winter.** 9 men. Navy personnel: Lt. (jg) William V. Kelly (officer-in-charge of the first wintering-over party at the new Palmer), William D. Platt (hospital corpsman), Richard Miller (radio operator), John A. Mosier (electrician), Bruce D. Mauer (mechanic), and Bobby G. Downs (cook). On the scientific side, Donald E. Moore was lab manager, and there were two USARP biologists from Clark University — Ernst Abendroth (*see* **Abendroth Peak**) and Ted Gannutz (chief scientist; *see* **Gannutz Glacier**). **1968-69 summer**: A fire destroyed the Jamesway hut on Dec. 18, 1968, and on Dec. 21, 1968 Max Conrad flew into Palmer. On Dec. 25, 1968 the *Hero* arrived at Palmer for the first time. On Jan. 21, 1969 about 70 tourists from the Chilean ship *Aquiles* had to spend the night at Palmer. **1969 winter.** 13 men. Navy personnel: Lt. (jg) Lance W. Hellerman (officer in charge), Lt. Arthur Benson (medical officer; *see* **Benson Hills**), Eric A. Turner (hospital corpsman), Walter B. Coker (radio operator), Drew G. Delmonaco (electrician), Roger A. Berkey (plumbing and utilities), Robert J. Westmoreland (mechanic), and David D. Dozier (cook). There were 4 USARP geodesists from U.S. Army Topographic Command — Edward J. Davis, David R. Messent, John H. Page (chief scientist), and John E. Webb. Earl E. Brodie, engineer with Marine Acousical Services, Inc., also wintered-over. Two of the Navy men were black. **1970**: New Palmer went up. **1970 winter.** 10 men. Navy personnel: Lt. (jg) Donald J. "Mac" McLaughlin (officer in charge), Lt. Verne A. "Doc" Smith, USNR (medical officer), Dennis M. "Pat" Patton (hospital corpsman), John R. "Stan" Stanciu (communications), Paul D. Steward (communications; known as "Big Stew"), George W. "Chief" Wade (electrician), Jay C. Klinck (mechanic; known as "Colonel," after the character in the "Hogans Heroes" TV show), and Harvey W. "Harv" High (cook). USARP chief scientist was biologist Steven B. Shabica from the University of Oregon, studying intertidal ecology. Michael X. Bergin, engineer with Marine Acoustical Services, Inc., also wintered-over. **1971 winter.** 11 men. Navy personnel: Lt. (jg) Ernest R. Fenton was officer in charge; Lt. Lawrence W. Mahalak was medical officer, and the other Navy personnel were: Dewitt L. Welday (hospital corpsman), Bobby J. Poitevient (communications), Barry S. Roos (supply officer), Richard Campleman (electrician), Frank H. Woodbury (plumbing and mechanical), Ralph L. Snyder (mechanic), and Troy M. Warren (cook). There were 2 biologists from Texas Tech — Dale L. Berry (chief scientist) and Brent L. Davis. Texas Tech was there to study insects and spiders, but mainly arthropods. On Dec. 28, 1971, the old Base N burned down. **1972 winter.** 13 men. Navy personnel: Lt. Cdr. Paul F. Jacobs (officer in charge), Lt. Joel H. Mumford (medical officer), Gary L. Cawthon (hospital corpsman), Larry D. Wise (communications), Charles L. Thompson (supply officer), Andrew Garrett (electrician; known by his middle name, Scott), Gary R. Russell (plumbing and mechanical), Joseph C. McGregory (mechanic), and David L. Oliver (cook). There were 4 USARP biologists, 2 from Texas Tech — Allen R. Crocker and William L. Graham (chief scientist), and 2 from the University of California, at Davis — William N. "Benny" Krebs and William L. Stockton. **1972-73 summer**: On Jan. 29, 1973 David Lewis arrived at Palmer in the *Ice Bird*, and Jacques-Yves Cousteau also arrived. **1973 winter.** 15 men. Naval personnel: Lloyd Jukkola (officer in charge; *see* **Mount Jukkola**), Lt. Donald A. Spencer (medical officer), Charles H. "Pete" Thornhill (hospital corpsman), Robert Houston (radioman; *see* **Houston Glacier**), Paul W. Morgan (supply), Jack C. Ames (plumbing and mechanical), Jimmie L. Evans (mechanic), Gary Cadle (electrician; *see* **Cadle Monolith**), Melvin W. "Willie" Williamson (carpenter), and Charles L. Sandau (cook; *see* **Sandau Nunatak**). USARP personnel: 3 biologists from the University of California (at Davis) — Albert Giannini (*see* **Giannini Peak**), Philip Haley (*see* **Haley Glacier**), and Thomas Kauffman (chief scientist; *see* **Kauffman Glacier**), there to study foraminifera; and 2 doppler researchers from USGS — Patrick D. "Pat" Smith and Kent Yates (*see* **Yates Spur**). **1973-74 summer**: David Lewis arrived again on Nov. 10, 1973, on the *John Biscoe*, to finish repairing his yacht and to continue his journey; Holmes & Narver, Inc., assumed control of Palmer Station from the Navy, which had run it up until now. **1974 winter.** 9 men. Holmes & Narver personnel: Dr. Fernando E. Franca (medical officer and station manager; *see* **Franca Glacier**), James I. "Jim" Balint, Phillip L. "Phil" Gonzales, Martin P. "Marty" McMullen, Dallas L. Smith, and Tom D. Smith. There were 3 USARP biologists from UC Davis — Dick Moe (chief scientist; *see* **Moe Point**), Tim Brand (*see* **Brand Peak**), and Nick Temnikow (*see* **Temnikow Nunataks**). **1975 winter.** 10 men. Holmes & Narver personnel: Bill Lokey (station manager; *see* **Lokey Peak**), Walter Tofani (doctor; *see* **Tofani Glacier**), Shane J. Williams (radioman), Allen Smith/Diego Cuadrado (mainentance; the rather odd dual name is how he is listed), Warren Lincoln (power plant mechanic), and Gary Bennett (cook). There were 3 USARP biologists from UC Davis — Robert "Bob" Daniels (chief scientist; *see* **Daniels Hill**), Glen Eisner (*see* **Eisner Peak**), and Daren Laine (also scuba diver; *see* **Laine Hills**), as well as University of Minnesota ornithologist Dave Neilson (*see* **Neilson Peak**). **1975-76 summer**: Mary Alice McWhinnie working at Palmer for the first time. **1976 winter.** 6 men. Holmes & Narver personnel: Larry Miyoda (station manager; *see* **Miyoda Cliff**), Craig W. Bertram (paramedic), Thomas W. "Tom" Frenaye (radioman), Edward M. "Ed" Miyoda (power plant mechanic), and Frank A. Wood (chef). USARP William R. "Bill" Fraser (*see* **Fraser Island**) was University of Minnesota ornithologist conducting a major bird census. **1977 winter.** 8 men. Holmes & Narver personnel: Shane J. Williams (station manager), Gary M. Cullen (paramedic), Frederick J. "Fred" Dorffeld (radioman), Daren Laine (power plant mechanic; *see* **Laine Hills**), John P. Tendick, Jr. (facilities engineer), and Patrick T. "Pat" Moriarty (cook). There were 2 USARP personnel: Brian M. Glass, chief scientist, and biologist with the University of Minnesota, and meteorologist Edward C. "Ed" Schwalenberg from the University of Nevada. **1978 winter.** 9 men. Holmes & Narver personnel: Pete Harding (station manager), Victor Bravo (paramedic), Joe Parr (communications), George Fitzsimmons (facilities engineer), Mike Beeman (power plant mechanic), and Casey Jones (chef). The scientists were: Jim Punches (LIDAR) and Robert Whinnery (radar), both from the University of Nevada, and John

Billey (VLF) from Stanford. **1979 winter.** 10 men. Holmes & Narver personnel: John Konecki (station manager), Jerry Kiewatt (medic), Jon Wells (communications), Pat Kraker and Duane Ness (engineers), and Allen Cull (cook). Usarps were: ornithologist Neil Bernstein (from the University of Minnesota), and 3 other scientists — Bill Earnhardt, Mark Faust, and Scooter Townsend. **1980 winter.** 7 men. This was the year ITT/Antarctic Services, Inc. took over from Holmes & Narver as the National Science Foundation's Antarctic support contractor. Their personnel at Palmer were: Bryan Bertacchi (station manager), Bob Cox (power plant), John Kauth (facilities engineer), Jim Powers (communications), and Steve Scott (cook). S.B. Rosenberg, USN, was hospital corpsman. Phil Mann, from Stanford, was the usarp studying VLF. **1981 winter.** 9 men. ITT personnel: Donald "Don" Wiggin (station manager), Gerry Ness (mechanic), Rob Frasier (facilities engineer), John "T.J." Wolfe (communications), and Jack Palesik (cook). There were 3 USARP scientists — John Green from Stanford, and Dave Johnson and Bob Watkins from the University of Houston. Mike Larkin was the USN hospital corpsman. **1982 winter.** 8 men. ITT personnel: Garth Brown (station manager), Bob Rambow (communications coordinator), Terry Melton (facilities engineer), Dale Knebel (power plant & vehicle mechanic), and Denis Boucher (chef). USARP personnel were Pawel Anaszkiewicz from Stanford, studying VLF, and Fred Menzia from Washington State, studying clean air. Don Johnson was the USN hospital corpsman. **1983 winter.** 10 persons. ITT personnel: C. Thomas "Tom" Plyler (station manager), Pat Cornelius (communications manager), Pat Mosier (facilities engineer), Mark Olson (materials), Gary Heimark (mechanic), and Rebecca "Becky" Heimark (cook). USARP personnel were: Mike Trimpi (from Stanford, studying VLF), and Steve and Ann Waylette from Washington State (air chemistry). John Larson, USN, was the hospital corpsman. Significant in that 2 women wintered-over. **1984 winter.** 7 men. ITT personnel: Philip "Phil" Colbert (station manager), Mike Ryan (communications coordinator), Steve Dye (facility engineer), Dennis O'Neill (power plant mechanic), and Steve Midlam (cook). Thomas Ferrara, from Washington State, was the usarp studying atmospheric science, and Kelly V. Fry was the USN hospital corpsman. On April 12, 1984, the 7 refugees from the Almirante Brown Station fire were put up at Palmer. **1985 winter.** 12 persons. ITT personnel: James H. "Jim" Lewis (station manager), Sheldon Blackman (communications technician), Gerry Ness (power plant mechanic), Jim Stretch, Sybil Carrère (diver; she was actually a psychologist from the University of California at Irvine), Jared Cook, John Garrett Stone, Mike Michel, Touché Howard, Chris Dillon, Tom Hourigan, Stan Dame. **1986 winter.** 7 persons. ITT personnel: Gary Heimark (facilities engineer and station manager), Peter D. Topp (communications), Tom Brutscher (power plant mechanic), James M. "Jim" Straut (materials), and Rebecca "Becky" Heimark (cook). Mike Elias was the biologist, and Bob England was the USN hospital corpsman. **1987 winter.** 6 men. ITT personnel: Richard F. "Rich" Dunning (station manager), Patrick R. "Pat" Brock (communications manager), Gerald T. "Gerry" Ness (power plant manager), Robert L. "Bob" Sekel (senior materials person), and Nathan A. "Nate" Swagel (cook). K. John Larson was USN hospital corpsman. **1988 winter.** 9 men. ITT personnel: Thomas P. "Tom" Brutscher (facilities engineer and station manager), John M. Platt (communications), John C. Myers (materials), Mark G. Harrington (carpenter), Mark D. DeGraff and Michael L. Krause (electricians), Scot J. Bowes (painter), and Robert T. Taylor (chef). Hans Schmidt was the USN hospital corpsman.**1989 winter**. 10 persons. ITT personnel: Thomas P. "Tom" Brutscher (facilities engineer and station manager), Ned Wilson (science technician), Dave Gallas (communications technician), Robbin Lamere (power plant mechanic), Robert "B.J." Jahn (materials), and Richard "Dick" Wall (cook), Richie Skane, Marcia Medford, Pat Sullivan. Dennis Hampton was the NSFA hospital corpsman. **1990 winter.** 12 persons. ASA personnel: Andrew A. "Andy" Deering (facilities engineer and station manager), Ed Whittle (physician), Al Oxton (communications technician), David Mobley (science technician), Ronnie Baltz (materials), Dennis Deering (power plant mechanic), Gregg A. Esche (carpenter foreman), Matthew Davidson and James "Thumper" Porter (carpenters), Lisa Radke (administrative assistant), Tony F. D'Aoust (general field assistant), and Dennis Miller (cook). **1991 winter**: 11 persons. ASA personnel: Robert H. "Fred" Frederick (facilities engineer and station manager), Hugh Cowan (physician), James "Jim" Meis (communications technician), Albert "Al" O'Kelly (power plant mechanic), Ronnie Baltz (materials), Jodie Hatchett (administrative assistant), Julian Ridley (general assistant), and Jamie Pierce (cook). There were 3 scientists from the University of California at Santa Barbara: David B. Carlini, Tom Frazer, and Carol Wyatt. That is the official NSF list. However, the photo of the 1991 winterers shows also Mike and Karen Butler, and does not show the aforementioned scientists). **1992 winter**. 11 persons. ASA personnel: Robert H. "Fred" Frederick (station manager), Rob La Barre (physician), Al Oxton (communications technician), Maria Tarantino (assistant science lab supervisor), Jim Fraser (science technician), Dwaine Schuldt (power plant mechanic), Ronnie Baltz (materials), Elizabeth "Liz" Linsey (administrative assistant), Wendy Norris (lead data entry clerk), Scott Thomas (general assistant), and Timothy "Tim" Graybill (cook). **1993 winter.** ASA personnel: Gerry Ness (q.v.) (station manager), James Meis (communications), Andrew "Andy" Archer (science technician), Nicole Desaulniers (assistant lab supervisor), Thomas "Tom" Galles (power plant mechanic), Corey J. Peterson (administrative), Ronnie Baltz (materials), and Gary Stone (cook). That is the NSF list of personnel. There are others on the 1993 wintering photo: Jacqui Mahoney, Sarah K. Pizer, Gloria Hutchings, Carol Wyatt, Joe Shields, Dave Vella, Joanne Keys, Tom Frazer. This would bring the total to 16, if correct, and that would be an enormous number of persons. However, it was no more enormous than, say, the following (1994) NSF wintering list. **1994 winter.** ASA personnel: Kirk A. Kiyota (assistant operations manager and station manager), Richard D. Kirkham (physician), Lawrence H. Mjoleness (facilities supervisor), David B. Morehouse (senior materials), Sarah K. Pizer (materials), Kevin E. Bliss and John F. "Johan" Booth (science technicians), Corey J. Peterson (assistant supervisor of lab operations), Sheldon R. Blackman (communications technician), John C. Lewis (power plant mechanic), Richard J. Skane (construction coordinator), Randolph D. Sliester (utility mechanic), Leslie A. Blank and Mark B. Melcon (carpenters), Jim Binford (network administrator), Laura M. Gittings (administrative coordinator), Matthew D. "Matt" Redlon and John G. Stone (general assistants), and Esther R. Boone (assistant cook). Victoria Hogue, from the University of California at Santa Barbara, was there studying krill. After this, the lists of station personnel grew greatly, and, as there are simply too many to list, only the station manager has been given. **1995 winter**: Kirk A. Kiyota (station manager). **1996 winter**. Janet M. Phillips (station manager). **1997 winter**. Ronald P. "Ronnie" Baltz (station manager). **1998 winter**. Ronald P. "Ronnie" Baltz (station manager). **1999 winter**. Christopher "Chris" Cunning (station manager). **2000 winter**. Robert "Bob" Farrell (station manager). **2001 winter**. Pam Hill (manager). **2002 winter**. Joe Pettit (manager). **2003 winter**. Gerry Ness (manager). **2004 winter**. Unknown manager. **2005 winter**. Jim Slaughter (manager). **2006 winter**. Brett Pickering (manager). **2007 winter**. Eric Pohlman (manager). **2008 winter**. Eric Pohlman (manager). **2009 winter**. Ken Keenan (manager).

Palmer's Bay *see* **Palmer Bay**, **False Bay**

Palmer's Harbor. 61°41' S, 45°27' W. A good embayed sealing harbor, about 1.5 km within the entrance to Washington Strait, in the South Orkneys. Discovered in Dec. 1821 by Nat Palmer and George Powell, and named by Powell for Palmer. It appears on Weddell's chart. The term is no longer used.

Palmer's Land *see* **Palmer Archipelago**, **Trinity Peninsula**

Punta Paloma. 66°35' S, 66°17' W. A point due N of Madell Point, on the Loubet Coast, on the W coast of Graham Land. Named by the Argentines.

Mount Palombo. 77°29' S, 143°12' W. Rising to 1030 m, it marks the NE end of the Mackay Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41, and remapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Lt. Robert A. Palombo, USN, aircraft commander during OpDF 68 (i.e., 1967-68).

Islotes Palosuo *see* **Palosuo Islands**

Palosuo Islands. 65°37' S, 66°05' W. A group of small islands and rocks, 2.5 km N of Maurstad Point, off the NW side of Renaud Island, in the N part of the Biscoe Islands. Named by ChilAE 1946-47, as Islas Mutilla, and they appear as such on that expedition's chart of 1947, as well as on a 1962 chart, and that was the name accepted by the Chilean gazetteer of 1974. Photographed aerially by FIDASE in 1956-57. They were first accurately shown on an Argentine chart of 1957, and if they were named on this chart, it was with the Chilean name. Named by UK-APC on July 7, 1959, as Palosuo Islands, for Erkki Palosuo (1912-2007), Finnish oceanographer specializing in sea ice studies, and professor of geophysics at the University of Helsinki, 1973-78. US-ACAN accepted the name in 1971. The Argentines call them Islotes Palosuo.

Pålsehøla *see* **Pauls Hole**

Mount Pálsson. 67°20' S, 65°32' W. A large and conspicuous mountain rising to 1190 m, at the N end of Whirlwind Inlet, between Flint Glacier and Demorest Glacier, on the Bowman Coast, on the E coast of Graham Land. Photographed aerially by USAS 1939-41, and surveyed by the BAS Larsen Ice Shelf Party of 1963-64. Named by UK-APC on Dec. 20, 1974, for Sveinn Pálsson (1762-1840), Icelandic naturalist and pioneer glaciologist. US-ACAN accepted the name in 1975. It appears in the 1976 British gazetteer.

The *Pampa*. Argentine transport vessel used to relieve Órcadas Station on an annual basis. **1932-33**: Captain Ángel Rodríguez. This was the year the first tourists went to Antarctica, some members of the University Club of Buenos Aires, and journalist Juan José de Soiza Reilly, when the *Pampa* made her relief trip to Órcadas Station. Alberto Carcelles was also aboard. **Jan. 1, 1935**: The *Pampa* set out for her 2nd voyage to Antarctica, under the command of Capt. Jorge C. Schilling. **1935-36**: She relieved Órcadas again, this time under the command of Capt. Julio C. Castro. **1936-37**: Again, in at Órcadas Station. Captain Juan A. Clemente. **1937-38**: Relieved Órcadas. Captain Ernesto Roux. **1938**: Capitán Iván Bárcena Feijóo was skipper, but did not take the ship to Antarctica. **1938-39**: Relieved Órcadas. Captain Roux. **1939-40**: Relieved Órcadas. Captain Clemente. **1940-41**: Relieved Óracadas. Capt. Clemente. **1942-43**: Relieved Órcadas. Captain José Almejeiras Barrére. **1943-44**: Relieved Órcadas. Captain Juan B. Dato Montero. **1947-48**: Capt. Oscar H. Rousseau (*see* **Picacho Rousseau**). **1947-48**: The *Pampa* took part in ArgAE 1947-48. Captain Rousseau. **1948**: The *Pampa* took part in ArgAE 1948. Captain Robert E. Cortines. **1948-49**: The *Pampa* took part in ArgAE 1948-49. The first captain that season was Cortines, replaced by Capt. Julio A. Durguet.

Bahía Pampa *see* **Pampa Passage**

Cerro Pampa *see* **Mahogany Bluff**

Isla Pampa *see* **Pampa Island**

Pampa Island. 64°20' S, 62°10' W. An island, 2.5 km long, and rising to 473 m above sea level, off the E coast of Brabant Island, 1.5 km NE of Pinel Point, and 9 km SW of Guesalaga Island, it is separated from Brabant Island by the S part of Pampa Passage, in the Palmer Archipelago. First roughly charted in Jan. 1898, by BelgAE 1897-99. ChilAE 1946-47 named it Isla Jenie, presumably for a family member of one of the crew members. It appears as such on their 1947 chart, and was the name accepted by the 1974 Chilean gazetteer. Named separately by ArgAE 1947-48 as Isla Pampa, in association with the passage. It appears as such on an Argentine chart of 1949, and was the name accepted by the 1970 Argentine gazetteer. Surveyed by Fids on the *Norsel* in April 1955, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 4, 1957, for Frank Hunt. It appears as such on a British chart of 1959. US-ACAN accepted the name Pampa Island in 1965.

Pampa Passage. 64°18' S, 62°10' W. Also called Boca Pampa. A ship passage trending SW along the central part of the E coast of Brabant Island, between that island (necessarily to the NW) and (to the SE) Lecointe Island and Pampa Island, about 11 km NNE of Buls Bay, in the Palmer Archipelago. Surveyed by ArgAE 1947-48 in its SW part, and they name the part they surveyed as Bahía Pampa (i.e., "Pampa bay"), for the *Pampa*. It appears thus on an Argentine chart of 1949. As a result of FIDASE air photos taken in 1956-57, UK-APC re-defined it on Sept. 23, 1960, naming it Freud Passage, for Sigmund Freud (1856-1939), Austrian founder of psychoanalyis. It appears as such on a 1961 British chart. US-ACAN accepted the name Pampa Passage in 1965. The Chileans call it Bahía Court, for Capitán de navío Eugenio Court Echeverría, commodore of ChilAE 1962-63. It is reported that the Argentine gazetteer of 1970 accepted the old half-cocked name Bahía Pampa, but that seems unlikely.

Islote Pampero. 68°43' S, 71°10' W. A small island off the N coast of Alexander Island. Named by the Argentines.

Pampero Pass. 69°31' S, 66°11' W. A snow pass at about 750 m above sea level, running N-S between Mount Edgell (to the W) and (to the E) Mistral Ridge and the Relay Hills, in the NW part of Palmer Land, on the W side of the Antarctic Peninsula. It provided a sledge route between the Wordie Ice Shelf and Eureka Glacier. Surveyed by BAS personnel from Base E in 1971-72. In keeping with the practice of naming several features in this area for the world's winds, this one was named by UK-APC on Dec. 8, 1977, for the cold wind that blows from the S part of the Andes to the Atlantic. It appears in the 1980 British gazetteer. US-ACAN accepted the name.

Mount Pams. 78°03' S, 163°54' E. A small mountain, rising to 1119 m above Rivard Glacier, at the head of Marshall Valley, in Victoria Land. Named by NZ-APC on Feb. 1, 1994, for the department of plants and microbiological sciences, at University of Canterbury, at Christchurch. US-ACAN accepted the name later in 1994.

Islote Pan de Azúcar *see* **Sugarloaf Island**

Pico Pan de Azúcar *see* **Mount Zuckerhut**

Pan Glacier. 68°48' S, 64°24' W. A glacier, 11 km long, flowing N and terminating at Bowman Inlet, on the Bowman Coast, on the E coast of the Antarctic Peninsula, 3 km SW of Victory Nunatak. The lower part of the glacier was mapped by U.S. cartographer W.L.G. Joerg from air photos taken by Ellsworth on Nov. 23, 1935. It was re-photographed aerially on Aug. 14, 1947, by FIDS, and again on Dec. 22, 1947, by RARE 1947-48. It was roughly surveyed by Fids from Base E in Dec. 1958. Named by UK-APC on Aug. 31, 1962, for the god of Greek mythology. US-ACAN accepted the name later in 1962. Re-photographed aerially by USN between 1966 and 1969, it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Panagyurishte Nunatak. 62°29' S, 59°56' W. A rocky peak, rising to 150 m above sea level, and projecting from Yakoruda Glacier, 1.4 km NE of Kerseblept Nunatak, 2.8 km S of Crutch Peaks, and 3.4 km WSW of Sevtopolis Peak, on Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for the town of Panagyurishte, in central Bulgaria.

Pancake ice. Small, circular pieces of ice, with raised edges, looking like pancakes. They are an accumulation of frazil ice, congealed in the calm sea. In turn the pancakes form ice floes.

Panda Automatic Weather Station. 73°41' S, 76°58' E. An Australian AWS in Princess Elizabeth Land, at an elevation of 2584 m, installed in Jan. 2008.

Panda South. 82°15' S, 75°59' E. A Chinese automatic weather station, installed in Jan. 2008, on the Polar Plateau, at an elevation of 4027 m.

Pandemonium Point. 60°45' S, 45°40' W. Marks the S end of a sharp ice-free ridge which forms the S extremity of Signy Island, in the South Orkneys. Surveyed in 1947 by FIDS, and named by them for the pandemonium caused by the penguins in their rookeries on the W side of the ridge close N of the point. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Pandora Spire. 77°47' S, 161°13' E. A sharp-pointed feature, rising to 1670 m, it is the highest point in the Solitary Rocks, on the N side of Taylor Glacier, in Victoria Land. A re-section survey station was established on this point by E.B. Fitzgerald (*see* **Fitzgerald Hill**), of NZGSAE 1957-58, who named it descriptively. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Panecillo. 62°26' S, 59°44' W. A low, mountainous formation, rising to only about 30 m above sea level, on Canto Point, Discovery Bay, Greenwich Island, in the South Shetlands. At the base of this hill, the Ecuadorians set up Pedro Vicente Maldonado Station. Named by them after a loaf-shaped feature in Quito.

Lednik Panega *see* **Panega Glacier**

Panega Glacier. 62°32' S, 60°07' W. Flows from the SE slopes of Vidin Heights, for 3.5 km in a SE-NW direction and 2.5 km in a SW-NE

direction, into Moon Bay between Helis Nunatak and Perperek Knoll, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, as Lednik Panega, for the River Panega in northern Bulgaria. The name has been translated into English.

Panhard Nunatak. 63°42' S, 58°17' W. Rising to about 670 m, it is the nearest nunatak to the coast on the N side of Russell East Glacier, in Trinity Peninsula. Surveyed by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for René Panhard (1841-1908), the French automobile designer. US-ACAN accepted the name later in 1964.

Isla Panimavida *see* **Roux Island**

Pankhurst, Robert John. b. May 5, 1942, London. After graduating from Cambridge in 1964, in natural sciences, he joined BAS as a geologist, and was in the Antarctic Peninsula in the summer of 1977-78; in Palmer Land in 1980-81; in the Ellsworth Mountains in 1983-84; and on Thurston Island in 1984-85, his specialty being geochronology. He retired from BAS in 2002.

Pankratz Bay. 73°27' S, 126°38' W. In the W end of Siple Island, just S of Lovill Bluff, it opens on Wrigley Gulf, off the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Leroy William Pankratz (b. Oct. 16, 1941, Nicollet, Minn.), USARP seismologist and geomagnetician who wintered-over at Byrd Station in 1965.

Panlong Shan. 62°14' S, 58°58' W. A hill on Fildes Peninsula, near Great Wall Station, on King George Island, in the South Shetlands. Named by the Chinese.

Panorama Pass. 63°49' S, 57°51' W. A col, running at about 250 m above sea level, at the head of Halozetes Valley, separating Berry Hill from the Lachman Crags, at the N end of Ulu Peninsula, on James Ross Island. So named by UK-APC on Nov. 15, 2006, for the impressive views of the panorama ranging between Trinity Peninsula to the W and Vega Island in the E.

Panorama Peak. 77°37' S, 161°24' W. A rock peak, 0.75 km N of Mount Thundergut on the ridge extending to Plane Table, in the Asgard Range of Victoria Land. Named for the wide scenery seen here by the New Zealanders. US-ACAN accepted the name in 1976.

Panorama Point. 82°49' S, 159°10' E. A point surmounted by a hill, on the NW side of Cotton Plateau, and overlooking the junction of Marsh Glacier and Nimrod Glacier. Discovered by the Holyoake, Cobham, and Queen Elizabeth Ranges Party of NZGSAE 1964-65, who named it for the panoramic view from here. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA accepted the name on Aug. 10, 1966.

Panorama Ridge. 62°08' S, 58°29' W. A mountain ridge between Point Thomas and Jardine Peak, it affords the best view over Ezcurra Inlet and Arctowski Station, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980.

Mys Panova. 68°34' S, 34°35' W. A very isolated cape. Named by the Russians. The problem is, these coordinates put this cape right in the middle of the Weddell Sea, where there is no land for miles and miles. Unless it is an ice cape of some sort.

Lago Pantano. 74°19' S, 165°04' E. A lake with seasonal ice covering, 90 m by 70 m, 4 m deep, and 3 m above sea level, 12 km ENE of Mount Melbourne, and 2 km NNW of Edmondson Point. On the N shore of the lake there are plenty of mosses and lichens. Surveyed by Vittorio Libera during ItAE 1988-89, and named by him (the word "pantano" means "morass" or "swamp," in Italian). Italy accepted the name officially on July 19, 1997.

Panter Ridge. 77°33' S, 169°03' E. A solitary ridge, 0.8 km long, and at an elevation of about 800 m above sea level, between Slattery Peak and Detrick Peak, in the S part of the Kyle Hills, on Ross Island. Named by Phil Kyle, for Kurt Samuel Panter (b. June 20, 1962) who, as a PhD student at the New Mexico Institute of Mining and Technology, worked extensively in Marie Byrd Land, where he completed his dissertation on rocks from Mount Sidley. He also assisted with work on Mount Erebus in 5 field seasons between 1988 and 1996. He was later at Bowling Green State University, in Ohio. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.

Ensenada Pantera *see* **Ensenada Aguayo**

Panther Cliff. 66°23' S, 65°36' W. Name also seen as Panthers Cliff. A conspicuous cliff, E of Workman Rocks, at the NE corner of Darbel Bay, just N of the mouth of Cardell Glacier, it fronts Ensenada Aguayo, on the Loubet Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base W between 1956 and 1958. A landmark for parties sledging in Darbel Bay, it was named by UK-APC on Sept. 23, 1960, for its spotted appearance. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Panthers Cliff *see* **Panther Cliff**

Pantomime Point. 60°44' S, 45°36' W. The most northerly of 3 ice-free points at the E end of Gourlay Peninsula, on Signy Island, in the South Orkneys. Surveyed in 1933 by the Discovery Investigations, and again in 1947 by FIDS, who named it for the amusing behavior of the penguins in their rookeries on Gourlay Peninsula. UK-APC accepted the name, and US-ACAN followed suit in 1956.

Panzarini, Rodolfo N. MacLennan. b. March 26, 1910, in Concepción del Uruguay, in Entre Ríos province, in Argentina, son of Ángel Panzarini and his wife Elisa MacLennan. He graduated from the Naval Academy in 1931, and after spending 1946 to 1949 at the University of California, he became chief of the Maritime Meterological Service in 1950. He was the officer who led ArgAE 1950-51, and ArgAE 1952-53. Later in the decade, as a rear admiral, he was director of the Instituto Antártico Argentino (1958-68). He was also vice president of SCAR, 1965-68. University professor and doctor in oceanography. He married Haydée Josefina Chaves.

Panzarini Hills. 82°10' S, 41°30' W. A group of hills, rising to about 880 m, N of San Martín Glacier, they form the N half of the Argentine Range, in the Pensacola Mountains. They include (from N to S): Mount Spann, Areta Rock, Arcondo Nunatak, Suárez Nunatak, Giró Nunatak, Mount Ferrara, and Vaca Nunatak. Surveyed from the ground by USGS, during their Pensacola Mountains Project of 1965-66, photographed aerially by USN in 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Rodolfo Panzarini. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Paola Automatic Weather Station. 72°46' S, 159°02' E. An Italian AWS, installed in Jan. 2003, at an elevation of 2384.62 m, at Talos Dome, on the edge of the East Antarctic plateau. It was still operating in 2009.

The Pap *see* **Hammer Hill**

Papa, Humberto *see* **Órcadas Station**, 1936

Papanin Nunataks. 68°13' S, 50°15' E. A small group of nunataks, 17.5 km (the Australians say 22 km) E of Alderdice Peak, in the Nye Mountains of Enderby Land. Named by SovAE 1961-62, as Gory Papanina (i.e., "Papanin mountains"), for Rear Admiral Ivan Dmitrievich Papanin (1894-1986), geophysicist on the Russian North Pole expedition of 1936-37. However, in 1966 the Russians officially accepted the name Nunataki Papanina, which ANCA translated as Papanin Nunataks on Oct. 22, 1968. They plotted the feature in 68°12' S, 50°03' E. US-ACAN followed the Australian lead in 1971, but with different coordinates.

Gory Papanina *see* **Papanin Nunataks**

Nunataki Papanina *see* **Papanin Nunataks**

Pape Rock. 75°32' S, 159°04' E. A lone rock at the S side of David Glacier, 5 km NW of Shomo Rock, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Bernard C. "Bernie" Pape, builder who wintered-over at Pole Station in 1966. ANCA accepted the name on Sept. 26, 1978.

Papitashvili Valley. 77°23' S, 161°00' E. A hanging valley, ice-free but for a glacier at the headwall, between Wendler Spur and Besson Spur, opening N to Barwick Valley opposite Hourglass Lake, in the Apocalypse Peaks of Victoria Land. Named by US-ACAN on Jan. 1, 2005, for Georgian geophysicist Vladimir O. Papitashvili (b. 1946), of the Space Physics Research Laboratory at the University of Michigan at Ann Arbor (since 1993), a specialist in Arctic and Antarctic geophysics, and member of a joint US-Russian project to collect magnetometer data in the areas of Mirnyy Station and Vostok Station, in 4 seasons between 1994 and 1999. From 2002 Dr. Papitashvili was program manager for aeron-

omy and astrophysics at the NSF's Office of Polar programs. NZ-APC accepted the name on Sept. 12, 2005.

Papiya Nunatak. 63°46' S, 58°27' W. A rocky peak rising to 826 m, in the E extremity of Trakiya Heights, 4.24 km E of Bozveli Peak, 3 km SE of Mount Daimler, and 8.78 km NNE of Mount Reece, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for Papiya Peak, on the Black Sea coast of Bulgaria.

Islote Papúa *see* **Papua Island**

Playa Papúa. 62°27' S, 60°48' W. A small beach immediately NNE of Playa Antártico, on the N coast of Cape Shirreff, in Livingston Island, in the South Shetlands. So named by the scientific personnel of ChilAE 1990-91, because of the existence here of breeding colonies of Papua penguins (the name means Papua Beach).

Papua Island. 63°07' S, 55°57' W. A small, circular island, it is the larger of 2 small islands in the Larsen Channel, 6 km W of Boreal Point, off the N coast of Joinville Island. Roughly charted by ArgAE 1953-54, and named by them as Islote Papúa, for the large numbers of gentoo penguins (*Pygoscelis papua*) seen here ("papúa" is what the Spanish call a Gentoo penguin). UK-APC accepted the name Papua Island (without the accent mark) on Feb. 12, 1964, and US-ACAN followed suit that year.

Papua New Guinea. When this country became independent of Australia, it automatically carried with it membership of the Antarctic Treaty, and was ratified as the 23rd signatory on March 16, 1981. However, PNG's direct involvement in Antarctica has been very limited.

Parachutes. **Nov. 3, 1934**: Bernard Skinner jumped out of the *William Horlick* at 4000 feet over Little America. At 400 feet he opened his 2nd chute, to soften the impact, but it fouled, and he landed roughly, but safely. Based out of McMurdo was a 4-man VX-6 para-rescue team, set up in the 1950s, and trained for Antarctic rescue. The Navy required oxygen for any jump made over 15,000 feet above mean sea level. **Nov. 22, 1956**: The first parachute jump at either the North or the South Pole took place at 90°S, by the 1710th Aerial Port Squadron, when Sgt. Richard J. Patton, USAF, parachuted to the South Pole. **1958**: Major Pedro Pascual Arcondo, of the Argentine Army, made the first Argentine parachute jump in Antarctica, at General Belgrano Station. **Dec. 23, 1966**: Jim Thomann made the first ever freefall jump over the South Pole, which was also the first jump by a Navy man. **Dec. 20, 1968**: Dick Spaulding and Jim Thomann set an Antarctic altitude record of 10,500 feet when they jumped out of an H-34 over McMurdo. **Jan. 19, 1969**: Dick Spaulding set a McMurdo parachute altitude record of 12,500 feet. **March 6, 1972**: VXE-6 parachute rigger 1st class Hendrick V. Gorick set an Antarctic record of 20,500 feet — freefalling from a UH-1N helicopter for 90 seconds. **Dec. 7, 1997**: Six private citizens formed the world's first skydiving expedition over the South Pole. Two were Norwegians (Trond Jacobsen and Morten Halvorsen), who did a tandem jump, using one chute between them, and freefalling to 4500 feet before opening; three were Americans (Michael Kearns, Ray Miller, and Steve Mulholland), and the sixth man was an Austrian (Hans Resack). Resack, Mulholland, and Miller died when they hit the ground, their chutes never having been opened. They were probably dead of oxygen-starvation before they hit the ground. One of them, Mulholland, was a former Naval carpenter who had worked at Pole Station. Kearns was the only one carrying an AAD (automatic activation device, which automatically opens the reserve chute if the main chute has failed), and just made it. Note: Jumps were made during OpHJ 1946-47.

Paradise Bay *see* **Paradise Harbor**

Paradise Cove *see* **Sentry Cove**

Paradise Harbor. 64°51' S, 62°54' W. A wide embayment surrounded by huge, completely ice-covered cliffs, and famous for its spectacular scenery, between Lemaire Island and Bryde Island (Bryde Island bounds the harbor to the W), it indents the W coast of Graham Land between Duthiers Point and Leniz Point, on the Danco Coast, which bounds it to the E and S. It is entered from the NE through the Aguirre Passage, from the W through the Bryde Channel, and from the S by the Ferguson Channel. Roughly charted in Feb. 1898, by BelgAE 1897-99. Further charted and named by the whalers operating in the area from 1913 (it was certainly named by 1920, presumably for the geological and glaciological formations here, and for the rather benign climate). It appears as such on the 1933 Discovery Investigations chart (but with a "u" in "Harbor," of course). It has also been seen as Paradise Bay (Bagshawe's 1939 map of the British Imperial Antarctic Expedition of 1920-22). It appears as Paradise Harbor on a 1940 U.S. Hydrographic Office chart. US-ACAN accepted the name Paradise Harbor in 1947, and it appears as such in the 1949 U.S. gazetteer. UK-APC accepted the spelling Paradise Harbour on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer, and on a British chart of 1959. It appears on a 1949 Argentine chart as Puerto Paradise, and on a 1947 Chilean chart it was translated all the way as Bahía Paraíso, and that last was the name accepted by the 1970 Argentine gazetteer and also by the 1974 Chilean gazetteer. The feature was slightly re-defined in the 1970s. It appears on a 1957 Argentine chart as Puerto Paraíso, but it seems that the name (in this case) refers to the whole sea area between Lemaire Island, the Danco Coast, and Bruce Island.

Paradise Harbour Station *see* **Base O**

Paradise Ridge. 85°27' S, 157°10' W. A low ridge that parallels the coast at the head of the Ross Ice Shelf, E of Amundsen Glacier and midway between the MacDonald Nunataks and O'Brien Peak. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by NZGSAE 1969-70 for its flat top which provides astoundingly easy traverses. NZ-APC accepted the name, and US-ACAN followed suit in 1971.

Punta Paragón *see* **Paragon Point**

Paragon Point. 65°38' S, 64°17' W. A small but prominent point on the SW side of Leroux Bay, 5 km WSW of Eijkman Point, on the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37, photographed aerially by FIDASE in 1957-57, and surveyed from the ground between 1956 and 1958 by a combined Royal Navy-FIDS team. So named by UK-APC on July 7, 1959 because the feature is a true point, whether seen in plan or elevation. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Punta Paragón.

Bahía Paraíso *see* **Pardise Harbor**

Puerto Paraíso *see* **Paradise Harbor**

Parallactic Island. 67°32' S, 62°46' E. The most northwesterly of the Parallactic Islands, in Holme Bay, Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped (but apparently not named) from these photos in 1946 by Norwegian cartographers. Plotted by Australian cartographers from ANARE air photos. Named by ANCA on July 4, 1961, for the photo-theodolite erected on the island for parallactic measurement of the aurora by ANARE in 1961. US-ACAN accepted the name in 1965.

Parallactic Islands. 67°32' S, 62°46' E. A group of 6 small islands, 3 km SE of the Azimuth Islands, between those islands and the Kellas Islands, in Holme Bay, Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Mapped by Australian cartographers from ANARE air photos. Named by ANCA on July 4, 1961, after the most northwesterly of the group, Parallactic Island (q.v.). US-ACAN accepted the name in 1965.

Paramount Volcano. There seems to be only one reference to this feature, and that is in the NZ descriptor of Co-pilot Glacier. Somehow it seems to be connected to Mount Overlord, in Victoria Land. Someone must have given this name, probably in connection with the Overlord theme, but one does remember the Paramount Pictures logo, and there is a mountain, much farther S, called Mount Cohen, named for Manny Cohen, of Paramount Pictures, who helped edit Byrd's 1928-30 film footage. There is also Parasite Cone. In the end, whoever gave the name Paramount Volcano, the name didn't stick.

The *Parana*. A 209-ton Sag Harbor, NY, whaling brig, built in 1849 as the Portuguese brig *Michael*. Bought by J. and E. Smith, and Thomas Brown, and renamed the *Parana*, she left Sag Harbor on June 16, 1853, bound for the South Shetlands, under the command of Capt. Smith, for the 1853-54 sealing season. On board was a passenger named Smith, one of the owners, and brother of the skipper. On Sept. 17, 1853, she arrived at New Bay, in Patagonia, and on Sept. 24 left for the Falkland Islands, which she reached on Oct. 7. The brig's crew shot 1500 wild geese, and brought them aboard. On Oct. 13, she sailed for the South Shetlands, reaching there on Oct. 23, 1853. She was icebound there for 7 weeks, on Nov. 7 discovering an uncharted

island, about 50 feet high and 200 feet long, which may well have been a berg. On Nov. 16, a so'westerly lasting 20 hours damaged the vessel slightly, and they lost a new boat. But the gale had the beneficial effect of breaking the ice up, and Dec. 3, 1853, they reached the shores of Elephant Island. The crew built a hut there, and left a sealing gang on the island, killing numerous elephant seals and filling their oil casks. The *Parana* left the South Shetlands on Feb. 26, 1854, and finally got back to the Falkland Islands on March 12, 1854, leaving there on April 8, bound for Sag Harbor, NY, arriving home on June 15, 1854. On Aug. 12, 1854, she again left Sag Harbor, bound for the South Shetlands, again under Capt. Smith, this time in company with a tender, the smack *Draco* (under Capt. Hoyt). Whether the *Parana* made it to the South Shetlands for the 1854-55 season is unclear (she probably did), but the *Draco* certainly didn't. Six days out of port the crew rebelled, refusing to go any farther, and the *Draco* put into Newport, R.I. The *Parana* was reported at New Bay (Patagonia) on Aug. 26, 1855, leaving there for the Falklands, and again bound for the South Shetlands. She arrived back in Sag Harbor on March 24, 1856, which is early in the season, so it looks as if she didn't make it to the South Shetlands for the 1855-56 season. Capt. Royce took over command of the *Parana*, and Capt. Smith went over to the *Susan*. The *Parana* was still sailing during the Civil War period, and in 1862 was throughly overhauled and repaired. She became the *Highland Mary*, was condemned at Tobago in 1868, refitted, became the *Sallie French*, went home to Sag Harbor, and was broken up in 1873.

Bahía Paraná *see* **Hidden Bay**

Nunatak Paraná *see* **Giró Nunatak**

Paraselenae *see* **Phenomena**

Parasite Bay. 66°46' S, 141°33' E. A small bay between Péage Island and the coastal angle formed by the W side of Cape Découverte. Charted by the French in 1951 and named by them as Baie des Parasites, for the study of atmospheric parasites made here, and by analogy with Ionosphere Bay at the E side of Cape Découverte, on the coast of East Antarctica. US-ACAN accepted the translated name Parasite Bay in 1962. The French have discontinued the name (as far as they are concerned).

Parasite Cone. 73°06' S, 164°18' E. A small parasite cone (a small cone on the side of a mountain) on the NW flank of Mount Overlord, 11 km from that mountain's summit, in the Mountaineer Range of Victoria Land. Named descriptively by the Northern Party of NZGSAE 1962-63. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Baie des Parasites *see* **Parasite Bay**

The *Paratii*. Brazilian yacht, skippered by Amyr Klink, which was in Antarctic waters in 1989-91, during which she wintered-over at Wiencke Island in 1990. This was part of an Antarctic-Arctic voyage that lasted 642 days. Mr. Klink (b. Sept. 25, 1955, São Paolo, Brazil, to a Lebanese father and a Swedish mother) wrote *Between Two Poles*. In Jan. 1997 he was back in Antarctic waters, advising a filming crew. He and the vessel were back in Antarctic waters in 1998-99 and wintered-over in the Antarctic Peninsula in 1999, as part of his Antarctica 360 project, in which he circumnavigated the continent. Mr. Klink was no stranger to this sort of activity — in 1984 he had rowed single-handed across the South Atlantic (the first person ever to do this), from South-West Africa to Brazil, in 101 days, a feat that almost defies belief. Mr. Klink and the *Paratii* were back in 2001-02.

Parawera Cone. 77°29' S, 168°59' E. A cone rising to about 1300 m, at the NE end of Tekapo Ridge, 1.5 km NW of Ainley Peak, in the Kyle Hills, on Ross Island. Named by NZ-APC on Feb. 20, 2000 (name means "south wind" in Maori). US-ACAN accepted the name later in 2000.

Parchevich Ridge. 62°31' S, 59°35' W. A partly ice-free ridge, at an elevation of 370 m above sea level, 600 m S of Benkovski Nunatak, in Breznik Heights, 1.7 km SW of Santa Cruz Point, and N of Hardy Cove, on Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their 2004-05 Tangra survey, and named by them on Dec. 15, 2006, for Petar Parchevich (1612-1674), a Bulgarian Catholic bishop and diplomat, who campaigned for Bulgarian independence in the period between 1630 and 1645.

Islas Pardas *see* [1]**Brown Island**

Cerro Pardo. 63°47' S, 58°29' W. A hill, rising to about 1000 m, 5 km NNE of Mount Reece, on the S side of Trinity Peninsula, on the E coast of the Antarctic Peninsula. Named by the Chileans for Luis Pardo Villalón (*see* below). The Argentines call it Cerro Madre.

Cordón Pardo *see* **Pardo Ridge**

Isla Pardo *see* **Clarence Island**, **Elephant Island**

Pardo Ridge. 61°08' S, 54°53' W. Forming the central portion of the E part of Elephant Island, it extends eastward, at an elevation of about 760 m above sea level, from The White Company to The Cornet, thence northeastward to Cape Valentine at the coast of the island, in the South Shetlands. Surveyed and mapped by the British Joint Services Expedition of 1970-71, who gave names to various features on the ridge (see below for the list). However, all these feature names were rejected by UK-APC on Nov. 3, 1971, when that body named the whole ridge as Pardo Ridge, for Luis Pardo Villalón (*see* the entry immediately beneath this one). US-ACAN accepted the name Pardo Ridge in 1972. It appears as such in the 1974 British gazetteer. The Argentines call the N side of the ridge Cordón Pardo (i.e., "Pardo chain"), and the S part Grandes Acantilados (i.e., "great cliffs"). Last plotted by the UK, in late 2008. As a matter of (great) interest, the rejected features were: Pic de Gaulle, on the N side of the ridge, and so named because it looks like General de Gaulle's famous physiognomic profile; Flat Top, a peak at the W end of the ridge; The Postern and Mount Heathcliffe, two peaks near the E end of the ridge; Moby Dick and Mount Talisker, two peaks on the ridge; and Avalanche Col, on the N side of The Cornet.

Pardo Villalón, Luis A. b. Sept. 20, 1882, Santiago, Chile. After pilot school, he entered the Chilean navy in June 1906, as pilot 3rd class. On Sept. 13, 1910 he was promoted to pilot 2nd class, and placed in command of the tug *Yáñez*. He was on the *Yelcho* when that ship accompanied the *Emma* as far south as 60°S, in one of the unsuccessful attempts to rescue Shackleton's men from Elephant Island in 1916, and when the call went out for volunteers to man the *Yelcho*, in order to steam to Elephant Island to try again, Piloto Pardo was the first in, and he brought 6 of his crew with him from the *Yáñez*. Although he was decorated by King George V, he refused an offer of £25,000 reward from HM government. He retired in 1919, and became Chilean consul in Liverpool. He stayed in touch with Shackleton's widow, and in 1934 was in London for an unveiling of a statue of the great explorer. He died of bronchopneumonia on Feb. 21, 1935, in Santiago.

Mount Pardoe. 67°08' S, 50°11' E. Rising to 790 m, between the Wyers Ice Shelf and Priestley Peak (it is 7 km N of that peak), on the shore of Amundsen Bay, Enderby Land. Plotted from ANARE air photos taken in 1956. Named by ANCA for Dr. Russel [sic] "Russ" Pardoe, medical officer at Mawson Station in 1961, who that season saved the life of Alan Newman (*see* **Newman Shoal**), in a remarkable display of bravado, guts, and skill that won him an MBE on Jan. 1, 1963. US-ACAN accepted the name in 1965.

Pardoe Peak. 73°29' S, 61°38' E. The summit of the SW part of the Mount Menzies massif, in the Prince Charles Mountains, it is 6.5 km SSW of the summit of Mount Menzies, and rises from the crest of a long ridge trending N toward Fischer Glacier, and forms the W wall of the huge N cirque of Mount Menzies itself. Plotted in 73°25' S, 61°44' E, from ANARE air photos taken in 1957 and 1960. First visited by Dave Trail's ANARE party of Dec. 1961. Named by ANCA for Russ Pardoe (*see* **Mount Pardoe**). The name was accepted by US-ACAN in 1972. The feature has since been re-plotted.

Pardoner Island *see* **Guido Island**

Pardue Peak. 79°06' S, 86°30' W. Rising to 1840 m, it is the most northerly peak on Smith Ridge, in the Founders Peaks of the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Lt. Andrew Michael Pardue (known as Michael; b. June 23, 1931, Nashville), USN, VX-6 flight surgeon, 1960-61. Dr. Pardue was later a plastic surgeon in Arizona.

Paré Glacier. 64°08' S, 62°13' W. A glacier, 11 km long and 1.5 km wide, it flows E and then NE into the head of Bouquet Bay, on the NE side of Brabant Island, in the Palmer Archipelago. It is shown on an Argentine government chart of 1953, but not named. Photographed aerially by FIDASE in 1956-57, and mapped from these photos by the British in 1959. Named by UK-APC on Sept. 23, 1960, for Ambroise

Paré (1510-1590), French surgeon who first taught the importance of clean wound dressings, and improved operation techniques and fracture treatment. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961.

Punta Paredes *see* **Charles Point**

Paredes, Rocas *see* **Oluf Rocks, Sven Rock**

Ensenada Paredón Negro. 64°38' S, 63°03' W. An inlet on the E side of Anvers Island, in the Palmer Archipelago. Named descriptively by the Argentines (the name means "black wall cove).

Paren, Julian Gerald. b. Oct. 27, 1942, London, a twin child of Gerald William Paren and his wife Winifred E. Rolfe. After Edinburgh University, he joined BAS, as a glaciologist, and spent 5 summers on the George VI Ice Shelf—1976-77, 1978-79, 1980-81, 1983-84, and 1984-85. He was the BAS Club secretary until 2008.

Parer, David Damien. b. July 31, 1945, son of Stanislaus Arthur Parer and his wife Catherine Irene Harriet "Rene" Gartlan. Damien Parer, the famous Australian photographer, was his uncle. Cosmic ray physicist and movie photographer at Mawson Station in 1970 and 1972, and at Macquarie Island in 1975. On April 25, 1980, he married Elizabeth Cook.

Parera Pond. 77°39' S, 162°55' E. Just SW of Lake Hoare, in the Taylor Valley of Victoria Land. Named by NZ-APC on Oct. 7, 1998, for the parera (*Anas superciliosa*), a NZ duck. US-ACAN accepted the name later in 1998.

Parhelia *see* **Phenomena**

Pari Haupapa Cliffs. 78°28' S, 161°53' E. On the E side of Lower Staircase, which is the lower (eastern) portion the Skelton Glacier, between The Landing and Clinker Bluff, in Victoria Land. Named by NZ-APC on March 1, 1994. Name means "ice cliff" in Maori. US-ACAN accepted the name later in 1994.

Paril Saddle. 62°41' S, 60°12' W. A saddle, running at an elevation of 1390 m, in Friesland Ridge, in the Tangra Mountains of Livingston Island, in the South Shetlands. It is bounded by St. Boris Peak to the NE, and by Simeon Peak to the SW, and overlooks Macy Glacier to the E and SE, and Huntress Glacier to the W and NW. Surveyed by the Bulgarians in 1995-95, and named by them on Dec. 15, 2006, for the saddle of the same name between Pirin Mountain and Slavyanka Mountain, near the settlement of Paril, in southwestern Bulgaria.

Massif Paris *see* **Mount Paris**

Montes París *see* **Mount Paris**

Mount Paris. 68°59' S, 70°50' W. Also seen spelled (erroneously) as Mount Parks. A conspicuous mountain, 6 km SE of Mount Bayonne, in the N part of Alexander Island. It was first included on a map drawn up by FrAE 1908-10, as part of what Charcot named Massif Paris, after the capital of his country. That name appears in his diary, published in Paris in 1910. In 1936 BGLE 1934-37 charted it as mountains, rather than a massif, and called them the Paris Mountains. This group (the so-called massif that Charcot described) extends 13 km to the SE from Mount Bayonne. At the summit of this group, three peaks stand out, the highest being 2750 m. The South Americans called this group Montes París, and the Russians called it Gora Georgija Pobedonosca, for Saint George Pobedonosec (which means St. George the Victorious), who was actually a Bulgar. However, studies of photos taken by RARE 1947-48 show that this 2750-meter-high peak is, in fact, a single mountain, not part of a group, and on Sept. 20, 1955 UK-APC named it Mount Paris, a name accepted by US-ACAN in 1961.

Paris Mountains *see* **Mount Paris**

Paris Peak. 64°30' S, 63°22' W. A conspicuous peak, rising to 1645 m (the British say about 950 m), 6 km NE of Mount Priam, at the N end of the Trojan Range, on Anvers Island, in the Palmer Archipelago. It is snow-covered on the S side, but the N side is formed by sheer rock scarps. Surveyed by Fids from Base N in 1955, and named by UK-APC on Sept. 4, 1957, for the Homeric character. It appears on a British chart of 1959. US-ACAN accepted the name in 1963.

Parisbreen *see* **Parizhskaya Kommuna Glacier**

Parish Ledge. 77°28' S, 161°31' E. A flat-topped ridge, at an elevation of 1642 m, at the E side of Bratina Valley, and N of Mount Jason, in the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for Thomas R. Parish, of the department of atmospheric science at the University of Wyoming, in Laramie, a long-time USAP investigator of Antarctic katabatic winds, between 1981 and 1997. NZ-APC accepted the name on Nov. 30, 2004.

Parish Riegel. 77°26' S, 161°30' E. A riegel (or rock bar), 3.2 km long and 1.6 km wide, extending N from Parish Ledge, across the McKelvey Valley toward the Insel Range, in the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, in association with the ledge. NZ-APC accepted the name on Nov. 30, 2004. It is similar to Bonney Riegel, in the Taylor Valley.

Parizhskaya Kommuna Glacier. 71°38' S, 12°04' E. About 13 km long, it flows NW between Zwiesel Mountain and Gråkammen Ridge, to Humboldt Graben in the Petermann Ranges of the Wohlthat Mountains, in Queen Maud Land. Discovered and photographed aerially (but not named) by GermAE 1938-39, and first plotted from these photos. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named Lednik Parizhskoy Kommuny (i.e., "Paris Commune glacier") by the Russians in 1966. US-ACAN accepted the semi-translated name in 1970.

Lednik Parizhskoj Kommuny *see* **Parizhskaya Kommuna Glacier**

Mount Park. 67°14' S, 51°00' E. A mountain on the S side of Beaver Glacier, 5 km W of Mount Tomlinson, in the NE part of the Scott Mountains of Enderby Land. Plotted by Australian cartographers from air photos taken by ANARE in 1956. Named by ANCA for John Park. US-ACAN accepted the name in 1965.

Park, David B. *see* **USEE 1838-42**

Park, John Alexander. b. 1905, Stornoway, Ross and Cromarty, son of Aberdonian butcher Alexander Park. He was living in Falmouth when he became an able seaman on the *Discovery* during the first half of BANZARE 1929-31. In Melbourne he took the *Bendigo* heading for London, where he arrived on June 25, 1930.

Park Glacier. 74°20' S, 110°38' W. On the N part of Bear Peninsula, it flows to the sea along the W side of Gurnon Peninsula, on the Walgreen Coast of Marie Byrd Land. First mapped by USGS from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1967, for Chung Gun Park (b. Jan. 11, 1939, Seoul), Stanford ionosphere physics researcher at Byrd Station in 1966.

The *Parker*. Argentine ship, named for Capt. Enrique Guillermo Parker, naval hero of the war against Brazil. Under the command of Captain Guillermo José Zarrabeitía, she took part in ArgAE 1947-48. Relieving the *Seaver* as the Argentine patrol ship in the South Shetlands, she left Deception Island on March 4, 1948 (one day after having detained and boarded the *Bråtegg*), and returned the following evening. During her very convenient absence, the British cruiser *Nigeria* pulled into Deception, with the Falkland Islands governor aboard, formal protest in hand, to argue against the right of the Argentines to be there. Later that year the *Parker* was on patrol again, with the same captain, studying ice conditions in the Drake Passage and the northern part of the Antarctic Peninsula. Not to be confused with a (later) corvette of the same name.

Mount Parker. 71°15' S, 168°05' E. A prominent bluff-type mountain peak rising to 1260 m, along the W side of Nash Glacier, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. This may or may not be the Mount Parker seen by Ross from his ship on Jan. 11, 1841, but is in the general area. Vice Admiral Sir William Parker (1781-1866) was a senior lord of the Admiralty from 1834 to 1841, and from 1841 1st Baronet Parker of Shenstone. US-ACAN accepted the name in 1950, and NZ-APC followed suit.

Parker, Alan Douglas. b. Aug. 10, 1935, Melbourne, son of Alan William Parker and Dorothy Dow. He married Jeanette Harris in 1957. He was the carpenter who wintered-over at Macquarie Island in 1966, and in the summers of 1967-68 and 1968-69 helped build the new Casey Station in Antarctica. In 1970 he took part in the Macquarie Island relief party, and in 1970-71 was part of the Prince Charles Mountains Survey. In 1971 he was deputy leader of the Macquarie Island relief party, and was at Mawson Station in the summer of 1971-72. He wintered-over at Davis Station in 1977, as officer-in-charge.

Parker, Alton Norman. b. July 12, 1895, Hazlehurst, Miss., son of Georgia saw mill worker

James T. Parker and his wife Ola (who would later re-marry). He grew up in Crystal Springs, Miss., enlisted in the U.S. Navy in June 1917, and was a captain in the Marine Corps Reserves when he flew with Byrd in the Arctic in 1926, and then became one of the pilots on the shore party of ByrdAE 1928-30. He was the first ashore, but did not get to fly to the South Pole, which rankled with him ever after. On his return to the USA, he joined a (then) new company, TWA, as a pilot, and remained with them for years, living in Kansas City. Altogether, in his whole career, he logged 2 million miles in the air. He died of heart disease in a Miami hotel room on Nov. 30, 1942.

Parker, George *see* **USEE 1838-42**

Parker, Thomas *see* **USEE 1838-42**

Parker Bluff. 86°17' S, 145°38' W. A bold, rounded bluff at the S end of the California Plateau, it overlooks Van Reeth Glacier, about 8 km E of Mount Blackburn, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for John J. Parker, VX-6 photographer during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67).

Parker Glacier. 73°47' S, 165°33' E. A valley glacier in the Mountaineer Range of Victoria Land, it drains the area just E and NE of Mount Monteagle, and flows S to Lady Newnes Bay, where it terminates in a floating glacier tongue adjacent to Andrus Point. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Anthony G.H. Parker, biologist at Hallett Station in 1963-64, and at McMurdo in 1964-65 and 1966-67.

Parker Hill. 68°31' S, 78°26' E. Rising to over 135 m, just E of Lake Cowan, in the E part of the Vestfold Hills. A wind-run pole was erected here by an ANARE party from Davis Station in 1969. Named by ANCA on May 18, 1971, for Desmond Arthur Aloysius "Des" Parker (b. Feb. 17, 1921), officer-in-charge and medical officer at Davis that winter (1969). He was at Mawson Station as medical officer in the winter of 1972, and spent three winters at Macquarie Island as well in the 1970s. US-ACAN accepted the name in 1973.

Parker Mesa. 77°15' S, 160°55' E. A prominent, high, flattish, snow-covered mesa, 6 km SE of Skew Peak, in the S part of the Clare Range of Victoria Land. Named by US-ACAN in 1976, for Bruce C. Parker, USARP biologist who conducted limnological studies on the Antarctic Peninsula in the 1969-70 summer season, and in Victoria Land during the 1973-74 and 1974-75 seasons.

Parker Pass. 77°53' S, 142°48' W. A broad, ice-covered pass on the S side of Zuncich Hill, in Marie Byrd Land, it leads from the head of Siemiatkowski Glacier to the névé area to the SW of El-Sayed Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Dana C. Parker (b. March 9, 1933, Victor Township, Mich. d. Oct. 31, 1969, Washtenaw Co., Mich.), USARP geophysicist at McMurdo, 1967-68.

[1]**Parker Peak**. 72°13' S, 68°37' E. The summit of a rock ridge, in the S part of the Clemence Massif, on the E side of the Lambert Glacier. It was the site of a geodetic survey station during the ANARE Prince Charles Mountains Survey of 1971. Named by ANCA for Alan D. Parker, technical officer on that party. He had wintered-over at Macquarie Island in 1966, and would winter-over again, at Davis Station, as base leader. There are references to a Gora Rukojatka, in coordinates very close to Parker Peak, and one has to suspect that this is the Russians' name for Parker Peak.

[2]**Parker Peak**. 72°18' S, 97°24' W. At the base of Evans Peninsula, in the Walker Mountains of Thurston Island. Gough Glacier flows off it into the head of Koether Inlet, on the N side of the island. Delineated from VX-6 air photos taken in Jan. 1960. Named by US-ACAN in 1961, for Alton Parker. This peak was originally plotted in 72°14' S, 97°30' W, but has since been replotted.

Parker Peninsula. 64°35' S, 63°03' W. In the NE part of Anvers Island, it extends NE to Andrews Point from a line joining the head of Fournier Bay with Lion Sound. Photographed aerially by FIDASE in 1956. Named by UK-APC on Oct. 24, 1979, for James Roland Walter Parker (1919-2009), governor of the Falkland Islands, 1977-80.

Parkinson Peak. 69°33' S, 159°00' E. An isolated peak, roughly pyramidal in shape, but with short prominent riges extending from it, it rises to 690 m, near the coast, in the N central part of the Wilson Hills, on the E side of Tomilin Glacier, surmounting the N extremity of the ridge complex that forms the divide between that glacier and Noll Glacier, in Oates Land. First visited in March 1961 by an ANARE airborne field party led by Phil Law from the *Magga Dan*. Named by ANCA on Nov. 24, 1961, for Wilfred Dudley Parkinson (b. 1919. d. 2001; known as Dudley), geophysicist and magnetician with the expedition. US-ACAN accepted the name in 1967.

Mount Parks *see* **Mount Paris**

Parks Glacier. 77°07' S, 125°55' W. Flows southeastward from Weiss Amphitheatre, in the S part of Mount Sidley, in the Executive Committee Range of Marie Byrd Land. Mapped in 1959 by USGS personnel during the Executive Committee Range Traverse. Named by US-ACAN in 1962, for Perry E. Parks, Jr., exploration geophysicist and assistant seismologist on the Marie Byrd Land Traverse of 1959-60, on the Ellsworth Highland Traverse of 1960-61 (led by Charlie Bentley), and on the Antarctic Peninsula Traverse of 1961-62 (q.v.).

Parmelee Massif. 70°58' S, 62°10' W. A rugged mountain massif, rising to about 1250 m in Neilson Peak, W of the base of Imshaug Peninsula, between Dana Glacier and Guard Glacier, at the head of Lehrke Inlet, on the Black Coast, on the E coast of Palmer Land. Photographed aerially by USN in 1966, surveyed from the ground by BAS personnel from Base E in 1972-73, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1976, for David Freeland Parmelee (b. June 20, 1924, Oshkosh, Wisc. d. Dec. 16, 1998, Las Vegas), USARP biologist who studied birds of the pack-ice ecosystems in the Antarctic Peninsula area from aboard icebreakers in the seasons 1972-73, 1973-74, and 1974-75. UK-APC accepted the name on July 21, 1976.

The *Parmelia*. Australian yacht, which visited the South Shetlands and the Antarctic Peninsula in 1997-98, under the command of Capt. Roger Wallis.

Cerro Parmenio. 62°27' S, 60°46' W. A hill on the point between Playa Cachorros and Playa Maderas, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for medical surgeon and marine biologist (possibly Chile's first marine biologist) Parmenio Yáñez Andrade (1902-1977), founder in 1941, and director of, the Marine Biological Station at Montemar (supported by the University of Chile), and who was on the *Angamos* during ChilAE 1946-47. He also assisted in the planning of the first Pinniped census of Antarctica, during ChilAE 1965-66.

Parnell, Donald Stirling "Don." b. 1938, Ashton, Lancs (Stirling was his mother's last name). He joined BAS in 1963, as a radio operator, left Southampton on the *Shackleton* in late September 1963, and wintered-over at Base B in 1964, at Base E in 1965, and at Base T in 1968, the last time also as base commander. In 1969, in Yorkshire, he married Sandra Y. Lockwood, and they lived in Huddersfield.

Montes Parodi *see* **Batterbee Mountains**

Punta Parodi *see* **Norseman Point**

Parpen Crags. 60°35' S, 45°49' W. A precipitous, isolated rock face near the head of Norway Bight, on the S side of Coronation Island, in the South Orkneys. Surveyed by FIDS in 1948-50, and named by UK-APC on March 31, 1955. Parpen is a masonry term meaning a stone extending through the thickness of a wall. US-ACAN accepted the name in 1956.

Cape Parr. 81°14' S, 161°04' E. A large, rocky, but snow-covered peninsula-like cape, between Cape Selborne and Cape May, along the W side of the Ross Ice Shelf, about 13 km S of Gentile Point, midway between Barne Inlet and Shackleton Inlet. Discovered by the Southern Polar Party in Dec. 1902, during BNAE 1901-04, and named by Scott for Admiral Alfred Arthur Chase Parr (1849-1914), Arctic explorer (he served under George Nares) and one of Scott's advisers. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Parrish Peak. 79°55' S, 82°01' W. A very pointed, partly snow-topped peak rising to 1775 m, surmounting the ridge next S of Seal Glacier, in the Enterprise Hills of the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Edward N. Parrish, glaciologist on the first two South Pole-

Queen Maud Land traverses, 1964-65 and 1965-66.

Mont Parry *see* **Mount Parry**

Monte Parry *see* **Mount Parry**

Mount Parry. 64°16' S, 62°25' W. Rising to 2520 m, eastward of Minot Point, it is the highest peak on Brabant Island, dominating the central part of that island, in the Palmer Archipelago. Roughly charted by Henry Foster in Feb. 1829, during the *Chanticleer* Expedition of 1828-31, and named by him for Adm. Sir William Edward Parry (1790-1855), the great Arctic explorer. It appears as Mount Parry on a British chart of 1839, and on Friederichsen's 1895 German map it appears as Parry Berg. It was further charted by FrAE 1903-05, and appears on their charts as Mont Parry. On a 1937 British chart it appears as Mount Parry, plotted in 64°17' S, 62°37' W, and that is how it was accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953, and how it appears in the British gazetteer of 1955. It appears on a 1943 U.S. Hydrographic Office chart as the Mount Parry Range. The Argentines had been calling it Monte Parry for as long as they were aware of its existence, and it appears that way not only in the 1970 Argentine gazetteer, but also in the 1974 Chilean gazetteer. Bagshawe's 1921 map (during the British Imperial Antarctic Expedition of 1920-22), shows this feature and Harvey Heights collectively as Mount Parry (s*ee also* **Harvey Heights**). Photographed aerially by FIDASE in 1956-57. It was first climbed on Oct. 30, 1984, by the British Joint Services Expedition of 1984-85.

Parry, Arthur. Able seaman on the *Discovery II*, 1929-35.

Parry Berg *see* **Mount Parry**

Parry Cliff *see* **Parry Point**

Parry Patch. 62°17' S, 59°22' W. A shoal in the N entrance of Nelson Strait, 5 km NW of Harmony Point, Nelson Island, in the South Shetlands. Photographed aerially by FIDASE in 1956. So named by UK-APC on Aug. 31, 1962, in order to preserve the name Parry in the area. What Richard Sherratt had called Parry's Straits in 1820-21 had long ago become Nelson Strait. It appears on a 1962 British chart. US-ACAN accepted the British naming in 1965.

Parry Peninsula. 79°30' S, 30°00' W. Between Slessor Glacier and Bailey Ice Stream, 5.5 km SW of Parry Point, and about 40 km SW of Mount Faraway, on the E side of the Filchner Ice Shelf, in Coats Land. Named by UK-APC on June 15, 1999.

Parry Point. 79°30' S, 30°20' W. A prominent rock outcrop (the British call it a nunatak rising to about 750 m), N of the mouth of Slessor Glacier, 40 km SW of Mount Faraway, in the Theron Mountains, on the E side of the Filchner Ice Shelf, in Coats Land. Roughly surveyed in Dec. 1956, by BCTAE 1957-58, and named by them for Rear Admiral Cecil Ramsden Langworthy Parry (b. Sept. 3, 1901, Croydon. d. March 31, 1977, Emsworth, Hants), distinguished wartime destroyer captain (Operation Husky) and secretary to BCTAE 1955-58. UK-APC accepted the name Parry Cliff on Aug. 31, 1962, while US-ACAN accepted the name Parry Point later in 1962.

Parry's Straits *see* **Nelson Strait**

Mount Parsons. 67°47' S, 62°35' E. A prominent pointed peak rising to 1120 m (the Australians say 1060 m), 1.5 km SSW of the N extremity of the David Range, and to the N of the main summit of that range, in Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped (but not named) by Norwegian cartographers from these photos in 1946. First visited in Jan. 1956 by an ANARE party led by John Béchervaise. Named by ANCA on Sept. 4, 1945, for Neville Ronsley "Nod" Parsons (b. Sept. 2, 1926), cosmic ray physicist who wintered-over at Mawson Station in 1955, purely to construct the cosmic ray lab. He had also been at Macquarie Island for the winter of 1950. US-ACAN accepted the name in 1961.

Parsons, Derek. b. Aug. 15, 1932, Newcastle, son of miner George Parsons and his wife Edna Armstrong. He joined FIDS in 1952, as a meteorologist, and wintered-over at Signy Island Station in 1953, and at Base B in 1954. One of the taller FIDS, he was 6 foot 5 (Ron Worswick may have been the only one taller than that, especially in the old days). Despite being erudite, he enjoyed the worker pose, the Communist. At the end of his tour, he returned to Port Stanley, then on to Montevideo, where he caught the *Andes* going to Southampton, arriving there on Feb. 24, 1955. While he had been at the base, Doug Mumford had advised him to spend his savings on a college education, which he did — at Durham University. He also married, got a divorce, and in later life is said to have slid into alcoholic oblivion. He died on Nov. 28, 2000, in Greenwich.

Parsons, Fred. b. June 12, 1878 (according to his Navy record; his death certificate says May 12, 1878), North Allington, Dorset, son of machine net braider Alfred Parsons and his wife Dinah Welch. He grew up living next door to George Balson and his family, who were related to Albert Balson (q.v.). He joined the Royal Navy, and was a leading seaman on the *Royal Arthur*, in at Sydney in 1901. He was one of the first submariners, and, as he was leaving the Navy in 1910, a colleague suggested Scott's expedition to Antarctica, so, after being interviewed by Teddie Evans, and then by Scott (a letter from Fred's old commanding officer helped), he signed on as a chief petty officer to the *Terra Nova* for BAE 1910-13, leaving his wife behind. He signed up again for the Navy during World War I, finally leaving the sea in 1920, and becoming a cobbler, owning Parsons Shoe Repair Factory, on Hastings Street, Plymouth. He retired in 1962, and handed the business over to six of his former employees. He died on Jan. 16, 1970, at his home "Terra Nova," at 35 Churchill Way.

Parsons Outcrop. 66°17' S, 110°33' E. An S-shaped rocky outcrop in snow, measuring about 150 m by 50 m, about one third of the way up the slope to the Løken Moraines, near Casey Station, along the Budd Coast. A trig survey station, NM/S/251, was established on the highest rock outcrop in July 1978, with the support of Rod Parsons, during the 1978 ANARE Glaciological Spring Traverse. A steel pole, 1.5 m high, was erected in the center of a rock cairn, to mark the station. Named by ANCA on Oct, 18, 1979.

Punta Partida *see* **Start Point**

Ostrov Partizan *see* **Partizan Island**

Partizan Island. 68°31' S, 78°10' E. A hook-shaped island, 5 km long, in the middle of the entrance to Langnes Fjord, in the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Onguløy (i.e., "fish-hook island"). Re-photographed aerially by OpHJ 1946-47, by ANARE in 1954, 1957, and 1958, and by SovAE 1956. Rightly fearing that the name might be confused with Ongul Island, the Russians changed it to Ostrov Partizan (i.e., "partisan island"), and it first appears as such on a Russian map of 1959. ANCA accepted the name Partizan Island on June 28, 1962, and US-ACAN followed suit in 1970.

Partridge, John Stuart "Jack." b. 1885, Lyttelton, NZ, son of John Partridge. He went as a fireman on the *Morning*, during the 1903-04 relief of Scott's expedition. He was back in Antarctica as a fireman on the *Nimrod*, signing on on Dec. 28, 1907, at Lyttelton, for the first half of BAE 1907-09. He was discharged at Lyttelton on March 21, 1908. He later worked on the dredge *Te Whaka*, for the Lyttelton Harbour Trust, in NZ. He died in Christchurch.

Partridge Nunatak. 75°42' S, 140°20' W. Rising to 730 m, on the N side of White Glacier, and about 8 km W of Bailey Nunatak, it is the most westerly of 3 aligned nunataks southward of the Ickes Mountains, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Billy W. Partridge, USN, chief equipment operator at Byrd Station in 1966. The Russians call it Nunatak Kokkinaki.

Gora Parus *see* **Småsponen Nunatak**

Parvenu Point. 67°34' S, 67°17' W. A low but prominent point forming the N extremity of Pourquoi Pas Island, and the NW entrance point of The Narrows, off the Loubet Coast, on the W coast of Graham Land. First surveyed in Aug. 1936 by BGLE 1934-37, and again in 1948 by Fids from Base E, who found it to be more conspicuous from the W than had been supposed, hence the name. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1982. The Argentines call it Punta Arribista (which means the same thing).

Mount Parviainen. 66°45' S, 51°07' E. Close NE of Mount Henksen, in the N part of the Tula Mountains, about 24 km NW of Pythagoras Peak, in Enderby Land. Plotted from air photos taken by ANARE in 1956. Named by ANCA for Lauri Parviainen. US-ACAN accepted the name in 1965.

Parviainen, Lauri. b. 1898, Nilsia, Helsinki, but raised in Lauritsala, son of Anna Parviainen.

He went to sea in 1923, as an ordinary seaman, and on Oct. 26, 1926, signed on at Melbourne, on to the *Yarra*, bound for Newcastle (NSW), then across the Pacific to Oregon. He was an able seaman on the *Discovery* during the 2nd half of BANZARE 1929-31. A little fellow (5 foot 3), but stout (160 pounds), he continued to sail through World War II, and in 1951 left Cape town on the *Arawa*, reaching Southampton in June 1951, and then returning to Helsinki. Someone, somewhere, was responsible for misrepresenting his first name as Louis.

Parvomay Neck. 62°30' S, 59°45' W. A neck, 5 km long, and between 1.55 and 3.5 km wide, between Discovery Bay to the NE and (to the SW) Shopski Cove and Yankee Harbor, it links the NW and SE parts of Greenwich Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on June 3, 2010, for the town of Parvomay, in southern Bulgaria.

Lake Parwati. 70°46' S, 11°42' E. In the Schirmacher Hills of Queen Maud Land. Named by the Indians.

Paryadin *see* **Poryadin**

Roca Pasaje *see* **Passage Rock**

Pasarel Island. 62°24' S, 59°46' W. An island, measuring 450 m by 260 m, in the Aitcho Islands, on the W side of English Strait, 900 m NW of Barrientos Island, 1.35 km NE of Sierra Island, and 650 m SE of Emeline Island, in the South Shetlands. Mapped by the Bulgarians, and named by them on Nov. 23, 2009, for the settlement of Lower Pasarel, in western Bulgaria.

Île Pascal *see* **Pascal Island**

Pascal Island. 66°47' S, 141°29' E. A small, rocky island, about 320 m ESE of Descartes Island, and 1.5 km NNE of Cape Mousse, between Port-Martin and Cape Découverte, off the coast of East Antarctica. Charted by the French in 1951, and named by them as Île Pascal, for Blaise Pascal (1623-1662), French physician and philosopher. US-ACAN accepted the name Pascal Island in 1962.

Île Pascal Le Mauguen *see* **Carrel Island**

Paschal Glacier. 75°54' S, 140°40' W. About 30 km long and 6 km wide, it flows NW between two ridges, the terminal points of which are Mount McCoy and Lewis Bluff. The lower end of this glacier merges with the flow of White Glacier and the larger Land Glacier near Mount McCoy before Land Glacier terminates in Land Bay, on the coast of Marie Byrd Land. Photographed aerially by USAS 1939-41. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1972, for Evans W. Paschal, scientific leader at Byrd Station in 1970.

Mount Pasco. 66°59' S, 54°44' E. Westward of Edward VIII Bay, about 33 km WSW of Mount Storegutt, in Enderby Land. Mapped by Australian cartographers from 1956 ANARE air photos. Named by ANCA for Cdr. Crawford Atchison Denman Pasco (1818-1898), RN, member of the Australian Antarctic Exploration Committee of 1886. US-ACAN accepted the name in 1965.

Pascoe Glacier. 76°46' S, 161°01' E. A cirque glacier, 2.5 km long, flowing into Greenville Valley from the N end of Staten Island Heights, in the Convoy Range of Victoria Land. Named by Christopher J. Burgess, leader of VUWAE 1976-77, for John D. Pascoe (1909-1972), NZ mountain climber, photographer, and author of books on NZ mountains and alpine subjects; he was chief archivist, department of Internal Affairs, 1963. NZ-APC accepted the name, and US-ACAN followed suit in 1993.

Pashuk Glacier. 63°00' S, 62°30' W. A steep glacier, 2.7 km long and 600 m wide, on the SE side of the Imeon Range, it flows southeastward from Vakarel Saddle between the side ridges descending from Antim Peak and Evlogi Peak, and separating the saddle from Krivodol Glacier to the N and Rupite Glacier to the S respectively, and flowing into Bransfield Strait, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Sept. 14, 2010, for Keri Pashuk, skipper of the *Northanger* (q.v.), here in 1996.

Punta Pasillo. 62°27' S, 60°48' W. A point marking the N extremity of the beach the Chileans call Playa Lobería, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by by the scientific personnel from the Instituto Antártico Chileno on ChilAE 1990-91 because this point offers a narrow pass between the rocks when the tide is changing.

Pasle, Friedrich. Skipper of the Chilean sealer *Archie*, in the South Shetlands in 1902.

Pico Paso *see* **Passes Peak**

Punta Paso. 64°03' S, 61°00' W. A point on the E coast of Islote Moreno, NW of Cape Sterneck, on the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Paso de los Andes Refugio. 67°49' S, 68°40' W. Argentine refugio built on rock, at an elevation of 6 m above sea level, on Avian Island, just off the S end of Adelaide Island, on Oct. 9, 1957, by Army personnel from San Martín Station. It was inaugurated on Oct. 26, 1957, named to commemorate the legendary crossing of the Andes in Jan. 1817, by Gen. San Martín. It was abandoned in 1958.

Paso del Medio Refugio. 63°25' S, 57°05' W. An Argentine refuge hut opened in the 1990 winter season, on Blade Ridge, Trinity Peninsula.

The *Passage*. French yacht, in Antarctic waters in 1990-91, under the command of Jean-Pierre Danjoun.

Roca Passage *see* **Passage Rock**

Passage Rock. 62°22' S, 59°45' W. A rock, rising to an elevation of 18 m above sea level, in the Aitcho Islands, at the N entrance to English Strait, 0.8 km W off Fort William (which is on Robert Island), in the South Shetlands. Charted in 1935 by personnel on the *Discovery II*, and named by them as Channel Rock. It appears as such on a 1942 British chart. However, it was renamed Passage Rock, because it serves as a leading mark for ships entering the strait. With this new name it appears on a 1948 British chart, and UK-APC accepted the name on Sept. 8, 1953, with US-ACAN following suit later that year. It appears as such in the 1955 British gazetteer, and on a British chart of 1968. It appears on a 1953 Argentine chart as Roca Pasaje, and that was the name accepted by the 1970 Argentine gazetteer. It appears on a 1954 French chart as Roche Channel, and on a 1961 Chilean chart as Isla Channel. On a 1961 U.S. Hydrographic Office chart it appears as "Channel (Passage) Rock." On a 1962 Chilean chart it appears as Islote Channel, and that name was accepted by the Chilean gazetteer of 1974 (after they had rejected the name Roca Passage). It was recharted by an RN Hydrographic Survey unit on the *Protector* in 1967. Last plotted by the UK, in late 2008.

Passat *see* **Passat Nunatak**

The *Passat*. One of the Dornier flying boats on GermAE 1938-39. *See* **The *Boreas*** for description (the planes were the same type).

Passat Nunatak. 71°18' S, 3°55' W. Rising to 145 m, 1.4 km NE of Boreas Nunatak, at the mouth of Schytt Glacier, in the ice S of the Jelbart Ice Shelf, between Maudheimvidda (in Queen Maud Land) and the Princess Martha Coast. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Passat, for the *Passat*. US-ACAN accepted the name Passat Nunatak in 1947. The Norwegians call it Passat.

Mount Passel. 76°53' S, 144°56' W. A ridge-like mountain, 6 km N of the Swanson Mountains, in the Ford Ranges of Marie Byrd Land. Discovered in Dec. 1940 by a party from West Base during USAS 1939-41, and named for Charles Passel. US-ACAN accepted the name in 1947.

Passel, Charles Fay. Known as "C." b. April 9, 1915, Indianapolis, son of railroad enginer Howard F. Passel and his wife Cora. After Miami University, he was the geologist and radio operator at West Base during USAS 1939-41. He died in Abilene, Texas, on Dec. 27, 2002. His dairies were edited by Tim Baughman.

Passel Pond. 76°53' S, 145°05' W. A meltwater pond at the SW foot of Mount Passel, in the Denfeld Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41. Named by US-ACAN in 1970, in association with the mountain.

Passes Peak. 63°27' S, 57°03' W. A pyramidal peak rising to 535 m, just S of Mount Carroll (the former Mount Carrel), and 3 km S of the head of Hope Bay, at the N end of Tabarin Peninsula, on Trinity Peninsula, at the NE end of the Antarctic Peninsula. First surveyed and charted in 1945-46 by Fids from Base D, and so named by them because it lies between two passes used by Base D sledging parties while traveling to Duse Bay and to the head of Depot Glacier. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. The Argentines have named it variously Cerro Parson (a 1956 reference which sounds like an error of transliteration, not to mention translation), Cerro Arcondo (named for Major Arcondo —*see*

Arcondo Nunatak), Pico Paso (meaning "pass peak"), and Cerro Saravia, named for Col. Pedro José Saravia (1756-1832). It is difficult to know exactly where the Argentines are with this feature at the moment.

Passy Peak. 62°32' S, 60°08' W. A conspicuous peak, rising to 510 m in Vidin Heights, 1.4 km NE of Miziya Peak, 8.6 km S of Williams Point, 1.6 km WNW of Madara Peak, and 350 m NE of Krichim Peak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for Solomon Passy (b. 1956), of the Atlantic Club of Bulgaria, who was in Antarctica with BulgAE 1993-94, 1994-95, and 1995-96.

Île Pasteur *see* **Pasteur Island**

Península Pasteur *see* **Pasteur Peninsula**

Presqu'île Pasteur *see* **Pasteur Peninsula**

Pasteur Island. 66°37' S, 140°06' E. A small rocky island at the SE end of the Dumoulin Islands, close N of Astrolabe Glacier Tongue. Photographed aerially by OpHJ 1946-47. Charted by the French in 1949-51, and named by them in 1951-52 as Île Pasteur, for Louis Pasteur (1822-1895), the French chemist. US-ACAN accepted the name Pasteur Island in 1956.

Pasteur Peninsula. 64°04' S, 62°24' W. A broad peninsula, 8 km long in a N-S direction, and between 8 and 13 km wide, N of a line joining Guyou Bay with the terminus of Lister Glacier (on Bouquet Bay), it forms the N end of Brabant Island, in the Palmer Archipelago. Roughly mapped by FrAE 1903-05, and named by Charcot as Presqu'île Pasteur, for Louis Pasteur (*see* **Pasteur Island**). It appears as such on Charcot's map of 1906. It appears translated as Pasteur Peninsula on a British chart of 1909. Further surveyed in Jan. 1936, from the *Penola*, during BGLE 1934-47, when its latitude was adjusted southward. It appears as such (i.e., as Pasteur Peninsula, and with the new plotting) on the expedition's 1937 chart, and that is how it was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1961. It appears on a Chilean chart of 1947 as Península Pasteur, and that was the name accepted by not only the Argentine gazetteer of 1970 but also the Chilean gazetteer of 1974. Photographed aerially by FIDASE in 1956-57.

Pastor Peak. 85°54' S, 134°42' W. Rising to 2000 m, along the N wall of Colorado Glacier, midway between Teller Peak and the Eblen Hills, on the ridge descending from the Michigan Plateau. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Stephen E. Pastor, equipment operator who wintered-over at McMurdo in 1956, at Byrd Station in 1960, and at McMurdo again in 1964.

Islote(s) Pastore *see* **Moreno Rock**

Pastoriza, Rafael Alberto *see* **Órcadas Station**, 1939, 1941, 1944, 1947, 1949, 1952

Bahía Pastorizo *see* **Pastorizo Bay**

Pastorizo Bay. 63°54' S, 57°17' W. A bay, 3 km wide, indenting the S side of Vega Island just W of Mahogany Bluff and E of False Point. Named by ArgAE 1958-59, as Bahía Pastorizo, for a member of the expedition. It appears as such on their 1959 chart. Surveyed by Fids from Base D between 1958 and 1961. UK-APC accepted the name Pastorizo Bay, on Feb. 12, 1964.

Pastra Glacier. 63°46' S, 60°44' W. A glacier, 4.8 km long and 2 km wide, flowing northward into Milburn Bay, on Trinity Island, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for the settlement of Pastra, in western Bulgaria.

Gora Pastuhova. 70°59' S, 67°08' E. A nunatak, NE of Mount Beck, in the Prince Charles Mountains. Named by the Russians.

Pat Automatic Weather Station. 74°54' S, 163°00' E. An American AWS installed in Jan. 1989, at an elevation of 30 m, on the Nansen Ice Sheet, on the coast of Victoria Land. Named for the wife of polar scientist Tom Parish. The tower fell down on Dec. 14, 1989, and the Italians raised it up again on Feb. 11, 1990. In Jan. 1991, it was removed.

Fiordo Pata de Perro *see* **Dogs Leg Fjord**

Península Pata de Perro *see* **Península Da Forno** (under **D**)

Seno Pata de Perro *see* **Dogs Leg Fjord**

The *Patagonia*. Whaling factory ship on ArgAE 1946-47. Captain Leandro M.B. Maloberti. One of her catchers was the *Don Samuel*.

Bahía Patagonia *see* **Patagonia Bay**

Patagonia Bay. 64°27' S, 63°12' W. A bay, 5 km wide, and indenting the NE coast of Anvers Island for 5 km, between Gourdon Peninsula and Thompson Peninsula, or, between Fournier Bay and Lapeyère Bay, in the Palmer Archipelago. Roughly charted at its mouth by FrAE 1903-05, but no naming seems to have taken place. Further charted by ArgAE 1947, and named by them as Bahía Patagonia, for the *Patagonia* (see above). It appears as such on their 1949 chart, and was the name accepted by the Argentine gazetteer of 1970. Photographed aerially by FIDASE in 1956-57. ChilAE 1961-62 called it Bahía Sin Nombre (i.e., "bay without a name"), it appears as such on their 1962 chart, and that name was accepted by the Chilean gazetteer of 1974. It appears as Bahía González Videla in a 1978 Chilean reference, and the Chileans seem to have renamed it yet again as Bahía Wunderlich, for Capitán de corbeta Pablo Wunderlich Widerit, who took part in the relief of Capitán Arturo Prat Station during ChilAE 1965-66. UK-APC accepted the name Patagonia Bay, on April 3, 1984, and US-ACAN followed suit.

Patalamon Mesa. 64°02' S, 58°22' W. A flat-topped mountain rising to about 700 m, W of Hidden Lake, in the W part of James Ross Island. Named by UK-APC on Feb. 15, 1988, in association with nearby Kerick Col. In the story "The White Seal," in Kipling's *Jungle Book*, Patalamon was the son of the character Kerick Booterin.

Patcha Point. 64°37' S, 62°07' W. The S end of Nansen Island, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Portal Point between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for Jan Patcha (b. 1918), Autair helicopter pilot with FIDASE 1955-57, which photographed this area. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. Mr. Patcha appeared as a helo pilot in the 1966 Greg Peck movie *Arabesque*.

Patella Island. 63°08' S, 55°31' W. A small but prominent island rising to over 75 above sea level, 3 km NW of Ambush Bay, and NW of King Point, off the N coast of Joinville Island. Surveyed by Fids from Base D in Dec. 1953, and named by them as Patella Islet, for its limpet shape (patella is Latin for limpet). UK-APC accepted that name on Sept. 4, 1957, and US-ACAN followed suit. When the term "islet" became outmoded, UK-APC redefined it as Patella Island on July 7, 1959, and US-ACAN followed suit in 1963. Meanwhile, ArgAE 1955-56 had re-surveyed it, and named it Isla Ruiz, probably for a member of that expedition. That is the name the Argentines use today.

Patelnia *see* **Telefon Point**

Paternoster Valley. 60°41' S, 45°37' W. Extends southwestward from Stygian Cove in the N part of Signy Island in the South Orkneys. BAS did biological work here for many years in the 1970s and 1980s (they set up a small field lab here in the 1980-81 summer season). Named by UK-APC on Dec. 20, 1974, for the 3 small paternoster lakes (a paternoster is a small lake in a rock basin in a glacial valley)—Moss Lake, Changing Lake, and Sombre Lake—at different levels in the valley. US-ACAN accepted the name in 1975.

Paternostro Glacier. 69°22' S, 158°39' E. A glacier, about 17.5 km long, in the Wilson Hills, E of Cook Ridge, it flows between that ridge and the Goodman Hills, to enter the E part of Davies Bay, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. (jg) Joseph L.A. Paternostro, USNR, Hercules aircraft navigator during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68). ANCA accepted the name on July 31, 1972. The Australians were the latest to replot this feature, in late 2008.

Mount Paterson. 78°02' S, 154°36' W. Also spelled (erroneously) as Mount Patterson. A pyramid-shaped mountain, 3 km NE of Mount Schlossbach, and about 5.5 km E of the Nilsen Plateau, at the NE end of the S group of the Rockefeller Mountains, on Edward VII Peninsula. Discovered by ByrdAE 1928-30, and later named by Byrd for Seward Mitchell Paterson (1875-1971), Boston manufacturer who furnished shoes and ski boots for ByrdAE 1933-35. He left $13 million, and that was only in his will. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Paterson Islands. 67°32' S, 63°10' E. A group of 6 small islands, 6 km NE of the Klung Islands, close to the coast of Mac. Robertson Land, about

15 km ENE of Mawson Station. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos by Norwegian cartographers in 1946. Named by ANCA on Aug. 10, 1966, for Alexander J.F. "Lex" Paterson, of Forrest Hills, Vic., supervisory technician (radio) at Mawson Station in 1963. US-ACAN accepted the name in 1970.

Rocas Patience *see* **Patience Rocks**

Patience, George McKay. Able seaman on the *Discovery II*, 1935-39. He was later an officer, RNR, and by 1945 was a skipper. He retired to Edinburgh, and was still alive in the 1980s.

Patience Camp. The third camp established by Shackleton and his men on the ice floes, after the sinking of the *Endurance* during BITE 1914-17. On Dec. 23, 1915 the 28 men left Ocean Camp (q.v.), in a desperate bid to head west to some sort of land. They got 8 miles before they set up Patience Camp on Dec. 30, 1915. They finally abandoned the camp when the floe it was on reached the vicinity of Elephant Island, and the men launched the 3 lifeboats, on April 9, 1916.

Patience Rocks. 67°45' S, 68°56' W. A group of in-shore rocks awash, 2.5 km NW of Avian Island, and N of Adelaide Anchorage, close off the S end of Adelaide Island. Named by UK-APC on Feb. 12, 1964, for leading engineer mechanic Donald Patience (b. 1941), RN, a member of the RN Hydrographic Survey unit which charted this area from the *John Biscoe* in 1963. It appears on a British chart of 1964, and, later that year, US-ACAN accepted the name. The Argentines call this feature Rocas Patience.

Islote Patito *see* **Phelps Rock**

Patleyna Glacier. 78°04' S, 85°47' W. A glacier, 5.5 km long and 2.5 km wide, N of the upper course of Ellen Glacier, it flows NNW from the E slopes of Mount Todd to join the Embree Glacier SE of Mount Goldthwait, on the E side of the north-central part of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS in 1988. Named by the Bulgarians on Dec. 6, 2010, for the nature reserve of Patleyna, in northeastern Bulgaria.

Paton, James "Scotty." b. 1869, Glasgow. Scottish seaman, living in Lyttelton, NZ, who has the distinction of being the first man on Beaufort Island, in the Ross Sea. As an able seaman on the *Morning*, in 1903, he left the ship against orders, crossed the ice, and walked onto the island. Presumably he was castigated to some extent on his return to the ship. This did not stop him returning in the *Morning* the following year, 1904, as part of Scott's relief party during BNAE 1901-04. He kept a diary of that 1904 trip from Hobart to the Antarctic, a diary which was not discovered until years later. He was back again on the *Nimrod*, as an able seaman for BAE 1907-09, signing on on Nov. 28, 1907, at Lyttelton. At the end of the expedition, he was discharged at Poplar (in London), on Aug. 31, 1909. He was back again on the *Terra Nova*, first when that ship took Scott down to the Antarctic for BAE 1910-13, and again in 1912 when the same vessel came to pick him up (Scott was, of course, dying on the trail at that time, and never made it back). Paton was back in Antarctica, as bosun on the *Aurora* in 1914-16, during BITE 1914-17, and signed on again as a member of the crew who went down to pick up the Ross Sea party in 1917. In June 1917 he was still bosun on the *Aurora* when that ship left Newcastle, NSW, bound for Iquique, in Chile, and disappeared.

Paton Peak. 76°57' S, 166°57' E. Rising to 740 m (the New Zealanders say 771 m) above sea level, it is the highest point on Beaufort Island, in the Ross Archipelago. Named by NZGSAE 1958-59 for James Paton. At a height of 550 m, at the SE end of the main ridge which forms the E side of Beaufort Island, was Paton Survey Station, occupied by a joint US-NZ geological survey and biological party on Jan. 24, 1959. NZ-APC accepted the name, and US-ACAN followed suit in 1961. It seems as if a man with so many Antarctic voyages to his credit should have more features named after him.

The *Patriarche*. Ship that took the 1998-99 Ukrainian expedition to Antarctica.

Patricia Islands. 66°51' S, 56°47' E. A group of 3 small islands, 24 km SW of Austnes Point, in the W part of Edward VIII Bay, in Kemp Land, in Enderby Land. Discovered in Feb. 1936 by personnel on the *William Scoresby*, and named by them. Mapped in greater detail by Norwegian cartographers in 1946, working from air photos taken during LCE 1936-37. Two of the islands, joined by ice, were named by them collectively as Tvillingane (i.e., "the twins"), while the third was named Tvillingstakken ("the twin stack"). US-ACAN accepted the name Patricia Islands in 1947. They were visited by Bob Dovers' ANARE party in 1954, while on a sledging party to Edward VIII Bay. On Feb. 18, 1958, ANCA named the group (for themselves only) as Georges Islands, for Georges Schwartz (q.v.), who was a member of Dovers' party. Who Patricia was remains a mystery, rather like Rosebud.

Nunatak Patricios. 75°09' S, 62°28' W. An isolated nunatak, due E of Cape Schlossbach, and SE of Cape Adams, on the SE coast of Palmer Land. Named by the Argentines.

Punta Patricio Lynch *see* **Kay Nunatak**

Mount Patrick. 84°13' S, 172°00' E. A massive, mostly ice-covered mountain, rising to 2380 m (the New Zealanders say 2316 m), in the Commonwealth Range, just E of Wedge Face, and about 20 km SE of Mount Cyril, on the E side of the Beardmore Glacier. Discovered by BAE 1907-09, and named by Shackleton, probably for his late uncle, Patrick Dudley Shackleton (1837-1901). US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Patrick, David. b. 1876. A Dundee quarryman who went into the Merchant Navy, worked his way up to bosun, and was in Buenos Aires in Jan. 1903 when he made his way to the Falklands, and joined the *Scotia* as bosun for ScotNAE 1902-04.

Patrick Automatic Weather Station. 89°53' S, 45°00' E. An American AWS at the South Pole (or close to it). It began operating on Jan. 28, 1986, and was removed on Jan. 16, 1987. A new one was installed, but stopped transmitting on June 27, 1987. Named for the son of former AWS researcher Mike Savage.

Patrick Nunatak. 84°04' S, 55°35' W. Rising to about 1535 m, 5.5 km SE of Gambacorta Peak, in the S part of the Neptune Range, in the Pensacola Mountains. In 1963-64 USN photographed it aerially, it was surveyed that season from the ground, and USGS mapped it from these efforts. Named by US-ACAN in 1968, for Frank M. Patrick, USN, aerographer at Ellsworth Station, 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Patrick Point. 73°28' S, 66°51' E. The northernmost point of the Cumpston Massif, at the junction of Mellor Glacier and Lambert Glacier, in the Prince Charles Mountains, in Mac. Robertson Land. Discovered and photographed aerially by ANARE in 1956, and mapped by Australian cartographers from these photos. Named by ANCA on April 29, 1958, for Patrick Neil "Pat" Albion, radio operator at Mawson Station in 1956. US-ACAN accepted the name in 1961. *See also* **Mount Albion**.

Islotes Patrignani *see* **Flyspot Rocks**

Patriot Hills. 80°20' S, 81°25' W. A line of rock hills, 8 km long, 5 km E of the N end of the Independence Hills, in Horseshoe Valley, in the Heritage Range of the Ellsworth Mountains, just S of the Ronne Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1964, in keeping with the Heritage theme. There was an ice runway here, and a base camp, both built by Adventure Network International in 80°19' S, 81°15' W, and first used in Nov. 1987. In 1996, the Chileans established a station at the base of the Patriot Hills — Teniente Arturo Parodi (q.v.).

Base Patriot Hills *see* **Teniente Arturo Parodi Station**

Patroclus Hill. 64°28' S, 63°37' W. A rounded, snow-covered hill, rising to 760 m, separated by a low col from the NW side of Mount Achilles, in the Achaean Range of Anvers Island, in the Palmer Archipelago. Surveyed by Fids from Base N in 1955, and named by UK-APC on Sept. 4, 1957, for the Homeric character. It appears on a British chart of 1959. US-ACAN accepted the name in 1963.

Patten, James. Irish surgeon on the *Squirrel* in 1763, he transferred from the *Senegal* to the *Resolution* on Dec. 12, 1771, as ship's surgeon for Cook's 2nd voyage, 1772-75. He also helped stock the expedition with medical supplies, and in Feb. 1774 he guided Cook through a sick spot. He kept a medical journal, now lost. On Sept. 6, 1777 he married Elizabeth Greene, and set up as an obstetrician in Dublin. He died in 1797.

Patterned Lake. 67°48' S, 62°52' E. A pear-shaped, permanently frozen epiglacial lake on the edge of the plateau, at the extreme N and central end of the Central Masson Range. It has an area of about 20.5 hectares, and its surface is composed of prominent mega crystals not seen on the other epiglacial lakes of the Framnes

Mountains. These crystals form patterns in the ice, hence the name given by ANCA.

Mount Patterson *see* **Mount Paterson**

Patterson, Diana. b. Tasmania. A career public servant, she applied unsuccessfully to be ANARE wintering-over officer-in-charge at an Antarctic station in 1979 and again in 1986, and summered-over at Casey Station in 1986-87. She was eventually the first ANARE woman to be wintering-over station leader in Antarctica, when she was at Mawson Station in 1989. She fulfilled a similar function at Davis Station in 1995.

Patterson, James *see* **USEE 1838-42**

Patterson Peak. 85°44' S, 155°59' W. Rising to 1610 m, at the S end of Medina Peaks, and 6 km NW of Anderson Ridge, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for geochemist Clair C. Patterson (b. June 2, 1922. d. Dec. 5, 1995, Sonoma, Calif.), glaciologist at Byrd Station, 1965-66.

Patterson Rock. 66°13' S, 110°35' E. A small rock in water, 0.8 km W of Cameron Island, in the N part of the Swain Islands, in the Windmill Islands, off the Budd Coast. The region was photographed aerially by OpHJ 1946-47, and again by SovAE 1956 and by ANARE, also in 1956. The islands N of Wilkes Station, including this rock, were surveyed from the ground in 1957 by a party led by Carl Eklund from that station, and this one was named by him for Acy H. "Pat" Patterson (b. 1932. d. May 28, 2007, New Milton, Hants, England), USN, electrician at that station in 1957. US-ACAN accepted the name in 1960, and ANCA followed suit.

Patton, Richard J. "Dick." b. Aug. 17, 1925, St Louis, Mo., but raised partly in St. Francois County, son of steel salesman William J. Patton and his wife Agnes Keough. His mother died when he was 8, and he joined the USAF on Nov. 1, 1943, served in World War II and Korea, and was a technical sergeant with the 1710th Aerial Port Squadron when he made the first parachute jump in Antarctica (from 1500 feet, in -17°F), on Nov. 25, 1956, when he dropped in to Pole Station from a Globemaster to become a temporary Seabee, at the very moment those boys were building South Pole Station (q.v.). It was his 32nd career jump. Despite the bravado of the performance (more the Air Force's bombast than Dick's, actually), and Seabee leader Dick Bowers' objection to such a stunt, Patton was very helpful in his mission, which was to direct air traffic. He also brought in new batteries for the broken Weasel. However, he had forgotten to pack his toothbrush, so one was dropped to him on Nov. 28, 1956, from a Globemaster, wrapped in a towel and attached to a bundle of oil drums (other supplies were dropped too, not just Dick's toothbrush; a tractor, for example). He was among the 2nd group who left the Pole after the job was done, on Dec. 29, 1956, and flew back to McMurdo. He died of a heart attack on Oct. 10, 1973, and is buried at Jefferson Barracks National Cemetery, St Louis, which is where he had enlisted.

Patton Bluff. 75°13' S, 133°40' W. Between Shibuya Peak and Coleman Nunatak, on the E side of Berry Glacier, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Delbert E. Patton, ionosphere physicist at Byrd Station in 1962.

Patton Glacier. 78°16' S, 85°25' W. A broad tributary glacier flowing from the E slope of the main ridge of the Sentinel Range, between Mount Ostenso and Mount Tyree, to enter Ellen Glacier, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Dick Patton.

Patuxent Camp. 84°54' S, 63°00' W. American field camp (a 16' x 16' Jamesway hut) built in the Patuxent Range, in the Pensacola Mountains, in Nov. 1962. It was dismantled in Dec. 1965.

Patuxent Ice Stream. 85°15' S, 67°45' W. A broad ice stream flowing northwestward between the Patuxent Range and Pecora Escarpment, to the upper part of Foundation Ice Stream, in the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, in association with the range. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Patuxent Mountains *see* **Patuxent Range**

Patuxent Range. 84°43' S, 64°30' W. One of the major ranges of the Pensacola Mountains. It comprises the Thomas Hills, the Anderson Hills, the Mackin Table (its highest point, 2135 m), and several nunataks and ridges bounded by the Foundation Ice Stream and Academy Glacier to the N, and the Patuxent Ice Stream to the S. Discovered and partially photographed aerially on Jan. 13, 1956, during the non-stop flight from McMurdo Sound to the Weddell Sea (*see* that date under **Operation Deep Freeze I**). Named originally by US-ACAN in 1962, as the Patuxent Mountains, for Patuxent River Naval Air Station, the U.S. Naval establishment at Cedar Point, Md., on the S side of the mouth of the Patuxent River, which was VX-6's first base in the USA. It was re-photographed aerially again, in its entirety this time, by VX-6 on Dec. 10, 1961, mapped by USGS from these photos (without ground surveys), and redefined as a range. In Jan. 1962 the first Argentines flew to the South Pole, and, as they did, they named this range Macizo Armada Argentina (i.e., "Argentine Navy massif").

Ozero Pauk *see* **Pauk Lake**

Pauk Lake. 68°34' S, 78°29' E. In the SE part of the Vestfold Hills, just S of Trajer Ridge. Photographed aerially by OpHJ 1946-47, by SovAE 1956, and by ANARE in 1957 and 1958. The Rusians named it Ozero Pauk (i.e., "spider lake"). On Nov. 27, 1973, ANCA accepted the name Pauk Lake.

Îles Paul *see* **Paul Islands**

Islas Paul *see* **Paul Islands**

Islotes Paul *see* **Paul Islands**

Paul, Bert Wilber. b. 1905, Bath, NC, son of farmer Bertie Paul and his wife Carrie. He became a merchant seaman in 1926, and was 1st assistant engineer on the *Jacob Ruppert*, during ByrdAE 1933-35, subsequently being promoted to chief engineer. He continued on in merchant shipping, for the Standard Shipping Co., as an oiler and engineer, and by the time of World War II was a chief engineer with the Kingston Shipping Co. He was alive in 1952, and living in Philadelphia.

Mount Paul Block (Jr.) *see* **Mount Block**

Paul Block Bay *see* **Block Bay**

The *Paul Buck*. A 615-foot U.S. Military Sealift Command oil tanker in at McMurdo during OpDF 1986 (1985-86), under the command of Capt. Duane Hockenberry. She was back in Antarctica in 1988-89 and 1989-90, both times under the command of Peter A. Thorpe. She was back at McMurdo on Jan. 21, 2005.

Baie Paul-Émile Victor *see* **Victor Bay**

Paul Inseln *see* **Paul Islands**

Paul Islands. 64°16' S, 63°44' W. A group of islands and rocks, extending for 5.5 km in a NE-SW direction, NW of Quinton Point, and 5 km W of Cape Grönland, off the NW coast of Anvers Island, in the Palmer Archipelago. Discovered and roughly surveyed by Dallmann in 1873-74, and named by him as Paul Inseln. The feature appears as such on Petermann's chart of 1875, and on Friederichsen's German map of 1895. Further charted by FrAE 1903-05, it appears on Charcot's 1906 map as Îles Paul. On Charcot's maps of 1910 and 1911, it appears as Récifs Paul 1er (i.e., Récifs Paul Premier) and Paul I Reefs, names which give a badly-needed clue as to whom the islands were named for (yet the clue is not good enough. Paul I, tsar of Russia, springs to mind, but he lived at the time of Napoleon. Pope Paul I was centuries before Dallmann, and Paul I of Greece came much later). On a 1946 Argentine chart it appears as Islas Paul, but on one of their 1949 charts as Islotes Paul. On a Chilean chart of 1947 it appears as Grupo Comdte Bories (i.e., Grupo Comandante Bories), named (rather obliquely) for the *Gobernador Bories*. By 1952, this name had been shortened to Grupo Bories, but by 1957 the Chileans were officially calling the feature Islotes Paul, which was the name accepted by the 1974 Chilean gazetteer (after rejecting the possibility of Grupo Bories). It appears as Paul Islands on British charts of 1908 and 1938, but on a 1948 British chart as Paul Islets, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953, and which appears in the 1955 British gazetteer. On a 1953 Argentine chart the feature appears translated all the way as Islotes Pablo, and that was the name accepted by the 1970 Argentine gazetteer. Photographed aerially by FIDASE in 1956. On July 7, 1959, UK-APC redefined the feature as Paul Islands, and US-ACAN followed suit on 1963.

Paul Islets *see* **Paul Islands**

Mount Paul Lee *see* **Mount Lee**

Récifs Paul 1er *see* **Paul Islands**

Monte Paulcke *see* **Mount Paulcke**

Mount Paulcke. 65°59' S, 64°53' W. Rising to at least 915 m, W of Huitfeldt Point, at Barilari Bay, on the Graham Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from ground surveys conducted that same season by Fids from Base J. Named by UK-APC on July 7, 1959, for Wilhelm Paulcke (1873-1949), pioneer in long-distance ski-mountaineering. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Monte Paulcke.

Paulding Bay. 66°35' S, 123°15' E. Along the Banzare Coast of Wilkes Land, just W of Clark Point. The outer portions of the bay are bounded by (on the one hand) the Moscow University Ice Shelf and the Dalton Iceberg Tongue, and (on the other) the Voyeykov Ice Shelf. Mapped by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for James K. Paulding (1778-1860), dramatist who also happened to be secretary of the Navy under President Van Buren. Prior to that he had been instrumental in outfitting USEE 1838-42. ANCA accepted the name. The bay was photographed aerially by SovAE 1956, and again by ANARE in 1961 and 1962.

Isla Paulet *see* **Paulet Island**

Paulet Island. 63°35' S, 55°47' W. A dark (because it is ice-free) circular island, about 1.5 km in diameter, and with bare rock sides rising abruptly from the sea, 5 km SE of Dundee Island, off the NE end of the Antarctic Peninsula. Its summit, looking like a crater (the island was, at one time, volcanic), rises to an elevation of 353 m. Discovered and charted by Ross on Dec. 30, 1842, during his expedition of 1839-43, and named by him for his friend Capt. (later Adm.) Lord George Paulet (1803-1879), RN, son of the 13th Marquess of Winchester. It appears on Ross's charts of 1844 and 1847. In Vincendon-Dumoulin's 1847 atlas it appears as Île Paulet, on Larsen's 1894 chart as Paulet Ø, and on Friederichsen's 1895 German map as Paulet Insel. One of the SwedAE 1901-04 huts is on this island (they occupied it from Feb. 28 to Oct. 31, 1903). Spelling errors abounded in those days. On a British chart of 1937 it appears, plotted in 63°36' S, 55°56' W. In Jan. 1947, Fids from Base D visited this feature and surveyed it, and it was further surveyed (but from a distance) by FIDS in Dec. 1953. US-ACAN accepted the name in 1952, but with corrected coordinates, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57. On Jan. 18-19, 1961, Fids on the *Shackleton* made a landing on this island, and a trigonometric station was occupied. The 1970 Argentine gazetteer accepted the name Isla Paulet, as did the Chilean gazetteer of 1974.

Playa Paulina. 62°28' S, 60°47' W. A small beach, at least 185 m long, immediately N of Punta Yeco, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for Paulina Schiappacasse Cambiaso, geographer with the Instituto Antártico Chileno, who was part of ChilAE 1990-91. *See also* **Playa Schiappacasse**.

Islotes Pauling *see* **Pauling Islands**

Pauling Islands. 66°32' S, 66°58' W. A group of islands and rocks, 5 km SE of the Barcroft Islands, in Crystal Sound, 21 km WNW of Cape Rey, off the Loubet Coast, on the W coast of Graham Land. Roughly mapped from the air in 1935-36, by BGLE 1934-37. Surveyed by ChilAE 1946-47, and named by them as Grupo Malleco, probably after a member of the expedition. It appears as such on their 1947 chart. Surveyed by Fids from Base W in Sept. 1958, and mapped by FIDS cartographers from that survey. Named by UK-APC on Sept. 23, 1960, for Linus Carl Pauling (1901-1994), U.S. chemist who, in the mid-1930s, originated a theory of the structure of ice. Pauling won not one, but two Nobel Prizes. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The feature appears on a Chilean chart of 1962 as Islotes Condell, named for Capt. Carlos Condell (*see* **Isla Condell**). It appears as such in the 1974 Chilean gazetteer, but today the Chilean call the feature Islas Pauling.

Pauls Hole. 64°41' S, 62°38' W. A small harbor lying along the E side of Rongé Island, in Errera Channel, just S of Cuverville Island, off the W coast of Graham Land. Charted by whalers in the area between 1913 and 1921, and named by them as Pålsehøla (i.e., "Paul's hole") It was used as an anchorage by the *Solstreif* in 1921-22, the season Lester drew up his rough chart during the British Imperial Antarctic Expedition. Lester calls it variously Paul's Hole, Pauls-Hole, and Paul's Hole Harbour. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base O. UK-APC accepted the name Pauls Hole on Sept. 23, 1960, and US-ACAN followed suit in 1965. It may have been named after a whaler named Pål (i.e., Paul), but one must not forget the whale catcher *Paal*.

Paulsen, Julius. b. 1876, Sandeherred, Norway. In 1908, he succeeded Alex Lange as whaling manager for the Ørnen Company, and was skipper of the *Ørn*, in Antarctic waters in 1908-09. On Dec. 26, 1908, his wife, Olava, was on board the *Telefon* when that vessel got stranded on the rocks at Admiralty Bay. She was in a lifeboat for 6 hours, and the Paulsens named their eldest child Arne Shetland Paulsen. Julius Paulsen left the Ørnen Company in 1912.

Paulsen, Karl-Heinz. Oceanographer on GermAE 1938-39. He died in 1941.

Paulsen, Otto. b. Norway. He wintered-over at Órcadas Station in 1905, and was 2nd-in-command there under Angus Rankin for the 1907 winter, and then led the 1910 wintering party.

Paulsen-Berge *see* **Paulsen Mountains**

Paulsen Mountains. 72°10' S, 1°21' E. A group of mountains, incuding Brattskarvet Mountain, Vendeholten Mountain, and Tverrveggen Ridge, in the N part of the Sverdrup Mountains, in Queen Maud Land. Discovered by GermAE 1938-39, and named by Ritscher as Paulsen-Berge, for Karl-Heinz Paulsen. US-ACAN accepted the name Paulsen Mountains in 1966.

Paulsenberge *see* **Paulsen Mountains**

Mont Paulus *see* **Mount Paulus**

Mount Paulus. 72°37' S, 31°00' E. Rising to 2420 m, close S of Mount Rossel, in the SW part of the Belgica Mountains. Discovered by BelgAE 1957-58, led by Gaston de Gerlache, who named it Mont Paulus, for Baron Jean-Pierre Paulus de Chatelet (b. 1920), in Belgium, a patron of the expedition. US-ACAN accepted the name Mount Paulus in 1966.

Paulus, John Francis "Cadillac Jack." Joined the U.S. Navy in 1961. He was LC-130 Hercules aircraft commander with VXE-6 during OpDF 69 (1968-69) and OpDF 70 (1969-70). During the latter tour he flew the first 6 women to the South Pole (*see* **Women in Antarctica**). He was pilot of the LC-130 that found the crashed NZ champagne flight that crashed into Mount Erebus in 1979. He retired from VXE-6 and the Navy on June 26, 1981, after having done 9 summers in Antarctica. Paulus Glacier, and Jack Paulus Skiway at the South Pole, were named for him.

Paulus Glacier. 69°24' S, 70°33' W. A glacier, W of Mount Cupola, and NE of Tufts Pass, flowing SE from the Rouen Mountains into Hampton Glacier, in the N part of Alexander Island. Photographed aerially by RARE 1947-48, and mapped from these photos in 1959-60 by Searle of the FIDS. Named by US-ACAN for Jack Paulus. UK-APC accepted the name on June 11, 1980.

Punta Paumelle *see* **Paumelle Point**

Paumelle, Robert. He had been a maitre d', and was the young steward on the *Français* during FrAE 1903-05, and, again with Charcot, on the *Pourquoi Pas?* during FrAE 1908-10.

Paumelle Point. 65°04' S, 64°03' W. Marks the S side of the entrance to Libois Bay, and the NW end of the peninsula which forms the W extremity of Booth Island (i.e., the peninsula separating Port Charcot from Salpêtrière Bay), in the Wilhelm Archipelago. First charted by FrAE 1903-05, and named by Charcot for Robert Paumelle. US-ACAN accepted the name in 1952. The Chileans call it Punta Paumelle.

Gory Paustovskogo *see* **Sør Rondane Mountains**

Pautalia Glacier. 62°38' S, 59°52' W. A glacier on Burgas Peninsula, flowing eastward into Bransfield Strait, it is bounded by Petko Voyvoda Peak to the W, Kaloyan Nunatak to the N, and Shabla Knoll to the E, on Livingston Island, in the South Shetlands. Named by the Bulgarians on April 11, 2005, for the ancient town of Pautalia, ancestor of the present day Kyustendil, in western Bulgaria.

The *Pavel Korchagin*. Soviet ice-reinforced cargo ship supplying Molodezhnaya Station for the following Soviet Antarctic expeditions: 1982-84 and 1984-86 (both years under Capt. Gennadiy Semenovich Segienko), and 1987-89 (under Capt. Aleksey A. Anasenko).

Cadena Pavie *see* **Pavie Ridge**

[1]**Cabo Pavie** *see* **Pavie Ridge**

[2]**Cabo Pavie**. 68°36' S, 67°05' W. A cape. Named by the Argentines. This is listed by the SCAR gazetteer as a separate and distinct feature, but that is hardly likely to be the case. It is most probably Pavie Ridge.

Cap Pavie *see* **Pavie Ridge**

Île Pavie *see* **Pavie Ridge**

Isla Pavie *see* **Pavie Ridge**

Isla Pavie. 68°37' S, 67°05' W. An island. Named by the Argentines. For the same caveat about this feature, *see* [2]**Cabo Pavie**.

Pavie Ridge. 68°34' S, 66°59' W. An isolated rocky ridge rising to about 550 m, it extends S and W from Martin Glacier to Moraine Cove, and forms the SE limit of the Bertram Ice Piedmont, at Mikkelsen Bay, on the Fallières Coast, on the W coast of Graham Land. On Jan. 22, 1909, Charcot, during FrAE 1908-10, probably sighted this ridge from a position near the NE end of Alexander Island. However, the day before, from a position 24 km SE of Jenny Island, he had sighted another feature, which he called Île Pavie, and Maurice Bongrain had made sketches of it. Auguste-Jean-Marie Pavie (1847-1925), was a French diplomat and explorer. As Charcot was not sure whether this was an island or a cape, he also called it Cap Pavie, just to be sure. He plotted the feature in 68°27' S, 66°40' W. The Argentines have, consequently, called this feature both Cabo Pavie and Isla Pavie. In 1936, BGLE, who were surveying this area, could not find this island/cape, but, in 1948, FIDS, using Bongrain's sketches, identified it as a feature which the BGLE, in 1936, had called Red Rock Ridge. Red Rock Ridge stuck, and the name Pavie Ridge was given to this other feature, not far away. UK-APC accepted this new situation on March 31, 1955, and US-ACAN followed suit that year. The Argentines call it Cadena Pavie.

Pavin de la Farge, Antoine-Auguste-Thérèse "Tony." b. May 23, 1812, Vivier, France, into a distinguished family. He went to de la Flèche Military School, and then to the naval school at Brest, where he excelled. He was on the *Syrène* in 1830 when she sailed into Algiers for the beginning of France's long relationship with that country. He served in the 1830s on various ships in the Mediterranean, gradually rising to become ensign, a rank he held when he sailed on the *Zélée* during FrAE 1837-40. He died on board, of dysentery, on Nov. 27, 1839.

Pavlak Glacier. 82°58' S, 163°12' E. Flows E from the Queen Elizabeth Range into Lowery Glacier, close S of Mount Predoehl. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Thomas L. Pavlak, USARP glaciologist at Pole Station in 1962-63.

Pavlikeni Point. 62°26' S, 58°58' W. A point, snow-free in summer, projecting for 600 m from the N coast of Greenwich Island, 3.4 km E of Duff Point, and 9.1. km W of Agüedo Point, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the Bulgarian town of Pavlikeni.

Pavlov Peak. 64°03' S, 61°58' W. Rising to about 850 m, N of Mount Vesalius, it is the highest peak in the Brugmann Mountains, on Liège Island, in the Palmer Archipelago. Surveyed by ArgAE 1953-54, and named by them as Monte Centro. It appears as such on their 1954 chart. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for the famous Ivan Petrovich Pavlov (1849-1936), Russian experimental physiologist who worked on conditional reflexes. He was professor of physiology at the Imperial Medical Academy, at St. Petersburg (i.e., Leningrad), 1890-1924, and won the Nobel Prize in 1904. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Gora Pavlova *see* **Ingvaldnuten**

Gora Pavlovskogo *see* **Marks Summit**

Mount Pawanputra. 70°46' S, 11°45' E. In the Schirmacher Hills of Queen Maud Land. Named by the Indians.

Pawley, Michael Raymond "Mick." b. June 15, 1945. BAS general assistant who wintered-over at Base E in 1969, 1970, and 1972, the last time as base commander. In 1974 he wintered-over on South Georgia, as base commander.

Pawley Nunataks. 69°59' S, 67°36' W. A line of 4 nunataks, rising to about 1160 m, on the E side of Mount Allan, in the Traverse Mountains, on the Rymill Coast, on the W side of the Palmer Land, at George VI Sound. Surveyed by BAS personnel from Base E in 1971-72. Named by UK-APC on Dec. 8, 1977, for Michael Raymond "Mick" Pawley, BAS general assistant who wintered-over at Base E in 1969, 1970, and 1972, the last year as base leader. He was in South Georgia for the winter of 1974. US-ACAN accepted the name. It appears in the 1980 British gazetteer.

Mount Pawson. 73°10' S, 61°01' W. A mountain, rising to 1225 m, 11 km SE of Mohn Peaks, and N of Simpson Head, at New Bedford Inlet, on the Lassiter Coast, on the E coast of Palmer Land. First mapped in Dec. 1947, by a joint sledging team of personnel from RARE 1947-48 and Fids from Base E. Re-mapped by USGS from ground surveys conducted by USGS during the Antarctic Peninsula Traverse of 1961-62, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for David L. Pawson, USARP biologist working in the area of the Antarctic Peninsula, off the *Eastwind*, and out of Palmer Station, during the summer season of 1965-66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Pawson, Kenneth "Ken." b. May 7, 1923, Triangle, Halifax, Yorks, son of butcher William Edmund Pawson and his wife Gertrude Mary Carter. He left school at 16, worked for a stationer, then volunteered for the RAF in 1941, becoming a met man. After training in Canada in 1942, he went to Bermuda, and then to Trinidad (where he served with Ted Gutteridge), to help establish a met station there. He had been applying, for the last year or so, to go to Antarctica, and when he got back to the UK in 1946, he found a letter from FIDS. He was due to go south in 1946, but it didn't work out, so he left Tilbury on Dec. 19, 1947, on the *John Biscoe*, bound for Montevideo and then Port Stanley, and on to be meteorological assistant who wintered-over at Port Lockroy Station in 1948. He was going to go to the new Fossil Bluff Station (Base K), but weather did not permit the opening of the station that year, so instead, he spent 6 weeks of the 1948-49 season at Base F, with Dan Jardine. For a time it looked as if the *John Biscoe* wouldn't be able to get in to pick them up, and that they might have to winter-over there in extreme hardship, but the ship made it, and took them to Base G (Admiralty Bay), where Pawson was assistant surveyor and general assistant for the winter of 1949. He applied for a 3rd winter, but was turned down. On his return to England he did a year at University College, London, training to he a surveyor, and on Jan. 5, 1952 married Jean Elizabeth Beck, a Tasmanian nurse, and they moved to Tonga. Back in England he worked for the Coal Board in Chesterfield, and then in 1955 went to Canada, where his grandfather had become a rancher, near Calgary, before World War I. Almost immediately he went to Borneo for nearly two years, then returned to Canada. He was Calgary city surveyor, 1961-88, and also did search & rescue work in the mountains. He retired in Calgary.

Pawson Peak. 62°11' S, 58°28' W. A solitary peak of irregular conical shape, rising to about 250 m, WNW of Sphinx Hill, between that hill and Hervé Cove, at Admiralty Bay, King George Island, in the South Shetlands. BAS did geological work here in 1975-76. Named by UK-APC on Feb. 7, 1978, for Ken Pawson. US-ACAN accepted the name. About this time, PolAE 1977-78 named it Iglica Czajkowskiego (i.e., "Czajkowski needle"), for Ryszard Czajkowski, a geophysicist with the expedition, who climbed this mountain. It appears as such on Birkenmajer's Polish chart of 1980, and on his 1979 one as Czajkowski Needle.

Payer Group *see* **Payer Mountains**

Payer Mountains. 72°02' S, 14°35' E. Also called the Payer Group. A group of scattered mountains extending N-S for 39 km, 16 km E of the Weyprecht Mountains, they form the E half of the Hoel Mountains, in the E part of Fimbulheimen, in central Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Payergruppe, for Julius von Payer (1842-1915), Austrian Arctic explorer who, with Karl Weyprecht, in 1873 discovered Franz Josef Land, now the most northerly territory in Russia. US-ACAN accepted the name Payer Mountains in 1966. The Norwegians call them Payerfjella.

Payerfjella *see* **Payer Mountains**

Payergruppe *see* **Payer Mountains**

Mount Payne. 72°49' S, 167°52' E. A mostly ice-covered mountain, rising to over 3200 m, about 2.7 km E of Mount Riddolls, in Stever Ridge, 6 km E of Mount Randall and 11 km E of Mount Burrill, in the Victory Mountains of Victoria Land. Named by US-ACAN on April

25, 2006, for Roger Lee Payne (b. Oct. 26, 1946), geographer, historian, and executive secretary of U.S. Board on Geographic Names from 1993. Mr. Payne, who had been with the Department of the Interior since 1973, was largely responsible for the American naming of Antarctic features during that time period.

Payne Glacier. 71°55' S, 96°42' W. In the N part of Evans Peninsula, flowing into the sea E of Cape Walden, on Thurston Island. Named by US-ACAN in 2003, for photographer's mate J.B. Payne, USN, air crewman in the Eastern Group during OpHJ 1946-47.

Islotes (de la) Paz *see* **Peace Island**

Paz Cove. 66°14' S, 100°47' E. A cove, 1.5 km wide, it indents the N side of the Bunger Hills for 6 km, 4 km SE of Cape Henderson. Mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1956, for Hubert J. Paz (b. May 7, 1923), USN, photographer's mate 2nd class, air crewman on the *Currituck* during OpHJ 1946-47.

Pazardzhik Point. 62°50' S, 61°23' W. A point, snow-free in summer, 2.1 km ENE of Cape Conway, and 9.9 km SW of Hall Peninsula, on the SE coast of Snow Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, after the town of Pazardzhik, in southern Bulgaria.

Pazifikblick. 70°23' S, 161°01' E. A point where there is a view, on the NW side of Serrat Glacier, in the Kvarayskiy Hills. Named by the Germans.

Ostrov Pchëlka *see* **Pchelka Island**

Pchelka Island. 68°52' S, 77°54' E. An irregular-shaped island, rising to a highest point of 69 m above sea level, 3.3 km NE of the northernmost point of Torckler Island, in the Rauer Islands. Charted by SovAE 1956, and named by them as Ostrov Pchëlka. ANCA translated the name on March 7, 1991.

Islotes Peace *see* **Peace Island**

Peace Inlet *see* **Peace Island**

Peace Island. 64°18' S, 62°57' W. A small island, the most northerly of several islands which extend northward about 1.5 km from the NW extremity of Eta Island, in Dallmann Bay, in the Melchior Islands, in the Palmer Archipelago. Roughly surveyed by the Discovery Investigations in 1927, and (probably) named by them as Peace Islet. It appears as such on their 1929 chart, and was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. It appears erroneously as Peace Inlet on a 1943 U.S. Hydrographic Office chart. It was re-surveyed by ArgAE 1942, ArgAE 1943, and ArgAE 1948. After the first 2 of those expeditions, it was named Isla Iota, and appears as such on a 1946 Argentine chart, named for the Greek letter. On a 1948 Argentine chart the feature Islotes Peace appears, which includes not just this island but also its offliers. That situation appears again, on a 1953 Argentine chart, fully translated as Islotes Paz, but on a 1957 chart it appears as Islotes de la Paz, that name being the one accepted by the 1970 Argentine gazetteer. On July 7, 1959, UK-APC renamed the main island as Peace Island, and it appears as such on a British chart of 1960. US-ACAN accepted that name in 1963. The Chilean gazetteer of 1974 accepted the name Islotes Peace for the group.

Peace Islet *see* **Peace Island**

Peachey, William Arthur. b. July 4, 1903, Totnes, Devon, son of house painter Frederick Peachey and his wife Edith Annie Matthews. He joined the Merchant Navy in 1928, as a fireman, and in 1929, in Kingsbridge, Devon, married Winifred B. Doidge, and they had two children in Totnes. He was a fireman on the *Discovery II*, 1931-33, and a greaser on the same vessel, 1933-35. He was still serving as a fireman on various transatlantic ships during World War II, and in 1946 was shipped back from Bombay to Glasgow on the *Circassia*, as a distressed seaman. He died in Aug. 1995, in Teinbridge, Devon.

The *Peacock*. A 559-ton American sloop-of-war, 118 feet long, 31½ feet in the beam, 15½ depth in hold, 10 guns, 11-knot speed, with a crew of 130. In 1828 she was selected for the U.S. Government Expedition, which never took place. 10 years later, and in disastrous condition, she took part in USEE 1838-42, and, under the command of Capt. William L. Hudson, acted as consort to Wilkes's flagship, the *Vincennes*. In March 1839, during the first foray of the expedition into Antarctic waters, the *Peacock* and the *Flying Fish* sailed along the edge of the pack-ice off the W coast of the Antarctic Peninsula, as far as the N of Thurston Island. Later, the *Peacock* got badly hit by icebergs, and had to return to Sydney in 1840. She was wrecked on the Columbia River, USA on July 11, 1841.

Mount Peacock. 72°13' S, 169°27' E. A high peak, rising to 3210 m, directly at the head of Kelly Glacier, 2.7 km SW of Mount Herschel, between that mountain and Mount Humphrey Lloyd, in the Admiralty Mountains of northern Victoria Land. Discovered by Ross on Feb. 15, 1841, and named by him for mathematician Dr. George Peacock (1791-1858), dean of Ely, a member of the British Association for the Advancement of Science, which was set up in 1838 to lay before the British government the desirability of sending an expedition to the Antarctic. US-ACAN accepted the name in 1950, and NZ-APC followed suit.

Peacock, Captain. Commander of the Newcastle sealer *Liberty*, in the South Shetlands, 1821-22.

Peacock, David. Able seaman on the *Discovery* during the 2nd half of BANZARE 1929-31, i.e., 1930-31.

Peacock, William. b. 1894, Llangefni, Anglesey, Wales, son of harness maker David Peacock (his father had come from Scotland) and his wife Ann Morris. He joined the Merchant Navy as a teenager, and had just come back from a cruise to the Americas when he joined as an able seaman on the *Aurora*, 1917, during BITE 1914-17. In 1954 he left London for Melbourne, as an engineer, returning to Southampton on June 18, 1954, on the *Moreton*.

[1]**Peacock Bay** *see* **Peacock Sound**

[2]**Peacock Bay**. This is probably what is now called Deakin Bay. It was discovered by Wilkes during USEE 1838-42, and named by him as Peacock's Bay, for the *Peacock*.

Peacock Heights. 81°33' S, 158°45' E. A bold array of peaks and ridges, 17 km long and 8 km wide, extending ESE from Mount Nares, in the Churchill Mountains. It rises from about 600 m on Starshot Glacier to about 2600 m near Mount Nares, and forms the divide between Flynn Glacier and Donnally Glacier. Named by US-ACAN in 2003, for Dennis Peacock (*see* **Peacock Peak**). NZ-APC accepted the name on Feb. 27, 2003.

Peacock Peak. 75°11' S, 134°30' W. A peak, 1.5 km S of Bennett Bluff, on the W side of the upper part of Berry Glacier, in Marie Byrd Land. Named by US-ACAN in 1974, for Dennis S. Peacock, ionosphere physicist at Byrd Station in 1970-71. From 1975 to 1987, Mr. Peacock was director of the solar-terrestrial physics program within the NSF's division of atmospheric sciences; from 1988 to 1991 he was section head for upper atmospheric research; and was USAP chief scientist between 1991 and 2002, concurrently working as head of the polar sciences section within the NSF's Office of Polar Programs.

Peacock Ridge. 66°48' S, 51°00' E. A rock ridge, just E of Mount Soucek, between that mountain and Mount Porteus, in the N part of the Tula Mountains of Enderby Land. Plotted by Australian cartographers from air photos taken by ANARE in 1956. Named by ANCA for David Peacock. US-ACAN accepted the name in 1965.

Peacock Sound. 72°45' S, 99°00' W. About 215 km long, and 60 km wide, it is ice-filled (therefore not navigable by ships) and is occupied by the W part of the Abbot Ice Shelf, and separates Thurston Island from the Eights Coast, in Ellsworth Land. Discovered in Feb. 1940 on flights from the *Bear*, during USAS 1939-41, and further delineated from air photos taken in Dec. 1946, during OpHJ 1946-47. In those days it was thought to be a bay, and was named Peacock Bay, for the *Peacock*, which had been in the area during USEE 1838-42. It was only during the USN Bellingshausen Sea Expedition, of Feb. 1960, that the so-called bay was actually found to run parallel to the entire S coast of Thurston Island, thus making it a sound, and also making Thurston Peninsula (as it was called up to this time) an island. US-ACAN accepted the new name in 1960.

Peacock Subglacial Trench. 76°30' S, 124°00' E. The N-S extension of the Aurora Subglacial Basin, S of Dome C, and W of the Belgica Subglacial Mountains, in Wilkes Land. Discovered and mapped by SPRI, in association with NSF and TUD, during a radio airborne echo-sounding program, 1967-79, and named after the *Peacock*. ANCA accepted the name on July 26, 1983, and US-ACAN followed suit.

Peacock's Bay *see* **Deakin Bay**

Péage Island. 66°46' S, 141°32' E. A small, rocky island, 0.8 km SW of Cape Découverte, in the Baie des Parasites, off the coast of East

Antarctica. Charted by the French in 1951-52, and named by them as Île du Péage, for its position, which looks as is it commands access to the Curzon Islands for parties arriving from Port Martin. Péage is French for "toll." US-ACAN accepted the name in 1962.

Peak 1600. 78°50' S, 83°45' W. In the Sentinel Range, in the Ellsworth Mountains. A term no longer used.

Peake-Jones Rock. 67°38' S, 62°48' E. A low, rocky, bean-shaped islet, just off the coast, 3 km NE of Ring Rock, in Holme Bay, Mac. Robertson Land, about 4 km SW of Mawson Station. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos by Norwegian cartographers in 1946. It was included in an ANARE ground survey conducted by Chris Armstrong in 1959. Named by ANCA for Kenneth "Ken" Peake-Jones, weather observer at Mawson Station in 1959. US-ACAN accepted the name in 1965.

Peale, Titian Ramsay. b. Oct. 10, 1799, Philadelphia. The naturalist on the *Peacock* during USEE 1838-42, the only one of the 6 scientists on that expedition to go as far south as 60°S. He died in Philadelphia, on March 13, 1885. His life and diary were published by Jessie Poesch (*see* the Bibliography).

Peale Inlet. 72°01' S, 99°58' W. An ice-filled inlet indenting the N side of Thurston Island for about 26 km, immediately W of Noville Peninsula. Delineated from air photos taken in Dec. 1946, during OpHJ 1946-47, and plotted in 71°55' S, 99°12' W. Named by US-ACAN in 1955 for Titian Ramsay Peale. It has since been replotted.

Peale's dolphin. Order: Cetacea (whales); sub-order: Odontoceti (toothed whales); family: Delphinidae. *Lagenorhyncus australis*, also called the whitesided dolphin, goes as far south as the Antarctic Convergence. It has a round snout and a short beak.

Islote Pear *see* **Pear Island**

Pear Island. 64°31' S, 62°54' W. A small island immediately SW of False Island, at Hackapike Bay, Parker Peninsula, off the NE coast of Anvers Island, in the Palmer Archipelago. It appears on the Discovery Investigations chart of 1929, and was roughly charted in Jan. 1936, by BGLE 1934-37, who named it for its shape. It appears as Pear Island on a 1947 U.S. Hydrographic Office chart, and (translated literally) as Isla Pera on a Chilean chart of the same year. It appears on British charts of 1950 and 1952, as Pear Islet, and that was the name accepted by UK-APC on Sept. 3, 1953. US-ACAN followed suit with the naming, and it appears as such in the 1955 British gazetteer. A Chilean map of 1955 has it as Islote Pear, and that was the name accepted by the Chilean gazetteer of 1974. However, on July 7, 1959, UK-APC redefined it back to its original, Pear Island, and it appears as such on a British chart of 1960. US-ACAN accepted this new name in 1965.

Pear Islet *see* **Pear Island**

Pearce, Clifford John "Cliff." b. Aug. 18, 1935, Stanmore, Mdsx, son of electrical engineer Stanley John Pearce and his wife Beatrice Gwendoline Mitchell. After Keele University, he taught geography for a year. In Sept. 1959, in search of adventure, he joined FIDS, and sailed south on the *Kista Dan*, being aboard for 110 days due to ice conditions in Marguerite Bay. He was scheduled to be meteorologist at Base Y, but the delay forced him to winter-over instead at Base B in 1960. In 1961 he took the *John Biscoe* to Marguerite Bay, and a flight on from there to Fossil Bluff Station, where he wintered-over in 1961. In April 1962 he returned to the UK on the *John Biscoe*, and left FIDS in May 1962. He returned to teaching, and after 10 years at a grammar school, he became a headmaster at 3 different schools over 25 years. In 1970 and 1971 he was an exchange teacher in San Diego. In Dec. 1963 he had married Jackie Whitaker, and he and Jackie were on a BAS cruise on the *Lubyov Orlova* in 2000, making 19 landings and getting as far south as 68°S. He wrote a book about his life as a Fid — *The Silent Sound*.

Pearce, John Beaton. b. Dec. 4, 1928, India, son of John Beaton Pearce (who had gone out to India only the year before) and an Indian wife. He joined FIDS in 1953, as a diesel electric mechanic, and left Cardiff later that year, bound for the Falklands. He wintered-over at Signy Island Station in 1954, and at Base G in 1955, and returned to London on March 2, 1956, on the *Highland Princess*. He was last seen in the late 1950s, in Orleston, near Ashford, Kent.

Pearce Dome. 71°20' S, 68°21' W. A dome-shaped mountain rising to 789.3 m above sea level, it is snow- and ice-free on the N slopes, and stands 875 m WNW of Khufu Peak, and 1.06 km due E of Blodwen Peak, near the center of the Fossil Bluff massif, in the E part of Alexander Island. In scientific reports of the early 1960s, it was referred to descriptively as The Snow Dome, and those working in the area generally referred to it as Dome. Renamed by UK-APC on April 23, 1998, for Cliff Pearce. US-ACAN accepted the name in 1999.

Pearce Peak. 67°48' S, 61°12' E. Rising to 1200 m, and partly snow-covered, it is actually a ridge which, when seen from the N, looks like a peak, 3 km (the Australians say 6 km) S of Moyes Peak, and 24 km SSW of Falla Bluff, in Mac. Robertson Land. Discovered on Feb. 18, 1931 by BANZARE, and named by Mawson for Sir George Foster Pearce (1870-1952), one of the major personalities within the Australian Labor Party, and chairman of the Australian Antarctic Committee in 1929. US-ACAN accepted the name in 1947.

Mount Pearigen. 72°01' S, 168°50' E. A prominent mountain, rising to 3020 m, 10 km NW of Mount Hart, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Jare Pearigen.

Pearigen, Jare Max. b. Dec. 13, 1934, Nashville. He entered the Navy in 1956 as an aviation cadet, and became an officer on Aug. 7, 1957. He married in Sept. 1958, in Mobile, Ala. He was a lieutenant commander and helo pilot in Antarctica in 1967-68, 1968-69, and 1969-70, and served in Vietnam. Later a captain, from June 24, 1980 to July 26, 1982 he was commander of Task Force 199, and retired on June 30, 1987. He died on June 15, 2000, at Burke, Va., and is buried in Arlington National Cemetery.

Pearl Harbor Glacier. 72°15' S, 167°40' E. A major tributary glacier, flowing generally E from the Victory Mountains into the SW side of Tucker Glacier, 28 km NW of Bypass Hill. Named by NZGSAE 1957-58 for the Americans at Pearl Harbor 16 years before. NZ-APC accepted the name, and US-ACAN followed suit in 1962. According to the NZ gazetteer, "In certain lighting conditions the glacier has a curious glistening beauty caused mainly by the distribution of its crevassed zones."

Pearl Rocks. 63°35' S, 59°56' W. A group of rocks covering an area 5 km by 3, close off the W coast of Tower Island, in the Palmer Archipelago. Photographed aerially by FIDASE 1956-57, and, apparently named descriptively by them, for the several snow-covered rocks in the group. UK-APC accepted the name on Sept. 23, 1960, but with the coordinates 63°36' S, 59°52' W, and it appears as such on a British chart of 1962. US-ACAN accepted the name (but not those coordinates) later in 1960.

Pearsall Ridge. 77°52' S, 163°06' E. A mostly ice-covered ridge, extending ENE from the Royal Society Range between Descent Pass and Covert Glacier, in Victoria Land. Named by US-ACAN in 1992, for USGS cartographer Richard A. "Rick" Pearsall, member of the geodetic control party to the Ellsworth Mountains in 1979-80. That same season he was at Pole Station, working out the true position of the Geographic South Pole.

Pearse Valley. 77°43' S, 161°32' E. An ice-free valley, 5 km long, immediately W of Catspaw Glacier, at the S side of the Asgard Range, in Victoria Land. Named by US-ACAN in 1964, for John Stuart Pearse (b. May 28, 1936, Boise, Id.), biologist at McMurdo in 1961 and 1961-62, and later long associated with the University of California at Santa Cruz. NZ-APC accepted the name.

[1]**Mount Pearson**. 72°17' S, 166°43' E. A prominent snow peak, rising to 2440 m, at the W side of the mouth of Lensen Glacier, where that glacier joins Pearl Harbor Glacier, in the Victory Mountains of Victoria Land. Named by the Northern Party of the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, for Frank H. Pearson, surveyor with the party. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

[2]**Mount Pearson** *see* **Pearson Peak**

Pearson, Clive William. b. March 12, 1935, Dartmouth, Devon, son of plumber George Pearson and his wife Violet Mary Adams. His grandfather was an eminent chef with the Great Western Railway. After grammar school in Dartmouth, he went to catering college, where he got all his qualifications in hotel management, and

went to work in holidays camps and hotels, then volunteered for 3 years in the Army, in the Catering Corps, doing 7 months in Malta. He was demobbed in Feb. 1956, and on his 21st birthday began work as a chef at the Royal Britannia Naval College, in Dartmouth (where, coincidentally, his father was then working in maintenance). In 1957 a friend of his father's suggested FIDS, and after interviews with Norman Lightup (of the Crown Agents) and Fids Johnny Green and Bill Sloman, he was taken on as a cook and general assistant, sailing from Southampton on the new *John Biscoe*'s second voyage (he was duly, and immediately seasick). For details of this trip *see* [2]**The *John Biscoe***, and **Shaw, John Barrie**. He wintered-over at Base F in 1958 and 1959, and then the *Kista Dan* came to take him off (see that entry for details of the trip). Back in the UK at the end of May 1960, he did a season as the chef at a new hotel in Dartmouth, worked at the Post Office for the next season, delivering mail, then drove a bulldozer, building another new hotel. He went into the building trade in 1962 and 1963, then had an accident, and went into maintenance (where his heart really belonged, rather than cooking), at the Naval College, working mainly on steam engines, steam and boiler maintenance. From 1967 to 1970 he was in Ascension Island, working at the power plant there, and then back to the Naval College, then to Gan, in the Maldives, for 19 months, and back to the UK in 1973. In Feb. 1976 he married Margaret Fairbairn, a world traveler and explorer in her own right, and left the maintenance job at the college in 1994. He became the verger of the college's chapel until he retired in 2000, but had already been taken on as tour guide for the establishment, which he still does. In 2005 he and 90 FIDS chartered the *Polar Star* and went to Antarctica on a tour.

Pearson, Jean. b. Feb. 1915. During World War II, she was a Women's Airforce Service pilot, in Wilmington, Del. Then began a 30-year career as a famous journalist, she was the science writer for the *Detroit News*, and president of the National Association of Science Writers, the first woman journalist in Antarctica since Jackie Ronne. She also worked for the *Detroit Free Press*. Fresh from the triumph of her "Man in Space" series, she went to the South Pole while covering Lois Jones's all-women expedition of 1969-70. In 1975 she retired from the Naval Reserves, as a lieutenant commander.

Pearson Peak. 75°54' S, 140°57' W. Also called Mount Pearson. A rock peak, 1.5 km S of McGaw Peak, on the ridge that trends S from Mount McCoy, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Herbert E. Pearson, USARP geomagnetician and seismologist at Byrd Station in 1963.

Pearson Spur. 69°43' S, 70°25' W. Extending SE from the Elgar Uplands toward the head of Sibelius Glacier, in the N part of Alexander Island. Roughly mapped by FIDS cartographers in 1959-60, working from air photos taken in late 1947 during RARE 1947-48. Re-surveyed by BAS between 1973 and 1977. Named by UK-APC on June 11, 1980, for Martin Robert Pearson (b. 1948), BAS glaciologist who wintered-over at Fossil Bluff Station in 1971 and 1972, and who worked on Alexander Island in 1971-72. US-ACAN accepted the name in 1995.

Massif Peary *see* **Mount Peary**

Monte Peary *see* **Mount Peary**

Mount Peary. 65°15' S, 63°52' W. A conspicuous massif, rising to about 1900 m (the British say about 1800 m), it has a flat, snow-covered summit several miles in extent, surmounted by a marginal peak on the W, 11 km ENE of Cape Tuxen and Waddington Bay, and dominates the area between Wiggins Glacier and Bussey Glacier, on the Graham Coast, on the W coast of Graham Land. Discovered and rougly mapped in 1909, by FrAE 1908-10, and named by Charcot as Massif Peary, for Robert Edwin Peary (1856-1920), the first man to reach the North Pole, on April 6, 1909. It appears as such on Charcot's map of 1912. It appears as Mount Peary on a British chart of 1940, and that was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears as such in the British gazetteer of 1955, and on a British chart of 1960. On a 1937 French chart it appears by error as Sommet du Matin, and, as a consequence, on a 1943 U.S. Hydrographic Office chart as Mount Matin. It appears on a Chilean chart of 1947 as Monte Peary, and that was the name accepted by the 1974 Chilean gazetteer. The Argentines use that name too. Photographed aerially by FIDASE in 1956-57, it was first climbed in 1965 by Frank Stacey, Tony Bushell, and Terry Tallis, of BAS. It was climbed again on Sept. 7, 1976 (*see* **Deaths**, 1976). Note: There is controversy concerning Peary's claim, as there is about the attainments of many other explorers, including, for example, Byrd. This controversy basically comes down to two questions: did Peary, in fact, get to the Pole, and did any other explorer get there before him? History will almost certainly, in the end, vindicate Peary on both counts.

Pease, Francis Kennedy. b. Feb. 13, 1908, at the Curragh, co. Kildare, but grew up mainly in Southsea, in Portsmouth, son of Major Charles Pease, of the Loyal North Lancs Regiment, and his wife May. The major died in London when Francis was 11, and his mother married again, in Portsmouth, in 1921, to Major Walter Angus Campbell, of the same regiment. The young Pease was one of the three midshipmen on the *Discovery*, 1925-27, during the Discovery Investigations, and after the expedition he made his way to Montevideo, taking the *Andes* from there to Southampton, arriving home on Aug. 21, 1928. In 1929, now involved in the meteorological business, he left London for Mozambique, and from there to Cape Town, but was deported and sent back to Southampton on the *Grantully Castle*, in Aug. 1931, making his way back to the Campbell household, now in Totland Bay, on the Isle of Wight. In 1932 it was announced that he would marry Rosemary Ursula Croxton, but something went horribly wrong, and they never made it to the altar. It would be 20 years before Rosemary married, in Chelsea, to Stephen Tennant. As far as can be ascertained, Mr. Pease never married. In 1934, still living in Portsmouth, he made the news again. He was the only man living who had a duplicate copy of Sir John Franklin's map of 90 years before (given to him by the now dead Danish explorer Knud Rasmussen), when that great explorer disappeared in the frozen north, so he decided to go to the Arctic to look for log books and other relics of that ill-fated expedition. On Aug. 31, 1934, he sailed out of Liverpool aboard the *Duchess of York*, listed on the ship's manifest as an explorer, bound for Canada, taking with him 5 tons of food. His intention was to be away for at least three years. He was also going to look for minerals, and investigate a landing strip site. His only companion would be Jill, for whom he made special shoes and a warm coat. Jill was his fox terrier. He duly arrived in Quebec on Sept. 7, 1934, and made his way to Fort Churchill, Manitoba, and from there the plan was to hike 1000 miles into the Arctic, to Chesterfield Inlet, and there pick up a dog team. However, something went wrong. He got as far as Fort Churchill, in mid-October, but on May 5, 1935, only eight months after he had left England, the *Duchess of York* pulled back into Liverpool from Montreal, and Pease was on board, still listing himself as an explorer, and heading for London. He moved to Boxmoor, Herts, and then, when World War II broke out, he became a pilot officer in the RAF, and a balloonist. After the war, he went into landscape contracting, living and working all over the south of England, and died in June 1987, in Weymouth.

Pebbly Mudstone Island. 63°18' S, 57°51' W. A small island in the SE part of the Duroch Islands, 0.5 km SW of Halpern Point, between that point and Cape Legoupil, on Trinity Peninsula. Named by Martin Halpern (*see* **Halpern Point**) in 1961-62, for the outcrop of pebbly mudstone of the Legoupil Formation of the Cretaceous, exposed on the island, and found by the University of Wisconsin field party that he was part of during geological mapping of the area, which provides valuable data to the geologic history of the region. US-ACAN accepted the name in 1964, and UK-APC not until Dec. 15, 1982.

Islotes Peces *see* **Fish Islands**

Mount Pechell. 71°05' S, 167°16' E. A prominent peak, rising to 1360 m, it surmounts the W end of Hedgpeth Heights, between Mount Troubridge and Mount Dalmeny, in the Anare Mountains (the New Zealanders say the Admiralty Mountains, but that is not right), in Oates Land, in the N part of Victoria Land. Discovered and rudely mapped on Jan. 11, 1841 by Ross, who named it for Capt. (later Rear admiral) Sir Samuel John Brooke Pechell (1785-1849), 3rd Bart., a junior lord of the Admiralty. US-ACAN accepted the name in 1950, and NZ-APC followed suit.

Peck, Patrick William Leslie George "Pat." b. Sept. 29, 1929, Stanley, Falkland Islands, 8th

child of laborer James Patrick Peck and his wife Sarah Ellen McAtasney. He left school at 14, and became a navvy for the Public Works Department, digging ditches and repairing roads. Toward the end of World War II he went to work for the Harbour Department, as a crewman on the government motor launch, relieving local defence force outposts and looking after the searchlight batteries. In 1946 he joined the crew of the *Fitzroy* (his father was already on board, as cook), and in 1948 traveled to the UK on her. He contracted pleurisy, and was hospitalized in Cardiff until New Year's, 1949. He got out in time to sign on the *Highland Princess*, as assistant pantryman, and sailed back to Montevideo, and from there to Port Stanley, where he met Bob Moss, the cameraman who had been filming scenery for *Scott of the Antarctic*, in the South Shetlands. Bob urged him to join FIDS, so Pat was interviewed by Frank Elliott, passed the medical and dental, and joined as a handyman, at £18 a month, board, food, warm clothing, tobacco, and a yearly quota of alcohol. He traveled down on the *John Biscoe* to Deception Island (Base B), where he wintered-over in 1949. The *John Biscoe* came to pick him up at the end of his tour, and took him to South Georgia, where he wintered-over in 1950, as cook. He returned to the Falklands, but 5 days later left to go back to Leith Harbor, in South Georgia, working as a Grade 8 (unskilled) laborer (at £28 a month) for Salvesen's. He did the 1952-53 season for Salvesen's, at Stromness, and then became valet to a succession of Falkland Islands governors, a position he held for 11 years. In 1956-57 he was in Antarctica again, on the *Protector*, with Governor Arthur, and transferred to the royal yacht *Britannia* during Prince Philip's visit. In 1959 he married Maureen Coutts, and in 1966 he and his wife moved to Pebble, where Pat worked for 7 years, and then on to Port Howard for 2 years, Fox Bay East for 2 years, and 4 years at Fox Bay West. Just before the 1982 invasion, he bought his own home in Stanley, and became an officer in the Falkland Islands Defence Force (he would rise through the officer ranks to major, and commander of the force, and be ADC to the governor in 1985. He retired from active service that year, but continued as ADC until 1993), and went back to work for Public Works until 1983, then to the Post Office, and finally to the Government Central Store, from where he retired in 1993. He lives in Stanley.

Peck Range. 72°20' S, 62°42' W. A range of mountains, hills, and ridges, about 17.5 km long in a N-S direction, about 10 km wide, and rising to about 1700 m, in the W part of the Du Toit Mountains, S of Beaumont Glacier, on the Black Coast, on the SE coast of Palmer Land. It is bounded to the S by a high snowfield, and to the E and W by unnamed north-flowing glaciers that coalesce at the N end of the range, S of Mount Wever. Bedrock in the range is almost entirely made up of a coarse-grained fresh granite batholith. Mapped by USGS from USN air photos taken between 1966 and 1969. Visited by a joint USGS-BAS field party in 1986-87. Named by US-ACAN in 1989, for geologist Dallas Lynn Peck (b. March 28, 1929, Cheney, Wash. d. Aug. 21, 2005, Fairfax, Va.), 11th director of USAS, 1981-93. UK-APC accepted the name on May 13, 1991.

Peckham Glacier. 80°21' S, 157°25' E. A steep tributary glacier flowing southward from the slopes of Mount McClintock into Byrd Glacier, just W of DeVries Glacier, in the Britannia Range. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Verne E. Peckham, biologist who wintered-over at McMurdo in 1962. He made several dives into the water, under the sea ice, using scuba gear. ANCA accepted the name on Aug. 27, 1975.

Pecora Escarpment. 85°38' S, 68°42' W. An irregular escarpment, 11 km long, and rising to an elevation of 1165 m, 56 km SW of the Patuxent Range, it marks the southernmost exposed rocks of the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by Dwight Schmidt (*see* **Schmidt Hills**) for William Thomas Pecora (1912-1972), Olympic fencer and 8th director of USGS, 1965-71, who pioneered the use of satellite imagery for mapping. US-ACAN accepted the name in 1966, and UK-APC followed suit on Nov. 3, 1971. It appears in the 1974 British gazetteer.

Pecten Spur. 64°12' S, 57°08' W. A sharp, rocky spur projecting eastward from the S cliff face of Jonkers Mesa, midway between Ekelöf Point and Cape Gage, in the E part of James Ross Island. So named by UK-APC on Nov. 15, 2006, due to the abundance of large pecten fossils in the sedimentary sequence that forms the local base of the volcanic cliffs.

Pedalling Ice Field. 77°15' S, 159°55' E. An icefield composed of blue ice at the edge of the Polar Plateau, just S of Mount Dewitt and Mount Littlepage, in Victoria Land. In keeping with the practice of naming several features in this area after bicycling terms, this was named by NZ-APC in 1995. Trevor Chinn's glacial mapping party of 1992-93 found that the best way to get about was on a bike. US-ACAN accepted the name in 1996.

Mount Peddie. 76°01' S, 145°01' W. An isolated mountain, 8 km N of Webster Bluff, at the N end of the Ford Ranges, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Norman W. Peddie, geomagnetician and seismologist at Byrd Station in 1964.

Peden, Irene Carswell. b. 1925. Associate professor of engineering at the University of Washington and a polar atmosphere scholar, she became the first American woman to work in the interior of Antarctica, at a field camp near Byrd Station in 1970-71. Just to make her feel comfortable, the National Science Foundation told her "If you fail there won't be another woman on the Antarctic continent for a generation." She didn't fail, despite the fact that her equipment never arrived. She later became a professor of electrical engineering, at the University of Washington, in Seattle.

Peden Cliffs. 74°57' S, 136°28' W. A line of cliffs, 10 km long, they are breached near their center by Rhodes Icefall, and they border the N side of Garfield Glacier, in the W part of McDonald Heights, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Irene C. Peden.

Pedernera Refugio *see* **General Pedernera Refugio**

Chenal Pedersen. 66°40' S, 140°01' E. A channel between Pétrel Island (to the NW) and Marégraph Island, Rostand Island, and Carrel Island to the SE, in the Géologie Archipelago. Named by the French for Bill Pedersen, the name has become accepted over the years (by the French anyway).

Mount Pedersen. 72°05' S, 164°02' E. Rising to 2070 m, 14 km SE of Galatos Peak, in the Salamander Range of the Freyberg Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for John M. Pedersen, biologist at McMurdo, 1965-66 and 1966-67.

Nunatak Pedersen *see* **Pedersen Nunatak**

Pedersen, Morten. Norwegian whaler, captain of the *Castor*, in the South Shetlands for the 1893-94 season.

Pedersen, Vilhelm "Bill." In 1952, when the *Kista Dan* came out of the yard brand new, Bill Pedersen was 2nd mate, and in 1953-54 he was chief officer. In 1956-57 he was chief officer of the *Magga Dan*, and her skipper, 1960-63. He was skipper of the *Thala Dan*, 1963-66. In 1966 he became a marine surveyor in the insurance company that insured all the Lauritzen Line ships, and in 1987 was sent down to Macquarie Island when the *Nella Dan* grounded there. It was Pedersen who had to scuttle her.

Pedersen Nunatak. 64°56' S, 60°44' W. The most westerly of the Seal Nunataks, it rises 210 m above the Larsen Ice Shelf, 13 km NE of Cape Fairweather, on the Nordenskjöld Coast, on the E coast of the Antarctic Peninsula. Surveyed and charted in Nov. 1947 by Fids from Base D, and named by them for Morten Pedersen. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1961. The Argentines call it NunatakP edersen.

Pedersenberg. 72°50' S, 166°24' E. A peak in the Lawrence Peaks of Victoria Land. Named by the Germans.

Monte Pedro *see* **Mount Pierre**

Punta Pedro *see* **Azufre Point**

Pedro Aguirre Station *see* **Presidente Pedro Aguirre Cerda Station**

The *Pedro Campbell*. Uruguay's first own Antarctic ship, she was the 1300-ton, 67.41-meter ex-USN minesweeper *Chickadee*, built, in 1942, bought by Uruguay in 1966 as a Navy vessel, and renamed for the Irishman, Peter Campbell, who has a claim to be the founder of Uruguay's navy. Her first Antarctic expedition was

1989-90, under skipper Julio Dodino. She was back for 1990-01, again under Capt. Dodino. That season, she arrived at Artigas Station on Nov. 27, 1990, carrying supplies. She was back relieving the Uruguyan expeditions of 1991-92 and 1992-93 (both times under the command of Capt. Carlos Tastas), but then she was replaced with the *Vanguardia*. Decommissioned and struck from the register in 2003, she was used as a training hulk at Montevideo until she was sold for scrap in 2005.

Isla Pedro Nelson *see* **Jinks Island**

Islote Pedro Nelson *see* **Jinks Island**

Isla Pedro I *see* **Peter I Island**

Pedro Vicente Maldonado Station. 62°27' S, 59°45' W. Ecuador's first scientific base in Antarctica, named after the 18th-century Spanish geographer, built at the base of the hill called Panecillo, on Canto Point, Discovery Bay, Greenwich Island, in the South Shetlands. Known as Vicente Station, or Base Vicente, or Maldonado Station, it was opened on March 2, 1990, as a summer station, during the 2nd Ecuadorian Antarctic Expedition.

Peel Cirque. 69°07' S, 70°31' W. Above the SW side of Roberts Ice Piedmont, in the NE part of Alexander Island. Photographed aerially in 1947 by RARE 1947-48, and mapped from these photos in 1960 by Searle of the FIDS. Surveyed from the ground by BAS personnel between 1973 and 1977. Named by UK-APC on June 11, 1980, for David Anthony Peel (b. June 12, 1944), BAS glaciologist who wintered-over at Halley Bay Station in 1970, and summered at Base T in 1975-76, and at Rothera Station in 1979-80 and 1985-86. US-ACAN accepted the name in 1995.

Peeler Bluff. 72°35' S, 93°20' W. Also called Peeler Point. A prominent rock bluff along the middle of the W coast of McNamara Island, within the N edge of the Abbot Ice Shelf, it is a useful navigation mark from seaward. Named by US-ACAN in 1962, for Lt. Cdr. James C. Peeler, USN, who camped here from Feb. 7 to Feb. 9, 1961, and obtained position data for the bluff and other points in the area, which was explored by personnel from the *Glacier* and the *Staten Island*.

Peeler Point *see* **Peeler Bluff**

Peers, Duncan Taylor. b. Dec. 1878, Ram's Head Lodge, Rostherne, near Altrincham, Cheshire, son of police constable James Peers and his Scottish wife Annie Taylor. Following the father's postings, the family moved to Crewe, then to Bebington, and finally to Tranmere, near Birkenhead, on the Mersey, where the wife ran a grocery and chandler's shop. Duncan joined the Merchant Navy, and on Nov. 28, 1911, at Hobart, joined the *Aurora* as bosun, at £9 per month, for the first part of AAE 1911-14. He left the expedition on May 1, 1912, in Sydney.

Península Péfaur. 64°26' S, 61°29' W. The peninsula separating Hughes Bay to the N from Charlotte Bay to the S, on the W coast of the Antarctic Peninsula. Named by the Chileans for Jaime E. Péfaur, biologist from the University of Concepción, in Chile, who studied soil mesofauna while on the *Yelcho* during ChilAE 1967-68. The Argentines call it Península Ventimiglia.

Pegasus Automatic Weather Station. 78°00' S, 166°36' E. An American AWS installed in Jan. 1989, near McMurdo, at an elevation of 10 m. Named for a crashed Constellation of that name, in the ice nearby. The station was removed on Nov. 10, 1989.

Pegasus Field. 77°58' S, 166°31' E. The smallest (3048 m long and 67 m wide) and most southerly of the three runways at McMurdo, 24 km from McMurdo Station, on the Ross Ice Shelf. The white ice here only gets a thin covering of snow (as opposed to the old Williams Field, which got a lot), and therefore can take wheeled aircraft. It was named after the crashed C-121 Lockheed Constellation named "Pegasus," which crashed near Willy Field in 1970, and was towed out here to what became Pegasus Field (it is still visible). Pegasus is lightly manned, and has no tower, being used only when a flight is coming in. It has only a couple of buildings — a weather station and a passenger terminal. *See* **Airstrips**.

Pegasus Mountains. 71°00' S, 67°12' W. A group of mountains, about 27 km long, and rising to about 1350 m, between Bertram Glacier and Ryder Glacier, and immediately E of Gurney Point, on the W coast of Palmer Land, at George VI Sound, they consist of a system of ridges and peaks broken by 2 passes. Included in this group are (from N to S): Mount Markab, Mount Alpheratz, and Mount Crooker. Roughly mapped in 1936 by BGLE 1934-37, and surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for the constellation. US-ACAN accepted the name later that year, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Pegasus North Automatic Weather Station. 77°54' S, 166°30' E. An American AWS installed in Jan. 1990, near McMurdo, at an elevation of 8 m. It was visited on Feb. 5, 2009.

Pegasus South Automatic Weather Station. 78°00' S, 166°36' E. An American AWS installed in Jan. 1991, at the site of the original Pegasus AWS, near McMurdo, at an elevation of 5 m. It was removed in Jan. 2009.

The *Peggotty*. NZ yacht, in Antarctic waters in 1992-93, under the command of Alan Sendall.

Pegmatite Peak. 85°39' S, 154°39' W. Rising to 790 m, along the W side of Koerwitz Glacier, about midway between the main summits of the Medina Peaks and Mount Salisbury, in the Queen Maud Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by NZGSAE 1969-70 for the large, whitish pegmatite dikes in a rock wall at the SE spur of the peak. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Pegmatite Point. 85°01' S, 165°20' W. Juts out into the head of the Ross Ice Shelf from the E part of the Duncan Mountains, 11 km ENE of Mount Fairweather. First roughly plotted from ground surveys conducted by ByrdAE 1928-30, and from air photos taken during the same expedition. Named by the Southern Party of NZGSAE 1963-64, for the rock pegmatite found in this distinctively banded point. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Pegmatitgrat. 71°10' S, 164°29' E. A peak in the W part of the Everett Range, in the Concord Mountains. Named by the Germans.

Pegtop Mountain. 77°04' S, 161°15' E. Also called Pegtop Nunatak. An elongated mountain marked by several conspicuous knobs, the highest and westernmost rising to 1395 m, at the S side of Mackay Glacier (the New Zealanders say the mountain rises to about 1200 m, and that the highest knob protrudes about 550 m above the Mackay), 5 km W of Sperm Bluff, and about 8 km W of Mount Suess, in Victoria Land. Mapped and named descriptively in Dec. 1911, by Grif Taylor's Granite Harbour Geological Party, during BAE 1910-13. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Pegtop Nunatak *see* **Pegtop Mountain**

Cerro Pehuenche. 62°27' S, 60°47' W. A hill, NW of Lago Oculto, and N of Cerro El Toqui, on the W coast of Cape Shirreff, in the N part of Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno for the native Chilean people, the Pehuenche.

Islote Peine *see* **Peine Island**

Peine Island. 63°24' S, 54°42' W. A small island, W of Beagle Island, in the Danger Islands, SE of Joinville Island. Named descriptively by the Argentines in 1978, as Islote Peine (i.e., "comb island"). On June 11, 1980, UK-APC translated the name (for themselves only) as Comb Island. It appears as such in the 1987 British gazetteer. In 1993, US-ACAN accepted the name Peine Island.

Peirce, Stanley Dexter. b. May 14, 1910, Topsfield, Mass., but raised partly in Boston, son of Thomas Wentworth Peirce (of the railroad Peirces) and his 2nd wife Gabrielle M. Dexter. An electrical engineer, he was chief radio operator on the *Jacob Ruppert*, as she sailed for Antarctica as part of ByrdAE 1933-35, and was a radioman on the shore party of that expedition, wintering-over at Little America in 1934. Stuart Paine says he resigned in Feb. 1934, and he certainly arrived in California on the *Mariposa*, on May 30, 1934, from Sydney. In Jan. 1941, Doris Black, a pretty 29-year-old, divorced Earle L. Sukeforth of Hartford, Conn. On July 2, she took poison in Boston, staggered up to two boys in the Back Bay, told them what she'd done, and was rushed to Beth Israel Hospital, where, 3 days later Stan Pierce married her. On July 9, she died. It was all quite odd. He married again, and was a retired lieutenant colonel when he moved to Churchville, Md., and died in Feb. 1976, at the Aberdeen Proving Ground, in Maryland.

Monte Pelado *see* **Stokes Hill**

The *Pelagic*. British yacht, registered in the British Virgin Islands, skippered by J.V. "Skip" Novak (who had just formed Pelagic Expeditions), in at the South Shetlands and the Antarctic Peninsula, carrying an Italian expedition,

during the 1987-88 season. She was back in 1990-91 and 1991-92, again skippered by Novak, and in 1992-93 she and Novak were chartered by Greenpeace, and again went to the South Shetlands and the Antarctic Peninsula. Under Novak again, she took tourists to the South Shetlands and the Antarctic Peninsula in 1993-94, 1994-95, 1995-96, 1996-97, and 1997-98 (Hamish Laird was co-skipper that season). Under Hamish Laird she was back in 1998-99 and 1999-2000. Under Carsten Steinbach, she was back in 2000-01 and 2001-02. She was back again in 2003-04, accompanying the *Pelagic Australis* on her trip to the Antarctic Peninsula with the Breaking the Ice expedition (q.v.) aboard. Richard Howarth was skipper. She was back in 2005-06. She could take 6 passengers.

The *Pelagic Australis*. Tourist yacht, registered in the British Virgin Islands, in Antarctic waters in 2003-04, and again in 2005-06. She could take 10 passengers. In the 2003-04 season she took the Breaking the Ice expedition (q.v.) to Antarctica. Steve Wilkins was skipper.

The *Pelagos*. The former White Star liner *Athenic*, built by Harland & Wolff, of Belfast, in 1900, and bought in 1928 by the Pelagos Company (Bruun & Van der Lippe), out of Tønsberg, converted by them into a 12,083-ton factory whaling ship, complete with stern slip, and run by Lars Christensen. She conducted pelagic whaling in Antarctic waters in 1928-29, 1929-30, and 1930-31. She was in Antarctic waters in 1933-34, 1934-35, 1935-36, 1936-37, 1937-38, and 1939-40. She was back in those waters in the 1940-41 season, when, on Jan. 14, 1941, she was taken by Nazi raiders off the *Pinguin*. The captured crew were: Fritz B. Gøthesen (captain; aged 37); Isidor Eriksen (manager; 40; recently out of a New York hospital); Severin Heian (1st mate; 61; tattoo on left wrist); Harald Myhre (2nd mate; 31); Güttorm Knutsen (3rd mate; 32); Ansgar Carlsen (4th mate; 30); Ingvart Hansen (1st bosun); Alf Jonas Hansen (2nd bosun; 35); Andreas Hansen (40), Håkon Olsson (28), Einar Taranrød (26), Halfdan Kristiansen (50), Harry Eugen Samuelsen (26), Sigurd Sele (29; tattoo on right forearm), Sigurd Eriksen (38), Lorentz Kvedal Olsen (35) (able seamen); Oskar Viklander (21), Ingolf Knutsen (28), Sverdrup Norem (27), Karl Knutsen, Nils Hestenes (34), Ludvig Jensen, Severin Skeie (31), Ivar Johannessen (32), John Bergseth (28) (ordinary seamen); Robert Gabrielli (18), Reidar W. Andresen, and Finn Løke (21) (junior ordinary seamen); Erling Osuldsen (radio operator; 42); Mauritz Granerød (chief engineer; 50; tattoo on right arm); Einar Eriksen (2nd engineer; 39; tattoo on right arm); Johan A. Nilsen (3rd engineer; 47; tattoo on right arm); Gustav A. Hegglund (4th engineer; 39); Dagfin Sten Jensen (5th engineer; 40); Olaf Pedersen (29) and Valter Holst (32) (donkeymen); Rolf Hansen (engineer's assistant; 41); Aksel B. Andersen (1st carpenter; 56); John Fjelstad (2nd carpenter; 40); Lars Ekeberg (electrician; 40); Ole Stålerød (1st repairman; 53); Gjert Johansen (2nd repairman); Arnold Abrahamsen (pump man; 55); Rolf Granerød (23), Dagfin Braendsrød (38; tattoo on left arm), Egil Ås (27), Sigurd Freitag (30), Sigurd Jørgensen (37), John Henry Fevang (23), Fritjof Jespersen (23), John Svendsen (40; tattoo on right hand), Alf Reidar Andersen (31), Thoralf M. Tveiten (35), and Spener Austad (39) (stokers); Karl Thorsen and Alfred Kallevik (36) (oilers); Horgen Sundseth (42; tattoo on right arm), Johann Thaule (34), Albert Jørgensen (49), Kristian Hotvedt (27), Hjalmar Forsstrøm (57), Henry Jørgensen (28), Frithjof Nilsen (42; he had only two fingers on his left hand), Thor Reppesgaard (41), Karl A. Jørgensen (33), Atle Kvaerne (32), Torkel Hagestad (48), Johan Jørgensen (31) (boiler men); Egil Andreassen (17), Herman Førland (19), Mathias Jeger Olsen (22), and Bernt Kinn (19) (engine boys); Arne H. Sørensen (1st blacksmith; 36); Harald Nilsen (2nd blacksmith; 37; he had only one eye — his left); Nils Adolf Nilsen (chief steward; 44); Gustav Olsen (1st cook; 36; tattoo on left arm); Johan Andersen (2nd cook; 34); Harald Andersen (night cook; 31); Ole Tüv (pantryman; 28); Kjønik Kjøniksen (provisions man); Thorstein Johansen (baker; 35; died April 18, 1941, on a train, near Saumur, while being transported to a German camp); Dagfin Haukeli (sausage maker; 34); Åge H. Gulliksen (21) and Thor Gran Larsen (21; tattoo on right arm) (galley boys); Werner Hegglund (mess foreman; 43); Arthur Dahl, Erling Ødegård (20), Carsten Kjell Larsen (18), Nils Hotvedt (18), Trygve Johansen, Jacob Johansen, Thorbjørn Olsen, Hans Hansen, Ragnar Olsen, Jørgen Åsland (28; later, he sailed on the *Thorshammer* during the 1945-46 season, but not in Antarctic waters), Karsten Pedersen, Karl Johansen, Johan Diserud, Kåre Olsen (21), and Lorentz Fjell (34) (mess boys); Kristian Moen (1st foreman; 34); Hans M. Johansen (2nd foreman; 47; tattoo on both arms); Hans Kristian Ramberg (36), Rolf Norberg (37), and Einar Paulsen (37) (bones sawmen); Aksel M. Studsrød (42; four fingers on left hand), Karsten Sjøblom (39), Lasse K. Tenden (34; tattoo on right arm), and Olav L. Tenden (36; tattoo on left arm) (1st flensers); Ole Nelvik (42), Gustav Blixt (37; tattoo on both arms), Olaf Sigurd Holte (37; tattoo on right arm), and Kristoffer Tenden (31; tattoo on left hand) (2nd flensers); Ingvald Skjauff (39), Lars Iversen (49), Kristian Kjønnerød (45), Emil Olsen (28), Otto Grønli (49), and Sverre Snørsvald (laborers); Aksel Hansen (37), Aksel B. Johansen (43; Swedish), Nils Nilsen (37), Georg Kvist (41), Nikoali Furuhaug (44), Trygve Sjøblom (31), Bernhard Johansen (43), Nils Eriksen (43: tattoo on right hand), Sigvart Skaug (38), Kristian Evensen (38), Ingebert Ljøsland (31), Henry "Harry" Eriksen (28), and Ludvik Bettum (cutters); Baard Vasgaard (sharpener; 58); Bjarne Dvergastein (44; tattoo on left arm), Anders Solberg (44), Konrad Lyngås (38), Trygve Henriksen (44), Peder Samuelsen (37), Sigurd Hansen (41), and Henry Jacobsen (43) (1st cookers); Reidar Jacobsen (28), Hans Olsen (47; tattoo on right arm), Lars M. Hesby (41; he had only one arm — his right), Eugen Büvik (47), Johannes Strandenes (47), and Erling Sørensen (38: he had not long before been treated for venereal disease in New York) (2nd cookers); Karsten Kristoffersen (factory man); Einar Moen (tank foreman; 47; tattoo on both arms); Lars Hansen (laborer); Harald Studsrød (blacksmith; 47); Carl Albin Olson (55: Swedish) and Elling Ellingsen (36; tattoo on left arm) (1st separators); Arne Gert Larsen (26; tattoo on right arm) and Leif Pedersen (42) (2nd separators); Torjus Saatvedt (35; tatoo on right arm), Sverre Johansen (33), Gudbrand Baukhol, Hans Arthur Gabrielsen (32; actually a carpenter), Henry Rød (34), Snorre Hibnes, Hagbart Våga (33), Meidel Solberg, Thorbjørn Kristiansen (31), Erling M. Hansen, Johnny Kristoffersen (31), Kristian Taranrød (33), Ole Skretteberg (30), Kristen Larsen, Henrik Andersen, Kolbjørn Sørensen, Ole Hansen (25), Sigurd Hjalmar Seeberg (60; tattoo on both hands), Carl Amandus Olafson (55; Swedish; tattoo on right arm), Anders Johnsen Dalen (32), Kåre Mathisen (27), Arne Davle, Berner S. Mjånes, Thorvald Sørensen, Monrad Hansen (23), Kåre Kristoffersen (40), Einar Horntvedt (28), Konrad A. Tenden (26), Harald Ås (33), Johan Dahl, Ole Henry Hansen (19), Aslak Neset (33), Haakon Andersen (40), Thor Johansen (27), Asbjørn K. Larsen (35; he had only two fingers on his left hand), Erik Winge (28), Jacob Naes (39), Ludvig Høien, Harry Furuhaug (23), Kristoffer Ellingsen (56; he was back sawing whales by the end of the war), Daniel Førland, Arne Jacobsen (44), Cato Landsverk (21), and Johan Johansen (25; tattoo on right arm) (workers); Per Hønnigstad (doctor; 34); Einar Bjølstad (secretary; 58); Olav Olsen Tüv (53) and Birger E. Thorsen (39) (handymen); Sigurd Haukanes (patient caretaker; 34). *See also* the *Star* whale catchers for additional crews. Some of the captured men were back whaling by 1943, and many, if not most, by the end of the war. On Oct. 24, 1944, the *Pelagos* was sunk at Kirkenes, but, after the war was refloated, and went back into service as a factory ship. She was in Antarctic waters in 1945-46, 1946-47, and 1947-48. In 1948-49 she had 11 catchers — *Gos 1, 2, 6, 7, 9, 10, 11, 12*, the *Falkland*, the *Jubarte*, and the *Baleine*. She was back every season until her last, 1961-62, and in 1962 was sold for breaking up in Germany.

Cabo Pelayo. 64°40' S, 62°12' W. A point on Pelseneer Island, between Jones Point and Garnerin Point, in the south-central portion of Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Pelecypods. Also known as Bivalvia. All bivalves, e.g. oysters and clams, belong to this class of mollusks. Found in Antarctica.

Peleg Peak. 65°51' S, 62°33' W. A rock peak, rising to 920 m, on the massif between Flask Glacier and Leppard Glacier, at the head of Scar Inlet, 6 km N of Ishmael Peak, on the Oscar II Coast, on the E coast of Graham Land. Surveyed by Fids from Base D in Sept. 1955, and named by UK-APC on Sept. 4, 1957, for the *Moby Dick* character. US-ACAN accepted the name in 1963.

Peletier Plateau. 83°55' S, 159°40' E. An ice-covered plateau, about 30 km long and 8 km wide, on the E side of Sandford Cliffs, and forming the S part of the Queen Elizabeth Range. Mapped by USGS from USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Rear Admiral Eugene Peletier, USN, of the Bureau of Yards and Docks, who assisted Admiral Dufek in the preparation of OpDF II (i.e., 1956-57).

Mount Peleus. 77°29' S, 162°05' E. A small peak, rising to 1790 m (the New Zealanders say 1900 m), about 5 km W of Mount Theseus, in the Olympus Range of Victoria Land. Named by VUWAE 1958-59, for the Thessalian king of Greek mythology. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Peleus Glacier. Unofficial American name in the 1960s for a glacier in the area of Wright Valley, close to Mount Peleus, in association with which it was named.

Pelias Bluff. 66°04' S, 61°23' W. A conspicuous rock bluff rising to over 150 m, at the head of the inlet lying immediately W of Standring Inlet, on the N coast of Jason Peninsula, S of Chapman Point, on the Oscar II Coast, on the E coast of Graham Land. Surveyed by Fids from Base D in June 1953. Named by UK-APC on Sept. 4, 1957, in association with Jason Peninsula. In Greek mythology Pelias was Jason's uncle. US-ACAN accepted the name in 1963.

Cabo Peligro *see* **Cape Danger**

Islotes Peligro *see* **Danger Islands**

Punta Peligrosa *see* **Foul Point**

Cabo Peligroso *see* **Cape Danger**

Pelishat Point. 62°28' S, 60°00' W. Forms the S extremity of Archar Peninsula, on the SW coast of Greenwich Island, in the South Shetlands, it lies 2.4 km SE of Duff Point, and 3.9 km NE of Pomorie Point (which is actually on Livingston Island). Mapped by the Bulgarians in 2009, and named by them on June 3, 2010, for the settlement of Pelishat, in northern Bulgaria.

Pelite Lake. 68°38' S, 78°25' E. A small lake in the Vestfold Hills, about 200 m in diameter, on an ice-covered moraine. There are prominent mud banks above the ice-cliffs on the W side. Named by ANCA. Pelite is a type of rock.

Bahía Pelletan. 65°06' S, 62°59' W. One of the several bays opening out into the E coast of Flandres Bay, between Bahía Wilson and Cruz Bay, and separated from Bahía Wilson by Pelletan Point. Named by the Chileans in association with the point. The Argentines call it Bahía Briand, in association with Briand Fjord.

Punta Pelletan *see* **Pelletan Point**

Pelletan Point. 65°06' S, 63°02' W. A long narrow point projecting into the head of Flandres Bay, 5 km S of Briand Fjord, on the W coast of Graham Land. Charted by FrAE 1903-05. During this expedition Charcot named this point as Pointe Bayet, after Charles Bayet (*see* **Bayet Peak**), and he named the indentations to the N and S of Pointe Bayet as one bay, Baie Pelletan, after Charles-Camille Pelletan (1846-1915), minister of the French Navy, 1902-05. The point became known as Bayet Point (in English) and as Punta Bayet (in Spanish). On Sept. 23, 1960, UK-APC decided that these two indentations did not form one feature, and transferred the name Pelletan to the point between them, and left the two actual indentations nameless. US-ACAN followed suit in 1965. Much later, the N one of the nameless bays was named Bahía Wilson by the Chileans, and they called the S one Bahía Pelletan (the Argentines call it Bahía Briand). The Argentines now call the point Punta Pelletan, but the Chileans still call it Punta Bayet.

Île Pelseneer *see* **Pelseneer Island**

Isla Pelseneer *see* **Pelseneer Island**

Pelseneer Island. 64°39' S, 62°13' W. An island, 3 km long and 1.5 km wide, with 3 prominent rocky peaks projecting through its ice-cap, 3 km W of Brooklyn Island, between Jones Point and Garnerin Point, about 10 km S of Delaite Island, in the south-central part of Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Cabo Pelayo is a point on this island. Discovered and roughly charted on Feb. 7, 1898, by BelgAE 1897-99, and named by de Gerlache as Île Pelseneer, for Belgian zoologist Prof. Paul Pelseneer (1863-1945), of Ghent, a member of the *Belgica* commission, and writer of some of the zoological reports of the expedition. On Dr. Frederick Cook's 1900 English language version of the expedition's maps it appears as Pelseneer Island, and that name was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The Argentines call it Isla Pelseneer.

Pelter, Joseph Arnold. b. March 1, 1908, Staunton, Va., but grew up in Bland, Va., son of quarry laborer Early Pelter and his wife Ida. He joined the U.S. Navy, as a photographer, and in the 1930s was stationed in Pensacola. He married Grace. He was aerial photographer on the shore party of ByrdAE 1933-35. On March 16, 1934, just after the winter-over at Little America had begun, his appendix was removed by Dr. Potaka. Not long after he got back to the States, he had a son named Joseph Byrd Pelter (who would become a staff sergeant in the Army and die in a plane crash in 1973, aged 37). The Antarctican Pelter died in Pensacola in Aug. 1969.

Pelter Glacier. 71°52' S, 98°20' W. About 8 km long, it flows from the E side of Noville Peninsula, into the W side of Murphy Inlet, on Thurston Island. Delineated from VX-6 air photos taken in Jan. 1960. Named by US-ACAN in 1960, for Joseph Pelter.

Canal Peltier *see* **Peltier Channel**

Chenal (de) Peltier *see* **Peltier Channel**

Détroit Peltier *see* **Peltier Channel**

Estrecho Peltier *see* **Peltier Channel**

Peltier, Évariste-Guinolet. b. July 15, 1816, Croisic, France. Ordinary seaman on the *Zélée* during FrAE 1837-40. He ran at Talcahuano, Chile, on May 17, 1838.

Peltier Channel. 64°52' S, 63°32' W. An elbow-shaped channel (or a channel resembling the figure "7"), 10 km long in a NE-SW direction, it separates Doumer Island from Wiencke Island, to the S of Port Lockroy, in the Palmer Archipelago. It is entered from the N between Damoy Point and Gautier Point, and from the S between Py Point and Cape Errera. Lecointe's 1903 chart of BelgAE 1897-99 suggests that it was discovered in Feb. 1898, during de Gerlache's expedition. It was definitely discovered and charted by FrAE 1903-05, and named by Charcot as Chenal Peltier, for Jean-Charles-Athanase Peltier (1785-1845), French physicist. It appears as such on Charcot's map of 1906. On the maps prepared by FrAE 1908-10 (also led by Charcot), it appears as both Chenal Peltier and Chenal de Peltier. It appears on a 1921 British chart as Peltier Channel. It was re-surveyed by the Discovery Investigations in 1927, and appears as Peltier Channel on their 1929 chart. Olaf Holtedahl charted it as Peltier Sound in 1929, and on a 1937 French chart it appears as Détroit Peltier. In 1944 it was re-surveyed by Operation Tabarin personnel from Port Lockroy Station. It appears on a 1947 Chilean chart as Canal Peltier, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. However, there was a (fleeting) 1955 reference to it as Estrecho Peltier. It appears as Peltier Channel on a 1947 British chart, and that was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a 1958 British chart.

Punta Pelusa. 63°19' S, 57°55' W. One of several little points in Covadonga Harbor named by the Chileans, on the E coast of Kopaitic Island, in the Duroch Islands, off Cape Legoupil, Trinity Peninsula.

Pemmican *see* **Food**

Pemmican Bluff. 73°31' S, 94°22' W. A short, but prominent, rock bluff with a steep rock N face, and a sloping snow S slope, it overlooks the W side of the upper section of Basecamp Valley, just W of Pillsbury Tower, in the Jones Mountains. So named by the University of Minnesota Jones Mountains Party of 1960-61, because the bluff is composed of complex volcanic rocks, giving the N face a very mottled appearance, similar to pemmican. US-ACAN accepted the name in 1963.

Pemmican Step. 72°00' S, 167°33' E. A step-like rise in the level of Tucker Glacier (the second of the steps on this glacier), above its junction with Leander Glacier, in Victoria Land. It is very crevassed in its southern half, but toward the N end traveling is easier going. Named by NZGSAE 1957-58. NZ-APC accepted the name, and US-ACAN followed suit in 1970. *See also* **Biscuit Step** and **Chocolate Step**.

The *Pen Duick III*. A 13.5-ton, 17.45-meter French yacht, designed by French former naval officer and distance record-setting sailor Éric Tabarly (b. July 24, 1931), and built in 1967. Skippered by Mons. Tabarly, she visited the South Shetlands and the Antarctic Peninsula in 1997-98. On June 14, 1998, off the coast of Wales, Tabarly was knocked from the boat. His body was found 5 weeks later.

Punta Peña. 63°37' S, 59°50' W. A point marking the southernmost end of Tower Island, in the Palmer Archipelago. It overlooks Zigzag Island to the south. Named by the Argentines.

Bukhta Penal *see* **Penal Bay**

Penal Bay. 66°02' S, 100°47' E. In the Bunger Hills, it runs to the W of Edisto Channel, and is bounded to the S by Currituck Island, to the W by the Shackleton Ice Shelf, and to the N by Dieglman Island. Charted by SovAE 1956 in 66°02' S, 100°40' W. Named Bukhta Penal by the Russians. The name was translated by the Australians, who also re-plotted it.

Penance Pass. 78°04' S, 163°51' E. The lowest and most easterly of the passes from Shangri-la to Miers Valley, in southern Victoria Land. Named by VUWAE 1960-61. NZ-APC accepted the name, and US-ACAN followed suit in 1974.

Punta Peñascos *see* **Punta Leech**

Mount Pénaud. 64°06' S, 60°52' W. Rising to about 1050 m, ESE of Cape Sterneck, on the Danco Coast, on the W coast of Graham Land. Roughly charted by Foster in Jan. 1829, during the *Chanticleer* Expedition of 1828-31, and named by him as Mount Herschel, for Sir John Herschel (*see* **Mount Herschel** and **Cape Sterneck**). It appears as such on the expedition charts, and also on a 1901 British chart. On a 1917 chart, the name was incorrectly applied to a feature in the S part of Trinity Island, as it was also on Capt. Johannessen's chart of 1919-20. On Irízar's 1903 Argentine map it appears as Monte Herschel; as Mont Herschel on Charcot's map of 1912 (reflecting FrAE 1908-10), and as Mount Herschel on a 1943 U.S. Hydrographic Office chart. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Alphonse Pénaud (1850-1880), French aircraft designer in the 1870s. The Chileans call it Monte Barrera. US-ACAN has noticeably shied away from this feature.

Cerro Penca *see* **Penca Hill**

Penca Hill. 62°36' S, 61°07' W. A prominent hill rising to about 200 m, at the base of Ray Promontory, on Byers Peninsula, at the extreme W of Livingston Island, in the South Shetlands. The Chileans did field work here, and called it Cerro Penca. It appears as such in their 1971 report. The name was translated as Penca Hill in 1972. Further geological work was carried out here by BAS in 1975-76. The name Penca Hill was accepted by UK-APC on Feb. 7, 1978, and US-ACAN followed suit. It appears as such in the 1980 British gazetteer. There are some guesses as to the reason for this name, but no one knows for sure, and none of the guesses make much sense without further information. Last plotted by the UK, in late 2008.

Cape Penck. 66°44' S, 87°55' E. An ice-covered point fronting the West Ice Shelf, about 56 km (the Australians say about 67 km) WNW of Gaussberg, it separates Princess Elizabeth Land (more specifically the Leopold and Astrid Coast) from the Wilhelm II Coast. Roughly charted by the Western Base Party of AAE 1911-14, and named by Mawson for Albrecht Penck (1858-1945), noted German geographer and authority on the ice ages. US-ACAN accepted the name in 1947, and ANCA followed suit. Originally plotted in 66°42' S, 87°43' E, it was replotted by the Australians in late 2008.

[1]Penck Glacier *see* **Albrecht Penck Glacier**

[2]Penck Glacier. 77°57' S, 34°42' W. A small glacier flowing northward along the W side of Bertrab Glacier, to Vahsel Bay. Discovered by GermAE 1911-12, who plotted it in 77°53' S, 34°48' W, and named by Filchner as Penckgletscher, for Albrecht Penck (*see* **Cape Penck**). It was later re-plotted, and UK-APC accepted the name Penck Glacier, on Dec. 19, 1981. US-ACAN followed suit.

Penck Ledge. 73°03' S, 4°18' W. A mainly ice-covered ledge (the Norwegians describe this feature as small nunataks) at the W side of the head of Penck Trough, between that trough and Ritscher Upland, S of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Pencksøkkrabbane, in association with the trough. US-ACAN accepted the translated name Penck Ledge in 1966.

Penck-Mulde *see* **Penck Trough**

Penck Trough. 73°00' S, 2°45' W. A broad, ice-filled valley, trending SW-NE for 100 km or so between the Borg Massif and the NE part of the Kirwan Escarpment, in the easternmost part of Maudheimvidda, in Queen Maud Land. Discovered by GermAE 1938-39, and named by Ritscher as Penck-Mulde, for Albrecht Penck (*see* **Cape Penck**). Ritscher's maps incorrectly have it running N-S, but it was correctly mapped by NBSAE 1949-52. US-ACAN accepted the name Penck Trough in 1947. The Norwegians call it Pencksøkket.

Penckgletscher *see* **[2]Penck Glacier**

Pencksøkket *see* **Penck Trough**

Pencksøkkrabbane *see* **Penck Ledge**

Pendant Lake. 68°28' S, 78°14' E. A small lake, shaped like a pendant, with a maximum depth of 21 m. The water is fresh on top, salty underneath, and with a great deal of biological activity. It is one of only 3 lakes in the Vestfold Hills to sport the copepod *Paralabidocera antarctica*. Named by ANCA on Oct. 18, 1979.

Pendant Ridge. 85°04' S, 174°45' W. About 5 km long, it extends SW to the N side of the mouth of McGregor Glacier, 2.5 km NW of Simplicity Hill, in the Queen Maud Mountains. So named by the Texas Tech Shackleton Glacier expedition of 1964-65, because a pyramidal peak at its S extremity looks as if it is dangling from the ridge like a pendant. US-ACAN accepted the name in 1966.

Penderecki Glacier. 62°11' S, 58°17' W. Between Vauréal Peak and Harnasie Hill, at the junction of Admiralty Bay and Bransfield Strait, King George Island, in the South Shetlands. Named by the Poles in 1980, for Krzysztof Penderecki (b. 1933), Polish composer.

Baie Pendleton *see* **Crystal Sound, Pendleton Strait**

Estrecho Pendleton *see* **Pendleton Strait**

Isla Pendleton *see* **Larrouy Island**

Pendleton, Benjamin. b. 1797, Stonington, Connecticut sealer who commanded 3 major expeditions to the South Shetlands: the Fanning-Pendleton Sealing expeditions of 1820-21 and 1821-22 (he was skipper of the *Frederick*), and the Palmer-Pendleton Expedition of 1829-30.

Pendleton, Harris. b. 1783. Commanded the *Hero* during the Fanning-Pendleton Sealing Expedition of 1821-23.

Pendleton, Jonathan. b. 1794. 1st mate on the *Frederick*, for the 2nd part of the Fanning-Pendleton Sealing Expedition of 1820-22. In 1827 he skippered the *Alabama Packet* into the Pacific.

Pendleton, William. b. 1796. From New London, Conn. He was 1st mate on the *Alabama Packet*, in the South Shetlands for the 1820-21 season, and was still sailing in 1852-53, as skipper of the *Sarah E. Spear*, in the South Shetlands.

Pendleton Island *see* **Tower Island**

Pendleton Strait. 66°00' S, 66°30' W. Running NW-SE between Extension Reef and Rabot Island to the NE and Lavoisier Island to the SW, in the Biscoe Islands. In Feb. 1832, when Biscoe discovered it, he was under the impression that Palmer had discovered it in Jan. 1821, in the *Hero* (there is no evidence for this), and so he named it Pendleton Bay, for Ben Pendleton, leader of the fleet that the *Hero* had been part of. It appears as such on Balch's map of 1902. It was resurveyed on Jan. 13, 1909, by FrAE 1908-10, and charted by them as Baie Pendleton. It seems to have first been defined correctly as a strait on a British chart of 1934. Who made this chart up, we do not know. The date may be an errror, because BGLE 1934-37 did survey it in Feb. 1936, as Pendleton Strait. It also appears as Pendleton Strait on a British chart of 1940. There is a 1940 reference to it as Burdick Channel, named after Stanton Burdick, and, on a 1943 U.S. Hydrographic Office chart it appears as "Burdick Channel (Pendleton Strait)." On Chilean charts of 1947 it appears variously as Canal Burdick, Estrecho Burdick, and Estrecho Pendleton. US-ACAN accepted the name Pendleton Strait in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a 1961 British chart. It was photographed aerially by FIDASE in 1956-57. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Estrecho Pendleton.

Mount Pendragon. 61°16' S, 55°14' W. Also called The Fortress. Rising to 975 m (the Chileans say 410 m), 2.5 km NW of Cape Lookout, it is the highest mountain on Elephant Island (it stands at the extreme S of the island), in the South Shetlands. Charted by ArgAE 1956-57 as Monte Blanco, "the only peak in the area permanently covered by snow in summer." It appears as such on a 1962 Chilean chart, and was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Surveyed and mapped by the British Joint Services

Expedition of 1970–71, and renamed by the UK on Nov. 3, 1971 for Prince Charles, the patron of the expedition (Pendragon is the ancient title for a British or Welsh prince). US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer. Last plotted by the UK, in late 2008.

Col du Pendu *see under* **D**

Caleta Péndulo *see* **Pendulum Cove**

Rada Péndulo *see* **Pendulum Cove**

Péndulo Refugio. 62°56' S, 60°36' W. Argentine refuge hut opened (as Refugio Naval Caleta Péndulo; also known as Bahía Péndulo Refugio, and Bahía Teléfono Refugio) on Nov. 19, 1947, in Telefon Bay, Deception Island, by ArgAE 1948–49. The name was shortened on April 4, 1949, to Péndulo Refugio, an inevitable process that had been taking place informally, anyway. It was dismantled in 1950. In Dec. 1953, the Argentines built their second Lasala refugio here.

Pendulum Cove. 62°56' S, 60°36' W. On the NE side of Port Foster, Deception Island, in the South Shetlands. Discovered and named in 1828–29, by Henry Foster, who was here to conduct pendulum studies in an effort to measure gravity forces during the *Chanticleer* Expedition of 1828–31. It appears on his and Kendall's rough 1829 chart from that expedition, and on the expedition's 1831 map. It also appears on a 1901 British chart. In Dec. 1908, FrAE 1908–10 found a board fixed to two uprights on the beach. On the board was scrawled the words "Sobraon Harbour," indicating that this cove was used as a whaling station by the *Sobraon*. The date of the board could be anywhere between the 1907–08 season (the *Sobraon*'s first in Antarctica) and the 1912–13 season (her last). US-ACAN accepted the name Pendulum Cove in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on an Argentine chart of 1944 as Caleta Péndulo, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. There is a 1958 reference to the anchorage itself as Rada Péndulo. One can swim here in the natural sulfur hot springs. *See also* **Gouvernøren Harbor**, for more on the *Sobraon*'s use of inlets.

Penelope Point. 71°30' S, 169°47' E. A bold rock headland between Nielsen Glacier and Scott Keltie Glacier, on the S shore of Robertson Bay, on the N coast of Victoria Land. First surveyed and charted in 1911, by Campbell's Northern Party during BAE 1910–13, and named by them for Lt. Harry Pennell (his nickname was "Penelope"). US-ACAN accepted the name, and NZ-APC followed suit.

Peneplain Peak. 83°51' S, 167°02' E. Rising to 2650 m, midway along Hampton Ridge, which lies between Montgomerie Glacier and Mackellar Glacier, in the Queen Alexandra Range. Named by the Ohio State University Geological Party of 1967–68 for the excellent exposure of the Kukri Peneplain, an ancient erosion surface, present on this peak. US-ACAN accepted the name in 1970.

Punta Penfold *see* **Penfold Point**

Penfold, David Neil. b. Sept. 4, 1913, Kent, son of Capt. Lewis Dudley Penfold, RN, and his wife Evelyn Mary Slader. He joined the Royal Navy in 1934, and on May 21, 1938, at Bromley, Kent, married Kathleen Margaret "Peggy" Rogers, 7 weeks after he had been promoted to lieutenant. Mrs. Penfold was also known as "Kat" (*see* **Petes Pillar** for more on her). He served as a lieutenant throughout World War II, and was a lieutenant commander and hydrographic officer who led the first three RN Hydrographic Survey units on the *John Biscoe* at Deception Island, Port Lockroy, and Wiencke Island, 1948–49, 1949–50, and 1951–52. He retired in 1967 and served for 9 years in the Hydrographic Office in the Ministry of Defence. He died on April 20, 1991, in Chichester, Sussex. *See also* **Mount Kirkwood**, and **Låvebrua Island**.

Penfold Point. 62°59' S, 60°35' W. Forms the NW side of the entrance to Whalers Bay, Deception Island, in the South Shetlands. Surveyed by an RN Hydrographic Survey unit in 1948–49, led by Lt. Cdr. David Penfold, and named by them for Penfold. It appears as such on their 1949 chart. UK-APC accepted the name on Nov. 15, 1951, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Punta Baja (i.e., "low point") and on a 1953 Chilean chart as Punta Penfold, which was the name accepted by the 1974 Chilean gazetteer. The Argentines still call it Punta Baja.

Pengin Dai *see* **Penguin Heights**

Pengin Dani. 68°34' S, 41°01' E. A north-facing valley with a penguin rookery, in Omeganisi-iwa, Cape Omega, on the Prince Olav Coast of Queen Maud Land. Named by the Japanese on March 22, 1979 (the name means "penguin valley").

Penglai Bandao. 69°22' S, 76°15' E. A peninsula in the Larsemann Hills. Named by the Chinese.

The *Penguin*. Stonington, Conn., sealing schooner of 84 tons, owned by Ephraim Williams. In 1827–29 she was in the Falkland Islands and Staten Island, under the command of Alex Palmer. Phineas Wilcox was the mate. Although she did not go to Antarctica in that time, she took in 4000 seal skins, which, at auction in Stonington, brought $19,000. During that trip, in the Falklands, she met up with the *Chanticleer*. She went to the South Shetlands on her own expedition in 1829–31, but teamed up with the *Annawan*, and became an unofficial part of the Palmer-Pendleton Expedition of 1829–31, which did go into Antarctic waters. She had a crew of 16. Alex Palmer was again captain, and Phineas Wilcox was first mate.

Isla Penguin *see* **Penguin Island**

Volcán Penguin *see* **Deacon Peak**

Penguin Automatic Weather Station. 74°20' S, 165°08' E. An Italian AWS, installed in Jan. 1990, at an elevation of 30 m, on Edmonson Point, below Mount Melbourne, along the W side of Wood Bay, in Victoria Land, and still operating in 2009.

Penguin Beach. 76°07' S, 168°20' E. On Franklin Island, in the Ross Sea, 130 km E of Victoria Land. A party from BNAE 1901–04 landed here on Jan. 4, 1904, to collect eggs and geological specimens, and they named it for the Adélie penguin rookery here at that time. The name appears in the 1958 NZ provisional gazetteer.

Penguin Bight. 64°16' S, 56°39' W. A bight on the SE coast of Seymour Island, northward of Penguin Point, and 6 km S of the extreme N point of the island. SwedAE 1901–04 named it Pinguinbucht (i.e., "penguin bay") for the large penguin rookery they found here, and it appears as such on Nordenskjöld's 1904 map. One can drop anchor 2.5 km from the coast. It appears as Penguin Bay on British charts of 1933 and 1948, and on a 1953 Argentine chart as Bahía Pingüino. However, after a survey by Fids from Base D in Sept. 1952, it was determined that the coast NE of Penguin Point is so slightly indented as not to need a name (i.e., there is no bay here worthy of the name). So, the name was discontinued. Notwithstanding this decision, it appears on a Chilean chart of 1962 as Fondeadero Pingüino, and that was the name accepted by the Chilean gazetteer of 1974. The Argentine gazetteer of 1970 accepted the name Bahía Pingüino. A 1988 map shows a significant indentation here (in contrast to the 1952 FIDS findings), and so the feature was reactivated by UK-APC on May 13, 1991, the term bight being considered more appropriate than "bay." US-ACAN followed suit with the naming.

Penguin Heights. 68°08' S, 42°38' E. A relatively low, rocky coastal hill with a penguin rookery, 1.5 km SW of Cape Hinode, on the coast of Queen Maud Land. Mapped from air photos taken by JARE in 1962, and by ground surveys conducted by JARE in 1973 and 1974. Named on Nov. 22, 1973, by the Japanese, as Pengin Dai (i.e., "penguin heights"). The USA accepted the translated name in 1975.

Penguin Highway. 60°44' S, 45°35' W. A flat area that runs in a NE–SW direction across Gourlay Peninsula from Fur Seal Cove to the E side of Caloplaca Cove, on Signy Island. Used by the penguins as a traverse route, it also forms the boundary between the penguin colonies and the habitat of the fur seals. Surveyed by FIDS between 1947 and 1950, and photographed aerially by the Royal Navy in 1968. Named descriptively by UK-APC on Sept. 29, 2004.

[1]**Penguin Island**. 62°06' S, 57°56' W. An island, 1.5 km long, close offshore, SE of Turret Point (on the S coast of King George Island), it marks the E side of the entrance to King George Bay, between that bay and Sherratt Bay, in the South Shetlands. It rises to the young volcanic crater of Deacon Peak. Discovered and roughly charted by Bransfield on Jan. 22, 1820, and named by him for the penguins seen on the shores of the island. When the men landed for water, the penguins attacked them. It appears on Bransfield's 1820 chart, as both Penguin Island and Penguins Island. Ben Pendleton's log of Nov. 23, 1821, has it as Pinguin Island, and

Powell's 1822 chart shows it as Penguin Isle. It is Penguin Island on British charts of 1822 and 1838. On Weddell's 1825 chart it appears as Georges Island, named in association with King George Bay. The 1838 map drawn up by FrAE 1837-40 shows it as Île Penguin, and an 1861 Spanish chart has it as Isla Penguin, while Friederichsen's 1895 German map shows it as Penguin Insel. Charcot's 1912 map has it as Île Pingouin. It was re-surveyed by the Discovery Investigations in 1937, when a landing was made for astronomical observations on Jan. 12 of that year. On an Argentine chart of 1946 it appears as Isla Pingüino. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer, and on a British chart of 1962. On an Argentine chart of 1953 it appears as Islote Penguin, but the name accepted by the 1970 Argentine gazetteer was Isla Pingüino. The 1974 Chilean gazetteer accepted the name Isla Penguin. Last plotted by the UK, in late 2008.

[2]**Penguin Island** *see* **Afuera Islands**, **Pingvin Island**

Penguin Isle *see* [1]**Penguin Island**

Penguin Knob. 67°00' S, 142°40' E. A low hill, immediately S of Cape Denison, on the E side of the entrance to Boat Harbour, and about 460 m N of the Main Hut used by Mawson during AAE 1911-14. Named by Mawson, it appears on the expedition maps. ANCA accepted the name on March 7, 1991.

Penguin Lagoon. 74°54' S, 163°44' E. A lagoon measuring 200 m by 120 m, with seasonal ice covering, 500 m S of the notorious snow cave inhabited by Campbell's Northern Party during BAE 1910-13, on Inexpressible Island, near the penguin rookery, hence the name given by Vittorio Libera during ItAE 1988-89. Italy accepted the name on July 17, 1997.

[1]**Penguin Point**. 60°31' S, 45°56' W. It forms the NW extremity of Coronation Island, as well as the NW entrance point of Tønsberg Cove, in the South Orkneys. Discovered on Dec. 7, 1821, by Powell and Palmer, and charted by Powell, who named it for the penguins here. Actually Powell applied the name to the N extremity of the Governor Islands, which lie off this point, and, as such, it appears on his chart published in 1822, and also on a British chart of 1839, as well as on Friederichsen's 1895 German map (as Cap Penguin) and on Petter Sørlle's chart of 1913 (he had surveyed it in 1912). On Sørlle's 1930 chart it appears as Penguin Pynten (which means the same thing). On an Argentine map of 1908 it appears as Punta Pingüin. Re-surveyed by the Discovery Investigations in 1933, it appears on their 1934 chart as Powell had charted it. On a 1946 Argentine chart the name Punta Pingüino refers to the feature as we know it today, and on a 1947 Argentine chart this same feature is shown as Punta Pinguina. On a 1947 French chart the name Pointe Foca refers to the N point of the Governor Islands. For the feature that we know today, US-ACAN accepted the name Penguin Point in 1947, and that name appears on a British chart of 1948, and was also the name accepted by UK-APC on Nov. 21, 1949. It appears as such in the 1955 Britsh gazetteer. It was surveyed by Fids from Signy Island Station between 1956 and 1958. The Argentine gazetteer of 1970 accepted the name Punta Pingüino.

[2]**Penguin Point**. 64°19' S, 56°43' W. A point located centrally along the SE coast of Seymour Island, SE of James Ross Island, at the S margin of Erebus and Terror Gulf. Seen by Ross in 1843. Carl Anton Larsen landed on the island in 1892 and again in Nov. 1893, when he roughly charted this point. It appears on his 1894 chart as Cap Seymour, named in association with the island, and it appears as such on Friederichsen's 1895 German map. SwedAE 1901-04 re-charted it in Jan. 1902, and renamed it Pinguinenkap, for the large penguin colony found here. Surveyed by Fids from Base D in 1946 and 1952. UK-APC accepted the name Penguin Point on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears as such in the 1955 British gazetteer, and in the 1956 American gazetteer (after they had rejected the proposed Penguinenkap). The Argentines call it Punta Pingüino.

[3]**Penguin Point**. 67°39' S, 146°12' E. A granite point, rising to 97 m above sea level, at the W side of the entrance to Murphy Bay, on the coast of George V Land, it marks the termination of a granite wall about 5 km long. Discovered and named in 1912 by Cecil Madigan's Eastern Coastal Party during AAE 1911-14. US-ACAN accepted the name, and ANCA followed suit. Penguin Point Automatic Weather Station was installed here by the Americans in Dec. 1992, at an elevation of 30 m. It was removed in Jan. 2007.

Penguin Ridge. 62°09' S, 58°28' W. A rocky ridge, S of Arctowski Station, on King George Island, in the South Shetlands. Named by the Poles in 1980, for the penguin rookery on it.

Penguin Station. 70°11' S, 2°23' W. A Norwegian scientific base, built in Dec. 1958, between Blåskimen Island and Trolltunga, on the Princess Martha Coast of Queen Maud Land. It was abandoned in Jan. 1959.

Penguinenkap *see* [2]**Penguin Point**

Isla Pengüino *see* [1]**Penguin Island**

Penguins. The penguin is a bird which evolved about 40 million years ago into the family *Spheniscidae*. The primordial penguin was nearly six feet tall. In 1930, on Seymour Island, the giant fossilized penguin *Anthropornis nordenskjöldi* was discovered. It stood about 5½ feet tall, and weighed between 200 and 300 pounds. There are today between 16 and 25 species of penguin worldwide (there is no agreement among experts as to the exact number), ranging from the Antarctic to the Equator. You will read sources saying that there are 2 or 3 species only which inhabit Antarctica, but, in fact, those to be seen south of 60°S number 7, if you include the king penguin, which used to live in the South Shetlands and South Orkneys, but not any more (as Bernard Stonehouse can tell you). The others are the gentoo penguin (or jackass penguin), the chinstrap penguin, the macaroni penguin, the Adélie penguin, and (the largest and most magnificent) the emperor penguin. These birds are perfectly adapted for swimming, diving, and the cold, and feed mostly on small fish, plankton, squid, and crustaceans, but they, in turn, are prey to leopard seals, killer whales, and humans, although they basically like people. To be fair to humans, they do not massacre penguins like they used to, and even in the old days humans never killed them in the quantities in which they killed the seals (if pushed, men would kill a penguin for food, or fuel). Occasionally young penguins are food for skuas and giant petrels, which is why penguins travel in flocks. They have strong homing instincts, and can navigate by the sun. They have found their way home from 2000 miles away within a year. The sexes are generally alike in size and plumage (although, see each individual species listed herein), and the eggs, usually one or two, are brooded by both parents, who take no food during incubation. The young penguins are fed by regurgitated food. First studied by ScotNAE 1902-04, penguins in Antarctica (except for the emperor) migrate north for the winter, following the new ice boundaries. They form pebble nests in the summer (the emperor is the only one who doesn't). All species but the emperor are found elsewhere in the world, and the Adélie is the funniest and the most common. A good movie on emperors is *March of the Penguins* (q.v.).

Penhale Peak. 77°37' S, 162°47' E. A peak rising to about 1600 m directly N of the W end of Lake Hoare, 1.3 km E of Mount Torii, on the N wall of Taylor Valley, in Victoria Land. Named by US-ACAN in 1997, for Polly A. Penhale, program manager for polar biology and medicine, at the NSF's Office of Polar Programs, from 1986. NZ-APC accepted the name.

Penitent Peak. 67°52' S, 67°14' W. Rising to 825 m, between Mount Breaker and Ryan Peak, SE of Lystad Bay, on Horseshoe Island, on the Fallières Coast, on the W coast of Graham Land. Surveyed by FIDS between 1955 and 1957, and named by them for the snow penitents which are a characteristic feature in the vicinity of this peak. It was first climbed in 1956. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. The Argentines call it Pico Penitente.

Pico Penitente *see* **Penitent Peak**

Penn Tarn. 77°35' S, 163°06' E. About 150 m N of Princeton Tarn, in the SW part of Tarn Valley, in Victoria Land. It is one of 4 tarns in the valley named by VUWAE 1965-66, for U.S. universities. This one was named after the University of Pennsylvania. NZ-APC accepted the name, and US-ACAN followed suit in 1997.

Pennell, Harry Lewin Lee. b. Dec. 1882, Kingsthorpe, Northants, son of Lt. Col. Reginald Pennell and his wife Jessie Clara Holland. In 1898 he entered the Royal Navy on the cadet ship *Britannia*, was a midshipman on the *Goliath* during the Third China War, and was promoted to lieutenant in 1903. He was commander of the *Terra Nova* during BAE 1910-13, which was Scott's last trip south (or anywhere, for that matter). As Scott wrote, "Pennell is truly excellent

in his present position. He is invariably cheerful, unceasingly watchful, and continuously ready for emergencies. I have come to possess implicit confidence in him." After leaving Scott at Ross Island, Penny (or Penelope, or Pennylope, as he was nicknamed by his men) did oceanographic studies in the Ross Sea, and explored large sections of Victoria Land and Oates Land. On his return to England, in 1913, he was promoted to commander, and transferred to the *Duke of Edinburgh*. On April 13, 1915, at Stow-on-Wold, Glos, he married Catherine Mary Maskew Hodson. He was killed on the *Queen Mary* in the famous naval battle of Jutland, on May 31, 1916.

Pennell Bank. 74°00' S, 177°00' E. A submarine feature, trending N-W, on the continental shelf in the E part of the Ross Sea. Thought to be a vast terminal moraine (*see* **Moraines**) or ridge of glacier-deposited material, it was possibly the extent of the Ross Sea during the ice age. Named for Lt. Harry Pennell. US-ACAN accepted the name in 1964, and NZ-APC followed suit. *See also* [2]**Scott Shoal**.

Pennell Coast. 71°00' S, 167°00' E. That portion of the coast of northern Victoria Land between (on the one hand) Cape Williams and the Lillie Glacier Tongue and (on the other) Cape Adare, with the Admiralty Mountains forming a magnificent backdrop to the coastline. Named by NZ-APC in 1961, for the discoverer of this coast — Lt. Harry Pennell. US-ACAN accepted the name in 1964.

Pennell Glacier *see* **Matusevich Glacier**

Pennell Glacier Tongue *see* **Matusevich Glacier Tongue**

Penney Bay. 66°26' S, 110°36' E. A large bay extending from Robinson Ridge to Browning Peninsula, at the E side of the Windmill Islands. First mapped from air photos taken during OpHJ 1946-47, and re-photographed aerially by ANARE in 1956, and also by SovAE 1956. Named by US-ACAN in 1963, for Richard L. "Dick" Penney, Australian ornithologist and biologist at Wilkes Station in 1959 and 1960. ANCA accepted the name. The Russians call it Zaliv Proshchal'nyj.

Penney Landing. 66°22' S, 110°28' E. The only practical landing place toward the E end of the N side of Ardery Island, in the Windmill Islands. Discovered in 1959 by Dick Penney (*see* **Penney Bay**), for whom it was named by ANCA. US-ACAN accepted the name in 1963.

Penney Ravine. 66°22' S, 110°27' E. A small ravine, 73 m long and 9 m wide, on the N side of, and just W of the center of, Ardery Island, in the Windmill Islands. Discovered in Feb. 1960 by a biological field party from Wilkes Station. Named by ANCA for Dick Penney (*see* **Penney Bay**). US-ACAN accepted the name in 1967.

Laguna Pennilea *see* **Kroner Lake**

Lake Pennilea *see* **Kroner Lake**

Penny, Thomas *see* **USEE 1838-42**

Penny Lake. 78°16' S, 163°12' E. A coin-shaped lake (hence the name) perched in moraine near the mouth of Roaring Valley, just S of Walcott Glacier, in Victoria Land. It was the site of a base camp of VUWAE 1960-61, and was named by them. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Penny Point. 80°48' S, 160°41' E. An ice-covered point on the S side of Nicholson Peninsula, it marks the N side of the entrance to Matterson Inlet, along the Ross Ice Shelf. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Lt. Cdr. Harmon Charles Penny (b. March 9, 1922, Ashtabula, O. d. Nov. 4, 2003, San Diego), USN, commander of the *Vance* from April 16, 1960 until Dec. 18, 1961, when H.J. Beyer took over. ANCA accepted the name on Aug. 27, 1975.

The *Penola*. The BGLE ship, 1934-37. A three-masted 138-ton Brittany topsail fishing schooner, 112 feet long, with a 24-foot beam, and with rather small twin-auxiliary screws and a two 50 hp Diesel engines, and with a carrying capacity of about 160 tons, she was built in 1908, of two thicknesses of 3½-inch oak planking, and was originally called the *Navaho*. Rymill bought her for £3000, re-named her for his home town in South Australia, and had her conditioned and strengthened at Messrs White's yard in Southampton, where her engines were overhauled, strong iron doubling plates were fitted on the bow, and her screws protected against ice. A great part of the space below deck was to be utilized as a hold. There was a comfortably-furnished saloon, an up-to-date galley, and a fully-equipped workshop. The deck house was to double as the captain's cabin and a chart room. Six men would sleep in the large after-cabin, and the rest in small cabins on the port side. After a delay of 10 days the *Penola* was finally commissioned in Southampton on Aug. 20, 1934, then had three days of preliminary trials, and on Aug. 30, 1934 arrived at St Katherine's Dock, in London, for loading. She finally left London on Sept. 10, 1934. Her rig was altered in the Falklands to one more suited to the ice, but her engine mounting was misaligned, thus causing problems with the small deck-auxiliary 10 hp engine once she got down south. She sank in the Firth of Clyde in 1940, following a collision.

Estrecho Penola *see* **Penola Strait**

Glacier Penola *see* **Zélée Glacier**

Isla Penola *see* **Penola Island, Petermann Island**

Islote Penola *see* **Penola Island**

Penola Island. 62°03' S, 57°54' W. A small island, about 2.7 km NE of Three Sisters Point, in Sherratt Bay, close off the S coast of King George Island, in the South Shetlands. Charted in 1937 by the personnel on the *Discovery II*, and named by them as King George Islet, in association with King George Island. However, they almost immediately changed the name to Penola Islet, for the *Penola*, the BGLE ship which helped the *Discovery II* look for a survey party stranded on King George Island in Jan. 1937. It appears that way on a British chart of 1942, and was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. It appears on an Argentine chart of 1949 as Islote Penola, but on one of their 1958 charts as Isla Penola. Islote Penola was accepted by not only the 1970 Argentine gazetteer, but also the 1974 Chilean gazetteer. On July 7, 1959, UK-APC renamed it Penola Island, and US-ACAN followed suit in 1963. However, it appears erroneously in the 1961 British gazetteer as Penola Islands. Last plotted by the UK, in late 2008.

Penola Islands *see* **Penola Island**

Penola Islet *see* **Penola Island**

Penola Strait. 65°10' S, 64°07' W. A strait, extending for 17.5 km in a NNE-SSW direction from Cape Cloos to Cape Tuxen, with an average width of 3 km, it separates the Argentine Islands, Petermann Island, and Hovgaard Island from the Graham Coast, on the W coast of Graham Land. Discovered by Dallmann in 1873-74, it is indicated on Friederichsen's 1895 German map. Traversed and roughly charted on Feb. 12, 1898, by BelgAE 1897-99. Further charted on March 10, 1936, by BGLE 1934-37, and named by them for their ship, the *Penola*. It appears on Rymill's 1938 map of that expedition, but with its N entrance between Duseberg Buttress and Petermann Island. It appears on a 1946 Argentine chart as Estrecho de Penola. On a British chart of 1948 it is incorrectly shown extending SW of Cape Tuxen. US-ACAN accepted the name in 1950, but as extending from Duseberg Buttress to Cape Tuxen, and that was how it was accepted by UK-APC on Sept. 8, 1953, and how it appears in the 1955 British gazetteer. After a re-surveying and re-charting by FIDS-RN in 1958, its present limits were described, and, as such, UK-APC accepted the feature again on July 7, 1959, with US-ACAN following suit in 1960. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Estrecho Penola (which means the same thing).

Roca Peñón *see* **Fort Point**

Penrod Nunatak. 85°35' S, 134°53' W. A nunatak, 3 km NW of Abbey Nunatak, at the W side of Reedy Glacier, just N of the mouth of Kansas Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1867, for Jack R. Penrod, Seabee builder 3rd class, carpenter, and official postal clerk at Byrd Station during the first winter-over of 1957.

Montes Pensacola *see* **Pensacola Mountains**

Pensacola Mountains. 83°45' S, 55°00' W. A large group of mountain ranges and peaks, extending over 400 km in a NE-SW direction, from 82°00' S to 85°45' S, they comprise the Argentina Range, the Forrestal Range, the Dufek Massif, the Cordiner Peaks, the Neptune Range, the Patuxent Range, the Rambo Nunataks, the Pecora Escarpment, and the Mackin Table (the highest elevation, at 2135 m). These individual components lie astride the extensive Foundation Ice Stream and Support Force Glacier, which flow northward to the Ronne Ice Shelf. Discovered and photographed aerially (at least, part of them were) on Jan. 13, 1956, during Jack Torbert's non-stop flight from McMurdo to the

Weddell Sea, and back. Named by US-ACAN in 1957, for the U.S. Naval Air Station in Pensacola, Fla., in honor of that establishment's role in training so many U.S. Navy aviators. The mountains were re-photographed aerially on Dec. 10, 1961, and again in 1963-64, by USN, surveyed from the ground by USGS in 1961-62, and again during their Pensacola Mountains Project of 1965-66, and mapped by USGS in 1967 and 1968 from all these efforts. They appear on a 1966 Argentine map as Montes Pensacola.

Penseroso Bluff. 71°04' S, 160°06' E. A prominent bluff, rising to 1945 m, surmounting the narrow N neck of the Daniels Range, 16 km NE of Mount Nero, in the Usarp Mountains. The Northern Party of NZGSAE 1963-64 reached it on a gloomy day, and the bluff appeared dark and sombre, hence the name, from Milton's *Il Penseroso* (a title meaning "the brooding one"), in antithesis to Allegro Valley, 22 km to the south. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Pensyl, Samuel *see* **USEE 1838-42**

Pentecost Cirque. 77°30' S, 160°41' E. A cirque, opening S to Wright Upper Glacier, between Hawkins Cirque and Dean Cirque, on the S side of the Olympus Range, in the McMurdo Dry Valleys, in Victoria Land. Named by US-ACAN on July 14, 2004, for John S. Pentecost, PHI helicopter pilot with USARP in 7 consecutive field seasons from the 1997-98 season on. NZ-APC accepted the name on Nov. 30, 2004.

The *Penzhina*. Soviet diesel-electric cargo ship of the icebreaker class, in Antarctic waters as part of the Soviet Antarctic expedition of 1976-78. Skipper that year was Mikhail Andreyevich Petrov.

Peoples Rocks. 64°45' S, 64°05' W. A group of small islands in Wylie Bay, NE of Norsel Point, on the coast of Anvers Island, in the Palmer Archipelago. Named by US-ACAN on Sept. 25, 1998, for Ann Peoples, who served in Antarctica in a variety of positions from 1981 to 1996. In 1986 she was the Berg Field Center manager at McMurdo. UK-APC had (apparently) already accepted the name on April 23, 1998.

The *Pep Boy's Snowman?* The Kellett autogiro, NR 2615, taken to Little America on ByrdAE 1933-35. It was the first rotary-winged aircraft to be used in Antarctica, or any polar region. It made its first flight on Sept. 1, 1934, and crashed on Sept. 30, 1934, after 10 flights and much useful service. Bill McCormick was its pilot.

Cap Pépin *see* **Cape Pépin**

Cape Pépin. 66°32' S, 138°34' E. An ice-covered cape E of Ravin Bay, between that bay and Barré Glacier, on the coast of East Antarctica. Discovered in 1840 by FrAE 1837-40, and named by Dumont d'Urville for his wife, Adèle Pépin. The area was charted in 1912-13 by AAE 1911-14, and again in 1931 by BANZARE 1929-31. US-ACAN accepted the name in 1947. Photographed aerially by OpHJ 1946-47, and delineated from these photos.

Monte Pepino. 64°08' S, 60°55' W. A peak immediately NE of Islote Silva, on the NE coast of Cierva Cove, 8 km SE of Cape Sterneck, at Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Pepper, Arthur Neville. Known as Neville. b. 1883, Hull, Yorks, son of a naval captain. After Rachel Stoner's school in Bridlington, he joined the Royal Navy, and was a midshipman on the *Morning*, during the relief of BNAE 1901-04. In 1912 he took ship from Liverpool to Sydney, and from there on to NZ. During World War II he would occasionally lecture on Antarctica, in company with Bryan O'Brien. He was a crane driver when he died on March 2, 1958, at Palmerston North Hospital, in NZ.

Pepper Peak. 83°12' S, 57°55' W. A sharp peak, rising to 940 m, 3 km N of Mount Nervo, in the Schmidt Hills of the Neptune Range, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Clifford G. Pepper (b. May 23, 1923, Tulsa. d. May 1981, Mesa, Ariz.), who, after serving in the Navy during World War II, was the hospital corpsman who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971.

Isla Pequeña *see* **Small Island**

Rocas Pequeñas *see* **Petty Rocks**

The *Pequod*. Argentine yacht, skippered by Hernán Alvárez Forn, which visited the South Shetlands during the 1987-88 season.

Pequod Glacier. 65°30' S, 62°03' W. Over 24 km long, it flows ENE into Exasperation Inlet, parallel to and just S of Melville Glacier, between Caution Point and Delusion Point on the Oscar II Coast, on the E coast of the Antarctic Peninsula. The lower reaches were surveyed by Fids from Base D in Nov. 1947, and the upper reaches in Sept. 1955. Named by UK-APC on Sept. 4, 1957, for the ship in the novel *Moby Dick*. It appears on a British chart of 1961. Further surveyed by Fids from Base D in 1961. US-ACAN accepted the name in 1963.

Per *see* **Per Rock**

Per Nunatak. 71°52' S, 7°04' E. A nunatak in the E part of Kyrkjetorget, on the E side of Jøkulkyrkja Mountain, 6 km NE of Larsen Cliffs, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Perskjeret, for Per Larsen, steward with NorAE 1956-57. US-ACAN accepted the translated name in 1967. *See also* **Larsen Cliffs**.

Per Rock. 71°17' S, 11°26' E. About 1.3 km N of Pål Rock, in the Arkticheskiy Institut Rocks, at the NW extremity of the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Per (i.e., "Peter"). *See also* **Pål Rock—Peter and Paul**, and **Oskeladden Rock**.

Per Spur. 71°19' S, 12°36' E. A rock spur marking the N extremity of the Östliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first mapped from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Persaksla, for J. Per Madsen, meteorologist with NorAE 1958-59. US-ACAN accepted the translated name in 1970. *See also* **Madsensåta**.

Caleta Peralta. 60°44' S, 44°49' W. A little cove indenting Cape Roca, between Route Point and Cape Davidson, in the NW part of Laurie Island, in the South Orkneys. Named by the Argentines.

Rocas Peralta *see* **Peralta Rocks**

Peralta Rocks. 63°16' S, 58°08' W. A group of about 8 small rocks covering an area of 6 km by 3 km, NW of the Duroch Islands, and 11 km N of Cape Ducorps, Trinity Peninsula. Roughly surveyed by ChilAE 1949-50, and named by them as Rocas Peralta, for Lt. Roberto Peralta Bell, 2nd-in-command of the *Lientur* during that expedition. They appear as such on a Chilean chart of 1951, and it was the name accepted by the Chilean gazetteer of 1974. Re-surveyed by Fids from Base D in 1960-61. UK-APC accepted the name Peralta Rocks on Feb. 12, 1964, and US-ACAN accepted that name later that year. They appear as such on a 1974 British map.

Cabo Perce *see* **Perce Point**

Cape Perce *see* **Perce Point**

Punta Perce *see* **Perce Point**

Perce, Earle Baker. b. April 10, 1910, Williams, near Springfield, Ill., son of saw mill worker William Harold (known as Harold) Perce and his wife Katie Twyman. When he was an infant, the family moved to St. Mary's Parish, La., where his father went in for farming. After a short but successful track career as a decathlete, Earle tried the Naval Academy, but it didn't work out, so he enlisted in the early 1930s, as an assistant machinist's mate 3rd class. In 1935, he was based at Pensacola (some of the time at the same time as Joe Pelter). He became a radioman 1st class, and a naval aviation pilot in 1938, and was co-pilot and radio operator at East Base during USAS 1939-41 (one of his daughters was born while he was on this expedition). After the expedition, he was stationed at the Naval Research Lab at Bellevue. Later he was on OpHJ 1946-47. In 1948, he married a second time, to Kay. By 1954 he was a lieutenant commander. He died on July 24, 1968, in Blackshear, Ga.

Perce Point. 72°08' S, 74°38' W. A low, ice-covered point, forming the NW entrance point of Couperin Bay, 20 km WNW of Berlioz Point, on the S coast of Beethoven Peninsula, and marking the NW limit of Ronne Entrance, in the extreme SW of Alexander Island. Discovered by Snow, Perce, and Carroll, on a flight from

East Base, on Dec. 22, 1940, during USAS 1939-41. The W extremity of Beethoven Peninsula was named Cape Perce, for Earle Perce, and plotted in 71°38' S, 71°25' W, and appears as such on a 1942 USAAF chart, and also on Finn Ronne's map of 1945 (reflecting USAS). It appears thus on an Argentine map of 1946, as Cabo Perce. Following aerial photography by RARE 1947-48, the name Cape Perce was re-applied to the present feature, but with the coordinates "about" 71°39' S, 76°00' W, and it appears as such in the 1956 U.S. gazetteer. It was with these coordinates, but with the name Cabo Perce, that this feature was listed in the 1974 Chilean gazetteer. However, some re-positioning had been done between 1956 and 1974, of which the Chileans were evidently unaware. In 1959-60 Searle of the FIDS, using the RARE photos, had replotted it in 72°04' S, 74°17' W, and determined it to be a point, rather than a cape, and so, in 1961, both UK-APC and US-ACAN redefined it as Perce Point, with the new (Searle) coordinates. It appears on a 1966 Argentine chart as Punta Perce. U.S. Landsat images of Jan. 1973, showed the coordinates to be 72°08' S, 74°38' W, and this new position was reflected by UK-APC in 1977.

Perch Island. 66°00' S, 65°22' W. Just off Prospect Point, it is the northernmost of the Fish Islands, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37, and surveyed by Fids from Base J in 1957. Named by UK-APC on July 7, 1959, in continuation of the fish theme. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Perched Rock. 68°35' S, 78°10' E. A conspicuous erratic dolerite boulder perched on the skyline of a ridge, 0.6 km W of Collerson Lake, on Breidnes Peninsula, in the Vestfold Hills. Named by ANCA.

Perched Rock Tarn. 68°35' S, 78°10' E. The N of two small freshwater lakes (or tarns) (the other being Station Tarn) about 0.9 km W of Collerson Lake, and about 1.5 km E of Davis Station, on Breidsnes Peninsula, in the Vestfold Hills. It marks an important turning point on the overland route between Davis Station and the Ellis Rapids. Named by ANCA for Perched Rock (see above), which is visible to the east. Note: Although the Australian gazetteer describes it as being north of Station Tarn, the very coordinates given by ANCA belie that, making it actually SE of Station Tarn.

Mont Perchot *see* **Mount Perchot**

Monte Perchot *see* **Mount Perchot**

Mount Perchot. 65°44' S, 64°10' W. Rising to 2040 m (the British say about 2050 m), it is surmounted by a prominent ridge which extends in a general N-S direction, 6 km SE of Magnier Peaks, and E of Bigo Bay, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly mapped by FrAE 1908-10, and named by Charcot as Mont Perchot, for mathematician and scientist Justin-Louis Perchot (1867-1946), who donated 70 pairs of boots to the expedition. As Charcot was returning to France, M. Perchot was beginning a two-year term in the Chamber of Deputies, as radical left member from Basses-Alpes, and in 1912 would begin an 18-year career as senator. The feature appears as Mount Perchot on a British chart of 1940, and that was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 20, 1955. It was surveyed by Fids from Base J in 1957-58. It appears on a 1947 Chilean chart as Monte Perchot, and that was the name accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974.

Perchuc Cone. 62°58' S, 60°33' W. A small, recently formed volcanic cone, piercing ice NE of Ronald Hill, Deception Island, in the South Shetlands. The gazetteers say that it was discovered in 1985, by Edward Perchuc, member of the Polish Geodynamic Expedition, yet they also say that Don Hawkes mapped it in 1961. Named by the Poles on Sept. 1, 1999. UK-APC accepted the name on March 17, 2010.

Percival, Isaac *see* **USEE 1838-42**

Monte Percy *see* **Mount Percy**

Mount Percy. 63°15' S, 55°49' W. A prominent mountain rising to 765 m, it is the highest point on Joinville Island, immediately N of Mount Alexander, near the center of the island, NW of Haddon Bay. Discovered on Dec. 30, 1842, by Ross, who named it for Rear Admiral (later Vice Admiral) Josceline Percy (1784-1856), RN, commander-in-chief at the Cape of Good Hope, 1841-46. Ross said that the mountain he saw was "to the northward terminated in two remarkable peaks," and that it rose to 1125 m. It appears on his charts of 1844 and 1847. This one (i.e., the one known today as Mount Percy) does not match that description, so this may or may not be the Mount Percy described by Ross. There are several other mountains of similar height in the area, and he may have seen two mountains as one. With Ross's descriptor, it appears on various maps and charts over the years. On a British chart of 1937, it appears misplotted in 63°16' S, 55°32' W. Fids from Base D surveyed it in Nov. 1953, and concluded that Ross's twin peaks relate not to the summit of the feature now defined, but to lower peaks or nunataks in the vicinity (this from the British gazetteer; it is odd that Ross put his twin-peaks at 1125 m high, whereas the present feature in only 765 m; so, something does not quite add up here). Photographed aerially by FIDASE in 1956-57. On Sept. 4, 1957, with the correct coordinates, UK-APC accepted the name Mount Percy for the feature we know today, and US-ACAN accepted that name in 1963. It appears as such on a British chart of 1962. The Chilean gazetteer of 1974 accepted the name Monte Percy, which is a name the Argentines also use. *See also* **d'Urville Monument**.

Percy, James A. b. Britain. In 1892 he left London for Rosario, in Argentina. He was 2nd-in-command at Órcadas Station for the winter-over of 1905, and. on Sept. 25, 1905, when base leader Otto Diebel died, Percy took over. He arrived back in Liverpool on Feb. 19, 1909, from Buenos Aires, on the *Beacon Grange*.

The *Peregrine Endeavour* *see* **The *Akademik Boris Petrov***

The *Peregrine Explorer* *see* **The *Akademik Boris Petrov***

The *Peregrine Mariner* *see* **The *Akademik Ioffe***

Peregrinus Peak. 69°09' S, 65°50' W. Also spelled Perigrinus Peak. Rising to 1915 m, along the N side of Airy Glacier, 5 km SE of Mount Timosthenes, between that mountain and Airy Glacier, on the Fallières Coast, on the W coast of Graham Land. Photographed aerially on Nov. 27, 1947, by RARE 1947-48, and surveyed by Fids from Base E in Dec. 1958. Named by UK-APC on Aug. 31, 1962, for Petrus Peregrinus de Maricourt, French crusader and the greatest experimental scientist of his time (the 13th century), who wrote the first detailed description of the compass as an instrument of navigation, in his *Epistola de Magnete* (1269). US-ACAN accepted the name later that year. Note: The names of this mountain and Mount Timosthenes were exchanged in 1974, thus giving us the situation we have today, a situation that appears on the 1979 USGS sketch map of the N part of Palmer Land.

Mys Perehodnyj *see* **Cape Perekhodnyj**

Monte Pereira *see* **Mount Quilmes**

Cape Perekhodnyj. 66°12' S, 100°26' E. In the Bunger Hills. Charted by SovAE 1956 in 66°16' S, 100°43' E, and named by them as Mys Perehodnyj. The Australians replotted it, and translated the name.

Nos Perelik *see* **Perelik Point**

[1]**Perelik Point**. 62°23' S, 59°22' W. 1.4 km NW of Kitchen Point, and 1.2 km SE of Smirnenski Point, on the E coast of Robert Island, and projecting for 900 m into Nelson Strait, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, as Nos Perelik, after Perelik Peak, in the Rhodope Mountains of southern Bulgaria. The name has been translated into English.

[2]**Perelik Point**. 62°35' S, 61°11' W. A point at Svishtov Cove, at the NE extremity of Byers Peninsula, in the NW part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Dec. 15, 2006. However, something happened to this point between the time of naming and Aug. 12, 2008, when the point on Robert Island (see the entry above) was named Perelik Point. What is most likely is that the Bulgarians, for some reason, renamed it Kardzhali Point.

Mys Peremennyj *see* **Cape Peremennyy**

Cape Peremennyy. 66°12' S, 105°24' E. An ice point on the Knox Coast of Wilkes Land, 72 km WNW of Merritt Island. First mapped in 1955 by U.S. cartographer Gard Blodgett, working from aerial photos taken by OpHJ 1946-47. Named by the USSR in 1956. Photographed aerially again in 1956 by both SovAE 1956 and ANARE. Named by that Russian expedition as Mys Peremennyj. The name means "variable," and refers to the nature of the ice coastline along the Knox Coast. US-ACAN accepted the name Cape Peremennyy in 1961, and ANCA followed suit.

Gora Perevoshchikova. 70°59' S, 67°01' E.

A nunatak, just N of Mount Beck, in the Prince Charles Mountains. Named by the Russians.

Caleta Pereyra *see* **Caleta Polizzi**

Pérez. Argentine observer, who joined the *Français* at Buenos Aires, as part of Charcot's FrAE 1903-05.

Cape Pérez. 65°24' S, 64°06' W. A prominent cape between Collins Bay and Beascochea Bay, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly charted on Feb. 13, 1898, by BelgAE 1897-99, but not named by them until they were working up their reports of the expedition, in 1901, at which point they named it Cap de Trooz (*see* **Trooz Glacier**). SwedAE 1901-04 charted it as Kap de Trooz. Meanwhile, in Nov. 1904, FrAE 1903-05 re-discovered it, and Charcot named it Cap des Trois Pérez, for the three Pérez brothers — Fernando, Leopoldo, and Manuel — of Buenos Aires, who assisted Charcot's expedition in Dec. 1903 and again in Feb. 1905. It appears as such on Charcot's 1906 map, but on another map of his that year it appears as Pointe Pérez. On a British chart of 1908 it appears as Cape des Trois Pérez. On an Argentine map of 1908 it appears as Cabo Trooz. On Charcot's 1910 map it appears as Cap des 3 Pérez. On Rymill's 1938 map (reflecting BGLE 1934-37, who re-charted it in 1935) it appears as Cape Trois Pérez, and that name also appears on a 1948 British chart. On an Argentine chart of 1946 it appears as Cabo Tres Pérez, but on one of their charts of 1947 it is Cabo de los Tres Pérez. There is also a 1947 reference to it as Cabo Pérez. In 1950, US-ACAN accepted the name Cape Pérez, and gave the name Trooz to a glacier 8 km NE of the cape (*see* **Trooz Glacier**). It appears as Cape Pérez on a British chart of 1952, and that was the name accepted by UK-APC on Jan. 28, 1953, and which appears in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by a FIDS-RN team in 1958. The Argentine gazetteer of 1970 accepted the name Cabo Tres Pérez. The Chilean gazetteer of 1974 accepted the name Cabo Trois Pérez, but today they call it Punta Trois Pérez.

Islotes Pérez. 68°31' S, 69°07' W. A small group of islets, NE of Guyer Rock, in Marguerite Bay, off the coast of the Antarctic Peninsula. Named by the Argentines.

Mount Perez. 70°00' S, 159°32' E. Rising to 1610 m, at the S side of the upper reaches of Suvorov Glacier, about 9 km S of Mount Ellery, and 10 km SW of Hornblende Bluffs, at the E end of the Wilson Hills, in Oates Land. Plotted by USGS from USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Manuel J. Perez, USN, photographer's mate, a member of the USGS Topo West survey party that established geodetic control for features between Cape Adare and the Wilson Hills, 1962-63. ANCA accepted the name on June 9, 1964. Note: The name does not need an accent mark, Mr. Perez being American.

Pointe Pérez *see* **Cape Pérez**

Punta Pérez *see* **Cape Pérez**

Perez Glacier. 84°06' S, 177°00' E. About 16 km long, it flows NE from Mount Brennan in the Hughes Range, to the Ross Ice Shelf to the E of Giovinco Ice Piedmont. Named by US-ACAN in 1966, for Ensign Richard Perez, USN, VX-6 member who wintered-over at McMurdo in 1961. He was back in Antarctica in 1963-64, for OpDF 64.

Pérez Peak. 65°25' S, 64°05' W. A distinctive peak, rising to about 535 m, 1.5 km SE of Cape Pérez, on the rugged peninsula between Collins Bay and Beascochea Bay, on the Graham Coast, on the W coast of Graham Land. Charted in 1904, by FrAE 1903-05, and again during FrAE 1908-10, and named by Charcot on one of those expeditions (probably the first one) as Sommet du Grand Pérez, in association with nearby Cap Trois Pérez (now called Cape Pérez). The name Pérez Peak, in general use since about 1957, was accepted by UK-APC on Sept. 23, 1960, and by US-ACAN in 1965.

Glaciar Pérez Rosales *see* **Gruening Glacier**

Roca Perforada *see* **Hole Rock**

Nunatak Pergamino *see* **Mount Ferrara**

Punta Periferia *see* **Rock Pile Point**

Périgot, Germain-Hector. b. Dec. 29, 1816, Devant-les-Ponts, France. Élève on the *Zélée* during FrAE 1837-40. He left sick at Valparaíso on May 29, 1838.

Perigrinus Peak *see* **Peregrinus Peak**

Rocas Periodista Serrano *see* **Cape Legoupil**

Periphery Point *see* **Rock Pile Point**

Treshchiny Peristye. 71°10' S, 16°40' E. A fissure in the ground (a "crack") in Fimbulheimen, in Queen Maud Land. Named by the Russians.

Perk Summit. 77°35' S, 162°54' E. A mountain peak, rising to 1750 m, the highest elevation on the ridge between Mount McLennan and Mount Keohane, in the Asgard Range of Victoria Land. Named by US-ACAN in 1997, for Henry Perk, chief pilot with Kenn Borek Air, in Calgary, Canada, who, from 1989, flew Twin Otters in the McMurdo Sound area, and in several remote parts of Antarctica, in support of USARP. NZ-APC accepted the name.

Mount Perkins. 76°32' S, 144°08' W. At the E end of the Fosdick Mountains, in the Ford Ranges of Marie Byrd Land. Discovered by ByrdAE 1933-35, on the Northeastern flight of Dec. 15-16, 1934, and named by Byrd for Jack Perkins. US-ACAN accepted the name in 1947.

Perkins, Anson Walker. b. Jan. 18, 1898, Chillicothe, Mo., but, almost from the time he was born, raised in Kenosha, Wisc. (hence his nickname, "Keno"), son of Wisconsin parents, retail grocer (and later insurance broker) Fred Perkins, Jr., and his wife Esther L. Walker. He fought in the Argonne with the American 32nd Division during World War I. Seaman on the *Eleanor Bolling*, during ByrdAE 1928-30. He was staying with his parents in Kenosha, when the census taker came around on the night of April 2, 1930. He is cutely listed as "explorer, Byrd Expedition." He died on Nov. 16, 1976, in Kenosha.

Perkins, Earle Bryant. b. May 21, 1901, Portland, Maine, son of tugboat captain Horace T. Perkins and his wife Edith. He graduated from Bowdoin in 1923, got his PhD from Harvard in 1927, and became assistant professor of zoology at Rutgers, which is where he was living with his widowed mother when he became zoologist on the shore party of ByrdAE 1933-35. He died on March 22, 1986, in Brunswick, Maine.

Perkins, Jack Elton "Perk." b. April 27, 1914, New Haven, Conn., but raised partly in New Orleans and Mandeville, La., son of Dr. Charles Edward Perkins and his wife Mae Dorothy Conaty. He became a biologist with the U.S. Fish and Wildlife Commission, and married Maurine Marshall. He went to Antarctica, and was at West Base during USAS 1939-41. In 1942, he was in Maine, investigating cormorants. Later, he was part of OpHJ 1946-47, leaving Norfolk on the *Mount Olympus* on Dec. 2, 1946, as his two young children, Dorothy and Charles, waved him off from the dock. He broke his ankle on this expedition. He died on Nov. 4, 1963, in Louisiana.

Perkins Canyon. 85°27' S, 124°20' W. At the head of Quonset Glacier, between Ruseski Buttress and Mount LeSchack, along the N side of the Wisconsin Range. Mapped by USGS from ground surveys, and USN air photos taken in 1959-60. Named by US-ACAN in 1962, for David M. Perkins, geomagnetist who wintered-over at Byrd Station in 1961.

Perkins Glacier. 74°54' S, 136°37' W. A broad, low-gradient glacier, 13 km SSE of Cape Burks, on the coast of Marie Byrd Land, it flows W from McDonald Heights into the E side of Hull Bay. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Earle B. Perkins.

Perks, Richard. b. 1874, Mossley Hill, Lancs, son of coachman (later called a cab driver) Benjamin Perks and his wife Jane Sherlock. The family moved to Allerton, Lancs, then into Liverpool, where Richard married in 1894, and joined the Merchant Navy in 1905, as a cook. He emigrated to NZ in 1914, and was chief cook on ships plying between Antipodean ports. He made 3 trips to Antarctica on the *Eleanor Bolling*, during ByrdAE 1928-30. His first one left Dunedin on Jan. 14, 1929, and his second on Feb. 18, 1929. On the third, leaving Dunedin on Jan. 20, 1930, he was chief cook. On July 15, 1935, at Dunedin, he signed onto the *Wairuna*, as assistant cook on the run from Wellington to San Francisco and Vancouver.

The *Perla Dan*. A 2353-ton, 75.135-meter ice-strengthened polar cargo ship, built at Pusnes Mek., Arendal, Norway, for the Lauritzen Lines (a Danish company), as a sister ship to the *Magga Dan* and the *Thala Dan*, and launched on July 31, 1958. She could travel at 12 knots and take up to 35 passengers, and was specially equipped with very good refrigeration facilities. She was used by BAS, 1966-67, 1967-68, and 1968-69 (skipper all three seasons was Anders Jacobsen), and again in 1969-70 (Capt. J. Gredsted). On Feb. 11, 1971, she was sold to Chimo Shipping,

in Newfoundland, and renamed the *Percy M. Crosbie*. In June 1977, she was laid up in St. Johns, and in 1981 was sold to Boreal Navigation, and renamed the *Baie James*. Later that year she was sold to Eastern Pearl Shipping, in Panama, and renamed the *Mothi*. In 1982 she was sold to Sri Mutiara Shipping & Trading, in Malaysia, but not renamed. In 1983 she was sold again, to an Indian buyer, and on Dec. 25, 1984, she sank at Cuddalore.

Perlebandet *see* **Perlebandet Nunataks**

Perlebandet Nunataks. 71°56' S, 23°03' E. A linear group of nunataks and crags, 12 miles long, 8 km NW of Tanngarden Peaks, in the Sør Rondane Mountains. Mapped in 1957 by Norwegian cartographers, using air photos taken during OpHJ 1946-47, and named by them as Perlebandet (i.e., "the string of pearls"). They plotted the feature in 71°52' S, 22°44' E. US-ACAN accepted the name Perlebandet Nunataks in 1966. It has since been replotted.

Perlebreen *see* **Tama Glacier**

Perleknausen *see* **Tama Point**

Permanent ice. This is the ice of the ice shelves, the glaciers and the Polar Plateau, and is relatively permanent when compared with the sea-ice, or annual ice as it is also called.

Pernic Bluff. 81°29' S, 159°30' E. An ice-covered bluff rising to 1060 m at the S end of the Kelly Plateau and the Carlstrom Foothills, in the Churchill Mountains. It rises 700 m above the terminus of Flynn Glacier, at the junction of that glacier with Starshot Glacier. Named by US-ACAN on Jan. 29, 2003, for Robert J. Pernic, electrical engineer with the University of Chicago's Henkes Observatory, at Williams Bay, Wisc., team leader for polar operations in support of CARA-wide pojects at USAP's Center for Astrophysical Research in Antarctica (i.e., CARA), at Pole Station between 1991 and 2002. NZ-APC accepted the name on Feb. 27, 2003.

Pernik Peninsula. 66°46' S, 68°12' W. An ice-covered peninsula projecting 40 km in a NW direction from the Loubet Coast, it is bounded by Darbel Bay to the NE, Lallemand Fjord to the W, and Crystal Sound to the NW, while its N part is dominated by Protector Heights, on the W coast of Graham Land. Mapped by the British in 1976. Named by the Bulgarians on Sept. 14, 2010, for the city of Pernik, in western Bulgaria.

Mont Perov *see* **Mount Perov**

Mount Perov. 72°34' S, 31°12' E. Rising to 2380 m, just W of the terminus of Norsk Polarinstitutt Glacier, in the Belgica Mountains. Discovered by BelgAE 1957-59, under Gaston de Gerlache, who named it Mont Perov, for Cdr. Viktor Perov, Soviet pilot who rescued 4 members of this Belgian expedition after their plane crashed in Dec. 1958. US-ACAN accepted the name Mount Perov in 1962.

Perov Nunataks. 67°35' S, 51°06' E. A small group of 5 nunataks extending N-S in a straight line, on the E edge of the Scott Mountains, about 30 km SE of Debenham Peak, in Enderby Land. Photographed aerially by ANARE in Oct. 1956, and surveyed in Nov. 1958 by an ANARE airborne field party. Named by ANCA on July 22, 1959, for Viktor Perov (*see* **Mount Perov**), who flew over this area during his 1958 rescue mission. US-ACAN accepted the name in 1961.

Perperek Knoll. 62°33' S, 60°08' W. Rising to 360 m in Vidin Heights, 5.7 km N of Sliven Peak, 4.4 km NE of Leslie Hill, and 2.3 km SE of Miziya Peak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the settlement of Perperek, in the Rhodope Mountains of Bulgaria (the ancient and holy Thracian town of Perperikon was here).

Perplex Ridge. 67°39' S, 67°43' W. A ridge, composed of 4 rocky masses separated by small glaciers, it runs NE-SW for 10 km at an elevation of over 915 m, from Lainez Point, N of Dalgliesh Bay, along the NW side of Pourquoi Pas Island, off the Fallières Coast, on the W coast of Graham Land. Discovered and roughly charted in 1909 by FrAE 1908-10. Roughly surveyed in 1936 by BGLE 1934-37, it appears on Rymill's 1938 map of the expedition. It was surveyed again in 1948 by Fids from Base E, who so named it because of the confusion in trying to identify this ridge from earlier maps, notably the BGLE one. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1982. The Argentines call it Cadena Confusión, which amounts to the same thing.

Bahía Perrier *see* **Perrier Bay**

Baie (E.) Perrier *see* **Perrier Bay**

Perrier Bay. 64°23' S, 63°45' W. A bay, 10 km wide (the Chileans say 5 km), indenting the NW coast of Anvers Island for 5 km between Giard Point and Quinton Point, 16 km SW of Cape Grönland, in the Palmer Archipelago. Presumably discovered by Dallmann in 1873-74. Roughly charted by FrAE 1903-05, and named by Charcot as Baie E. Perrier, or Baie Perrier, for Jean-Octave-Edmond Perrier (1844-1921; known as Edmond Perrier), French zoologist and anatomist, director of the Museum of Natural History, in Paris, and chairman of the commission publishing the scientific results of Charcot's expedition. He was also on the Comité de Patronage of FrAE 1908-10. It appears both ways on Charcot's 1906 map. On a British chart of 1908 it appears as E. Perrier Bay. On a 1911 chart drawn up during FrAE 1908-10, it appears as Baie Edmond Perrier, and plotted in 64°27' S, 63°40' W. On a 1943 U.S. Hydrographic Office chart it appears as East Perrier Bay. They thought the "E." stood for "East." On a 1943 USAAF chart it appears as Perrier Bay. On a 1947 Chilean chart it appears as Bahía E. Perrier. On a British chart of 1948 it appears as Perrier Bay, plotted in 64°27' S, 63°40' W, and that was the name (and coordinates) accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953, and how it appears in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956. The coordinates were corrected by the time of a 1961 British chart, and, with the new coordinates, the feature appears in the 1977 British gazetteer. On an Argentine chart of 1949, it appears as Bahía Perrier, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Punta Perro *see* **Canto Point**, **Nebles Point**

Perron, André. b. March 31, 1810, Leguille, France. Able seaman on the *Zélée* during FrAE 1837-40.

Perry, André. Élèves' steward on the *Astrolabe* during FrAE 1837-40. He ran at Talcahuano, Chile, on May 12, 1838.

Perry, Oliver Hazard. b. Feb. 13, 1815, Newport, RI, son of the famous commodore of the same name, i.e., the hero of Lake Erie (War of 1812), and his wife Elizabeth "Betsy" Champlin Mason. He was also the nephew of Commodore Matthew Perry. He joined the U.S. Navy, and in 1829 was warranted a midshipman. On Nov. 17, 1836, he married Lydia Poole. He was a U.S. naval lieutenant (promoted thus in 1841) on USEE 1838-42, first aboard the *Peacock*, and then on the *Vincennes*. In 1849 he resigned from the Navy.

Perry, Robin Morris. b. June 9, 1930, at Te Awamutu, near Hamilton, NZ, but returned to England as an infant, to Grange over Sands, Lancs, son of Lancashire parents, Leonard Edward Harold Perry and his wife Pauline Dickinson. The name Morris comes from his paternal grandmother. In the late 1940s he was at Trent College, with Nigel Procter. He was working for the Met Office at Aberdeen Airport when Dick Hillson came there for a crash course before going to Antarctica. This inspired Mr. Perry to join FIDS in 1957, as a meteorologist. He left Southampton on the *Shackleton*, on Oct. 1, 1957. Via Dakar, and with a flu epidemic on board, they arrived at Montevideo on Oct. 25, 1957. From there on to Port Stanley, in the Falklands, arriving on Nov. 6, 1957. He had been scheduled to winter-over at Base G, but was reassigned to Base W, and so stayed at a boarding house in Stanley, helping out at the Met Office there, until the *John Biscoe* arrived to take him south. After a stop at South Georgia, Powell Island (in the South Orkneys), and other bases, he wintered-over at Base W in 1958, and at Base Y in 1959, the second time also as base leader. He arrived back in Southampton on June 6, 1960, on the *John Biscoe*, and went back to the Met Office, this time at Stansted. He married Liliane in Dec. 1961, and in 1968 moved to Geneva, where he took up a post with the World Meteorological Organization. In 1983 he moved to Morges. He wrote a remarkable book called *Antarctic Experience 1958-60*.

Perry Bay. 66°08' S, 132°49' E. An open, ice-filled bay, about 20 km wide, indenting the coast of East Antarctica between Freeman Point and a stubby peninsula terminating in Cape Keltie. Delineated by U.S. cartographer Gard Blodgett in 1955, from air photos taken by OpHJ 1946-47. Named by US-ACAN in 1955, for O.H. Perry.

Perry Range. 75°00' S, 134°12' W. A narrow range of mountains, 10 km long, it separates the lower ends of Venzke Glacier and Berry Glacier,

where they enter the Getz Ice Shelf, on the coast of Marie Byrd Land. Discovered and photographed aerially in Dec. 1940, by members of West Base, during USAS 1939–41. Named by US-ACAN in 1974, for Lt. John E. Perry, USN, public works officer at McMurdo, in 1968. He commanded the Antarctic Construction Battalion Unit from Jan. 1969 until it was decommissioned in May 1971, when he became project manager for Pole Station.

Perry Sound *see* **Nelson Strait**

Perry's Straits *see* **Nelson Strait**

Persaksla *see* **Per Spur**

Kupol Persej. 70°10' S, 7°20' E. An ice dome on the coast of Queen Maud Land. Named by the Russians for the Russian Arctic oceanographic ship of the 1930s, the *Persey* [sic] (i.e., the *Perseus*). This may be the same feature as Kupol Sadko (q.v.).

Perseus Crags. 70°36' S, 66°11' W. A group of about 12 small nunataks rising to about 1730 m, and dominated by a high, whale-backed hill, on the W edge of the Dyer Plateau, near the Bertram Glacier, in Palmer Land, about 50 km ENE of Wade Point, at George VI Sound. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for the constellation. US-ACAN accepted the name later that year, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Perseus Peak. 79°37' S, 157°20' E. A distinct triangular peak, in bedded Beacon Sandstone, on Tentacle Ridge, NW of Medusa Peak, in the Cook Mountains. In keeping with Medusa from Greek mythology, this feature was named by US-ACAN on Nov. 27, 2000, for Perseus, the slayer of the aforementioned Gorgon. NZ-APC accepted the name on Feb. 20, 2001.

Mount Perseverance. 76°48' S, 162°12' E. The high peak near the S end of the ridge from Mount Whitcombe, overlooking the lower part of Benson Glacier, in Victoria Land. So named because it was the final station occupied by the NZ Northern Survey Party of BCTAE after a particularly long day's field work on Oct. 22, 1957. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Persienneknatten *see* **Sudare Rock**

Perskjeret *see* **Per Nuanatak**

Isla Persson *see* **Persson Island**

Persson Island. 64°12' S, 58°24' W. An almost ice-free island, 2.5 km long (the Chileans say 1.5 km), in the entrance to Röhss Bay, on the SW side of James Ross Island. It presents 2 peaks, the higher one, rising to 213 m above sea level, being the N one. Discovered and mapped in 1902, by SwedAE 1901-04, and named by Nordenskjöld as N. Perssons Ön (i.e., "N. Persson's island"), for Nils Persson (1836-1916), of Helsingborg, a consul, and a financial patron of the expedition. It appears on Charcot's 1912 map as Île Persson (he had charted it during FrAE 1908-10). It appears as Persson Island on a 1921 British chart. On a 1930 British chart it appears as Persson Islet, and on a 1949 British chart, as Persson Island, both times with the coordinates 64°12' S, 58°20' W. US-ACAN accepted the name (but with corrected coordinates) in 1952, and UK-APC followed suit on Sept. 8, 1953. It was re-surveyed by Fids from Base D between 1952 and 1954. It appears as Persson Island in the 1955 British gazetteer. The Argentines had been calling it Isla Persson from as early as 1908, and both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted this name. In 1955 the Argentines built Libertador General San Martín Refugio on the N side of the island.

Persson Islet *see* **Persson Island**

Peru. Spelled Perú in Spanish. The adjective is peruano (normally written with a small "p"). Ratified as the 25th signatory of the Antarctic Treaty, on April 10, 1981. Peru sent observers to Antarctica in 1982–83, one working with the Australians and two with the Chileans. The first Peruvian Antarctic Expedition was in Jan.–March 1988, in the *Humboldt* (*see* **Peruvian Antarctic Expeditions**). In 1989 Peru became a consultative member of the Antarctic Treaty. A Peruvian scientific station, Machu Picchu Station, was built on King George Island, in the South Shetlands. INANPE (Instituto Antártico Peruano), created in 2002 as a division of the ministry of foreign relations, guides all Peruvian activities in Antarctica.

The *Peru*. Sealing bark from New London, Conn. In the 1870–71 season, in the South Atlantic (including in at South Georgia), Robert H. Glass was her master, and a young Edwin W. Church was 3rd mate. On Aug. 17, 1871 she left New London, bound for the South Shetlands, where she sealed the 1871–72 season in company with the *Franklin*. Crew: George Gilderdale (master), Frederick H. Smith (1st mate), James W. Buddington (2nd mate), Edward Townsend (3d mate; from Glen Cove, Long Island, NY); the Germans: Loderick Jakob Isimann, Johann Rohng, Wilhelm Schlief, E. Jones [sic], Karl Denecke, Karl Hoepfner, Eugen Veith, Gottlieb Ernst, John Stecker, and Ronumus Cuney; Irishman Edmund Carroll; Englishman James Rounds; and Americans: William P. Shatwell, Ethan A. Collins, Charles Gardner, George Dewey, James M. Williams, George Thompson, Charles Pierce (an Indian, from Groton, Conn.), James McAllister, and John McHugh. *See* **King, James A.**, for a detailed history of this expedition.

Perunika Glacier. 62°36' S, 60°19' W. A roughly crescent-shaped glacier, about 8 km long, and with an average width of 2.6 km, with its head N of Mount Pliska, it flows northwestward from Pliska Ridge, between Burdick Ridge and Mount Bowles, then N of Rezen Knoll, turning WSW and flowing N of Balkan Snowfield and Bulgarian Beach, to enter the head of Emona Anchorage, at South Bay. It is bounded by Pliska Ridge to the SSW, by Wörner Gap to the E, and by Mount Bowles to the NNE, on Livingston Island, in the South Shetlands. Its heavily crevassed lower half receives ice influx from the Balkan Snowfield, and from an ice-cap portion located W of Hemus Peak and NE of Emona Anchorage. Named by the Bulgarians on Feb. 23, 1995, for the village of Perunika, in the Rhodope Mountains of Bulgaria. UK-APC accepted the name on Dec. 11, 1995, and US-ACAN followed suit in 1996. Plotted by the UK in late 2008.

Glaciar Perutz *see* **Perutz Glacier**

Perutz Glacier. 67°36' S, 66°33' W. A glacier, 16 km long and 3 km wide, flowing WNW (the British say NNE) into Bourgeois Fjord, close E of Thomson Head, on the Fallières Coast, on the W coast of Graham Land. The mouth of this glacier was first surveyed in 1936 by BGLE 1934–37, and it appears on Rymill's 1938 map of the expedition. In its upper reaches it was surveyed by Fids from Base E in 1946–47 and again in its lower reaches by Fids from Base E in 1948–49, and named by them for Austrian-born British molecular biologist Max Ferdinand Perutz (1914–2002), of the Cavendish Laboratory, Cambridge, who was an authority on glacier flow. He won the 1962 Nobel Prize for chemistry. UK-APC accepted the name on March 31, 1955, but with wrong coordinates — 66°37' S, 66°256' W. US-ACAN accepted the name (and the false coordinates) in 1956. The correct coordinates appear on a 1957 British chart, and on Sept. 4, 1957, UK-APC amended the coordinates officially. US-ACAN followed suit. The Argentines call it Glaciar Perutz.

Peruvian Antarctic Expeditions (PeruAE). The expeditions were: **PeruAE I**. 1988. Led by Alfredo Arnáiz Ambrosiani (executive director), on the *Humboldt*. It lasted from Jan. to March 1988. They studied oceanography and the ecosystem in the Bransfield Strait and conducted geomagnetic observations on King George Island, in the South Shetlands. **PeruAE II**. 1988–89. Led by Alejandro Martínez Frisancho, on the *Humboldt*. The Peruvian Army established Machu Picchu Station, at Admiralty Bay. The *Humboldt* ran aground on Feb. 27, 1989, while conducting oceanographic work in the Bransfield Strait. **PeruAE III**. 1990–91. Led by Guillermo Devoto Elías, on the *Humboldt*. The team continued the oceanographic work in the Bransfield Strait. Machu Picchu Station was opened in Jan.–Feb. 1991. **PeruAE IV**. 1992–93. The team, led by Rear Admiral Jorge Brousset Barrios, was flown down to Antarctica. **PeruAE V**. 1993–94. Again, Adm. Barrios led the expedition, and again it was flown in. **PeruAE VI**. 1994–95. Again, Adm. Barrios led the expedition, and again it was flown in. **PeruAE VII**. 1995–96. The expedition, led by Pedro Noriega Quiñones, was flown in. **PeruAE VIII. 1996–97**. Carlos Roberto Carrillo Riechof led the expedition, which was flown in. **PeruAE IX**. 1997–98. Rear Admiral Rafael Calizaya Cresspi led the expedition, which came in on the *Humboldt*. **PeruAE X**. 1998–99. The ship was the *Humboldt*. **PeruAE XI**. 1999–2000. Juan Patiño Albuja led the expedition, on the *Humboldt*. **PeruAE XII**. 2000–01. The *Humboldt*. **PeruAE XIII**. 20001–02. The *Humboldt*. **PeruAE XIV**. 2002–03. The *Humboldt*. **PeruAE XV**. 2003–04. The *Humboldt*. **PeruAE XVI**. 2005–06. The *Humboldt*. **PeruAE XVII**. 2006–07. The *Humboldt*. **PeruAE XVIII**. 2007–08. The *Humboldt*.

Gora Pervomajskaja *see* **Pervomayskaya Peak**

Pervomajskajaberget *see* **Pervomayskaya Peak**

Pervomayskaya Peak. 71°47' S, 11°40' E. Rising to 2795 m, 1.5 km NE of Mount Skarshovden, in the mountain ridge the Norwegians call Kvamsbrotet, in the central portion of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first mapped from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1961-62, and named by the Russians in 1966, as Gora Pervomajskaja (i.e., "May 1st mountain"). US-ACAN accepted the translated name in 1970. The Norwegians translated it as Pervomajskajaberget.

Isla Pescado *see* **Fish Islands**

The *Pescapuerta IV*. Name also seen as *Pescapuerta Cuarto* (which means the same thing). Spanish Fisheries vessel, 1627 tons, 73.80 m long, which, along with the *Nuevo Alcocero*, took down a Spanish expedition to Antarctica in 1986-87. She could take 50 persons, 23 crew and 17 passengers.

Pesce Peninsula. 71°38' S, 75°00' W. A broad, snow-covered peninsula, between Rameau Inlet and Verdi Inlet, on the N side of Beethoven Peninsula, Alexander Island. Mapped by Searle of the FIDS in 1959-60, from late 1947 air photos taken during RARE 1947-48. He plotted it in 71°41' S, 74°57' W. Named by US-ACAN for Cdr. (later Capt.) Victor Louis Pesce, commanding officer of VXE-6 from May 1980 to May 1981. It has since been replotted. UK-APC accepted the name (and the new coordinates) on May 13, 1991.

Podlëdnye Gory Peschanskogo. 69°00' S, 53°30' E. A group of subglacial mountains, due S of Mount Ashford, in Enderby Land. Named by the Russians.

Ostrov Pesec *see* **Pesets Island**

Pesets Island. 66°05' S, 101°05' E. In the Bunger Hills. Charted by SovAE 1956, and named by them as Ostrov Pesec. ANCA translated the name.

Peshev Ridge. 62°42' S, 60°08' W. A ridge extending for 2 km along the NE coast of Brunow Bay, E of the lower Macy Glacier, its summit rises to over 500 m, 4.95 km SW of Great Needle Peak, and 4.2 km SSE of Lyaskovets Peak, on Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, for Dimitar Peshev (1894-1973), who led the campaign to keep Bulgaria's Jews alive during World War II. For more on Peshev, *see* Gabriele Nissim's 1998 biography, *L'uomo che fermò Hitler*.

Peshtera Glacier. 62°42' S, 60°18' W. A small glacier, flowing for 2 km in a NNW direction on Rozhen Peninsula, to terminate at the NE extremity of Zagore Beach, at False Bay, W of the S portal to Inepta Cove, in the S part of Livingston Island, in the South Shetlands. Its head is bounded by Mackay Peak to the SW and Tervel Peak to the E. Named by the Bulgarians on March 15, 2002, for the Bulgarian town of Peshtera. UK-APC accepted the name on July 8, 2003, and US-ACAN followed suit that year. Plotted by the UK in late 2008.

Rocas Pesky *see* **Pesky Rocks**

Pesky Rocks. 66°09' S, 65°54' W. A small group of rocks, rising to about 6 m above sea level, 5.5 km W of Cape Evensen, off the Graham Coast, on the W coast of Graham Land. The name Banco Osorno, after a town and volcano in Chile, was applied by ChilAE 1946-47 to the shoal area in this vicinity, and appears as such on their 1947 chart. Photographed aerially by FIDASE in 1956-57. The rocks were named Pesky Rocks by UK-APC on July 7, 1959, because they obstruct an otherwise clear shipping route. The feature appears as such on a British chart of 1961. US-ACAN accepted the name in 1971. The Argentines call them Rocas Pesky. The Chilean gazetteer of 1974 has Bajo Osorno.

Pessaro, Carlos A. *see* **Órcadas Station**, 1941

Gora Pestelja. 72°15' S, 2°09' E. A nunatak in the Gjelsvik Mountains of Queen Maud Land. Named by the Russians.

Pik Pestrocvetnyj. 83°54' S, 57°22' W. A peak E of West Prongs, and just N of Elliott Ridge, in the Neptune Range of the Pensacola Mountains. Named by the Russians.

Pesyakov Hill. 62°39' S, 60°22' W. An ice-free hill rising to 36 m on Bulgarian Beach, next SSW of the 1988 buildings of St. Kliment Ohridski Station, 490 m E of Hespérides Point, and 270 m SW of Sinemorets Hill, it surmounts Grand Lagoon to the W and SW, on Livingston Island, in the South Shetlands. Access to the hill is restricted in order to protect floral communities. Mapped by the Spanish in 1991, and by the Bulgarians in 1996. Named by the Bulgarians on Sept. 14, 2010, for Capt. Feliks Pes'yakov, of the *Mikhail Somov* (q.v.), who provided logistical support for building the first facilities of the Bulgarian base in April 1988.

Mount Peter. 70°11' S, 64°56' E. A large, dome-shaped (except for the N face, which is flat and sheer), individual rock outcrop, about 3 km E of Mount Béchervaise, in the main series forming the W part of the Athos Range, in the Prince Charles Mountains of Mac. Robertson Land. First visited on Nov. 27, 1955 by an ANARE party led by John Béchervaise. Named by ANCA for Peter Crohn, geologist who wintered-over at Mawson Station in 1955 and 1956 (*see also* **Crohn Island**). US-ACAN accepted the name in 1965.

Peter Crest. 79°39' S, 157°57' E. Rising to about 1600 m, it is the summit of Mulgrew Nunatak, in the Cook Mountains. Named by US-ACAN on Nov. 22, 2000, for Peter Mulgrew. NZ-APC accepted the name on Feb. 20, 2001.

Peter Glacier. 73°20' S, 1°09' W. A short, broad glacier flowing NE into Jutulstraumen Glacier just SE of Neumayer Cliffs and Melleby Peak, in the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Peterbreen, for Peter Melleby. US-ACAN accepted the translated name in 1966.

Peter Nunatak. 75°55' S, 128°33' W. A prominent, conical nunatak, rising to 2440 m, 5.5 km SE of Mount Petras, at the S extremity of the McCuddin Mountains, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Capt. Peter J. Anderson, USAF, technical editor, History and Research Division, U.S. Naval Support Force, Antarctica during OpDF71 (i.e., 1970-71) and OpDF 72 (i.e., 1971-72).

Peter Peak. 62°38' S, 59°57' W. Rising to over 850 m in Delchev Ridge, 550 m NW of Delchev Peak, 2.7 km SE by S of Rila Point, 1.9 km W by S of Yavorov Peak, and 1.8 km SW of Rodopi Peak, it surmounts Iskar Glacier to the W, Bruix Cove to the NW, and Sopot Ice Piedmont to the N, in the Tangra Mountains of eastern Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for Czar Peter II of Bulgaria, 1185-97, who, with his brother, Asen I, restored Bulgaria's independence to establish the Second Bulgarian Kingdom.

Peter Snow-Millers. Trench-cutting machines made in Switzerland by the Konrad Peter Company. Built primarily to cut mountain passes, they were used in Antarctica (especially for the new Byrd Station), to create snow-tunnels.

Peter I Island. 68°47' S, 90°35' W. Said as Peter the First Island. A lofty, isolated, and glaciated volcanic island (95 per cent covered with ice), with steep slopes, a formidable ice barrier in front of it, and only a few places to effect a landing. It measures about 19 km long in a N-S direction and 11 km wide (the Norwegians say it has an area of 156 sq km), and reaches a high point of about 1755 m (in Lars Christensen Peak). The island rises from the continental rise, in the Bellingshausen Sea, about 450 km off the Eights Coast, and about 300 km N of Cape Braathen (which is on Thurston Island), and is one of the true oceanic islands in Antarctic waters. The climate is harsh, with strong winds, freezing temperatures, and snow. For most of the year, the island is surrounded by thick pack-ice, making it inaccessible most of the time. The vegetation consists almost exclusively of lichens and mosse that have adapted to the extreme conditions here. Some seabirds, especially Antarctic fulmars, breed at various sites on the island, and seals are also to be found here. It was first seen at 3 P.M., on Jan. 21, 1821, by von Bellingshausen, the first land to be discovered within the Antarctic Circle, and therefore the most southerly land ever found. Due to the pack-ice, von Bellingshausen could not get to within 25 km of the island, which he named Ostrov Petra I, for the old ruler of Russia, Peter I. Charcot was the next to see it, in Jan. 1910, during FrAE 1908-10, but he

could get no closer than 5 km. In 1926, Eyvind Tofte, in the *Odd I*, circumnavigated the island, as he did also in 1927. That latter season the *Norvegia* dredged some rocks off its W coast, and it was first landed on on Feb. 2, 1929, by the crew of the *Norvegia*, and annexed by Norway on that date. The Norwegians call it Peter I Øy, and they claimed it on March 6, 1931 (ratified on May 1, 1931). That year, Larsen tried landing, but, again, the pack-ice prevented it. On March 24, 1933, it became a dependency of Norway. US-ACAN accepted the name Peter I Island in 1947. The next landing was on Feb. 10, 1948, by the *Bråtegg*. They were there for 3 days, built a hut, and then the pack-ice forced them to leave. A crew from the *Burton Island* went ashore at Norvegia Bay in 1960, and in 1987, 5 Norwegian scientists spent 11 days on the island, and installed an automatic weather station. Several tourist ships get in there. In Feb. 2006, the Americans installed an automatic weather station here, at an elevation of 90 m. The Chileans call it Isla Pedro I.

Peter I Øy *see* **Peter I Island**

The *Peter Nell*. East German Fisheries vessel (skipper unknown) in the waters of the South Orkneys and South Shetlands in Feb. and March 1979, carrying an expedition led by U. Hoffmann, to investigate fish and krill biology.

Peterbreen *see* **Peter Glacier**

Peterman Island(s) *see* **Petermann Island**

Isla Petermann *see* **Petermann Island**

Petermann Island. 65°10' S, 64°10' W. An island, 1.5 km long, and 1 km wide at its broadest, 1.5 km SW of Hovgaard Island, on the W side of Penola Strait, between Hovgaard Island and the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of the Antarctic Peninsula. Discovered by Dallmann in 1873-74, and named by him as Petermann-Insel (i.e., "Petermann island"), for August Heinrich Petermann (1822-1878), the German geographer. It appears on an 1894 U.S. Hydrographic Office chart as Petermann Island. It was further charted, but as a new discovery, on Feb. 12, 1898, by BelgAE 1897-99, and named by de Gerlache as Île Lund. It appears as such on Lecointe's 1899 map, and on de Gerlache's of 1900. On Dr. Frederick Cook's 1900 English language version of the same maps, it appears as Lund Island. Who Lund was is unknown. We are told it was a Danish supporter of de Gerlache's expedition, and that may be, but, as there is no more to go on, it is unsatisfactory. It was re-charted in Feb. 1904, by FrAE 1903-05, at which time Petermann and Lund were determined to be the same feature. It appears both ways on Charcot's 1906 map. On a 1908 Argentine map it appears as Isla Lund. It was recharted in March 1909, by FrAE 1908-10, and appears on Charcot's 1910 map as Île Petermann. On most of the French charts from this time period (as well as on others from other countries), the two names Lund and Petermann are shown, to warn the reader of the confusion. On a 1942 USAAF chart it appears erroneously as Peterman Islands, and, consequently, on a Chilean chart of 1947 as Isla Peterman, and on a British chart of 1947 as Peterman Island. Petermann Island was the name accepted by US-ACAN in 1950, it appears as such on a British chart of 1951, and UK-APC accepted the name on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. On a 1957 Argentine chart the name Isla Penola appears, presumably for this island. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by a FIDS-RN team in 1958. The name Isla Petermann was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Petermann-Ketten *see* **Petermann Ranges**

Petermann Range *see* **Petermann Ranges**

Petermann Ranges. 71°40' S, 12°20' E. A group of associated mountain ranges, just E of the Humboldt Mountains, in the central part of the Wohlthat Mountains, in Queen Maud Land. They include the Östliche Petermann Range, the Westliche Petermann Range, the Mittlere Petermann Range, the Südliche Petermann Range, and the Pieck Range. Discovered by GermAE 1938-39, and named Petermannkette (i.e., "Petermann range") by him for August Petermann (*see* **Petermann Island**). The feature, plotted from these German air photos, was nicely pluralized, presumably by the Australians, after the Petermann Ranges of Australia (which were also named for August Petermann). US-ACAN accepted the name in 1970. The Russians call this feature Petermann-Ketten.

Petermanninsel *see* **Petermann Island**

Petermannketten *see* **Petermann Ranges**

Peters, Alfred. b. 1921, Germany. He went to sea on the *Schwabenland* at 15, as a deck boy, and was light sailor on the same ship during GermAE 1938-39.

Peters, Barry John. b. Oct. 7, 1938. FIDS ionosphere physicist who wintered-over at Halley Bay station in 1961 and 1962. He spent about 30 months on the ice between 1969 and 1992.

Peters, William. b. May 15, 1879, Kilbrittain, Cork. He joined the Royal Navy, and was serving on the *Magnificent* as an able seaman when he transferred to the *Discovery* for BNAE 1901-04.

Peters Bastion. 70°27' S, 62°54' W. The large, mainly ice-free mountain forming the northernmost summit of the Eland Mountains, and rising to about 1250 m on the S side of Clifford Glacier, on the Wilkins Coast, on the E coast of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for Cdr. Vernon William "Vern" Peters (b. Dec. 4, 1934, St. Joseph, Mich. d. May 10, 1979, South Haven, Mich.), USN, who was operations boss and 3rd pilot on *Juliet 321* during OpDF 72 (1971-72), when that plane crashed (*see* **Disasters**, Dec. 4, 1971), and commander of VXE-6 from June 1973 to July 1974. UK-APC accepted the name on July 21, 1976.

Peters Butte. 85°19' S, 119°32' W. A flat-topped, steep-sided rock butte on the S side of McCarthy Valley, in the Long Hills, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for Norman L. Peters, meteorologist at Byrd Station in 1958.

Peters Island. 68°57' S, 77°56' E. A small, crescent-shaped island, 3 km S of Browns Island, in the Rauer Islands. Named by ANCA, presumably for Peter Crohn.

Peters Peak. 82°14' S, 160°04' E. A snow-covered peak, rising to 2220 m, 6 km N of Melrose Peak, in the central part of the Holyoake Range, in the S part of the Churchill Mountains. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Merrill J. Peters, USARP field assistant, 1962-63.

Cape Petersen. 71°54' S, 101°27' W. A rounded, ice-covered cape on the N side of Thurston Island, about 28 km ENE of Cape Flying Fish. Delineated from air photos taken during OpHJ 1946-47, and plotted in 71°56' S, 101°46' W. Named by US-ACAN in 1960, for Carl O. Petersen. It has since been replotted.

Mount Petersen *see* **Mount Peterson**

Petersen, Carl Oskar. b. July 14, 1897, Borre, Norway, son of Johan Edvard Petersen and his wife Inger Johane. Norwegian radio engineer, he went to sea in 1919, and was on many whaling expeditions in the 1920s in Norwegian and British expeditions. He came to the USA in 1926, and was a sergeant in the 319th Attack Group of the U.S. Army Air Corps. He was on the shore party of ByrdAE 1928-30, and sent the first ever radio message from Antarctica (to the *New York Times*). In 1932 he and Thor Solberg attempted, unsuccessfully, to fly the Atlantic, and nose-dived into Newfoundland waters. They were not hurt. He was back south again, on ByrdAE 1933-35, as the Paramount News cameraman as well as radio man during the winter-over at Little America in 1934. He had been awarded American citizenship after the first Antarctic trip, and on June 9, 1937, Lt. Petersen, USNR, was awarded the DFC. He was also twice awarded the Medal of Honor. In 1940 he left Paramount News to go on active service in the Navy, and died while serving on the *Ranger*, on Nov. 10, 1941, in Portland, Maine, leaving Hjordis, his widow, and a daughter.

Petersen, Hans Chistian. Norwegian captain of the *Kista Dan*, 1952-56, then of the *Magga Dan*, 1956-57, then of the *Kista Dan* again, 1957-58, and then of the *Thala Dan*, 1958-61. He commanded the *Nella Dan* in 1961-62, and again in 1963-64.

Petersen, Harries-Clichy *see* **Peterson, Harries-Clichy**

Petersen, Jorgen. 1st mate on the *Southern Cross* during BAE 1898-1900. He died in Sept. 1900, on the voyage back from Australia.

Petersen Bank. A submarine bank centering on 65°45' S, 109°55' E, and extending NNW from the Budd Coast of East Antarctica, just W of the Balaena Islands. A portion of this bank was sounded by ships during OpHJ 1946-47. The bank was more fully delineated in Jan. 1956,

when the *Kista Dan*, skippered by Hans Petersen, on an ANARE expedition led by Phil Law, sailed along its E and W fringes, and crossed its S end. Named by ANCA on Sept. 4, 1956, for Capt. Petersen. ANARE was back here in 1957. US-ACAN accepted the name in 1964.

Petersen Island. 67°35' S, 62°54' E. The largest and most northerly of the Jocelyn Islands, in Holme Bay, Mac. Robertson Land, about 3 km NNE of Mawson Station. Photographed aerially by LCE 1936-37, and mapped from these photos by Norwegian cartographers in 1946. It was included in a triangulation of the Mawson area by surveyor Chris Armstrong in 1959. Named by ANCA on Oct. 11, 1960, for Hans Christian Petersen. US-ACAN accepted the name in 1965.

Petersen Peak. 80°27' S, 27°57' W. A rock peak rising to 1215 m, 10 km SW of the Morris Hills, and N of Fuchs Dome, in the north-central part of the Shackleton Range. First mapped in Oct. 1957 by BCTAE, who named it for Hans Christian Petersen (q.v.), skipper of the *Magga Dan* which carried members of the expedition to the Filchner Ice Shelf. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year. Further surveyed by BAS personnel from Halley Bay Station between 1968 and 1971.

The *Peterson*. U.S. ship DE-152, in Antarctica for OpDF 60 (1959-60; Captain Clifford E. Hunter).

Monte Peterson *see* [2]**Mount Peterson**

[1]**Mount Peterson**. 72°46' S, 169°42' E. Rising to 1910 m, it is the N summit on Daniell Peninsula, and is flanked by Whitehall Glacier to the W, by Tucker Inlet and Tucker Glacier to the N, and by the Ross Sea to the E, on the Borchgrevink Coast of Victoria Land. Named by NZ-APC on Aug. 7, 2008, for Dean Peterson, science and information manager at Antarctica New Zealand, from 1998 onwards. US-ACAN accepted the name on Oct. 21, 2008.

[2]**Mount Peterson**. 74°40' S, 76°59' W. Also spelled erroneously as Mount Petersen. A small mountain rising to about 1100 m (that is the height as estimated by the British; the Chileans say 2743 m) above the ice surface, 35 km NW of Mount Rex, and S of Stange Sound, on the English Coast of Ellsworth Land. It lies within a group of nunataks discovered and photographed aerially by Ellsworth on Nov. 23, 1935. Explored by RARE 1947-48, and named by Finn Ronne in 1948, for Dr. Edwin Peterson (b. April 8, 1898, Rockport, Mass. d. Jan. 1979), father of Harries-Clichy Peterson. US-ACAN accepted the name, and UK-APC followed suit on Dec. 20, 1974. The Chileans call it Monte Peterson.

Peterson, Harries-Clichy. Known as Harcly, or Pete. b. Sept. 7, 1924, Boston, Mass, but raised partly in Belmont, son of dentist Edwin William Peterson (from Rockport, Mass., of Swedish parents) and his wife Annekathe "Anna" (who was from Halle, Germany, and not Uzbekistan, as has sometimes been reported). His rather odd name comes about because his parents were married at Camp Clichy, near Paris (where Dr. Peterson was serving during World War I), and the best man man was Col. Harries. After Boston Latin School and a brief sojourn at Harvard, he joined the Marines at 17, during World War II. He became a radar 2nd lieutenant, and was an instructor at the Marine Corps school in Quantico. He was working as a radio engineer for United Airlines when he became physicist on RARE 1947-48. During this expedition he fell 110 feet down a crevasse, head first. 28 hours later Dick Butson of the FIDS was lowered down to get him out. There were no bones broken. His arm was later partially paralyzed, but that healed up soon enough. On Sept. 24, 1949, at the bride's home in Scranton, Pa., he married teacher Rebecca Abigail Peck (daughter of Knickerbocker Peck, and great granddaughter of President McKinley's assistant secretary of state). Bob Dodson was best man. Pete graduated from Harvard Business School in 1950, and was then called up for Korea. His job was going to be instructor again, as a major, but he volunteered for the front, winning the Silver Star, and photographing the war as he went. On his return to the USA, he saw his son, Harries-Clichy, Jr., for the first time. The former Marine became an underwriter for a banking firm in New York, then went to work for W.R. Grace, in New York (interestingly, Christopher Naisbitt had also worked for Grace, many years before). In 1960 he formed his own company, and worked for several years in Lima, Peru (his second wife was Peruvian), but later returned to Boston, where, in 1965, he became vice president in charge of new business for Foremost Dairies' international division. He later moved to San Francisco, and retired to Daly City, Calif.

Peterson Bluff. 71°09' S, 165°53' E. A prominent bluff rising to 1480 m, on the N side of Ebbe Glacier, it forms the SE end of the broad ridge that descends from Mount Bolt, in the Anare Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Donald C. Peterson, USN, photographer's mate with VX-6, at McMurdo in 1967-68 and 1968-69.

Peterson Glacier. 66°25' S, 110°44' E. Flows westward into Penney Bay, opposite Herring Island, in the E part of Vincennes Bay, about 13 km E of Holl Island, in the Windmill Islands, on the Budd Coast of Wilkes Land. Mapped in 1955 by U.S. cartographer Gard Blodgett from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Louie N. Peterson, radio operator and recorder on OpW 1947-48. ANCA accepted the name on Aug. 11, 1958.

Peterson Hills. 75°50' S, 67°55' W. A group of hills, rising to an elevation of about 1100 m, just E of Spear Glacier, between the Hauberg Mountains and the Wilkins Mountains, on the Orville Coast, where Ellsworth Land meets southern Palmer Land. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for David G. "Dave" (also known as "Pete") Peterson, electronics technician at Pole Station in 1963. The feature appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Peterson Icefalls. 70°05' S, 72°44' E. A very prominent line of icefalls at the terminus of Stevenson Glacier, where that glacier enters the E part of the Amery Ice Shelf, on the Ingrid Christensen Coast. Delineated by U.S. cartographer John H. Roscoe in 1952, from OpHJ 1946-47 aerial photos, and named by him for J.C. Peterson, Jr., air crewman on OpHJ 1946-47, on flights which provided the photos from which Roscoe was to work. US-ACAN accepted the name in 1965, and ANCA followed suit on May 18, 1971.

[1]**Peterson Island**. 66°22' S, 66°32' W. An island, immediately SE of Levy Island, W of the Bernal Islands, in Crystal Sound, on the Loubet Coast, on the W coast of Graham Land. Photographd aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base W in 1958-59. Named by UK-APC on Sept. 23, 1960, for Selmer Wilfred Peterson (1917-2004), U.S. physical chemist who, with Henri Levy (*see* **Levy Island**) in 1957, by neutron diffraction, determined the location of the hydrogen atoms in ice. It appears on a British chart of 1961. US-ACAN has remained noticeably aloof from any discussion on this feature.

[2]**Peterson Island**. 66°28' S, 110°30' E. A rocky island, 3 km long, and with 2 inlets indenting the N side of it, immediately W of Browning Peninsula, in the S part of the Windmill Islands, off the Budd Coast. First mapped from air photos taken in 1947 by OpHJ 1946-47, and in 1948 by OpW 1947-48. According to the U.S. gazetteer, this feature was named by US-ACAN in 1993, for Lt. (later Cdr.) Mendel Lazear Peterson (b. March 8, 1919, Idaho. d. July 30, 2003, McLean, Va.), who joined the U.S. Navy on May 29, 1943, served in World War II, and was supply officer on OpW 1947-48. A military and naval historian, he retired from the Navy on March 8, 1978, and was buried in Arlington National Cemetery. The US-ACAN acceptance date seems very late, especially when the Australian gazetteer says that ANCA accepted the name on July 4, 1961, and given that there are many references to it as Peterson Island in the 1960s and 1970s. The Russians call it Ostrov Krab, a descriptive name, because, in plan, it looks like a crab.

Peterson Ridge. 84°34' S, 163°56' E. A high rock ridge extending N from the W part of the Storm Peak massif, in the Queen Alexandra Range. Named by the Ohio State University Geological Expedition of 1969-70, for Donald N. Peterson, a member of the party, who collected basalt lavas from the ridge for petrologic and paleomagnetic studies. US-ACAN accepted the name in 1972.

Peterson Terrace. 77°20' S, 161°11' E. A gently-inclined, mostly ice-free area of about 2.5 sq km, rising to about 1250 m, 750 m above Barwick Valley and Lake Vashka (close southward),

between Gaisser Valley and LaBelle Valley, in the Cruzen Range of Victoria Land. Named by US-ACAN in 2005, for Jeffrey B. Peterson, of the physics department at Carnegie-Mellon University, in Pittsburgh, astrophysics researcher at Pole Station for 14 seasons between 1988 and 2005. NZ-APC accepted the name on Sept. 12, 2005.

Columna Petes *see* **Petes Pillar**

Petes Pillar. 62°59' S, 60°33' W. A pillar rock, or stack in water, rising to 45 m, about 520 m due E of Fildes Point, and forming the N entrance point of Neptunes Bellows, at Port Foster, in Deception Island, in the South Shetlands. It was a well-known landmark to the early sealers, and appears on Foster and Kendall's rough chart drawn up in 1829, during the *Chanticleer* Expedition of 1828-31. Surveyed by an RN Hydrographic Survey unit on the *John Biscoe* in 1948-49. They named it Kats Pillar, after Kathleen Margaret "Peggy" Rogers, also known as "Kat," wife of Cdr. David Penfold, leader of the survey. It appears as such on their 1949 chart. On Nov. 15, 1951, however, UK-APC accepted the name Pete's Pillar, for Pilot Officer Pete St Louis (*see under* **Saint**). US-ACAN accepted that name in 1953. It appears as Petes Pillar (i.e., without the apostrophe) on a British chart of 1953, and that name was accepted by the British gazetteer of 1955, and by US-ACAN in 1956. It appears on a 1953 Argentine chart as El Monolito (i.e., "the monolith"), and on one of their 1958 charts as Piedra El Monolito, but the name El Monolito was the one accepted by the Argentine gazetteer of 1970. The Chileans call it Columna Petes (one has to wonder if they understand the meaning). Last plotted by the UK, in late 2008.

Mount Petinos. 74°25' S, 132°43' W. Rising to 500 m, 1.5 km ESE of Worley Point, in the NW part of Shepard Island. Named by US-ACAN in 1962, for Lt. (jg) Frank Petinos, USN, first lieutenant on the *Glacier* when personnel from that ship mapped the mountain on Feb. 4, 1962.

Le Petit Prince Seamount *see* **Saint-Exupéry Guyot**

Petite Île. 66°40' S, 140°01' E. A little island NW of the Buffon Islands, in the central part of the Géologie Archipelago. So named by the French in 1977, for its size.

Petite Rocks. 82°40' S, 51°30' W. Two small, isolated rocks, rising to 1155 m, in the W part of the Sallee Snowfield, and forming the southeasternmost outlier of the Dufek Massif, about 8 km E of the central part of that massif, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS, during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. So named by US-ACAN in 1968, for their size. UK-APC accepted the name on Nov. 3, 1971. The feature appears in the 1974 British gazetteer.

Petko Voyvoda Peak. 62°38' S, 59°53' W. Rising to 400 m in Delchev Ridge, 1 km E of Elena Peak, 1.3 km SE of Paisiy Peak, and 1 km SW of Kaloyan Nunatak, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on April 11, 2005, for Kapitan Petko Voyvoda, pseudonym of Petko Kiryakov (1844-1900), leader of the Bulgarian liberation movement in western Thrace and the Rhodope Mountains.

Petkovic Glacier. 72°58' S, 68°09' E. A small glacier, about 9 km long, in the central part of the Mawson Escarpment, between Hay Hills and Sulzberger Bluff. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1960, and 1973. Named by ANCA for Josko J. Petkovic, geophysicist who wintered-over at Mawson Station in 1971, and who took part in the 1972 ANARE Prince Charles Mountains Survey. He wintered-over at Mawson again, in 1978.

Nunatak Petljakova. 80°39' S, 19°23' W. Immediately NW of Nobleknausane, in the easternmost part of the Shackleton Range. Named by the Russians.

Mount Petlock. 85°25' S, 172°16' E. Rising to 3195 m, it is the most prominent mountain in the NE part of the Otway Massif, and surmounts the N end of the ridge which borders the E side of Burgess Glacier. Named by US-ACAN in 1966, for James D. Petlock, USARP ionosphere physicist from the National Bureau of Standards, who wintered-over at Pole Station in 1963.

The *Petr Shirshov*. Soviet vessel that took part in the Soviet Antarctic Expedition of 1968-70. Skipper that year was A.A. Pavlov.

Mys Petra Chaplina. 68°34' S, 33°20' W. A cape on the Weddell Sea, named by the Russians.

Nunatak Petra Krivonosa. 84°02' S, 55°00' W. In the Neptune Range of the Pensacola Mountains. Named by the Russians.

Ostrov Petra I *see* **Peter I Island**

The *Petrarca*. Full name: The *Private Frank J. Petrarca*. A 2382-ton, 388 foot 8 inch American cargo ship of the Alamosa class, built by Consolidated Steel, in Long Beach, Calif., and launched as the *Long Splice*, in 1945. She just missed World War II, and was transferred to the Army, changed her name, and served as a transport vessel. She was transferred to the Navy in 1950, and served in the Pacific, until she was laid up in 1959. In 1960, she was taken out of mothballs, and in 1962 was in Alaska. She took part in OpDF 1966 (i.e., 1965-66), under the command of Capt. R.A. Wilson, the first cargo ship without an ice-strengthened hull to be so employed. On Jan. 30, 1966, she left Lyttelton, NZ, bound for McMurdo. After that, she continued to work in the Pacific, including Vietnam, until she was struck from the Navy List in 1973, being sold in 1977.

Mount Petras. 75°52' S, 128°39' W. A high, prominent, ridge-shaped mountain rising to 2865 m, 16 km SE of Mount Flint, in the McCuddin Mountains, behind the Hobbs Coast of Marie Byrd Land. Discovered on a flight from West Base on Dec. 14-15, 1940, during USAS 1939-41, and named Mount Josephine Petras, for Josephine Albis (b. Oct. 7, 1917, Richmond, Va. d. May 21, 2001, Miami; daughter of Sicilian immigrant barber Joseph Stevens "Joe" Albis; name originally Giuseppe Albisi), the wife of Ted Petras. The name was accepted by US-ACAN in 1947. In 1966, US-ACAN shortened the name. Lichens are to be found here.

Petras, Theodore Argyrios "Pete." Also known as "Ted," or "T.A." b. May 16, 1911, Birmingham, Ala., just 3 months before his father, Argyrios Theodore "Tom" Petras had taken out U.S. citizenship. The father, a Greek barber from Meteliu, Turkey, had arrived in the USA in 1906. The mother, Eriphile (known as Elfia), had arrived in 1910. Pete enlisted in the Marine Corps on Nov. 1, 1929, served in Haiti, then went to Naval flight school, graduating in 1932. After another stint in Haiti, he toured the U.S. and Canada with VF9M Stunt and Fighter Squadron. In 1936 he married Josephine Albis (*see* **Mount Petras**), did 28 months in the Virgin Islands as a pilot and radio officer (serving there with Zadik Collier), and was master technical sergeant and aircraft pilot on USAS 1939-41. At West Base, he was initially one of the 4 men looking after the Snowcruiser. He was commissioned during World War II, and served in the Pacific with General Vandergrift, with whom he transferred, as a major, to Washington, DC, after the war. After various postings, he retired as a colonel on Nov. 1, 1959, to Virginia Beach, and worked for the Norfolk Port Authority until 1979. He died in Miami, on May 9, 2004.

The *Petrel*. Whale catcher chartered to relieve Órcadas Station in 1944-45, after the *Chaco* failed to get in because of the ice.

Base Petrel *see* **Petrel Station**

Isla Petrel *see* **Dynamite Island**

Islote Petrel *see* **Dynamite Island**

Mount Petrel *see* **Petrellfjellet**

Rada Petrel *see* **Petrel Cove**

Petrel Cove. 63°28' S, 56°13' W. A small cove on the NE side of Welchness, between that feature and Diana Reef, next to Petrel Station, at the W end of Dundee Island. Named Rada Petrel by the Argentines in 1950, in association with the station, it appears as such on a 1953 Argentine chart, and was the name accepted by the Argentine gazetteer of 1970. Surveyed by Fids from Base D between 1958 and 1961. UK-APC accepted the translated name on Feb. 12, 1964, and US-ACAN followed suit that year. The Chileans call it Caleta Gorziglia, for Sub Lt. Hugo Gorziglia Antolini, of the (modern-day) *Yelcho*, when that vessel came to the assistance of the stricken *Lindblad Explorer* in Admiralty Bay in 1972.

Petrel Creek. 62°10' S, 58°27' W. A creek running from the dead ice zone and the N moraines of Rescuers Hills to Suszczewski Cove, at Admiralty Bay, King George Island, in the South Shetlands. Its highest point is 35 m above sea level, and its lowest point is at sea level. Next to the creek there are 3 colonies of giant petrels, hence the name Potok Petrela given by the Poles. This name has been translated into English.

Petrel Glacier. 77°14' S, 166°28' E. Near Cape Bird, Ross Island. Named by NZ.

Petrel Hill. 67°01' S, 142°41' E. Rising to about 35 m between Low Lake and East Lake,

at Cape Denison, about 925 m ESE from Mawson's Main Hut, during AAE 1911–14. Named by Mawson, it appears on the expedition's maps. ANCA accepted the name on March 7, 1991.

Petrel Island *see* **Dynamite Island**

Pétrel Island. 66°40' S, 140°01' E. A rocky island, 0.8 km long, and rising to 45 m above sea level, NW of Rostand Island, it is the largest feature in the cluster of islands at the SE end of the Géologie Archipelago, to the W of the Astrolabe Glacier. Photographed aerially during OpHJ 1946–47. Charted by the French in 1949–51, and named by them as Île des Pétrels, for the several snow petrel nests here. In Jan. 1952, following the fire at Port-Martin, Mario Marret expanded the French hut on this island in order to serve as the new base. This base became Dumont d'Urville Station. US-ACAN accepted the translated name of Pétrel Island in 1956.

Petrel Lake. 62°13' S, 58°58' W. A lake, on the W side of Hydrographers Cove, on Fildes Peninsula, King George Island, in the South Shetlands. Surveyed by the Russians from Bellingshausen Station from 1968, it appears in 1973 references as Ozero Al'batros (i.e., "albatross lake"). This was translated into English as Lake Albatross. However, by 1975 it was being called Ozero Burevestnik (i.e., "petrel lake"), and this was duly translated as Lake Burevestnik. UK-APC accepted the name Petrel Lake on Feb. 7, 1978, and US-ACAN followed suit. It appears as such in the 1980 British gazetteer. On the 1984 Brazilian map of Fildes Peninsula, it appears as Lago do Petrel. Plotted by the UK in late 2008.

Petrel Refugio *see* **Petrel Station**

Petrel Station. 63°28' S, 56°12' W. Argentine station built initially by ArgAE 1951–52 as a refugio (refuge hut) on a rock surface, on the S side of Petrel Cove, on Welchness, Dundee Island, in the Weddell Sea. The personnel were brought down on the *Bahía Aguirre*. **Jan. 18, 1952**: The refugio was completed. **Feb. 22, 1952**: The refugio was inaugurated as Refugio Naval Petrel (Petrel was a code name). It was used sporadically until 1962. **Feb. 22, 1967**: The refugio was upgraded, and inaugurated as a year-round scientific station with 9 buildings accommodating 55 persons. It was now known officially as Estación Aeronaval Petrel (i.e., Petrel Air-Navy Station), but more commonly called Base Petrel. **1967 winter**: Teniente de corbeta Eduardo Figueroa (leader). **1968 winter**: Augusto Rivolta (leader). **1969 winter**: Horacio López Daveri (leader). **1970 winter**: Norberto Dazzi (leader). **1971 winter**: Jorge Enrico (leader). **1972 winter**: José Roberto Fernández (leader). **1973 winter**: Hernán A. Hermele (leader). **1974 winter**: Ernesto Alcayaga (leader). **1975 winter**: Fernando H. Cortes (leader). **1976 winter**: Jorge Luis Laboro (leader). **1977 winter**: Carlos Lavarias (leader). **Feb. 1978**: The station closed temporarily, but was still used as a place for maintenance work, and as a base for field work. **1996**: Petrel closed for good as a scientific station, but even then, was still going, albeit as a seasonal air station, in 2006.

Potok Petrela *see* **Petrel Creek**

Petrellfjellet. 71°59' S, 4°50' E. Also called Mount Petrel. A prominent, mainly ice-free mountain, between Slokstallen Mountain and Mount Grytøyr, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them (name means "the petrel mountain"). US-ACAN accepted the name without modification in 1966.

Petrellnuten. 72°02' S, 22°50' E. A nunatak on the N side of Tanngarden Peaks, in the central part of the Sør Rondane Mountains. Named by the Norwegians ("the petrel peak").

Petrels. Also called tubenoses, because of their tubular nostrils. They are the most numerous birds in Antarctica. Of the order Procelariiformes, they are related to the fulmars (q.v.), prions (q.v.), albatrosses (q.v.), and shearwaters (q.v.), and sometimes the differences are blurred. Superbly equipped for the Antarctic, with their webbed feet and dense plumage, they lay a single egg. The name means "little Peter," and comes from the birds' habit of walking on water. Wilson's petrel (*Oceanites oceanicus*) is a storm petrel, and breeds on the Antarctic continent. It is one of the most abundant seabirds in the world. Others seen south of 60°S include the black-bellied storm petrel (*Fregatta tropica*; seen in the South Orkneys and South Shetlands; the mottled petrel (*Pterodroma inexpectata*; actually seen on the continent itself); the white-headed petrel (*Pterodroma lessoni*); the blue petrel (*Halobaena caerulea*); the Kerguélen petrel (*Pterodroma brevirostris*); and the white-faced storm petrel (*Pelagodroma marina*). There are various fulmars called petrels; see that entry also. A story about a giant petrel. Herwil Bryant took one aboard the evacuation aircraft at the end of USAS 1939–41, taped its beak so it wouldn't squawk, and stuffed it down his jacket. Only once the plane was airborne did he reveal it to a stunned crew, including pilot Ashley Snow. The petrel lived for years in Washington Zoo.

Île des Pétrels *see* **Pétrel Island**

Petrich Peak. 62°37' S, 60°11' W. An ice-covered peak rising to 760 m, on the central part of Bowles Ridge, 400 m E of Ticha Peak, 1.98 km SW of Melnik Peak, and 1.25 km W of the summit of Asparuh Peak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004–05, and named by them on Nov. 4, 2005, for the town of Petrich, in southwestern Bulgaria.

Mount Petrides. 75°04' S, 136°30' W. A mountain with much exposed rock, midway between Oehlenschlager Bluff and Mount Sinha, in the S part of Erickson Bluffs, in Marie Byrd Land, it overlooks the confluence of Kirkpatrick Glacier and Hull Glacier from the north. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for George A. Petrides, biologist working off the *Southwind* in the Bellingshausen Sea and the Amundsen Sea, in 1971–72.

Petrie, George. b. 1831, Montrose. Cook on the *Polar Star*, during DWE 1892–93.

Petrie Ice Rises. 70°33' S, 72°12' W. A line of about 10 ice rises, running in a N-S direction on the Wilkins Ice Shelf, in Wilkins Sound, off the W coast of Alexander Island. Discovered aerially on Feb. 11, 1967, during a BAS radio echo-sounding flight around Alexander Island, and later accurately positioned from U.S. Landsat images. Named by UK-APC on Dec. 9, 1981, for David Lyall Petrie (b. 1940), BAS and SPRI electronics technician who was on the flight. He had wintered-over at Halley Bay Station in 1963 and 1964, where he had been called DaveMacP. US-ACAN accepted the name.

Petrified Forest Creek. 62°30' S, 58°29' W. West of Arctowski Station, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for the numerous petrified wood fragments of the Tertiary Age.

Petroff Point. 64°11' S, 62°05' W. A point projecting northeastward 1.2 km into Hill Bay, 3.85 km NW of Mitchell Point, and 6.8 km of Spallanzani Point, on the E coast of Brabant Island, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for Bulgarian-American inventor Peter Petroff (1919–2003), who invented the digital watch.

Petroleum Helicopters, Inc. Helicopter service company out of Lafayette, La. Contracted by the NSF to provide helos and pilots for Antarctica.

Gora Petrova. 83°47' S, 56°40' W. A nunatak in the Neptune Range of the Pensacola Mountains. Named by the Russians.

Pett, Saul. b. March 18, 1918, Passaic, NJ, son of Russian Jewish immigrant tailor Nathan Pett and his wife Ada. He married Leonore Green. AP correspondent (1946–91), who went on OpDF I. On Jan. 13, 1956 he was in the Skymaster commanded by Hal Kolp that flew over the South Pole. In 1960 he covered the Belgian Congo, and was with Richard Nixon in Moscow in 1972, for the first of three arms limitations treaties. In 1982 he won the Pulitzer Prize for his article the year before on the growth of the Federal bureaucracy. He died on June 13, 1993, in McLean, Va.

Bahía Petter *see* **Petter Bay**

Havre Petter *see* **Potter Cove**

Petter Bay. 60°43' S, 45°10' W. A bight, 0.8 km S of Spence Harbor, between that harbor and Divide Peaks, on the SE coast of Coronation Island, in the South Orkneys. This coast was roughly charted by Powell and Palmer in Dec. 1821. Further charted by Petter Sørlle in 1912–13, it appears on his 1912 chart as P. Sørlles Bukt, named for Sørlle, probably by Hans Borge. It appears on Sørlle and Borge's 1913 chart as Petters Bay, and that is also how it appears on Sørlle's 1930 chart. It was re-surveyed by the Discovery Investigations in 1933, and appears on their 1934 chart as Petter Bay. It appears on a 1933 Argentine chart as Caleta Petters. US-ACAN accepted the name Petter Bay in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. On a 1945 Argentine chart it appears as Bahía Petter, and that was

the name accepted by the Argentine gazetteer of 1970. It was surveyed again by Fids from Signy Island Station between 1956 and 1958.

Caleta Petters *see* **Petter Bay**

Petters Bay *see* **Petter Bay**

Pettersen Ridge. 71°47' S, 9°42' E. Extends N for 10 km, from Sandhø Heights, in the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-69, and from 1958-59 air photos taken during the same long expedition, and named by them as Pettersenegga, for Sverre O. Pettersen, who wintered-over as cook and steward at Norway Station in 1958, during NorAE 1956-60. US-ACAN accepted the translated name in 1970.

Pettersenegga *see* **Pettersen Ridge**

Pettit, Leonard Henry. b. 1891, Croydon, but raised mostly in Kensington, son of drain inspector George Mackness Pettit and his wife Mary Eleanor Baker. He joined the Union Steam Ship Company of NZ, as a steward, and had been working for some time on the *Ulimaroa*, on the Wellington to Sydney run, when, on Nov. 27, 1911, at Hobart, he joined the *Aurora* as 2nd steward, at £6 10 s per month, for the first part of AAE 1911-14. He left the expedition at Sydney, on April 9, 1912, and went back to work for the Union, on a variety of ships, including the *Tahiti*, under Capt. F.P. Evans (q.v.). By 1913 he had made 1st class steward, and was occasionally making runs to the North American west coast. In 1914 he joined the London Regiment for World War I, as a private, and on Dec. 29, 1915, was transferred to the Lancashire Fusiliers, as a probationary 2nd lieutenant. In 1918, in Ormskirk, Lancs, he married Ida Pickup. Toward the end of his life he was living in North Dunstable, Beds, and died on Dec. 28, 1940, in Luton Hospital.

Petts, Norman Stanley Wilson. b. Nov. 7, 1920, Faversham, Kent, son of Stanley Havelock Wilson Petts and his wife Alice Farnes. He joined FIDS in 1951, and was base leader at Base F in the winter of 1952. He was a potholer, and this led to a few scary moments in Antarctica. In 1953 the *John Biscoe* came to pick him up, and he arrived back in Southampton on June 11, 1953. In 1956, in Uxbridge, he married Madeline G. Puttock, and died in May 2001, in St Austell, Cornwall.

Pettus Glacier. 63°48' S, 59°04' W. A narrow, deeply entrenched glacier, 14 km long, flowing N from Ebony Wall into Gavin Ice Piedmont, E of Poynter Hill, between that hill and Tinsel Dome, on Trinity Peninsula. Photographed aerially by FIDASE in 1956-57, and surveyed by Fids from Base D in 1960. Named by UK-APC on Feb. 12, 1964, for Robert Nelson "Bob" Pettus (b. 1921), captain of the 2nd Canso aircraft during the 2nd half of FIDASE (i.e., 1956-57). US-ACAN accepted the name later that year.

Rocas Petty *see* **Petty Rocks**

Petty Rock *see* **Petty Rocks**

Petty Rocks. 67°34' S, 67°30' W. A group of small rocks, 5 km SE of Cape Sáenz, in the center of the W part of Bigourdan Fjord, off the Loubet Coast, on the W coast of Graham Land. Toward the S they are joined to Pourquoi Pas Island by a low-lying shoal. First roughly surveyed in 1936 by BGLE 1934-37, but as one rock. It appears that way on Rymill's 1938 map of the expedition. It was again surveyed as one rock in 1948 by Fids from Base E, who named it Petty Rock, for its size. That name was accepted by UK-APC on March 31, 1955, and it appears as such in the British gazetteer of 1956 and on a British chart of 1957. US-ACAN accepted that name in 1958. Photographed aerially by FIDASE in 1956-57, and FIDS cartographers, working from these photos, realized that there are, in fact, 4 rocks here. UK-APC therefore pluralized the feature as Petty Rocks on July 7, 1959, and US-ACAN followed suit in 1963. It appears as such on British charts of 1961 and 1982. The feature appears on a Chilean chart of 1962 as Rocas Petty, and that name was accepted by the Chilean gazetteer of 1974. The Argentines call them Rocas Pequeñas. A BAS automatic weather station was established on the rocks in 1981-82.

Petzval Glacier *see* **Suárez Glacier**

Gora Pevcova. 71°17' S, 67°07' E. A nunatak, SW of Mount Lanyon, in the Prince Charles Mountains. Named by the Russians.

Pevikhornet. 70°58' S, 11°50' E. A nunatak in Lingetoppane, in the easternmost part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians for Johnny Pevik (1913-1944) and his brother Arthur (1915-1974), a lieutenant, American-born Resistance leaders from Trondheim during World War II.

Mount Pew. 72°19' S, 169°11' E. Rising to 2950 m, it surmounts the central part of the ridge separating Kelly Glacier from Towles Glacier, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for James A. Pew, geophysicist at McMurdo, 1966-67.

Lake Péwé. 77°56' S, 164°18' E. A small lake at a height of 580 m, on the uppermost bench of Koettlitz Glacier, 1.5 km SE of Blackwelder Glacier, in Victoria Land. Near here VUWAE 1960-61 found a note reporting observations on glacial erratics, left by Troy L. Péwé (b. June 28, 1918, Rock Island, Ill. d. Oct. 21, 1999, Tempe, Ariz.), glacial geologist from the University of Alaska who, in 1957-58, explored parts of Victoria Land, including this lake. The New Zealanders named this feature after Péwé. US-ACAN accepted the name in 1964.

Péwé Peak. 78°02' S, 163°40' E. A bedrock peak, rising to 860 m (the New Zealanders say 847 m), composed of granite and topped with a dolerite sill, and completely surrounded by glacial ice except on the S side, immediately S of Joyce Glacier, between that glacier and Catacomb Hill, in the region of the upper Blue Glacier. Named by the U.S. National Academy of Sciences for Troy Péwé (*see* **Lake Péwé**). US-ACAN accepted the name in 1961.

Islote Pfaff *see* **Pfaff Island**

Pfaff Island. 66°54' S, 67°44' W. One of the Bennett Islands, just S of Gränicher Island, in Hanusse Bay, off the NE coast of Adelaide Island. Named by ChilAE 1947 as Isla Quidora, after their submarine the *Quidora* (not in Antarctic waters), and that was the name accepted by the Chilean gazetteer of 1974. It was named Islote Contreras by ArgAE (probably ArgAE 1956-57), and appears as such on their 1957 chart, named, presumably, for one of the crew on that expedition. Mapped from aerial photographs taken by RARE 1947-48 and by FIDASE in 1956-57, and named by UK-APC on Sept. 23, 1960, for Alexius Burkhardt Immanuel Friedrich Pfaff (1825-1886), German mineralogist at Erlangen, specializing in the plasticity of ice. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines today call it Islote Pfaff.

Pfeiffernunatak. 72°11' S, 160°31' E. A nunatak, SW of Mount Phelan, in the Usarp Mountains. Named by the Germans.

Pfitzner, Murray Leigh. Known as Leigh Pfitzner. b. May 6, 1940. Glaciologist at Wilkes Station in 1966. In Jan. and Feb. 2001 he took part in Expedition Ice Bound (q.v.). In 2006 he was living in Bungonia Heights, NSW.

Pflaum, Louis. b. Dec. 25, 1803, Strasbourg. Steward on the *Zélée* during FrAE 1837-40. He died on board, on Nov. 3, 1839.

Pfrogner Point. 72°37' S, 89°35' W. An ice-covered point on the NW extension of Fletcher Peninsula, and partly within the Abbot Ice Shelf, it marks the division of the Eights Coast and the Bryan Coast. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1968, for Ray Long Pfrogner (b. 1934), USARP geomagnetist and seismologist at Byrd Station in 1961-62.

Phalaropes. Red phalaropes—*Phalaropus fulicarius*—are rare birds in the Antarctic.

Phanagoria Island. 62°26' S, 66°10' W. The third largest island in the Zed Islands, it measures 700 m by 500 m, and is separated from the neighboring Esperanto Island and Lesidren Island by channels 70 m and 130 m wide respectively. It is located 2.1 km NW of Williams Point, on the N coast of Livingston Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the town of Phanagoria in 7th-century Old Great Bulgaria.

Phantom Point. 66°25' S, 65°41' W. A point within Darbel Bay, 2.5 km W of Shanty Point, between Cardell Glacier and Erskine Glacier, on the Loubet Coast, on the W coast of Graham Land. It appears (in error) on a 1946 U.S. Hydrographic Office chart, as Cape Bellue, and on a Chilean chart of 1947 (translated as Cabo Bellue). In 1957, when its position was only vaguely known, a FIDS sledge party from Base W visited it and it suddenly loomed up at them out of the thick fog, like a phantom (hence the name they gave it). From this survey, and from air photos taken by FIDASE in 1956-57, the feature was mapped by FIDS cartographers. UK-APC ac-

cepted the name on July 7, 1959, and US-ACAN followed suit in 1960. It appears in the 1961 British gazetteer. The Argentines call it Punta Fantasma, which means the same thing.

Le Phare *see under* **L**

Mount Phelan. 71°59' S, 160°37' E. Rising to over 2000 m, and mostly ice-free, it surmounts an ice-covered plateau, 8 km SE of Killer Nunatak, in the S portion of the Emlen Peaks, in the Usarp Mountains. Mapped by USGS from ground surveys, and from USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Michael J. Phelan, magnetist and seismologist who wintered-over at Pole Station in 1962, and who was a member of the Byrd Traverse, 1963-64.

Phelps, Edmund Malcolm Stuart. Known as Malcolm Phelps. b. Nov. 16, 1928, Stafford, son of Edmund Samuel J. Phelps and his wife Henrietta Violet Patterson. He joined the Merchant Navy just after World War II, and by 1952 was a 3rd officer. In 1964 he became 2nd officer on the *John Biscoe*, in 1966 became her 1st officer, and was finally her skipper from 1972 to 1990, with one season out—1975-76—when he was skipper of the *Bransfield*.

Phelps, G.E. He was on the *North Star* for the 2nd half of USAS 1939-41.

Phelps Island. 66°17' S, 110°30' E. A small island, close W of the N end of Shirley Island, in the Windmill Islands, off the Budd Coast. First mapped from air photos taken in 1947 during OpHJ 1946-47, and in 1948 during OpW. Named by US-ACAN in 1956, for Robert F. Phelps, air crewman on OpW 1947-48. ANCA accepted the name on July 4, 1961.

Phelps Promontory. 62°29' S, 60°07' W. A large ice piedmont promontory fringed by several low-lying rocky headlands, it rises gently S to an elevation of about 180 m, southward of William Point, in the NE part of Livingston Island, in the South Shetlands. Named by UK-APC on Dec. 12, 1997, for Malcolm Phelps. US-ACAN accepted the name on Sept. 25, 1998. Plotted by the UK in late 2008.

Phelps Rock. 65°00' S, 65°50' W. An insular rock rising to 10 m above sea level, SW of Hugo Island, in the W approaches to French Passage, in the Wilhelm Archipelago. Charted by an RN Hydrographic Office unit on the *Protector* in 1966-67. Named by UK-APC on Nov. 3, 1971, for Malcolm Phelps (q.v.), who assisted with the survey. US-ACAN accepted the name in 1972. It appears on a British chart of 1974, and also in the British gazetteer of that year. The Argentines call it Islote Patito.

Phenomena. The nature of Antarctica lends itself to phenomena, the flatness and vastness of the continent optimizing the viewing of such phenomena, aided by the cold, dry climate. Haloes are the most common of all the Antarctic phenomena. Haloes are called parhelia when the source of light is the sun, and paraselenae when the source of light is the moon. Haloes are produced by the refraction and reflection of sun or moon rays (depending on the type of halo) on the ice crystals of cirrus clouds and of fog, and are spectacular displays. When a halo occurs, 3 suns or 3 moons are seen on a given line, parallel to the horizon. The sun or moon in the center is the true one. Haloes are often confused with coronas, which are colored areas of light, usually extending over no great distance, and are arranged concentrically in alternating bands of blue, or green and red, around the sun or moon. They are not caused by refraction in ice crystals (as a halo is) but by diffraction of light around the small water droplets which form the cloud. The more uniform the size of the droplets, the purer the colors of the corona. Glories are common. They are caused by the diffraction of light from the edge of water drops (which must be present in order to form a glory). That light being reflected back to the sun, and mixing with the incoming light, causes circular zones of darkness and brightness. Note: In order to see a glory, look away from the sun. Mock suns, or sun dogs, are caused by the sun's light being reflected and refracted by ice crystals in the atmosphere. This gives the impression of expanding and whitening the sun. A sun-pillar is a long, thin dagger of orange light which sometimes rises from the horizon high into the sky above the setting sun at the South Pole. This is due to the refraction of ice crystals in the air. Also due to the refraction of ice crystals in the air are rainbow circles, which often form around the sun. A false sun is a mirage at the Pole, where the sun rises and sets for several days instead of following the horizon in a circle, as the proper Antarctic sun should. Another phenomenon is wind clouds, which can form after severe storms. *See also* **Looming, Mirages, Whiteout, Ice-blink, Airglow, Aurora, Fog bows, Rainbows**, and **Barrier wind phenomenon**.

PHI *see* **Petroleum Helicopters, Inc.**

Philately *see* **Stamps**

Philbin Inlet. 74°04' S, 114°11' W. A narrow, ice-filled inlet indenting the N end of Martin Peninsula for about 24 km between Murray Foreland and Slichter Foreland, on the Walgreen Coast of Marie Byrd Land. First mapped by USGS from air photos taken in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1967, for Brig. Gen. Tony Philbin, U.S. Army, who served the secretary of defense in liaison with the U.S. Navy during IGY (1957-58). Originally plotted in 74°04' S, 113°58' W, it has since been replotted.

Philip, Prince. Also known as the Duke of Edinburgh. b. June 10, 1921, Corfu, son of Prince Andrew of Greece and Princess Alice of Battenberg. He married on Nov. 20, 1947 the future Queen Elizabeth of England. He led the *Britannia* expedition to Antarctica in early Jan. 1957. It was really a round-the-world voyage on the royal yacht (*see* **The *Britannia*** for more). He was also one of the first humans ever to play tennis in Antarctica (*see* **Tennis**).

Philip Wrigley Gulf *see* **Wrigley Gulf**

Alturas Philippi *see* **Philippi Rise**

Cape Philippi. 75°14' S, 162°33' E. A dark rock cliff with vertical sides, rising abruptly to 490 m, it marks the E extremity of D'Urville Wall, and the N side of the terminus of David Glacier, in Victoria Land. Discovered during BAE 1907-09, and named by Shackleton for Emil Philippi. US-ACAN accepted the name, and it appears in the 1958 NZ gazetteer.

Cumbres Philippi *see* **Philippi Rise**

Philippi, Emil. b. Dec. 4, 1871, Breslau. Professor of geology at Jena University, he was glaciologist and geologist on GermAE 1901-03. In 1908 he was German consul at Mazatlán, in Mexico, and died on Feb. 27, 1910, in Helwan, Egypt.

Philippi Canyon. 65°45' S, 78°30' E. A submarine canyon off the coast of the American Highland.

Philippi Glacier. 66°45' S, 88°20' E. A coastal glacier, about 24 km long and 11 km wide, flowing N to the E end of the West Ice Shelf, 24 km W of Gaussberg, between that feature and Cape Penck, on the coast of Wilhelm II Land. Delineated from air photos taken by OpHJ 1946-47. Named by ANCA on Aug. 11, 1955, for Emil Philippi. US-ACAN accepted the name (the American gazetteer says in 1953, which is unlikely).

Philippi Ice Plateau *see* **Philippi Rise**

Philippi Rise. 66°06' S, 62°18' W. A low, snow-covered promontory (the British call it an ice-covered land area), 11 km wide, it extends about 16 km SE from the Nordenskjöld Coast, on the E coast of Graham Land, W of Jason Peninsula. The ice surface is highest in the W, where it rises to 395 m (the British say about 250 m), and is broken by Borchgrevink Nunatak and Gemini Nunatak. In fact, it lies between those 2 features to the NW and Medea Dome to the SW. Nordenskjöld, during SwedAE 1901-04, reported an ice wall, or glacial terrace, in the area of Borchgrevink Nunatak. Although he was unable to determine its true nature, he called it Philippigletscher (i.e., "Philippi glacier"), or Philippieis (i.e., "Philippi ice"), for Emil Philippi. Following air photography by Wilkins on Dec. 20, 1928, the name Philippi Ice Plateau was variously applied to the ice shelf and land ice in this area. It appears on a 1946 Argentine chart as Meseta de Hielo Philippi (i.e., "Philippi ice plateau"). In Dec. 1947 Fids from Base D determined its true nature, and that it is separated from Jason Peninsula by a channel filled with shelf ice. That is how it appears on Dougie Mason's FIDS map of 1950, and that it is how it was accepted by UK-APC on Jan. 22, 1951, and by US-ACAN in 1952, the new name being Philippi Rise. It appears that way on a British chart of 1952, and also in the 1955 British gazetteer. However, Fids from Base D, surveying it again in Sept. 1955, found that it is joined to Jason Peninsula by a narrow neck of land. On a 1956 U.S. Hydrographic Office chart it appears (misspelled) as Phillipi Ice Plateau, and on a 1957 Argentine chart it appears as Alturas Philippi (i.e., "Philippi heights"). That latter name was the one accepted by the Argentine gazetteer of 1970, albeit with the misspelling Alturas Phillippi. On a Chilean chart of 1963 it appears as Cumbres Philippi, and that was the name accepted by the 1974 Chilean gazetteer.

Philippibank. 66°45' S, 89°00' E. A sea bank off the coast of Queen Maud Land. Named by international agreement.

Philippieis *see* **Philippi Rise**

Philippigletscher *see* **Philippi Rise**

The *Philippine Sea*. Popularly known as the *Phil Sea*. Aircraft carrier whose keel was laid on Aug. 14, 1944, by Bethlehem Steel, and she was built that year, as the *Wright*, in honor of aeronaut Wilbur Wright. On Feb. 14, 1945, her name was changed to the *Philippine Sea*, after the famous battle of World War II. In Nov. 1946 she received orders to participate in OpHJ 1946-47. Captain Delbert S. Cornwell. She went to Boston for repairs, and on Dec. 29, 1946, arrived back in Norfolk, Va., where, on Jan. 2, 1947, she became Admiral Byrd's flagship for the expedition. She made her way down to the Panama Canal by Jan. 8, and cleared Balboa on Jan. 10, 1947. The vessel carried six R4D transport planes and an HO3S-1 helicopter. On Jan. 12, she crossed the Equator, and on Jan. 22, 1947, lost her helo in an accident. The crew were rescued within 8 minutes. On Jan. 24, 1947, she rendezvous'd with the other ships of Task Force 68. She served in Korea, and was decommissioned in 1958, being struck from the Naval Vessel Registry in 1969, and sold for scrap in 1971.

Cape Phillips. 73°04' S, 169°36' E. A cape about midway along the E side of Daniell Peninsula, about 11 km southward of Cape Daniell, and 13 km SE of Mount Brewster, it marks the S entrance to Tucker Inlet, on the E coast of Victoria Land. Discovered in Jan. 1841 by Ross, who named it for Lt. Charles Gerrans Phillips. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Mount Phillips. 73°01' S, 167°15' E. A high summit, rising to 3035 m, westward of Mount Lubbock, it is the culminating summit in the S part of the ice-covered Malta Plateau, in northern Victoria Land. Discovered in Jan. 1841 by Ross, who named it for geologist John Phillips (1800-1874), the first assistant secretary of the British Association for the Advancement of Science, 1832-59. US-ACAN accepted the name in 1950, and NZ-APC followed suit.

Phillips, Charles. 2nd mate on the *Huron*, 1820-21. He was probably one of the first to make a landing on the Antarctic continent (*see* **Landings**).

Phillips, Charles Gerrans. b. 1803, Henfield, Sussex. He entered the Royal Navy on Nov. 25, 1820, and on June 28, 1838, was promoted to lieutenant. As such, on Sept. 21, 1839, he was appointed to the *Terror*, for RossAE 1839-43. On Nov. 23, 1843, promoted to 1st lieutenant, he was appointed to the *Helena*, and was promoted to commander on Jan. 31, 1848. In 1949, he married in Ipswich, but his wife died not long thereafter, and he never married again. In 1850-51, he was 2nd-in-command on the *Felix*, under Sir John Ross, in the Arctic, looking for the lost Sir John Franklin. He was skipper of the *Urgent*, 1855-57. On July 31, 1860, he was promoted to captain, and retired to Deptford, Kent. In his later years, he moved in with his niece and her husband in Peckham, where he died on Nov. 23, 1871.

Phillips Glacier *see* **Albanus Glacier**

Phillips Mountains. 76°16' S, 145°00' W. A range of mountains on the N side of Balchen Glacier and Block Bay, in the Ford Ranges of Marie Byrd Land. Mount June is the highest peak in these mountains. Discovered by ByrdAE 1928-30, and named by Byrd as Albanus Phillips Mountains, for Col. Albanus Phillips, Sr. (1871-1949), a Maryland manufacturer, founder of the Phillips Packing Company, and food counselor and patron of the exhibition. US-ACAN accepted the name in 1947, but later shortened it to Phillips Mountains. *See also* **Albanus Glacier**.

Phillips Nunatak. 84°45' S, 62°36' W. A small nunatak, rising to about 1000 m above sea level, along the edge of a small ice escarpment 11 km N of Mount Wanous, NE of the Mackin Table, in the Patuxent Range of the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Harry G. Phillips, who wintered-over as cook at Palmer Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Phillips Nunataks. 66°30' S, 52°39' E. Nunataks forming a ridge about 13 km SE of Douglas Peak, in Enderby Land. Named by ANCA on Dec. 7, 1976, for Mike Phillips, weather observer-in-charge at Mawson Station in 1972, again in 1975, and at Casey Station in 1978.

Phillips Ridge. 67°50' S, 62°49' E. A ridge, 0.8 km long, 0.8 km W of the main massif of the Central Masson Range, just S of Ferguson Peak, in the Framnes Mountains of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Named by ANCA for John Phillips, physicist at Mawson Station in 1962. US-ACAN accepted the name in 1965.

Phillpot Automatic Weather Station. 68°39' S, 60°33' E. Formerly known as GEO3. An Australian AWS, installed in Jan. 1982, at an elevation of 1830 m, SE of the Hansen Mountains of Kemp Land. Named for Henry R. Phillpot (*see* **Phillpot Bluff**).

Phillpot Bluff. 73°23' S, 68°18' E. A rock bluff in the S part of the Mawson Escarpment, between Turk Glacier and Sheraton Glacier. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1960, and 1973. Named by ANCA on Nov. 27, 1973, for Henry Robert Phillpot (b. 1919), who served in the RAAF during World War II, was appointed a professional meteorologist with the Bureau of Meteorology from 1948 (he had started at the Bureau in 1940), and by 1952 was met adviser for the British atomic bomb tests in Australia. He was leader of the International Antarctic Analysis Centre, in Melbourne, 1959-65, and leader of the International Antarctic Meteorological Centre (also in Melbourne), 1965-69. From 1969 to 1978, he was in charge of the synoptic research section of the Bureau, and led the Basic Data Set Project for the first Global Atmospheric Program (GARP) experiment. From 1978 to 1980 he was head of the Bureau's research and development branch, retired from the Bureau in 1980, and from 1980 to 1987 was a senior associate with the met department at the University of Melbourne, concentrating on Antarctica. He retired in 2001.

The *Philos*. Swiss yacht, skippered by Eric Barde (Philos Expéditions), which visited the South Shetlands and the Antarctic Peninsula in 1997-98, 1998-99, 1999-2000, 2000-01, 2001-02, and 2002-03. She had a crew of 2 and could take 3 passengers. *See also* **The *Theoros***.

Islote Phils *see* **Phils Island**

Phils Island. 64°30' S, 63°00' W. The southern of two small islands immediately S of Guépratte Island, in Discovery Sound, off the NE coast of Anvers Island, in the Palmer Archipelago. Probably first seen in Jan. 1905, during FrAE 1903-05. Charted in 1927 by personnel on the *Discovery*, it appears on their chart of 1929, as Phils Islet. The name may reflect usage by whalers in the area. It appears on a Chilean chart of 1947 as Islote Phils, and that name was accepted by the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The name Phils Islet was accepted by UK-APC on Sept. 20, 1955, and US-ACAN followed suit. Photographed aerially by FIDASE in 1956-57. On July 7, 1959, UK-APC renamed it as Phils Island, but in the 1961 British gazetteer, it appears erroneously as Phils Islands. US-ACAN followed suit with Phils Island in 1963.

Phils Islands *see* **Phils Island**

Phils Islet *see* **Phils Island**

Phipps, Paul. b. 1929, Coventry, son of George E. Phipps and his wife Dorothy E.M. Overton. He did his national service in the Royal Navy, and worked for an engineering company. He joined FIDS in 1954, as a meteorologist, and wintered-over at Base B in 1955. He would wear a deerstalker around the base. He lived in Newent, Glos, until 2006, then disappears.

Phleger Dome. 85°52' S, 138°24' W. A massive dome-shaped mountain, rising to 3315 m, at the NE end of the Stanford Plateau, along the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for lawyer and diplomat Herman Phleger (1890-1984), adviser to President Eisenhower, one of the U.S. representatives in the discussions of the Antarctic Treaty in 1959.

Phobos Ridge. 71°52' S, 68°30' W. A rocky ridge of sandstone and shale, rising to about 500 m, it forms the W side of Mars Glacier, in the SE corner of Alexander Island. The coast in this vicinity was discovered and photographed aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. This ridge was photographed aerially again in 1947 by RARE 1947-48, and surveyed from the ground in 1949 by Fids from Base E. Named by UK-APC on March 31, 1955, for the satellite of the planet

Mars. US-ACAN accepted the name in 1956. In 1959-60, FIDS cartographers mapped it from the RARE photos.

Phocidae *see* **Seals**

Mount Phoebe. 71°47' S, 68°47' W. A mountain rising to 1040 m above sea level, at the junction of 4 radial ridges, between Saturn Glacier and the head of Neptune Glacier, in eastern Alexander Island. The summit is a small mesa of conglomerate, rising to 300 m above the surrounding ice. Discovered and photographed aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. Mapped again in 1959-60, by FIDS cartographers working from air photos taken in late 1947 by RARE 1947-48. Surveyed by BAS between 1961 and 1973. Named by UK-APC on Dec. 20, 1974, for one of the satellites of the planet Saturn. US-ACAN accepted the name in 1975.

Phoenix Peak. 64°24' S, 59°39' W. Immediately S of Muskeg Gap, at the N end of Sobral Peninsula, in Graham Land. Surveyed by FIDS in 1960-61, and mapped by FIDS cartographers from this survey. Named by UK-APC on Feb. 12, 1964, for the Phoenix Manufacturing Co., of Eau Claire, Wisconsin, pioneers of locomotive sleds. US-ACAN accepted the name later in 1964. The Argentines call it Pico Fénix.

Phoque Island. 66°49' S, 141°24' E. A rocky island, about 160 m long, it is the most southerly island in a small group about 160 meters NE of Cape Margerie, in the area of Port-Martin. Charted in 1951 by the French, and named by them as Île aux Phoques, for the large number of seals here (phoque is French for "seal"). US-ACAN accepted the translated name in 1962.

Île aux Phoques *see* **Phoque Island**

Île des Phoques *see* **Seal Islands**

Cap des Phoques de Weddell *see under* **Des**

Phormidium Lake. 63°51' S, 58°00' W. A narrow lake, about 2 km long, on the SW side of Brandy Bay, James Ross Island. Notable for its reddish-purple mat of the cyannobacterium *Phormidium autumnale*, hence the name given by UK-APC on Dec. 2, 1993.

Phosphate. It looks as if sedimentary phosphate exists in Antarctica.

Photogrammetry Point. 62°30' S, 58°28' W. A small rocky promontory S of Furmanczyk Point, SE of Komandor Peak, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, to commemorate the photogrammetric work done during PolAE 1978-79.

Photography. **Feb. 1874**: The earliest known photographs taken in Antarctica were of icebergs, during the *Challenger* expedition. **1897-99**: Dr. Cook took several photos during de Gerlache's BelgAE. **1898-1900**: In his narrative on Borchgrevink's BAE 1898-1900, Louis Bernacchi published over 150 Antarctic photos taken by him during the expedition. **Feb. 4, 1902**: During Scott's BNAE 1901-04, Shackleton took the first aerial photos — from a balloon. However, Reginald Skelton was the official expedition photographer. **1903-05**: Paul Pléneau was photographer on Charcot's FrAE. **1907-09**: Shackleton and Marshall took pocket cameras with them on their trek to the Pole, during BAE, and Mawson had a box camera with him when he went to the South Magnetic Pole during the same expedition. **1908-10**: André Senouque was the photographer on Charcot's FrAE, and took thousands of shots. **1910-13**: Herbert Ponting was the first professional photographer in Antarctica, when he went on Scott's BAE, shooting the first color photos, autochromes, in 1911. Not only that, he shot the first movie there. **1911-14**: Frank Hurley was the professional photographer of Mawson's AAE. Percy Correll also took photos. **1914-17**: During Shackleton's BITE, Frank Hurley was the official photographer and cameraman. Engineer Alfred Dakin took his camera with him on the *Aurora*. **Dec. 20, 1928**: Wilkins took aerial photos. **1928-30**: Willard Vander Veer was official photographer of ByrdAE. Ashley McKinley took aerial photos during the same expedition. **1929-30**: George Rayner, on the *William Scoresby*, took several photos. **1919-31**: Frank Hurley took photos during Mawson's BANZARE. **The 1930s**: Alfred Saunders was the photographer on the *Discovery II*, capturing the South Orkneys as never before. **1933-35**: Byrd took aerial photos, during his 2nd expedition. Byrd was the first to use a fixed aerial survey camera (*see also* **Aerial photography**, and **Movies set in Antarctica**). **1936-37**: Lars Christensen's LCE took thousands of aerial photos. **1938-39**: GermAE took 1800 aerial photos. **1939-41**: Loran Wells and Richard Moulton were the official photographers for USAS. H.H. Richardson took Antarctica's first color motion picture shots. Tony Wayne, seaman on the *Bear*, took great motion pictures. **1946-47**: Over 70,000 aerial photos were taken during Operation Highjump, using the new trimetrogon process of 5 synchronized cameras. **1947-48**: An unbelievable number of aerial photos were taken during Operation Windmill, which was not unexpected — mapping being a main mission of the expedition. Also that season, especially in Nov. and Dec. 1947, extensive trimetrogon aerial photography was carried out by Finn Ronne's RARE. **1955-57**: Hunting Aerosurveys took thousands of aerial photos during FIDASE. **1958-59**: The Norwegians took thousands of aerial photos during NorAE 1956-60. **1959**: Renowned Swiss photographer Emil Schulthess spent 4 months in Antarctica, His photographic book *Antarctica* was a result of this trip. **1975**: Lanscape photographer Eliot Porter visited Antarctica, and produced his book, the visual masterpiece *Antarctica*.

Rocas Physeter *see* **Physeter Rocks**

Physeter Rocks. 63°31' S, 60°09' W. A small group, rising to an elevation of just over 50 m above sea level, just NW of Ohlin Island, in the Palmer Archipelago. Mapped from aerial photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for the sperm whale (*Physeter catodon*). US-ACAN accepted the name later in 1960. They appear on a 1962 British chart. The Argentines call them Rocas Physeter.

Islotes Pi *see* **Pi islands**

Pi Islands. 64°20' S, 62°53' W. Two islands and several rocks 1.5 km E of the NE end of Omega Island, and S of Eta Island, in the Melchior Islands, in the Palmer Archipelago. Surveyed by ArgAE 1942 and ArgAE 1943, and it is shown on a 1943 Argentine chart as Islas Pi, after the Greek letter. They appear on a 1947 British chart as Pi Islands, but on a 1950 British chart as Pi Islets, and that latter name was the one accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. However, on July 7, 1959, UK-APC renamed them Pi Islands, and they appear as such on a British chart of that year. US-ACAN accepted the new name in 1963. ArgAE 1947-48 recharted them, and gave them a new name, Islotes Sidders, presumably named for a member of the expedition. Then ArgAE 1958-59 renamed them yet again, as Islotes Subof. Rubanes ("Subof." being short for Suboficial), again presumably for a member of that expedition. They appear on a Chilean chart of 1955 as Islotes Pi, and that was the name accepted by the Chilean gazetteer of 1974. It is unclear what the Argentines call this group today.

Pi Islets *see* **Pi Islands**

Pianos. The *Discovery* had a Broadwood aboard in 1901-04, donated by a lady in England. On its return it was as good as ever. The *Terra Nova* had one, during BAE 1910-13. Martin Smith took a piano down to Base F for the winters of 1958 and 1959. There was certainly one at McMurdo in 1966.

Piasecki Pass. 62°04' S, 58°24' W. A pass, at an elevation of between 200 and 210 m above sea level, between Mount Birkenmajer and Tyrrell Ridge, above Noble Glacier, on Keller Peninsula, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Jacek Piasecki, glaciologist on PolAE 1978-79.

Caleta Piccard *see* **Piccard Cove**

Piccard Cove. 64°45' S, 62°19' W. Forms the southwesternmost part of Wilhelmina Bay, along the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Auguste Piccard (1884-1962), Swiss physicist and balloonist. It appears on a British chart of 1961. On a 1963 Chilean chart Bahía Wilhelmina is shown apparently relating only to this cove, but that is probably a slight physical misplacing of the name on the chart. US-ACAN accepted the British naming in 1965. Since about 1978, the Argentines have tended to call it Caleta Piccard.

Mount Picciotto. 83°46' S, 163°00' E. A prominent, mainly ice-free mountain, rising to 2560 m, it surmounts the NE end of Painted Cliffs, on the Prince Andrew Plateau of the Queen Elizabeth Range. Named by US-ACAN in 1966, for Edgard E. Picciotto, geologist with the Laboratory of Nuclear Geology and Geochemisty at the Free University of Brussels, glaciologist on the BelgAE 1957-59, and at Pole Station in 1962-63, and a member of the South Pole-Queen Maud Land traverses of 1964-65 and 1965-66. In fact, he led the 2nd one.

Picciottoknausane. 72°25' S, 26°30' E. A group of crags in a line 25 km long, S of Skirfonna, in the E part of the Sør Rondane Mountains. Named by the Norwegians for Edgard Picciotto (*see* **Mount Picciotto**). The name means Picciotto Crags. The Russians call this feature Nunataki Mechnikova, for Lev Mechnikov (*see* **Mechnikov Peak**).

The *Pichincha*. A 100-ton Chilean sealing vessel owned by Messrs Braun & Blanchard (Mauricio Braun and Juan Blanchard), of Punta Arenas. In 1902, with a crew of 19, under the command of Capt. Juan Vieira, she visited the South Shetlands. *See also* **The *Archie*** and **The *Rippling Wave***.

Islotes Pichón. 64°19' S, 62°54' W. A group of little islands, just S of the E side of Eta Island, in the East Melchior Islands. Named by the Argentines.

Pickard Ridge. 68°37' S, 78°09' E. An irregular ridge, consisting of ancient Precambrian rock, and separating Marine Plain from Poseidon Basin and its S extension, in the Vestfold Hills. It has a NNW-SSE orientation, is about 2.5 km long, with an average width of 0.6 km in the S and 1 km in the N, and part of the feature is bounded by the 25-meter contour which marks an old beach level. The ridge reaches an elevation of between 40 and 50 m in the S, rising to a little below 70 m in the N. As defined, Pickard Ridge includes a small, isolated outcrop S of the ridge proper, and is separated from it by a 100-meter gap. Named by ANCA on April 27, 1995, for John Pickard, who wintered-over at Davis Station in 1980, and who made initial studies describing the area and establishing its significance. He wrote *Antarctic Oasis*, the first attempt at a comprehensive synthesis of the evolution of the region in glacial times.

Pickering Nunatak. 71°24' S, 70°47' E. A prominent, solitary nunatak at the E side of the mouth of Lambert Glacier, about 30 km SSW of the Manning Nunataks, at the E edge of the Amery Ice Shelf. Discovered aerially on Nov. 2, 1957, on a flight by an ANARE Beaver aircraft over the Amery Ice Shelf. Named by ANCA on April 29, 1958, for Flight Sgt. Richard Ronald "Ron" Pickering (b. Jan. 12, 1920. d. Jan. 13, 1997), airframe fitter with the RAAF Antarctic Flight at Mawson Station, 1955-56, and again for the winter of 1957. US-ACAN accepted the name in 1961. The Australians plot it in 71°25' S, 71°00' E.

Pickering Nunataks. 71°49' S, 68°57' W. A group of nunataks, rising to an elevation of about 500 m, 3 km SW of Mount Phoebe, on the NE side (i.e., near the head) of Saturn Glacier, in the E part of Alexander Island. Discovered and photographed aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos in 1936-37, by U.S. cartographer W.L.G. Joerg. Surveyed by BAS between 1961 and 1973. Named by UK-APC on Dec. 20, 1974, for William Henry Pickering (1858-1938), U.S. astronomer who discovered Phoebe (in 1909), one of the satellites of the planet Saturn. US-ACAN accepted the name in 1975.

Pickersgill, Richard. He was baptized on April 18, 1749, in West Tanfield, Yorks, son of Richard Pickersgill and his wife Ann Lee. He was with Wallis in Tahiti in 1767, and with Cook on his 1st voyage. He kept a log. He was 3rd lieutenant on the *Resolution* during Cook's 2nd voyage, 1772-75, and again kept a log. He later commanded his own ships, but the sea began to look better to him through the neck of a bottle, and he was court-martialed for drunkenness. One night, in 1779, a little unsteady on his feet, he fell into the Thames and drowned.

Isla Pickwick *see* **Pickwick Island**

Pickwick Island. 65°29' S, 65°38' W. The largest of the Pitt Islands, in the Biscoe Islands. Very roughly charted by BGLE 1934-37, and photographed aerially by FIDASE in 1956. It was more accurately shown on a 1957 Argentine chart prepared by ArgAE 1956-57, as Isla Alférez Maveroff, after an ensign on the expedition, and it appears as such on a 1964 Argentine chart. Named by UK-APC on July 7, 1959, in continuation of the *Pickwick Papers* theme (the islands in the group were named for characters in the Dickens novel). It appears on a British chart of 1960. US-ACAN accepted the name in 1965. It appears on a 1962 Chilean chart as Isla Pickwick, and that name was accepted by the 1974 Chilean gazetteer. Today, the Argentines use the name Isla Maveroff.

Picnic Passage. 64°20' S, 56°55' W. A marine channel, 2.5 km long and 0.8 km wide, running E-W, and separating Snow Hill Island from Seymour Island, in the James Ross Island group. First surveyed in April 1902, by SwedAE 1901-04, and named by Nordenskjöld as Seymoursund (i.e., "Seymour sound"). It appears as such on his 1911 map of the expedition. Re-surveyed by Fids from Base D in Sept. 1952, and named by them as Picnic Passage, for the easy sledging conditions experienced here (nothing to do with a picnic, as such; "It was a picnic" is the same thing as saying "it was a piece of cake"). UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963. ArgAE 1955-56 named it Estrecho Arguindeguy, for Teniente de fragata Luis E. Arguindeguy, of the Argentine Navy, who was killed in an avalanche at Mendoza (in Argentina) on Aug. 18, 1953, while in training to lead a naval detachment in Antarctica. That name was accepted by the 1970 Argentine gazetteer. On a 1963 U.S. Hydrographic Office chart it appears as Arguindeguy Strait. The Chileans call it Paso Ripamonti, or Estrecho Ripamonti, for Julio Ripamonti Barros (b. 1916), architect of the Chilean bases in Antarctica. He was part of ChilAE 1946-47, ChilAE 1947-48, and ChilAE 1948-49. Mr. Ripamonti had tried to get on to USAS 1939-41. In 1954, the Argentines built Betbeder Refugio on the NE end of Snow Hill Island, on the S side of the passage.

Picnics. To relieve the boredom aboard the frozen-in *Français* during the winter of 1904, at Port Charcot, Booth Island, during FrAE 1903-05, Charcot took a party of men on a picnic to nearby Hovgaard Island. They left their ship at 10.30 A.M., on May 30, 1904, and walked across the ice. They had to break up the meat and butter with axes, and then eat very quickly, dancing as they did do, to keep warm. This was the high watermark of Antarctic picnics. From then on, men did not picnic in the frozen south.

Isla Pico *see* **Beak Island**

Monte Pico *see* **Mount Pico**

Mount Pico. 64°10' S, 62°27' W. Rising to over 1700 m (the British say about 1750 m), in the NW part of Brabant Island, 5.5 km NE of Driencourt Point. Named by ArgAE 1955-56, it appears on their 1955 chart as Monte Pico (i.e., "peak mountain"). It appears again, as such, on a 1957 Argentine chart. Photographed aerially by FIDASE in 1956-57. There were a few reasons why UK-APC could not call it Mount Pico. One was that it would be going along with the Argentines, which, in 1960, was not a good idea. Another was that to name it thus might offend (or, at best, amuse) the Chileans, who use the word "pico" to mean not only a peak, and a bird's bill, but also, very frequently, the male organ of generation. The British knew this, of course, and they also knew what a wicked sense of humor the Argentines had. So, they named it on Sept. 23, 1960 (for themselves only) as Mount Rokitansky, after Karl, Freiherr von Rokitansky (1804-1878), Austrian pioneer in anatomy and pathology. US-ACAN accepted the name Mount Pico in 1965. The mountain was climbed on March 4, 1984, by the British Joint Services Expedition.

Rocas Pico *see* **Montrol Rock**

Pico, Armando S. b. Argentina. He wintered-over at Órcadas Station in 1933; was 2nd-in-command there for the winters of 1935 and 1938; and was base leader in 1943 and 1945. He wintered-over again in 1951, as a meteorological observer.

Pidgeon Island. 66°19' S, 110°27' E. A rocky island, 1.5 km long, just W of Mitchell Peninsula, between that peninsula and Midgley Island, in the Windmill Islands. First mapped from air photos taken in 1947 by OpHJ 1946-47, and in 1948 by OpW 1947-48. Named by US-ACAN in 1956, for Earl Chester Pidgeon (b. May 27, 1926, St. Louis. d. Dec. 13, 1985), who joined the U.S. Navy very young, during World War II, and was a photographer's mate on the *Currituck*, during OpHJ 1946-47. Working from the air photos, the E part of this feature was once thought to be a separate island, and called O'Brien Islet. The name O'Brien is now applied to the bay N of Mitchell Peninsula. However, it may still be two islands, but, if so, they are joined by permanent ice.

Pieck Range. 71°45' S, 12°06' E. A short mountain ridge, 25 km long, surmounted by Zwiesel Mountain, at the E side of the Humboldt Graben, in the Petermann Ranges of the Humboldt Mountains, in the Wohlthat Mountains of Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long

expedition. Re-mapped by SovAE 1960-61, and named by the Russians in 1966, (reportedly) as Hrebet Vil'gel'ma Pika, for Wilhelm Reinhold Pieck (1876-1960), president of East Germany from 1949 to 1960. US-ACAN accepted the name Pieck Range (sic) in 1970. The Norwegians call it Pieckryggen (which means "Pieck ridge").

Pieckryggen *see* **Pieck Range**

Pied, Jean-Baptiste. b. May 9, 1810, Bayonne. Able seaman on the *Zélée* during FrAE 1837-40. He died on board on July 15, 1839.

Piedmont glacier. The lobe-shaped expanded terminal part of a valley glacier spread out over broad lowlands at the base of a mountain. Differs from an ice sheet (q.v.) in its origin.

The Piedmont Tongue. 77°01' S, 163°07' E. A tiny glacier tongue at the very N of Wilson Piedmont Glacier, it juts out into the S part of Granite Harbor, in Victoria Land.

Isla Piedrabuena *see* **Eta Island**

Punta Piedras *see* **Piedras Point**

Piedras Point. 62°43' S, 60°20' W. In the central part of Zagore Beach, on the E coast of False Bay, NW of MacKay Peak, and SW of Inept Cove, 5.1 km N of Barnard Point, and 4.35 km W of St. Methodius Peak, on Livingston Island, in the South Shetlands. On a Spanish chart of 1998, it appears as Punta Piedras (i.e., "rocky point"). UK-APC accepted the translated name on Dec. 16, 2003. On March 5, 2002, the Bulgarians named it Ogosta Point, after the Ogosta River, in Bulgaria.

Pierce, Stanley *see* **Peirce**

Pierce-Butler, K.S. *see* **Butler, Kenelm**

Pierce Peak. 84°52' S, 63°09' W. Rising to 1790 m, 3 km S of Sullivan Peaks, at the NE edge of Mackin Table, in the Patuxent Range of the Pensacola Mountains. Surveyed by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Chester M. Pierce, USARP biologist who, with Jay T. Shurley, studied the psychophysiology of men while asleep and awake, before, during, and after stays at Pole Station in 1966-67. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Mont Pierre *see* **[2]Mount Pierre**

Monte Pierre *see* **Mount Pierre**

[1]Mount Pierre. 63°58' S, 61°50' W. A sharp, conical peak, rising to 210 m (the British say about 450 m), immediately SW of Moureaux Point, on Liège Island, in the Palmer Archipelago. Discovered, photographed, and roughly charted on Feb. 23, 1898, by BelgAE 1897-99, and named by de Gerlache as Mont Pierre. It appears as such on the expedition's charts. On Dr. Frederick Cook's 1900 English language version of these maps, it appears as Mount Pierre, and that name was seen also on a 1930 British chart. That name was accepted by US-ACAN in 1952, and by UK-APC Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The Argentines had been calling it Monte Pierre from at least 1908, but on a 1953 Argentine chart it appears as Monte Pedro ("Pedro" = "Pierre"), and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57. As for why it was named Mont Pierre, one is told by the gazetteers that it was for a supporter of the expedition, but no clarification of that is forthcoming. So, one has to wonder. There was no one on de Gerlache's expedition named Pierre, or was there? Jan Van Mirlo is listed several times as "Pierre Van Mirlo" in bulletins issued by the Royal Geographical Society of Belgium. His name was quite clearly Jan, but here he is being called Pierre.

[2]Mount Pierre. 71°18' S, 35°45' E. A massif, rising to 2220 m, next N of Mount Goossens, in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960, by BelgAE 1960-61, led by Guido Derom, and named by him as Mont Pierre, for Michel Pierre, aircraft mechanic, a member of the Belgian flight reconnoitering party in this area. US-ACAN accepted the translated name in 1966.

Cap Pierre Baudin *see* **Baudin Peaks**

Baie Pierre Lejay. 66°38' S, 139°50' E. A large bay opening into the Dumont d'Urville Sea, and which contains the Géologie Archipelago, the Fram Islands, Ifo Island, and Hélène Island, NE of the Astrolabe Glacier, between Pointe Ebba to the W and the Dumoulin Islands to the east. Named by the French in 1958, for Pierre Lejay (1898-1958), a physicist and Jesuit priest, and a member of the French committee for IGY. It is reported that the Russians call it Lejay Bay.

Cap Pierre Willems *see* **Cape Willems**

Pierrebotnen. 71°51' S, 24°37' E. A corrie, or cirque, at the W side of Oyayubi-one, in the NE part of the Brattnipane Peaks, in the central part of the Sør Rondane Mountains. Named by the Norwegians ("Pierre cirque"), one assumes for Michel Pierre [*see* **[2]Mount Pierre**].

Pieter J. Lenie Field Station. 62°10' S, 58°28' W. Also called Copacabana Field Camp. American field station opened in 1991-92, on Admiralty Bay, on King George Island, in the South Shetlands. Named for Pieter Lenie (q.v.). It was open again in 1992-93, then closed.

Roca(s) Pig *see* **Pig Rock**

Pig Rock. 62°19' S, 58°48' W. A rock, rising to 65 m above sea level, it is the largest of a group of rocks 1.5 km E of Duthoit Point (the E end of Nelson Island), in the entrance to Fildes Strait, in the South Shetlands. Discovered by sealers before 1821, it seems to be the feature charted by Capt. Sherratt as Post Office Rock in 1821. Charted by personnel on the *Discovery II* in 1935, and named by them as Pig Rock. It appears on their 1935 chart, and on a British chart of 1942. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears in the 1955 and 1962 British gazetteers, and on a British chart of 1968. On an Argentine chart of 1949 it appears as Roca Pig, but on one of their charts of 1953 it appears fully translated as Roca Chanchito. On a 1954 Argentine chart, this rock and smaller rocks in the vicinity, were collectively named Rocas Chanchito, and that name was accepted by the 1970 Argentine gazetteer, although it does appear as Rocas Chanchitos on a 1959 Argentine chart. On a 1962 Chilean chart the name appears as Rocas Pig (for the group), and that name was accepted by the Chilean gazetteer of 1974.

Mount Piggen. 66°43' S, 54°41' W. An astonishingly isolated mountain on the Larsen Ice Shelf. Named by the Russians. Acceptance of this feature must be made cautiously.

Piggott, Alan. b. March 13, 1937, Bradford, Yorks, son of baker Alfred Piggott and his wife Eliza Ena May Marsden. After grammar school, he went to work in local government, at Bradford Town Hall, for 2 years, then did his national service in the RAF, as a radio operator. After a year in a private steel works in Bradford, he was made redundant, and one Sunday afternoon in 1958 he saw an ad for radio operators in the Falklands (Antarctica was not mentioned). That was how he joined FIDS, and in September of that year sailed from Southampton on the *John Biscoe*. He wintered-over as radio operator at Base F for 3 successive years —1959, 1960, and 1961. In 1962 the *Shackleton* came to pick him up, and back in Bradford he went back into local government, first as a cashier at Bradford Tech, then as registrar at Keighley Tech, then as the chief administrative officer at the Co-operative College in Loughborough, then at Grimsby Tech, and finally to Doncaster College as registrar. He retired in 1993, and after 5 years of that went back to work as a part-time clerk with the local parish council in Doncaster, which he will do until he dies. He married Susann Brown.

Piggott, William Roy. Known as "Roy Piggott," but usually simply as "Piggott." b. July 18, 1914, Merton, Surrey, son of Josiah W. Piggott and his wife Alice M. Harvey. After King's College, London, he became personal research assistant to Sir Edward Appleton, the great pioneer of atmospheric research, but Piggott's focus in those days was on radon. After he had an accident with radon gas, he became radiocative, and had to quit, going into ionospheric physics at the Cavendish Lab, at Cambridge. During World War II he was involved in radio physics research, at Slough, and after the war led a team to capture the German ionospherics research station at Lindau, stealing it out from under the grasping hands of the Russians. This became the Max Planck Institute. He was the main proponent of the ionospherics observatory at Halley Bay Station, in Antarctica, during IGY (1957-58), and, from 1973 to 1979, he was head of Atmospheric Sciences at BAS, all the while continuing to oversee the observatory at Halley. The space science platform at Halley V was named Piggott Platform. His wife Allison died after 57 years of marriage, and Piggott himself died in Cambridge, on May 20, 2008.

Piggott Peninsula. 73°43' S, 61°20' W. A broad, snow-covered peninsula between New Bedford Inlet and Wright Inlet, on the Lassiter Coast, bounded to the W by Bryan Glacier and Swann Glacier, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940, during USAS 1939-41. Mapped by

USGS from ground surveys, and USN air photos taken between 1961 and 1967. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. Named by UK-APC on Nov. 13, 1985, for Roy Piggott. US-ACAN accepted the name.

Pigmy Rock. 68°43' S, 67°33' W. Also spelled Pygmy Rock. Close off the SW side of Alamode Island, at the S extremity of the Terra Firma Islands, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. The Terra Firma Islands were first visited and surveyed in 1936, by BGLE 1934-37. This particular rock was surveyed in Oct. 1948 by Fids from Base E, who named it for its size. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Pigs. Charcot took a cochon named Toby with him on the *Français* during his first expedition, 1903-05. In Dec. 1904 Toby inadvertently ate fish with hooks still in them. Despite Charcot operating on him, he (Toby) died, and the Frenchman was very upset. Filchner took two pigs to the ice during GermAE 1911-12. From 1912-13 on, the Norwegian whalers took pigs with them every season to their station on Deception Island. On Dec. 5, 1914, the *Endurance* left Grytviken, South Georgia, with two live pigs aboard, Sir Patrick and Bridget Dennis. In April 1915, while the *Endurance* was stuck fast in the ice, Sir Patrick and Bridget performed the ultimate act of service. On Dec. 7, 1944, the *William Scoresby* arrived to relieve Base B at Deception Island, during Operation Tabarin. On board were the new personnel, including Gertrude, a 6-week-old Falklands pig. Gertrude soon made the base her home, and lived in a kennel built by Taff Davies. Apparently she would eat and drink anything — gin and paint, among other things, and was in turn eaten by the lads for New Year's — but only after the newly-arrived huskies found her and tore her to pieces. Port Lockroy got a porker at the same time that Base B got theirs. This one they called "The Pig," and she became part of the family. Taff Davies had to shoot her point blank in the head with his .45 revolver. These are just some of the salient pigs in Antarctic history.

Nunatak Pik. 70°47' S, 67°12' E. A nunatak due S of Murray Dome, in the Amery Peaks, in the Prince Charles Mountains. Named by the Russians.

Piked whale *see* **Minke whale**

Pikehead *see* **Minke whale**

Pila Island. 67°35' S, 62°43' E. A small island, about 1.5 km long, 2.5 km W of the Flat Islands, in Holme Bay, about 7 km WNW of Mawson Station. Discovered and photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Pila (i.e., "the arrow"). ANCA accepted the name Arrow Island, on Feb. 18, 1958. US-ACAN accepted the name Pila Island in 1965.

Pilarryggen. 72°42' S, 3°56' W. A rock ridge at the W side of Portalen Pass, in the Seilkopf Peaks, in the W part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them (name means "the pillar ridge"). US-ACAN accepted the name without modification, in 1966.

Pilbeam, Arthur Edmund. b. March 30, 1878, Hastings, Sussex, son of tailor William Pilbeam and his wife Emily Ray. After a few jobs as an errand boy in Hastings, he joined the RN in 1895, and was a leading seaman at Gibraltar, on the *Mars*, when he transferred to the *Discovery*, for BNAE 1901-04. He married in Hackney, on Feb. 10, 1907, to Ellen Mary Stephens, and they lived in Islington, and later in Dover. On March 28, 1916, Petty Officer 2nd Class Pilbeam was serving with the Dover Patrol, aboard the minesweeping trawler *Saxon Prince*, when the ship was lost in a storm off Dover.

Pico Pilcher *see* **Pilcher Peak**

Pilcher, Michael. b. 1906, Otahuhu, NZ, son of William Pilcher. Stowaway on the *Jacob Ruppert* during ByrdAE 1933-35 (*see also* **Wray, Geoffrey Branford**).

Pilcher Peak. 64°19' S, 60°49' W. Rising to about 950 m, between Mouillard Glacier and Lilienthal Glacier, E of Brialmont Cove, on the Danco Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, surveyed from the ground by Fids from Portal Point between 1957 and 1959, and mapped by FIDS cartographers from these efforts. Named by UK-APC on Sept. 23, 1960, for Percy Sinclair Pilcher (1866-1899), British engineer and gliding pioneer. US-ACAN accepted the name later in 1960. It was a gliding accident that killed Mr. Pilcher.

Pilgerberg. 74°42' S, 162°38' E. A mountain, E of Backwater Glacier, at the S end of the Eisenhower Range, in Victoria Land. Named by the Germans.

Pill, Josiah John. b. June 1, 1890, Bedford, England, son of school caretaker George Pill and his wife Rosa Jane Barrick. In 1913 he moved to Sydney, married Margaret Brown Patterson in 1923, and then settled in Denison, Tasmania. He was chief steward on the *Discovery* for the 2nd half of BANZARE 1929-31. He continued to live in Tasmania, as a laborer. He died on Oct. 17, 1962, in Hobart. Margaret died in 1964.

Pillar. 77°35' S, 166°13' E. A high pillar formed by an exposed plug of a local crater at Cape Barne, on Ross Island. Named by BAE 1910-13. The name appears in the 1958 NZ provisional gazetteer.

Pillar Peak *see* **Waldeck-Rousseau Peak**

Pillow Knob. 83°39' S, 58°41' W. A knob, protruding through the snow cover to a height of 810 m above sea level, at the NE end of the Williams Hills, in the Neptune Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named descriptively by Dwight Schmidt (*see* **Schmidt Hills**), who did geological work in this area between 1956 and 1966. US-ACAN accepted the name in 1968, and UK-APC followed suit on Nov. 3, 1971. It appears in the 1974 British gazetteer.

Pillow Saddle. 77°53' S, 164°01' E. A saddle on Hobbs Ridge, 3 km E of Hobbs Peak, between Hobbs Glacier and Blue Glacier, in Victoria Land. So named by NZ-APC in 1980 because uncommon metamorphosed pillow lavas crop out in the saddle.

Pillowlavaspitze. 73°28' S, 167°08' E. A peak, due W of Tiger Hill, in the E part of the Mountaineer Range of Victoria Land. Named by the Germans.

Pillsbury Tower. 73°31' S, 94°20' W. A remnant volcanic cone, rising to 1295 m, directly at the base of Avalanche Ridge, in the Jones Mountains. It has a sheer north-facing rock cliff, and a gradual slope at the S side, and its dark rock rises over 100 m above the level of the surrounding area, thus making it an excellent landmark. Named by the University of Minnesota Jones Mountains Party of 1960-61, for Pillsbury Hall, which housed the department of geology, at the University of Minnesota. US-ACAN accepted the name in 1963.

Pilon Peak. 71°14' S, 164°57' E. A prominent peak, rising to 1880 m, 3 km NE of Mount Works, along the W side of Horne Glacier, in the Everett Range of the Concord Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Cdr. Jerome R. Pilon, USN, commander of VXE-6 in 1969-70. He had been operations officer of VX-6 (as it was known then) from 1967 to 1968, and executive officer from 1968 to 1969. Later, 1976-78, he served on US-ACAN.

Pico Pilot *see* **Pilot Peak**

Pilot Glacier. 73°23' S, 165°03' E. A short, deeply entrenched tributary glacier, 13 km long, descending along the SE side of Deception Plateau, through the Mountaineer Range, to enter Aviator Glacier, in Victoria Land. Named by the Northern Party of NZGSAE 1962-63, for the members of VX-6, and also in association with Aviator Glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1971.

Pilot Peak. 65°51' S, 65°16' W. Rising to 745 m, it is the highest point on Larrouy Island, conspicuous from a great distance, off the Graham Coast, on the W coast of Graham Land. Charted by FrAE 1908-10. So named by UK-APC on July 7, 1959, because of its usefulness as a navigation mark for the passage of Grandidier Channel (this peak is at the SW end of the channel). Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by a joint FIDS-RN team from Base J in 1957-58. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Pico Piloto. It appears on a 1962 Chilean chart as Pico Pilot, but ChilAE 1962-63 named it Pico García, in association with Cape García. It appears as such on their 1963 chart, and was the name accepted by the Chilean gazetteer of 1974.

Pilot whale *see* **Long-finned pilot whale**

Pico Piloto *see* **Pilot Peak**

The *Piloto Pardo*. A 2930-ton, 82-meter ice-strengthened Chilean transport ship, built in

Haarlem, Holland, by Haarlemshe Scheepsbouw Maatschappij, specifically for Antarctic work, launched on July 11, 1958, and named for Capt. Luis Pardo Villalón. Capable of 16 knots, she arrived in Valparaíso on March 12, 1959, and joined the Chilean Navy on April 7, 1959. She was seen in Antarctic waters during the following expeditions: ChilAE 1959-60 (Captain Arturo Ricke Schwerter); ChilAE 1960-61 (Captain Custodio Labbé Lippi); ChilAE 1961-62 (Captain Jorge Paredes Wetzer — later a rear admiral); ChilAE 1962-63 (Captain Carlos Aguayo Ávila); ChilAE 1963-64 (Captain Federico Horn Wheeler); ChilAE 1964-65 (Captain Horn); ChilAE 1965-66 (Captain Mario Poblete Garcés); ChilAE 1966-67 (Captain Carlos Borrowman Sanhueza — later director of the Naval Academy); ChilAE 1967-68 (Captain Ladislao D'Hainaut Fuenzalida); ChilAE 1968-69 (Captain D'Hainaut); ChilAE 1969-70 (Captain Ronald McIntyre Mendoza); ChilAE 1970-71 (Captain Guillermo Aldoney Hansen — later a rear admiral); ChilAE 1971-72 (Captain Sergio Barra von Kretschmann — later a rear admiral, and head of Naval Intelligence); ChilAE 1972-73 (Captain Germán Guesalaga Toro — later a vice admiral); ChilAE 1973-74 (Captain John Martin Reynolds); ChilAE 1974-75 (Captain Manuel de Sarratea Zolessi); ChilAE 1975-76 (Captain Franklin González Rodríguez); ChilAE 1976-77 (Captain Erwin Conn Tesche — later a rear admiral); ChilAE 1977-78 (Captain Gustavo Pfeifer Niedbalski — later a vice admiral). On Christmas Day 1979, while helping in the shooting of a movie by a Japanese company, she helped the *Lindblad Explorer* when that ship ran aground not far from Palmer Station; ChilAE 1979-80 (Captain Roberto Suazo Francis); ChilAE 1980-81 (Captain Eduardo Barison Roberts); ChilAE 1981-82 (Captain Adolfo Cruz Labarthe); ChilAE 1982-83 (Captain Guillermo Aranda Pinochet); ChilAE 1983-84 (the first captain that season was Aranda, as in the previous season, and he was replaced by Capt. Enrique Maldonado Roi); ChilAE 1984-85 (Captain Jorge Vergara Dakic; they brought down the first Uruguayan expedition); ChilAE 1985-86 (Capt. Vergara); ChilAE 1986-87 (Captain Jorge Muratto González); ChilAE 1987-88 (Captain Rodolfo Camacho Olivárez); ChilAE 1988-89 (Captain Luis Maldonado Fernández); ChilAE 1989-90 (Captain Walter Berlinger Landa); ChilAE 1990-91 (Captain Luis Vera Medrano); ChilAE 1991-92 (Captain Sergio Bidart Jiménez; that year she also took down the Ecuadorian Antarctic Expedition); ChilAE 1992-93 (Captain Bidart again); ChilAE 1993-94 (Captain Michael Mayne Nicholls; that year she also took down the Ecuadorian Antarctic Expedition); ChilAE 1994-95 (Captain Arturo Ojeda Zenott). She was replaced by the *Almirante Óscar Viel Toro*, and dropped from the Navy List on Jan. 7, 1997. In 2002, she was acquired by the Chilean company, Antarctic Shipping, and in 2004 became the tourist ship *Antarctic Dream*, beginning her new career to Antarctic waters in 2005-06. She could take 78 passengers.

Isla Piloto Pardo *see* **Elephant Island, Islas Piloto Pardo**

Islas Piloto Pardo. 64°10' S, 54°30' W. Chile gave this name to the section of the South Shetlands that includes Elephant Island and Clarence Island, and also Aspland Island, Gibbs Island, O'Brien Island, Cornwallis Island, Rowett Island, the Seal Islands, and other small ones. This name honors the man rather than the ship, i.e., Capt. Luis Pardo Villalón. No one except the Chileans seems to want anything to do with this name, and that rebuff has nothing to do with Piloto Pardo himself. The Chileans got the idea of naming it thus from the fact that in the period 1945-47, they had tried applying the names Isla Piloto Pardo and Isla Pardo to Elephant Island itself.

Piloto Pardo Refugio. 62°23' S, 59°42' W. Established by the Chileans at Coppermine Cove, in the NW part of Robert Island, in the South Shetlands, in Feb. 1962.

Mount Pilots. 62°08' S, 58°33' W. An ice-covered mountain, rising to more than 600 m above sea level, above the Polar Committee Icefall, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for the helo pilots during PolAE 1978-79.

Pilseneer Island *see* **Brooklyn Island, Pelseneer Island**

Pilten *see* **Pilten Nunatak**

Pilten Nunatak. 71°53' S, 24°48' E. In the N part of Gjel Glacier, in the north-central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Pilten (i.e., "the nipper," "the lad"). US-ACAN accepted the name Pilten Nunatak in 1966.

Pimpirev, Christo Tsanev. b. Feb. 13, 1953, Sofia. The great name of Bulgarian Antarctic expeditions. After a year and a half in the Army (1971-73), he spent the rest of his working life at Sofia University, first studying stratigraphy and paleontology, and then as a professor. He was one of the geologists on the first Bulgarian Antarctic Expedition, 1987-88, and led the second one, 1993-94. From that second expedition, the Bulgarians went to St. Kliment Ohridski Station every summer, and to the time of writing, Dr. Pimpirev has led every single one of those expeditions. From 1994 he has been head of the Bulgarian Antarctic program, and director of the Bulgarian Antarctic Institute. He has also done field work in many countries.

Pimpirev Beach. 62°37' S, 60°25' W. The portion of the NW coast of South Bay, on Livingston Island, in the South Shetlands, bounded to the SW by Ereby Point, and to the NE by the N corner of the bay marked by an ice sea cave 5.8 km ENE of Ereby Point and 1.4 km NW of Aleko Rock. The shoreline, extending 6.5 km in a WSW-ENE direction, is formed by a narrow beach under the ice-cap cliff. A number of minor disruptions occur with portions of the ice-cap entering the sea. Pimpirev Ice Wall, which runs parallel some 100 m inland, surmounts the NE half of the coast. It features Smolyan Point, a cape located 1.9 km NE of Ereby Point, and which ends with a rock 25 m wide and 4 m high. Conspicuous radial crevasses spread inland. The central portion of the coast is indented for 250 m by a nameless cove, 710 m wide, behind Rongel Reef. Mapped in detail by the Spanish in 1991. In 1996 the Bulgarians remapped the coastal reconfiguration modified by a recent glacier retreat. Named by the Bulgarians on Feb. 17, 2004, in association with Pimpirev Ice Wall.

Pimpirev Glacier. 62°36' S, 60°25' W. A glacier extending 5.5 km in a WSW-ESE direction and 1.8 km in a NNW-SWE direction, W of Perunika Glacier, E of Kamchiya Glacier, and S of the glacial divide between the Drake Passage and the Bransfield Strait, it flows SSW into South Bay ENE of Ereby Point, on Livingston Island, in the South Shetlands. Mapped by the Spanish in 1991, and re-surveyed by the Bulgarians in 1995-96, when the name Pimpirev Ice Wall was given to this feature by the Bulgarians on Oct. 29, 1996, for Christo Pimpirev. It was plotted in 62°37' S, 60°24' W, and was then described as a rectilinear ice slope, about 50 m high, and extending for 3.7 km in a WSW direction from the NW corner of, and running parallel to (and about 100 m inland from) Emona Anchorage, on Livingston Island. UK-APC accepted the name on April 29, 1997, and US-ACAN followed suit on Sept. 25, 1998. It was re-surveyed by the Bulgarians in 2005, and, in order to reflect changes in the local ice-cap configuration, this feature's name was changed by them to Pimpirev Glacier on Oct. 29, 2006.

Pimpirev Ice Wall *see* **Pimpirev Glacier**

The Pimple. 77°59' S, 162°40' E. A small, cone-shaped peak rising to 3215 m (the New Zealanders say about 3100 m), about midway between Mount Lister and Camels Hump, in the Royal Society Range of Victoria Land. Discovered and named by BNAE 1901-04. US-ACAN accepted the name in 1953, and NZ-APC followed suit.

Punta Pin *see* **Renier Point**

Roca Pin *see* **Pin Rock**

Pin Point *see* **Renier Point**

Pin Rock. 62°38' S, 59°48' W. A rock which sticks out of the sea 550 m SSE of Renier Point (the E extremity of Livingston Island), in Morton Strait, in the South Shetlands. It was mapped in 1935 by the Discovery Investigations personnel, and named by Capt. Andrew Nelson, of the *Discovery II* that year, after a group of rocks that had been erroneously charted in this area. The rock was named Pin Rock by the Admiralty in 1948, and US-ACAN accepted that naming in 1959. The Chileans called it Roca Pin, and the Argentines, who plotted it in 62°38' S, 59°51' W, translated it as Roca Alfiler. However, since that time it has been impossible to individualize this feature satisfactorily, and a question mark hangs over it.

Mount Pinafore. 69°46' S, 70°58' W. A prominent peak, rising to about 110 m between Bartok Glacier and Sullivan Glacier, in the N part of Alexander Island. Surveyed by BAS from

1968. Named by UK-APC on Dec. 8, 1977, for the Gilbert & Sullivan opera *HMS Pinafore*. It appears in the 1980 British gazetteer. US-ACAN accepted the name, but plot it in 69°46' S, 70°52' W. *See also* **Gilbert Glacier** and **Sullivan Glacier**.

Pinafore Moraine. 76°43' S, 159°26' E. A sheet of moraine extending NE from Carapace Nunatak, in Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, and named descriptively by them. US-ACAN accepted the name in 1965, and NZ-APC followed suit on Aug. 10, 1966.

Pinaud, Pierre. b. May 28, 1807, Charleville, France. Pilot on the *Astrolabe* during FrAE 1837-40.

Pinball machines. American automatic weather stations in Antarctica. Actually ice stations, they are more reliable than grasshoppers.

Pinboko Rock *see* **Oku-iwa Rock**

Pincardini, Attilio *see* **Órcadas Station**, 1946

Cerro Pincen *see* **Cerro Eneas**

Pincer Point. 85°34' S, 150°30' W. A narrow rock point, 6 km ESE of Durham Point, near the NW end of the Tapley Mountains. Discovered and roughly mapped by ByrdAE 1928-30. So named by US-ACAN in 1967 because it looks like part of a pincers.

Pinckard Table. 74°00' S, 164°03' E. An ice-covered tableland 13 km long by 5 km wide, between Styx Glacier and Burns Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for William "Bill" Pinckard, biologist at McMurdo 1965-66.

Pinckney, Robert Frederick "Bob." Name also spelled Pinkney, in fact Pinkney is probably better. b. May 13, 1811, Md., son of Jonathan Pinkney and his wife Rebecca. He became a midshipman on Dec. 1, 1827, and a passed midshipman on June 1, 1833. On Feb. 28, 1838, he was promoted to 1st lieutenant, and, as such, took part in USEE 1838-42. He joined the *Peacock* at Orange Bay, and took over command of the *Flying Fish* from Lt. Walker at Callao. He was detached at Honolulu in 1840. On Sept. 14, 1855, he was promoted to commander, and on April 23, 1861, resigned his commission, and went south, becoming a commander in the Confederate Navy on June 24, 1861, and later a captain, commanding several ships during the war. He retired as a commodore, took the oath of allegiance in 1865, and went back to Baltimore. He died of paralysis at his home in Baltimore, on March 14, 1878.

Pinder, Ronald "Ron." b. June 30, 1932, Catford, London, son of Florence Pinder and an unknown father. His mother died of lung cancer when Ron was an infant, and he was placed with Dr. Barnardos, from where he was fostered out to a family in Kent. In 1947, Barnardos felt he should go out into the world, and he took digs in Chatham, apprenticed as a shipwright. It wasn't for him, so he joined the RAF, in the Boys Service, on an 8-year contract, with 4 additional reserve years, training as a telegraphist in Wiltshire. As a corporal, his last overseas posting was at the British Embassy in Warsaw, after which he worked at the Air Ministry at Whitehall for a while, before getting out of the RAF in 1958. For a short while he worked with the cargo section of British European Airways, at Heathrow, and on the way to work he would pass W.H. Smith's Library. One day he picked up a radio magazine, and saw an ad for FIDS. Bill Sloman interviewed him, and he left England later in 1958 on the *Shackleton*, as a radio operator and meteorological assistant, bound for Montevideo, Port Stanley, and Signy Island Station, where he wintered-over for 3 consecutive years at Signy Island Station, 1959, 1960, and 1961, which was something of a record at the time. During those 3 years and 4 months, he never went north of 60°S. In April 1962, the *John Biscoe* came to pick him up, and, on that ship, he went via Port Stanley and Montevideo, back to the UK, where Lance Tickell invited him to go with him to Bird Island, South Georgia, to study albatrosses, and to be radioman and general handyman. He spent the summer of 1962-63 there, and wintered-over there in 1963 with Tickell and American Harry Clagg, and returned to the UK in 1964, where Martin Holdgate encouraged him to write up his report on the Cape pigeon. On Sept. 12, 1964, he married Janet Palmer (Lance Tickell was best man). He worked for a while for BAS at Queen Mary College, in London, at their biological office, with Pete Tilbrook and Barry Heywood, and then joined the Police Force as a civilian radio operator. In 1969 he joined the Central Electricity Generating Board, in London, and worked for them until he retired in 1993, to Woodhurst, Hunts (now Cambridgeshire). For the next 13 years he worked part-time.

Pinder Gully. 60°43' S, 45°35' W. A small gully in the E part of Signy Island, in the South Orkneys, it runs N from Observation Bluff down to the sea. Named by UK-APC on Dec. 25, 1974, for Ron Pinder. US-ACAN accepted the name in 1975.

The *Pine Island*. AV-12. Known informally as the *P.I.* A 14,000-ton Currituck-class seaplane tender, 540 feet 5 inches long, capable of 18 knots, and with a crew of 684, she was named for the island off the coast of Florida. Launched on Feb. 26, 1944, at the Todd Pacific Shipyards, in San Pedro, Calif., and commissioned into the U.S. Navy on April 26, 1945, she left California on June 16, 1945, to take part in the final stages of World War II. In 1946 she returned to Norfolk, Va., leaving there on Dec. 2, 1946, with new captain, Henry Howard Caldwell, commanding, as the flagship of the Eastern Task Group during OpHJ 1946-48. Passing through the Panama Canal on Dec. 7, 1946, she arrived in Antarctica on Dec. 25, 1946. On Dec. 30, 1946 *George-1*, a Martin Mariner, flew off the ship and crashed on Thurston Island. The survivors, including Capt. Caldwell, were rescued on Jan. 12, 1947. On March 3, 1947 the *Pine Island* headed for Rio de Janeiro, then through the Panama Canal, back to San Diego, where she arrived in April 1947. She spent 1948-49 in China, and was decommissioned on May 1, 1950. On Oct. 7, 1950, she was recommissioned for the Korean War, then served many years in the Pacific and in Asian waters, including the Vietnam War, finally being decommisioned on June 16, 1967, in San Diego. She became a reserve ship, in California, and was struck from the register on Feb. 1, 1971. On March 7, 1972, she was sold to Zidell Exploration, of Portland, Oreg.

Pine Island Bay. 74°50' S, 102°40' W. A bay, about 50 km wide, formed by the SE portion of the Amundsen Sea indenting the Walgreen Coast for about 60 km long, in Marie Byrd Land. It is fed by ice from Pine Island Glacier. Delineated in 1955 by U.S. cartographer Gard Blodgett, from air photos taken in 1946 during OpHJ 1946-47. Named by US-ACAN in 1955, for the *Pine Island*.

Pine Island Glacier. 75°10' S, 100°00' W. A broad glacier flowing WNW along the S side of the Hudson Mountains into Pine Island Bay, on the Walgreen Coast, at the SE extremity of the Amundsen Sea. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, in association with the bay.

Pineapple Lake. 68°39' S, 78°13' E. An elongated frozen lake between the Sørsdal Glacier and the Vestfold Hills. The ice is between 3 and 4 m thick, and the water is at least 70 m deep. The ice surface is flat in places, with ridges and hummocks in other places. A tin of pineapple juice was found nearby, and the feature was named accordingly by ANARE. ANCA acceopted the name on Dec. 3, 1984.

Pinegin Peak. 71°44' S, 12°33' E. Rising to 2595 m, it is a central peak on Isdalsegga Ridge, in the Südliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61, and named by the USSR in 1966 as Gora Pinegina, for polar explorer Nikolay Vasil'yevich Pinegin (1883-1940). US-ACAN accepted the name Pinegin Peak in 1970. The Norwegians call it Pinegintoppen.

Gora Pinegina *see* **Pinegin Peak**

Punta Pinel *see* **Pinel Point**

Pinel Point. 64°21' S, 62°12' W. A point, 8 km NE of D'Ursel Point, it forms the SW entrance point of Pampa Passage, on the E side of Brabant Island, in the Palmer Archipelago. First roughly charted by BelgAE 1897-99. Mapped by FIDS cartographers in 1959-60 from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Philippe Pinel (1745-1826), French pioneer of humane psychiatry. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. The Argentines call it Punta Pinel.

Baie Piner *see* **Piner Bay**

Piner, Thomas. Signal quartermaster on the *Vincennes* during USEE 1838–42. He served the cruise. He sailed from Charleston on March 11, 1843, as quartermaster on the *Grampus*, bound for Norfolk. The ship was never heard from again.

Piner Bay. 66°43' S, 140°17' E. A bay, 3 km wide, which indents the coast of Adélie Land for 13 km between Cape Bienvenue and the E side of the Astrolabe Glacier Tongue. Discovered on Jan. 30, 1840, by USEE 1838–42, and named by Wilkes as Piner's Bay, for Thomas Piner. The name was later shortened. US-ACAN accepted the name in 1947. The French call it Baie Piner.

Isla Piñero *see* **Piñero Island**

Piñero Island. 67°34' S, 67°49' W. An island, 3 km long, and 0.8 km wide, 7 km SW of Pourquoi Pas Island, W of Cape Sáenz, on Arrowsmith Peninsula, off the Loubet Coast, on the W coast of Graham Land. Discovered and charted in Jan. 1909, by FrAE 1908–10, and named by Charcot as Île Piniero (sic) for Dr. Antonio F. Piñero, member of the Chamber of Deputies of Argentina, on whose motion the government voted unlimited credit to meet the needs of Charcot's expedition in Oct. 1908. It appears as such on Charcot's 1912 map. It appears on a 1946 USAAF chart as Piniero Island, as it does on a British chart of 1948. Surveyed by ChilAE 1946–47, and named by them as Isla Carrera (i.e., "course island"), for its position in the entrance of Laubeuf Fjord. It appears as such on their 1947 chart. Surveyed by Fids from Base E in Sept. 1948. The name Piniero Island was accepted by US-ACAN in 1950, and by UK-APC on Sept. 20, 1955. The name Pinero Island (sic) appears on a 1956 U.S. Hydrographic Office chart, but in the 1956 American gazetteer it appears as Piñero Island, which was the name accepted by UK-APC on Sept. 23, 1960, and which appears on a British chart of 1961. It appears variously as Isla Piñero and Isla Piniero on 1957 Argentine charts, but the name used by the Argentines today is Isla Piñero. Isla Carrera was the name accepted by the 1974 Chilean gazetteer. It appears misspelled as Peñero island in the 1974 British gazetteer.

Piñero Peak. 67°34' S, 67°49' W. Rising to 380 m, it is the highest point on Piñero Island, in Laubeuf Fjord, off the Loubet Coast, on the W coast of Graham Land. It was used as a reference point for the RN Hydrographic Survey unit on the *Endurance*, in 1976–77. Named by UK-APC on Dec. 9, 1982, in association with the island. US-ACAN accepted the name. It appears on a British chart of 1980.

Piners Bay *see* **Piner Bay**

Pinet Butte. 73°10' S, 161°41' E. A small butte comprising the westernmost portion of the Caudal Hills, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Paul R. Pinet, geologist at McMurdo, 1966–67.

Pingding Shan. 62°13' S, 58°58' W. A hill on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Île Pingouin *see* **Penguin Island**

The *Pinguin*. A Nazi raider, Hilfskreuzer KMS 33 of the German Navy. Captain Ernst-Felix Krüder. She was actually the former Hansa line freighter *Kandelfels*, and had been modified at Bremen and recommissioned on June 2, 1940, armed with 300 mines and two Heinkel 114B aircraft (later replaced by one Arado 196A-1). On June 15, 1940 she left harbor heading for the Indian Ocean, on what turned out to be her only cruise, of 328 days. In the fall of 1940 she left the Indian Ocean and headed toward Antarctica, on Dec. 17, 1940 crossing into sub-Antarctic waters, with the intention of capturing the Norwegian whaling factory ships she had discovered in the area of Bouvet Island. There were three of them, all belonging to Lars Christensen — the *Ole Wegger* (with 7 "Pol" whale-catching vessels attached), the *Thorshammer*, and the *Pelagos*, (with 7 "Star" whale-catchers), all having arrived in Antarctic waters in Nov. 1940. A fourth, the supply tanker and oiler *Solglimt*, was on its way down from New York, where she had stocked up with supplies, and — strangely — guns. By Dec. 23, 1940, Krüder was listening in to the Norwegian radio conversations, and beginning to plan his move. Just after Christmas Day they almost lost their seaplane when it went down in the sea, and it was only rescued after a full-speed rescue dash by the *Pinguin*. By early Jan. 1941 Krüder had tracked the Norwegians west and south, until they were off the coast of Queen Maud Land, in around 69°S, 2°30' W. Then they headed north, and when in 57°45' S, 2°30' W, in the early morning of Jan. 13–14, 1941, a commando party from this vessel, led by Lt. Bach, succeeded in capturing 40,000 tons of Norwegian whaling vessels, in the form the *Pelagos*, the *Solglimt*, and the *Ole Wegger*, as well as 11 whale catching vessels that belonged to the factory ships. The *Pinguin* was sunk by the British Navy in May 1941. *See also* **Blaue, Lt**.

Pinguinbucht *see* **Penguin Bight**

Pinguinenkap *see* [2]**Penguin Point**

Cerro Pingüinera. 62°27' S, 60°48' W. A hill, little more than 200 m N of Cerro Diaguita, and E of the beach the Chileans call Playa Antártico, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990–91 because at its summit is the greatest concentration of chinstrap penguins (the species of penguin the Chileans call "pingüino antártico") in the area.

Isla Pingüinera *see* **Sotomayor Island**

Punta Pingüinera *see* **Stranger Point**

Rada Pingüinera *see* **Rada Barraza** (under **B**)

Estación de Salvamento y Observatorio Pingüino *see* **Capitán Fliess Refugio**

Fondeadero Pingüino *see* **Penguin Bight**

Isla Pingüino *see* **Waterboat Point**

[1]**Islote Pingüino**. 64°48' S, 62°52' W. An islet off the NE coast of Lemaire Island, off the W coast of Graham Land. Surveyed by ChilAE 1950–51, and named by them for the penguins here. It appears on their chart of 1951. This is not the island part of Waterboat Point (q.v.).

[2]**Islote Pingüino** *see* **Waterboat Point**

[1]**Punta Pingüino** *see* **Penguin Point**

[2]**Punta Pingüino**. 62°27' S, 60°48' W. A point forming the NE limit of Playa Papúa, on the N coast of Cape Shirreff, in Livingston Island, in the South Shetlands. The name was proposed by personnel of the Instituto Antártico Chileno during ChilAE 1990–91, owing to the existence here of penguin colonies (the name means "penguin point").

[3]**Punta Pingüino** *see* [2]**Penguin Point**

The *Pingvin*. Norwegian whale catcher (gunner: Reidar Olsen) belonging to Thor Dahl. She was in Antarctic waters in 1961–62, catching for the *Thorshavet* during that factory's final Antarctic season. She took 1 fin whale and 6 sperms.

Pingvin Island. 65°45' S, 81°50' E. Also called Penguin Island. Off the NW side of the West Ice Shelf. Named by the USSR in 1956–57 as Pingvin (i.e., "penguin"). It no longer appears in any gazetteers.

Pingvinane *see* **Pingvinane Nunataks**

Pingvinane Nunataks. 72°00' S, 23°17' E. A group of nunataks close N of Tangarden Peaks, in the NW part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946–47, and named by them as Pingvinane (i.e., "the penguins"). US-ACAN accepted the name Pingvinane Nunataks in 1966.

Pingvinholet. 68°50' S, 90°43' W. A natural tunnel through the inner part of Framnes Head, on the stretch of the coast the Norwegians call Lazarevkysten, on Peter I Island. Named by the Norwegians ("the penguin hole").

Pingzi Shan. 62°12' S, 58°58' W. A hill on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Île Piniero *see* **Piñero Island**

Piniero Island *see* **Piñero Island**

Pinkham, Seth Aaron. b. May 25, 1894, Addison, Me. He joined the Army in 1917, during World War I, and stayed in until the 1920s, and then, from 1926, plied the seas as an assistant engineer in merchant ships. During ByrdAE 1933–35 he was 1st assistant engineer on the *Bear of Oakland*, 1933–34, and chief engineer on the same vessel, 1934–35. He lived in Boston, and was still at sea in 1948.

Pinkney, Robert F. *see* **Pinckney, Robert F.**

Pinn Island. 67°34' S, 47°55' E. A prominent island, about 5 km long, and 0.8 km wide, close off the NE end of McKinnon Island, in the S part of Casey Bay, off the coast of Enderby Land. Plotted by Australian cartographers from 1956 RAAF Antarctic Flight photos, and visited by Bruce Stinear's ANARE party in Oct. 1957. Named by ANCA on April 29, 1958, for John David Pinn (b. July 10, 1934), geophysicist at Mawson Station in 1957. He was in charge of the magnetic and seismic observatories. US-ACAN accepted the name in 1965.

Pinnacle *see* **The Spire**

Roca Pinnacle *see* **Pinnacle Rock**

Pinnacle Gap. 73°15' S, 163°00' E. Between Pain Mesa and Tobin Mesa, in the Mesa Range

of Victoria Land. Traversed by the Northern Party of NZGSAE 1962–63, and so named by them because it is easily identified by the high rock pinnacle of Mount Ballou on the N ridge overlooking the gap. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Pinnacle Island *see* **Pinnacle Rock**

Pinnacle Rock. 61°06' S, 54°47' W. An offshore stack rising to 120 m above sea level, 4 km E of Point Wild, and close off the N coast of Elephant Island, in the South Shetlands. Named by Shackleton's men in 1916 after the failed BITE 1914–17 (they described it as a pillar of rock). It appears on Shackleton's 1919 chart. However, on a British chart of 1927 it appears as Pinnacle Island, but on a 1940 British chart it is again Pinnacle Rock, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1951 Chilean chart as Roca Pinnacle, and that name was accepted by the 1974 Chilean gazetteer. On an Argentine chart of 1953 it appears translated as Roca Pináculo, but on one of their 1957 charts it is shown as Roca de la Aguja (i.e., "rock of the needle"), which was the name accepted by the 1970 Argentine gazetteer. However, on a 1963 Argentine chart it is seen pluralized as Rocas de la Aguja. In Dec. 1970, it was surveyed by the British Joint Services Expedition.

Pinnipeds *see* **Seals**

Pinnock, Michael. b. March 6, 1954, Melton Mowbray, Leicestershire, son of Philip Pinnock and his wife Marjorie Paterson. BAS inospheric technician, who wintered-over at Halley Bay Station in 1977 and 1978. He later became an ionospheric project engineer, and helped install the Advanced Ionospheric Sounder at Halley, wintering-over in 1982 for the first season's operation of this new instrument. He later became division head, Physical Sciences Division, of BAS.

Estrecho Pinochet *see* **Discovery Sound**

Playa Pinochet de la Barra. 62°27' S, 60°48' W. A small beach immediately E of Punta Pingüino, on the N coast of Cape Shirreff, in Livingston Island, in the South Shetlands. Named for Óscar Pinochet de la Barra, director of the Instituto Antártico Chileno, who ordered the installation of a fiber-glass module to assist ground activities, which were developing in the area during ChilAE 1990–91. Mr. Pinochet had first traveled to Antarctica on the *Angamos*, during ChilAE 1946–47, as representative of the Ministry of Foreign Relations. He was back in Antarctica as part of ChilAE 1947–48, and ChilAE 1948–49. He wrote a book called *Base Soberanía* (see the bibliography). *See also* **Crown Peak**.

Pintado Island. 68°40' S, 77°54' E. A small, steep-sided island in Krok Fjord, about 1 km SE of Zolotov Island, in the Vestfold Hills. So named by ANCA on Aug. 27, 1975, because a colony of about 115 pairs of pintado petrels (*see* **Fulmars**) were found nesting on the island in 1974.

Pintails. The yellow-billed pintail (*Anas georgica*) is a rare bird in Antarctica, but seen nonetheless.

Pinther Ridge. 70°22' S, 64°20' W. An arc-shaped, isolated, and mostly snow-covered ridge, 10 km long in a N-S direction, and rising to about 2275 m above the ice surface at the E margin of the Dyer Plateau, SW of the Columbia Mountains, and 35 km S of the Eternity Range, in the south-central part of Palmer Land. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Miklos Pinther (b. April 1940), of Teaneck, NJ, chief cartographer of the American Geographical Society in the 1970s, who was responsible for many excellent maps of Antarctica. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Pioneer Crossing. 68°29' S, 78°22' E. A low pass, about 0.8 km long, and running at an elevation of about 6 m above sea level across Langnes Peninsula, in the Vestfold Hills, it leads from the SE arm of Tryne Fjord to Langnes Fjord. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers. Visited by an ANARE sledging party led by Bruce Stinear in 1957, and so named by ANCA on April 29, 1958, because it was by this pass that the first traverse was made between Tryne Fjord and Langnes Fjord. US-ACAN accepted the name in 1961. It is used for the portage of sledges, and is suitable for tracked vehicles.

Pioneer Heights. 79°30' S, 83°30' W. Also called the Pioneer Hills. The large area of hills, ridges, and peaks eastward of Schneider Glacier and Schanz Glacier, and between Spelttstoesser Glacier and Union Glacier, in the Heritage Range, in the Ellsworth Mountains. Included in these heights are Inferno Ridge, the Nimbus Hills, the Buchanan Hills, the Collier Hills, and the Gross Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, in keeping with the heritage theme.

Pioneer Hills *see* **Pioneer Heights**

Pioneers Escarpment. 80°28' S, 21°07' W. A north-facing escarpment, mostly snow-covered, interrupted by occasional bluffs and spurs, between Slessor Glacier on the N and Shotton Snowfield and the Read Mountains on the S, it extends from Jackson Tooth to Lundström Knoll (in Coats Land), in the Shackleton Range, and continuing to the easternmost nunataks of the range in the vicinity of Skiltvakta and Vindberget, in Queen Maud Land. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS in 1974 from these efforts. So named by UK-APC on Jan. 5, 1972, because features on the escarpment are named for pioneers whose inventions have assisted living and traveling conditions in the polar regions. US-ACAN accepted the name. It appears as such in the 1974 British gazetteer. However, in those days, the name was restricted to that portion of the feature lying within Coats Land. The Norwegians, who called it Pionerhallet, redefined the name to include all of the escarpment, and UK-APC accepted that. It appears as such (and as it is defined today) in the 1980 British gazetteer.

The *Pioner*. A small (1721-ton) Norwegian diesel-propelled factory whaling ship, without a slip, owned by Johan C. Borgen's Pioner Company (managers: A.W. Nordstrøm and K. Gjølberg), which operated between Bouvet Island and the South Shetlands and Graham Land in 1934–35, or between 57°S and 65°S, and 3°W and 53°W, in company with the *Maudie* as a help-cookery ship (the *Maudie* was loaned to the Pioner Company by her then owners, the Polhavet Company; the Pioner Company had once owned the *Maudie*). In fact, the *Pioner* was the only whaler operating in the South Shetlands in the 1930s. The *Pioner* also did pelagic whaling that season. She took a total of 134 whales (9083 barrels of oil), and in addition, rescued the crews of her catchers *Klem* and *Splint*, after those two vessels had gone down on April 1, 1935.

The *Pioner Estonii*. A 5370-ton, 130.3-meter Soviet cargo ship, with a speed of 14.1 knots, and a crew of 20, built in 1976, she was in Antarctic waters for the following Soviet Antarctic expeditions: 1979–81, 1981–83, 1983–85, and 1985–87, all four years under the command of Capt. Valeriy Alekseyevich Sarapunin.

The *Pioner Onegi*. A 4814-ton Soviet ship, built in 1975 at the Vyborg Shipyard, for the Joint Stock Northern Shipping Company, and capable of 16 knots, she was in Antarctic waters for the 1980–82 Soviet Antarctic Expedition. Skipper was Aleksey Aleksandrovich Burov.

Pionerflaket. 72°40' S, 10°52' W. An ice plateau in the northernmost part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for the pioneers of the Norwegian Resistance movement during World War II.

Pionerskaya Station. 69°44' S, 95°31' E. Soviet operational support station in the Larsemann Hills of Mac. Robertson Land, used during IGY (1957–58), 375 km inland from, and south of, Mirnyy Station, and 2741 m above sea level. The name means "pioneer." **April 2, 1956**: Under the direction of Mikhail Somov, a 7-man tractor train set out from Mirnyy Station, heading south into the interior, in order to set up Pionerskaya. **May 4, 1956:** The tractor train halted, and building began. **May 27, 1956**: The station was completed, with assistance from aircraft. An aerodrome was built there, and Somov used it to fly back to Mirnyy. Pionerskaya was the first Soviet continental research station in Antarctica. **1956 winter**: 6 men. A.M. Gusev (leader). **Nov. 17, 1956**: An AN-2 brought in a relief party. Nikolay Petrovich Rusin took over from Gusev. S.E. Zotov, aerologist, also came in on the flight. **1956–57 summer**: Nikolay Petrovich Rusin (leader). **Feb. 1957**: Rusin was relieved, and Grigoriy Ivanovich Paschenko became leader, until he was transferred that month to Oazis Station for the winter. **1957 winter**: Sergey Alekseyevich Pavlov (leader). **Jan. 2, 1958**: The trac-

tor train arrived from Mirnyy. **Jan. 8, 1958**: The train left for Konsomolskaya Station. **1958 winter**: Grigoriy Melent'yevich Silin (leader). The station closed, at the end of IGY.

Kupol Pionerskij *see* **Pionerskiy Dome**

Pionerskiy Dome. 73°59' S, 73°08' E. An ice-covered summit about 115 km SSW of the Grove Mountains. Discovered by SovAE 1958, and named by them as Kupol Pionerskij (i.e., "pioneers' dome"). ANCA accepted the name Pionerskiy Dome on May 18, 1971, and US-ACAN followed suit in 1973.

Piore Ridge. 72°40' S, 168°55' E. A prominent ridge, 17.5 km long, between Elder Glacier and Bowers Glacier, in the Victory Mountains of Victoria Land. Mapped by NZGSAE 1957-58, and by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1973, for Emanuel Ruben "Manny" Piore (b. July 19, 1908, Vilnius, Lithuania. d. May 9, 2000, NY), U.S. physicist with the NSF, 1961-62.

Pip Cliffs. 65°43' S, 63°01' W. Prominent rock cliffs W of Mount Fedallah, rising to about 1350 m on the N side of Flask Glacier, on the Oscar II Coast of Graham Land. Named by UK-APC on Feb. 15, 1988, for the *Moby Dick* character. US-ACAN accepted the name.

Pipe Cove. 60°42' S, 45°39' W. A cove, S of Thulla Cove, and E of Jebsen Rocks, Signy Island, in the South Orkneys. Surveyed by FIDS between 1947 and 1950, and photographed aerially by the RN in 1968. Named by UK-APC on Sept. 29, 2004, for the old waterpipe here that was left by the whalers.

Pipe Peak. 79°09' S, 86°15' W. A sharp peak, rising to 1720 m on a ridge, 2.5 km N of Matney Peak, in the Founders Peaks of the Heritage Range. Named by the University of Minnesota Geological Party in 1963-64, for a pipe that was left here after a visit. US-ACAN accepted the name in 1966.

Pipecleaner Glacier. 78°14' S, 162°51' E. Formed by the coalescence of several small alpine glaciers on the E side of Mount Huggins, with Glimpse Glacier it joins Radian Glacier where that glacier meets the N arm of Dismal Ridge. Its surface is marked by innumerable bands of moraine which look like pipecleaners, hence the name given by VUWAE 1960-61. NZ-APC accepted the name, and US-ACAN followed suit in 1974.

Piper, Georg. b. 1892, Germany. He moved to Argentina, where he became known as Jorge. Cook at Órcadas Station in 1920 and 1925.

Pipkin Rock. 68°05' S, 68°50' W. A small, ice-free island, just NE of Dismal Island, in the Faure Islands, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. The Faures were discovered and first charted in 1909, by FrAE 1908-10, and surveyed by Fids from Base E in July 1949, when an astrofix was taken at the rock. They named this feature for its insignificant size. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. A pipkin is a small earthenware pot.

Pippin Peaks. 65°39' S, 62°28' W. A line of peaks, running E-W, and formed of white or pink granite, they range in height from 880 m to 1660 m, at the W end of Stubb Glacier, between that glacier and Starbuck Glacier, forming part of Stubb Glacier's north wall, on the Oscar II Coast. Surveyed by Fids from Base D in 1961. Named by UK-APC on July 21, 1976, for the *Moby Dick* character. US-ACAN accepted the name later in 1976.

Punta Pique. 62°14' S, 58°57' W. A point on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Argentines.

Islote Piragua *see* **Mabel Island**

Sopka Piramidal'naja *see* **Piramidalnaya Hill**

Piramidalnaya Hill. 66°17' S, 100°41' E. In the Bunger Hills. Charted by SovAE 1956, and named descriptively by the Russians as Sopka Piramidal'naja. ANCA translated the name (and without the unnnecessary apostrophe) on Jan. 19, 1989.

Cabo Pirámide *see* **Minot Point**

Cerro Pirámide *see* **Thimble Peak**

Islote Pirámide *see* **Pyramid Island**

Roca Pirámide *see* **The Pyramid**, **Pyramid Rock**

Pirdop Gate. 62°37' S, 60°08' W. A pass, 250 m wide, between Maritsa Peak and Atanasoff Nunatak, in the E part of Bowles Ridge, on Livingston Island, in the South Shetlands. It rises to 375 m at its N entrance from Struma Glacier and to 260 m at its S entrance from Huron Glacier. The gate is part of an overland route between the middle Huron Glacier and the upper Kaliakra Glacier. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the town of Pirdop, in central Bulgaria.

Península Pirie *see* **Pirie Peninsula**

Pirie, James Hunter Harvey. Known as Harvey Pirie. b. Dec. 10, 1878, Foveran, Aberdeenshire, son of wealthy farmer James Mitchell Pirie and his wife Elsie Harvey. He had just completed his medical degree at Edinburgh when he went as doctor and geologist on ScotNAE 1902-04. He survived a fall into shark-infested water on the trip out from Scotland to the Falklands, and co-wrote *The Voyage of the Scotia*. In 1907 he went into private practice in Scotland, in 1910 marrying Agnes Mabel Kerr (known as Mabel) (*see* **Cape Mabel**). From 1910-12, as a bacteriologist, he was assistant to Prof. Harvey Littlejohn, in the forensic medicine department at the University of Edinburgh, and in 1913 joined the Colonial Medical Service, working in Kenya from that time, and also serving there during World War I, as a medical officer. In 1916 he moved to South Africa as part of the staff of the South African Institute for Medical Research, and died on Sept. 27, 1965, in Johannesburg.

Pirie Peninsula. 60°42' S, 44°38' W. A narrow peninsula extending NNW for 5 km from the center of the N coast of Laurie Island, between Jessie Bay and Browns Bay, in the South Orkneys. It terminates in Cape Mabel. Roughly charted by Powell and Palmer in 1821. Surveyed in 1903 by Bruce, who mapped it in 1903, and in 1904 named it for Harvey Pirie (execpt that he spelled it Perie Peninsula). However, on Bruce's 1905 map it is spelled correctly. It was surveyed by the Discovery Investigations in 1933, and appears on their 1934 chart. It appears on a 1933 Argentine map, as Península Pirie, and that name was accepted by the 1970 Argentine gazetteer. US-ACAN accepted the name in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer.

Pirin Glacier. 64°05' S, 60°43' W. A glacier, 5.7 km long and 6 km wide, next E of Chavdar Peninsula, it flows NNW to enter the head of Curtiss Bay E of Seaplane Point, in Graham Land. Named by the Bulgarians on June 3, 2010, for Pirin Mountain, in southwestern Bulgaria.

Punta Piris. 64°45' S, 62°43' W. A point on the NW side of Beneden Head, on the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Islote Pirita *see* **Pyrites Island**

Lago Pirocchi. 74°58' S, 162°31' E. A lake, 81 m above sea level, with permanent ice covering, it measures 300 m by 190 m, 3.3 km NE of Mount Gerlache, behind Terra Nova Bay, in Victoria Land. Surveyed by Vittorio Libera during ItAE 1988-89. Named by the Italians on July 17, 1997, for Prof. Livio Pirocchi (1909-1985), director of the Italian Institute of Hydrobiology, 1967-79.

Pirogov Glacier. 64°17' S, 62°28' W. A glacier, 5 km long and 1.5 km wide, SW of Mount Parry, it flows westward to enter Dallmann Bay S of Minot Point, on Brabant Island, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for Russian scientist and surgeon Nikolay Pirogov (1810–1881), who developed modern health care in Bulgaria during the 1877-78 Russo-Turkish war.

Gora Pirogova *see* **Gunnarkampen**

Pirrie Col. 63°51' S, 57°26' W. Between Sandwich Bluff and (what the British have temporarily called) Hill 484 on the promontory formed by Cape Lamb, Vega Island, in the Erebus and Terror Gulf, of the NE end of the Antarctic Peninsula. Named by UK-APC on Dec. 2, 1993, for Dr. Duncan Pirie (b. 1964), BAS sedimentologist, 1985-90, who did work here. He did not winter-over.

Mount Pirrit *see* **Mount Tidd**

Pirrit, John "Jock." b. Oct. 24, 1924, Scotland. U.S. glaciologist who wintered-over at Ellsworth Station in 1958, and who led the U.S. Ellsworth-Byrd Traverse Party of 1958, and the 1959 Executive Committee Range Traverse. He took over from Stephen Barnes as scientific leader of Byrd Station for the 1959 winter. He died in 1962, and his book, *West Across Antarctica*, was published posthumously.

Pirrit Hills. 81°17' S, 85°21' W. An isolated group of peaks and nunataks, about 11 km in extent, southward of the Ellsworth Mountains, between the Heritage Range and the Nash Hills. The feature was positioned by the Ellsworth-Byrd Traverse Party in Dec. 1958. Named by US-ACAN in 1964, for Jock Pirrit.

The *Pisagua*. A large and spectacular 2852-

ton steel, 4-masted barque, built in 1892 at Geestemünde, as the flag ship of the German "P" Laeisz Line, of Hamburg, and launched at the shipyard of Johan C. Tecklenborg, on Sept. 23, 1892. On March 16, 1912 she collided with the P & O liner *Oceana*, off Beachy Head, and the *Oceana* foundered. It was the *Oceana*'s fault, failing to gauge the speed of the barque. On June 5, 1912, the *Pisagua* was bought by whaler Chris Christensen's Ørnen Company, for £5000, and on Oct. 17, 1912, under the command of a Captain Larsen, she left Sandefjord, Norway, bound for the Antarctica, and was used by Christensen's two Norwegian companies jointly — Nor and Ørnen — as an auxiliary factory whaling ship in the South Shetlands in 1912–13, and wrecked off Deception Island on Jan. 27, 1913. No lives were lost, and the cargo (oil, just loaded) was saved.

Pisagua Hill. 62°55' S, 60°41' W. About 60 m above sea level, between Ajmonecat Lake and Telefon Bay, formed during the 1967–69 volcanic eruptions on Deception Island, in the South Shetlands. Named by UK-APC on March 17, 2010, for the *Pisagua*. It is the site of Antarctic Specially Protected Area #140 (sub-site F).

Punta Pisano. 62°47' S, 61°14' W. A point, about 10 km NE of Cape Conway, on the E coast of Snow Island, in the South Shetlands. Named by the Chileans for botanist Edmundo Pisano Valdés (1919–1997), ornithological (sic) investigator from the Instituto Antártico Chileno, who took part in ChilAE 1980–81.

Mount Pisco *see* **Mount Pisgah**

Tour de Pise *see under* **T**

Monte Pisgah *see* **Mount Pisgah**

Mount Pisgah. 62°57' S, 62°29' W. There are 2 peaks next to each other, in the north-central part of Smith Island, in the South Shetlands. American sealers who saw them in the 1820–21 season thought that there was a twin-peaked mountain on the island, similar to the mountain near Durham, Conn., called Mount Pisgah. They named the whole island as Mount Pisgah. That is one story. Another, possibly justifying the name Mount Pisco, also given to this peak (if not to the whole island) is that it was named by the sealers after the town of Pisco, on the coast of Peru, that was used as a re-fitting station for vessels en route to Antarctica. The name is also seen as Mount Pesca, Mount Pisgo, and even Mount Piso. However, there are two separate peaks. This one, rising to 1860 m (the Chileans say 1320 m), 6 km NE of Mount Foster, was called Mount Pisco on Powell's chart of 1831, on the 1838 map prepared by FrAE 1837–40 (as Mont Pisco), on Friederichsen's 1895 German map (as Pisco Berg), and on British charts of 1901 and 1938. It appears as Mount Piso on a British chart of 1839 (this was undoubtedly a corruption of Pisco), and as Mont Piso on the 1902 map drawn up by BelgAE 1897–99. It was roughly surveyed by the Discovery Investigations in 1930–31, and appears on their 1931 chart. It appears on a 1940 U.S. Hydrographic Office chart as Mount Pisgah, and that was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer, and on a British chart of 1962. The Argentines call it Monte Pisco, and the Chileans call it Monte Pisgah. There is a third mountain, 5 km to the NE, called Mount Christi.

Mount Piso *see* **Mount Pisgah**

Punta Pissano. 66°18' S, 61°00' W. A point, immediately SW of Nunatak Argüello, on the NE coast of Stratton Inlet, on the S side of Jason Peninsula. Named by the Argentines.

Piste du Lion. 66°40' S, 140°01' E. An 1100-meter runway in the Géologie Archipelago. It was found necessary to build a runway for Hercules aircraft in the French zone, to bring in cargo from the Australian zone, but none of the geographical features offered the length necessary, or the safety. Construction began in 1980, on an artificial runway, from Cuvier Island, across the S part of Lion Island, and then over the water, to the southern of the Buffon Islands, and it was used for several years. On Jan. 26–27, 1994, an enormous storm split off part of the Astrolabe Glacier Tongue, and damaged the runway. On June 15, 1996, the French closed the runway, due to runaway costs and mounting pressure from environmentalists. Named officially by the French on Feb. 16, 2010, even though by now it was a feature of the past.

PistenBully. A tracked vehicle used in Antarctica.

Piston Bullies *see* **PistenBully**

Pitkevitch Glacier. 71°23' S, 168°52' E. A steep glacier, 30 km long, it flows NE from the Admiralty Mountains, along the W side of the DuBridge Range, and reaches the sea as Anderson Icefalls, just E of Atkinson Cliffs, and W of Robertson Bay. A portion of the terminus merges with Fendley Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Staff Sgt. Leonard M. Pitkevich (*see* **Deaths**, 1958). NZ-APC accepted the name.

Mount Pitman. 70°09' S, 67°42' W. A mountain with 2 mainly ice-covered, dome-shaped summits, the higher and more northerly one rising to 1830 m (the other one seems to rise to 1740 m), 14 km inland from the E side of George VI Sound, between Riley Glacier and Chapman Glacier, on the W coast of Palmer Land. First photographed aerially and roughly surveyed from the ground in 1936 by BGLE 1934–37, it appears on Stephenson's 1940 map of the expedition. Re-surveyed from a distance by Fids from Base E in 1949. Named by UK-APC on March 31, 1955, for Ernest Layton Pitman (1878–1935), an airplane constructor who lived at Byfleet, Surrey, worked for years for Vickers, and who made the sledges used by BGLE, as well as those for the 1935–36 Oxford University Arctic expedition (*see* **Sledges**). US-ACAN accepted the name later in 1955. It appears on a 1955 U.S. Hydrographic Office chart. It was further surveyed by BAS between 1962 and 1972.

Pitman Fracture Zone. 64°30' S, 170°00' W. An undersea feature, it actually spreads over an area between 58°S and 71°S, and 155°W to 175°W. Named by Drs. Steven Cande, William F. Haxby, and Carol A. Raymond, of Lamont-Doherty Geological Observatory, for geophysicist Walter C. Pitman III (b. 1931, Newark, NJ), a pioneer in the theory of continental drift and seafloor spreading. The name was accepted by international agreement in May 1993.

Île (du) Piton *see* **Piton Island**

Piton Island. 66°47' S, 141°36' E. A small, rocky island, about 160 m SW of Guano Island, one of the most southeasterly of the Curzon Islands, close to the coastal ice cliffs, close to Cape Découverte. Charted in 1951 by the French, and named by them as Île du Piton (they later shortened to name to Île Piton), for its very pointed shape. US-ACAN accepted the name Piton Island in 1962.

Islas Pitt *see* **Pitt Islands**

Punta Pitt *see* **Pitt Point**

Pitt, Keith Allan John. b. Aug. 27, 1911. He became a merchant seaman in the late 1920s, working for the British and Argentine Steam Navigation Company, soon rising to officer, and plying the Atlantic. He married Evelyn Mary. He was captain of the *Fitzroy*, 1943–46, during that vessel's Antarctic tours, and in the 1950s was a marine superintendent in the Gold Coast. In 1987, in Enfield, Mdsx, he married Stella Scoppie, and died in March 1996, in Enfield.

Pitt Island *see* **Pitt's Island**

Pitt Islands. 65°26' S, 65°30' W. A group of small islands and rocks immediately off the NE extremity of Renaud Island, and forming the NE part of the Biscoe Islands. Biscoe was here in 1832 (*see* **Pitt's Island** for a history of this region before 1897), and BelgAE 1897–99 is reputed to have been here also. The NE part of the Biscoe Islands (i.e., what we know today as the Pitt Islands) was roughly charted by FrAE 1903–05, as a single island, and named by Charcot as Île Martin (*see* **Martin Islands** for more on this). It appears as such (and also as Îlot Martin) on Charcot's 1906 map, but on a 1908 British map the feature appears as Martin Islands (this has to be a misprint, as the British knew only what Charot knew). They (i.e., the NE group) were further roughly charted by FrAE 1908–10, and appear on Charcot's 1912 map as Îles Martin. However, on Bongrain's 1914 chart the name Îles Martin is extended to the SE to include Vieugué Island. One of the islands in this group appears as Martin Island on a British photo of 1916 (or, it may be just a misprint for Martin Islands). The outer limits of the islands were charted and their general distribution and shape sketched from the air in 1935–36 by BGLE 1934–37, and what we know today as the Pitt Islands appear on Rymill's 1938 BGLE map as Martin Islands. The SW part of the group Rymill called the Pitt Islands, after Pitt's Island, and that feature also appears on his 1938 map. It also appears on a British chart of 1940. Rymill's definitions (i.e., Martin Islands and their subsidiary part, the Pitt Islands) were accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953, and they appear in the 1955 British gazetteer, the Martin Islands being plotted in 65°28' S, 65°18' W. The

situation is repeated on a British chart of 1957. ArgAE 1952-53 named the whole group Islas Moyano, but on a 1957 chart they appear as Islas Avellaneda, named for Nicolás Avellaneda (1837-1885), president of Argentina, 1874-80. It appears as such in the 1970 Argentine gazetteer. On July 7, 1959, UK-APC applied the name Pitt Islands to the whole group, and US-ACAN followed suit. It appears as Islas Pit (sic) on a Chilean chart of 1962, but the Chilean gazetteer of 1974 accepted the name Islas Pitt. The islands within the group have generally been given names of characters in Charles Dickens's book, *The Pickwick Papers*: Fizkin, Snubbin, Pickwick, Buzfuz, Nupkins, Sawyer, Tupman, Winkle, Trundle, Jingle, Slumkey, Weller, Smiggers, and Snodgrass, as well as Bardell Rock, and Dickens Rocks. This article must be read in conjunction with Pitt's Island (below) and Martin Islands.

Pitt Point. 63°51' S, 58°23' W. A promontory rising to 90 m above sea level, at the S side of the mouth of Victory Glacier, on the S coast of Trinity Peninsula, on Prince Gustav Channel. Discovered in 1903 by SwedAE 1901-04. Surveyed and charted by Fids from Base D in Aug. 1945, and named for K.A.J. Pitt. It appears on a British chart of 1949, and UK-APC accepted the name on Nov. 21, 1949, with US-ACAN following suit in 1952. It appears in the 1955 British gazetteer. On a Chilean chart of 1951 it appears as Punta Pitt, and that name was accepted by the 1974 Chilean gazetteer. The Argentines also call it Punta Pitt. It was re-surveyed by Fids from Base D in 1959-60, given new coordinates, and appears, with the new coordinates, in the 1965 British gazetteer. In 1964 the Argentines built Sargento Cabral Refugio here.

Mount Pittard. 71°31' S, 166°54' E. A pointed mountain, rising to 2410 m, 20 km E of the N part of the Homerun Range, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Donald A. Pittard, USARP biologist at McMurdo, 1966-67 and 1967-68.

Pittman, Richard. Seaman and deckhand on the *Eagle*, 1944-45, during the 2nd phase of Operation Tabarin.

Pitt's Island. Lying in about 65°10' S, 65°50' W, in the area of Alexander Island. This was an island (or a group of islands believed to be one large island) discovered by Biscoe on Feb. 19, 1832, and plotted by him in 65°20' S, 66°38' W. He landed on it and named it for William Pitt (1759-1806), the late British prime minister (i.e., Pitt the Younger), "from the great likeness of an iceberg to that statesman in a sitting posture, and which for some time I took to be a rock." It appears as Pitt Island on a British chart of 1839. The islands in the area were roughly charted by BelgAE 1897-99, and, on Lecointe's 1903 chart of that expedition, in 65°20' S, 65°39' W, appears Île Pitt. One has to wonder exactly how rough de Gerlache's survey was, or indeed, if there even was one. It appears (or something does, in this area) as Isla Pitt on a 1908 Argentine map. On a British chart of 1933, Pitt Island appears in 65°30' S, 65°20' W. By the time of BGLE 1934-37, it became apparent that Pitt's Island was not a real feature, as such, and modern geographers think Biscoe charted it in error. This may be so, but the name was transferred by BGLE to the Pitt Islands, 40 km to the ESE.

Pitzman Glacier. 70°41' S, 160°10' E. A glacier, 10 km long, draining the SE slopes of the Pomerantz Tableland, in the Usarp Mountains, it flows between Mount Lowman and Williams Bluff, to an ice piedmont just eastward. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Frederick J. Pitzman (b. 1941), USARP biologist at McMurdo, 1967-68.

Mount Pivot. 80°41' S, 30°10' W. A conspicuous mountain, rising to 1095 m, and with steep rock slopes on its W side, between Mount Haslop and Turnpike Bluff, at the SW end of the Shackleton Range. Surveyed and mapped in Dec. 1957, by BCTAE, and so named by them because this prominent landmark was the turning point for aircraft and sledging parties of the expedition rounding the SW end of the Shackleton Range. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Pivot Peak. 78°02' S, 161°01' E. A prominent conical peak, rising to 2450 m, distinguished by a large NE cirque, at the NE corner of Skelton Névé, about 10 km SE of Monastery Nunatak, on the E side of the main stream of the Ferrar Glacier where it leaves the Skelton. It is the highest point in the Wilkniss Mountains. The NZ Northern Survey party of BCTAE established a survey station on its summit on Jan. 21, 1958. Named by them for its prominent position and appearance. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Nunatak Pjatimetrovyj. 81°42' S, 29°18' W. An isolated nunatak, NW of Omega Nunatak, in Coats Land. Named by the Russians.

Mys Pjatnenkova. 67°44' S, 45°34' E. A cape on the W side of Freeth Bay, Enderby Land. Named by the Russians.

Pik Pjatnenkova. 80°43' S, 24°45' W. A peak in the Read Mountains, in the south-central part of the Shackleton Range. Named by the Russians. It may well be the same feature as The Ark.

Holmy Pjatnistye. 66°35' S, 99°45' E. One of the Obruchev Hills, in Queen Mary Land. Named by the Russians.

Placke, Rodolfo *see* **Órcadas Station**, 1937

Plagge, Robert. b. Germany. He had been many years in Argentina when he wintered-over as cook at Órcadas Station in 1919 and 1921. He was back in 1923, but not as cook.

Plagne, Paul. b. May 23, 1794, Toulon. Gunner 2nd class, promoted to 1st class on Sept. 1, 1837, a week before he sailed on the *Astrolabe* for FrAE 1837-40.

Plaice Island. 66°01' S, 65°27' W. West of Mackerel Island, in the Fish Islands, off the Graham Coast of Graham Land. Charted by BGLE 1934-37, and surveyed by Fids from Base J in 1957. Named by UK-APC on July 7, 1959, in continuation of the fish theme. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Plain Islands *see* **Chatos Islands**

Plan Magne *see under* **M**

Plana Peak. 62°39' S, 60°04' W. Rising to 740 m in Levski Ridge, 2.4 km NNW of Great Needle Peak, 2.75 km NE of Levski Peak, and 2.6 km WNW of Helmet Peak, in the Tangra Mountains of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for Plana Mountain, in western Bulgaria.

Planck Point. 79°18' S, 85°11' W. A snow-covered, spur-like point along the N side of Splettstoesser Glacier, 16 km SE of Landmark Peak, in the Heritage Range. Named by the University of Minnesota Geological Party here in 1963-64, for Russell E. Planck, helicopter crew chief with the 62nd Transportation Detachment, who assisted the party. US-ACAN accepted the name in 1966.

Plane Table. 77°36' S, 161°27' E. A distinctive and flattish ice-free mesa in the N part of the Asgard Range of Victoria Land, it surmounts the area between Nibelungen Valley and Sykes Glacier, and commands an extensive view of Wright Valley. Named descriptively by NZ-APC. US-ACAN accepted the name in 1976.

Plane Table Glacier. 77°34' S, 161°29' E. A short, tapering glacier on the N side of Plane Table that extends part way down the S wall of Wright Valley, in the N part of the Asgard Range, in Victoria Land. Named by US-ACAN in 1997, in association with Plane Table.

Planet Heights. 71°12' S, 68°40' W. A series of summits along a ridge, rising to about 1650 m, and extending 36 km in a N-S direction from Jupiter Glacier to Uranus Glacier, E of the Milky Way, between the S part of the LeMay Range and George VI Sound, in the E part of Alexander Island. Lunar Crag and Mount Ariel are part of this feature. Mapped by Searle of the FIDS in 1959-60, from air photos taken in late 1947 during RARE 1947-48. He plotted it in 71°13' S, 68°47' W. Named by UK-APC on March 2, 1961, in association with the many features nearby named for planets. US-ACAN accepted the name later in 1961. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, the feature appears in the 1977 British gazetteer.

Plankington Bluff. 84°58' S, 64°37' W. A large rock bluff rising to about 1800 m along the SW edge of the Mackin Table, 8 km SE of Shurley Ridge, in the Patuxent Range of the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for John C. Plankington, Jr., USARP meteorologist who wintered-over at Pole Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Plankton. Minute aquatic organisms which abound in Antarctic seas, especially near the coasts, and float near the surface of the water.

Part of the marine chain of life, the phytoplankton are eaten by the zooplankton, which in turn are gobbled up as the basic diet by whales, seals, fish, squid, and seabirds. They are the marine equivalent of pasture land for cattle (*see also* **Flora**, and **Fauna**).

Islote Plano. 62°47' S, 61°15' W. The more southerly of 2 small islands in Ivaylo Cove, W of Punta Pisano, on Hall Peninsula, on the E coast of Snow Island, in the South Shetlands. Named by the Argentines. The other island is Islote Trapecio.

Monte Plano *see* **Flat Top Peninsula**

Morro Plano *see* **Flat Top Peninsula**

Plants *see* **Flora**

Plasmon. A milk-protein health food carried in powder form by Scott and Shackleton during their expeditions. Also used as a food supplement (*see also* **Sledging biscuits**).

Passage Plata *see* **Plata Passage**

Canal del Plata *see* **Plata Passage**

Plata Channel *see* **Plata Passage**

Plata Glacier. 72°04' S, 166°11' E. A glacier in the Victory Mountains, flowing N between the Mirabito Range and the Monteath Hills into Jutland Glacier, in Victoria Land. In keeping with the practice of naming several features in this area after famous naval encounters, this one was named by R.H. Findlay, NZARP geologist in the area with a 1981-82 field party, for the Battle of Río de la Plata, Dec. 1939. NZ-APC accepted the name, and US-ACAN followed suit.

Plata Passage. 64°40' S, 62°01' W. Also called La Plata Channel. A channel extending for about 16 km in a N-S direction, in the interior of Wilhelmina Bay, it separates Enterprise Island, Nansen Island, and Brooklyn Island from the Danco Coast, on the W coast of Graham Land. To the NE it is entered between Daedalus Point and Hobbs Point, and to the SW between Wyck Island and Garnerin Point. It was first traversed and roughly charted on Feb. 7, 1898, by BelgAE 1897-99, and named by de Gerlache as Chenal de la Plata, after Río de la Plata, the estuary between Argentina and Uruguay, in recognition of the services rendered the expedition by the people of Argentina. It appears as such on the expedition maps. There are also indications that it appears as Passage Plata. On Arctowski's 1901 map of the expedition, it appears as La Plata Channel. On an Argentine chart of 1953 it appears as Canal del Plata. It was photographed aerially by FIDASE in 1956-57, and between 1956 and 1958 was surveyed from the ground by Fids from Base O and from Portal Point. UK-APC accepted the name Plata Passage on Sept. 23, 1960, and it appears as such on a British chart of 1961. US-ACAN followed suit with the British naming in 1965. The Argentine gazetteer of 1970 accepted the name Canal de la Plata, but today the Argentines seem to call it Canal del Plata. The Chileans have recently started calling it Canal Almirante Merino, for José Toribio Merino Castro, commander in chief of the Chilean Navy, who was on Pinochet's presidential trip to Chilean Antarctica in 1997, on board the *Aquiles*.

Platcha Huts. 68°31' S, 78°31' E. Remote Australian weather station, with field huts, 31 km E of Davis Station, in the Vestfold Hills, on the Ingrid Christensen Coast of Queen Maud Land. Established by an ANARE party led by M. Hay in April-May 1961. The official reason given for the name by a (normally and quite justifiably) rather sensitive ANCA is that it was a combination of the name Plateau Chateau; however, it might also be for the fact that Harry Redfearn's nickname was Platcha. A straight-talker, Redfearn's stock phrase to his fellow man was "Go plait your shit!" This explanation seems a little unreal, however, not to mention absolutely disgusting.

Plateau Chateau *see* **Platcha**

Plateau Station. 79°15' S, 40°30' E. The smallest, highest (11,890 feet above sea level), coldest (-120°F), and most inaccessible (1350 miles from McMurdo Station) of all the U.S. scientific stations in Antarctica, it was located inland from the Prince Olav Coast, on the Polar Plateau, hence its name, and was intended not just as a scientific station, but also as a stopping point for South Pole-Queen Maud Land Traverse II. In the summer of 1964-65 Marion E. "Moe" Morris, USN, commander of VX-6, flew an LC-130F over the proposed terrain, with Phil Smith and Steve Kauffman aboard. This was an aerial reconnaissance only; they did not land. In May 1965 Ensign (shortly thereafter Lt.) David Ramsey, USN, was picked to lead the 10 Seabees who would build the station in the sumer of 1965-66. The Seabees trained at Davisville, RI, and in Calgary, Canada, which is where the equipment was made and shipped to Davisville, and from there aboard the *Towle* down to McMurdo in the summer of 1965-66. From McMurdo it was taken by sledge to Willy Field, and from there flown by LC-130s to the Pole, where the planes were re-fueled, and then on to the Plateau site. The Seabees would follow a similar path, but before they went in, Moe Morris flew Don Bursik out to inspect the terrain, and they landed. Even with JATO bottles, it was a tremendous problem getting out of the 2-foot-thick snow that covered the ice. **1965-66 summer**: The first personnel were Cdr. Kauffman, Bill Austin (NSF representative), Capt. Don Pope, representative of the commander, U.S. Naval Support Force Antarctica; Lea Stroschein (meteorologist), and Leonard S. Yarbrough (industrial engineer). **Dec. 4, 1965**: Moe Morris flew Marty Sponholz in on the LC-130F from Pole Station. Charlie Roberts left on that flight out. **Dec. 22, 1965**: The Seabees finished the station, and flew back to McMurdo. Their next assignment was Vietnam. Plateau Station comprised 5 fabricated vans assembled into a main building, 70' × 25', plus an additional van (30' × 8'), with a 16' × 26' Jamesway hut attached to it for emergency shelter. **Jan. 29, 1966**: South Pole-Queen Maud Land Traverse II (led by Edgard Picciotto) arrived from the Pole of Relative Inaccessibility, after a trek of 45 days and 715 miles. **Jan. 30, 1966**: Much of the traverse equipment and personnel were airlifted back to McMurdo. **Jan. 31, 1966**: Admiral Fred Bakutis arrived for a dedication ceremony. **Feb. 10, 1966**: The last of 53 LC-130F flights of the summer season took off from Plateau, carrying Behling, Stroschein, and others, as well as the last of the SPQMLT material, in-66°F, and with the liberal use of JATO bottles to get the freezing plane off the ice. **1966 winter**: 8 men. USN personnel: Lt. Jimmy Gowan (medical officer and officer in charge; *see* **Gowan Glacier**); Jerry Damschroder (construction mechanic—power; *see* **Damschroder Rock**); Bill "Lulu" Lulow (cook; *see* **Lulow Rock**); Ed Horton (electronics technician; *see* **Horton Ledge**); USARP personnel: Rob Flint (geomagnetist and scientific leader; *see* **Mount Flint**); Marty Sponholz (meteorologist; *see* **Sponholz Peak**), Bob Geissel (geomagnetist; *see* **Mount Geissel**); Hugh Muir (British exchange aurora scientist; *see* **Muir Peak**). **1966-67 summer**: Fritz Koerner, the ex-FID, was there. **1967 winter**: Navy personnel: Lt. Archie B. Blackburn (medical officer and officer-in-charge; *see* **Blackburn Nunatak**), Melvin Sowle (construction mechanic; *see* **Sowle Nunatak**). Larry Clark (cook; *see* **Clark Ridge**). USARP personnel: James B. Pranke (scientific leader), John Wagner (radio scientist; *see* **Wagner Nunatak**), Bob Dingle (q.v.), (Australian exchange scientist). **March 19, 1968**: A fire (*see* **Disasters**, 1968). **1968 winter**: Gerald Moran (construction mechanic; *see* **Moran Bluff**). George S. Rubin de la Borbolla (meteorologist and scientific leader; *see* **Mount Rubin de la Borbolla**), Tom Frostman (meteorologist; *see* **Frostman Glacier**), Robert Soond (geomagnetist; *see* **Mount Soond**), Atok Karaali (ionosphere physicist; *see* **Karaali Rocks**). **June 5, 1968**: A new Plateau Station record low temperature of -123 F was recorded. **Jan. 29, 1969**: the station closed.

Plateau Weather Station. Meteorological station set up on the mainland of the Antarctic Peninsula, NE of Stonington Island, from July 16 to July 24, 1947, during RARE 1947-48. Manned by Petersen and Dodson, it was abandoned by them on July 25, 1947, a day after completion. While the two men were on their way back to Main Base, on Stonington Island, Petersen fell down a crevasse and was trapped upside down, 110 feet down the crevasse, for 12 hours. Dodson brought back a rescue squad, and Petersen was hauled out with no damage. This was the highlight of their wild adventure.

Platform Spur. 77°59' S, 162°10' E. A wedge-shaped sandstone platform rising to 2350 m, and tapering toward the NE, between Bindschadler Glacier and Jezek Glacier, in the NW part of the Royal Society Range, in Victoria Land. Named descriptively by Alan Sherwood, NZGSAE party leader here in 1987-88. NZ-APC accepted the name, and US-ACAN followed suit in 1993.

Islote Plato *see* **Plato Island**

Plato Island. 63°26' S, 54°40' W. A small island, 1.5 km E of Darwin Island, it is one of the smallest of the Danger Islands, about 24 km SE of Joinville Island. Named descriptively by the Argentines in 1977, as Islote Plato (i.e., "plate

islet"). US-ACAN, redefining it as an island (rather than an islet), accepted the name Plato Island in 1993. UK-APC, unable to accept the name Plato for two reasons (one, it is an Argentine word, and two, it might be confused with the Greek philosopher) accepted the name Platter Island.

Platt, Eric R. b. 1926, Mill Bank, Yorks, son of John Halstead Platt and his wife Clara Boughton, of Prospect House, Soyland, Ripponden, near Halifax. He studied geology at Manchester University, and in 1947 joined FIDS as a geologist, on Dec. 19, 1947 sailing from Tilbury on the *John Biscoe*, bound for Port Stanley. He was geologist and leader at Base G from the time the base opened, and subsequently through the winter of 1948. On Nov. 9, 1948 he and met man Jack Reid set out to look for a penguin rookery. On a pass on the way back Platt had a heart attack, began to falter, and Reid tried to carry him, but had to abandon him to go back to base to get help. After a desperate struggle to get back, Reid came across two other Fids who had come out to find them. One of the rescuers had fallen down a 30-foot crevasse, but was unhurt. When they found Platt the next day, near Ternyck Needle, he was dead of exposure and heart failure. He was buried near the station.

Platt Cliffs. 62°11' S, 58°36' W. Rising to about 100 m (the Poles say about 300 m) above sea level, between Goulden Cove on the one hand and (on the other) Monsimet Cove and Zalewski Glacier, at Ezcurra Inlet, Admiralty Bay, on King George Island, in the South Shetlands. BAS did geological work here in 1975-76. Named by UK-APC on Feb. 7, 1978, for Eric Platt. US-ACAN accepted the name. The Poles call this feature Cytadela, for the Warsaw Citadel, where the Poles so incredibly resisted the Nazis during World War II. It appears as such on the 1979 chart drawn up by Krzysztof Birkenmajer, and Poland accepted the name in 1980.

Platt Point. 68°36' S, 64°14' W. The E entrance point to Bowman Inlet, it marks the extremity of an ice-covered, though clearly outlined, spur that projects N from the W part of Hollick-Kenyon Peninsula into the Larsen Ice Shelf, on the Bowman Coast, on the E coast of the Antarctic Peninsula. The margins of this feature were photographed aerially by Ellsworth in 1935, but the whole feature was more clearly defined from 1940 air photos taken during USAS 1939-41. Surveyed by Fids from Base E between 1946 and 1948, and photographed aerially by USN between 1966 and 1969. Named by US-ACAN in 1977, for William D. Platt, USN, who wintered-over as hospital corpsman at Palmer Station in 1968. It appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on May 21, 1979.

Platter Island *see* **Plato Island**

Platypus Ridge. 70°42' S, 163°43' E. A large, ice-covered ridge, bordering the W side of the mouth of Lillie Glacier, and extending NE for 16 km from the Bowers Mountains to the head of Ob' Bay. Its position was fixed by Syd Kirkby on Feb. 19-20, 1962, while on a trip on the *Thala Dan*. Named by ANCA for the Australian animal. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Ostrov Plau *see* **Plog Island**

Playfair Mountains. 73°55' S, 63°25' W. A group of mountains, rising to about 650 m, between Swann Glacier and Squires Glacier, on the Lassister Coast, in the SE part of Palmer Land. Mount Kane and Squires Peak are part of this feature. Discovered and photographed aerially by members of East Base, during USAS 1939-41. Mapped by USGS from ground surveys conducted in 1961-62, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for John Playfair (1748-1819), Scottish geologist, professor of mathematics at Edinburgh University, 1783-1805. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Pointe de la Plaza *see* **Plaza Point**

Punta La Plaza *see* **Plaza Point**

Plaza Point. 62°05' S, 58°24' W. It forms the S tip of Keller Peninsula, the E entrance point of Mackellar Inlet, and the W entrance point of Martel Inlet (i.e., it separates Mackellar Inlet from Martel Inlet), in the N part of Admiralty Bay, on King George Island, in the South Shetlands. Charted in Dec. 1909, by FrAE 1908-10, and named by Charcot as Pointe de la Plaza, for Victorino de la Plaza (1840-1919), then minister of foreign affairs, and (later) president of Argentina, 1916-19. Interestingly, US-ACAN says Charcot named it for the plaza-like (i.e., central) position of this feature at the head of Admiralty Bay. Someone was misinformed. It appears as Pointe de la Plaza on Charcot's 1912 map. Resurveyed by the Discovery Investigations in 1927, it appears on their 1929 chart as La Plaza Point, and that is how it was accepted by UK-APC on Sept. 20, 1955, with coordinates in 62°04' S, 58°25' W. It appears as such on a British chart of 1956, and US-ACAN followed suit with that in 1956. It appears on a 1946 Argentine chart as Punta de la Plaza, and on a 1947 Chilean chart as Punta la Plaza, that latter name being accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. On Sept. 23, 1960, UK-APC changed the name to Plaza Point, and US-ACAN followed suit that year. Last plotted by the UK, in late 2008.

Pleasant Plateau. 79°46' S, 158°30' E. A small, somewhat isolated, ice-free area close W of Blank Peaks and Foggydog Glacier, in the central part of the Brown Hills (most of which can be viewed from this plateau). Discovered and explored by VUWAE 1962-63, who named it for the pleasant weather conditions here. NZ-APC accepted the name, as did ANCA. US-ACAN accepted the name in 1968.

The Pleiades. 72°42' S, 165°32' E. A group of several extinct volcanic peaks in a cluster, overlooking the W side of the head of Mariner Glacier from the south. Named by the Northern Party of NZGSAE 1962-63, for the cluster of small stars in the constellation Taurus. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Mount Pleiones. 72°45' S, 165°29' E. The southernmost and highest peak of The Pleiades, at the head of Mariner Glacier. Named by NZ-APC for Pleiones, the Greek mythological mother of the Pleiades. US-ACAN accepted the name in 1969.

Pointe Pléneau *see* **Pléneau Island**

Pléneau, Paul. b. 1870, Bordeaux. Wealthy French director of a Paris engineering company building steam engines, he was a friend and supporter of Charcot. When that explorer telegrammed him an invitation to come on FrAE 1903-05, as photographer, Pléneau replied, "Where you like. When you like. For as long as you like."

Pléneau Island. 65°06' S, 64°04' W. An island, about 1.4 km long, just NE of Hovgaard Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. The NE point of this island was charted by FrAE 1903-05, and named by Charcot as Pointe Pléneau, for Paul Pléneau. It appears as such on Charcot's maps of 1906 and 1908. FrAE 1908-10 mapped the island as a peninsula joined to Hovgaard Island, and it appears as such on the expedition's charts. The Argentines mapped it as an island in 1957, and it appears as such on their chart of that year. The survey launch of an RN Hydrographic Survey unit of 1957-58, found the same thing, that it is, in fact, an island, separated from Hovgaard Island by a very narrow marine channel, and on July 7, 1959, UK-APC transferred the name Pléneau to the island itself. It appears as such on a British chart of 1960, and US-ACAN accepted that in 1971.

Cape Plenty. 61°30' S, 55°28' W. The SE cape (and the southernmost point) of Gibbs Island, in the South Shetlands. Visited by the British Joint Services Expediton in Jan. 1977, and so named by them because a reef E of the cape causes upwelling of water which attracts numerous birds to feed in the area. It appears on Chris Furse's 1979 map of the expedition, and was the name accepted by UK-APC on June 11, 1980, and by US-ACAN in 1993. Plotted by the UK in late 2008.

Pik Pleshcheeva. 80°19' S, 28°35' W. A peak, due S of Mathys Bank, in the La Grange Nunataks, in the Shackleton Range. Named by the Russians.

Pleven Saddle. 62°43' S, 60°18' W. A deep saddle at an elevation of about 500 m, in Friesland Ridge, surmounting Peshtera Glacier to the N and Charity Glacier to the S, in the Tangra Mountains of Livingston Island, in the South Shetlands. Its midpoint is 1.8 km N of Gabrovo Knoll, 400 m E of MacKay Peak, and 1.2 km WSW of Tervel Peak, being bounded by the 2 latter features to the WSW and ENE respectively. Named by the Bulgarians on Feb. 17, 2004, for the Bulgarian city of Pleven.

Pliska Ridge. 62°39' S, 60°14' W. A 3-peaked ridge, 0.5 km wide, and running E-W for 1.6 km at a highest elevation of 681 m above sea level, with a precipitous S slope. Ice-covered ex-

cept for segments of its E peak, it is bounded to the N by the head of Perunika Glacier, and to the S and W by the head of Huntress Glacier, 3.52 km NW of the summit of Mount Friesland, 2.57 km ENE of Willan Nunatak, 5.88 km E of Krum Rock, 1.73 km SE of Burdick Peak, 3.66 km SSW of Mount Bowles, on Livingston Island, in the South Shetlands. Mapped by the Spanish in 1991. Named by the Bulgarians on Feb. 23, 1995, for Bulgaria's first capital, Pliska. UK-APC accepted the name on Dec. 11, 1995, and US-ACAN followed suit in 1996. Plotted by the UK in late 2008.

Plog Island. 68°32' S, 78°00' E. A small island, about 1.75 km long, in Prydz Bay, 0.8 km N of Lake Island, and 0.8 km W of Breidnes Peninsula, in the central part of the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Plogøy (i.e., "plow island"), for its shape. ANCA translated this as Plough Island on Sept. 4, 1956. US-ACAN accepted the name Plog Island in 1965. It is also seen occasionally as Plow Island, and even (it is said) as Ostrov Plau (by the Russians).

Plogbreen. 73°10' S, 13°35' W. A glacier, between the massif the Norwegians call Basen and the mountain they call Plogen, in the N part of the Kraul Mountains, in New Schwabenland, in the W part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians, in association with Plogen.

[1]**Plogen**. 68°49' S, 90°36' W. A mountain ridge, mainly snow- and ice-covered, between Lars Christensen Peak and Simonovbreen, in the NE part of Peter I Island. Named descriptively by the Norwegians ("the plow").

[2]**Plogen**. 73°13' S, 13°47' W. A mountain on the SW side of Plogbreen in the Kraul Mountains of Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the plow").

Plogøy *see* **Plog Island**

Plogskaftet *see* **Plogskaftet Nunataks**

Plogskaftet Nunataks. 71°48' S, 5°12' E. A row of nunataks about 8 km long, close NW of Cumulus Mountain, and N of Breplogen Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Plogskaftet (i.e., "the plow handle"), in association with Breplogen (which means "the glacier plow"). US-ACAN accepted the name Plogskaftet Nunataks in 1967.

Plogsteinen *see* **Lucas Island**

Gora Ploshchadka. 72°01' S, 66°48' E. A nunatak on the W side of the Shaw Massif, in the Prince Charles Mountains. Named by the Russians.

Dolina Ploskaja. 73°24' S, 61°40' E. A valley on the NW side of Pardoe Peak, in the W part of the Mount Menzies massif, in the Prince Charles Mountains. Named by the Russians.

Gora Ploskaja *see* **Bardin Knoll**

Ploski Cove. 63°33' S, 59°49' W. A cove, 1.5 km wide, indenting the NE coast of Tower Island for 900 m NW of Traverso Point, in the Palmer Archipelago. Mapped by the Germans and British in 1996. Named by the Bulgarians on Sept. 14, 2010, for the settlement of Ploski, in southwestern Bulgaria.

Ostrov Ploskij *see* **Haswell Island**

Plough Island *see* **Plog Island**

Plough Lake. 67°26' S, 59°26' E. A roughly triangular lake, measuring about 0.8 km by about 0.3 km, about 1.3 km E of Kemp Peak, in the Stillwell Hills of Kemp Land, in Enderby Land. It drains from its N end into Stillwell Lake via a channel that flows infrequently. So named by ANCA on March 12, 1992, because its shape resembles an old-fashioned plough blade.

Plovdiv Peak. 62°39' S, 60°01' W. Rising to 1040 m in the E extremity of Levski Ridge, 3.25 km ENE of Great Needle Peak, 1.2 km E of Helmet Peak, 4.2 km N of M'Kean Point, and 4.3 km SSW of Rila Point, it overlooks Magura Glacier to the S and Iskar Glacier to the NNE, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, for the Bulgarian city of Plovdiv.

Plow Island *see* **Plog Island**

Plum Bob Point *see* **Plumb Bob Point**

Plumb Bob Point. 77°52' S, 161°44' E. A tapering rock point, 6 km NE of Knobhead, it marks the NE extremity of the Quartermain Mountains, as well as the point of apposition of the east-flowing Taylor Glacier and Ferrar Glacier, in Victoria Land. In keeping with the practice of naming several features in this area after surveying terms, this one was named by NZ-APC in 1992, for the plumb bob, or plummet (a surveying weight). US-ACAN accepted the name in 1993. *See also* **Plummet Glacier**.

El Plumerillo Refugio *see under* **El**

Plumley, Frank. He had no middle initial, despite the references to such in certain sources. b. May 5, 1875, Clevedon, Somerset, son of stonemason Henry Plumley and his wife Elleanor "Ellen" Parsley. Frank was apprenticed as a blacksmith before joining the RN, and, at Cape Town, where he was serving on the *Gibraltar*, he joined the *Discovery* as a stoker, also working as blacksmith and wheelwright for BNAE 1901-04. His wages were 2s 5d per day from the Navy and 1s 6d from the Royal Geographical Society. During the expedition he cut off the top of his thumb whle sawing frozen pemmican. It was so cold he put the amputated part back and it grew back in without even leaving a scar. In 1904, a month after his return to England, he married Mary Elizabeth "Betty" Raymond, in Wincanton. He later served on the *Dreadnought*, and also on the *Venus* during her trip around the world, as well as the *King George V*. He retired from the Navy in 1919, having survived a torpedo attack, and worked as a blacksmith in Portsmouth until World War II. A competitive gardener into his 70s, he had a stroke and went to live with his son George in the Isle of Wight, where he died on Feb. 8, 1971, the next to last survivor of the *Discovery* expedition. Many years later his souvenirs were found, and auctioned off by Sotheby's for £6210.

Plumley, Robin Charles. b. Feb. 9, 1955, Weston-super-Mare, Somerset, son of Kenneth E.C. Plumley and his wife Jean R.A. Cox. He went to sea at 17, spending 4 years as a navigating cadet, and, after gaining his 2nd mate's certificate, went to work for BAS, from 1976 being a deck officer on their research ships. From 1976 to 1982 he was 4th, then 3rd, then 2nd mate on the *Bransfield*. He was promoted to 1st officer in 1984, and as such was on the *James Clark Ross* in her first season. He was captain of the *Discovery*, in 2000-01, and in 2007, the first skipper of the *James Cook*.

Plummer Glacier. 79°58' S, 81°30' W. A short glacier flowing E through the Enterprise Hills to the N of Lippert Peak and the Douglas Peaks, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Charles Carlton Plummer (b. April 21, 1937, Mexico City), glaciologist of USGS and Ohio State University, at Palmer Station in 1965. He was later of Sacramento State University. In 1981-82 he led an Australian-NZ-U.S. geological investigation party to the Daniels Range, in Antarctica.

Plummet Glacier. 77°47' S, 161°54' E. The westernmost glacier on the N side of the Kukri Hills, it flows N to Taylor Glacier, in Victoria Land. In keeping with the practice of naming several features in this area after surveying terms, this was named by NZ-APC in 1992, for the plummet, or plumb bob, a surveying weight. US-ACAN accepted the name in 1993. It seems odd that, at the same time NZ-APC named this one thus, it also named Plumb Bob Point, the two surveying terms meaning the same thing.

Plumstead Valley. 76°37' S, 159°49' E. At the N end of Shipton Ridge, E of Kirkaldy Spur, in the Allan Hills of Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, and named by them for geologist and paleobotanist Edna Pauline "E.P." Plumstead (b. 1903, Cape Town; née Janisch; d. 1989; married Edric Plumstead), part-time lecturer in geology at the University of Witwatersrand, for her work on Glossopteris fossils, especially those from Antarctica. NZ-APC accepted the name, and US-ACAN followed suit in 1965. ANCA accepted the name on Aug. 10, 1966.

Plunder fish. *Pogronphryne scotti*. Coastal fish of the order Harpagiferidae. Found in Antarctic waters.

Plunket Point. 85°05' S, 167°06' E. A conspicuous, long, narrow rock ridge marking the N end of the Dominion Range and the confluence of the Beardmore Glacier with Mill Glacier. The point is 40 m W of Ranfurly Point, which it closely resembles in shape. Discovered in Dec. 1908, by Shackleton's Polar Party, during BAE 1907-09, and named by him for William Lee Plunket, 5th Baron Plunket (1864-1920), then governor of NZ. In 1906, Lord Plunket presented to NZ the Plunket Shield, a prestigious

cricket award. Lord Ranfurly had done something similar for rugby union five years before. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Pluto Glacier. 71°07' S, 68°22' W. A glacier, 16 km long and 6 km wide, flowing E into George VI Sound to the N of Succession Cliffs, between those cliffs and Tombaugh Cliffs, on the E coast of Alexander Island. First photographed aerially on Nov. 23, 1935, by Ellsworth, and plotted roughly from these photos in 1936-37 by U.S. cartographer W.L.G. Joerg. Roughly surveyed in Oct. 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map of the expedition. Further photographed aerially by RARE 1947-48, and re-surveyed by Fids from Base E in 1948 and 1949. Named by UK-APC on March 31, 1955, for the planet Pluto. US-ACAN accepted the name later that year, and it appears on a 1955 U.S. Hydrographic Office chart. FIDS cartographers mapped it in 1959-60, from the RARE photos. The Argentines call it Glaciar Plutón.

Glaciar Plutón *see* **Pluto Glacier**

Ostrov Pluton *see* **Pluton Island**

Pluton Glacier. 64°53' S, 62°48' W. A large tidewater glacier at Leith Cove, NE of Jantar Hills, at Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named by the Poles on Sept. 1, 1999.

Pluton Island. 66°03' S, 101°11' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrov Pluton. ANCA translated the name as Pluton Island, on Jan. 19, 1989.

Monte Plymouth *see* **Mount Plymouth**

Mount Plymouth. 62°28' S, 59°49' W. Rising to 520 m (formerly estimated at 635 m), 2.5 km NW of Discovery Bay, in the N part of Greenwich Island, in the South Shetlands. Charted in 1935 by the personnel on the *Discovery II*, and named by them for the town of Plymouth, in Devon. It appears on their 1935 chart, and on a British chart of 1948, and the name was accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears in the 1955 British gazetteer. During 1946-47, Chilean Army personnel from Soberanía Station (later known as Capitán Arturo Prat Station) named it Nevado General Cañas, after Gen. Cañas (*see* **Islote Cañas**). Over the course of the next few years this was seen variously as Picacho General Cañas, Nevado General R. Cañas M., Nevado General Ramón Cañas Montalva, and (on a 1951 Chilean chart) as Pico Osorno, named for the Chilean town and volcano. On an Argentine chart of 1953, it appears as Monte Plymouth, and on one of their 1958 charts as Pico Plymouth. Photographed aerially by FIDASE in 1956, and surveyed from the ground by FIDS between 1957 and 1959. On a Chilean chart of 1962 it apperas as Monte Osorno, and that was the name accepted by the 1974 Chilean gazetteer. However, today, the Chileans call it Monte Plymouth. The name accepted by the 1970 Argentine gazetteer was Monte Plymouth.

Plyler, Tom. b. 1949. Ex-Marine officer. Wintered-over at Pole Station in 1975, and was station manager there in 1981. He was station manager at Palmer Station in 1983, the first time women had wintered-over there.

PM-3A *see* **Nuclear power**

Pobeda Canyon. 63°30' S, 98°55' E. A submarine feature N of Pobeda Ice Island, off the Shackleton Ice Shelf. Named by international agreement, in association with the ice island.

Pobeda Ice Island. 64°39' S, 98°54' E. A tabular iceberg, up to 120 km long and 80 km wide, with a flat top and almost vertical sides, 150 km from the Shackleton Ice Shelf. It is not a feature in the regular sense of the word. Every 50 years or so a huge chunk of the Denman Glacier breaks off, then runs aground on a shoal N of the Shackleton Ice Shelf. In time, this disintegrates, and a new one is formed from the Denman in the same way, and the same thing happens to it. Wilkes saw one in Feb. 1840, during USEE 1838-42, Mawson saw another one during AAE 1911-14, but did not see one during BANZARE 1929-31. In 1960, the Russians saw one, and named it Ostrov Pobedy, after the World War II battle of Pobeda. They installed a temporary research station on it. Sometime in the 1970s, Pobeda (as such) disappeared, and in 1985 a new one was formed. However, in 2003 or 2004 that one disappeared too, and as at time of writing, there is no Pobeda Ice island.

Pobeda Station. 64°39' S, 98°54' E. A temporary Soviet weather station built on the coast of Queen Mary Land, near Mirnyy Station, at an elevation of 27 m above sea level, and open from May to Aug. 1960.

Gora Pobedy. 70°44' S, 67°17' E. A nunatak, SE of Murray Dome, in the Aramis Range of the Prince Charles Mountains. Named by the Russians.

Península Poblete. 64°40' S, 62°21' W. A minor peninsula, projecting E from Arctowski Peninsula, on the W coast of Wilhelmina Bay, on the W coast of the Antarctic Peninsula. Named by the Chileans for 1st Lt. Mario Poblete Garcés, who took part in the preparations for ChilAE 1951-52. Later (as a capitán de navío), he was skipper of the *Piloto Pardo*, 1965-66, and in 1971 became director of the Instituto Antártico Chileno. The Argentines call it Península De Solier.

Punta Poblete. 62°27' S, 60°48' W. A point, immediately NW of the beach the Chileans call Playa Escondida, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for Mario Poblete Garcés (*see* **Península Poblete**, above), for his 1965-66 work in assisting the scientific personnel from the Instituto Antártico Chileno, an institution he would head from 1971.

Poch, Julio R. b. 1908, Buenos Aires. His mother was Carmen de Costa. A teniente de fragata in the Argentine Navy, he was an observer on USAS 1939-41, and was later promoted to capitán de navío.

Playa Pocitas. 62°27' S, 60°48' W. A beach, ENE of Playa Angosta, on the N coast of Cape Shirreff, on Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91, for the little pools in which the young elephant seals learn to swim.

Rocas Pod *see* **Pod Rocks**

Pod Rocks. 68°09' S, 67°30' W. A small, compact group of rocks, 8 km W of Millerand Island, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. First roughly surveyed in 1936 by BGLE 1934-37, they appear on Rymill's 1938 map of that expedition. Visited by Fids from Base E. In Aug. 1949 they established a sealing camp here, and in Dec. 1949, they re-surveyed the rocks, naming them for the old sealers' pods (groups of seals hauled ashore). UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. The Argentines call them Rocas Pod.

Ozero Podgornoe. 72°52' S, 68°06' E. A lake, NW of Rofe Glacier, and SW of Korotkiy Glacier, in the central part of the Mawson Escarpment. Named by the Russians.

Podgumer Col. 63°50' S, 58°39' W. A col, mostly ice-free, at an elevation of over 800 m, linking Kondofrey Heights to the E with Darzalas Peak 2.06 km to the W and also with the Detroit Plateau to the W, 1.03 km WNW of Gurgulyat Peak, 6.6 km N by W of Mount Bradley, and 10 km S by W of Zlidol Gate, it surmounts the upper course of Victory Glacier to the N and a tributary to Znepole Ice Piedmont to the S, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Podgumer, in western Bulgaria.

The Podium. 78°56' S, 161°09' E. A high, flat, ice-covered bluff, 1.5 km in extent, which projects at the S end of the Worcester Range, and surmounts the ice-filled embayment between Cape Teall and Cape Timberlake. Named by US-ACAN in 1965, for its position relative to nearby features, and for its resemblance to a podium. NZ-APC accepted the name.

Hrebet Podkova. 70°11' S, 65°06' E. A mountain ridge, NE of Mount Dovers, in the Athos Range of the Prince Charles Mountains. Named by the Russians. Although the coordinates are close to those of Harriss Ridge (the only named ridge in the area), they are not precisely the same. However, with the Russians this need not be a problem. So, with reservations (the reservation being Nunatak Predgornyj), this feature looks as if it may be the same as Harriss Ridge.

Ozero Podkova. 66°26' S, 100°26' E. A lake, NE of Scott Glacier, in Wilkes Land. Named by the Russians.

Gora Podlëdnaja. 73°19' S, 68°35' E. A nunatak in the S part of the Mawson Escarpment. Named by the Russians.

Vpadina Podlëdnaja. 71°52' S, 67°46' E. A trench, SE of the Nilsson Rocks, in the Prince Charles Mountains. Named by the Russians.

Holm Podlëdnyj. 68°44' S, 70°13' E. An island in the area of the Amery Ice Shelf. Named by the Russians.

Nunatak Podlëdnyj. 67°49' S, 63°11' E. A nunatak, SW of Russell Nunatak, in Mac. Robertson Land. Named by the Russians.

Holm Podlëdnyj Kupol. 68°59' S, 69°10' E. An ice island, or dome, in the NE part of Doggers Bay, on the W side of the Amery Ice Shelf. Named by the Russians.

Ozero Podprudnoe *see* **Podprudnoye Lake**

Podprudnoevatnet *see* **Lake Podprudnoye**

Podprudnoye Lake. 70°45' S, 11°37' E. A small lake, just SE of Prilednikovoye Lake, in the SW part of Sundsvassheia (i.e., the S part of the Schirmacher Hills), in Fimbulheimen, in Queen Maud Land. Mapped by SovAE 1961, and named Ozero Podprudnoe (i.e., "by-the-pond lake") by the USSR that year. US-ACAN accepted the name Podprudnoye Lake in 1970. The Norwegians call it Podprudnoevatnet.

Poduene Glacier. 64°26' S, 61°32' W. A glacier, 3.3 km long and 2.4 km wide, on Península Péfaur, W of Agalina Glacier, it drains the N slopes of Mount Zeppelin, and flows northwestward into Gerlache Strait E of Eckener Point, on the Danco Coast, on the W coast of Graham Land. Mapped by the British in 1978. Named by the Bulgarians on Sept. 14, 2010 for the settlement of Poduene, in western Bulgaria, now part of the city of Sofia.

Podvis Col. 63°59' S, 59°47' W. An ice-covered col, at an elevation of 1494 m above sea level, extending 1.6 km between Korten Ridge to the NW and the Detroit Plateau to the SE, it overlooks Sabine Glacier to the N and Temple Glacier to the SW, on the Davis Coast, on the W coast of Graham Land. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Podvis, in southeastern Bulgaria.

Poetry Glacier. 61°57' S, 57°50' W. A large glacier flowing N and NW into the E side of Venus Bay between Miloz Point and Bolinder Bluff, on the N coast of King George Island, in the South Shetlands. Named by the Poles (the American gazetteer says it was named by PolAE 1984, but the British gazetteer — and the Poles themselves — say it was named in 1980), as Lodowiecz Poezji. UK-APC accepted the translated name on July 8, 2003, and US-ACAN followed suit that year. Plotted by the UK in late 2008.

Lodowiecz Poezji *see* **Poetry Glacier**

The *Pogoria*. 342-ton, 154-foot Polish barquentine (an actual tall ship, with 3 masts), designed by Zygmunt Choren, built in Gdansk Shipyard, and launched on Jan. 23, 1980. She could take 50 persons, and could travel at 15 knots. She was chartered by the Polish government to be a relief vessel for PolAE 1981-83. Skipper that season (1981-82) was Krzysztof "Kris" Baranowski. She took part in several tall ships races, from 1985 to 1991 was under charter in Canada, and in 1987-88 sailed around the world.

Gora Pogrebënnaja. 71°41' S, 67°51' E. A nunatak, NE of the Nilsson Rocks, in the Prince Charles Mountains. Named by the Russians.

Poidecoeur, Adolphe-Alphonse. b. June 5, 1816, Le Havre. On Dec. 31, 1839, at Hobart, he joined the *Astrolabe* as a junior seaman, just in time for FrAE 1837-40's 2nd trip to Antarctica.

Cabo Poindexter *see* **Cape Mackintosh**

Cape Poindexter *see* **Mount Reynolds**

Poindexter Peak. 75°13' S, 134°25' W. A snow-covered peak rising to 1215 m, 6 km E of Bennett Bluff, along the W side of the upper part of Berry Glacier, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Monte F. Poindexter, USARP meteorologist at Byrd Station in 1962.

Cape Poinsett. 65°46' S, 113°13' E. An ice-covered cape, the N extremity of the Budd Coast, from which the coast recedes abruptly to the SE and SW. Plotted from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for physician and botanist Joel Roberts Poinsett (1779-1851), secretary of war under President Van Buren, 1837-41, who was instrumental in the compilation and publication of the many scientific reports based on the work of USEE 1838-42. This expedition may well have been the first actually to sight this cape, albeit through looming (q.v.). Its position correlates closely with the high seaward extremity of Budd's High Land, as charted in 1840 by Wilkes. ANCA accepted the name.

Point Rock *see* **Billie Rocks**

Pointe Géologie *see* **Géologie Archipelago**

Pointer Nunatak. 80°37' S, 29°00' W. A conspicuous nunatak, rising to 1235 m, immediately E of Wedge Ridge, on the SW side of Stratton Glacier, in the W part of the Shackleton Range. First surveyed and mapped in Oct. 1957, by BCTAE, and so named by them because it is an important landmark on the route from Blaiklock Glacier to Stratton Glacier, which provides access from the W to the E part of the Shackleton Range. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

The Pointers. 62°35' S, 61°19' W. Two submerged rocks NW of Rugged Island, between Eddystone Rock and Start Point, off the coast of Livingston island, in the South Shetlands. Known to sealers in the 1820s as a navigational mark and hazard near the entrance to New Plymouth, and so named by them. The feature appears on Fildes' chart of 1821, but on a 1916 British chart it appears as Pointers (i.e., without the definite article). Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name The Pointers on Aug. 31, 1962, and it appears as such on a British chart of that year. US-ACAN accepted the British naming in 1965. Last plotted by the UK, in late 2008.

Pointing Cliff *see* **Ponting Cliff**

Poiron, Placide-Adolphe. b. May 8, 1823, Vaugirard. Cabin boy on the *Zélée* during FrAE 1837-40. On his 16th birthday he became an apprentice seaman.

Isla Poisson *see* **Bob Island**

Promontorio Poisson *see* **Poisson Hill**

Poisson Hill. 62°28' S, 59°39' W. A rounded, ice-covered hill, rising to about 80 m, 0.5 km NE of Iquique Cove, NE of Guesalaga Peninsulas, at Discovery Bay, Greenwich Island, in the South Shetlands. Surveyed by ChilAE 1946-47, when the name Promontorio Subteniente Poisson was given to the area between the hill and Ash Point, named for Sub lieutenant (later Capitán de corbeta) Maurice Poisson Eastman, who signed the official act of inauguration of nearby Soberanía Station (what would later be called Capitán Arturo Prat Station) in 1947. It appears as such on their 1947 chart. It appears with the shortened name of Promontorio Poisson on a 1951 Chilean chart. On a Chilean chart of 1962 the hill itself appears as Cerro Poisson, but on a 1963 Chilean chart it appears as Cabezo Poisson, and there is a translated Chilean reference to it as Poisson Promontory. In 1964 it was charted by an RN Hydrographic Survey unit on the *Protector*. It appears as Poisson Hill on their chart, and also on a British chart of 1968, and that name was accepted by UK-APC on Nov. 3, 1971, with US-ACAN following suit in 1972. It appears as such in the 1974 British gazetteer. Last plotted by the UK, in late 2008. For more on Don Maurice, *see* **Rockpepper Bay**.

Les Poissons *see under* **L**

Vozvyshennost' Pojarkova. 77°50' S, 82°45' W. A beacon in the ice shelf of the SE coast of Palmer Land. Named by the Russians.

Pojeta Peak. 79°28' S, 84°41' W. Rising to about 1500 m in the central part of Webbers Peaks, 3 km SE of Bingham Peak, in the Heritage Range, in the Ellsworth Mountains. Named by US-ACAN for John Pojeta, Jr., USGS paleontologist at Reston, Va., from 1963. He was a usarp with the field party during the Ellsworth Mountains Expedition of 1979-80.

Holmy Pokatye. 66°33' S, 99°51' E. One of the Obruchev Hills, in Queen Mary Land. Named by the Russians.

Otrog Pokatyj. 73°16' S, 68°22' E. A spur on the SW side of the Mawson Escarpment. Named by the Russians.

The *Pol VIII*. A 298-ton whale catcher, just under 137 feet long, built in 1936 by Moss Vaerft & Dokk, in Moss, Norway, for the Polaris Company, and which caught for the *Ole Wegger* in 1941. Crew: Olav B. Olsen (1st mate); Henry Johannessen, Reinhart Reinhartsen, and Karsten Nilsen (able seamen); Olaus Ask (chief engineer); N. Magnussen (2nd engineer); Gunnar Karlsen (3rd engineer); Alf Martinsen (stoker); Storm Larsen (gunner captain); Arne Eliassen (cabin boy); Jørgen Naess (able seaman and radio operator); Erland Stange (steward). Along with her factory ship, she was taken by the Nazi ship *Pinguin* in 1941, and sent to France for conversion.

The *Pol IX*. Whale catcher belonging to the *Ole Wegger* in 1941. Crew: Frithjof Dahler Jørgensen (1st mate; aged 34); Arthur Vindal, Theodor Juel Dahl (37), Hjalmar Andreassen (29), and Åge Schau (able seamen); Jørgen Mathisen (chief engineer); Harald Amundsen (2nd engineer; 35); Nils Christen Nilsen (engineer's assistant); Ragnar Gjertsen and Erik Pettersen (stokers); Bjarne Krog Andersen (gunner captain; 40); Asbjørn Høivik (cabin boy); Alf Helland (steward; 40).

The *Pol X*. Whale catcher belonging to the *Ole Wegger* in 1941. Crew: H. Theodor Olsen (1st mate; 34); Arne Olsen, Einar Abrahamsen (27),

Leif Mangar Andersen, and Aleksander Bergan (able seamen); Oldemar Ås (chief engineer); Reidar Sundt Johansen (2nd engineer; 34); Johannes Andersen (engineer's assistant); Bjarne Allum (stoker); Sverre Hansen (gunner captain; 37); Asbjørn Hansen (cabin boy); and Jørgen Hammer (steward).

Punta Polaca *see* **Polish Bluff**

PolAE *see* **Polish Antarctic Expedition**

Poland. Two Poles were on BelgAE 1897-99, Henryk Arctowski and Antoni Dobrowolski. Poland sent its first expedition to Antarctica in 1958-59 (*see* **Polish Antarctic Expedition 1958-59**), with 7 men led by Wojciech Krzeminski, and on Jan. 21, 1959 took over the Russian Oazis Station, re-naming it Dobrowolski Station. They worked there for 2 weeks, and then closed the station. Poland was the 13th country to sign the Antarctic Treaty, and the 10th to be ratified (this last on June 8, 1961-ahead of Australia, Argentina, and Chile, 3 of the original signatories). Over the next 20 years Polish scientists did occasionally visit Dobrowolski Station when they went south with Russian expeditions to Molodezhnaya Station, but no Polish expedition, as such, was launched. However, in 1975-76 a Polish Fisheries voyage, led by chief scientist Daniel Dutkiewicz (under the overall direction of Dr. Stanislaw Rakusa-Suszczewski in Poland), was in the Weddell Sea, on the *Tazar* and the *Professor Siedlecki*. They were in Antarctic waters in Jan. and Feb. 1976, and visited Frei and Bellingshausen Stations. There was a similar voyage in 1976-77, led by chief scientist Zbigniew Kornicki. His ships were the *Professor Siedlecki*, the *Gemini*, the *Manta*, the *Tazar*, and the *Rekin*. On July 29, 1977 Poland became the 13th Consultative party to the treaty, and that year Polish Antarctic Expeditions (q.v.) began going down on an annual basis. The only two Polish scientific stations have been Dobrowolski Station and Arctowski Station.

Lake Pol'anskogo. 66°19' S, 100°30' E. Sometimes seen as Lake Polanskogo. In the SW corner of the Bunger Hills, between those hills and Apfel Glacier. The lake contains a number of small islands. Charted by SovAE 1956, and named by the Russians as Ozero Pol'anskogo, for Aleksandr Pol'ansky, who was on the Arctic drift of the *Sedov*. ANCA translated the name as Lake Polanskogo (i.e., without the apostrophe) on March 7, 1991. Despite the occasional erroneous reference to this feature as Ozero Poljanskogo (which is actually a wrong name), the right name is Ozero Pol'anskogo (with, or without, the apostrophe, depending on your preference).

Ozero Pol'anskogo *see* **Lake Pol'anskogo**

Polar Air Mass. A great body of air forming over the South Pole, or nearby, either over land or water. *See also* **Continental Polar Air Mass**, and **Maritime Polar Air Mass**.

Polar Bear Point. 77°49' S, 166°51' E. An ice-covered point, about 2 km SE of Castle Rock, on the E side of Hut Point Peninsula, Ross Island. A breached crater stands 1.1 km to the NNW, but no rock is exposed on the point, which is well-defined and elevated at the junction with McMurdo Ice Shelf. When viewed from the W, the appearance of the point is suggestive of the head, neck, and fore part of a polar bear. Named by US-ACAN in 2000. NZ-APC accepted the name on Feb. 20, 2001.

The *Polar Bird* *see* **The *Icebird***

The *Polar Bound*. Tourist yacht in Antarctica in 2002-03. She could take 1 passenger.

The *Polar Chief* *see* [1]**The *Anglo-Norse***

The *Polar Circle* *see* **The *Polarsirkel***

Polar Club Glacier. 62°14' S, 58°32' W. A broad glacier, ENE of Stranger Point, flowing SE between that point and Red Hill, to enter Bransfield Strait W of Telefon Point, King George Island, in the South Shetlands. Named by the Poles in 1980, for the Polish Polar Club. UK-APC accepted the name on July 8, 2003, and US-ACAN followed suit that year. Plotted by the UK, in late 2008.

Polar Committee Icefall. 62°08' S, 58°30' W. Between Urbanek Crag and Klekowski Crag, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for the committee on polar research at the Polish Academy of Sciences.

The *Polar Duke*. A 615-ton, 219-foot, ice-strengthened steel ship, built in Norway in 1983, for Rieber Shipping, of Bergen, as an oil industry supply vessel. She had a 43-foot beam, 19-foot draft, a helicopter deck, 4 labs, 2 diesel engines, each 2250 bhp, and carried 12 crew and 28 scientists. In Jan. 1985, she was leased by the NSF as a replacement for the *Hero*, converted into a research vessel (*see* **Kennedy Cove**), and as such serviced Palmer Station. She had a Canadian crew, and flew a Canadian flag. Skippers that season (1984-85) were Ulrich Mueller and José-Simone Ree. In Nov. 1985 she helped rescue the crew of the trapped *John Biscoe*. Skippers that season (and the following season, 1986-87) were Patrick Gates and Ulrich Mueller. Skippers in 1987-88 were Ulrich Mueller and Henry Flite. In Jan.-Feb. 1989 (during the 1988-89 season), under the command of Ulrich Mueller and Grant Philipott, she was involved in the fight against the oil slick from the capsized *Bahía Paraíso* (*see* **Pollution**). That year she was re-flagged, and gained a Norwegian crew. She was back in Antarctica in 1989-90, same two captains as the year before, and again in 1990-91, this time under Tor Arne Jakobsen and Karl Birger Sanden. In 1992-93, and again in 1994-95 and 1995-96, she was back, under Capt. Sanden and Capt. Magnar Aklestad. She finished her NSF charter in 1997, worked for a few months in the North Sea, and was then re-fitted as a seismic ship. She was back in Antarctica in 1997-98, under the command of Capt. Einar Saetre, again in 1999-2000, under captains Sanden and Sandvik, carrying the GANOVEX VIII expedition (and also relieving the German scientific station), and again in 2000-01, carrying a Norwegian Antarctic survey team. She spent a couple of years in NZ waters, and in 2005 was sold to the French, her name being changed to *Duke and Multiwave*, and later to *Veritas Seabed*.

Polar Friendship Glacier. 62°09' S, 58°50' W. A large glacier at the head of Collins Harbor. In 1973, the Russians Govorucha and Simonov called it Lednik Collins (i.e., "Collins glacier"), in association with the harbor, but, in 1980, the Poles renamed it for the friendship that existed between their Arctowski Station, the Russians' Bellingshausen Station, and the Chileans' Frei Station, all close together there on Fildes Peninsula, King George Island, in the South Shetlands.

The *Polar Mist*. A 54-foot American aluminum-hulled cutter, skippered by Richard and Sheri Crowe, which carried tourists to the South Shetlands and the Antarctic Peninsula in 1996-97.

Polar Party Cross. A giant cross made of Australian jarrah wood, standing 9 feet out of the very top of Observation Hill, on Ross Island. It was erected on Jan. 22, 1913, to honor Scott and his 4 companions, by those members of BAE 1910-13 who didn't die. They took 2 days to carry it to the top of the 750-foot hill. The inscription says, "To strive, to seek, to find, and not to yield." In July-Aug. 1974 it blew down in a tremendous storm, and was re-uprighted on Sept. 24, 1974, by New Zealanders from Scott Base.

The *Polar Pioneer*. A 1754-ton, 71.6-meter Russian icebreaker (actually the *Polyarnyy Pioner*), built in Finland in 1982, as the *Akademik Shuleykin* (q.v.). In 1995 she was refitted in Germany as a tourist vessel, and on July 1, 2001 was renamed the *Polar Pioneer*. She was in Antarctic waters every season from 2001-02 (operated by Aurora Expeditions). She could take 54 passengers.

Polar Plateau. 90°00' S, 0°00'. Also seen as "polar plateau" (i.e., small letters). It is the broad, relatively smooth plateau, with somewhat undefined limits, that surrounds the South Pole. Discovered by Armitage in 1902. Shackleton, during his (unsuccessful) push to the Pole during BAE 1907-09, applied the name King Edward VII Plateau (or just King Edward Plateau; named after the king) to the area between the head of the Beardmore Glacier (where, after climbing the Beardmore, he emerged onto the plateau) and the farthest south he did reach (88°23' S, 162°00' E. It appears as such on Shackleton's expedition maps. In Dec. 1911, upon reaching the South Pole, Amundsen applied the name Kong Haakon VII Vidde (i.e., "King Haakon VII Plateau) to the area surrounding the Pole. It appears as such on his expedition maps, as well as on the maps of BCTAE 1955-58. The area around the Pole became widely known as the South Polar Plateau, and it appears as such on a British map of 1927, on an Australian map of 1939, on a U.S. Hydrographic Office chart of 1943, and was the name accepted by UK-APC on Sept. 23, 1962. It appears as such in the 1974 British gazetteer. Byrd called it the Polar Plateau on his 1930 map, and it appears that way on a 1957 *National Geographic* map. The Russians call it Plato Sovëtskoe.

[1]**The *Polar Queen***. Norwegian ship of the 1980s, built in 1981 for Rieber Shipping, of Bergen, and used as a research and seal-survey

ship. She took part in GANOVEX III. She was part of the West German expeditions of 1981-82 and 1982-83. Magnar Aklestad was skipper both seasons, and Gode Gravenhorst was the scientific leader. She was part of the Italian Antarctic Expeditions of 1985-86 and 1987-88. Aklestad was still skipper. She took part in the German Antarctic expeditions of 1988-89 (Capt. Aklestad), 1989-90 (Capt. Aklestad), 1990-91 (Captain Peter Brandal), 1991-92 (Capt. Brandal), 1992-93 (captains Norbert Roland and L.M. Gaasø), and 1993-94 (Capt. Brandal). In 1994, she was sold to the Brazilians, and became the *Ary Rongel* (q.v.).

[2]**The *Polar Queen*** *see* **The *Ernest Shackleton***

Polar Record Glacier. 69°45' S, 75°30' E. A large glacier flowing NW from the American Highland, between Meknattane Nunataks and Dodd Island, to the central part of the Publications Ice Shelf, in Princess Elizabeth Land, about 40 or 50 km SW of the Larsemann Hills. Delineated by U.S. cartographer John H. Roscoe, in 1952, from air photos taken during OpHJ 1946-47, and named by him for the *Polar Record*, the polar journal published in England by the Scott Polar Research Institute. US-ACAN accepted the name in 1956, and ANCA followed suit on July 22, 1959.

The *Polar Sea*. One of the U.S. Coast Guard's most powerful icebreakers. Launched on June 4, 1975, and commissioned in Jan. 1977. Sister ship of the *Polar Star*. Her skippers in Antarctic cruises were: H.H. Kothe (1979-80, when she was on an oceanographic cruise in the Weddell Sea); John J. Dirschel (1981-82); Bruce S. Little (1983-84); William A. Anderson (1986-87); Joseph J. McCleland (1988-89); Gary Boyer (1990-91 and 1991-92); Lawson W. Brigham (1993-94 and 1994-95); Jeffrey Garrett (1996-97); Gerald Davis (1998-99); Keith G. Johnson (2000-01; he was skipper until June 7, 2002); Mark L. Miller (from June 7, 2002); David A. Vaughan (from June 2009; he had been the ship's exec since 2004). She was in Antarctic waters in 2003-04, 2004-05, 2005-06, 2006-07, and 2007-08.

Cape Polar Sea. 73°32' S, 169°27' E. A rock cape forming the W extremity of Coulman Island, in the NW part of the Ross Sea. Named by US-ACAN in 1998, for the *Polar Sea* (the cape lies near Cape Polar Star and Glacier Strait, two other features named after icebreakers). However, on Nov. 4, 1999, NZ-APC felt that the name was ambiguous (as indeed it is), and should be Polar Sea Cape. On Jan. 5, 2000 they faxed US-ACAN to see if they would accept this logic. US-ACAN's e-mail response of Jan. 14, 2000 made no mention of the subject, probably because the NZ proposal was no less ambiguous than the existing name. It was not until March 25, 2004 that NZ-APC finally accepted the U.S. naming, and it appears as such in the 2004 NZ gazetteer.

Polar Sea Cape *see* **Cape Polar Sea**

[1]**The *Polar Star***. A 216-ton whaler, built at Peterhead in 1857, the smallest of the 4 vessels on DWE 1892-94. Capt. James Davidson.

[2]**The *Polar Star***. Lincoln Ellsworth's Northrop Gamma all-metal, cantilever, low-wing monoplane, NR12269. It weighed 7800 pounds, had a 600 hp Wasp engine, could do 5000 miles non-stop at 230 mph, could carry 2 passengers, and land at 42 mph. In the 1930s Ellsworth tried 3 times to fly across the continent of Antarctica, using this plane on each occasion. On the first try, 1933-34, it was damaged in a storm, at Little America II. The following season, 1934-35, Ellsworth failed to get off the Antarctic Peninsula with it. On the 3rd attempt, 1935-36, he and Hollick-Kenyon (the actual pilot) flew it across the continent from the Weddell Sea to a point 16 miles from Little America, where they ran out of fuel, and the plane had to be abandoned. The men made their way to Little America (see Ellsworth for more detail).

[3]**The *Polar Star***. U.S. Coast Guard icebreaker used in Antarctic waters, also as a research vessel. Commissioned in Jan. 1976 she was the most powerful U.S. icebreaker ever made (including the *Glacier*). Sister ship of the *Polar Sea*. Her skipper in 1977-78 and 1978-79 was R.G. Moore; in 1980-81 it was Thomas C. Volkle; in 1982-83 it was Joseph F. Smith. That season she became the 7th ship to circumnavigate Antarctica in high latitudes, when she carried an Antarctic Treaty inspection team to 12 international bases around the continent. Later skippers were: John P. Flaherty (1984-85); Wade M. Moncrief (1985-86); P. Richard Taylor (1987-88); Robert E. Hammond (1989-90); Paul Hagstrom (1992-93); Robert Parsons (1994-95); Carl Swedburg (1995-96); Charles Lancaster (1997-98). On Dec. 15, 1999, under the command of Terrance Julich, she crossed into Antarctic waters to begin her work supporting the American scientific crew in Antarctica for the 1999-2000 season. On Dec. 27, 1999, she reached the edge of the ice leading to McMurdo, and began pounding her way through. On Jan. 7, 2000, she left McMurdo for Marble Point, with McMurdo fuel personnel aboard, and the following day reached her destination, breaking through the ice to re-fuel Marble Point. By Jan. 9, 2000, she was back at McMurdo, and left on Feb. 11, 2000, for the Oates Coast, arriving there on Feb. 16, 2000. On Feb. 21, 2000, she left the Oates Coast heading home, crossed out of Antarctic waters on Feb. 24, 2000, and arrived back in the USA on April 10, 2000.

[4]**The *Polar Star***. Built in Finland in 1969, as the Swedish Navy icebreaker *Njord*. She was updated in 1988 and served in the Baltic until 2000, when she was bought by Karlsen, the tourist company, re-named the *Polar Star*, and registered in Barbados. She has been several times in Antarctica.

Cape Polar Star. 73°38' S, 169°40' E. A bold cape forming the SW extremity of Coulman Island, in the NW part of the Ross Sea. Named by US-ACAN in 1987, to commemorate U.S. Coast Guard activities in Antarctica since OpDF 78 (i.e., 1977-78). A survey of this cape was conducted from the *Polar Star* in 1986.

Polar Subglacial Basin. 85°00' S, 110°00' E. A subsurface feature beneath the Polar Plateau, generally between the Gamburtsev Subglacial Mountains and the Dominion Range, in East Antarctica. Also called the Eastern Plain, it was roughly delineated by the UK, US, and USSR seismic sounding parties in the period 1958-61. So named by US-ACAN in 1961, for its proximity to the South Pole.

Polar-3-Halbinsel. 74°34' S, 165°22' E. Pronounce as Polar-Drei-Halbinsel. The long peninsula which separates Wood Bay from Terra Nova Bay, in Victoria Land. Cape Washington forms its S tip. Named by the Germans.

Polar3-Halbinsel *see above*, as pronounced Polar-Drei

Polar Times Glacier. 69°46' S, 74°35' E. On the Ingrid Christensen Coast, it flows NE between Svarthausen Nunatak and Boyd Nunatak, just E of Mount Caroline Mikkelsen, into the W part of the Publications Ice Shelf, in Princess Elizabeth Land. Delineated by John H. Roscoe, the U.S. cartographer, in 1952, from air photos taken during OpHJ 1946-47, and named by him for the *Polar Times*, a journal published by the American Polar Society of New York since June 1935. US-ACAN accepted the name in 1956, and ANCA followed suit on July 22, 1959.

Polarårboken Glacier. 69°36' S, 76°00' E. A glacier, 5 km NE of the Stein Islands, flowing WNW into the N part of the Publications Ice Shelf, about 17 km SW of the Larsemann Hills, on the Ingrid Christensen Coast. Delineated by U.S. cartographer John H. Roscoe, in 1952, from air photos taken during OpHJ 1946-47, and named by him for the *Polarårboken* (i.e., "the Polar Year Book"), a polar journal published since 1949 by the Norsk Polarklubb of Oslo. US-ACAN accepted the name in 1956. Sighted by the ANARE Prince Charles Mountains Survey party in Feb. 1969. ANCA accepted the name on May 18, 1971.

[1]**The *Polarbjörn***. Norwegian freighter of 486 tons. Under Captain Bernt A. Brandal she accompanied the *Polarsirkel* to Antarctica with NorAE 1956-57, and took the first SANAE down to Antarctica in 1959-60 (Captain Henrik Marø). She took part in the West German expedition of 1982-83. Her skipper that season was Lothar Suhrmeyer. Gotthilf Hempel was the scientific leader aboard during that voyage. In 1984-85 she became the ship taking the French to Antarctica every summer. Her skipper that year was Arne Verpeide. Peter Brandal was her captain in 1985-86, 1986-87, and 1987-88. In 1989-90, under the command of Capt. Magne Helle, she took down the Indian Antarctic Expedition. In 1991-92 she took down the Nordic Antarctic Research Program expedition. Her skippers in 1992-93 were Magne Helle and Sigvald Brandal.

[2]**The *Polarbjörn*** *see* **The *Arctic Sunrise***

[3]**The Polarbjørn**. Built in Norway, in 2001, for Rieber Shipping, as an Antarctic vessel.

Polarbjørnbukta. 70°16' S, 2°48' W. A small bay in the Fimbul Ice Shelf, N of Blåskimen Island, on the Princess Martha Coast. Named by the Norwegians for the *Polarbjørn* (i.e., "the *Polarbjørn* bay").

Polarforschung Glacier. 69°50' S, 75°07' E. A heavily crevassed glacier flowing NNW along the W side of Meknattane Nunataks, to the Publications Ice Shelf, just W of Polar Record Glacier. Vestknatten Nunatak lies within the mouth of the glacier. Delineated by U.S. cartographer John H. Roscoe in 1952 from air photos taken during OpHJ 1946–47, and named by him for the *Polarforschung*, a polar journal published by the Archiv für Polarforschung, in Kiel, Germany. US-ACAN accepted the name in 1956, and ANCA followed suit on July 22, 1959.

The *Polarhav*. Tiny Norwegian sealer which transported BelgAE 1957–58 to Antarctica (*see also* **The *Polarsirkel***). In 1959 she was sent to re-supply the Belgian Roi Baudoin Station with a relief party (BelgAE 1958–60), dogs, supplies and equipment, but got trapped in the ice 300 km from the station, and was helped out by the *Glacier*. In 1960–61 she took down the second SANAE. In 1964 she was in the South Shetlands on a Norwegian sealing voyage from Ålesund, to explore the future in sealing on the pack-ice. She took 852 adult seals (mainly crabeaters), between Aug. 25 and Oct. 31 of that year. Sigmund Bøe was skipper throughout this entire period.

Baie Polarhav. 70°18' S, 24°40' E. Part of Breid Bay, on the Princess Ragnhild Coast of Queen Maud Land. Named by the Belgians for the *Polarhav*.

Glaciar Polaris *see* **Polaris Glacier**

Polaris Company. Norwegian whaling company, out of Larvik, owned by Melsom & Melsom. The company operated the *Nielsen-Alonso* in Antarctic waters between 1926 and 1931.

Polaris Glacier. 64°14' S, 59°31' W. A distinctive glacier, 6 km long, flowing from the Detroit Plateau of Graham Land, between Pyke Glacier and Eliason Glacier, joining with the latter glacier to the E to flow S into Larsen Inlet. Surveyed by Fids from Base D in 1960–61, and mapped by FIDS cartographers from those efforts. Named by UK-APC on Feb. 12, 1964, for the Polaris Motorsledge (*see* **Sledges**), used in Antarctica since 1961. US-ACAN accepted the name later in 1964. The Argentines call it Glaciar Polaris.

Polaris Peak. 84°39' S, 172°40' W. A rounded peak, rising to 970 m, about 7 km SSW of Mount Roth, in the Gabbro Hills of the Queen Maud Mountains. So named by the Southern Party of NZGSAE 1963–64 because they drove a Polaris motor toboggan to the top. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

The *Polarka*. Czech yacht (the name means "polar star"), skippered by Rudolf Krautschneider, which visited the South Shetlands, notably Deception Island, in 1992–93. Mr. Krautschneider wrote *Around the World for the Feather of a Penguin*.

Polarmail Ledge. 79°56' S, 156°13' E. A relatively flat, wedge-shaped platform that rises above Communication Heights, in the S part of the Midnight Plateau, in the Darwin Mountains. At 2000 m, the feature is similar in elevation and aspect to Skilton Ledge, 1.5 km to the E. Named by US-ACAN in 2001, for Richard Chapman Johnson, of Nazareth, Pa., radio operator who, between 1985 and 2001, was involved in coordinating MARSgrams and Polarmail, which have enabled personnel in Antarctica to communicate with home.

The *Polarsirkel*. Also called the *Polar Circle*. Norwegian ship that carried various Norwegian expeditons to the Antarctic. Under the command of John Jakobsen she took down NorAE 1956–57, and also BelgAE 1957–58 (*see also* **The *Polarhav***). From the 1976–77 season (skipper Magnar Aklestad) she conducted marine geophysical surveys in Antarctic waters. In 1976–77 and 1978–79 she took down Norsk Polarinstitutt expeditions led by Olav Orheim to the Weddell Sea. Aklestad was still skipper of the ship. On Dec. 24, 1978 they established a station on Bouvet Island (not in Antarctica), which closed on March 8, 1979. That was the first part of the expedition. The second part was at Queen Maud Land and the Weddell Sea. In 1979–80, with Aklestad still skipper, she visited Victoria Land on a West German expedition led by Heinz Kohnen. Aklestad was still skipper in 1980–81, when the vessel was part of the West German expedition of that year. In 1981–82 she was hired by the Indians to take down their Operation Gangotri. Joh Fjørtoft was skipper that season. She also took down the Indians' 2nd expedition, IndAE 1982–83. John A. Strand was skipper that season. She was chartered by the USA to relieve Palmer Station for the 1987–88 season. Her skipper in 1990–91 was I. Slettevoll. When the Royal Navy ship *Endurance* was decommissioned in 1991, the Navy chartered the *Polarsirkel* from the Norwegian Coast Guard, and, under the command of Capt. Robert Milligan Turner (*see* **Turner Rock**), was in Antarctic waters in 1991–92. In 1992 she was re-named *Endurance*, and since then has been used in Antarctic waters, as the old *Endurance*'s successor. In 1992–93, again under Capt. Turner, she was in at the South Shetlands, South Orkneys, and the Antarctic Peninsula, on an Antarctic Treaty inspection of bases, with South Korea and Italy. She was back at the same geographical locations in 1993–94 (Capt. David Alan Phillips), 1994–95 (Capt. Phillips), and 1995–96 (Capt. Barry William Bryant). That last season, she took the British Joint Services Expedition, under Martin Kimbrey, to Smith Island, for an (unsuccessful, as it turned out) assault on Mount Foster. She was back in the same areas in 1996–97, 1997–98, and 1998–99, all three voyages under the command of Capt. Timothy John Barton. She was back in 1999–2000, under Capt. Andrew Dickson.

Polarsirkel Valley. 64°50' S, 8°00' E. An undersea feature, out to sea off the coast of Queen Maud Land. It is listed in the 1988 gazetteer of such features. Named by international agreement for the *Polarsirkel*.

Polarsirkelbukta. 70°15' S, 2°47' W. A small bay in the Fimbul Ice Shelf, N of Blåskimen Island, on the Princess Martha Coast. Named by the Norwegians for the *Polarsirkel* (i.e., "the *Polarsirkel* bay").

Polarstar Peak. 77°32' S, 86°09' W. Rising to over 2400 m, 5 km N of Mount Ulmer, in the N part of the Sentinel Range. Discovered aerially by Ellsworth on Nov. 23, 1935. Named by US-ACAN in 1961, for Ellsworth's plane, the *Polar Star*. So, like the naming of Northstar Island, it would be nice to get the name right. *See* **Northstar Island** for comments on the naming bodies' reluctance to correct errors.

Polarstar Ridge. 71°49' S, 70°27' W. A jagged ridge, 6 km long, trending SW from The Obelisk, in the Staccato Peaks, in the SW part of Alexander Island. Photographed aerially by Ellsworth on Nov. 23, 1935, from his plane, the *Polar Star*, and roughly mapped by U.S. cartographer W.L.G. Joerg in 1936, from these photos. Surveyed from the ground by BAS personnel from Fossil Bluff between 1961 and 1973. Named by US-ACAN for the *Polar Star*. UK-APC accepted the name on June 11, 1980.

The *Polarstern*. West German icebreaker (the name means "Polar Star"), commissioned in Jan. 1982. 386 feet 10 inches long, 82 feet 3 inches wide, she had a 34½-foot draft, and could carry 3900 tons at a speed of 15½ knots. She could take 106 passengers, 36 crew, and 40 scientists, as well as 30 replacement crew for the scientific station Georg von Neumayer. She took part in the West German expeditions of 1982–83 (skipper: Arne Verpeide; scientific leader was Heinz Kohnen), 1983–84 (skipper: Dieter Zapff), 1985–86 (skippers: Lothar Suhrmeyer and Ernst-Peter Greve; on Nov. 20, 1985 she freed the trapped *John Biscoe*), and 1986–87. From June 17 to Dec. 14, 1986 she conducted the Winter Weddell Sea Project. In 1987–88 she took down not only the West German expedition of that season, but also the Swedish expedition that set up Svea Station. Lothar Suhrmeyer and Capt. Greve were the skippers. She was the main relief ship for the West German station in 1988–89 and 1989–90 (captains Heinz Jonas and Capt. Greve on both tours), and then (after the unification of the two Germanys) she was the relief ship for the German expedition each year from 1990–91. Captains Jonas and Greve were her skippers in 1990–91 and 1992; captains Jonas and Suhrmeyer in 1992–93; captains Greve and C. Allers in 1993–94 and 1994–95; captains Jonas and Greve in 1995–96, 1996–97, 1997–98, and 1998–99; captains Uwe Pahl and Jürgen Keil in 1999–2000. She continues to go the Antarctic.

Polarstern Canyon. 71°30' S, 21°00' W. A submarine feature in the Weddell Sea. Named by Heinrich Hinze in Jan. 1997, for the Polarstern. The name was accepted by international agreement in June 1997.

Polarstern Knoll. 71°25' S, 24°47' W. Also called Polarstern Plateau. A submarine feature in the Weddell Sea. Named by Heinrich Hinze in Jan. 1997, the name was accepted by international agreement in June 1997.

Polarstern Plateau *see* **Polarstern Knoll**

Poldervaart Edge. 80°44' S, 25°57' W. An east-facing escarpment rising to about 1300 m, and trending NE-SW for 5 km in the Du Toit Nunataks, in the Read Mountains, in the Shack-

leton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS in 1974 from these efforts. Named by UK-APC on Jan. 5, 1972, for Arie Poldervaart (1919-1964), Dutch petrologist known for his research on basaltic rocks. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Pole of Inaccessibility. 82°06' S, 54°58' E. Also called the Pole of Relative Inaccessibility, this is the point in Antarctica which is farthest inland from all shore lines. About 878 km from the Geographic South Pole (i.e., the famous South Pole), at an altitude of 3718 m, it was first reached on Dec. 14, 1958, by a Soviet IGY tractor traverse, who built their Pole of Inaccessibility Station here (*see* **Polyus Nedostupnosti**). However, the location of this Pole has come under dispute, partly because "where is the Antarctic shoreline?" Is it where the actual "land mass" ends, or does it include the ice shelves, which are attached to the mainland, but still floating? And how much of this "shoreline" is constantly moving? The Scott Polar Research Institute locates this Pole at 85°50' S, 65°47' E. In 2005, BAS officially declared the Pole of Inaccessibility to be in 82°53' S, 55°04' S, that is if one takes into account land surface proper. On Dec. 11, of that year, 3 Spanish Transantarctic expeditioners were the first ever to reach this exact spot. They pushed on to 83°51' S, 65°43' E, which is the point BAS says is the Pole of Inaccessibility if one takes ice shelves into account. When they reached there on Dec. 14, this Spanish team had really covered their bases.

Pole of Inaccessibility Station *see* **Polyus Nedostupnosti Station**

Pole of Relative Inaccessibility *see* **Pole of Inaccessibility**

Pole Station. This is the term generally used throughout this book to refer to Amundsen-Scott South Pole Station or, as it used to be known, South Pole Station.

Poles *see* **South Pole**, **South Geomagnetic Pole**, **South Magnetic Pole**, **Spin Pole**, **Pole of Inaccessibility**

Polex South. International project proposed by the USSR and begun in 1975 as part of GARP (the Global Atmospheric Research Program). There is a Polex North too, and the mission of both was to understand the dynamics of the climate. The first phase was 1975-76, and this involved the USSR and the USA. Argentina studied the circumpolar current in the Drake Passage.

Polheim. Amundsen's tent base at the South Pole. Erected between Dec. 14 and Dec. 16, 1911, it was abandoned on Dec. 17, 1911.

Polhesten *see* **Leckie Range**

Punta Polinesia *see* **Polynesia Point**

Polish Antarctic Expedition 1958-59. Organized by the Polish Academy of Sciences. 7 men, led by Wojciech Krzeminski (b. 1926. d. April 1981). The expedition took over the Russian Oazis Station on Jan. 21, 1959, and re-named it Dobrowolski Station. Gravimetry, Quaternary geomorphology and geology were studied for 2 weeks, and then the station was closed.

Polish Antarctic Expeditions. These are the expeditions of the modern era (known as PolAE). For the wintering parties, *see* **Arctowski Station**. **PolAE 1. 1976-78**. Led by Prof. Stanislaw Rakusa-Suszczewski, the expedition left Gdynia in Dec. 1976, on the two ships *Zabrze* and *Dalmor*. It built Arctowski Station. **PolAE 2. 1977-79.** Led by Seweryn Maciej Zalewski. The ship was the *Antoni Garnuszewski*. Summer personnel included Krzysztof Birkenmajer, Jerzy Jasnorzewski, Anna Jackowska, Wojciech Kittel, Elzbieta Kopczynska, Andrzej Myrcha, Magada Swierszcz (*see* **Magda Nunatak**), Teresa Weglenska. *See* **Ladies Buttresses** and **Ladies Icefall**. **PolAE 3. 1978-80**. Led by Stanislaw Rakusa-Suszczewski. The ships were the *Antoni Garnuszewski* and the *Zawichost*. Summer personnel included Krzysztof Birkenmajer, Boleslaw Jablonski, Anna Jakubiec-Puka, Leokadia Jarecka, Dorota Kulesza-Lipka, Malgorzata Mitek, Ewa Smialowska, Antoni Tokarski. *See* **Ladies Buttresses** and **Ladies Icefall**. **PolAE 4. 1979-81**. Led by Andrzej Myrcha. The ships were the *Antoni Garnuszewski* and the *Kapitan Ledovski* (separate voyages) and the *Kopernik*. Summer personnel included Barbara Cygan, Andrzej Paulo, Hanna Jackowska, Hanna Krzyzaniak, Joanna Pilarska-Obojska, Piotr Presler, Alana Puchalska, Magda Swierszcz (*see* **Magda Nunatak**), Jan Taylor, Anna Tokarska and her husband Antoni Tokarski, and Magdalena Tulli. **PolAE 5. 1980-82**. Led by Krzysztof Birkenmajer. The ships were the *Zulawy*, the *Pogoria*, the *Antoni Garnuszewski*, and the *Professor Siedlecki*. Summer personnel included Edward Kolakowski, Wladyslaw Danowski. **PolAE 6. 1981-83**. Led by Ryszard Wroblewski. The ship was the *Neptunia*. **PolAE 7. 1982-84**. Led by Marek Zdanowski. The ship was the *Zawichost*. **PolAE 8. 1983-85**. Led by Ryszard Stepnik. The ship was the *Professor Siedlecki*. Summer personnel included Malgorzata Mitek. **PolAE 9. 1984-86**. Led by Tadeusz Wojciechowski. The ships were the *Antoni Garnuszweski* and the *Jantar*. **PolAE 10. 1985-87**. Led by Eduard Kolakowski. Summer personnel included Antoni Tokarski. The ships were the *Koral*, the *Carina*, and the *Lyra*. **PolAE 11. 1986-88**. Led by Raymund Jan Wisniewski. The ship was the *Koral*. The Polish contingent of BIOMASS III, there that summer of 1986-87, included Stanislaw Rakusa-Suszczewski, Maciej Lipski, Marek Zdanowski, and Wojciech Kittel. **PolAE 12. 1987-89**. Led by Piotr Presler. The ship was the *Antoni Garnuszweski*. Summer personnel included Maria Dobrzycka and her husband Stanislaw Dobrzycki, Katarzyna Janiec, Adam Barcikowski, Anna Krzyszowska, Lucja Sierakowska, Grazyna Szarek, Stanislaw Rakusa-Suszczewski, and Zbig Battke (*see* **Battke Point**). **PolAE 13. 1988-90**. Led by Henryk Gurgul. **PolAE 14. 1989-91**. Led by Pawel Madejski, on the *Heweliusz*. Summer personnel included Adam Barcikowski, Maria Olech, and Stanislaw Rakusa-Suszczewski. **PolAE 15. 1990-92**. Led by Przemyslaw Gonera. Summer personnel included Katarzyna Janiec, Krysyna Olenczuk-Neyman, and Stanislaw Rakusa-Suszczewski. A Dutch party operated out of Arctowski for the 1990-91 summer. **PolAE 16. 1991-93**. Led by Maria A. Olech. **PolAE 17. 1992-94**. Led by Wojciech Kittel. Summer personnel included Maciej Lipski. The ship *Akademik Shuleykin* was used. **PolAE 18. 1993-95**. Led by Wojciech Bart. Summer personnel included Maciej Lipski and Stanislaw Rakusa-Suszczewski. **PolAE 19. 1994-96**. Led by Krzysztof Makowski. Summer personnel included Maciej Lipski and two Czechs — Michal Janouch and Pavel Prosek. **PolAE 20. 1995-97**. Led by Adam Barcikowski on the *Jastarnia*. Summer psersonnel included Maria Olech and Stanislaw Rakusa-Suszczewski. **PolAE 21. 1996-98**. Led by Tomasz Zadrozny on the *Wiadyslawwo*. Summer personnel included Katarzyna Salwicka. **PolAE 22. 1997-99**. The 22nd Polish Antarctic Expedition. Led by Anna Kidawa on the *Kalymnos*. Summer personnel included Stanislaw Rakusa-Suszczewski and Joanna Kulesz. **PolAE 23. 1998-2000**. On Nov. 4, 1998, the expedition, led by Zbigniew Battke (*see* **Battke Point**), left Gdynia. 17 persons, including 12 winterers for 1999. Summer personnel included Ewa Kamler, Stanislaw Rakusa-Suszczewski, and Adam Barcikowski. In Feb. 2000, the expedition returned home to Poland. **PolAE 24. 1999-2001**. On Nov. 3, 1999, the expedition left Gdynia on the *Humboldt*, led by Sebastian Baranowski. Summer members included: Magdalena Owczarek, Anna Kidawa, Marek Zdanowski, and Piotr Borsuk. In Jan. 2001, the expedition returned to Poland. **PolAE 25. 2000-02**. Led by Tomasz Janecki. Summer members included Krzysztof Birkenmajer and Stanislaw Rakusa-Suszczewski. **PolAE 26. 2001-03**. Led by Dr. Pawel Loro. Maria Olek was in the summer crew. **PolAE 27. 2002-04**. Organized by the Department of Antarctic Biology, Polish Academy of Sciences. On Oct. 1, 2002, the expedition left Gdynia on the *Polar Pioneer*, heading for Buenos Aires, led by geologist Dr. Wojciech Majewski. On Nov. 11, 2002, the expedition landed at Arctowski Station. During the 2002-03 summer, Arctowski Station hosted researchers from Bolivia, Brazil, the Czech Republic, Germany, Hungary, Korea, Peru, Russia, and the Ukraine. In addition, 12 tourist ships anchored in Arctowski Bay, bringing 1879 tourists. The main scientific interest was the geology of King George Island. **PolAE 28. 2003-05**. Led by Wieslaw Kolodziejski. Summer members included: Tomasz Janecki, Anna Kidawa, Marta Markowska, Stanislaw Rakusa Suszczewski, Marek Zdanowski, Magdalena Zmuda, Michael Adamczyk, and Krzysztof Cackowski. **PolAE 29. 2004-06**. Led by Arkadiusz Nedzarek. Summer members included: Adam Barcikowski, Tomasz Janecki, Anna Kidawa, Marta Markowska, Stanislaw Rakusa-Suszczewski, and Waldemar Wojciechowski. **PolAE 30. 2005-07**. Led by Leszek Wilcynski. Summer members included: Katarzyna Chwedorzewska, Marta Markowska, Maria Olech, Mikolaj Golochowski, and Jaroslaw

Roszczyk. **PolAE 31. 2006-08**. Led by Michal Ofierski. Summer expeditioners included Katarzyna Chwedorzewska, Malgorzata Korczak, Anna Kostecka, Magdalena Offierska, Magdalena Panczyk, Maria Olech, Agnieszka Wasilowska, Mikolaj Golachowski, and Andrzej Tatur. **PolAE 32. 2007-09**. Led by Mikolaj Golachowski. Summer personnel included Michael Offierski, Tomasz Janecki, Marta Markowska, Magdalena Rokicka, Anna Panasiuk-Chodnicka, Agnieszka Tatarek. The expeditions continue.

Polish Bluff. 62°40' S, 60°24' W. A bluff with cliffs rising to 100 m, SW of the entrance to Johnsons Dock, on Hurd Peninsula, Livingston Island, in the South Shetlands. It appears on a 1988 Spanish chart as Punta Polaca, named by the Spanish as way of saying thank you for the help the Polish gave in setting up the Spanish station. On May 13, 1991, UK-APC accepted the translated (and more appropriate) name, Polish Bluff, and UK-APC followed suit that year. Plotted by the UK in late 2008.

Polish-British Antarctic Expedition. 1988-89. Two voyages, both led by Stanislaw Ragusa-Suszczewski and Inigo Everson, on the *Professor Siedlecki*. The first voyage, one of oceanography and biology, was conducted around Elephant Island and in the South Orkneys. The second was at South Georgia.

Bay of Polish Geodesists. 66°16' S, 100°45' E. A part of Algae Lake, close to Dobrowolski Station, in the Bunger Hills. Named by the Poles in 1985, for the Polish geodesists who took part in PolAE 1958-59 and PolAE 1978-79 (*see* **Polish Antarctic Expeditions**).

Polish Navy Point. 62°07' S, 58°28' W. A marine promontory immediately E of Klekowski Crag, N of Denais Stack, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980.

Caleta Polizzi. 64°39' S, 61°37' W. A cove at the head of Charlotte Bay, between Brabant Island and the Danco Coast, on the W coast of the Antarctic Peninsula. Named by the Chileans for 1st Lt. Marcelo Polizzi Muñoz, hydrographic officer with the 3rd Naval Zone, in Antarctic during ChilAE 1966-67. The Argentines call it Caleta Pereyra.

Ozero Poljanskogo *see* **Lake Pol'anskogo**

Mys Poljarnika Romanova. 67°16' S, 46°46' E. A cape on the N side of Wattle Island, 10 km E of Kirkby Head, in Enderby Land. Named by the Russians.

Gory Poljarnikov. 70°30' S, 65°28' E. A group of nunataks, about 5 km SE of Mount Kirkby, in the Porthos Range of the Prince Charles Mountains. Named by the Russians. *See* **Webster Peaks**.

Ostrova Poljarnoj Aviacii *see* **Aviation Islands**

Utësy Poljarnyh Lëtchikov. 81°45' S, 162°24' E. A bluff, NW of Cape May, and S of Cape Laird, along the W edge of the Ross Ice Shelf. Named by the Russians.

Poljus Nedostupnosti *see under* **Polyus**

Holmy Polkanova *see* **Cape Ryugu**

Mount Pollard. 70°28' S, 64°37' E. A partly snow-covered mountain, just S of the Corry Massif, and 5 km (the Australians say about 9 km) W of the Crohn Massif, in the Porthos Range of the Prince Charles Mountains. Mapped by Australian cartographers from terrestrial photos taken by Syd Kirkby in 1956, and from ANARE air photos taken in 1965. Named by ANCA for John R. Pollard, ionosphere physicist at Wilkes Station in 1964. US-ACAN accepted the name in 1970. The Russians call it Gora Romantichnaja.

Pollard Glacier. 65°52' S, 64°03' W. Flows into the S side of Comrie Glacier, to the E of Bradford Glacier, on the Graham Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and plotted by them in 65°49' S, 64°13' W. Named by UK-APC on July 7, 1959, for Alan Faraday Campbell Pollard (1877-1948), first president of the British Society for International Bibliography. He also pioneered the use of the Universal Decimal System into public libraries. US-ACAN accepted the name in 1971. It has since been replotted.

[1]**Pollen**. Pollen fell from flowers eons ago when there were flowers in Antarctica. It was then fossilized. Palynologist Rosemary Askin has pioneered Antarctic work in dating fossilized pollen spores.

[2]**Pollen** *see* **Thala Fjord**

Pollholmen. 69°01' S, 39°36' E. A small island, 0.5 km long, about 160 m off the SE side of East Ongul Island, in the E side of the entrance to Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and named Pollholmen (i.e., "the bay island"), by the Norwegian cartographers who mapped it from these photos in 1946, for its position opposite the narrow inlet (or bay) separating East Ongul Island from Ongul Island. US-ACAN accepted the name without modification, in 1971.

Cape Pollock. 68°03' S, 146°50' E. The N extremity of Dixson Island, at the W side of the mouth of Ninnis Glacier. Discovered by AAE 1911-14, and (later) named by Mawson for Irish-born Australian physicist James Arthur Pollock (1865-1922), of the University of Sydney, and a member of the Expedition Advisory Committee in 1929. During World War I he had served in the Mining Corps with Edgeworth David. US-ACAN accepted the name in 1952, and ANCA followed suit.

Mount Pollock. 73°45' S, 162°47' E. A symmetrical mountain rising to 2640 m above the mid portion of Recoil Glacier, just S of Archambault Ridge, in the Deep Freeze Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Herbert William "Herb" Pollock (b. March 5, 1929, Mishawaka, Ind. d. Feb. 25, 2008, Seneca, SC), USN, construction electrician at McMurdo in 1962 and 1967.

Pollution. Pollution was in Antarctica long before humans trod its surface. Penguin droppings, for example, can be pretty overpowering en masse, as the men at Hallett Station found out during IGY. The volume of natural human waste will never rival that of the Adélie penguin, to name but one animal in Antarctica. However, the biggest, and most dangerous, problems are tourists and oil spills. Two examples of the latter menace: On Jan. 15, 1956 the *Nespelen* was holed by an iceberg during OpDF I and lost 125,000 gallons of fuel. On Jan. 28, 1989, the *Bahía Paraíso* ran aground in Bismarck Strait, about 2.5 km from Palmer Station. On Jan. 31, 1989, after crew and passengers had been rescued, and the ship had floated free in heavy seas, it capsized, spilling oil and several hundred propane gas containers into the sea, leaving a 2-mile slick. In 1992 a combined Argentine-U.S. initiative successfully got rid of most of the "debris." This was the first oil spill in recent times, and represented the biggest earthbound threat to Antarctica yet. Tourists are becoming a nuisance to the penguins and the scientists.

Îlot Pollux. 66°40' S, 140°01' E. The more southwesterly of a group of 2 islets SE of Île du Lion, in the Baie des Gémeaux, in the Géologie Archipelago. Named by the French in 1977, with Castor in mind. *See also* **Îlot Castor**.

Pollux Nunatak. 65°05' S, 59°53' W. One of the Seal Nunataks, 3 km NW of Robertson Island, it rises to about 110 m above the Larsen Ice Shelf, on the Nordenskjöld Coast of the Antarctic Peninsula. It was seen by Fids from Base D in Aug. 1947, and surveyed by FIDS in July 1953. Named by UK-APC on Sept. 4, 1957, for the Greek mythological character, brother of Castor (Castor Nuanatak is 7 km to the SSW). US-ACAN accepted the name in 1963.

Polnell, John *see* **USEE 1838-42**

Polo Glacier *see* **Il Polo Glacier**

Ostrov Pologij *see* **Pologij Island**

Pologij Island. 66°02' S, 101°10' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrov Pologij. ANCA translated the name on Jan. 19, 1989.

Poloksen *see* **Leckie Range**

Zatoka Polonez *see* **Polonez Cove**

Polonez Cove. 62°09' S, 58°08' W. On the N side of Low Head, between that head and Mazurek Point, below Chopin Ridge, on King George Island, on the Bransfield Strait, in the South Shetlands. With Chopin in mind, it was named by the Poles in 1980, as Zatoka Polonez, "polonez" being the Polish for the "polonaise" dance. It appears (as does the English translation) on Krzysztof Birkenmajer's 1980 map. UK-APC accepted the translated name on Nov. 13, 1985, and US-ACAN followed suit. Plotted by the UK in late 2008.

Polonia Glacier *see* **Polonia Piedmont Glacier**

Polonia Piedmont Glacier. 62°03' S, 58°07' W. A semi-circular ice piedmont between (on the one hand) Lions Rump and the Sukienennice Hills and (on the other) Turret Point, at King George Bay, on King George Island, in the South Shetlands. Named by the Poles in 1980, for Poland ("Polonia"). UK-APC accepted the name on Dec. 16, 2003. Plotted by the UK in late 2008.

Gora Polonskogo. 80°21' S, 28°15' W. A nunatak, NE of Flat Top, in the NW part of the Shackleton Range. Named by the Russians.

Polotsk Island *see* **Robert Island**

[1]**Islote Pólvora**. 64°32' S, 61°59' W. East of Enterprise Island, in Wilhelmina Bay, off the W coast of Graham Land. Together with Pythia Island, it protects Gouvernøren Harbor from the north. The name appears on a Chilean chart of 1947, and that is what the Chileans call it to this day ("powder island").

[2]**Islote Pólvora** *see* **Powder Island**

Polychaeta *see* **Worms**

Polygon Gorge. 68°37' S, 78°29' E. A narrow gorge, about 600 m long, 25 m deep, and between 10 and 15 m wide, trending S-N from Polygon Valley to Krok Lake, in the Vestfold Hills. It is the western of 2 gorges at this end of Krok Lake. Named by ANCA on Dec. 3, 1984, in association with the valley.

Polygon Spur. 86°00' S, 126°00' W. A broad, ice-free spur, 3 km SE of Tillite Spur, at the S end of Wisconsin Plateau, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by John H. Mercer in 1964-65 for the network of unsorted polygons covering the surface of the spur. US-ACAN accepted the name in 1967.

Polygon Valley. 68°37' S, 78°28' E. A more or les flat valley, with superb polygonal patterned ground (hence the name), between 100 m and 200 wide, and 1 km long, it trends SSW-NNE in the Vestfold Hills. Named by ANCA on Dec. 3, 1984.

The *Polynesia*. Built as the *Tokio* in 1895, in Hull, by T. Wilson & Sons, she was acquired as a floating factory ship in 1912 by the Antarctic Whaling Company, out of Tønsberg, and her name was changed to the *Polynesia*. She was leased by the Rethval Company, when that company's whaling factory *Falkand* sank in Nov. 1913, and, under the command of Capt. Hans Borge, she worked in the South Shetlands and South Orkneys in 1913-14, and again in the Antarctic Peninsula area in 1914-15. She was torpedoed by U-18, during World War I, off the Scilly Isles, on Sept. 10, 1916.

Polynesia Point. 60°43' S, 45°36' W. An ice-free point forming the NE entrance point of Paal Harbor, on the E side of Signy Island, in the South Orkneys. Surveyed in 1933 by personnel from the Discovery Committee, and again in 1947 by FIDS. Named by UK-APC on March 31, 1955, for the *Polynesia*. US-ACAN accepted the name in 1956. The Argentines call it Punta Polinesia.

Gora Polynova. 82°33' S, 51°43' W. A nunatak, immediately to the NE of Nutt Bluff, on the Dufek Massif, in the Pensacola Mountains. Named by the Russians. In fact, given the closeness of the coordinates, it may be the same feature as Nutt Bluff.

Polynya. A Russian word meaning an area in an ice-field which is constantly free of ice, a lake of open water within the pack-ice. Discovered in 1974, some are as large as France. They may be vents for gas and excess heat. *See* **Weddell Polynya** and **Terra Nova Polynya**.

Polyus Nedostupnosti Station. 82°06' S, 54°58' E. Pole of Inaccessibility Station, a Soviet station. A tractor train left Mirnyy Station, and arrived at the Pole of Inaccessibilty, after a trek of 2100 km, in Dec. 1958, built a temporary station, and stayed 2 weeks, Dec. 14 to 28, 1958. The station was never officially named. A Russian team arrived there in 1967. Today, all that remains is a building, with a statue of Lenin looking toward Moscow, and a visitors book. Yet, all of that was eventually covered by snow, the head of Lenin being the last to disappear.

Holmy Pomeranceva. 81°12' S, 159°30' E. A group of hills, NE of Mount Blick, in the Churchill Mountains. Named by the Russians.

Pomerantz, Martin Arthur. b. Dec. 17, 1916, NYC, son of Austrian immigrant hatter Joseph Pomerantz and his German immigrant wife Henrietta. In 1930 he went to a parade honoring Admiral Byrd on his return from ByrdAE 1928-30, and that started his fascination with Antarctica. After Syracuse (1937) and the University of Pennsylvania (1938), he joined the Bartol Foundation, remaining there practically his entire working life, and being the head of it from 1959 to 1987. He was an innovator in Antarctic solar studies, and conducted cosmic ray studies in the McMurdo Sound area in 1959-60 and 1960-61. On Jan. 6, 1987 he was awarded the Distinguished Public Service Award by the NSF for his contributions to research at the South Pole and to USAP. He died of cancer at his home in California, on Oct. 26, 2008. He is memorialized by, among many other things, the Martin A. Pomerantz Observatory (Mapo) at the South Pole (opened in 1995), and a book he wrote, *Astronomy on Ice* (2004).

Pomerantz Tableland. 70°38' S, 159°50' E. A high, ice-covered tableland, rising to 2290 m, 16 km long, 24 km NW of the Daniels Range, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Martin Pomerantz. ANCA accepted the name on June 9, 1964.

Baie Robert-Pommier *see under* **R**

Pomona *see* **Coronation Island**

The *Pomona*. A 57-ton London sealing sloop, owned by Blyth & Co. (Thomas & H.D. Blyth), of Limehouse. In Jan. 1821, she returned from a successful South Seas voyage, and spent the next 6 months in London being re-covered with patent felt. On July 21, 1821, under the command of Capt. Charles Robinson, and in company with the Blyth sealing and whaling brig *Martha*, she left London, leaving Gravesend on July 26, 1821, Deal on Aug. 3, 1821, and Torbay on Aug. 8, 1821. Their next call was Plymouth, and the two vessels left there on Aug. 19, 1821, bound for the 1821-22 South Shetland sealing season, stopping on the way down at Madeira between Sept. 11 and Oct. 16, 1821. The *Pomona* and the *Martha* were certainly in at Clothier Harbor on March 7, 1822, along with the *Grace*, also from Plymouth. After the expedition, they made their way up to Valparaíso, from where they went whaling, returning to the South Shetlands for the 1822-23 season. On the return trip, the two ships split up, and the *Pomona* got back to England on June 10, 1823, with 890 sealskins. She was then repaired.

Meseta Pomona *see* **Pomona Plateau**

Pomona Plateau. 60°35' S, 45°55' W. Rising to over 300 m (the British say about 400 m), and ice-covered, it extends between Sandefjord Peaks and Deacon Hill, in the W part of Coronation Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1948 and 1950. Named by UK-APC on March 31, 1955, in order to preserve the name Pomona in the area (*see* **Coronation Island**). US-ACAN accepted the name in 1956. The Argentines call it Meseta Pomona.

Pomorie Point. 62°29' S, 60°04' W. On the coast of McFarlane Strait, it forms the N side of the entrance to Lister Cove, on Varna Peninsula, on Livingston Island, 5.2 km SE of Williams Point, 7.5 km NE of Miziya Peak (in Vidin Heights), 5.6 km NW of Inott Point, 3.9 km SSW of Duff Point (which is on Greenwich Island), and 2.5 km SSE of Channel Rock, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the Bulgarian town of Pomorie.

Pomornaya Hill. 70°45' S, 11°47' E. On the Princess Martha Coast. Named by the Russians as Gora Pomornikov, the name has not been accepted by anyone else, despite the informal translation into English.

Gora Pomornikov *see* **Pomornaya Hill**

Ponce Island. 63°18' S, 57°53' W. About 160 m E of Ortiz Island, and 0.5 km SE of Largo Island, in the Duroch Islands, 1.5 km NE of General Bernardo O'Higgins Station, off Cape Legoupil, Trinity Peninsula. Charted (but not named) by ChilAE 1947-48. Named by Martin Halpern (*see* **Halpern Point**) for Lautaro Ponce, chief of Antarctic operations at the University of Chile, in appreciation of the Chilean logistical support provided to the Wisconsin field party led by Halpern as they mapped the area geologically in 1961-62. US-ACAN accepted the name in 1964, and UK-APC followed suit on Dec. 15, 1982. It appears in the 1986 British gazetteer.

Monte Pond *see* **Mount Pond**

Mount Pond. 62°57' S, 60°33' W. Rising to 540 m, 2.5 km ESE of Pendulum Cove, it is the highest point on Deception Island, in the South Shetlands. The name appears on Kendall and Foster's rough Jan. 1829 chart prepared during the *Chanticleer* Expedition here in 1828-31, but refers to the lower summit to the NNW, and probably named for John Pond (1767-1836), the 6th British astronomer royal (1811-35). There is some indication that the entire mountain was named by that expedition as Iceberg Hill, "from the circumstances of it being capped with ice in a singular manner, so as to give it the resemblance of a huge twelfth-cake" [In 1834, Webster, who was on that expedition, mentions this name, but indicates that it belongs to a feature N of Pendulm Cove; but that cannot be; so it

really has to be this one, as was determined on a 1930 British chart]. In Vincendon-Dumoulin's 1847 atlas the feature we know today appears as Mont Pound (simply an error), on a British chart of 1901 as Mount Pond, and on Gourdon's chart of 1910 as Mont Pond. Referring to the lower summit to the NNW it appears on an Argentine chart of 1944 as Monte Pond. US-ACAN accepted the name Mount Pond in 1952, and UK-APC followed suit on Sept. 8, 1953. It was surveyed by FIDS in 1953-54. It appears on a British chart of 1955, and in the British gazetteer of that year. On a 1953 Argentine chart, the feature we know today is shown as Monte Campbell, named after Capitán de fragata Campbell (d. 1961), of the Argentine Navy, who made the first photogrammetric air survey of Deception Island, in 1948. That name was accepted by the 1970 Argentine gazetteer. On both that 1953 chart, and in the 1970 gazetteer, the name for the lower summit to the NNW is called Monte Estanque (i.e., "pond mountain"), as if the word "pond" were a common noun. The 1974 Chilean gazetteer accepted the name Monte Pond for the lower summit to the NNW. The names Cerro Pond and Mount Estanque have also been seen.

Pond Hill. 62°10' S, 58°35' W. A promontory rising to 190 m above sea level, it divides Cardozo Cove from Goulden Cove, at Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. It has a small pond on top. Named by PolAE 1977-78, Poland accepted the name officially on Sept. 1, 1999.

Pond Peak. 77°19' S, 162°24' E. A conspicuous ice-free peak, rising to 1430 m at the S side of the mouth of Baldwin Valley, in the Saint Johns Range of Victoria Land. Named by US-ACAN in 1964, for Chief Electronics Technician James Daniel Pond (b. 1925. d. Sept. 2, 2006, Great Falls, Minn.), USN, in charge of electronic repair and maintenance at Hallett Station, in 1962-63. NZ-APC accepted the name.

Pond Ridge. 73°25' S, 93°33' W. A flattish rock ridge that extends N from Mount Loweth, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party here in 1960-61, and named by them for a small pond that was discovered on the ridge. US-ACAN accepted the name in 1963.

Ponder Peak. 77°29' S, 162°46' E. A peak on the SW side of Decker Glacier, in the E part of the Asgard Ridge Range, in Victoria Land. Named by NZ-APC on Jan. 30, 1998, for W. Frank Ponder, the NZ Ministry of Works architect who designed Scott Base. US-ACAN accepted the name that year. Mr. Ponder's story is told in his book *A Man from the Ministry: Tales of a New Zealand Architect* (1966: Wenlock House, NZ). Like the first edition of this encyclopedia, Frank Ponder's book had a foreword by Sir Edmund Hillary.

Ponganis Icefall. 73°32' S, 169°51' E. An icefall, 1000 m high, and 1.25 km wide, on the E side of Coulman Island, in the Ross Sea. It descends from the Hawkes Heights caldera to the sea at Cape Main. Named by US-ACAN in 2005, for Paul J. Ponganis (b. April 29, 1950, Sacramento), of the Center for Marine Biotechnology, at the Scripps Institution of Technology, at La Jolla, Calif., who studied the behavior and census of emperor penguins at Cape Crozier, Cape Washington, Beaufort Island, Franklin Island, and Coulman Island, in 13 field seasons, 1987-2004, and for Katherine Victoria Ponganis (b. April 20, 1950, San Francisco; formerly Karass), his wife since 1972, a member of the study team in 5 of those field seasons. The Ponganises have since been back to Antarctica. Their "Penguin Ranch" is near McMurdo. NZ-APC accepted the name on Sept. 12, 2005.

Ponies. Shackleton took 15 Siberian (also known as Manchurian) ponies with him on BAE 1907-09. Sturdy little animals, and very friendly, and used to the cold, of course. Someone told Shackleton that a pony could pull 1500 pounds on 11 pounds of food a day, as opposed to a dog, which could drag only 80 pounds on 1½ pounds of food a day. He added four and four, and, as it happens, made five. The ponies were fine at the beginning, but not much use on Shackleton's actual polar trek. Provisions were, in fact, a problem (quantity and expense), and, as the Siberians' hooves were not equipped for ice travel, they kept getting bogged down, and, with their weight, kept sinking in the ice and, worse, falling into crevasses. Not only that, even a small pony is a large animal, and powerful, and men would often get injured by a panicky animal, sometimes seriously. Shackleton wound up killing and eating those who didn't fall to their deaths or die in some other grisly way. After the expedition was over, he still couldn't bring himself to say anything but kind things about the Siberians, and this lack of objective honesty would later cost Robert Falcon Scott his life during BAE 1910-13, Scott's fateful last expedition. Not having had a frank report on the ponies' performance, therefore, and knowing that Shackleton had got to within 97 miles of the Pole using them (really, despite using them), Scott ordered Cecil Meares to obtain ponies in Harbin, which he did —19 old and worn out Manchurians. Of these Scott used 10 on his fateful trek south in 1911. None of the ponies made it back alive, but then, none of the men did either. After that no one ever dreamed of taking ponies down south again.

Le Pont de la Croix *see under* **L**

Pontes Ridge. 80°08' S, 156°24' E. A mountain spur descending eastward to McCraw Glacier, 6 km S of Derrick Peak, in the Britannia Range. In association with Britannia (i.e., ancient Britain), Mike Selby's 1978-79 University of Waikato (NZ) geological party here named this after Pontes, the Roman settlement near Staines, just outside London. NZ-APC accepted the name, and US-ACAN followed suit.

Ponting, Herbert George. b. April 13, 1870, Salisbury, Wilts, but raised mostly in the north of England, son of bank manager Francis William Ponting and his wife Mary Christian Style. He himself became a bank clerk, but after 4 years could take no more of that glamorous life, and just after Christmas 1892 he sailed from Liverpool on the *Servia*, arriving in New York on Jan. 10, 1893, bound for San Francisco. He became a fruit farmer and gold miner, and in 1895 married Mary Biddle Elliot. By 1901 he had left his family and was a war correspondent in the Philippines. He then spent 3 years in Japan, and was war correspondent for *Harper's Weekly*, covering the First Japanese Army in Manchuria. He was already famous as a photographer in 1909 when he was picked to go south with Scott on BAE 1910-13. Scott, in his diary, in May 1911, describes Ponting as, "a very charming character, generous, highly-strung, nervous, artistic, but the effects of his wrestling for existence with very materialistic conditions in California and elsewhere has also had its effect." The first professional photographer in Antarctica, he made a movie, *90 Degrees South*, which he remade in sound in 1933. He wrote the book, *The Great White South*. In 1918 he was on an expedition to Spitzbergen. He died on Feb. 7, 1935, in London.

Ponting Cliff. 71°12' S, 168°21' E. Also seen (erroneously) as Pointing Cliff. A steep, angular cliff, 463 m high, and similar in appearance to Meares Cliff just to the eastward, it is located 5 km E of the terminal confluences of Nash Glacier, Dennistoun Glacier, and Wallis Glacier, on the N coast of Victoria Land. Charted in 1911, by Campbell's Northern Party, during BAE 1910-13, and named by Campbell for Herbert Ponting. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Ponton Island. 65°06' S, 63°05' W. A small island, 2.5 km SE of the Moureaux Islands, near the head of Flandres Bay, on the Danco Coast, on the W coast of Graham Land. Roughly charted (but not named) by FrAE 1903-05. ArgAE 1953-54 named it Isla Solitario (i.e., "lonely island"). It appears as such on their 1954 chart. On an Argentine chart of 1956 it appears as Islote Solitario, and on a 1957 chart of theirs as El Solitario. It was photographed aerially by FIDASE in 1956-57. On Sept. 23, 1960, UK-APC renamed this first one as Ponton Island, for Mungo Ponton (1802-1880), Scottish photography pioneer. US-ACAN accepted the British naming in 1965. The Argentine gazetteer of 1970 accepted the name Islote Solitario.

The *Pontos*. A 6400-ton Norwegian factory whaling ship, formerly the *Ørn II*, bought in 1929 by the Pontos Company (Bruun and von der Lippe), and renamed the *Pontos*. In 1929-30 and 1930-31, with her main mast and bridge front removed, she worked pelagically as a supply ship along the edge of the Antarctic ice (one of her catchers that first season was the *Symra*). She worked in company with the *Thorshavn* in 1933-34, and was broken up in Norway in 1934.

Pönui Nunatak. 77°35' S, 169°01' E. A nunatak, 1 km SE of Slattery Peak, and about 9 km SW of The Knoll, in the SE part of Ross Island. It rises to about 320 m near the junction of the island and the Ross Ice Shelf. Apparently, the name "pönui" signifies "wind that comes from the south," in Maori. Named by NZ-APC in 2000. US-ACAN accepted the name that year.

Pony Lake. 77°33' S, 166°09' E. A little lake immediately N of Flagstaff Point, and 0.4 km N of Cape Royds, Ross Island. Named by BAE 1907-09, for the ponies they tethered near here. The expedition's winter hut was next to this lake. US-ACAN accepted the name in 1968, and NZ-APC followed suit. Apparently not to be confused with Home Lake.

Mount Pool. 86°13' S, 127°00' W. Rising to 2090 m, at the NW side of Metavolcanic Mountain, at the E flank of Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Douglas A. Pool, construction electrician at Byrd Station in 1962.

Poorman Peak. 69°57' S, 159°15' E. A rock peak rising to 1610 m, near the head of Suvorov Glacier, 14 km WSW of Mount Ellery, and about 28 km SE of Pope Mountain, in the Wilson Hills of Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Dean A. Poorman, USN, aviation machinist's mate with VX-6, who wintered-over at McMurdo in 1967. ANCA accepted the name on July 31, 1972.

Punta Popa. 64°53' S, 62°53' W. One of the 2 points on the NW side of Coughtrey Peninsula named by the Argentines after parts of a ship (*see* **Punta Proa**), on the E side of Paradise Harbor, on the Danco Coast, on the W coast of the Antarctic Peninsula. Named by the Argentines.

The *Popaye*. French yacht, skippered by Olivier Carré, which visited the South Shetlands and the Antarctic Peninsula in 1993-94.

Pope Glacier. 75°19' S, 111°22' W. About 30 km long, it flows N along the W side of Mount Murphy into the lower part of Smith Glacier, at the Crosson Ice Shelf, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Capt. (later Major) Donald R. "Don" Pope, U.S. Army, civil engineer on the staff of the commander, U.S. Naval Support Force, Antarctica, 1965-67. He was the commander's representative at Plateau Station in 1965-66, while the station was being built. Originally plotted in 75°15' S, 111°30' W, it has since been replotted.

Pope Mountain. 69°44' S, 158°50' E. A largely ice-free mountain, rising to 1345 m, directly at the head of Tomilin Glacier, 5 km SE of Governor Mountain, in the Wilson Hills of Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Thomas J. Pope, USNR, LC-130F aircraft navigator during OpDF 68 (i.e., 1967-68). ANCA accepted the name on July 31, 1972.

Gora Poperechnaja *see* **Hulcombe Ridge**

Mys Popova. 66°46' S, 127°35' E. A cape, E of Holmes Glacier, on the Banzare Coast. Named by the Russians.

Hrebet Popovicha *see* **Skorvestallen**

Popovo Saddle. 62°58' S, 62°29' W. Rising to about 1550 m, it is bounded by Drinov Peak to the N and Sevlievski Peak to the S, and overlooks Ovech Glacier to the E and Chuprene Glacier to the SW, in the Imeon Range, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the town of Popovo, in northeastern Bulgaria.

Popp Island. 68°31' S, 151°57' E. A small island off the Cook Ice Shelf, on the coast of George V Land. Photographed aerially during OpHJ 1946-47, and again by SovAE 1958. Named by the Russians as Ostrov Poppa, for Hans-Christian Popp (*see* **Deaths**, 1960), and plotted by them in 68°32' S, 151°46' E. The Australians translated the name, and replotted the feature.

Ostrov Poppa *see* **Popp Island**

Populations. Before World War II the permanent human population of Antarctica was very small — whalers and government representatives in the South Shetlands, and the permanently-manned Órcadas Station in the South Orkneys. Then the FIDS stations appeared, with winter and summer crews making them permanently inhabited. In 1954 the Australians were in Antarctica on a continuous basis, and from 1955 the Americans, relays of scientists and support staff, were there too, on a permanent continuous basis. The population of Antarctica varies seasonally, and at times (in the summer) can reach 2000 or more. Of course, with tourism growing every year, the aggregate fluid population of Antarctica is now the size of a fair-sized American city. The animal population is a different story. It is exceedingly difficult to count them. Some say the total number of seals, for example, is between 50 and 75 million, but others break it down like this: crabeater seals — 5 to 30 million; Weddell seals —½ to 1 million; leopard seals —½ million; elephant seals — 600,000 to 750,000; Ross seals — 50,000 to 200,000; fur seals — 30,000 to 200,000. The penguins are pretty uncountable, but the emperors alone are estimated at 1 million. Then there are the flying birds.

Pordim Islands. 62°19' S, 59°40' W. Two adjacent islands, 870 m ENE of Heywood Island, and 2.1 km NW of Catharina Point, and extending for 960 m in an ESE-WNW direction, off Robert Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for Pordim, the town in northern Bulgaria.

Porebski Cove. 62°08' S, 58°55' W. A cove, N of West Foreland, on Joannes Paulus II Coast, King George Island, in the South Shetlands. Named by the Poles in 1984, for geologist Szczepan Porebski, member of PolAE 1980-81 to King George Island.

Acantilado Pórfido *see* **Porphyry Bluff**

Ostrov Porjadina *see* **Poryadin Island**

Lake Porkchop. 78°16' S, 163°08' E. A morainal lake near the middle of Roaring Valley. Named for its shape by VUWAE 1960-61. NZ-APC accepted the name, and US-ACAN followed suit in 1974.

Porkchop Lake *see* **Lake Porkchop**

Porlier Bay. 62°29' S, 60°45' W. A cove, 3 km wide, indenting the N coast of Ioannes Paulus Peninsula for 1.6 km between Punta del Medio and Black Point, on Livingston Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on June 3, 2010, for Rosendo Porlier (see the entry below). Remains of the wreckage of Porlier's ship, the *San Telmo*, were found in this bay.

Porlier y Asteguieta, Rosendo. b. 1771, Lima. Commander of the fleet that left Cádiz, Spain, in 1819, the fleet that included the *San Telmo* (q.v. for details).

Porphyry Bluff. 64°27' S, 59°11' W. A prominent rocky bluff, rising to about 365 m, and extending about 3 km inland from the coast, it forms the E entrance point of Larsen Inlet, between that inlet and Longing Gap, on the Nordenskjöld Coast of Graham Land. Surveyed by FIDS in 1960-61, and mapped by FIDS cartographers from that survey. Named by UK-APC on Feb. 12, 1964, for the buff-colored quartz-plagioclase-porphyritic rock which is characteristic of this bluff. US-ACAN accepted the name later in 1964. The Argentines call it Acantilado Pórfido (which means about the same thing).

Porphyry Cove. 64°53' S, 62°51' W. A large cove in front of Porphyry Glacier, between Coughtrey Peninsula to the S and Boruta Point to the N, in Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named by the Poles on Sept. 1, 1999.

Porphyry Glacier. 64°53' S, 62°52' W. A large tidewater glacier between the Jantar Hills and Porphyry Ridge, terminating at Porphyry Cove, in Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named by the Poles on Sept. 1, 1999.

Porphyry Ridge. 64°54' S, 62°50' W. A long rocky ridge built mainly of a porphyrite intrusion, E of Almirante Brown Station, between (on the one hand) Porphyry Glacier and (on the other) Skontorp Cove and Avalanche Glacier, at Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named by the Poles on Sept. 1, 1999.

The *Porpoise*. A 224-ton American hermaphrodite brig built in 1835, and launched on May 31, 1836. 88 feet long and 25 foot in the beam, she was 11 foot deep in the hold, had 4 guns, carried a crew of 65, and could do 10 knots. She was commanded by Cadwalader Ringgold during USEE 1838-42, and helped chart the coastline of East Antarctica in 1840. On Jan. 29, 1840 she met FrAE 1837-40 off the coast. Unsure flag signals made by each of the expeditions made each of the commanders think that there was snubbing going on by the other, and this caused a bit of international hostility until it was all cleared up. After the expedition, she took part in anti-slaver patrol off the coast of Africa, and served in the Mexican War of 1846-48. She was decommissioned, went back to Africa, and was decommissioned again in 1852. In 1853, under Cadwalader Ringgold again, she took part in the North Pacific Exploring and Surveying Expedi-

tion, and was lost in Chinese seas, in Sept. 1854 (Ringgold survived).

Porpoise Basin. 66°15' S, 128°30' E. Also called Porpoise Trough, A submarine feature off the Banzare Coast of East Antarctica. Named by international agreement in 1971, for the *Porpoise*.

Porpoise Bay. 66°30' S, 128°30' E. An ice-filled embayment, about 140 km wide (the Australians say about 170 km), indenting the Banzare Coast between Cape Goodenough and Cape Morse (the Australian gazetteer still, after all these years, has Cape Morse as Cape Mose, which shows how long it's been since they updated this descriptor). Discovered in 1840 by USEE 1838-42, and named by Wilkes for the *Porpoise*. The trouble is, he saw it through looming (q.v.), a sort of mirage, and logged it as being in 66°S, 130°E. This bay, to the SW, must be what he saw, according to the studies made by U.S. cartographer Gard Blodgett in 1955, using air photos taken by OpHJ 1946-47. US-ACAN applied the Wilkes naming to this one in 1955. ANCA accepted the name.

Porpoise Canyon. 64°20' S, 131°00' E. Submarine feature off the Banzare Coast of Wilkes Land, it is one of the biggest canyons in the Wilkes Land Continental Margin. Discovered by the *Hakurei Maru*. Named by Dr. Kunio Yashima in Jan. 1999, in association with Porpoise Bay. The name was accepted by international agreement in June 1999.

Porpoise Subglacial Highlands. 69°30' S, 134°00' E. A group of subglacial highlands running in a N-S direction to the W of Astrolabe Subglacial Basin, in the E part of Wilkes Land. Discovered and delineated by the SPRI-NSF-TUD airborne radio echo-sounding program between 1967 and 1979, and named for the *Porpoise*. ANCA accepted the name on July 26, 1983, and US-ACAN followed suit.

Porpoise Trough *see* **Porpoise Basin**

Porpoises. Cetaceous marine creatures similar to whales, they do not cross the Antarctic Convergence, and are therefore not seen in Antarctic waters.

Porro Bluff. 64°45' S, 62°33' W. A bluff rising to 2250 m, S of Birdsend Bluff, on Arctowski Peninsula, it overlooks Errera Channel, E of Danco Island, on the Danco Coast, on the W coast of Graham Land. Shown (unnamed) on an Argentine chart of 1950. In 1956 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base O. Named by UK-APC on Sept. 23, 1960, for Ignazio Porro (1795-1875), Italian engineer and inventor in 1851 of the Porro prism, an optical device that inverts and reverses right and left an image viewed through it. This was important in the development of stereo-plotting instruments. US-ACAN accepted the name in 1965.

Port Lockroy *see* **Lockroy**

Port Lockroy Station. 64°49' S, 63°31' W. Lockroy is pronounced with the stress on the last syllable. British scientific station on a rock surface 3 m above sea level on Goudier Island, in the harbor of Port Lockroy, and separated from Wiencke Island by a channel no more than 85 m across, in Gerlache Strait, between Anvers Island and the W coast of Graham Land. Originally Alice Creek was considered for the site of the base, but it was too close to the tail of a glacier, and, besides, much of the bare rock was occupied by nesting birds. So, Goudier Island was picked instead. The first site on Goudier Island was the gravel area in the NW corner of the island, but it was too close to sea level to predict ice encroachment, so a new site was picked farther uphill. Port Lockroy was the second permanent British station in Antarctica, and was originally — and alternately — called Base A, and later Station A. **Feb. 11, 1944**: During Operation Tabarin (q.v.), the *Fitzroy* and the *William Scoresby* arrived at Port Lockroy, to set up a base on the site of an old whaling station. There were two women aboard (*see* **Women in Antarctica**). The main studies (what there was of them, that is — *see* **Operation Tabarin** for an explanation of this rather cynical remark) at that time were geology, geography (i.e., surveying), meteorology and botany. The main building (actually a hut) was named Bransfield House, after the *Bransfield*. **Feb. 15, 1944**: Aerial mast erected. **Feb. 17, 1944**: The *Fitzroy* and the *Scoresby* left Port Lockroy, leaving behind the wintering-party of Jimmy Marr (zoologist and base leader), Eric Back (meteorologist and surgeon), Andrew Taylor (surveyor), Fram Farrington (radioman), Ivan Mackenzie Lamb (botanist), Gwion "Taffy" Davies (handyman), Tom Berry (stores and cook), Lewis "Chippy" Ashton (carpenter), and Ken Blair (handyman and assistant cook). Five cabins were built as sleeping quarters, each one 1.83 m by 2.13 m. Each had double bunks brought in from Deception Island, a little table, a chair, and a rug. Marr's cabin doubled as the office. Cabin 1 was shared by Berry and Ashton; Cabin 2 by Blair and Davies; Cabin 3 by Farrington and Back; Cabin 4 by Taylor and Lamb. **Early March 1944**: Lamb and Blair came down with tonsillitis. Doc Back operated on Fram Farrington's septic finger, and several of the men suffered mild colds. **March 7, 1944**: The gramophone was unpacked. **March 19, 1944**: The *Fitzroy* and the *Scoresby* arrived back at Port Lockroy. Marr, Davies, and Ashton rowed out to meet them, but Davies slipped off an improvised raft into the water, and had to go back to base to dry out. He was replaced by Blair, which was somewhat ironic as Blair's successor — Johnny Blyth — had just arrived on the ship (again, *see* **Operation Tabarin** for an explanation of this). **March 20, 1944**: Capt. Marchesi, of the *Scoresby*, came ashore with Finkle Flett (visiting from Deception Island). There was the inevitable party, during which Berry injured his foot while doing a semi-obscene fan dance. At 11 that night Marchesi and Flett returned to the *Scoresby*. **March 21, 1944**: Doc Back diagnosed a broken bone in Berry's foot, and confined him to bed. Blair, assisted by Blyth, filled in as cook while Berry was sick. **March 23, 1944**: The Post Office in Bransfield House was opened. **March 24, 1944**: The *William Scoresby* left Port Lockroy with Ken Blair aboard. As for the injured Berry, he lay down on the kitchen table, and Doc Back, assisted by some of the boys, set the broken foot, and put the patient in plaster of Paris. Blyth would continue to run the kitchen, and Berry would hobble around, trying to help him. **April 17, 1944**: The *Scoresby* arrived one final time at Port Lockroy. Marchesi and Flett came ashore again, and there was another party. Berry, despite his injury, danced yet again, again semi-obscenely. At 10.30 that night Back, Farrington, and Davies rowed the two visitors back to the *Scoresby*, finally making it back to base after 1 o'clock the following morning. **April 18, 1944**: The *Scoresby* left, at 6.30 A.M. **1944 winter**: The winterers were Marr, Back, Lamb, Taylor, Farrington, Berry, Ashton, Davies, and Blyth. **May 1, 1945**: Survey work began at Port Lockroy. **May 10, 1944**: Birthday bash for Chippy Ashton. **Midwinter's Day**: Celebrated with a meal consisting of hors d'oeuvres, purée of pea, fried pilchards, asparagus au beurre, York ham, potatoes baked and croquette, garden peas, plum pudding, macedoine fruit en jelly, mince pies, coffee, and, of course, the odd drink. That day Jimmy Marr got news of the birth of his first son. During this winter Blyth got snowblindness because he didn't wear his snow goggles. **Dec. 7, 1944**: The *William Scoresby* left Deception Island, bound for Port Lockroy. **March 8, 1945**: John Biggs arrived on the *William Scoresby*. **1945 winter**: Jock Lockley (meteorologist, zoologist, and base leader), Norman Layther (radioman), John Biggs (handyman), Frank White (cook). **Jan. 15, 1946**: The *Trepassey* relieved the 1945 winterers. **1946 winter**: Mike Hardy (meteorologist and leader), Gordon Stock (radioman), Kenny McLeod (handyman), Frank White (cook). **Jan. 27, 1947**: John Huckle and Jimmy Smith arrived from Base B, on the *Fitzroy*. Outgoing base leader Mike Hardy sold his dog, Crown, to Huckle, and then got on the ship with Stock and White, and they left. **Jan. 31, 1947**: The *Trepassey* arrived at Port Lockroy, and left that evening, leaving Huckle, Smith, and McLeod to clean up the base before it was vacated. **Feb. 2, 1947**: The *Trepassey* arrived with a message for Huckle, but left the same day. **Feb. 10, 1947**: The Argentine whale catcher *Don Samuel* arrived at Port Lockroy, asking questions. A few hours later, after they had left, the *Trepassey* arrived, with Stewart Slessor and James Wordie on board. **Feb. 23, 1947**: The *Don Samuel* returned. **Feb. 28, 1947**: The *Don Samuel* finally left, after coming back and forth into Port Lockroy. **March 1, 1947**: The *Trepassey* arrived, and took off McLeod, leaving Huckle and Smith there alone. **March 2, 1947**: The return of the *Don Samuel*. **March 4, 1947**: The Chilean ship *Angamos* arrived at Port Lockroy, saw the Argentine whaler, and left. **March 17, 1947**: The *King* and the *Murature* arrived, to pay a social visit. **March 26, 1947**: The *Trepassey* arrived, with Ted Bingham and Jack Ewer. **April 8, 1947**: The station was vacated. Toward the end of their stay, the two lads at Port Lockroy had run out of food, and had to kill penguins and seals and blue-eyed cormorants to go with their oatmeal. They also had

about 10 bottles of Uruguayan beer that Jack Ewer had brought. Jimmy Smith did the cooking. They also had a shotgun (but no ammunition) and a .45 revolver (with four or five bullets). **Jan. 23, 1948**: The *Snipe* arrived, with the advance party of Bill Richards and Johnny Blyth, and the station was re-opened. **Feb. 26, 1948**: The *John Biscoe* arrived with George Barry and Ken Pawson aboard. Several others came ashore for a brief visit that day — Stewart Slessor, Kenny McLeod, Ken Butler, Jack Ewer, and Frank Elliott. They all got stuck there when the weather turned nasty, and had to spend the night. **Feb. 27, 1948**: It was only late that evening when unloading could begin. **Feb. 28, 1948**: By the evening, unloading was finished. **Feb. 29, 1948**: At 6 A.M. the *John Biscoe* sailed for Hope Bay and Deception Island. Left at Port Lockroy were the 5 winterers-to-be, and Bill Bailey, there to fix up the ionosphere antenna and apparatus. He would not winter-over. **March 1, 1948:** At 1 P.M. the Chilean ship *Covadonga* visited. **March 4, 1948**: The Argentines visited. **March 9, 1948**: Bill Bailey made the first ionosphere test. **April 6, 1948**: The *Fitzroy* arrived at 6.40 P.M., in deteriorating weather conditions. **April 8, 1948**: Bill Bailey left on the *Fitzroy*, as she sailed off, bound for the Argentine Islands. **April 28, 1948**: Johnny Blyth got news that his fiancée had died in Port Stanley. **1948 winter**: George Barry (radio operator and leader), Ken Pawson (meteorologist), Bill Richards and Johnny Blyth (handymen). Blyth was 2nd-in-command. There were 2 dogs there that season, Pretty and Peter. **Feb. 14, 1949**: The *John Biscoe* arrived, finally. **Feb. 18, 1949**: The *John Biscoe* left, with all the men on board, and the station was vacated again. **Jan. 24, 1950**: The station re-opened, under J.H. Chaplin. **1950 winter**: J.H. Chaplin (meteorologist and leader), Jock Walker (meteorologist and general assistant), Ken Gooden (surveyor and general assistant), Tommy Burgess (radioman). From 1950 the main study at Port Lockroy was ionospheric research, which it was to do much of during IGY (1957-58). **Feb. 11, 1951**: The station was vacated again. **Dec. 15, 1951**: The station re-opened, under the command of Ralph Lenton, and it would be occupied continuously from that time for 10 years. **1952 winter**: Ralph Lenton (radioman, builder, and leader), David Barrett (meteorologist), Bill Etheridge (ionosphere physicist), Geoff Collop (radioman), Helier Robinson (diesel electric mechanic). **1953 winter**: Steve Ward (leader), Arthur Martin (meteorologist), Fred Bird (ionosphere physicist), Geoff Collop (radioman), Helier Robinson (diesel electric mechanic). **1954 winter**: Fred Bird (ionosphere physicist and leader), Mike Faulkner and Brian Weeks (ionosphere physicists), Arthur Swain (radioman), Ray Watton (diesel electric mechanic). **Nov. 27, 1954**: The *John Biscoe* arrived with the relief party — Alan Carroll (ionosphere physicist and leader), Bill Etheridge (ionosphere physicist), Bob Whittock (he would ultimately be the ionosphere physicist), Bernie Taylor (radio operator), and John Smith (diesel electric mechanic). **Dec. 3, 1954**: The *John Biscoe* left at 9 A.M. **Feb. 20, 1955**: Argentine visitors from the *Chiriguano*. **March 7, 1955**: The *Norsel* and the *John Biscoe* both arrived. The governor of the Falkland Islands came ashore to inspect the station. **March 24, 1955**: The *John Biscoe* arrived. The governor threw a cocktail party on board. **March 28, 1955**: The *Norsel* arrived. **April 6, 1955**: The *Norsel* arrived again. **April 11, 1955**: The *Norsel* arrived yet again. **April 13, 1955**: The *Norsel* arrived one more time. There was a problem. Bill Etheridge, due to winter-over as ionosphere physicist, refused to serve under Alan Carroll. It was a shock to everyone. General consensus is that Etheridge thought he should have been the base leader, instead of the very young Alan Carroll. **April 16, 1955**: The *Norsel* left at 11 P.M., with Etheridge aboard. **1955 winter**: Carroll, Smith, Whittock, and Taylor. **Nov. 21, 1955**: Birthday celebrations for Bernie Taylor. **Dec. 19, 1955**: The *John Biscoe* arrived. The winterers went on board, there was some dental work done by the Falkland Islands dentist, and a movie was watched. **Dec. 20, 1955:** The *John Biscoe* left for Base F. **Dec. 28, 1955:** The Chilean ship *Lientur* visited. A group of men and a dog rowed ashore (the dog didn't actually do any of the rowing), and Whittock, Smith, and Taylor went back to their ship for a meal. **Jan. 13, 1956**: The base was buzzed by an Argentine Grumman Goose airplane. **Jan. 23, 1956**: The *Chiriguano* arrived. Carroll, Smith, and Taylor went aboard, made a formal protest at Argentina invading British territory, then had a very nice lunch, and the occasional drink. The *Chiriguano* left, and then the *Lientur* came back. Carroll, Whittock and Taylor went aboard, and a group of Chileans joined Smith on fire watch at base. It was all very jolly. **Feb. 12, 1956:** The base was buzzed by an Argentine Grumman Goose and a helicopter. **Feb. 13, 1956**: The *Protector* arrived, dropped mail off, and left. **Feb. 23, 1956**: The *Protector* arrived again. **Feb. 27, 1956**: Smith, Taylor, and Whittock left Port Lockroy on the *Shackleton*. There were now 6 men at Port Lockroy, plus Tiddles the cat. Alan Carroll (base leader), Rob Davis and Len Fox (ionosphere physicists), Peter Bunch (radioman), Barry Golborne (diesel electric mechanic), and Vic Harrison, ionosphere chief from Port Stanley, there only for the summer to install new equipment. **March 4, 1956**: Tiddles the cat died (*see* **Cats**). **March 9, 1956**: The *Shackleton* and the *John Biscoe* arrived. **March 18, 1956**: The *Oluf Sven* arrived. **March 19, 1956**: The *John Biscoe* arrived, with mail and Bill McDowell, who was en route to Base W. **April 27, 1956**: The *Shackleton* arrived with John Canty, and took off McDowell and Vic Harrison, along with John Canty with the wind charger, which he was going to take to Base N. **1956 winter**: Carroll, Fox (deputy leader), Davis, Golborne, and Bunch. **Nov. 11, 1956:** The *Protector* arrived, with Vic Harrison, Ted Gutteridge, Jim Smith (the incoming base leader; except that he turned out not to be the leader; Colin Clement assumed that role), Ray Cooper (diesel electric mechanic there for the summer after a winter-over at Base W), as well as the colonial secretary, and an entire (unexpected) RN Hydrographic Survey unit which was to be there for the summer. The unit was led by Lt. John Wynne-Edwards; his survey recorders were leading seaman Arthur R. Milnes and A/B John "Wally" Walsham; the seamen assistants were A/B David "Dave" Dickenson and A/B Edward E. "Ted" Savage; and the boat's engineer was ME(1) Jeffrey "Stokes" Lynch. They brought with them a prefabricated hut and an ice-modified motor launch. Unexpectedly, John Thompson, John Bull, and Peter Hooper arrived in a dinghy from Base N, which meant 19 men were now sleeping in the main hut. **Nov. 12, 1956**: The *Protector* left for Deception Island. 16 men were now sleeping in the base hut. **Nov. 13, 1956:** The Hydro Unit began erecting their hut (designed by Johnny Green) a little way away from the main base hut. **Nov. 14, 1956**: The *Protector* arrived, and flew fuel in by helicopter for the Unit's motor launch. **Nov. 16, 1956**: The Hydro Unit's hut was completed. **Nov. 17, 1956**: Bull, Thompson, and Hooper went back to Base N. **Nov. 18, 1956**: The Hydro Unit all went to Base N, along with Alan Carroll, Ray Cooper, and Len Fox, as well as Dennis Kershaw and Pete Wylie, who had come from Copper Peak. **Nov. 19, 1956**: Everyone who was meant to be be back at Port Lockroy was back, in time for dinner, after spending the night at Base N. **Nov. 27, 1956**: The *Protector* arrived, with the governor of the Falklands coming ashore with Johnny Green. The governor broke the news of Prince Philip's impending visit. **Dec. 8, 1956**: The *Shackleton* arrived, with stores and supplies, and Gordon Farquhar (in from a winter-over at Base Y). Barry Golborne left for home. **Dec. 11, 1956**: The *Shackleton* arrived from Base N, with Peter Bunch, who had been visiting other bases for the last few days. **Dec. 27, 1956**: The *Protector* arrived, and all base personnel (except Farquhar) went on board for a dinner with the governor. **Jan. 2, 1957**: The *Protector* arrived with the royal yacht *Britannia*, out of which stepped Prince Philip. He toured the base, then went off to Base O, on another tour. The *John Biscoe* also arrived, with Jack Tinbergen, the new ionosphere physicist, aboard. **Jan. 4, 1957**: Robbie Davis's birthday. **Jan. 20, 1957**: The *John Biscoe* arrived from the Falklands, with Colin Clement aboard. He had come from being leader at Base G, and now wanted to devote all his time at Lockroy to working on the power generation system, but was told, on his arrival, that he was the new base leader. Rob Davis left on the *John Biscoe* that day. **Feb. 11, 1957**: The *Protector* arrived. **Feb. 14, 1957**: The *Lautaro* dropped in for a visit. **March 1, 1957:** The *Shackleton* arrived, dropped Peter Gale off, took on board Alan Carroll, and left, bound for Base G. **March 6, 1957**: The *Oluf Sven* called in, with FIDASE aboard. **March 8, 1957**: The return of the *Oluf Sven*. **March 16, 1957**: The *Oluf Sven* returned, with a canine gift for the FIDS at Lockroy — Peso, who proved a great addition. She would stay on at Lockroy as FIDS mascot until 1962 (see that year, below). **March**

21, 1957: The *John Biscoe* arrived with stores. **April 14, 1957**: Peso got a fish hook in her lip, and they had to operate. **1957 winter**: Colin Clement (diesel electric mechanic and leader), Jim Smith, Len Fox, and Jack Tinbergen (ionosphere physicists), Gordon Farquhar (radioman), Peter Gale (general assistant and 2nd diesel electric mechanic). **1958 winter**: Jim Smith (ionosphere physicist and leader), Alan Cameron and Jack Tinbergen (ionosphere physicists), Mike Crockford (radioman), and David Price (diesel electric mechanic). **Sept. 19, 1958**: Jim Smith got sick, and on this date three men from Almirante Brown Station came over by open boat to treat him — Horacio Méndez (the base leader), Oscar Bammater (the 2nd-in-command), and Mario Yamazaki (the doctor). **1959 winter**: Alan Cameron (ionosphere physicist and leader), Paul Leek and George Lewis (ionosphere physicists), Mike Crockford (radioman), David Price (diesel electric mechanic). **1960 winter**: John Cunningham (leader), Paul Leek and Bunny Austen (ionosphere physicists), Barry Williamson (radioman), Evan Watson (diesel electric mechanic). **1961 winter**: Brian Nixon (leader), Bunny Austen and Ted Grimshaw (ionosphere physicists), Mike Crockford (radioman), Dave Hounsell (diesel electric mechanic). **Jan. 16, 1962**: The station finally closed, and the ionosphere work was transferred to Faraday Station. Dave Hounsell took Peso the dog with him to Adelaide Island. **May 19, 1995**: the station was designated Historic Site #61. **Jan. 1996**: Port Lockroy began to be open during the summer months. **Jan. 14, 1996**: Work began to restore the station. **March 18, 1995**: Restoration was complete. **Nov. 1996**: The UK Antarctic Heritage Trust saw that, from this date, it was manned as an historic site for tourists. Alan Carroll has compiled an entertaining and thorough history of Port Lockroy Station.

Port Lockroy Prattler. Monthly newspaper started in the winter of 1944 at Port Lockroy, during Operation Tabarin. The most southerly news sheet of its time.

Port Martin *see under* **M**

Presqu'île Port-Martin *see under* **M**

Port-Martin Station. 66°49' S, 141°24' E. Main base for the French Polar Expedition 1949-53, built on Pointe Géologie, Cape Margerie, in Adélie Land. **Jan. 18, 1950**: Work began on the station. **Feb. 1950**: The station was completed. **1950 winter**: 11 men. André-Franck Liotard (q.v.) (leader), Henri Boujon (meteorologist), François Tabuteau (q.v.) (seismologist and hydrographer), Yves Vallette (topographer and cartographer), Robert Pommier (atmospheric optics; *see* **Baie Robert-Pommier**, *under* **R**), Jean Sapin-Jaloustre (q.v.) (doctor and biologist), Mario Marret (q.v.) (ionosphere physicist), Maurice Harders (chief radioman), René Gros (radioman), André Paget (builder), and Georges Schwartz (q.v.) (general assistant). **1951 winter**: 15 men. Michel Barré (q.v.) (leader), Bertrand Imbert (q.v.) (2nd-in-command), André Prud'homme (q.v.) (chief meteorologist), Robert Le Quinio (meteorological engineer), Jean Bouquin (ionosphere physicist), Fritz Loewe (q.v.) (Australian glaciologist), Pierre N. Mayaud (optical magnetism), Jean Cendron (q.v.) (doctor and biologist), Paul Perroud (geodesist), François Tabuteau (q.v.) (hydrographer), Claude Tisserand (chief radioman), Paul Rateau (electrician 2nd radio), Jacques Dubois (chief mechanic), René Dova (mechanic), Roger Kirschner (photographic assistant), Georges Schwartz (q.v.) (dogman), and Raoul Desprez (q.v.) (cook). A post office was opened. During this winter, Jean Cendron operated on Claude Tisserand (*see* **Cendron, Jean** for details). **Jan. 14, 1952**: The *Tottan* reached Port-Martin. **Jan. 23, 1952**: The station was destroyed by a fire. **1952 winter**: The party that had been scheduled to winter-over for 1952 at Port-Martin, was reduced in size to 7 men, and they wintered-over on Pétrel Island (at what came to be known as Base Marret). Mario Marret (q.v.) (leader), Bob Dovers (q.v.) (geoscientist and Australian observer), Jackie Duhamel (construction), George Lepineux (radio operator), Jean Prevost (q.v.) (ornithologist), Jean Rivolier (q.v.) (medical officer and biologist), and Roger Vincent (mechanic). **Jan. 14, 1953**: The *Tottan* arrived, and relieved the winterers at Pétrel Island.

The *Port of Beaumont, Texas*. An 1190-ton wooden-hulled, ocean-going tug, 183 feet long, with two 750 hp diesel-electric motors, formerly called the ATA-215. She was Finn Ronne's ship during RARE 1947-48, named by him for the port of Beaumont, in Texas, which had extended every courtesy to the expedition when it had docked there. Captained by Ike Schlossbach, she was deliberately frozen in while the expedition wintered-over at Stonington Bay.

The *Port Stanley*. A 169-ton Norwegian whale catcher, built in 1911 by Kalnaes Mek., in Tønsberg, for the Hektor Whaling Company. She worked for the *Ronald*, and was in the South Shetlands in 1911-12, 1912-13, and several seasons after that. During World War I she was at Port Stanley, and in 1920-21 was catching for the new *Ronald*. By 1929 she was known as the *Roydur* (q.v.).

The Portal. 78°02' S, 159°45' E. The gap between the Lashly Mountains and Portal Mountain, through which the main stream of Skelton Glacier enters Skelton Névé from the Polar Plateau. Discovered in Jan. 1958 by the NZ party of BCTAE, and named descriptively by them. NZ-APC accepted the name, and US-ACAN followed suit in 1961. ANCA also accepted the name.

Mount Portal *see* **Portal Mountain**

Punta Portal *see* **Portal Point**

Portal Mountain. 78°06' S, 159°10' E. A large mountain, with a broad, ill-defined ice-capped summit rising to 2555 m, S of the Lashly Mountains, on the S side of the main stream of Skelton Glacier, where that glacier leaves the Polar Plateau. Discovered by the NZ Party of BCTAE in Jan. 1957, who named it in association with The Portal. NZ-APC accepted the name, and US-ACAN followed suit in 1961. ANCA also accepted the name.

Portal Point. 64°30' S, 61°46' W. A narrow point which forms the NE tip of Reclus Peninsula and also the SW entrance point of the mouth of Charlotte Bay, between that bay and Wilhelmina Bay, on the Danco Coast, on the W coast of Graham Land. On Dec. 7, 1956, a FIDS hut was built here (*see* **Cape Reclus Refuge**—under **C**) by personnel from Base O (50 m to the SW), from which a route to the central plateau of northern Graham Land was established. So named by UK-APC on Sept. 23, 1960, because this point is the gateway of the route. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Punta Portal.

Portal Point Refuge *see* **Cape Reclus Refuge** (under **C**)

Portal Rock. 83°50' S, 165°36' E. A turret-like rock knob, rising to 1990 m, 2.5 km NW of Fairchild Peak, just S of the mouth of Tillite Glacier, in the Queen Alexandra Range. So named by the Ohio State University geological party here in 1966-67, because the only safe route to Tillite Glacier runs between this rock and Fairchild Peak. US-ACAN accepted the name in 1968.

Portalen *see* **Portalen Pass**

Portalen Pass. 72°43' S, 3°53' W. A mountain pass between Domen Butte and Pilarryggen, in Seilkopf Peaks, in the W part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Portalen (i.e., "the portal"). US-ACAN accepted the name Portalen Pass in 1966.

Porten *see* **Porten Pass**

Porten Pass. 72°12' S, 2°23' E. A mountain pass between Von Essen Mountain and Nupskammen Ridge, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Porten (i.e., "the port, or gateway"). US-ACAN accepted the name Porten Pass in 1966.

Punta Porteous *see* **Porteous Point**

Porteous, Andrew Nicol. b. 1889, Edinburgh, son of plumber James Porteous and his much younger wife Janet. He joined the Merchant Navy and worked his way up through the engineer ranks, and was 2nd engineer on the *Discovery*, 1925-27, and on the first 4 cruises of the *Discovery II*, 1929-31, 1931-33, 1933-35, and 1935-37. He was then promoted to chief engineer, and served on the ship until 1939. That year, 1939, in Surrey, he married Mabel E. Williams. During World War II he was 2nd engineer on the *Rapidol*, and in 1948, while serving on the *Rowanol*, was invalided out of the Royal Fleet Auxiliary, as chief engineer. He was living in Edinburgh in the late 1940s.

Porteous Point. 60°44' S, 45°41' W. It forms the S entrance point of Cummings Cove, and the NE entrance point of Fyr Channel, at the

SW end of Signy Island, in the South Orkneys. Charted in 1933 by personnel on the *Discovery II*, and named by them for A.N. Porteous. It appears on their 1934 chart. Surveyed by Fids from Signy Island Station between 1948 and 1950. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. The Argentines call it Punta Porteous.

Porteous Rocks. 60°43' S, 45°40' W. A small group of rocks immediately S of, and named in association with, Porteous Point, at the SW end of Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1950, and photographed aerially by the RN in 1968. Named by UK-APC on Sept. 29, 2004.

Porter, George *see* **USEE 1838-42**

Porter, Orval Henry. b. Sept. 22, 1896, Grangeville, Idaho, son of teamster Orval J. Porter and his wife Eva Peters. He became an auto mechanic, and left home to live with his uncle in Washtucna, Wash. He was working for the Stinson Aircraft Corporation, in Detroit, when he was picked to be one of the two mechanics on Hubert Wilkins's Arctic expedition of 1927 and the Wilkins-Hearst Expedition of 1928-29 to Antarctica. He returned to New York in March 1929, with Wilkins, but in September of that year was headed back south. He had married Orpha Boreen, of Anderson, Ohio. In 1942 he was working at the McClellan Field Air Depot, in Sacramento, and lived in Placer, Calif., with his wife, Lillian. He died in Feb. 1976, in Spokane, Wash.

Porter Hills. 78°10' S, 163°40' E. A small group of hills between Walcott Glacier and Heald Island, on the coast of Victoria Land. Named by US-ACAN in 1994, for Raymond C. Porter, electronics technician, U.S. Coast Guard, a crewman on the *Glacier* (*see* **Deaths**, 1979).

Porter Ice Shelf. 67°00' S, 49°20' E. An ice shelf with an area of about 100 sq km, adjoining Amundsen Bay off Sakellari Peninsula, in Enderby Land. Named by ANCA on July 26, 1983, for the Pilatus Porter airplanes that have performed sterling service in the area.

Porters Pinnacles. 71°33' S, 99°09' W. A group of low, ice-covered rocks forming a threat to shipping along the N coast of Thurston Island, about 6 km N of the E extremity of Glacier Bight. Discovered by the *Glacier* during the USN Bellingshausen Sea Expedition of Feb. 1960. Named by US-ACAN in 1960, for Cdr. Philip W. Porter, of Higganum, Conn., commander of the *Glacier* at the time.

Mount Porteus. 66°49' S, 51°03' E. A mountain, 3 km E of Peacock Ridge, in the Tula Mountains of Enderby Land. Plotted by Australian cartographers from air photos taken by ANARE in 1956. Named by ANCA for Will Porteus. US-ACAN accepted the name in 1965.

Porteus, William Franklin "Will." b. 1901, Geelong, Vic. He went to sea as a radio operator. One of the ships he sailed on, the wool-cutter *Mount Stewart*, pulled into Melbourne one day, and the skipper refused to pay Porteus, who then proceeded to jump ship. He later sailed on the *Garthneill*. He lived in Sandringham, Vic., and was an able seaman on the *Discovery* during the second half of BANZARE, 1929-31. He died tragically at sea, off the Falkland Islands, on Feb. 24, 1931.

Porthos Range. 70°25' S, 65°50' E. The second range south in the Prince Charles Mountains, it extends for about 50 km in an E-W direction between Scylla Glacier and Charybdis Glacier. Visited in Dec. 1956 by Bill Bewsher's ANARE Southern Party, and named by Bewsher for one of the *Three Musketeers*, the most popular book read on this southern journey. ANCA accepted the name on July 22, 1957, and US-ACAN followed suit in 1962.

Portielo, Severo *see* **The *Uruguay***, 1903

Isla Portillo *see* **Korff Ice Rise**

Portillo, Gregorio *see* **Airplanes**, 1947

Portnipa *see* **Portnipa Peak**

Portnipa Peak. 72°14' S, 2°24' E. Rising to 2665 m, it surmounts Von Essen Mountain and Porten Pass, in the S part of the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Portnipa (i.e., "the gateway peak"). US-ACAN accepted the name Portnipa Peak in 1966.

Portwine, Kenneth James "Ken." b. 1936, Dartford, Kent, son of William James Portwine. He joined BAS in 1967, as a cook, and wintered-over at Base F in 1968. During that winter he came down with ulcerative colitis, and there was no doctor on the base. Dr. Mike Holmes took care of it by radio from Base E, but the cure was only temporary. Portwine got worse. The Argentines flew him out in a plane piloted by Posé, but the plane crashed. Finally the icebreaker *General San Martín* arrived, and he was flown out to her by chopper, and shipped to Buenos Aires. He died of peritonitis a few days later, on Oct. 10, 1968. He really should have mentioned, in his BAS application, that he had been in India.

The *Porvenir*. A 31-foot Falklands Islands steel sloop, which visited the South Shetlands and the Antarctic Peninsula in 1999-2000, under the command of Capt. Ken Passfield.

Poryadin, Yakov. Name also spelled Paryadin. Navigator of the *Vostok* during von Bellingshausen's expedition of 1819-21. He died in retirement, as a lieutenant colonel.

Poryadin Island. 66°32' S, 92°59' E. A small island, about 1.3 km S of Haswell Island, in the Haswell Islands. Discovered and mapped by AAE 1911-4. Remapped by SovAE 1956, and named by them as Ostrov Porjadina, for Yakov Poryadin. ANCA accepted the translated name on Oct. 11, 1960, and US-ACAN followed suit in 1961.

Posadovsky Canyon. 65°40' S, 89°30' E. A submarine feature off the Queen Mary Coast. Named by the Germans.

Posadowsky Bay. 66°47' S, 89°27' E. A wide-open embayment in the vicinity of Gaussberg, just E of the West Ice Shelf, in Wilhelm II Land. Discovered in Feb. 1902 by GermAE 1901-03, and plotted by them in 66°30' S, 90°00' E. Named by von Drygalski as Posadowskibai, for Graf Arthur von Poswadowsky Wehner (1845-1932), German imperial home secretary, who secured the government grant that covered the cost of von Drygalski's expedition. ANCA accepted the name Posawdowsky Bay on Aug. 20, 1957, and US-ACAN followed suit in 1961.

Posadowsky Glacier. 66°50' S, 89°25' E. A glacier, about 14 km long, it flows N to Posadowsky Bay immediately E of Gaussberg, in Wilhelm II Land. It was observed, mapped, and photographed from the summit of Gaussberg by GermAE 1901-03. Delineated in 1955 by U.S. cartographer Gard Blodgett, working from air photos taken by OpHJ 1946-47. Named by US-ACAN in 1955, in association with the bay. ANCA accepted the name on Oct. 22, 1968.

Posadowskybai *see* **Posadowsky Bay**

Poseidon Basin. 68°37' S, 78°09' E. A roughly oval-shaped basin, 1 km long and about 500 m wide, in the Vestfold Hills, with a lake in the bottom and cliffs all around. Named by ANCA.

Poseidon Pass. 68°47' S, 63°40' W. About 375 m above sea level, on the E side of the Antarctic Peninsula, it leads NW-SE from the head of Bowman Inlet to the Larsen Ice Shelf, on the Bowman Coast, between Cape Keeler and Cape Mayo. Roughly surveyed from the ground by FIDS in Nov. 1947, and photographed aerially on Dec. 22, 1947, by RARE 1947-48. It was used by the East Coast geological party from Base E (Stonington Island) in Nov. 1960, and was found to provide an ideal sledging route. They re-surveyed it. Named by UK-APC on Aug. 31, 1962, for the Greek god. US-ACAN accepted the name later in 1962. The British plot it in 68°47' S, 63°32' W.

Poseidon Pond. 77°27' S, 162°11' E. On the E side of McClelland Ridge, between Sanford Valley and Thomas Valley, in the E part of the Olympus Range, in Victoria Land. In keeping with the naming of several features in this area after characters in Greek mythology, this was named by NZ-APC in 1998. US-ACAN accepted the name later that year.

Cabo Posesión *see* **Cape Possession**

Posey Range. 71°12' S, 164°00' E. A mountain range, 24 km long, at the W side of Lillie Glacier, and opposite the N part of the Everett Range, in the E part of the Bowers Mountains. It is bounded by Smithson Glacier, Graveson Glacier, Lillie Glacier, and Champness Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Julian W. Posey, U.S. meteorologist who took over from Palle Mogensen as scientific leader at Pole Station for the winter of 1959. NZ-APC accepted the name.

Poso, Joseph. This was how Dumont d'Urville spelled the name, but it was almost certainly José Pozo. b. July 7, 1816, Villa-Talca, Chile. On Sept. 27, 1838 he happened to be in Upolu, in

the Samoan group, when he joined the *Astrolabe* as a junior seaman, for FrAE 1837-40.

Cape Possession. 63°43' S, 61°51' W. Forms the W extremity of Chanticleer Island, just W of Hoseason Island, in the Palmer Archipelago. It was roughly indicated by Powell on his 1828 chart. Named Possession Cape by Capt. Henry Foster's *Chanticleer* party which landed in this area on Jan. 7, 1829 (i.e., a British possession). Foster and Kendall's 1829 chart has it in 63°45' S, 61°45' W. It appears as Possession Cape on an 1839 British chart, on the 1842 map prepared by FrAE 1837-40 as Cap Possession, and on an 1861 Spanish chart as Cabo Posesión. SwedAE 1901-04, on their charts, have it as Kapp Possession, and both FrAE 1903-05 and FrAE 1908-10 charted it as Cap Possession. On a 1937 British chart, the name Cape Possession is wrongly applied to the extreme NW end of Hoseason Island, and this has caused much confusion to the present day. US-ACAN accepted the name (and the correct position) in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a 1961 British chart. It was photographed aerially by FIDASE in 1956. The name Cabo Posesión, as applied to the NW end of Hoseason Island, has appeared on both Argentine and Chilean charts since the 1940s (spelled in a variety of ways), and, for some reason reluctant to make the change to the correct position, both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted that situation (and spelling). The Chileans describe it as a notable bare rock hill, rising to 259 m.

Possession Cape *see* **Cape Possession**

Possession Island. 71°52' S, 171°12' E. A rocky island almost 3 km long, it is the most northerly and largest of the Possession Islands, in the Ross Sea. Discovered by Ross on Jan. 11, 1841, and named him in commemoration of the planting of the British flag here on that day. US-ACAN accepted the name in 1962. In Dec. 1992, the Americans installed an automatic weather station here, at an elevation of 30 m.

Possession Islands. 71°56' S, 171°10' E. A group of 9 small islands and rocks, extending over an area of about 11 km, in the W part of the Ross Sea, 8 km SE of Cape McCormick, and 6 km off the NE coast of Victoria Land. The group extends N and S a distance of about 16 km, and the individual features (named by Henryk Bull in 1895) vary in size from 5 km in length to mere pillars of rock. They include: Possession Island (the northernmost, and largest), Foyn Island (the westernmost, and second largest, it lies 6 km SW of Possession Island), Heftye Island (the southernmost), Bull Island, Kristensen Rocks (there are 2 of them, 1.5 km S of Possession Island)), Kemp Rock (between Foyn Island and Bull Island), Dickson Pillar (close S of Possession Island), and Favreau Pillar (close E of Foyn Island). Ross landed here (actually on a small, rocky beach on Foyn Island) on Jan. 12, 1841, and dedicated the islands to Queen Victoria. In 1895 Kristensen discovered a lichen here, the first vegetation found south of the Antarctic Circle. Borchgrevink landed here in 1899, during BAE 1898-1900, and Colbeck did the same in 1903. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Possession Nunataks *see* **Possession Rocks**

Possession Rocks. 66°45' S, 98°51' E. Also called Possession Nunataks. Two small rock outcrops just E of Northcliffe Glacier, above which they rise to 160 m, and about 13 km SW of Cape Harrison, in Queen Mary Land. Discovered by the Eastern Sledge Party under Frank Wild, during AAE 1911-14, and named following a ceremony on Christmas Day, 1912, which claimed all the land around here for Britain. US-ACAN accepted the name in 1948, and ANCA followed suit.

Possin, Albert. b. March 23, 1879, Rheinsberg-im-Mark, Germany. In Cape Town, in Dec. 1901, he joined the *Gauss* as an able seaman for GermAE 1901-03.

Post Office Hill. 77°28' S, 169°14' E. A prominent hill, rising to 430 m, 6 km NW (the New Zealanders say NE; they are wrong) of The Knoll, it overlooks the Adélie penguin rookery of Cape Crozier, about 0.8 km inland from the coast of Ross Island. NZGSAE 1958-59 established a survey station here; they mapped it, and E.B. Fitzgerald of that expedition so named it because the *Discovery*, in Jan. 1902, left messages attached to a pole in a cairn of rocks in the rookery for the relief ship *Morning*. The dome-shaped hill resembles the old type of post box. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Post Office Rock *see* **Pig Rock**

Post offices. *See also* **Stamps**. Before Shackleton left NZ in 1907, for BAE 1907-09, he was sworn in as a postmaster before prime minister Sir Joseph Ward, and authorized to open a post office on Edward VII Peninsula. It was actually opened at sea on Jan. 14, 1908, and closed on March 4, 1909. Edward Binnie, the Falkland Islands customs officer, opened one on the whaler *Hektoria*, at Deception Island, in 1912-13. There was a post office on Deception Island in the 1930s, and ByrdAE 1933-35 had PO facilities, but no actual post office, at little America II. In 1944, Dr. Back and Tom Berry set up a post office in the lounge of the *Fitzroy*, as the first post office of Operation Tabarin. Considering that this was a secret wartime operation, Fram Farrington read and censored the mail, including his own. On March 23, 1944 the post office at Bransfield House (Port Lockroy) was opened, the first real Tabarin post office. In 1947 a post office was established by the Chileans at Soberanía Station (later re-named Capitán Arturo Prat Station). Finn Ronne started one on Stonington Island on May 11, 1947, during RARE 1947-48. He dated it March 12, 1947 (the date the expedition arrived in Antarctica). The closing date was Feb. 22, 1948. Ronne had been appointed a 4th-class postmaster, and, for postal purposes, the base was called Oleona. In early 1950 a post office was opened at Port-Martin Station, with overprinted Madagascar stamps. The South Africans established a post office at Sanae Station in 1960, but canceled it in 1961. The Indians opened one at Dakshin Gangotri Station on Jan. 26, 1988, as a branch of the North Goa Post Office. Nowadays all the stations have a post office.

Post Ridge. 76°56' S, 143°38' W. A rock ridge, 5 km long, and trending WNW-ESE, immediately NE of Mount Swan, in the Ford Ranges of Marie Byrd Land. Discovered and first mapped by USAS 1939-41. Named by US-ACAN in 1972, for Madison J. Post, ionosphere physicist at Byrd Station in 1970.

Punta Poste *see* **Poste Point**

Poste, Louis-Émile. b. April 1, 1876, St Malo, France, son of Louis-Marie Poste and his wife Hortense-Célestine Bourdonnais. He was a stoker on the *Français*, during FrAE 1903-05, and 2nd enginer on the *Pourquoi Pas?* during FrAE 1908-10. He was still at sea during World War I, as an engineer.

Poste Point. 65°05' S, 64°01' W. On the W side of Booth Island, it marks the S limit of Salpêtrière Bay, in the Wilhelm Archipelago. Charted by FrAE 1903-05, and named by Charcot for Louis Poste. US-ACAN accepted the name in 1952. The Argentines call it Ponta Poste.

Poste Valley. 69°27' S, 71°17' W. An ice-filled valley running SSE-NNW into Palestrina Glacier, between Mount Braun and Landers Peaks, on the N side of Alexander Island. Surveyed by BAS personnel from Fossil Bluff, 1975-76. Named by UK-APC on June 11, 1980, for Louis Poste.

Postel Nunatak. 84°53' S, 67°46' W. Rising to 1450 m, 13 km SW of Snake Ridge, along the ice escarpment that trends SW from the ridge, in the Patuxent Range of the Pensacola Mountains. In fact, it is the westernmost feature of the Patuxent Range. Surveyed by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Philip A. Postel, meteorologist at Pole Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Mount Poster. 74°41' S, 65°39' W. A mountain rising to about 1700 m, W of the Latady Mountains, and 14 km NW of Mount Tenney, on the Orville Coast of southern Palmer Land. Surveyed from the ground by USGS, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Carl K. Poster, USARP geophysicist with the South Pole-Queen Maud Land Traverse, 1967-68. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

The Postern *see* **Pardo Ridge**

Postern Gap. 63°15' S, 55°59' W. A pass running NW-SE at an elevation of about 500 m, in the central ridge of Joinville Island, just E of Mount Tholus. Surveyed by Fids from Base D in Jan. 1954. This is the only sledging route through the ridge giving access to the central part of the S coast of the island, hence the name given by UK-APC on Sept. 4, 1957. US-ACAN

accepted the name in 1963. It appears in the 1977 British gazetteer.

Postillion Rock. 68°14' S, 66°53' W. A small, ice-free rock in the N part of Neny Fjord, close S offshore from Roman Four Promontory, along the Fallières Coast, on the W coast of Graham Land. Surveyed in 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map of the expedition. It was surveyed again by ChilAE 1946-47, and named by them as Isla Teniente Primero Marinero Rubilar, for one of the expedition members. It appears that way on their 1947 chart. Re-surveyed in Dec. 1949 by Fids from Base E, who named it Postillion Rock, for its outlying position. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Potaka, Louis Hauiti. b. March 14, 1901, Wanganui, NZ, son of Arapeta Takui Potaka and his wife Esther Caselberg. After gaining his medical degree he worked as an intern in Nelson in the late 1920s for a couple of years, then on to the town of Murchison, where he became a contentious and controversial figure. In 1933 he was back in Nelson. He answered Byrd's ad for a doctor to replace Doc Shirey, and was brought down from Dunedin, NZ, to Little America, in the *Discovery II*, for ByrdAE 1933-35. He wintered-over in 1934, and had several quarrels with Byrd. His first operation was the removal of Joe Pelter's appendix. He returned to NZ in Feb. 1935, on the *Jacob Ruppert*. Immediately he moved to Takaka, where he set up in a practice that went sour, and he desperately dunned Byrd for funds. With his finances shot and a court case pending, and with constant eye problems since Antarctica, he poisoned himself with morphia and died on Oct. 2, 1936, in Nelson Hospital.

Potaka Glacier *see* **Potaka Inlet**

Potaka Inlet. 72°02' S, 99°23' W. Also called Potaka Glacier. A narrow, ice-filled inlet, about 13 km long, it indents the N side of Thurston Island, immediately E of Starr Peninsula. First delineated from air photos taken in Dec. 1946, during OpHJ 1946-47. Named by US-ACAN in 1960, for Louis Potaka. Originally plotted in 71°57' S, 99°35' W, it has since been replotted. The Russians plot it in 72°08' S, 99°10' W.

Gora Potanina. 72°58' S, 65°58' E. A nunatak, NE of Mount Rymill, in the southern Prince Charles Mountains. Named by the Russians.

Potmess Rocks. 62°19' S, 59°45' W. A group of large rocks, rising to about 50 m above sea level, 1.9 km W of Heywood Island, in the South Shetlands. Charted by an RN Hydrographic Survey unit on the *Protector* in Jan.-March 1967. Named for the midday stew served on board the survey launch *Nimrod*. It appears as such on their 1968 chart. The Argentine call the group Islas Orejas de Burro (i.e., "asses ears islands"), but for the English-speaking world Asses Ears (q.v.) is merely a very distinctive feature near the N end of Potmess Rocks. UK-APC accepted the name on Nov. 3, 1971, and US-ACAN followed suit in 1972. It appears in the 1974 British gazetteer.

Potrzebowski Peak. 62°12' S, 58°46' W. A somewhat isolated mountain, rising to 300 m, E of Buddington Peak, between Moczydlowski Glacier and Polar Friendship Glacier, at Marian Cove, on King George Island, in the South Shetlands. Named by the Poles in 1984, for Kazimierz Potrzebowski, deputy leader of PolAE 1979-80, and member of several Polish expeditions to Arctowski Station.

Potsdamgletscher. 70°50' S, 12°40' E. A glacier flowing into Nivlisen, between the Wohlthat Mountains and the Schirmacher Hills. Named by the Germans on Oct. 20, 1998.

Pottage, Dave. He wintered-over at Casey Station in 1982, and at Mawson Station in 1982, 1985, and 1992. He also wintered-over at Macquarie Island in 1996.

Caleta Potter *see* **Potter Cove**

Mount Potter. 78°08' S, 162°17' E. On the SW side of Williams Glacier, in the Royal Society Range of Victoria Land. Named by US-ACAN for glaciologist Noel Potter, Jr., chairman of the department of geology at Dickinson College, in Carlisle, Pa., who worked in this area during 7 seasons.

Potter, James *see* **USEE 1838-42**

Potter, John Robert. b. Dec. 7, 1957. BAS glaciologist on the George VI Ice Shelf, 1979-80 and 1980-81; at Rothera Station, 1981-82; and back on the George VI Ice Shelf, 1982-83. In the 1990s he was in Singapore.

Potter Cove. 62°14' S, 58°41' W. Indents the SW side of King George Island, between Winship Point and Three Brothers Hill, to the E of Barton Peninsula, in the South Shetlands. Bellingshausen Station was built here. It was discovered by John Roberts, on the sealer *King George*, during the 1820-21 season. Charted by several sealers in the same season, and also in the 1821-22 season. Capt. Fildes, in 1821, called it Potters Cove, and described it as the best harbor on the S coast of King George Island. Originally called Potter's Cove (we don't know who named it), it appears as such on Capt. Sherratt's chart of 1821. Capt. Potter was a British navigator of the period. It appears as such on Powell's chart published in 1822, and also on Foster and Kendall's chart of 1829 (prepared during the *Chanticleer* Expedition of 1828-31). On Weddell's 1825 chart it appears as Potter Cove. The cove features prominently in the story of James King and the *Franklin*, in 1871-72. It was visited by Dallmann in 1873-74. Balch called it Potter Cove in 1904 (when he was telling his grossly unfactual story of Mr. King). On Charcot's 1912 map it appears as both Havre Peter and Havre Petter (either this is a misprint for Potter, or Charcot got it wrong; it appears as Havre Potter on Bongrain's 1914 map of the same expedition). On a British chart of 1930 it appears as both Potters Cove and Potter Cove. It appears on an Argentine chart of 1949 as Caleta Potter, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. UK-APC accepted the name Potter Cove on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such on a 1954 British chart, in the 1955 British gazetteer, and on a 1962 British chart. It was further charted from the *Veryan Bay* in 1954-55, and photographed aerially by FIDASE in 1956. Jubany Station was built here. Last plotted by the UK, in late 2008.

Potter Glacier. 78°23' S, 162°12' E. About 20 km long, and 3 km wide, between Mount Huggins and Mount Kempe, in the Royal Society Range of Victoria Land, it flows generally SW into Skelton Glacier. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1963 for Lt. Cdr. Edgar A. "Al" Potter (b. Aug. 11, 1924, Los Angeles. d. June 1978), USN, helicopter pilot at McMurdo in 1960.

Potter Nunataks. 72°02' S, 161°10' E. A group of small, somewhat isolated nunataks, about 10 km SW of the Helliwell Hills, and 30 km NE of Welcome Mountain of the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Neal Potter, economist at McMurdo in 1965-66, there to study the economic potentials of Antarctica.

Potter Peak. 75°07' S, 68°45' W. Rising to about 1650 m, 10 km E of Mount Jenkins, in the Sweeney Mountains, on the Orville Coast, where Ellsworth Land meets southern Palmer Land. Discovered aerially by RARE 1947-48. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Christopher J. Potter, USARP glaciologist at Byrd Station, 1965-66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Potter Peninsula. 62°15' S, 58°39' W. A low, ice-free peninsula, 1.4 km E of Three Brothers Hill, between Potter Cove and Stranger Point, on the SW side of King George Island, in the South Shetlands. Named Península Potter in 1966, by Chilean geologists Roberto Araya and Francisco Hervé, following work done at Potter Cove. BAS did geological work here in 1975-76. UK-APC translated the name on Feb. 7, 1978, and US-ACAN followed suit. It was designated SSSI #13. Last plotted by the UK, in late 2008.

Potter Refugio *see* **Jubany Station**

Potters Cove *see* **Potter Cove**

Punta Pottinger *see* **Pottinger Point**

Pottinger, Charles. b. 1790. In 1812 he was involved in the timber trade between Nova Scotia and Liverpool, and was living in Whitechapel when, on July 21, 1818, he married Maria Richmond at Stepney, which is where they went to live and have three children. On July 4, 1821, he was appointed captain of the London sealer *Tartar*, in the South Shetlands, 1821-22. Capt. Pottinger was buried on Dec. 22, 1833, in St. Dunstan's, Stepney, and on the last day of 1834 his widow had a headstone erected there to his memory. Maria continued to live in Stepney, as landlady of the *Crown and Dolphin* on High Street, until she died in 1870.

Pottinger Point. 61°56' S, 58°21' W. Also called Punta Redonda. A point, 3 km E of

Round Point, and E of Owen Island, on the N coast of King George Island, in the South Shetlands. Photographed aerially by FIDASE in 1956. On a 1957 Argentine chart it appears by mistake as Punta Redonda. Named by UK-APC on Sept. 23, 1960, as Pottinger Point, for Charles Pottinger. US-ACAN accepted the name later that year. It appears on a British chart of 1962. The Argentines call it Punta Pottinger. Last plotted by the UK, in late 2008.

Pottle, James M. *see* **USEE 1838-42**

Potts, Francis Boyd. Known as Boyd Potts. b. 1938, Derby, son of Frank Potts and his wife Marguerita Leam. He joined FIDS in 1960, as a meteorologist, and wintered-over at Base F in 1961 and 1962.

Potts, Jeremiah "Jerry." There were at least two sealing captains from New London, Conn., with this name, over the years. Our man was born in 1835, in Groton, Conn., eldest child of mariner Jeremiah Potts and his wife Lydia Daniels. He went to sea at 13, and lived prosperously in New London with his wife Rebecca. He was skipper of the *Lizzie P. Simmons* when she left on July 24, 1872, bound for the South Atlantic, and captained the same ship when she left New London on Aug. 2, 1873, bound for the South Shetlands. He returned to the USA in 1875.

Potts Glacier. 72°58' S, 166°50' E. A steep glacier flowing S from the W slopes of the Malta Plateau into Mariner Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Donald C. Potts, biologist at McMurdo, 1966-67.

Potts Peak. 61°58' S, 58°15' W. Rising to about 350 m, to the W side of Eldred Glacier, on the N coast of King George Island, in the South Shetlands. Photographed aerially by FIDASE in 1956. Named by UK-APC on Sept. 23, 1960, for Capt. Jerry Potts. US-ACAN accepted the name later in 1960. Last plotted by the UK, in late 2008.

Poulssonhamaren. 74°48' S, 11°29' W. The SW corner of Skjønsbergskarvet, in the Heimefront Range, in Maudeheimvidda, in Queen Maud Land. Named by the Norwegians for lawyer Erik Tutein Poulsson (1897-1978), and his twin brother, Dr. Leif Torp Poulsson (1897-1991), Norwegian Resistance fighters during World War II.

Poulter, Thomas Charles "Tom." b. March 3, 1897, Mount Pleasant, Iowa, son of farmer Mike L. Poulter and his wife Alberta. He joined the Navy in 1918, and was professor of physics at Iowa Wesleyan, where his star pupil was James A. Van Allen. He married Phoebe Esther Ganoe. He was 2nd-in-command and senior scientist on the shore party of ByrdAE 1933-35. A day after getting back to NZ, on Feb. 19, 1935, in Dunedin, he married Helen Gray, who had traveled there to meet him. Byrd gave the bride away. They stayed married (often, these NZ marriages didn't). Later, as scientific director (1936-48) of the Armour Research Foundation, he designed and built the Snowcruiser (q.v.), and went down to Antarctica again for the first part of USAS 1939-41, to set it up. He lost 35 pounds on that expedition, and was not a well man. He died of a heart attack on June 15, 1978, at Stanford Research International, Menlo Park, Calif., with whom he had been since 1948.

Poulter Glacier. 86°50' S, 153°30' W. A tributary glacier flowing E along the S flank of the Rawson Mountains, to enter Scott Glacier, in the Queen Maud Mountains. Discovered by Quin Blackburn's geological party during ByrdAE 1933-35, and named by US-ACAN for Tom Poulter.

Poulton Peak. 68°02' S, 63°02' E. The highest point on the elongated rock ridge in the NE part of the Blånabbane Nunataks (what the Australians call the Anniversary Nunataks), in Mac. Robertson Land. The summit looks like a rock cairn. The peak was used as an unoccupied trigonometrical station by ANARE surveyor Max Corry in 1965. Named by ANCA on Aug. 10, 1966, for Michael Alexander "Mike" Poulton, weather observer at Mawson Station in 1965. US-ACAN accepted the name in 1971.

The *Pourquoi Pas?* Charcot's 3-masted schooner during FrAE 1908-10. She was the most modern polar vessel up to that time, taking 8 months to build at Saint-Malo, France, by Gauthier Senior, at a cost of 780,000 gold francs. She had 800 tons capacity, was 131 feet long, 30 feet wide, and had 550 hp. She had all the mod cons (modern conveniences)—telephones, a searchlight, ship-to-shore electric cables, a motor launch, and 3 laboratories. She was launched May 18, 1908. Charcot disappeared with the ship in Greenland, on Sept. 16, 1936.

Glacier (du) Pourquoi Pas *see* **Pourquoi Pas Glacier**

Pointe du Pourquoi Pas? *see* **Pourquoi Pas Point**

Isla Pourquoi Pas *see* **Pourquoi Pas Island**

Pourquoi Pas Glacier. 66°15' S, 135°55' E. A glacier, 24 km long and 6 km wide, it flows NNW from the continental ice, and terminates in the prominent Pourquoi Pas Glacier Tongue 14 km WNW of Pourquoi Pas Point, almost at the boundary between Wilkes Land and Adélie Land. Delineated by French cartographers working from air photos taken by OpHJ 1946-47, and named by them in 1952 as Glacier (du) Pourquoi Pas, for the *Pourquoi Pas?* US-ACAN accepted the name in 1955, and ANCA followed suit on Aug. 11, 1955. Sometimes, in certain countries' renditions of this name, it is seen with a question mark after the word "pas," as in the name of the ship, but this is somewhat intrusive in the feature name.

Pourquoi Pas Glacier Tongue. 66°10' S, 136°00' E. A prominent glacier tongue, 10 km long and 6 km wide, it is the prominent seaward extension of Pourquoi Pas Glacier. Delineated from air photos taken during OpHJ 1946-47, and named by US-ACAN in 1956, for the *Pourquoi Pas?* For comments about the question mark, *see* **Pourquoi Pas Glacier**.

Pourquoi Pas Island. 67°41' S, 67°28' W. A high, mountainous, but completely snow-covered island, with cliffed coasts, 26.5 km long in a SW-NE direction, between 8 and 17.5 km wide, in the entrance to Laubeuf Fjord, between Bigourdan Fjord and Bourgeois Fjord, and separated from Blaiklock Island by The Narrows, in the NE corner of Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Some of the features on the island are named after Jules Verne characters—Arronax, Conseil, Nautilus, Nemo, and, of course, Verne. Discovered and roughly charted on its SW side in 1909 by FrAE 1908-10, but not recognized as an island. Charted as an island in 1936, by BGLE 1934-37, and named by them for the *Pourquoi Pas?* It appears on a British chart of 1940. The island was re-surveyed by Fids from Base E in 1948-49. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. As Isla Pourquoi Pas (sometimes with a hyphen in between the two key words) it appears on a Chilean chart of 1947, an Argentine chart of 1958, in the 1970 Argentine gazetteer, and in the 1974 Chilean gazetteer. For comments about the question mark, *see* **Pourquoi Pas Glacier**.

Pourquoi Pas Point. 66°12' S, 136°11' E. An ice-covered point forming the W side of the entrance to Victor Bay, near the W extremity of Adélie Land, on Commandant Charcot Glacier, NW of the glacial tongue, on the coast of East Antarctica. Charted by the French in 1950-52, plotted by them (apparently) in 66°12' S, 136°45' E, and named by them in 1954, as Pointe du Pourquoi Pas?, for the *Pourquoi Pas?* US-ACAN accepted the name Pourquoi Pas Point in 1962. For comments about the question mark, *see* **Pourquoi Pas Glacier**.

Pousseau, Jean-Baptiste. b. July 31, 1807, Antibes. On May 29, 1838, at Valparaíso, he joined the *Zélée* as an able seaman, for FrAE 1837-40. He died on board, on Jan. 18, 1840, the only member of the expedition to die in Antarctic waters.

Poutini Peak. 78°09' S, 163°06' E. Rising to 2062 m at the N end of Chancellor Ridge, at the S side of Bowden Glacier, and 1.5 km W of Murihau Peak, on the W ridge marking the head of Blue Glacier, in Victoria Land. Named by NZ-APC on March 1, 1994. US-ACAN accepted the name later that year. Poutini was the Maori mythological character who was taniwha (i.e., guardian) of pounamou (i.e., jade).

Poveda, Enrique *see* **Órcadas Station**, 1943, 1945, 1948, 1951

Povilaitis, Stanley C. b. Dec. 11, 1918, Carmel, Pa., but raised in Nanty-Glo, son of Lithuanian parents, coal miner Peter Povilaitis and his wife Elenora. He was the Seabee cook at Little America V during OpDF I (1955-56) and for the winter of 1956. He later lived for years in Shippensburg, Pa., which is where he died on Jan. 3, 1996.

Obryv Povorot. 72°54' S, 68°24' E. A bluff in the area of the Hay Hills, at the N end of Mawson Escarpment, in Mac. Robertson Land. Named By the Russians.

Powder Island. 69°32' S, 68°47' W. A small

island inside the entrance of George VI Sound, 13 km SSE of Cape Jeremy, and 3 km off the W coast of Palmer Land. Photographed aerially on Aug. 16, 1936, by BGLE 1934-37, but not recognized for what it was in the fragmented ice shelf surrounding it. ChilAE 1946-47 reported 2 small islands in 69°45' S, 68°33' W, and named them Islotes Chacabuco, after the battle against the Spanish in 1817. They appear on the expedition chart of 1947. These two islands were probably the same as the feature that became known as Powder Island. Surveyed in 1948 by Fids from Base E, and named by them as Powder Islet, for the crumbly type of Jurassic-Cretaceous rock on this island, a rock which, when easily crushed, turns to powder. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears as such on a 1955 U.S. Hydrographic Office chart. On July 7, 1959, UK-APC did away with the term "islet," and renamed this feature Powder Island, and it appears as such on a British chart of 1961. US-ACAN accepted the new name in 1963. The Chileans translated it as Islote Pólvora on one of their 1962 charts, and that was the name accepted by the 1974 Chilean gazetteer.

Powder Islet *see* **Powder Island**

[1]**The *Powell*.** A whale catcher, which replaced the *Funding*, and which was used by Petter Sørlle to get about in while he made his running survey of the South Orkneys, in 1912-13. The *Powell* did catching for both the *Paal* and the *Falkland*.

[2]**The *Powell*.** Tanker owned by Rupert Trouton, which supplied the *Balaena* with fuel in Antarctic waters in the 1950s.

Isla Powell *see* **Powell Island**

Mount Powell. 85°21' S, 87°56' W. A prominent mountain. rising to 2195 m, in the E part of the Thiel Mountains. It shares a small massif with King Peak 2.5 km to the WNW. Named by Peter Bermel and Art Ford, leaders of the Thiel Mountains Survey Party here in 1960-61, for John Wesley Powell (1834-1902), the 2nd director of USGS, 1881-94. US-ACAN accepted the name in 1962.

Roca Powell *see* **Powell Rock**

Powell, Dale Lee. b. June 5, 1936, Goodland, Kansas, son of Elma O. Powell and his wife Ruby Archibald. His father, a butcher who owned a store, moved west, during the Depression, to Colorado Springs, which is as far as he could get before his money ran out. Dale joined the Navy in 1954, and answered the notice for "volunteers to go to the South Pole." He was attached to the Seabees, went to Davisville, RI, for training, and shipped south in Nov. 1955. At McMurdo Sound he helped build the base, and wintered-over there in 1956. As radio mechanic second class he was one of the first group of men who were flown in on Nov. 20, 1956, to the South Pole, to build the station there, and, when the job was done, was one of the 2nd party to fly back to McMurdo, on Dec. 29, 1956. He was not only the youngest of the group, but the youngest man to that date ever to be at the Pole. He married Navy girl Rose Martinez in 1960, in Baltimore, and then was in Panama, Guam, Hawaii, and Vietnam, and wintered-over again, at McMurdo, in 1968, visiting Byrd's hut. He became involved in drug and alcohol rehabilitation, and after retirement from the Navy in 1974, continued in this field in civilian life. He died of lung cancer on June 11, 2005, in New Mexico, and is buried in Santa Fe.

Powell, George. b. 1794, London, son of George Powell, butcher of 74 Ratcliff Highway. He went to sea as a young man, and was only 23 when appointed by Daniel Bennett & Sons, the leading London South Sea company, on Aug. 19, 1818, to skipper the *Dove* to the South Seas in search of seals and oil. It is not known exactly where Powell plied the seas that season, 1818-19, but it was probably the Kerguélens and South Georgia; anyway, he returned to London on July 19, 1819. His father had died on the last day of April that year. On Sept. 4, 1819, he sailed from England, in the *Eliza*, bound for the South American coast, on what would be a two-year trip. In the 1820-21 season he was in the South Shetlands. He returned to England with 18,000 seal skins. For his third expedition, he left England on June 30, 1821, approached the South Shetlands from the NNW on Nov. 8, 1821, sighted Mount Foster from 80 miles away, and arrived in the South Shetlands on Nov. 9, 1821, for the 1821-22 sealing season, leading a Bennett sealing expedition of two ships, the *Eliza* and the *Dove*. Powell commanded the *Eliza*, and John Wright commanded the *Dove*. That day, Nov. 9, he was 18 miles off Cape Smith, and then bore E across Boyd Strait, bound for New Plymouth, where he found the *Ann* (Capt. Duell), the *Grace* (Capt. Rowe), and the *Sprightly* (Capt. Frazier). Powell stayed there a day and a half, and then, from Nov. 12, 1821, he looked for a suitable harbor all along the N coast of Livingston Island. On Nov. 13, 1821, he was off Cape Shirreff, and in the cove to the W of the cape, he found the *Mellona* (Capt. Laing) in Spiller Cove. Then he went off to Blythe Bay (at Desolation Island), and, ultimately, found a suitable place at Clothier Harbor, on Robert Island. There he transferred to the *Dove*, leaving Wright and the *Eliza* at Clothier Harbor, and he went looking for seals. He first tried Elephant Island, and narrowly avoided being wrecked on a reef there. Believing (wrongly) that there were seals aplenty, he sent a party ashore, and returned in the *Dove* to Clothier Harbor for more men. On his return to Elephant Island he found that only 150 seals had been taken. On Nov. 30, 1821, he ran into the *James Monroe*, an American ship under the command of Nat Palmer. On Nov. 30, 1821, the two captains decided to team up for an exploration of the islands, and, on Dec. 4, 1821, leaving behind a sealing party on Clarence Island, Powell set out, with Palmer, heading east. On Dec. 6, 1821, they discovered the South Orkneys (actually Coronation Island; and, actually, it was Powell who saw the group first, sailing, as he was, 4 hours ahead of Palmer). Powell landed a group of men and annexed the group for George IV. He found anchorage at Spence's Harbor, on the E side of the island, and did some charting in the South Orkneys, and also while cruising the South Shetlands. Palmer was interested only in seals; Powell was interested too, more than interested, but it was only he who did the charting. Landings were also made on Laurie Island and Powell Island, both in the South Orkneys. His charts, published in 1822, are seminal in the history of Antarctic cartography. On Dec. 13, 1821, the two captains left the area, heading south, but were stopped by pack-ice in 62°30' S, 45°29' W. They skirted the pack west to Elephant Island, which they reached on Dec. 14, 1821. On Dec. 22, 1821, Powell arived back in Clothier Harbor, and Palmer went his own way. Powell finally headed north out of Antarctic waters on Feb. 26, 1822, and arrived back in England in Aug. 1822. In 1824 he was commanding the *Rambler*, for the Enderby Brothers of London. He landed at the Friendly Isles on April 3 of that year. A local chief had encouraged several members of his crew to desert, including a young man placed under Powell's care, and Powell went ashore to get them back. He was killed.

Powell, Kenneth Ernest Charles "Ken." Some called him Casey, for obvious reasons. b. Feb. 27, 1928, Southwark, London, son of Henry F. Powell and his wife Ethel Lucy Dove. An engineer, he was living in West Ewell, Surrey, when he married Joyce V.T. Standen, in 1951. He joined FIDS in 1952, as a diesel electric mechanic, and wintered-over at Base D in 1953 and 1954. At the end of his tour he returned to Port Stanley, then on to Montevideo, where he picked up the *Andes* heading for Southampton, where he arrived on Feb. 24, 1955. He was senior diesel mechanic on the first part (1955-57) of the British Royal Society Expedition, wintering-over as diesel engineer at Halley Bay in 1956. He returned to West Ewell after the expedition, sailing from Halley Bay on the *Magga Dan*, and returning to London on March 13, 1957. He went to the Middle East, working for an oil company, in the company of Wink Mander, Brian Gilpin, and Derek Clarke.

Powell Basin. 62°15' S, 49°30' W. A submarine feature in the South Shetlands. Named by international agreement in 1977, for George Powell.

Powell Channel. 68°08' S, 67°07' W. A narrow marine channel running N-S, and separating Millerand Island from the Debenham Islands, off the Fallières Coast, on the W coast of Graham Land. Surveyed by an RN Hydrographic Survey unit on the *Endurance*, in 1972, and named by them for Lt. John Martin Powell (b. 1944), RN, part of the survey team. It appears on their 1973 chart. UK-APC accepted the name on Dec. 20, 1974, and US-ACAN followed suit in 1975.

Powell Cove. 66°15' S, 110°32' E. A cove on the N side of Stonehocker Point, between that point and Whitney Point, on the W side of Clark Peninsula, on the Budd Coast of East Antarctica. First mapped from air photos taken during OpHJ 1946-47. It was re-photographed aerially by ANARE in 1956, and by SovAE 1956. It was included in a 1957 ground survey by a team led by Carl Eklund out of Wilkes Station, and

named by Eklund for James T. Powell, USN, chief aerographer at Wilkes that year. US-ACAN accepted the name in 1960, and ANCA followed suit on July 4, 1961.

Powell Group *see* **South Orkney Islands**

Powell Hill. 81°56' S, 161°11' E. A rounded, ice-covered prominence, 10 km WSW of Mount Christmas, it overlooks the head of Algie Glacier. Named by US-ACAN in 1965, for Lt. Cdr. James A. Powell, USN, communications officer at McMurdo during OpDF 63 (i.e., 1962-63) and OpDF 64 (i.e., 1963-64).

Powell Island. 60°41' S, 45°03' W. A narrow island, 11 km long and 3 km wide, it is separated from Coronation Island to the W by Lewthwaite Strait, and from Laurie Island to the E by Washington Strait, in the central part of the South Orkneys. Discovered and roughly surveyed (but not named) by Nat Palmer and George Powell in Dec. 1821, it appears correctly (i.e., as one island) on Powell's chart published in 1822. Between 1822 and 1824, Weddell charted the S part as Cruchleys Island and the N part as Dibdins Island (i.e., he thought it was 2 separate islands). It appears as such on his 1825 chart. It was resurveyed in 1838, by FrAE 1837-40, and appears on their chart of that year, as one island with a narrow isthmus in the middle. On a British chart of 1839 it appears as 2 islands, the Powel Islands (sic). On Vincendon-Dumoulin's 1847 atlas it appears as Île Powell. On a U.S. Hydrographic Office chart of 1894 it appears as Powell Islands. SwedAE 1901-04 charted it as both one island and two islands. ScotNAE 1902-04 re-surveyed it, and charted it as Powell Island. On British charts of 1916 and 1926 it appears as Powell Islands. There is a 1906 reference to it as Dibdin Island, and on a 1908 Argentine map it appears as Islas Powell. Petter Sørlle re-surveyed it in 1912-13, and it appears on his (and Hans Borge's) 1913 chart as Powel Island (sic). On an Argentine chart of 1930 it appears as Isla Powell. Re-surveyed by the Discovery Investigations in 1933, it appears on their 1934 chart as Powell Island, and that was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. A specially protected area (SPA #15) was created here in 1967, and took in the S half of Powell Island, Fredriken Island, Michelsen Island, Christoffersen Island, Grey Island, and the unnamed islets nearby. The Argentine gazetteer of 1970 accepted the name Isla Powell. As for Dibdin and Cruchley. Dibdin is anyone's guess. Cruchley might be the London cartographer and mapseller George Frederick Cruchley (1796-1880), but the date seems a little early for him.

Powell Islands *see* **South Orkney Islands**

Powell Point. 68°31' S, 78°06' E. On the N side of Breidnes Peninsula, it forms the S entrance to Langnes Fjord, in the Vestfold Hills. Named by ANCA on Nov. 27, 1973, for Owen G. Powell, weather observer at Davis Station in 1970.

Powell Rock. 60°41' S, 45°35' W. A small submerged rock (i.e., a rock awash) on the NE side of Signy Island, E of the mouth of Starfish Cove, about 0.5 km NE of Balin Point, in the South Orkneys. First charted by Petter Sørlle in 1912-13, and named by him as Powellboen, for the whale catcher, the *Powell*, which he used in his seach for anchorages during his running survey of the South Orkneys. Fids from Signy Island Station surveyed it in 1947, and fixed the position of breakers here during rough weather. UK-APC accepted the name Powell Rock on March 31, 1955, and US-ACAN followed suit in 1956. The Argentines call it Roca Powell.

Powellboen *see* **Powell Rock**

Powels Islands *see* **Heywood Island**

Power, Frank. A veteran of coal-fired steam engines, he was working in a machine repair shop in St. John's, Newfoundland, when Capt. Bobby Sheppard picked him to be 2nd engineer on the *Eagle*, for the 2nd phase of Operation Tabarin, 1944-45.

Power, James S. *see* **Power Glacier**, **USEE 1838-42**

Power Glacier. 66°35' S, 125°15' E. A channel glacier about 8 km wide, and 6 km long, flowing N from the continental ice at the W flank of Norths Highland, to the head of Maury Bay, where it terminates in a glacier tongue on the Banzare Coast of Wilkes Land, in East Antarctica. It was delineated from OpHJ photos of 1946-47, and named by US-ACAN for James S. Power, purser's steward on the *Flying Fish* during USEE 1838-42. At least that is how it appears in the 1956 U.S. gazetteer, but today it is not listed in any gazetteer.

Cerro Poynter *see* **Poynter Hill**

Colina Poynter *see* **Poynter Hill**

Poynter, Charles Wittit. b. 1797, Upper Deal, Kent. A Royal Navy seaman, he was a master's mate on the *Andromache* in 1817 when that ship sailed to Valparaíso under Capt. William H. Shirreff. When Capt. Smith pulled into Valparaíso in 1819 with news of his discovery of the South Shetlands, Shirreff commandeered Smith's vessel, the *Williams*, and placed Edward Bransfield in command, with Smith as pilot, and three midshipmen and master's mates to assist in the charting and hydrographic expedition of the newly-found lands. Poynter was one of the master's mates. His diary of this trip was discovered in the 1990s in NZ, and published by the Hakluyt Society in 2000 as *The Discovery of the South Shetland Islands 1819-20*. He later made commander, RN. On Aug. 8, 1835, in Dover, he married Louisa Illenden, and they lived in Cornwall, and then Devon, then Yorkshire, with their several children, while Poynter himself continued in the Navy. He retired, as a commander, to Lower Sydenham, Kent (now part of London), where he died on Dec. 16, 1878. His daughter, Eliza, was a watercolor artist.

Poynter Col. 63°49' S, 59°07' W. A snow-filled col, at an elevation of about 750 m above sea level, it joins Poynter Hill and Ivory Pinnacles, on Trinity Peninsula, 14 km ESE of Cape Kjellman, in the NW part of Graham Land. Charted by Fids from Base D in Nov. 1948, and named by UK-APC on Jan. 28, 1953, in association with the hill. US-ACAN accepted the name later in 1953. It appears in the 1955 British gazetteer.

Poynter Hill. 63°46' S, 59°06' W. A conspicuous hill, rising to 825 m (the British say 950 m; the Chileans say 823 m), 13 km ESE of Cape Kjellman, on the W side of Trinity Peninsula. Surveyed and charted in 1948 by Fids from Base D, and named by them in 1950, for Charles Poynter. US-ACAN accepted the name, and UK-APC followed suit on Jan. 28, 1953. It appears on a 1954 British chart, and in the 1955 British gazetteer. It appears on a 1961 Chilean chart as Cerro Poynter, and on one of their 1963 charts as Colina Poynter, the latter name being the one accepted by the Chilean gazetteer of 1974. However, today, the Chileans seem to call it Cerro Poynter.

Nunatak Pozharskogo. 69°44' S, 64°29' E. A nunatak, SE of Dovers Peak, at the W end of the Stinear Nunataks, in Mac. Robertson Land. Named by the Russians.

Poznan Glacier. 62°01' S, 58°09' W. A tributary glacier, flowing between Mount Hopeful and Rea Peak, into Polonia Glacier, in the Arctowski Mountains, N of King George Bay, on King George Island, in the South Shetlands. Named by the Poles in 1981, after the second oldest capital of Poland.

Cabo Del Pozo *see under* **D**

Los Pozos *see* **Montes Aguayo**

Isla Practicante Coloma *see* **Lautaro Island**

Prague Spur. 70°01' S, 70°20' W. A rock spur rising to about 500 m between (on the one hand) Puccini Spur and (on the other) the Lully Foothills and the Finlandia Foothills, at the E end of the Mozart Ice Piedmont, on Alexander Island. Mapped by Searle of the FIDS from air photos taken in late 1947 by RARE 1947-48. Surveyed by BAS from 1968. In association with the ice piedmont, it was named by UK-APC on Dec. 8, 1977 for Mozart's Symphony No. 38, the Prague (1788). US-ACAN accepted the name. It appears in the 1980 British gazetteer. In those days it was plotted in 71°01' S, 70°20' W, but it was replotted. With the new coordinates, it appears in the 1986 British gazetteer.

Prahl Crags. 76°04' S, 134°43' W. Rock crags at an elevation of about 2750 m, on the S slopes of the Mount Moulton massif, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for Sidney R. Prahl, USARP glaciologist who studied ice sheet dynamics in the area NE of Byrd Station, in 1971-72.

Pram Point. 77°51' S, 166°45' E. A low rounded point projecting from the SE side of Hut Point Peninsula, about 2.5 km NE of Cape Armitage, on Ross Island. Discovered by Scott in Feb. 1902, during BNAE 1901-04, and named by him for the pram (a Norwegian-style skiff) they had to use to travel between here and Winter Quarters Bay during the summer months. Scott Base is here. US-ACAN accepted the name, and NZ-APC followed suit.

Pram Point Bay. 77°50' S, 166°44' E. The bay near Pram Point, on the SE side of Hut Point

Peninsula, on Ross Island. Named by BAE 1910-13. The name appears in the 1958 NZ provisional gazetteer.

Pranke Island. 73°14' S, 124°55' E. A small, ice-covered island, close to Siple Island, in the W extremity of Russell Bay, off the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for James B. Pranke, aurora researcher at Byrd Station in 1965.

Punta Prat *see* **Edwards Point**

Prat, Federico Argento *see under* **A**

Pratt. b. Conn. Crew member on the *Wasp*, 1822-24.

Mount Pratt. 85°24' S, 176°41' E. Also called Stenhouse Nunatak. Rising to about 2700 m, it is the most northerly nunatak in the Grosvenor Mountains, just E of the head of Mill Stream Glacier, 27 km N of Block Peak, between Mount Bumstead and the Ross Ice Shelf, about 30 km W of the head of Shackleton Glacier, in the Queen Maud Mountains. Discovered by Byrd on his flight to the Pole in Dec. 1929, during ByrdAE 1928-30, and named by him for Thomas B. Pratt, U.S. financier and contributor to the expedition. This feature was inadvertently named Stenhouse Nunatak, by NZ, in 1960, as one of the five Aurora Nunataks. The oversight was soon rectified (*see* **Aurora Nunataks**), with US-ACAN accepting the name Mount Pratt, and NZ-APC following suit.

Pratt, David Lynn. b. Aug. 16, 1924, Swindon, Wilts, son of William L. Pratt and his wife Margery F. Lewis. After Marlborough, he joined the Royal Engineers, and fought in a tank squadron (Assault Royal Engineers) during World War II, after which he served as a garrison engineer. He left the Army in 1948, worked with Girling Brake Company, and then went to Cambridge, graduating in 1952 in mechanical science, and studying design at the College of Aeronautics. He went as an engineer with Fuchs across the continent during BCTAE 1957-58, returning to Wellington (NZ) after the expedition, and from there to Southampton on the *Rangitoto*, arriving in the UK on May 12, 1958. After the expedition, he went to the Imperial College of Science and Technology, and in 1959 married Victoria de Rin. He won the CBE.

Pratt, John Geoffrey Drewe. Known as Geoffrey Pratt. b. Jan. 23, 1925, Richmond, Surrey, son of barrister John L. Pratt and his Australian wife Annie Mary Mills (Nance) Coghill. In 1950 he went to work for BP, as a geophysicist, looking for oil in the Middle East, the Far East, and Canada, using seismic methods of exploration, and was a geologist who went with Fuchs across the continent during BCTAE 1957-58. He died in March 1994, in Surrey.

Pratt Peaks *see* **Pratts Peak**

Pratts Peak. 80°24' S, 29°21' W. A rock peak, rising to 915 m, 10 km E of Mount Provender, at the N end of the Haskard Highlands, in the W part of the Shackleton Range. First surveyed and mapped in Oct. 1957, by BCTAE. They gave the name Pratt Peaks to this peak and one immediately to the S, named for David and Geoffrey Pratt (they were not related). UK-APC accepted that name on Aug. 31, 1962, and US-ACAN followed suit that year. Surveyed by BAS personnel from Halley Bay Station between 1968 and 1971. On Dec. 20, 1974, UK-APC applied the name Pratts Peak to this peak alone, and US-ACAN followed suit in 1975. The peak that was dispossessed of a name, remains dispossessed.

Bereg Pravdy. 67°00' S, 94°00' E. A part of the coast of Queen Mary Land, near Mirnyy Station. Named by the Russians.

Le Pré *see* **Anse du Pré**

Anse du Pré *see under* **D**

Baie du Pré *see* **Anse du Pré** (under **D**)

Prebble, Michael Maynard "Mike." b. 1929, Nelson, NZ. A geographer, he was in Antarctica 7 times — in 1960-61, as the youngest member of Les Quartermain's expedition to restore the old huts at Cape Evans and Cape Royds; in 1961-62 as field assistant and dog handler at Scott Base; in 1964-65 as deputy leader at Scott Base; and in the winter of 1965 and the summer of 1965-66 as leader at the same station. He was back as leader of Scott Station in 1979-80, the summer the Champagne Flight crashed into Mount Erebus. Much involved with Antarctic conservation and preservation, he visited Antarctica twice in the 1990s, once as an observer on the *Bremen*, and in 1997-98 as an official representative of the NZ government aboard the *Kapitan Khlebnikov*. He died suddenly on April 18, 1998, at Piha, near Auckland.

Prebble Glacier. 84°16' S, 164°30' E. A small glacier, 14 km long, flowing westward from Mount Kirkpatrick in the Queen Alexandra Range, to enter Walcott Névé north of Fremouw Peak. It provides access to Mount Falla. Named by the Northern Party of NZGSAE 1961-62, for Mike Prebble (q.v.), of the base support party, who assisted the party with preparations and training. NZ-APC accepted the name, and US-ACAN followed suit in 1966. Between Nov. 1966 and Feb. 1967, the Americans had a field camp (a Jamesway hut, 16' x 16') at the mouth of the glacier, Prebble Glacier Camp, in 84°15' S, 164°10' E.

Prebble Icefalls. 79°54' S, 155°55' E. On the SW side of Midnight Plateau, in the Darwin Mountains. They occupy 2 large cirques SW of Mount Ellis, and fall about 900 m. Discovered by VUWAE 1962-63, and named for Warwick Maynard Prebble, NZ geologist on VUWAE 1962-63, VUWAE 1963-64 (leader), and VUWAE 1964-65 (leader). NZ-APC accepted the name, and US-ACAN followed suit in 1968.

Precious, Alan. Obviously known as "Presh." b. March 11, 1926, Eskrick, Yorks, but raised in Hutton Le Hole, son of electrician Frederick Precious (later a pub landlord) and his wife Esther Helstrip. After a couple of jobs, errand boy and gardening assistant, he volunteered for the RAF, was accepted, but, as they had too many RAF boys at the time, he wound up in the Army, serving with the 3rd Paras in Palestine, between 1945 and 1948. He became a postman, then transferred to the Post Office Savings Bank in Harrogate, as a clerical officer with the Civil Service. He answered an ad for FIDS, and went down to London for an interview with Frank Elliott. He had done some climbing, and some skiing in Norway, and was a natural. He sailed from Southampton on the *John Biscoe* in late 1953, and was meteorological observer at Base D in the 1954 and 1955 winters. He returned to England in May 1956, and then, on Oct. 1, 1956, sailed again from Southampton on the *Shackleton*, bound for Antarctica, as leader at Base G in the winter of 1957. He also wintered-over as met man at Halley Bay Station in 1961. All the time he was in Antarctica he was on Approved Employment Leave from the Civil Service, and in 1962 went back to the Post Office Savings Bank, then transferred to the Ministry of Defence, and finally to the Air Force Department, from which he retired in 1985. He married Jocelynne in 1963.

Precious Peaks. 62°04' S, 58°18' W. A line of about 3 dark peaks at the NE side of Martel Inlet, and 1.5 km E of Ullmann Point, on Admiralty Bay, King George Island, in the South Shetlands. Charted by FrAE 1908-10. Named by UK-APC on Sept. 23, 1960 for Alan Precious. US-ACAN accepted the name later in 1960. The Chileans named it descriptively as Promontorio Negro Notable (i.e., "notable black promontory"). Last plotted by the UK, in late 2008.

Predel Point. 64°32' S, 63°13' W. On the NW coast of Fournier Bay, it separates the termini of Rhesus Glacier to the N and Thamyris Glacier to the S, on Anvers Island, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for Predel Saddle, in southwestern Bulgaria.

Ozero Predgornoe. 70°45' S, 11°46' E. A lake at the N side of Russeskaget, in the Schirmacher Hills, in Fimbulheimen, in Queen Maud Land. Named by the Russians ("in the front of the mountain"). The Norwegians call it Predgornoevatnet (which means the same thing).

Predgornoevatnet *see* **Ozero Predgornoe**

Ozëra Predgornye. 70°32' S, 67°42' E. A group of lakes at the W foot of Mount Loewe, in the E part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Nunatak Predgornyj. 70°08' S, 65°06' E. Named by the Russians. Its coordinates, as furnished by the Russians, would place it in the same location as Harriss Ridge, in the Athos Range of the Prince Charles Mountains. Unlikely, but it may be the Russian name for that ridge. *See also* **Hrebet Podkova**.

Mount Predoehl. 82°56' S, 163°11' E. A partly snow-covered mountain rising to 1710 m, just N of the lower part of Pavlak Glacier, in the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Martin C. Predoehl, USARP meteorologist at McMurdo in 1961-62 and 1962-63.

Preece, Ivor. b. Wales. Physicist who joined FIDS in 1959, and wintered-over at Base F in 1960 and 1961 as a geophysicist.

Prehn Peninsula. 75°06' S, 63°30' W. A mainly ice-covered peninsula, 30 km long and

16 km wide, between Hansen Inlet and Gardner Inlet, on the Orville Coast, on the SE coast of Palmer Land. Discovered aerially by RARE 1947-48. Mapped by USGS from ground surveys, 1961-65, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Lt. Cdr. Frederick Adolph "Fritz" Prehn, Jr. (b. Jan. 23, 1928, Joliet, Ill. d. Aug. 20, 2009, Pensacola, Fla.), who joined the U.S. Navy in Dec. 1945, and was in Antarctica, as a VX-6 pilot on photographic flights over the Pensacola Mountains and the area of Alexander Island, during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68). He retired from the Navy in June 1971. The feature appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Preikestolen *see* **Preikestolen Ridge**

Preikestolen Ridge. 72°06' S, 2°51' W. In the W part of Liljequist Heights, on Alhlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Preikestolen (i.e., "the pulpit"). US-ACAN accepted the name Preikestolen Ridge in 1966.

Prelez Gap. 63°34' S, 58°32' W. A flat, ice-covered saddle at an elevation of over 700 m above sea level, it links Marescot Ridge to the NW with the Louis Philippe Plateau to the SE, and overlooks the upper course of Malorad Glacier to the SW, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Prelez, in northeastern Bulgaria.

Islotes Prensa Austral *see* **Psi Islands**

Prentice, Ebenezer. b. 1806, Stonington, Conn., son of John Prentice and his wife Sarah Leonard. Whaler and sealer, who spent the 1831-33 seasons in the South Shetlands, as a crew member on the *Courier*.

Prentice Plateau. 77°29' S, 160°37' E. A nearly rectangular plateau, with an area of about 14.5 sq km, at the N side of Victoria Upper Glacier, and W of Apollo Peak, in the Olympus Range of Victoria Land. The upper surface (at about 1850 m) is ice-covered, except for scoured outcrops. Named by US-ACAN in 2004, for Michael L. Prentice, of the department of earth sciences at the University of New Hampshire, in Durham, in USAP for about 15 years beginning about 1983, including work in the McMurdo Dry Valleys. NZ-APC accepted the name on Nov. 30, 2004.

Prescott, Richard John "Dick." b. June 23, 1935, Warsaw, NY, but grew up in neighboring Perry, NY, son of the postmaster there, Ronald Prescott and his wife Beatrice Donald. He joined the U.S. Navy on Sept. 28, 1953, and served as a Seabee in Bainbridge, Md., which is where he was, doing general maintenance duties, when he saw the notice for Naval volunteers wanted for Antarctica. He trained at Davisville, RI, then shipped out from Norfolk, Va., on the *Wyandot*, in charge of a team of dogs (John Tuck was in charge of the other team, on the *Glacier*), to Christchurch, NZ, then on to McMurdo, where, as builder 2nd class on Chief Bevilacqua's team, he helped build the base there from nothing, and wintering-over in 1956, as a member of the Search and Rescue Operations team (*see* **McMurdo**, and **South Pole Station**). On Oct. 27, 1956 he was one of the 4 men flown out to establish Beardmore Glacier Camp. On Nov. 25-26 he was flown by Gus Shinn in the *Que Sera Sera* to the Pole, as one of the 2nd party of Seabees, to help build the station there in Nov. and Dec. 1956. After the job was done he was one of the 1st party to fly out, on Dec. 24, 1956, back to McMurdo, then shipped out to Sydney, then back to California. His last posting was at Quonset Point, Md., then in 1957 he left the Navy, and in 1958 married Audrey Beesing. He had various jobs, including mechanic in a salt mine in New York, then became an automobile dealer and head of an auto transportation company in NY. His wife died in 1964, and he married Patricia Krenzer in 1967. He retired in 2000.

Prescott Spur. 77°05' S, 162°16' E. A rock spur, running N-S, and rising to 1250 m, between Robson Glacier and Pyne Glacier, in the Gonville and Caius Range of Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Dick Prescott. NZ-APC accepted the name on April 7, 2008.

Presian Ridge. 62°40' S, 60°10' W. A ridge, rising to 1456 m, extending 950 m in an E-W direction in Friesland Ridge, between Mount Friesland to the W and Catalunyan Saddle to the E, 3.5 km S of Kuzman Knoll, and 4.1 km SE of the summit of Pliska Ridge, in the Tangra Mountains of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for Khan Presian of Bulgaria, 836-852.

President Beaches. 62°37' S, 61°07' W. A series of beaches extending for 10 km along the W end of Byers Peninsula, from Hell Gates to Start Point, on Livingston Island, in the South Shetlands. In Feb. 1969, Kaye R. Everett, USARP geologist making a reconnaissance soil survey in the area, named them West Beaches. However, the U.S. thought that Mr. Everett's naming would not really be distinctive enough, or meaningful enough, and they were right. Instead, in 1970, they called this feature President Beaches, to preserve the name that had once been used for Plymouth Harbor — i.e., President's Harbor, which is an anchorage just off these beaches. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer. Last plotted by the UK, in late 2008. There is a 1971 Chilean reference to the N part of the beaches as Playa Skúa.

President Harbor *see* **New Plymouth**

President Head. 62°44' S, 61°12' W. A headland forming the NE extremity of Snow Island, in the South Shetlands. Photographed aerially by FIDASE in 1956. Named by UK-APC on Aug. 31, 1962, to preserve the original name of Snow Island, i.e., President Island, as the Connecticut sealers called it in 1820-21. That name did not catch on. It appears on a British chart of 1962. US-ACAN accepted the British naming in 1965. One of the Argentine Antarctic expeditions named it Punta Tortuga (i.e., "tortoise point"), for its shape in plan view. That name has been appearing since 1978, and seems to be the one used by the Argentines today.

President Island *see* **Snow Island**

Isla Presidente Aguirre Cerda *see* **Clarence Island**

The *Presidente Alessandri*. Ship of 1644 tons, owned by the Chilean-Norwegian Fishing Community, operating out of Punta Arenas in Antarctic waters from 1933. *See* **Ambush Bay**.

Bahía Presidente Balmaceda *see* **Mobiloil Inlet**

Ensenada Presidente Barros Luca *see* **New Bedford Inlet**

Presidente Eduardo Frei Montalva Station *see* **Presidente Frei Station**

Presidente Frei Station. 62°12' S, 58°58' W. Chilean Air Force base on King George Island, at the head of Ardley Cove, on Fildes Peninsula, King George Island, in the South Shetlands. More formally called Base Aérea Antártica Presidente Frei Montalva, or Presidente Eduardo Frei Montalva Station, and commonly known as Frei Station. **March 7, 1969**: The station was completed. Inaugurated by President Frei himself, as the Centro Meteorológico Eduardo Frei. **1969 winter**: Juan Becerra González (leader). **1970 winter**: Jorge Villa Gallardo (leader). **1971 winter**: Evandro Valenzuela Guevara (leader). **1972 winter**: Manuel González Sepúlveda (leader). **1973 winter**: Miguel Camus Saldías (leader). **1974 winter**: Roberto Vergara Pesenti (leader). **1975 winter**: Luis Cornejo S. (leader). **1976 winter**: Evandro Valenzuela Guevara (leader). **1977 winter**: Alejandro Pérez Llanos (leader). **1978 winter**: Miguel Gómez Z. (leader). **1979 winter**: Miguel Camus Saldías (leader). **1979-80 summer**: The Chileans decided to build a new station nearby to service Frei's runway, and called this new station Teniente Rodolfo Marsh station. **1980 winter**: Juan López del Castillo (leader). **1981 winter**: Horacio López del Castillo (leader). Although Frei kept going as a meteorological center, it was incorporated administratively into Teniente Rodolfo Marsh Station after the 1981 winter, and the leader at Marsh was also leader at Frei. After the 1994 winter, the situation was reversed. The name of the entire complex became known as Base Presidente Eduardo Frei Montalva, or Presidente Eduardo Frei Montalva Station, or Frei for short, and the name Teniente Rodolfo Marsh was, from now on, applied only to the runway. **1995 winter**: Waldo Zúñiga Peña y Lillo (leader). **1996 winter**: Waldo Zúñiga Peña y Lillo (leader). **1997 winter**: Roberto Sarabia Vilches (leader). **1998 winter**: Roberto Sarabia Vilches (leader). **1999 winter**: Federico Klock Cruz (leader; he was later a brigadier general). **2000 winter**: Federico Klock Cruz (leader). The station has sent a wintering team every year since. The Russians' Bellingshausen Station is,

rather interestingly, also in the same Frei complex, as is Escudero Station.

Presidente Gabriel González Videla Station. 64°49' S, 62°52' W. Correctly known as Base Presidente Gabriel González Videla, but more popularly known as González Videla. Permanent year-round Chilean meteorological station built by the Chilean Air Force (FACH) in Jan. 1951 on a rock surface, at Waterboat Point, Paradise Harbor (or Paradise Bay, as it was called then), on the Danco Coast of the Antarctic Peninsula, and inaugurated on March 12, 1951. It was one hut back then, accommodating 8 men. **1951 winter**: Lt. Roberto Araos Tapia, Chilean Air Force (leader), Subteniente José Ormeño M. (radio engineer), Sargento Victor Sierra Acuña (sick berth attendant), Sargento Clementino Varas C. (cook), Cabo Miguel Jara Acevedo (radio operator), and Cabo Manuel Antuñez I. (meteorological observer). **1952 winter**: Gerardo López Ángulo (leader). **1953 winter**: Sergio Espinoza L. (leader). **1954 winter**: Eleuterio Molina B. (leader). **1955 winter**: Orlando Pérez (leader). **1956 winter**: Ernesto L. Galaz Goodman, Chilean Air Force (leader). **1957 winter**: Vicente Rodríguez Bustos, Chilean Air Force (leader). **1958 winter**: Tulio Vidal Corvalán (leader). **1959 winter**: Hernán Rojas L. (leader). **1960 winter**: Guillermo Kaempffer (leader). **1961 winter**: Peter Welkner M. (leader). **1962 winter**: Braulio Araya (leader). **1963 winter**: Luis Valdés Valdés (leader). **1964 winter**: Guillermo Sandóval (leader). **1964-65 summer**: The station was closed as a wintering station, and open now only in the summer. **1966-67**: The station was closed completely. **1967-68**: The station was re-opened as a year-round base. **1968 winter**: René Miranda Britano (leader). The station was closed after the 1969 winter. **1981-82 summer**: The station was re-opened by the Chilean Air Force as a summer station for 10 persons, but closed again after the 1983-84 summer. **1986-87 summer**: The station re-opened as summer station, and was still going as such in 1987-88.

Presidente Pedro Aguirre Cerda Station. 62°56' S, 60°36' W. Chilean scientific base at Pendulum Cove, Port Foster, Deception Island, in the South Shetlands. Nearby are warm volcanic springs. **Feb. 18, 1955**: Inaugurated by Chilean minister of defense, Tobías Barros Ortiz, and run by the Chilean Air Force. It was going to be called Presidente Carlos Ibáñez del Campo, for the then president of Chile, but he himself named it after ex-president Aguirre Cerda. **1955 winter**: Hernán del Río (leader). **1956 winter**: Hugo Sage S. (leader). **1957 winter**: Sergio Lizasoaín Mitrano (leader). **1958 winter**: Eduardo Fornet Fernández (leader). **1959 winter**: Silvestre Mahuzier Peña (leader). **1960 winter**: Fernando Mansilla Salas (leader). **1961 winter**: Luis Rojas Flores (leader). **1962 winter**: René Arriagada (leader). **1963 winter**: Mario López Tobar (leader). **1964 winter**: Andrés Pacheco (leader). **1965 winter**: Mario Jahn Barrera (leader). **1966 winter**: Roberto Stange Bahner (leader). **1967 winter**: Jorge Iturriaga Moreira (leader). **Dec. 5, 1967**: The station was destroyed by the volcano which also wiped out the British Base B. The 16 men had to be evacuated. One can still see the ruins today.

The *Presidente Pinto*. A 4087-ton, 426-foot special attack ship, built in Providence, RI, by Welch-Kaiser, and launched on July 26, 1945, as the *Zenobia*. Sold to the Chileans in 1945, she became the *Presidente Pinto*, and took down the Presidential Antarctic Expedition of 1948 (see below). Captain was Miguel Lagos Grant. She was decommissioned in 1968, and scrapped in 1974.

Canal Presidente Sarmiento *see* **George VI Sound**

Presidential Antarctic Expedition. Chilean expedition of 1948 (separate from ChilAE 1947-48), consisting of one ship, the *Presidente Pinto*, which took to Antarctica President General González Videla, with an official party of 140, including minister of national defense Gen. Guillermo Barrios Tirado. The president inaugurated Soberanía Station (later called Capitán Arturo Prat Station) on Feb. 18, 1948.

President's Harbor *see* **New Plymouth**

Preslav Crag. 62°43' S, 60°11' W. A sharp peak rising to about 600 m in Friesland Ridge, 1.65 km ESE of St. Cyril Peak, 2 km NNW of Needle Peak, and 3.1 km WSW of the summit of Preshev Ridge, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. With its precipitous and ice-free SW and NE slopes, it overlooks Prespa Glacier to the SW and Macy Glacier to the NE, the latter flowing between Preslav Crag and Peshev Ridge into Brunow Bay. Named by the Bulgarians on Feb. 17, 2004, for the town of Veliki Preslav, the 9th-century capital of the First Bulgarian Kingdom.

Preslik Spur. 82°32' S, 51°20' W. An ice-free spur, S of Clemons Spur and SW of Forlidas Ridge, in the Dufek Massif, in the extreme N part of the Pensacola Mountains. Named by Art Ford for Private 1st Class Joseph W. Preslik, a member of the U.S. Army Aviation Detachment with the USGS Pensacola Mountains Survey of 1965-66. US-ACAN accepted the name, and UK-APC followed suit on May 21, 1979.

Prespa Glacier. 62°44' S, 60°12' W. A glacier on Rozhen Peninsula, bounded to the E by Needle Peak, it lies between that peak and Tarnovo Ice Piedmont, and flows SE into Bransfield Strait, in the E part of Livingston Island, in the South Shetlands. It is bounded to the NW by St. Cyril Peak and St. Methodius Peak, and to the SW by Shumen Peak and Yambol Peak. Named by the Bulgarians on March 15, 2002, for Prespa Peak, in the Rhodope Mountains of Bulgaria. UK-APC accepted the name on July 8, 2003, and US-ACAN followed suit that year. Plotted by the UK, in late 2008.

Mount Press. 78°05' S, 85°58' W. Rising to 3830 m, just E of the main ridge of the Sentinel Range, and 5.5 km ENE of Mount Bentley, in the Ellsworth Mountains. Mapped by Charlie Bentley during his Marie Byrd Land Traverse of 1957-58, and named by him for Frank Press, vice chairman of the technical panel on glaciology of the U.S. National Committee for IGY. In 1965 Mr. Press became chairman of the department of earth and planetary sciences at MIT, and in 1977 became White House science adviser. US-ACAN accepted the name in 1960.

Pressure Bay. 71°25' S, 169°20' E. A small arm, 5 km wide, in the W side of Robertson Bay, between Cape Wood and Birthday Point, along the N coast of Victoria Land. Charted in 1911 by Campbell's Northern Party, during BAE 1910-13. They had a great deal of trouble sledging across the pressure ice fringing the shore of Robertson Bay. This pressure was caused by the adjacent Shipley Glacier descending to the sea ice. Hence the name given by Campbell. US-ACAN accepted the name, and NZ-APC followed suit.

Pressure ice *see* **Pressure ridges**

Pressure ridges. Also known as pressure ice. Ridges, hummocks, or any kind of sharp mass of ice thrust up by the collision of slowly-moving ice with a land mass.

Preston, Frank. b. 1938. FIDS surveyor who wintered-over at Wordie House in 1960, and as first base leader at the new Adelaide Island Station (Base T) in 1961.

Preston Island. 67°48' S, 68°59' W. The largest of the Henkes Islands, off the SW end of Adelaide Island. Charted by an RN Hydrographic Survey unit on the *Protector*, in 1963. Named by UK-APC on Feb. 12, 1964, for Frank Preston. US-ACAN accepted the name later that year, and it appears on a British chart of 1964.

Preston Point. 70°17' S, 71°48' E. An ice-covered point with marginal rock exposures, marking the N end of Gillock Island, in the Amery Ice Shelf. Delineated in 1952 by U.S. cartographer John H. Roscoe from air photos taken during OpHJ 1946-47, and named by him for John C. Preston, Jr., USN, ARM2 on the *Currituck*, with PBM Squadron, air crewman on OpHJ flights over this area, which provided the photos from which Roscoe was to work 5 years later. US-ACAN accepted the name in 1956, and ANCA followed suit on May 18, 1971.

Mount Prestrud. 86°34' S, 165°07' W. Rising to over 2400 m, in the SW part of the massif at the head of Amundsen Glacier, in the Queen Maud Mountains. During his race to the Pole, in Nov. 1911, Amundsen named a mountain in this general area as Mount K. Prestrud, for Lt. Kristian Prestrud. This may or may not be the same mountain, but US-ACAN picked one and named it in 1950, in order to preserve Prestrud's name (and Amundsen's intention) in the area. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. NZ-APC accepted the name.

Prestrud, Kristian. b. Nov. 11, 1880, Solør Hed, Norway, son of farmer Kristian Iversen Prestrud (the name was originally Praestrud), and his wife Hulda Augusta. After training as a sea cadet at Horten, he became a Norwegian naval officer, and was scientific observations chief on NorAE 1910-12, and 1st officer on the *Fram*. He did not go with Amundsen to the Pole, but he

did lead an independent sledge journey, the Eastern Sledge Party of 1911, to Scott's Nunataks (or Scott Nunataks, as they are now also called), on Edward VII Peninsula (or Edward VII Land, as it was called then). He was one of the group who arrived back in London on Nov. 29, 1912, on the *Highland Scot*, from La Plata. He died in 1927.

Prestrud Bank. 77°30' S, 159°30' W. A submarine feature off Edward VII Peninsula. Named by international agreement in 1988, in association with Prestrud Inlet.

Prestrud Coast *see* **Shirase Coast**

Prestrud Inlet. 78°18' S, 156°00' W. A re-entrant (an ice shelf indentation into the mainland) in the S side of Edward VII Peninsula, it forms the neck of this peninsula, at the NE corner of the Ross Ice Shelf. Named by USAS 1939-41 for Lt. Kristian Prestrud. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

The *Pretext* *see* **The *John Biscoe***

Preuschoff, Franz. b. Germany. Lufthansa flight engineer who went as flight mechanic for the *Passat* on GermAE 1938-39. He continued with Lufthansa long after World War II.

Preuschoff Range. 72°04' S, 4°03' E. A mountain range consisting of Mount Hochlin and associated features, just W of Kaye Crest, in the Mühlig-Hofmann Mountains of Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Preuschoff-Rücken, for Franz Preuschoff. Because the expedition's photos were sometimes somewhat inaccurate, this may or may not be the feature he intended, but it's pretty close to it if it's not. US-ACAN accepted the translated name in 1970.

Preuschoff Rücken *see* **Preuschoff Range**

Preuschoffrücken *see* **Preuschoff Range**

Prévost, Jean. Biologist of the French Polar Expedition of 1952, wintering-over that year at Base Marret. He also wintered-over (as biologist) at Dumont d'Urville Station in 1956.

Prevot Island. 64°53' S, 63°58' W. A small, rocky island, 0.8 km NE of Miller Island, it is the northernmost of the Wauwermans Islands, in the Wilhelm Archipelago. ArgAE 1953-54 surveyed it, and named it Isla Fernando, and it appears as such on their 1954 chart. However, ArgAE 1956-57 renamed it Isla Primer Teniente Prevot, to honor 1st Lt. Prevot, commander of the mobile detachment in the operations of the Argentine Air Force unit for Antarctica. He died on the job (but not in Antarctica). That name appears on their 1957 chart, and on a 1963 chart of theirs, and was the name accepted by the Argentine gazetteer of 1970. The name was later shortened to Isla Prevot. In 1956-57 it was resurveyed by the RN in conjunction with Fids from Base N. On July 7, 1959, UK-APC accepted the name Tangent Island, for its position on the S side of Bismarck Strait. It appears as such on a British chart of 1960. In 1965 US-ACAN accepted the name Prevot Island. The Argentines call it Isla Tangente. However, we are told that the Argentines today call it Isla Tangente, which, being a translation of the British term at the expense of a perfectly good Argentine name with quite a history behind it, does not seem credible.

Prezbecheski Island *see* **Przybyszewski Island**

Mount Priam. 64°34' S, 63°24' W. A flat-topped, snow-covered mountain, rising to 1980 m, it forms the central mass of the Trojan Range, 6 km N of Mount Français, on Anvers Island, in the Palmer Archipelago. Surveyed in 1955 by Fids from Base N, and named by UK-APC on Sept. 4, 1957, for the Homeric character. It appears on a British chart of 1959. US-ACAN accepted the name in 1963.

Priboy Rocks. 62°22' S, 59°22' W. A group of rocks extending 1.65 km in an E-W direction and 1.2 km in a N-S direction, off the E coast of Robert Island, in the South Shetlands. Their central point is 750 m E of Smirnenski Point, 1.45 km SSW of Salient Rock, and 850 m N of Perelik Point. Mapped by the British in 1968, and by the Bulgarians in 2009. Named by the Bulgarians on Sept. 14, 2010, for the settlement of Priboy, in western Bulgaria.

Ozero Pribrezhnoe. 67°38' S, 62°23' E. A lake immediately NE of Forbes Glacier, in the Framnes Mountains of Mac. Robertson Land. Named by the Russians.

Zaliv Pribylova. 69°45' S, 0°30' E. A gulf on the Princess Martha Coast. Named by the Russians.

Mount Price. 84°29' S, 166°38' E. Rising to 3030 m, it is the eastern of 2 peaks at the N end of the Adams Mountains, in the Queen Alexandra Range. Named by US-ACAN in 1966, for Rayburn Price, USARP meteorologist at Hallett Station in 1963.

Price, David Michael. b. 1935, Thornbury, Glos, son of Albert E. Price and his wife Florence C. Bruton. He was working for a company that had a contract for power generators, and one came in for FIDS. He applied, and became a diesel electric mechanic, sailing from Southampton on Oct. 1, 1957, on the *Shackleton*, bound for Montevideo and the Falkland Islands. He wintered-over at Port Lockroy Station in 1958, and in the summer of 1958-59 spent 6 weeks in the Falklands, then back to Port Lockroy for the 1959 winter. The *John Biscoe* took him back to Port Stanley in 1960, and he made his way back to the UK on the *Kista Dan*. He was a mining engineer in Malaya for 7 years, married an Australian in 1965, then went to Australia in 1967. In 2008 he published his book *Tip of the Iceberg*. He had also written another book, called *Climate Change*.

Price, Murray. b. March 22, 1940. Senior plumber and official photographer who wintered-over at Macquarie Island Station in 1969, at Casey Station in 1972, and at Mawson Station in 1976.

Price, Richard Andrew. b. Oct. 10, 1952. BAS marine technician who wintered-over at Signy Island Station in 1979, and again in 1984 and 1985, the last year as base commander. A lot of his work involved sub-ice diving.

Price Bluff. 86°32' S, 144°34' W. A large bluff, 8 km NE of Mount Mooney, near the head of Robison Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. Robert P. Price, USN, photographic officer on many flights as an in-flight observer during OpDF 65 (i.e., 1964-65) and OpDF 66 (i.e., 1965-66).

Price Nunatak. 67°57' S, 62°43' E. An isolated nunatak, about 7 km S of the South Masson Range, it marks the N end of the Trilling Peaks, 5 km S of Mount Burnett, in the Framnes Mountains of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos by Norwegian cartographers in 1946. Named by ANCA on Oct. 11, 1960, for Harold L. "Harry" Price, senior diesel mechanic at Mawson Station in 1959. He had also wintered-over at Macquarie Island in 1956. US-ACAN accepted the name in 1965.

Price Peak. 85°43' S, 142°24' W. Rising to 1510 m, at the N side of Leverett Glacier, 13 km N of the extremity of the California Plateau. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Floyd W. Price, VX-6 personnel man in Antarctica every summer season between 1963 and 1967, as well as one wintering-over.

Price Terrace. 77°20' S, 161°18' E. A relatively level ice-free area, about 1.5 sq km in area, and rising to about 1250 m about 750 m above Barwick Valley close southward, between LaBelle Valley and Berkey Valley, in the Cruzen Range of Victoria Land. Named by US-ACAN in 2005, for P. Buford Price, of the physics department at the University of California, at Berkeley, a USAP principal investigator for cosmic ray studies near McMurdo in 1989, and neutrino astrophysics researcher at Pole Station in 1991. NZ-APC accepted the name on Sept. 12, 2005.

Priceley, Joseph. b. April 27, 1803, London. On Dec. 26, 1839, at Hobart, he joined the *Zélée* as a 6-piaster sailor. "Priceley" is how Dumont d'Urville spelled it. It is most likely to be Priestley.

Skaly Prichudlivye.69°11' S, 77°22' E. A group of rocks, E of Brattstrand Bluffs, at the W end of Ranvik Glacier, on the Ingrid Christensen Coast, in the SE part of Prydz Bay. Named by the Russians.

Prickly Ridge. 72°31' S, 97°34' W. A rounded, ice-covered ridge, 6 km W of Shelton Head, on the S side of Thurston Island. The largest outcrop on this ridge is Belknap Nunatak. Named descriptively by US-ACAN in 2003. Small dispersed nunataks rise above the ice surface, giving the feature a prickly appearance.

Priddle, Julian Hartley. b. July 24, 1952, Bristol. Freshwater biologist who wintered-over at Signy Island Station in 1975 and 1976. During the summers he scuba dived in the island's lakes. He stayed with BAS for several years thereafter.

Priddy Glacier. 77°56' S, 164°01' E. A glacier, 3 km long, on the W side of Esser Hill, it flows NW to join Hobbs Glacier, on the Scott Coast

of Victoria Land. Named by US-ACAN in 1992, for Allan R. Priddy, of Holmes & Narver, in Antarctica many times between 1969 and 1991. He was construction foreman at 4 geological field camps, and for 4 summer seasons at Pole Station, and helped build Siple Station and Siple II Station. He also wintered-over at McMurdo.

Priddy Promontory. 69°26' S, 76°02' E. The eastern of 2 promontories to the SW of Stornes Peninsula, in the Larsemann Hills. Photographed aerially by LCE 1936-37, and plotted from these photos in 1946 by Norwegian cartographers, and named by them as Storneskloa (i.e., "Stornes claw"). Actually the name Storneskloa was applied to both this promontory and the one that became known as Tonagh Promonory. ANCA named this one as Priddy Promontory, on Sept. 29, 1988, for Richard Priddy, who wintered-over as medical officer at Casey Station in 1981, and who was medical officer and deputy leader of the ANARE Larsemann Hills field party of 1987-88. The Chinese call it Jiulong Bandao.

Islote Priest *see* **Goetschy Island**

Priest Island *see* **Goetschy Island**

Mount Priestley. 75°11' S, 161°53' E. A mountain peak rising to 1100 m, at the N side of David Glacier, 8 km SW of Mount Bellingshausen, in the Prince Albert Mountains of Victoria Land. First charted by BAE 1907-09, and named by Shackleton for Ray Priestley. US-ACAN accepted the name, and NZ-APC followed suit.

Priestley, Raymond Edward "Ray." b. July 20, 1886, Tewkesbury, England, son of Joseph Edward Priestley, the headmaster of the grammar school there, and his wife Henrietta Rice. Through his older brother, he became, while in his final year studying science at University College, Bristol, the assistant geologist on BAE 1907-09. He later studied geology in Sydney under Prof. Edgeworth David. He was back in Antarctica on BAE 1910-13 (replacing Allan Thomson, who had become ill), and was the leader of the 2nd ascent of Mount Erebus. He was a member of Victor Campbell's Northern Party during the same expedition, and thus a part of their wild adventure. In fact, another expeditioner, Grif Taylor would become his brother-in-law. His book, *Northern Adventure*, was published in 1914. He was in France during World War I with the 46th Divisional Signals, and on April 10, 1915, at Ringwood, Hants, he married Phyllis Mary Boyd, a New Zealander. He was seconded to the War Office to write *The History of the Signal Service*, and also wrote *Breaking the Hindenburg Line*, the story of his division. After the war he spent years at Cambridge, and from 1934 to 1938 was in Australia, unhappily, as vice chancellor of Melbourne University, and from 1938 to 1952 was vice chancellor and principal of Birmingham University, back in England. He was knighted in 1949, which is when he finally stopped playing cricket. From 1953 to 1955 he was chairman of the Royal Commission on the Civil Service, and from 1955 to 1958 (while Vivian Fuchs was crossing Antarctica) he was acting director of the FIDS scientific bureau. He accompanied Prince Philip on the early Jan. 1957 cruise of FIDS bases, and and in the summer season of 1958-59 went to Antarctica on the *Wyandot* as an observer with OpDF IV. He was also on the *Staten Island* that season, and visited Scott's huts. He was president of the Royal Geographical Society, 1961-68. His wife died in 1961, and Sir Raymond died on June 24, 1974, at Cheltenham, Glos.

Priestley Glacier. 74°20' S, 163°22' E. Also spelled (erroneously) as Priestly Glacier. A major valley glacier, about 100 km long and 4 km wide, it flows SE from the Polar Plateau SE of Mount Baxter, between the Deep Freeze Range and the Eisenhower Range, and enters the N end of the Nansen Ice Sheet, on the E coast of Victoria Land. First explored by Campbell's Northern Party of 1911-13, during BAE 1910-13, and named by Campbell for Ray Priestley. US-ACAN accepted the name, and NZ-APC followed suit. The Italians installed two automatic weather station here; the first was Priestley Glacier AWS, at an elevation of 640 m, and the second was Hi Priestley Glacier, at an elevation of 1980 m.

Priestley Lake. 74°53' S, 163°44' E. A lake, with seasonal ice covering, measuring 120 m by 25 m, 25 m above sea level, 200 m NE of the snow cave on Inexpressible Island where Campbell's party was forced to winter-over during BAE 1910-13. Surveyed by Vittorio Libera during ItAE 1988-89, and named by the Italians on July 17, 1997, for Ray Priestley.

Priestley Névé. 73°35' S, 160°20' E. At the head of Priestley Glacier (in association with which it was named by NZ-APC in the 1960s), in Victoria Land. US-ACAN accepted the name in 1967, and ANCA followed suit on Jan. 19, 1989. It does not seem to appear in the NZ gazetteer, which is disturbing.

Priestley Peak. 67°12' S, 50°23' E. A prominent peak between Mount Pardoe and Mount Tod, on the S side of Amundsen Bay, in the Scott Mountains of Enderby Land. Discovered on Jan. 14, 1930 by BANZARE, and named by Mawson for Ray Priestley. US-ACAN accepted the name in 1965, and ANCA followed suit.

Priestly Glacier *see* **Priestley Glacier**

Caleta Prieto. 64°41' S, 62°00' W. A cove in the SE corner of Wilhelmina Bay, between Caleta Cordovez to the N and Caleta Macera to the S, on the W coast of the Antarctic Peninsula. Named by the Chileans for 1st Lt. Leonardo Prieto Vial, hydrographic officer on the *Angamos* during ChilAE 1963-64. The Argentines call it Caleta Quintero.

Prikken. 72°14' S, 27°50' E. A small nunatak just S of Balchen Mountain, in the easternmost part of the Sør Rondane Mountains. Named by the Norwegians (name means "the dot").

Ozero Prilednikovoe *see* **Prilednikovoye Lake**

Prilednikovoevatnet *see* **Prilednikovoye Lake**

Prilednikovoye Lake. 70°45' S, 11°35' E. A lake, 2 km SSW of Tyuleniy Point, in the southwesternmost part of Sundvassheia, in the Schirmacher Hills, at the edge of the continental ice sheet, in Fimbulheimen, in Queen Maud Land. Mapped by SovAE 1961, and named by them as Ozero Prilednikovoe (i.e., "fore-glacier lake," or "near the glacier"), for its location. US-ACAN accepted the translation in 1970. The Norwegians call it Prilednikovoevatnet.

Prilep Knoll. 63°29' S, 57°59' W. An ice-covered hill rising to over 700 m at the S entrance to Misty Pass W of the Laclavère Plateau, 2.39 km E of the hill the Argentines call Cerro Morro del Paso, 1.41 km S by W of Dabnik Peak, 10.08 km W of Kanitz Nunatak, and 6.72 km N of Yarlovo Nunatak, it surmounts Broad Valley to the SE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Prilep, in southeastern Bulgaria.

Base Primavera *see* **Primavera Station**

Cabo Primavera *see* **Cierva Point, Spring Point**

Cabo Primavera Refugio *see* **Primavera Station**

Cape Primavera *see* **Spring Point**

Primavera Bay *see* **Brialmont Cove**

Primavera Station. 64°09' S, 60°55' W. Argentine summer scientific base on Cierva Point (Spring Point), Hughes Bay, on the Danco Coast of the Antarctic Peninsula. It began life as a refugio, built on a rock surface, and inaugurated on Jan. 23, 1954, as Refugio Naval Cabo Primavera. Its name was soon changed to Refugio Naval Capitán Cobbett (name also seen as Cobbet), named for Capt. Enrique Cobbett, who fought with Almirante Brown in the 19th century. It closed in 1962. The site was re-opened, on March 3, 1977, this time as a real scientific station, year-round, with 11 buildings, taking a maximum of 18 persons, and was inaugurated on March 8, 1977, as Base de Ejército Primavera (Primavera Army Base), but known more commonly as Base Primavera. **1977 winter**: Engineer Lt. Col. Ignacio Carro (leader). **1978 winter**: Artillery Lt. Col. Julio Vicente Fuscaldo (leader). **1979 winter**: Artillery Captain Miguel Felipe Perandones Tomas (leader). **1980 winter**: Infantry 1st Lt. Augusto César Buraschi (leader). **1981 winter**: Infantry Captain Juan Manuel Carrizo (leader). The station was closed after the 1981 winter, and from then on used only as a temporary base.

Prime Head. 63°13' S, 57°17' W. A prominent, snow-covered headland rising to about 50 m, and forming the N extremity of both Trinity Peninsula and the Antarctic Peninsula. In Feb. 1838, during FrAE 1837-40, Dumont d'Urville discovered and charted a point 5 km to the E, which he named Cap Siffrey. In 1946, when Fids from Base D surveyed this area, they mistakenly applied the name Cape Siffrey to the present feature. It appears that way on a British chart of 1949, and that was how it was accepted by US-ACAN and by UK-APC, and how it appears in the 1955 British gazetteer. It appears as such on a Chilean chart of 1951 (as Cabo Siffrey), and that was the situation accepted by the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

In fact, everyone, the Russians included, bought into the error. After examining FIDASE air photos taken in 1956–57, and re-examining Dumont d'Urville's charts, FIDS cartographers sorted out the confusion, gave the name Siffrey back to its original owner (but as Siffrey Point), and renamed the present feature Prime Head to indicate that this is, indeed, the northernmost point on the Antarctic continent. UK-APC accepted that on Feb. 12, 1964, and US-ACAN followed suit that year, leaving the South Americans in an anachronistic vortex.

Isla Primer Teniente Aciar *see* **Prevot Island**

Punta Primera Junta. 64°51' S, 63°01' W. A point projecting into Alvaro Cove, on the N coast of Bryde Island, off the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

The *Primero de Mayo*. Also written *1° de Mayo*. ARA (Armada República Argentina) ship first in Antarctic waters in 1925. She was back in 1929, when, in Feb. of that year, under the command of Capt. Francisco J. Clarizza, she relieved Órcadas Station (Alberto Carcelles was also aboard). In early 1930, under the command of Ángel Rodríguez, she again relieved Órcadas, and was also in the South Shetlands. This time she was carrying an amphibious plane on board, but when it came down to it the plane wouldn't work. In early 1931 she relieved Órcadas again. Her skipper that season was Capt. Domingo Asconapé. The ship was back in the South Shetlands in 1942, surveying and claiming Deception Island for Argentina. Alberto J. Oddera was captain that year. In 1943 she was back again, to do more surveying, under the command of Silvano Harriague. In March 1943 she landed a party at Stonington Island, the first visitors since USAS left it in 1941. They rescued much of the U.S. equipment. On March 2, 1943 they were at Wiencke Island. Also on board were P. Abate, L. Avellaneda, and M. Landi (they left their names, and the date, on a rock). She sank off the Argentine coast (near Monte Hermoso) on Feb. 5, 1944.

Bahía Primero de Mayo *see* **Primero de Mayo Bay**

Caleta Primero de Mayo *see* **Surgidero Iquique**

Isla Primero de Mayo *see* **Lambda Island**

Paso Primero de Mayo. 60°42' S, 44°51' W. A small marine passage between Nigg Rock and Eillium Island, in the Bruce Islands, in the South Orkneys. Named by the Argentines for the *Primero de Mayo*.

Primero de Mayo Bay. 62°58' S, 60°42' W. The largest bay in Port Foster, Deception Island, on the SW side of that natural harbor, in the South Shetlands. Named Bahía 1° de Mayo (i.e., Bahía Primero de Mayo) by ArgAE 1942–43, for the *Primero de Mayo*. It appears as such on an Argentine chart of 1944, and that was the name accepted by the Argentine gazetteer of 1970. In 1947 what would later be called Decepción Station (q.v.) was established here by the Argentines. There is a 1955 Argentine reference to Caleta Primero de Mayo, but that is really to the feature the Chileans call Surgidero Iquique (q.v. under **I**). Surveyed by Fids from Base D in 1953–54, and photographed aerially by FIDASE in 1956–57. On July 7, 1959, UK-APC accepted the name Fumarole Bay, because the most active fumarole on the island is here. US-ACAN accepted the name Primero de Mayo Bay in 1965. The Chileans call it Bahía Septiembre, and the Spanish call it Fumarolas, or Bahía Fumarolas. The British were the last to plot it, in late 2008.

Primero de Mayo Station *see* **Decepción Station**

The *Primeroso-Mariana*. Spanish vessel out of Cádiz in 1819, traveling with 17 million pesos in cash, which went south of 60°S in an effort to save her partner ship, the *San Telmo* (q.v. for details). Captain was Manuel de Castillo.

Gora Primetnaja. 70°45' S, 11°40' E. A hill in the central part of Sundvassheia, in the Schirmacher Hills, in Fimbulheimen, in Queen Maud Land. Named by the Russians (name means "landmark hill"). The Norwegians call it Primetnajaberget (which means the same thing).

Primetnajaberget *see* **Gora Primetnaja**

Primus. A portable kerosene stove developed in 1892, and used in Antarctica during sledging trips.

Mount Prince. 74°58' S, 134°11' W. A prominent butte, rising to 640 m, marking the N end of the Perry Range, on the coast of Marie Byrd Land. Algae, lichens, mosses, and petrels are to be found here. Discovered and photographed aerially by USAS 1939–41. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Joseph F. Prince, USN, VX-6 aviation machinist's mate who spent several summer seasons in Antarctica, as well as wintering-over at Little America in 1956, and at McMurdo in 1966.

Prince Albert I Bank *see* **Albert Bank**

Prince Albert Mountains. 76°00' S, 161°30' E. A major coastal mountain group, extending northward for over 300 km from McMurdo Sound, between Priestley Glacier and Ferrar Glacier, in Victoria Land. Mount Davidson is the highest peak, and others include Mount Gran, Mount Thomson, Mount Woolnough, Mount Morrison, Mount Brogger, Mount Forde, Mount Marston, Mount Creak, Mount Chetwynd, and Mount Gauss. Discovered on Feb. 17, 1841, by Ross, who named them for Prince Albert, husband of the relatively new queen, Victoria. US-ACAN accepted the name in 1947.

Prince Andrew Plateau. 83°38' S, 162°00' E. A large, ic-covered plateau, about 60 km long, 24 km wide, and averaging about 2700 m in elevation, S of Mount Rabot, it forms the S part of the Queen Elizabeth Range. Named by NZGSAE 1961–62, for the son of Queen Elizabeth II of England. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Prince Charles Mountains. 72°00' S, 67°00' E. Known familiarly by the Australians as the PCMs. Also called Main South Range. They are a major group of mountains in Mac. Robertson Land, and include the Athos Range, the Porthos Range, and the Aramis Range. These mountains, and other scattered peaks, form an arc of about 430 km (the Australians say about 380 km) in length from the N extremity (which is about 320 km SSE of Mawson Station), and extend from the vicinity of Mount Starlight in the N, to Goodspeed Nunataks in the S. Discovered and photographed aerially and from a distance during OpHJ 1946–47. The exact position of their N components was first determined by Bob Dovers, who saw them from the Stinear Nunataks in Dec. 1954, toward the end of the first wintering-over at Mawson Station. The N range (i.e., the Athos Range) was first visited by John Béchervaise's ANARE party in Dec. 1955. On Jan. 23, 1956 the Queen of Australia graciously allowed ANCA to name them for her son. The Australians plotted them in 71°26' S, 67°15' E. In the summer of 1956–57, Bill Bewsher's ANARE party explored and mapped the 3 northern ranges. In 1957, Keith Mather's ANARE party reached the Goodspeed Nunataks, in the south. ANARE parties made landings from the air in 1958 and 1959. In 1960 and 1961, Ric Ruker and Dave Trail respectively led ANARE parties that made geological surveys of the S components. In 1969, ANARE began a detailed topographical and geological survey of the mountains, calling these summer expeditions the Prince Charles Mountains Survey. US-ACAN accepted the name in 1961, but with the coordinates as given at the top of this entry. The Australians say they extend between 70°10' S and 74°30' S, and between 60°00' E and 60°40' E (sic), so one can see immediately that they are not to be trusted, and that one must rely on the American coordinates.

Prince Charles Strait. 61°06' S, 54°34' W. A strait, 8 km wide, between Cornwallis Island and Cape Valentine (on Elephant Island), in the South Shetlands. Known to sealers in 1820–21. The first recorded navigation of this strait was on March 7, 1839, by the *Porpoise*, during USEE 1838–42. Soundings of the strait were made by the *John Biscoe* and the *Sparrow* on Dec. 7, 1948. Named by them for Prince Charles (*see* **Prince Charles Mountains**). UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such on a British chart of 1954, in the 1955 British gazetteer, and on a British chart of 1962. Last plotted by the UK, in late 2008. On an Argentine chart of 1977, the passage between Elephant Island and Clarence Island was incorrectly referred to as Pasaje Príncipe Carlos.

Monts Prince de Ligne *see* **Prince de Ligne Mountains**

Prince de Ligne Mountains. 72°20' S, 31°14' E. A small group of mountains rising to 2285 m, 16 km N of the Belgica Mountains. Discovered by BelgAE 1957–58, led by Gaston de Gerlache, who named them Monts Prince de Ligne, for Prince Antoine de Ligne (b. March 8, 1925, Brussels. d. Aug. 21, 2005, Belgium), the 13th prince of that line, RAF World War II pilot, and pilot and photographer with de Gerlache's expedition. US-ACAN accepted the name Prince de Ligne Mountains in 1962. In 1950, Prince Antoine married Princess Alix of Luxemburg.

Prince Edward Glacier. 82°46' S, 159°32' E. A glacier draining the N side of the Cotton Plateau, in the Queen Elizabeth Range, and flowing N for about 10 km along the W side of Hochstein Ridge. Named by NZ-APC for Prince Edward, son of Queen Elizabeth. US-ACAN accepted the name in 1966, and ANCA followed suit on Dec. 7, 1976.

Prince Edward Islands. 46°46' S, 37°51' E. Two small islands in the sub-Antarctic part of the Indian Ocean, and therefore not in Antarctica, as such. Marion Island is the larger, and Prince Edward Island is the smaller.

Prince Gustav Channel. 63°50' S, 58°15' W. A strait, about 130 km long, and between 6 and 24 km wide, it separates James Ross Island and Vega Island from Trinity Peninsula. Discovered, traversed, and surveyed in Oct. 1903 by SwedAE 1901–04, and named by Nordenskjöld as Kronprins Gustaf Kanalen (i.e., "the Crown Prince Gustav channel"), for Prince Gustav (1858-1950), the man who would be king. Every country that had a vested interest in the region translated this according to their language, and there several variations of the name, all immediately recognizable. Ellsworth saw it aerially in Nov. 1935. It appears on a 1921 British chart as Crown Prince Gustav Channel, but on a 1943 U.S. Hydrographic Office chart of 1947 as Prince Gustav Channel. It was traversed for only the second time, and surveyed, by Fids from Base D in Aug. 1945, and again in 1946–47. The name Crown Prince Gustav Channel was accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. It appears as such on a British chart of 1959. However, on July 7, 1959, UK-APC shortened it to Prince Gustav Channel, and it appears as such on a British chart of 1962. Fids from Base D surveyed it again between 1959 and 1961. US-ACAN followed suit with the new naming in 1964. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Canal Príncipe Gustavo. *See also* **Prince Gustav Ice Shelf**.

Prince Gustav Ice Front. 63°50' S, 58°15' W. The seaward face of the former Prince Gustav Ice Shelf. From 1945 it underwent continuous retreat, and, by Dec. 2002, had, with the ice shelf, disappeared. Named by UK-APC on May 13, 1991 (the Americans do not recognize ice fronts as separate features).

Prince Gustav Ice Shelf. 64°12' S, 58°15' W. An ice shelf of more than 24 km in extent, once occupying the S part of the Prince Gustav Channel, including Röhss Bay, James Ross Island. Named by UK-APC on May 13, 1991, in association with the channel (which is really a strait). US-ACAN accepted the name. In continuous retreat from 1945 onwards, it was shown on U.S. Landsat images of Feb. and Dec. 2002 that all of the ice shelf has gone.

Prince Harald Coast. 69°30' S, 36°00' E. That portion of the coast of Queen Maud Land between the Princess Ragnhild Coast and the Prince Olav Coast, or to be more specific, between the bottom of Vestvika on the W side of the Riiser-Larsen Peninsula and Shirase Glacier, in the bottom of Lützow-Holm Bay. It actually encompasses the Lützow-Holm Bay area. Discovered aerially by LCE 1936–37, on Feb. 4, 1937, on a flight carrying Viggo Widerøe, Nils Romnaes, and Ingrid Christensen. Named Prins Harald Kyst for Prince Harald (b. 1937), the young son of the Crown Prince of Norway. It is also called Prince Harald Land. US-ACAN accepted the name Prince Harald Coast in 1952. Originally, the limits were between Riiser-Larsen Peninsula (in 34°E) and the E entrance point to Lützow-Holm Bay (marked by the coastal angle in 40°E), but in 1973 the Norwegians redefined it.

The *Prince of Denmark*. A 127-ton London sealing schooner, sheathed and coppered, built in Scotland in 1798, and in 1822 owned by David Asquith, of Lewisham. She left London on Aug. 12, 1822, left Gravesend on Aug. 19, arrived at Cape Town on Nov. 16, 1822, left there 10 days later, and was in the South Shetlands for the 1822–23 season, under the command of Captain Peter Williams. She arrived back at Gravesend on April 29, 1823, and at London on May 6, 1823, with 2700 sealskins.

The *Prince of Saxe-Coburg*. British sealer owned by James Weddell, she was in the South Shetlands in Dec. 1826, under the command of Capt. Matthew Brisbane, when she was beset and damaged by ice. She made her way back to Puerto Fury, off the W coast of Tierra del Fuego, where she was wrecked on Dec. 16, 1826. On March 6, 1827 the crew were rescued by the *Beagle*.

Prince of Wales Glacier. 82°44' S, 160°10' E. In the Queen Elizabeth Range, it flows generally N for about 16 km between Hochstein Ridge and Komhyr Ridge, into Hamilton Glacier, on the NW side of Mount Markham. It forms an access route from Marsh Glacier to the Nimrod Glacier. Named by NZGSAE 1961-62, for the Prince of Wales, i.e., Prince Charles, son of Queen Elizabeth II of England. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA also accepted the name.

Prince Olaf Escarpment *see* **Prince Olav Mountains**

Prince Olaf Mountains *see* **Prince Olav Mountains**

Prince Olav Coast. 68°30' S, 41°00' E. Also called Crown Prince Olav Land, and Prince Olav Land. That section of the coast of Queen Maud Land between Shirase Glacier in the bottom of Lützow-Holm Bay (in the W) and 45°E (in the E). Discovered by Riiser-Larsen on a flight from the *Norvegia* on Jan. 15, 1930. Named by the Norwegians as Kronprins Olav Kyst, for Prince Olav (1903–1991), later King Olav V. US-ACAN accepted the name Prince Olav Coast in 1952. Originally, this coast's limits were between the E entrance point to Lützow-Holm Bay (marked by the coastal angle in 40°E) and Shinnan Glacier (in 44°38' E), but in 1973 the Norwegians redefined it.

Prince Olav Land *see* **Prince Olav Coast**

[1]**Prince Olav Mountains**. 84°57' S, 173°00' W. Also spelled Prince Olaf Mountains. A mountain group covering 9168 sq km, and extending from the Shackleton Glacier to the Liv Glacier, 145 km in a N-S direction and 118 km in an E-W direction, in the Queen Maud Mountains, at the head of the Ross Ice Shelf. Discovered in 1911 by Amundsen, and named by him as Crown Prince Olav Mountains, for the crown prince of Norway. The name was later shortened by Byrd to Prince Olaf Escarpment (he also re-defined the feature). It was later redefined yet again. US-ACAN accepted the name Prince Olav Mountains in 1947, and NZ-APC followed suit. The highest peaks in this range are: Mount Wade, Mount Fisher, Centennial Peak, Mount Ray, Mount Sellery, Mount Oliver, Mount Campbell, Jones Peak, Mount Finley, and Seabee Heights.

[2]**Prince Olav Mountains** *see* **Bush Mountains**

Prince Philip Glacier. 82°21' S, 159°55' E. Flows S for 30 km (the Australians say 48 km) between the Cobham Range and the Holyoake Range, into Nimrod Glacier. Named by NZ-APC for Prince Philip, the Duke of Edinburgh, husband of Queen Elizabeth, and himself an Antarctic visitor (*see* **Philip**). US-ACAN accepted the name in 1966, and ANCA followed suit.

Prince-Regent Luitpold Land *see* **Luitpold Coast**

Prince William('s) Land *see* **Chanticleer Island**, **Danco Coast**, **Hoseason Island**, **Palmer Archipelago**

Princess Anne Glacier. 82°59' S, 159°20' E. At the W side of the Queen Elizabeth Range, it flows for 24 km from the area S of Mount Bonaparte, between the Cotton Plateau and the Bartrum Plateau, into Marsh Glacier. Low passes connect with the Prince of Wales Glacier and the Rabot Glacier. Named by the Northern Party of NZGSAE 1961-62, for the daughter of Queen Elizabeth. NZ-APC accepted the name, and US-ACAN followed suit in 1966. Princess Anne would later go to Antarctica (*see* **Distinguished visitors**). ANCA accepted the name on Dec. 7, 1976.

Princess Astrid Coast. 70°45' S, 7°00' E. That portion of the coast of Queen Maud Land between Trolltunga (in 0°30' W) and Cape Sedov (in 14°05' E). The entire coast is bordered by ice shelves. Discovered on Jan. 23, 1931 by Capt. H.H. Halvorsen, of the *New Sevilla*, and named by him as Prinsesse Astrid Kyst, for the Norwegian Princess Astrid (b. 1932), daughter of King Olav V. US-ACAN accepted the name

Princess Astrid Coast in 1947. Originally, it signified the section of the coast of Queen Maud Land between 5°E and 20°E, but in 1973 the Norwegians redefined its limits.

The *Princess Charlotte*. A 517-ton British sealer, built in 1815 at Whitehaven, the first of the great Indiamen belonging to Brocklebank's, of Liverpool (Thomas & John Brocklebank; they also built it, at their yard). She was registered in Whitehaven on Jan. 16, 1816, and under Cap'n John M'Kean, she made her first run to Bengal that year. In 1821 she left Calcutta, bound for the South Shetlands, for the 1821-22 season, under M'Kean, and moored in Johnson's Dock, Livingston Island. After the expedition, she went back to the Liverpool-Bengal run. She was replaced by another Brocklebank vessel of the same name, 514 tons, built at Workington in 1828, still under M'Kean (until 1836). Later she was skippered by Capt. Henry Ponsonby.

Princess Elisabeth Station. 71°58' S, 23°34' E. Belgian scientific station, known more popularly as PEA, built in the last weeks of 2007, at Utsteinen Nunatak, in the Sør Rondane Mountains of Queen Maud Land. 173 km inland from the old Roi Baudoin Station, which it replaced (after 30 years of service by that station), and 55 km from the old Asuka Station. It was the first zero-emission research station. It could house 12 persons, and an extension could handle the sleeping of another 8. On Dec. 14, 2007, the *Ivan Papanin* brought the 106 containers (containing the unassembled station), to Crown Bay. It was then transported inland.

Princess Elizabeth Land. 68°30' S, 83°22' E. Also called Princess Elizabeth Coast. That section of the coast of East Antarctica between Gaussberg and Mac. Robertson Land. Discovered on Feb. 9, 1931, by BANZARE during the 1930-31 season, and named by Mawson for the young princess who would later become Queen Elizabeth II of England and Wales (and Queen Elizabeth I of Scotland). ANCA accepted the name, but, curiously, US-ACAN does not seem to have.

Princess Elizabeth Trough. 64°10' S, 83°00' E. An undersea feature off the coast of Princess Elizabeth Land, in association with which it was named.

Princess Martha Coast. 72°00' S, 10°00' W. A long coast, it connects Coats Land with New Schwabenland, and the entire coast is bounded by ice shelves with ice cliffs 20 to 35 m high, in the W part of Queen Maud Land. Discovered aerially by Riiser-Larsen in a flight from the *Norvegia*, on Feb. 8, 1930, and he applied the name Kronprinsesse Martha Land (i.e., "Crown Princess Martha Land"), to the coast he discovered, in the vicinity of Cape Norvegia. Named for the Norwegian princess Martha (1901-1954), married to King Olav V. The name was later shortened, and the feature re-defined to being that portion of the coast of Queen Maud Land between 5°E and the terminus of Stancomb-Wills Glacier (in 20°W). In 1973, it was redefined again by the Norwegians as being between 20°W and Trolltunga (in 0°30' W).

Princess Martha Coast Station *see* **Norway Station**

Princess Ragnhild Coast. 70°30' S, 27°00' E. Also called Ragnhild Coast. That portion of the coast of Queen Maud Land between Sedovodden (14°05' E) and the bottom of Vestvika (33°E), on the W side of Riiser-Larsen Peninsula. The entire coast, except the E end, is fringed by ice shelves. Discovered by Riiser-Larsen and Capt. Nils Larsen, in flights from the *Norvegia*, on Feb. 16, 1931. Named Prinsesse Ragnhild Kyst, or Princess Ragnhild Land, by the Norwegians, for their princess (b. 1930), daughter of King Olav V. In those days it was defined as between 20°E and Riiser-Larsen Peninsula (34°E). However, in 1973, it was redefined.

Princess Royal Range. 67°33' S, 68°34' W. A mountain range at the S end of Alexander Island, extending from McCallum Pass in the N to Cape Alexandra in the south. Roughly mapped by FrAE 1903-05, as part of Graham Land. Partly re-surveyed from the ground by Fids from Base E in 1948, and partly photographed aerially by FIDASE in 1956-57. Named by UK-APC on June 6, 2006, for Princess Anne (b. 1950) (*see* **Distinguished visitors**, 2002).

Princeton Tarn. 77°35' S, 163°06' E. A tarn at the NW side of Mount Falconer, and 150 m S of Penn Tarn, in the SW part of Tarn Valley, in Victoria Land. It is one of 4 tarns in Tarn Valley named by VUWAE 1965-66 after American universities. NZ-APC accepted the name, and US-ACAN followed suit in 1997.

Cabo Principal *see* **Principal Point**

Canal Principal *see* **The Sound**

Principal Point. 64°55' S, 63°27' W. A prominent, ice-covered point, 6 km E of Cape Errera, it forms the SE end of Wiencke Island, in the Palmer Archipelago. Charted by FrAE 1903-05. Roughly charted by ArgAE 1952-53, and named by them as Cabo Principal, for its prominence as a feature. It appears as such on their 1953 chart, and was the name accepted by the 1970 Argentine gazetteer. In 1956-57 it was surveyed by Fids from Base N and also by an RN Hydrographic Survey unit. On July 7, 1959, UK-APC accepted the name Pursuit Point, in connection with an unsuccessful attempt by the RN surveyors to climb Savoia Peak to the north. It appears as such on a British chart of 1960. In 1965 US-ACAN accepted the name Principal Point. Today, it seems, the Argentines tend to call it Punta Pursuit.

Pasaje Príncipe Carlos *see* **Prince Charles Strait**

Príncipe de Asturias Peak. 78°33' S, 85°43' W. Rising to 4680 m on the Vinson Massif, 3.32 km SW of the summit of Mount Vinson, 1.33 km W of Silverstein Peak, and 5.1 km NE of Brichebor Peak, 7.68 km SE of Knutzen Peak, and 3.64 km S of Branscomb Peak, it surmounts Branscomb Glacier to the WNW, Roché Glacier to the N, and Tulaczyk Glacier to the SW, in the Sentinel Range, in the Ellsworth Mountains. Mapped by the Americans in 1988. Named by the Bulgarians on Sept. 14, 2010, for the Prince of Asturias, in connection with the peak's first ascent made by the Spaniards Manuel Álvarez and Alfonso Juez, on Jan. 23, 1995.

Canal Príncipe Gustavo *see* **Prince Gustav Channel**

Prins Harald Kyst *see* **Prince Harald Coast**

Prins Harald Land *see* **Prince Harald Coast**

The *Prinsendam*. American tourist ship, with a capacity of 700 passengers, in Antarctic waters in 2005-06.

Prinsesse Astrid Kyst *see* **Princess Astrid Coast**

Prinsesse Ragnhild Kyst *see* **Princess Ragnhild Coast**

Prinzregent Luitpold Land *see* **Luitpold Coast**

Prion Glacier. 77°20' S, 166°35' E. A glacier flowing from Mount Bird, immediately S of Sheathbill Glacier, and N of Albatross Glacier, on Ross Island. Named by NZ-APC, apparently in 1989.

Prions. The prion is a small petrel of the genus Pachyptila. There are 3 species: the dove prion, or Antarctic prion (*Pachyptila desolata*), the fulmar prion (*Pachyptila crassirostris*), and the thin-billed prion (*Pachyptila belcheri*). All are seen in Antarctica, but only the dove breeds south of 60°S — in the South Orkneys.

Mount Prior. 72°58' S, 168°47' E. A volcanic cone rising to 1220 m, about 16 km W of Mount Brewster, at the head of, and in line with, Whitehall Glacier, between that glacier and the Lady Newnes Ice Shelf, W of Mount Lubbock, and W of the S end of Daniell Peninsula, in Victoria Land. A brief description of this mountain was given by Hartley Ferrar, of BNAE 1901-04, but he misidentified it with Mount Brewster. Named by NZGSAE 1957-58, for George T. Prior (*see* **Prior Island**), who was of much help to Ferrar back in England, when they were publishing the latter's geological results of the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Prior, Douglas Roland Otway "Doug." b. Sept. 16, 1914, London, son of Alfred Prior and his wife Lilian Daisy Prior (sic). He was a carpenter on the first part (1955-57) of the British Royal Society Expedition, and as such wintered-over at Halley Bay in 1956. The other carpenter on the expedition, Johnny Raymond, was his brother-in-law (i.e., Doug was married to Johnny's sister). He and Johnny returned to London on March 13, 1957, on the *Magga Dan*. He died in Aug. 1985, in Sutton, Surrey.

Prior Bluff. 73°12' S, 68°15' E. A rock bluff in the central part of the Mawson Escarpment, between Manning Glacier and Greenall Glacier. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1960, and 1973. Named by ANCA on Nov. 27, 1973, for Lancelot Sidney Prior (b. 1913), assistant director (geophysics) at Watheroo Magnetic Observatory, in Western Australia, 1963-74. From 1948 to 1974 he was a geologist with the Bureau of Mineral Resources.

Prior Cliff. 80°47' S, 158°50' E. Rising to be-

tween 1000 m and 1200 m, it extends ENE from Mount Dick, in the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Stuart Prior, senior public servant with the Ministry of Foreign Affairs and Trade with previous involvement in Antarctic Treaty administration, who led NZ's Antarctic Policy unit for several years, and has actively worked against illegal sub-Antarctic fishing. US-ACAN accepted the name later in 2003.

Prior Glacier *see* **Pryor Glacier**

Prior Island. 75°41' S, 162°52' E. An island, about 1.5 km long and 0.8 km wide, 1.5 km E of Lamplugh Island, and about 8 km S of Cape Irízar, off the coast of Victoria Land. The granite cliffs of the island are 90 m high and covered with an ice-cap about 22 m high. First charted by BAE 1907-09, and named by Shackleton for George Thurland Prior (1862-1936), keeper of the Department of Minerals at the Museum of Natural History from 1909 to 1927. He studied all the rocks brought back by British expeditions to Antarctica. He gave his name to the mineral priorite. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Prioress Island. 64°56' S, 63°53' W. A narrow island, 0.8 km E of Host Island, in the central portion of the Wauwermans Islands, in the Wilhelm Archipelago. Shown on an Argentine government chart of 1954, but apparently unnamed. Charted by an RN Hydrographic Survey unit on the *Protector*, in 1956-57, and named by them for the *Canterbury Tales* character. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. It appears on a British chart of 1972.

Nunataki Priozërnye. 69°28' S, 68°50' E. An isolated group of nunataks on the coast of Mac. Robertson Land. Named by the Russians.

Lednik Priozërnyj *see* **Battye Glacier**

Pripek Point. 65°57' S, 65°09' W. Forms the W side of the entrance to Dimitrov Cove, on the NW coast of Velingrad Peninsula, 3.65 km N of Tuorda Peak, 3.55 km E by N of Rossa Point, and 6.8 km WSW of Biser Point, on the Graham Coast, on the W coast of Graham Land. Mapped by the British in 1971. Named by the Bulgarians on Dec. 6, 2010, for the settlements of Pripek in northeastern, southeastern, and southern Bulgaria, and Dalgi (i.e., Long) Pripek in northern Bulgaria.

Priscu Stream. 77°39' S, 162°45' E. A meltwater stream, 3 km long, flowing SW from the SE end of Lacroix Glacier to the NE end of Lake Bonney, in the Taylor Valley, in Victoria Land. Named by US-ACAN in 1996, for ecologist John C. Priscu, of the department of biological sciences, at Montana State University, at Bozeman, USAP invesigator in the McMurdo Dry Valleys between 1984 and 2002.

Priscu Valley. 77°29' S, 160°47' E. An upland, ice-free valley opening N to the head of McKelvey Valley, on the E side of the Prentice Plateau, in the Olympus Range of Victoria Land. Named by US-ACAN in 2005, for John C. Priscu (*see* **Priscu Stream**).

Prism Ridge. 73°33' S, 94°14' W. A small ridge with bare rock outcroppings, just N of Haskell Glacier, and 3 km SSW of Bonnabeau Dome, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and named by them for the large block of ice in the shape of a square prism which they found standing as an isolated feature at the S end of this ridge. US-ACAN accepted the name in 1963.

Roca Prisma. 69°12' S, 58°46' W. A very isolated rock off the E coast of the Antarctic Peninsula. Named by the Argentines.

Paredón Prisma Negro. 64°27' S, 62°23' W. The NE face of Lagrange Peak, on the SE coast of Brabant Island, in the Palmer Archipelago. Named by the Argentines.

Prismatine Peak. 69°24' S, 76°07' E. A small peak on Stornes Peninsula, in the Larsemann Hills. Named by ANCA.

Prisoe Cove. 62°33' S, 60°40' W. A cove, 3.7 km wide, indenting the N coast of Livingston Island for 1.75 km between Agüero Point and Avitohol Point, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on June 3, 2010, for the settlement of Prisoeto, in northern Bulgaria.

Pritchard Peak. 80°22' S, 155°18' E. Rising to over 1800 m, 5 km SE of Saburro Peak, in the Doll Mountains of the Britannia Range. Named by US-ACAN in 2001, for Col. Marion Graham Pritchard, Jr., vice commander and then commander of 109 Airlift Wing during the transition of LC-130 aircraft operations from the USN to the Air National Guard.

Ozero Prival'noe. 70°46' S, 11°52' E. A lake N of the westernmost part of Russeskaget, in the Schirmacher Hills, in Fimbulheimen, in Queen Maud Land. Named by the Russians (name means "stop lake"). The Norwegians call it Prival'noevatnet.

Prival'noevatnet *see* **Ozero Prival'noe**

The *Private Frank J. Petrarca* *see* **The *Petrarca***

The *Private John R. Towle* *see* **The *Towle***

The *Private Joseph F. Merrell*. A 15,200-ton, 455-foot U.S. icebreaker/freighter with a diesel-electric engine. Launched on May 27, 1944, by California Shipbuilding Company, as the *Grange Victory*, sister ship of the *Greenville Victory*, she served as a cargo ship toward the end of World War II, and in 1947 was renamed the *Private Joseph F. Merrell*. She arrived at McMurdo Sound on Jan. 22, 1957, as part of OpDF II (1956-57), her captain being Raymond C. Dollar. She was back at McMurdo in 1961-62 (Captain Harold H. Cleaves), 1962-63 (Capt. Charles Eugene Driscoll), 1963-64 (Capt. Cleaves), and 1964-65 (Capt. Cleaves). She later served in Vietnam.

Lake Priyadarshini *see* **Zub Lake**

Morena Prjamaja. 73°57' S, 66°51' E. A moraine, NW of Mount Maguire, in the S part of the Lambert Glacier. Named by the Russians.

Bukhta Prjamougol'naja *see* **Pryamougol'naya Bay**

Punta Proa. 64°53' S, 62°53' W. One of the 2 points on the NW side of Coughtrey Peninsula, named by the Argentines for parts of a ship (the other is Punta Popa), on the E side of Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Proa means "foredeck" and popa means "poop deck."

Probe Ridge. 71°50' S, 68°21' W. A prominent, snow-free, terraced ridge forming part of the N flank of Viking Valley, in the S part of Alexander Island. Named descriptively by UK-APC on Dec. 2, 1993, and also after the space probe that surveyed Mars in 1976. US-ACAN accepted the name in 1994.

Probuda Ridge. 78°07' S, 85°56' W. A side ridge, 15 km long and 4.5 km wide, descending from Mount Anderson north-northeastwards toward Mount Todd, in the north-central part of the Sentinel Range, in the Ellsworth Mountains. The ridge features Eyer Peak, Mount Press, and Mount Todd, and surmounts Embree Glacier to the W and N, and Ellen Glacier to the SE. Mapped by the Americans in 1988. The ridge's summit, Mount Press, was first climbed by the Australian-Chilean team led by Damien Gildea on Dec. 31, 2006. Named by the Bulgarians on Sept. 14, 2010, for the settlement of Probuda, in northeastern Bulgaria.

Proclamation Island. 65°51' S, 53°41' E. A small, rocky island, rising to an elevation of 244 m above sea level, close E of the Aagaard Islands, about 3.5 km off the coast of Enderby Land, and about 10 km W of Cape Batterbee. BANZARE discovered it, and on Jan. 13, 1930 a landing was made, and a proclamation was read on its summit claiming the vast area in this region for Britain. US-ACAN accepted the name in 1947, and ANCA followed suit.

Procter, Nigel Arthur Alexander. b. July 29, 1930, Richmond, Surrey, but raised partially in Kenya, son of government man Arthur Procter and his wife Helen Albrecht. In the late 1940s he was at Trent College with Robin Perry. In 1956, after Oxford, he joined FIDS, sailing out of Southampton on the *John Biscoe* on Nov. 26, 1956, as the geologist who wintered-over at Base Y in 1957, and at Base E in 1958. In May 1959 he returned to the UK, wrote up his report at the FIDS geology unit at Birmingham University, and left FIDS on May 31, 1960.

Procyon Peaks. 70°29' S, 66°30' W. Two ridges of peaks connected by a pass which can be sledged through, they rise to about 1250 m near the upper part (i.e., the head) of Millett Glacier, between that glacier and the head of Bertram Glacier, about 40 km E of Moore Point, on the W coast of Palmer Land. Surveyed by BAS personnel from Base E between 1962 and 1972. Named by UK-APC on July 21, 1976, for the star. US-ACAN accepted the name later in 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Isla Profesor Barrera *see* **Surf Rock**

Profesor Julio Escudero Station. 62°12' S, 58°58' W. Known as Escudero Station, or Base Escudero. Chilean scientific station, formerly the old Fildes Refugio. On Feb. 5, 1995, it was upgraded to a scientific station, and the name was changed to Base Profesor Julio Escudero, or Professor Julio Escudero Station, after Julio Escud-

ero, a legal adviser to the Chilean foreign ministry, who, in 1948, suggested a freeze of all territorial claims to Antarctica (this was one of the things that led to the Antarctic Treaty). The base comprised 8 buildings, located within the complex known as Frei Station (or more formally Presidente Eduardo Frei Montalva Station), 10 m above sea level, at Maxwell Bay, King George Island, in the South Shetlands.

Isla Profesor Oliver Schneider *see* **Northstar Island**

Professor Glacier. 62°05' S, 58°19' W. Between Szafer Ridge and Tern Nunatak, at Martel Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980 for Prof. Szafer (*see* **Szafer Ridge**).

The *Professor Bogucki*. A Polish Fisheries vessel, in Antarctic waters in 1977-78, under the command of skipper Jan Sokolowski. She was part of an expedition led by chief scientist Zbigniew Ziembo, and the other ships on the expedition were the *Sirius*, the *Manta*, the *Gemini*, and the *Sagitta*.

The *Professor Gruvel*. This was the former whaler *Bombay* (q.v.), bought in 1922 by the Congo Company, and her name was changed to the *Professor Gruvel*. She became an oil refining vessel, and was the ship that carried Shackleton's body from South Georgia to Montevideo, in 1922. Later, owned by Chris Christensen's Congo Company, and under the command of Captain Gustav Bull (manager) and Ole Jacobsen (skipper), near the South Shetlands (she was actually in 57°53' S, 50°45' W, in the Drake Passage), when she struck an iceberg and sank on Oct. 12, 1927. One man was drowned. The rest were saved by other whale catchers.

The *Professor Khromov*. A 71.6-meter Russian cruise ship with 32 crew, that could take 38 passengers, in Antarctic waters in 1994-95, 1995-96, and 1996-97, all three times under the command of Capt. Filip Kolesnikov.

The *Professor Molchanov*. A 71.6-meter vessel, the first Soviet tourist ship in Antarctic waters, she was there from the 1991-92 season onwards. During that first trip, indeed while she was south of the Antarctic Circle, under the command of Capt. Valeriy Maksimov, the Soviet Union fell, so the *Molchanov* also became the first Russian tourist ship, which presented a bit of an identification problem when she approached Palmer Station flying a flag the Americans had never seen before. She was back in 1992-93, still under Capt. Maksimov, and then again in 1994-95 and 1995-96, under Capt. Gennadiy Ussopov. Capt. Maksimov was her skipper again in 1996-97, and then Capt. Ussopov again in 1997-98, 1998-99, and 1999-2000. Yevgeniy Baturkin was her captain in 2000-01. She was back all seasons from then on. She had a crew of 32, and could take between 38 and 52 passengers.

The *Professor Multanovskiy*. A 71.6-meter Russian cruise and expedition ship, with 32 crew, that could take between 46 and 52 passengers. Sister ship of the *Akademik Golitisin*. She was in Antarctic waters for SovAE 1991-93 (Capt. Sergey Kostusev). In 1995-96 and 1996-97, still under the command of Capt. Kostusev, she operated in Antarctic waters as a cruise ship, and repeated that performance in 1997-98, under Capt. Andrey Gostnikov, and again in 1999-2000 (Capt. Aleksey Zakalyshnyuk). During that latter season, she relieved Bellingshausen Station. She was back in Antarctic waters in 2000-01, again under Capt. Kostusev, and in 2001-02, under Capt. Zakalyshnyuk. She was back every season from then on. She would sometimes sail under the name *Marine Intrepid*.

The *Professor Siedlecki*. Polish ship which, with the *Tazar*, carried out the 1975-76 Polish Antarctic Marine Research Expeditions, led by chief scientist Daniel Dutkiewicz. Miron Babiak was skipper of the ship. The party landed at Maxwell Bay (q.v. for details), on King George Island, in the South Shetlands, in Feb. 1976. She was back again, on a similar mission, in 1976-77, led by chief scientist Zbigniew Kornicki. The ship also took down the Polish Antarctic Expedition of 1980-82, and worked in the BIOMASS project that season too. Capt. Babiak was still skipper. She took down the Polish Antarctic Expedition of 1983-85. Skipper that year was Ryszard Ludvig. In 1988-89 she carried the Polish-British Antarctic Expedition.

The *Professor Vize*. Also spelled *Professor Viese*. Big Soviet research ship of 6934 tons and 384 feet long, she was built in 1967, and was sister ship to the *Professor Zubov*. Designed for polar work, she could accommodate 200 scientists and crew, and alternated every year with the *Zubov*. Named for Vladimir Vize (*see* **Vize Islands**). She took part in the following Soviet Antarctic expeditions: 1967-69 (Capt. Ivan Man), 1969-71, 1970-72, 1971-73, 1973-75, 1974-76, and 1975-77 (all years under Capt. Emmanuil Nikolayevich Troitsky), 1978-80 (Capt. Yuriy Georgiyevich Burmistrov), 1979-81 and 1980-82 (both years under Capt. Yuriy Dem'yanovich Kovalev), 1982-84, 1983-85, and 1985-87 (all under Capt. Burmistrov again), 1986-88, 1987-89 (Capt. Valeriy Aleksandrovich Viktorov), 1988-90 (Capt. Valentin Fedorovich Rodchenko), 1990-92 (Capt. A.V. Tokarskiy), and 1991-93 (Capt. M.S. Kaloshin).

The *Professor Wladimir Besnard*. Also known as the *Professor W. Besnard*, the *Professor Besnard*, and simply the *Besnard*. Sister ship to the *Barão de Teffe*. Brazilian research ship, in Antarctic waters as part of the first several Brazilian Antarctic expeditions —1982-83 (skipper: Adilson Luiz Gama), 1983-84 (skipper: Waldir da Costa Freitas), 1984-85, 1985-86, 1986-87, 1987-88 (Capt. Freitas every year).

The *Professor Zubov*. Built in 1967, sister ship to the *Professor Vize*, consequently she was like that vessel in most respects, and alternated in Antarctica with her. The Soviet Antarctic expeditions she participated in were: 1968-70 (Capt. Petr Ivanovich Tairov), 1970-72, 1972-74, 1974-76, 1976-78, 1977-79, and 1978-80 (all under the command of Capt. Oktavian Vitol'dovich Andrzheyevskiy), 1979-81 (unknown skipper), 1980-82, 1981-83, 1982-84, 1985-87, and 1986-88 (all under Capt. Vladimir Ivanovich Uzolin), 1987-89 (under Capt. Valentin Fedorovich Rodchenko), 1988-90 and 1989-91 (both times under Capt. Vladimir Ivanovich Uzolin), 1990-92 (Capt. K.F. Rudiy), and 1991-93 (Capt. Uzolin).

Profile Bluff. 77°52' S, 160°26' E. A prominent bluff, rising to 2070 m, midway between Mount Weller and Horizon Bluff, in the Quartermain Mountains of Victoria Land. In keeping with naming several features in this area after surveying terms, this was named by NZ-APC in 1992. US-ACAN accepted the name in 1993.

Profilgrat. 73°01' S, 166°00' E. The northernmost crest of Whitcomb Ridge, along the S side of the head of Gair Glacier, 10 km SE of Mount Supernal, in the Mountaineer Range of Victoria Land. Named by the Germans ("profile crest").

Profound Lake. 62°11' S, 58°55' W. A lake, 400 m NW of Jasper Point, in the NE part of Fildes Peninsula, King George Island, in the South Shetlands. Russians working out of nearby Bellingshausen Station from 1968 surveyed this feature and named it Ozero Glubokoe (i.e., "deep lake"). However both forms of the name were already in use (the former several times), so on Feb. 7, 1978, UK-APC accepted the name Profound Lake, and US-ACAN followed suit. It is the site of Artigas Station. On the 1984 Brazilian map of Fildes Peninsula, it appears as Lago Glubokoe. Plotted by the UK in late 2008.

Progress Lake. 69°24' S, 76°23' E. A large, deep lake in the Larsemann Hills, with a steep cliff face on its S edge. Named by ANCA on Nov. 24, 1987. The Chinese call it Jinbu Hu.

Progress Station. Name also seen as Progres. 69°23' S, 76°24' E. Soviet scientific station just SW of Davis Station, on Broknes Peninsula, in the Larsemann Hills, at an elevation of 15 m above sea level. Established in 1986-87 as a summer station, but replaced in April 1988 by Progress Station II (*see* below).

Progress II Station. 69°23' S, 76°23' E. The new Progress (or Progres) Station, opened by the Russians on April 1, 1988, 2 km from Law Base, and just to the N of the old site (*see* **Progress Station**, above). **1988 winter**: Anatoliy Nikolayevich Semenov (leader). It was closed after this winter, and partly dismantled. However, it was decided to re-occupy it. **1989 winter**: Konstantin Pavlovich Shibakov (leader). It was open for the 1989-90 summer, but not the 1990 winter. **1991 winter**: Vyacheslav Grigorevich Mineev (leader). It was closed after this winter, and then re-opened for the 1993-94 summer, and then closed again. In 1995-96 it was inspected, to see if a re-opening was possible. But it wasn't for several more years that a wintering-over party stayed there. **1999 winter**: Aleksey Nikolayev (leader). The 16 persons who wintered-over got trapped there (a ship being unable to relieve them in the normal time, and were finally rescued by the *Akademik Fedorov* in early 2000. **2000 winter**: Sergey Romanovich Borzenkov (leader). It was then closed. It was re-occupied for the 2003 winter, the closed again. Re-occu-

pied for the 2005 winter, and then every winter since then. On Oct. 4, 2008, a fire broke out, killing a construction worker. The new site was totally destroyed.

Project Array. Ocean current measurements conducted by the *Westwind* between Feb. 5 and Feb. 19, 1968.

Projection Peak. 77°59' S, 163°47' E. Rising to 1475 m at the head of Garwood Glacier, at the SW extremity of Hobbs Ridge, in Victoria Land. In association with several other features on this ridge named for types of map projections (Bonne Glacier, Cassini Glacier, and Mollweide Glacier), this one was named by NZ-APC in 1992. US-ACAN accepted the name in 1993.

Promenade Screes. 71°19' S, 68°18' W. Rounded, snow- and ice-free slopes W of Fossil Bluff Station, onn Alexander Island, they are criss-crossed with pathways, and are frequently the destination of short walks from the station. Named by UK-APC on Nov. 23, 1998. U.S. accepted the name in 1999.

Ozero Promernoe. 67°40' S, 45°53' E. One of the several lakes next to Oval'noye Lake, near Molodezhnaya Station, in Enderby Land. Named by the Russians.

Gora Promezhutochnaja. 72°50' S, 68°46' E. A nunatak on the Mawson Escarpment. Named by the Russians.

Nunatak Promezhutochnyj *see* **Mount Twintop**

Islas Prominentes *see* **Islotes Lientur**

El Promontorio *see* **The Naze** (under **N**)

Islote Promontorio *see* **Foreland Island**

Cabo Promontorio Bajo *see* **Low Head**

Cabo Promontorio Norte *see* **North Foreland**

Gora Pronchishcheva. 70°31' S, 65°16' E. A peak, about 5 km SE of Mount Kirkby, in the Porthos Range of the Prince Charles Mountains. Named by the Russians. *See* **Webster Peaks**.

Prong Point. 60°32' S, 45°34' W. A narrow protruding point forming the W side of the entrance to Ommanney Bay, on the N coast of Coronation Island, in the South Orkneys. Discovered by Powell and Palmer in Dec. 1821. Surveyed by Fids from Signy Island Station between 1956 and 1958. Named descriptively (in plan, it looks like a prong) by UK-APC on July 7, 1959. US-ACAN followed suit with the naming in 1964.

Gora Propadajushchaja. 73°02' S, 61°30' E. A nunatak, S by SE of Marsh Nunatak, in the Goodspeed Nunataks, in the southern Prince Charles Mountains, in Mac. Robertson Land. Named by the Russians.

Zaliv Proshchal'nyj *see* **Penney Bay**

Bukhta Proshchanija *see* **Proshchaniya Bay**

Proshchaniya Bay. 70°10' S, 4°20' E. Indents the SW side of Neupokoyev Bight, along the ice shelf that fringes the coast of Queen Maud Land. Photographed aerially in 1958-59, during the long NorAE 1956-60, and roughly mapped from these photos. Re-photographed aerially by SovAE 1960-61, and named by the Russians in 1961, as Bukhta Proshchanija (i.e., "farewell bay"). US-ACAN accepted the English-language translation in 1970.

Punta Prospección *see* **Prospect Point**

Punta Prospect *see* **Prospect Point**

Prospect Col *see* **Prospect Glacier**

Prospect Gap. 68°35' S, 78°11' E. A defile, trending NW-SE, 0.7 km SW of Collerson Lake, on Breidnes Peninsula, in the Vestfold Hills. The overland route from Davis Station to Ellis Rapids passes through the defile, and from this point the first view of Ellis Fjord, Ellis Rapids, and Mule Peninsula is obtained. Named by ANCA on Nov. 27, 1973.

Prospect Glacier. 69°32' S, 67°20' W. Between the Kinnear Mountains and the Mayer Hills, it flows N into the Forster Ice Piedmont, on the Fallières Coast, on the W coast of Graham Land. First roughly surveyed in Sept. 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map of that expedition. Between 1946 and 1949, Fids from Base E re-surveyed this area, and they applied the name Prospect Col to the col at the head of this glacier (i.e., the col runs between that glacier and Eureka Glacier), from which there is a fine prospect across George VI Sound to Alexander Island. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. In Nov. 1958, during a resurvey, Fids from Base E found that the col (i.e., Prospect Col) was not even worthy of a name, but that this glacier was, so they transferred the name to the glacier. UK-APC accepted this new situation on Aug. 31, 1962, and US-ACAN followed suit that year. The British plot in 69°34' S, 67°20' W.

Prospect Mesa. 77°30' S, 161°52' E. A low mesa below Bull Pass, on the N side of Wright Valley, in Victoria Land. Named by geologists Colin Vucetich (q.v.) and Wayne Topping (*see* **Topping Cove**) of VUWAE 1969-70, to designate the type locality of the geological "Prospect Formation." NZ-APC accepted the name, and US-ACAN followed suit in 1976.

Prospect Point. 66°00' S, 65°21' W. A point, almost 3 km S of Ferin Head, and immediately E of the Fish Islands, in Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. Roughly charted by BGLE 1934-37, and photographed aerially by FIDASE in 1956-57. Following the establishment there of Base J, in Jan. 1957, it was named later that year by Edwin Arrowsmith, governor of the Falkland Islands. UK-APC accepted the name on March 3, 1958, and US-ACAN followed suit in 1963. It appears on a Chilean chart of 1962 as Punta Prospect, and that was the name accepted by the 1974 Chilean gazetteer. The Argentines have translated it more fully, as Punta Prospección. However, "prospección" signifies prospecting for, say, gold. A better Argentine word would have been "vista."

Prospect Point Station *see* **Base J**

Prospect Spur. 83°57' S, 173°25' E. A long, narrow spur at the SW base of Cleft Peak, in the Separation Range, it descends westward to enter the edge of Hood Glacier at the latitude shown. Named on Dec. 16, 1959, by the NZ Alpine Club Antarctic Expedition of 1959-60, who had to climb up here to get a view up the S portion of the Hood Glacier, in order to prospect a route to the south. Later, it was used as an important link in the surveying of the area. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Cabo Próspero. 66°43' S, 64°04' W. A cape, about 16 km SW of Spur Point, in Cabinet Inlet, on the Foyn Coast, on the E coast of Graham Land. Named by the Chileans for Topographer 3rd class Próspero Madrid Madrid, of the Chilean Army, who was on the *Angamos* during ChilAE 1946-47. The Argentines call it Cabo Muñoz.

Bukhta Protalina. 67°58' S, 44°01' E. A bay which has Cape Ryugu on its E side and Kapp Begichev (what the Russians named Mys Begicheva) on its W side, immediately W of Carstensfjella, on the Prince Olav Coast of Queen Maud Land. Named by the Russians.

The *Protea*. A 2762-ton, 79.25-meter South African ship, commissioned on May 23, 1972. After a few cruises in sub-Antarctic seas, she was in the Gerlache Strait in early 1978, under the command of Cornelias Wagenveld, looking for krill, as part of the South African Fisheries cruise. In 1992-93 she was back in Antarctica, under the command of Brian Derek Law, supplying Sanae Station, and conducting a hydrographic survey off the coast of Queen Maud Land. She was still sailing into the 2000s, in sub-Antarctic waters.

Protection Cove. 71°39' S, 170°12' E. A bay, or cove, 5 km wide, at the E side of Cape Klövstad, between that cape and Newnes Glacier, where it forms the head of Robertson Bay, in northern Victoria Land. It is bounded by the ice cliffs of Newnes Glacier and a steep, rocky cliff which reaches a height of 1100 m. First charted in 1899 by BAE 1898-1900, and named by Borchgrevink for the protection it afforded his ship, the *Southern Cross*, during a gale. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

The *Protector*. An armed Royal Navy minelayer and guardship of 4500 tons displacement. She was built as a netlayer in Glasgow in 1936, and, in 1954-55, was especially converted and strengthened for use as a FIDS guard ship in Antarctic waters, where she made her first trips in 1955-56 and 1956-57, both seasons under the command of Capt. John Valentine Wilkinson. The first season, she steamed 25,000 miles in Antarctic waters. None of her 20 officers and 250 men had ever been in the Antarctic before. The best insulated ship in the British navy, and one of the sturdiest, she carried two Whirlwind helicopters, one of which was used in 1955-56 to land a detachment of Royal Marines on Anvers Island. She also helped out BCTAE's ship *Theron* when that ship was stuck in the ice. In the second season, she "protected" the *Britannia* and the *John Biscoe*, while the Duke of Edinburgh was aboard. She was back in 1957-58, under the command of Capt. Adrian Butler, moving FIDS around from base to base, and conducting hydrographic surveys (something she did every sea-

son until 1962-63). She was back in 1958-59, again under Capt. Butler. The governor of the Falklands, Sir Oswald Raynor, was aboard some of the time. In 1959-60 and 1960-61 she was under the command of Captain David Noel Forbes, and in 1961-62 and 1962-63 under Captain Robert Henry Graham. On the latter cruise, Sir Edwin Arrowsmith, the governor of the Falklands, was aboard some of the time. In 1963-64 and 1964-65 she was back yet again, under the command of Capt. Martin Spencer Ollivant. In 1965-66, under the command of Capt. Sefton Ronald Sandford, she worked partly in collaboration with the *John Biscoe* in Marguerite Bay and the Argentine Islands, and in 1966-67, still under Sandford, she assisted the *Shackleton* in seismographic investigations in the South Orkneys. On Dec. 6, 1963, leading Seaman Reg Hodge and Able Seaman Lane died while prepping a depth charge for seismic studies. This was not in Antarctic waters. In 1967-68, under Capt. Peter Alexander Bence-Trower, she was again in the South Orkneys, and also assisting the *Shackleton* in seismic investigations in the Scotia Sea. This was her last season as RN guard ship in Antarctic waters, and she was replaced by the *Endurance*.

Alturas Protector *see* **Protector Heights**

Protector Heights. 66°42' S, 66°15' W. Mountainous coastal heights rising to 2245 m (in Liebig Peak), and separated from the Graham Land plateau by a narrow col, they extend in an arc from Holdfast Point to the N of Wilkinson Glacier, dominating the area between that glacier and the S part of Darbel Bay, on the Loubet Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57 and from ground surveys conducted by Fids from Base W that same season. Named by UK-APC on July 7, 1959, for the *Protector*. It appears on a British chart of 1961. US-ACAN accepted the name in 1964. The Argentines call this feature Alturas Protector.

Ozëra Protochnye. 70°31' S, 67°52' E. A group of lakes in the NE sector of the Loewe Massif, in the E part of the Aramis Range, in the Prince Charles Mountains of Mac. Robertson Land. Named by the Russians.

Proudfoot Nunataks. 75°05' S, 71°30' W. A group of nunataks, S of Sky-Blu, in Palmer Land. Used for visibility observations for aircraft at Sky-Blu ice runway. Named by UK-APC on June 26, 2001, for Lee Proudfoot (b. 1966), who became chief pilot in 1995, and coordinated the effort to establish the runway.

Provadiya Hook. 62°32' S, 59°47' W. A boomerang-shaped gravel barrier spit separating Yankee Harbor (i.e., the inner part of the bay the Chileans call Puerto Yankee) from the outer part (i.e., Shopski Cove and McFarlane Strait), on the SW side of Greenwich Island, in the South Shetlands. The hook extends 700 m northwestward from the SW extremity of Oborishte Ridge to a point forming the SE side of the entrance to Shopski Cove, and then extending 500 m northward to end up in Spit Point, the latter forming the S side of the entrance to Yankee Harbor. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for the town of Provadiya, in northeastern Bulgaria.

Vpadina Proval. 71°41' S, 71°05' E. A trench, pretty much due S of Pickering Nunatak, at the E edge of the Amery Ice Shelf. Named by the Russians.

Nunataki Proval'nye. 71°02' S, 71°40' E. A group of nunataks, just SE of the Manning Nunataks, in the S part of the Amery Ice Shelf. Named by the Russians.

Mount Provender. 80°23' S, 29°55' W. A conspicuous rock mountain, rising to about 900 m NE of Nostoc Lake, it marks the NW extremity of the Shackleton Range. First mapped in Oct. 1957 by BCTAE, and named by them for the food and fuel depot, and the airplane camp established by them at Nostoc Lake that year to support sledging parties working in the Shackleton Range. The Soviets built a field station here in 1976-77, for geological studies in the Shackleton Range. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Providence Cove. 68°19' S, 66°47' W. Bounded by ice cliffs, it is located at the foot of Remus Glacier, in the SE corner of Neny Fjord, along the Fallières Coast, on the W coast of Graham Land. First roughly surveyed in 1936 by BGLE 1934-37, it appears on Rymill's 1938 map of that expedition. Re-surveyed in 1940-41 by USAS 1939-41, and so named by them because when they first arrived here it seemed providential that a site for East Base was found so quickly and easily. It was soon found, however, that the cove was not a good place for the base. It appears on Finn Ronne's 1943 map, and was the name accepted by UK-APC on March 31, 1955, and by US-ACAN later that year. The British plot it in 68°18' S, 66°49' W.

Caleta Providencia *see* **Providence Cove**

Provost, Jean-Louis. b. July 14, 1814, Piaul, France. Able seaman on the *Zélée* during FrAE 1837-40.

Prud'homme, André. b. 1920. French meteorologist who wintered-over with FrAE 1951. He was back in Antarctica in the summer of 1958-59, in Adélie Land, and just a few hours before the arrival of the *Norsel*, on Jan. 7, 1959, he disappeared in a blizzard in the Géologie Archipelago, only 200 meters from base (*see* **Deaths**, 1959). The French erected a monument to him there, called Croix Prud'homme. *See also* **Cap André Prud'homme**.

Bukhta Pryamougol'naya *see* **Pryamougol'naya Bay**

Pryamougol'naya Bay. 70°10' S, 5°30' E. A small bay indenting the SE side of Neupokoyev Bight along the ice shelf that fringes the coast of Queen Maud Land. Photographed aerially in 1958-59, during NorAE 1956-60, and roughly mapped from these photos. Re-photographed aerially by SovAE 1960-61, and named by the Russians in 1961 as Bukhta Prjamougol'naja (i.e., "rectangle bay"). US-ACAN accepted the English-language translation in 1970.

Prydz Bay. 69°00' S, 75°00' E. Name also seen as Olaf Prydz Fjord. A long, deep embayment of the continent between (on the one hand) the Lars Christensen Coast and the E side of the Amery Ice Shelf and (on the other) the Ingrid Christensen Coast. Portions of the bay were discovered in Jan. and Feb. 1931 by BANZARE 1929-31, and also by Norwegian whalers. It was explored in Feb. 1935, by Mikkelsen, in the *Thorshavn*. It was photographed aerially by LCE 1936-37, and mapped from these photos in considerable detail in 1946 by Norwegian cartographers who named it Olaf Prydz Bukt, for Olaf Petter Blankenborg Prydz (b. Sept. 14, 1882, Stange, Hedmark), general manager of the Hvalfangernes Assuranceforening, in Sandefjord, Norway. US-ACAN accepted the name Prydz Bay in 1947, and ANCA followed suit on Nov. 24, 1953.

Prydz Bukht *see* **Prydz Bay**

Prydz Channel. 67°00' S, 73°00' E. A gentle undersea channel, below 500 m, entering Prydz Bay from the continental slope into the Amery Depression between Fram Bank and Four Ladies Bank. The feature includes the poorly-defined continental shelf break. Named by ANCA on March 7, 1991, in association with the bay.

Pryor Cliff. 73°53' S, 100°00' W. A distinctive rock cliff that faces northward toward the Cosgrove Ice Shelf, 8 km NE of Mount Nickens, at the N end of the Hudson Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Douglas A. Pryor, map compilation specialist who contributed greatly to the preparation of USGS sketch maps of Antarctica.

Pryor Glacier. 70°05' S, 160°10' E. A glacier flowing northeastward for about 57 km into Rennick Bay to the N of Mount Shields and Yermak Point, and forming a physical separation between the Wilson Hills and the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for biologist Madison E. Pryor (b. Dec. 22, 1928, Grant Co., Ky., but raised in Lexington), scientific leader at McMurdo in 1959, and U.S. exchange scientist at Mirnyy Station in 1962. ANCA accepted the name on June 9, 1964, and NZ-APC followed suit. It is reported that the Russians call it Prior Glacier (sic), but why they should do such a thing is unclear.

Pryor Peak. 67°16' S, 67°22' W. Rising to about 600 m at the W side of Giants Cirque, in the Tyndall Mountains, on Arrowsmith Peninsula, on the SE side of Ward Glacier, on the Loubet Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1957. Visited by BAS geologists from Rothera Station in 1980-81. Named by UK-APC on April 3, 1984, for Cdr. John Stoneman Nelson Pryor (b. 1919), RN, superintendent of sailing directions at the Hydrographic Department, at the Ministry of Defence. He was a member of UK-APC, 1968-82. US-ACAN accepted the name.

Przheval'skijbreen *see* **Lednik Przheval'skogo**

Gora Przheval'skogo. 73°03' S, 60°34' E. A peak, just to the W of the center of Mitchell Ridge, in the Goodspeed Nunataks, in the southern Prince Charles Mountains. Named by the Russians.

Lednik Przheval'skogo. 71°40' S, 11°20' E. A glacier, to the E of the center of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Russians. The Norwegians, who plot it in 71°42' S, 11°24' E, call it Przheval'skijbreen (which means the same thing).

Przybyllok, Erich Hugo Günther. b. June 30, 1880, Tarnowitz, Poland. German physicist, mathematician, and astronomer, on GermAE 1911–12. He was professor of astronomy at Königsberg University from 1921 to 1944, and died on Sept. 11, 1954, in Cologne.

Przybyszewski Island. 76°58' S, 148°45' W. Somewhat notorious as the most daunting name in (English-speaking) Antarctica. Also spelled (erroneously, but more helpfully) as Prezbecheski Island. An ice-covered island, 20 km long, in the Marshall Archipelago, 5 km E of Cronenwett Island, in the W part of the Sulzberger Ice Shelf. Charted from aircraft off the *Glacier* in 1962, and named by the skipper of the *Glacier* at the time, Capt. Edwin A. McDonald, for Lt. (jg) Vincent A. "Vince" Przybyszewski (b. Dec. 22, 1937), USNR, helicopter pilot who sighted this island from the air on Jan. 26, 1962. US-ACAN accepted the name. For the secondmost daunting name in Antarctica, see immediately below.

Mount Przywitowski. 86°36' S, 154°08' W. Rising to 2770 m, at the SE side of Holdsworth Glacier, 4 km W of McNally Peak, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Richard F. "Dick" Przywitowski (b. June 27, 1943), ionosphere physicist with the National Bureau of Standards, scientific leader at Pole Station for the winter of 1966, and at McMurdo in for the winter of 1968.

Islotes Psi *see* **Psi Islands**

Psi Islands. 64°18' S, 63°01' W. Just off the W coast of Lambda Island, in the Melchior Islands, in the Palmer Archipelago. Charted by ArgAE 1942–43, and, in association with other islands named for Greek letters, named by them as Islotes Psi, for the 23rd letter in the Greek alphabet. It appears as such on their map of 1946, and on a 1947 British chart as Psi Islands. ArgAE 1947–48 surveyed the group further. The name Psi Islets appears on a 1948 British chart, and that was the name accepted by UK-APC on Sept. 20, 1955, and also by US-ACAN. The group appears on a 1953 Argentine chart as Islotes Ballesteros, named by ArgAE 1953 after a member of the expedition. Similarly, and for the same reasons, it appears on a 1957 Argentine chart as Islotes Lamadrid (named by ArgAE 1957). On July 7, 1959, UK-APC redefined the group as the Psi Islands, and it appears as such on a British chart of 1960. US-ACAN accepted the name in 1963. After toying with the names Islotes El Imparcial, Islotes El Sur, Islotes El Ilustrado, Islotes La Opinión, and Islotes Prensa Austral (all obviously unacceptable names, after Chilean newspapers), Chile decided on Islotes Psi, and that is how the group is listed in the 1974 Chilean gazetteer. The Argentines still call the islands Islotes Lamadrid.

Psi Islets *see* **Psi Islands**

Mys Ptich'e *see* **Cape Pt'ich'je**

Ozero Ptich'e *see* **Lake Pt'ich'je**

Cape Pt'ich'je. 66°20' S, 100°50' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Mys Ptich'e. ANCA translated the name into English.

Lake Pt'ich'je. 66°20' S, 100°50' E. A lake in the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ozero Ptich'e. ANCA translated this as Lake Pt'ich'je, or as Lake Ptichje.

Mount Ptolemy. 68°33' S, 65°58' W. An isolated block mountain with 4 main summits, the highest being 1370 m, close N of the Traffic Circle, between that feature and Gibbs Glacier, on the NW side of the Mercator Ice Piedmont, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Discovered from the ground by Finn Ronne and Carl Eklund as they sledged their way through the Traffic Circle during USAS 1939–41. Sketched from the air by FIDS on Aug. 14, 1947, and surveyed by Fids from Base E in Dec. 1958. Named by UK-APC on Aug. 31, 1962, for Claudius Ptolemy, the 2nd-century AD Egyptian geographer. US-ACAN accepted the name later in 1962.

Puanu Glacier. 77°23' S, 160°59' E. Forms the upper portion of Papitashvili Valley, in the Apocalypse Peaks of Victoria Land. Named by NZ-APC on Sept. 12, 2005. The word "puanu" signifies "intense cold" in Maori. US-ACAN accepted the name in 2006.

Publication Glacier Tongues *see* **Publications Ice Shelf**

Publications Ice Shelf. 69°38' S, 75°20' E. An ice shelf, about 56 km long, and with an area of about 1600 sq km, on the S shore of Prydz Bay, on the Ingrid Christensen Coast, between Mount Caroline Mikkelsen and Stornes Peninsula, off the Ingrid Christensen Coast. It is fed by several glaciers, all named by U.S. cartographer, John H. Roscoe, in 1952, for international polar journals, and these glaciers are, from SW to NE: Polar Times Glacier, Il Polo Glacier, Polarforschung Glacier, Polar Record Glacier, and Polarårboken Glacier. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers. It was photographed aerially again by OpHJ 1946–47 and by OpW 1947–48. Mr. Roscoe, working from these last photos, first proposed the name Publication Glacier Tongues, and that name was accepted by US-ACAN. In Feb. 1969, the feature was charted and photographed by the ANARE Prince Charles Mountains Survey Party, during a survey between the Amery Ice Shelf and the Vestfold Hills. On May 18, 1971, ANCA redefined the feature as an ice shelf, and US-ACAN followed suit in 1973.

Puccini Spur. 70°03' S, 70°38' W. A rock spur, 10 km long, it rises to about 1100 m above sea level, and extends SW into the E end of the Mozart Ice Piedmont close S of Mahler Spur, in the N part of Alexander Island. Discovered aerially on Feb. 1, 1937, by BGLE 1934–37, and roughly mapped by them. It appears on Stephenson's 1940 map of that expedition. Re-photographed aerially in late 1947 by RARE 1947–48. Mapped by Searle of the FIDS in 1959–60, from the RARE photos. Named by UK-APC on March 2, 1961, for the Italian composer Giacomo Puccini (1858–1924). US-ACAN accepted the name later in 1961. It appears on a British chart of 1961. In those days it was plotted in 69°53' S, 70°50' W. It was re-plotted from U.S. Landsat images taken in Jan. 1973 and Feb. 1979.

Puchalski Peak. 62°10' S, 58°17' W. A nunatak, 190 m above sea level, between Nature Conservation Glacier and Rybak Glacier, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Wlodzimierz "Wlodek" Puchalski (1909–1979; *see* **Deaths**, 1979). *See also* **Wlodek Cove**.

Cabo Pucher. 64°36' S, 62°25' W. A cape, about 1.5 km SSE of Cape Anna, off Louise Island, on the E coast of Arctowski Peninsula, on the W coast of the Antarctic Peninsula. Named by the Chileans for Leo Pucher de Kroll (*see* **Bolivia**). The Argentines call it Cabo Lasala.

Cabo Puckman *see* **Cape Valavielle**

Cape Puckman *see* **Cape Valavielle**

Pudding Butte. 75°52' S, 159°59' E. A butte, 3.2 km SW of Beta Peak, between that peak and Richards Nunatak, in the Prince Albert Mountains of Victoria Land. Named by the Southern Party of NZGSAE 1962–63, as Pudding Tableland, for the feast they had at the nearby camp. NZ-APC felt that the term Pudding Butte was more appropriate, and US-ACAN accepted that name in 1966, and ANCA followed suit on Sept. 26, 1978.

Pudding Tableland *see* **Pudding Butte**

Cerro Pudú. 62°27' S, 60°48' W. A hill, immediately E of Punta Poblete, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno, here with ChilAE 1984–85, for the pudú (*Pudu puda*), the smallest deer not only in Chile but in the world. It can also climb trees.

Cerro Puelche. 62°28' S, 60°47' W. A hill, SW of Half Moon Beach, and NE of Cerro Jaña, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno, here with ChilAE 1990–91, for the Puelche, an extinct tribe of South America.

Islotes Puertas del Infierno *see* **Hell Gates**

Paso Puertas del Infierno *see* **Hell Gates**

Nunatak Puerto Belgrano *see* **Areta Rock**

The *Puerto Deseado*. Red and white 2133-ton, 70.8-meter Argentine ice-strengthened research ship, built at the Río de la Plata Shipyards, launched on Dec. 8, 1976, and bought by the Navy in 1980 for Antarctic work. She was in Antarctic waters with ArgAE 1995–96 (Capt. Arturo A. Rodríguez), ArgAE 1996–97 (Capt. Ro-

dríguez), and ArgAE 1997–98 (Capt. Javier A. Valladares).

Puerto Mikkelsen Refugio *see* **Capitán Caillet Bois Refugio**

Puerto Neko Refugio *see* **Capitán Fliess Refugio**

Puerto Yankee Refugio *see* **Yankee Bay Station**

Islotes Puffball *see* **Puffball Islands**

Puffball Islands. 69°02' S, 68°30' W. A scattered group of one small, completely ice-covered island, and some low, offlying mainly ice-covered rocks, which extend about 16 km in a NE-SW direction, in the S portion of Marguerite Bay, WSW of Cape Berteaux, off the Fallières Coast, on the W coast of Graham Land. The center of the group lies 39 km NNE of Cape Jeremy. Photographed aerially on Feb. 1, 1937, during BGLE 1934–37, but not recognized as islands among all the ice bergs. First visited and surveyed in Oct. 1948, by Fids from Base E. ArgAE 1952–53 roughly surveyed them, and named them Islotes Litten, for Jacobo Litten, an Argentine sailor aboard the frigate *25 de Mayo*, who was killed in the naval battle of Quilmes, on July 30, 1826. It appears as such on their 1953 chart. On March 31, 1955, UK-APC named this feature as Puffball Islets, in association with Mushroom Island, which is 22 km NE of this group. US-ACAN followed suit with this naming later in 1955. On a 1957 Argentine chart the northernmost of these islands appears as Islote Litten, and that name was accepted by the 1970 Argentine gazetteer, plotted in 68°47' S, 68°27' W (however, the Argentine gazetteer of today shows it plotted in 68°50' S, 68°30' W). On July 7, 1959, UK-APC redefined them as Puffball Islands, and US-ACAN accepted that name in 1963. On a 1961 Russian chart, the name Ostrov Litten (i.e., "Litten island") is shown to the W of Cape Berteaux, but presumably refers to the northernmost of these islands. On a Chilean chart of 1962 the name Islotes Litten appears, referring to the northernmost features (sic) within this group, and that name was accepted by the Chilean gazetteer of 1974. At least, this is what we are told in the British gazetteer, although why the Chileans would name a feature after an Argentine hero is beyond comprehension. On the surface it looks like a mistake on the part of the British gazetteer; the same gazetteer says that the name Islotes Puffball appears on a 1962 Chilean chart, and was accepted by the Chilean gazetteer of 1974. This sounds much more reasonable — for the whole group, that is, especially as the Chilean gazetteer itself says that the name they use is Islotes Puffball. However, it may not be a mistake. The Chilean gazetteer lists an entry Islotes Litten, with the coordinates 68°47' S, 68°27' W, and they are certainly describing these (or part of these) islands. They say that the feature first appears on a Chilean chart of 1947, and has been in use ever since. The Argentines call the whole group Islotes Bejin, rather than, say, Islotes Litten. One must admit to being puzzled by the name Bejin. The name Litten Island appears on a 1986 British chart, plotted in 68°50' S, 68°28' W. This is obviously a reference to the northernmost island.

Puffball Islets *see* **Puffball Islands**

Cordón Puga *see* **Louis Philippe Plateau**

Cabo Puget *see* **Puget Rock**

Cape Puget *see* **Puget Rock**

Puget Rock. 63°29' S, 55°39' W. East of Eden Rocks, off the E end of Dundee Island, in the Joinville Island group. On Dec. 30, 1842, Ross named a feature in this area as Cape Puget, for Capt. William David Puget (d. 1853), RN, but it is not clear what exact feature Ross was naming. On a 1943 U.S. Hydrographic Office chart, the name was applied to the S point of Paulet Island, and the Argentines copied that on a 1947 chart (as Cabo Puget). ArgAE 1953–54 surveyed it, and named this rock Islote Redondo (i.e., "round islet"), and it appears as such on their 1954 chart. It was the name accepted by the Argentine gazetteer of 1970. Fids from Base D surveyed it that same season (1953–54), and on Sept. 4, 1957, UK-APC named this rock Puget Rock in order to preserve Ross's naming. It appears on a British chart of 1962. US-ACAN accepted the name in 1965. The Argentines call it Islote Redondo.

Cape Puikman *see* **Cape Valavielle**

Pujals, Carmen. b. Jan. 13, 1916, Buenos Aires, daughter of Catalan parents. When she was 5, her family moved back to Barcelona, where Miss Pujals went to school. She became interested in algae while swimming in the Mediterranean as a child. In 1935 she entered the University of Barcelona, to study biology, but the Spanish Civil War intervened, and her father took the family back to Buenos Aires, where she entered UBA. In 1947 she went to work at the Argentine Museum of Natural Sciences, and stayed for 52 years, as a professor of natural sciences, and a specialist in algae. She was one of the first women scientists to work on the Antarctic continent, in 1968–69 (*see* **Women in Antarctica**). She died on Oct. 24, 2003, in Adrogué, Argentina.

Pujato, Hernán. b. June 5, 1904, Diamante, Argentina. Soldier, diplomat, explorer, and, with a lot of truth to it, the father of Argentine Antarctica. In 1949 he presented to President Perón a detailed plan for Argentine occupation of permanent bases in Antarctica, and he went to Greenland for training. In 1951 his plan came to fruition with the creation of San Martín Station. He was in Antarctica in 1950–51, and again in 1954–55. He was base leader at General Belgrano Station for the winters of 1955 and 1956. He died on Sept. 7, 2003, in Buenos Aires, and his remains were buried at San Martín Station.

Pujato Bluff. 82°40' S, 42°57' W. A rock bluff, rising to 660 m above sea level, it forms the S end of the Schneider Hills, in the Argentina Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965–66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for General Hernán Pujato (q.v.), officer-in-charge of General Belgrano Station in 1956. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

The *Pukaki*. A 1435-ton, 87-meter Royal Navy Loch-class anti-submarine frigate, built in Leith by Henry Robb, in 1943–44, as the *Loch Achanalt*. She served as a convoy escort in the North Atlantic during the last year or so of World War II, and was then put in reserve. In 1947 she was one of six RN frigates bought by the NZ Navy, and which were to make up their 11th Flotilla. They were all modernized in the UK and then sailed to NZ in 1948 and 1949. The *Pukaki* served in the Korean War, in 1950, and was part of the British nuclear-testing effort at Christmas Island. Under Capt. Richard Thomas Hale, she was in Antarctic waters with the *Hawea* (q.v. for details) in 1956–57. She was back at the edge of the Antarctic pack-ice in 1964–65, as a radar ship, picket ship, and rescue ship (if necessary), under the command of captains M.N. Weymouth and A.G. Rhodes. She was sold for scrap in 1965.

Mount Pukaki. 82°49' S, 162°06' E. The massive central peak of the Frigate Range, between Mount Hawea and Mount Rotoiti, and about 14 km E of Mount Markham. Named by the Northern Party of NZGSAE 1961–62, for the *Pukaki*. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Puke Toropa Mountain. 78°14' S, 162°25' E. A mostly ice-covered mountain rising to 3465 m, about 5.5 km SSW of Mount Rucker, in the Royal Society Range of Victoria Land. Named by NZ on March 1, 1994. The words "puke toropa" mean "circular hill" in Maori. US-ACAN accepted the name later in 1994.

Pukeko Pond. 77°29' S, 162°34' E. A pond on the E side of Mount Loke, in the Asgard Range of Victoria Land. Named by NZ-APC, for the pukeko, the purple swamp hen of NZ. US-ACAN accepted the name in 1998.

Pukkelen *see* **Pukkelen Rocks**

Pukkelen Rocks. 72°15' S, 27°09' E. Rock outcrops just W of Bollene Rocks, at the head of Byrdbreen, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946–47, and named by them as Pukkelen (i.e., "the hump"). They plotted it in 72°24' S, 27°35' E. US-ACAN accepted the name Pukkelen Rocks in 1966, but with new coordinates.

Pukkelryggen. 73°23' S, 13°53' W. A small ridge in the northernmost part of the Kraul Mountains, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians (name means "the hump ridge").

Pulfrich Peak. 64°41' S, 62°28' W. Rising to about 1250 m, near the E part of Wild Spur, on Arctowski Peninsula, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956–57. Named by UK-APC on Sept. 23, 1960, for Carl Pulfrich (1858–1927), the "father of stereophotogrammetry." It was misplaced 3 km to the N on a British chart of 1961, and on a 1963 American chart (Stolze Peak is what appears in those coordinates), but that error was even-

tually corrected. US-ACAN accepted the name in 1965.

El Pulgar *see under* **E**

Cerro Pulgar Negro *see* **Black Thumb, Little Thumb**

Monte Pulgar Negro *see* **Black Thumb, Little Thumb**

Mount Pulitzer. 85°49' S, 154°16' W. A prominent mountain, rising sharply to 2155 m (the New Zealanders say 1371 m), distinguished by sharp, serrated ridges, 11 km NE of Mount Griffith, on the elevated platform between Koerwitz Glacier and Vaughan Glacier, about 24 km W of Robert Scott Glacier (about 40 km S of that glacier's terminus), in the Queen Maud Mountains. Discovered in 1934, by Quin Blackburn's party, during ByrdAE 1933-35, and named by Byrd for Joseph Pulitzer (1885-1955), publisher of the *St. Louis Post-Dispatch*, son of the more famous father of the same name, and a patron of the expedition. US-ACAN accepted the name, and NZ-APC followed suit.

Isla Pullen *see* **Pullen Island**

Pullen, William Arthur "Bill." b. June 18, 1902, Cedar Mills, Oreg., son of farmer William Andrew "Bill" Pullen and his wife Josephine Minerva "Josie" Morgan. He joined the U.S. Navy, and, in 1927, while stationed in Honolulu, married Leilani Kailihala, a girl from Maui. In 1930, with two young children (Bill Jr. and Leilani Jr.) they were posted back to San Diego, later moving to Portland, Oreg. Bill was an aviation machinist's mate 1st class at East Base during USAS 1939-41. Leilani died in 1988, in San Diego. Bill died on April 15, 1990.

Pullen Island. 72°31' S, 60°59' W. An island, 8 km long, ice-covered except for a rock face rising to 495 m at its NE end, near the center of Violante Inlet, along the Black Coast, on the landward side of the Larsen Ice Shelf, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940, by members of East Base, during USAS 1939-41, and named for Bill Pullen. It appears on a 1942 USAAF chart, plotted in 73°00' S, 59°15' W. It appears on an Argentine chart of 1946, as Isla Pullen. US-ACAN accepted the name Pullen Island in 1947, and UK-APC followed suit on Jan. 28, 1953. It appears as such on a 1954 British chart, and in the 1955 British gazetteer. In Nov. 1947, the feature was surveyed from the ground by a joint sledging team of personnel from RARE 1947-48 and Fids from Base E, and found to be 75 km NW of its previously reported position. It was replotted in 72°35' S, 60°57' W. Remapped by USGS from USN air photos taken between 1966 and 1969. With the new coordinates, the feature appears in the 1977 British gazetteer, and also on the 1979 USGS sketch map of the N part of Palmer Land. Both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Isla Pullen.

Pully, Robert *see* **USEE 1838-42**

Pulmar, Benjamin *see* **USEE 1838-42**

Mount Pulpit *see* **Pulpit Mountain**

Pulpit Mountain. 60°41' S, 45°13' W. A conspicuous, red-colored mountain, rising to 945 m, 2.5 km W of Spence Harbor, at the E end of Coronation island, in the South Orkneys. Surveyed by Fids from Signy Island Station in 1948-49, and named by them for its shape when seen from the east. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. Further surveyed by Fids from Signy between 1956 and 1958. According to the SCAR Gazetteer, the Russians call this feature Mount Pulpit, although why they would do such a thing (if indeed they do) is a mystery.

Monte Púlpito *see* **Pulpit Mountain**

The *Puma*. A 98-ton Norwegian whale catcher, built at Christiania in 1901 under the supervision of Alexander McDougall (q.v.), for the Newfoundland Steam Whaling Company (she was their first catcher). She arrived at St. John's, Newfoundland, on June 15, 1901, and that (northern) season captured 48 Arctic whales. In 1907 she was operating out of NZ in southern (but not Antarctic) waters, and in Nov. 1907, from NZ, with the *Lynx*, she finally went to Antarctica, under the command of Capt. Christophersen, catching for the factory ship *Sabraon*. After the season was over, she and the *Lynx* went back to St. John's, where they resumed their duties. However, the *Puma* was back in Antarctic waters, on and off, until 1910.

Pumphouse Lake. 60°42' S, 45°37' W. The most southerly of the 3 lakes in Three Lakes Valley, on Signy Island, in the South Orkneys. BAS personnel from Signy Island Station did biological work here up to 1973. Named by UK-APC on Dec. 20, 1974, for the abandoned pumphouse and pipeline on the E side of the lake, which were built by whalers. US-ACAN accepted the name in 1975.

Punch Bowl *see* **Devils Punchbowl**

Punchbowl Cirque. 76°42' S, 159°47' E. In the S part of Shipton Ridge, about 0.8 km SW of Roscolyn Tor, in the Allan Hills of Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, and named descriptively by them. US-ACAN accepted the name in 1965, and ANCA followed suit on Aug. 10, 1966.

Punchbowl Glacier. 65°11' S, 61°57' W. A glacier flowing SSE into the N end of Exasperation Inlet, N of Jorum Glacier, on the Oscar II Coast, on the E coast of Graham Land. Surveyed by Fids from Base D in Nov. 1947 and Oct. 1955. The glacier, being hemmed in by mountains on 3 sides, was named descriptively by UK-APC on Sept. 4, 1957. It appears on a British chart of 1961, in 65°08' S, 61°59' W. US-ACAN accepted the name in 1963, but with different coordinates.

Pico Puño *see* **Admiralen Peak**

Cerro Punta Armonía *see* **Harmony Point**

The *Punta Loyola*. A 3102-ton, 99.11-meter Argentine tanker, capable of 10 knots, twin of the *Punta Ninfas*, built at St. John's River, USA, for the Argentine government, launched on March 24, 1945, and incorporated into the Argentine Navy in 1949. She had a crew of 33, and took part in the following expeditions: ArgAE 1950-51 (Captain Francisco P. Morrell); ArgAE 1953-54 (Captain Alberto A. Baglietto); and ArgAE 1954-55 (Captain Jorge Federico Pablo Wicht). She was decommissioned in 1964, and on May 31, 1966, she was sold to the Action Company for 28 million pesos, and began to fly a Liberian flag.

The *Punta Médanos*. A 153.02-meter tanker, built by Swan Hunter and Wigham Richardson, in Wallsend-on-Tyne, England, for the Argentine government, and launched on Feb. 20, 1950. She could do 18 knots, and could take 90 crew. On Dec. 1, 1950 she was commissioned into the Argentine Navy. She took part in ArgAE 1961-62 (Captain Eduardo H. Fraga) and ArgAE 1962-63 (Captain Claudio E. Grandjean). She was dropped from the Navy List in 1971, and decommissioned in 1984. The following year she was sold to Paul Cheng & Sons, and, in 1988, while being towed by the *Atlantic Rescuer*, her towing cables broke and she foundered in 34°40' S, 48°49' W.

The *Punta Ninfas*. Argentine vessel, named for the Argentine cape in Patagonia (where there is a large colony of elephant seals). Sister ship of the *Punta Loyola*, (q.v. for details of size and building), she took part in the following expeditions: ArgAE 1948-49 (Captain Rafael Palomegue); ArgAE 1949-50 (Capt. Enrique Arizzi); ArgAE 1951-52 (Capt. Pedro M.A. Sanguinetti); ArgAE 1952-53 (Capt. Roberto L. Arena); ArgAE 1955-56; and ArgAE 1960-61 (Capt. Mariano Alvarado).

Glaciar Punta Ninfas *see* **Support Force Glacier**

Punta Spring Refugio. 64°17' S, 61°04' W. Chilean refuge hut, built at Spring Point, Hughes Bay, on the Danco Coast, on the W coast of Graham Land. It was originally called Shirreff Refugio when it was opened in 1972-73, but was generally known as Punta Spring Refugio, or just Spring. In 1999-2000 it was renamed Base Dr. Guillermo Mann, which translated into Dr. Guillermo Mann Refugio. The name was shortened colloquially to just Mann, but the station was still usually known as Spring. Guillermo Mann Fischer was a Chilean whale expert, and took part in ChilAE 1946-47. It was finally renamed Refugio Dr. Federico Puga Borne, or Federico Puga for short, but it is now closed. Federico Puga Borne (1855-1935) was a Chilean physician and scientist.

Rocas Punteadas *see* **Stipple Rocks**

Pico Puntiagudo *see* **Sharp Peak**

Punta Punzón *see* **Awl Point**

Pup Cove. 60°42' S, 45°36' W. A small cove on the N side of Elephant Flats, at the head of Borge Bay, Signy Island, in the South Orkneys. Named by UK-APC on May 13, 1991, in recognition of the first recorded birth of a fur seal pup on the island (in Feb. 1977), since the opening of Signy Island Station in 1947. US-ACAN accepted the name.

Pup Rock. 68°22' S, 67°03' W. A rock, about 200 m in diameter, between the Refuge Islands and the Tiber Rocks, in Rymill Bay, Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Discovered by Bob Nichols dur-

ing RARE 1947–48, and he named it Three Pup Island. Photographed aerially on Nov. 27, 1947, by RARE. The name has since been shortened for convenience, although that very convenience is inconvenient because it obfuscates Nichols' intention. FIDS cartographers fixed its position from air photos. UK-APC accepted the new name on Aug. 31, 1962, and US-ACAN followed suit that year. It appears in the British gazetteer of 1986.

Pupier, Julien. b. April 13, 1802, Antibes. Armorer on the *Zélée* during FrAE 1837–40.

Puppa. 72°12' S, 25°00' E. A nunatak S of the ridge the Norwegians call Åma, in the central part of the Sør Rondane Mountains. Named by the Norwegians (name means "the pupa"; cf **Åma**, which means "caterpillar").

Puppis Pikes. 71°16' S, 66°24' W. A looosely-defined group of 5 pointed nunataks and smaller rock outcrops running roughly E-W, and rising to about 1350 m, 11 km NE of Mount Cadbury, in Palmer Land, at George VI Sound. Surveyed by BAS personnel from Base E between 1962 and 1972. Named by UK-APC on July 21, 1976, for the constellation. US-ACAN accepted the name later in 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Purcell Snowfield. 70°34' S, 69°45' W. About 24 km wide, and rising to about 500 m, between the Colbert Mountains (to the W) and the Douglas Range (to the E), in the central part of Alexander Island. It is bounded by Handel Ice Piedmont to the N, and by Vivaldi Gap and the Lully Foothills to the south. Photographed aerially in Nov. 1947 by RARE 1947–48, and mapped from these photos in 1959–60, by Searle of the FIDS, who plotted it in 70°29' S, 69°55' W. In accordance with other features in this area named for famous classical composers, it was named by UK-APC on March 2, 1961, for Henry Purcell (1659–1695), the English composer. US-ACAN accepted the name later in 1961. It has since been replotted.

Punta Purdy *see* **Purdy Point**

Purdy Point. 60°32' S, 45°26' W. A point, 2.5 km ESE of Foul Point, on the N coast of Coronation Island, in the South Orkneys. Discovered by Powell and Palmer in Dec. 1821, and roughly shown on Powell's 1822 chart. Surveyed by FIDS between 1956 and 1958, and named by UK-APC on July 7, 1959, for John Purdy (1773–1843), British hydrographer who compiled nautical directories and charts, including one of the South Orkneys. US-ACAN followed suit with the naming in 1964. The Argentines call it Punta Purdy.

Purgatory Peak. 77°21' S, 162°18' E. Immediately N of the snout of Lower Victoria Glacier, where that glacier creeps westward into Victoria Valley from Wilson Piedmont Glacier, 3 km SW of Pond Peak, in the Saint Johns Range of Victoria Land. Named by the NZ Northern Survey Party of BCTAE 1956–58, for the extremely bad weather and terrain conditions while they were pressing toward and surveying from this feature. On Nov. 8, 1957, they established a survey station on its summit. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Purka *see* **Purka Mountain**

Purka Mountain. 68°15' S, 58°35' E. A prominent mountain ridge with 2 outliers, about 8 km SE of Mount Gjeita, in the Hansen Mountains. Photographed by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Purka (i.e., "the sow"). ANCA named it (for themselves only) as Mount Corry, on July 29, 1965, for Max Corry. US-ACAN accepted the name Purka Mountain in 1967.

Purser, Joseph Alexander. b. 1906. After graduating from the University of Melbourne in 1928, he became a doctor in 1930, working at Perth Hospital. He was surgeon on the *Discovery II*, during the 1933–35 cruise of Discovery Investigations in Antarctic waters. After the expedition, he lived in London, married Katherine "Kitty" Back, and for many years was at Westminster Hospital, then at Banstead Hospital, in Sutton, Surrey. During World War II he was a lieutenant colonel in the RAMC. In 1966 they were living at Edgmount, Charlwood, Surrey, which is where he died in 1968.

Punta Pursuit *see* **Principal Point**

Pursuit Point *see* **Principal Point**

Cabo Purvis *see* **Cape Purvis**

Cape Purvis. 63°35' S, 55°58' W. Forms the S extremity of Dundee Island, off the N tip of the Antarctic Peninsula. Discovered and roughly charted on Dec. 30, 1842 by Ross, and named by him for Commodore (later Rear Admiral) John Brett Purvis (1757–1837), RN, senior naval officer on the E coast of South America, 1842–44, who helped Ross get his expedition together. It appears on Ross's 1844 and 1847 charts, and (as Cap Purvis) in Vincendon-Dumoulin's 1847 atlas. SwedAE 1901–04 charted it as Kap Purvis. On British charts of 1938 and 1940 it appears as the SE point of Dundee Island, and as the SW entrance point of the Firth of Tay. It was further surveyed by Fids on the *Trepassey* in Jan. 1947, and again by Fids from Base D in Dec. 1953. Therefore, the situation was corrected by the time UK-APC accepted the name on Sept. 4, 1957. It appears as such on a British chart of 1962. US-ACAN accepted the name in 1963. On an Argentine chart of 1957, the name Cabo Purvis was applied to the E end of Dundee Island, and that error was perpetuated not only by the 1970 Argentine gazetteer, but also by the 1974 Chilean gazetteer. The Chileans, when describing their feature, say that on its W coast is a bare, black rock in the shape of a trapezoid.

Purvis, James. Ordinary seaman on the *Discovery*, 1925–27. He was on the *Alert*, in South Georgia waters, 1928–30. In 1930–31 he was an able seaman on the *Discovery II*, and assistant cook on the same vessel, 1933–35. He was later a petty officer in the RN. Purvis Glacier, on South Georgia, was named after him.

Purvis Peak. 72°38' S, 169°09' E. Rising to 2250 m, 3 km NE of Mount Northampton, in the Victory Mountains of Victoria Land, it overlooks the terminus of Tucker Glacier from the south. Mapped by NZGSAE 1957–58, and also by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1973, for Lt. (later Lt. Cdr.) Ronald Scott Purvis (b. April 17, 1928, Cleveland, O.), who joined the U.S. Navy in June 1946, and was a VX-6 pilot of Otter aircraft at Ellsworth Station in 1956–57, and of R5D Skymaster aircraft at McMurdo in 1957–58. He retired from the Navy in May 1972.

Gora Pushchina. 72°04' S, 2°44' E. Some form of mountainous feature named by the Russians. Given the coordinates, it is on the SW side of Jutulsessen Mountain, in the Gjelsvik Mountains of Queen Maud Land. It is probably the Russian name for Brugda Ridge.

Lednik Pushkina. 81°40' S, 23°00' W. An isolated glacier, inland from the Filchner Ice Shelf. Named by the Russians.

Nunataki Pustovalova *see* **Wignall Nunataks**

Putuo Wan *see* **Webster Bay**

Putzke Peak. 75°49' S, 128°32' W. Rising to 2325 m, at the end of the spur which descends NE from Mount Petras, from which mountain this peak is 5.5 km to the SW, in the McCuddin Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Capt. Stanley G. Putzke, commander of the *Staten Island* during OpDF 71 (i.e., 1970–71) and OpDF 72 (i.e., 1971–72).

Puzzle Islands. 64°59' S, 63°40' W. A group of small islands, rocks, and reefs (some of them submerged), at the mouth of Flandres Bay, 1.5 km W of Ménier Island, E of Butler Passage, off the Danco Coast, on the W coast of Graham Land. First charted by FrAE 1903–05 (but, apparently, not named by them), and re-charted by an RN Hydrographic Survey unit in 1956–57. So named by UK-APC on July 7, 1959, because this group is often hidden by icebergs which come to rest in the shallow waters around here. It appears on a British chart of 1960. US-ACAN accepted the name in 1960. One of the Argentine Antarctic expeditions named it Islotes Mercurio, after the Argentine frigate *Mercurio* (not in Antarctic waters), and it appears as such in a 1978 Argentine reference. It is possible that the Argentines also named the largest of these islets as Islote Mercurio.

Pointe Py *see* **Py Point**

Punta Py *see* **Py Point**

Py Point. 64°53' S, 63°37' W. An island, 1.5 km long and about 450 m wide, forming the S extremity of Doumer Island, in the Palmer Archipelago, about 16 km off the W coast of the Antarctic Peninsula. Discovered and charted by FrAE 1903–05, and named by Charcot as Pointe Py, for Henry-Constant Py (b. 1841), president of the French Chamber of Commerce in Buenos Aires (he was famous for his long white beard). There is a 1948 reference to it as Punta Py, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. UK-APC accepted the name Py Point on Nov. 21, 1949, and US-ACAN followed suit in 1950.

It appears as such on a 1950 British chart, in the 1955 Brtiish gazetteer, and on a British chart of 1958.

Pycnogonids. Ten-legged, crab-like, foraging sea-spiders which live on the sea-bed near the coasts (*see* **Fauna**). Professor Eights discovered them in 1830, but he was not believed until they were rediscovered by ScotNAE 1902-04. There are several species, and some have 12 legs (*Dodecalopoda mawsoni*).

Pygmy right whales. Order: Cetacea (whales); sub-order: Mysticeti (baleen whales); family: Neobalaenidae. The pgymy is halfway between a right whale and a rorqual, in that is has a dorsal fin unique in right whales, 4 fingers (not 5), and, most important, two throat grooves, whereas rorquals have several and right whales have none. It is the smallest of the baleen whales, and has a shorter baleen than the right whale.

Pygmy Rock *see* **Pigmy Rock**

Glaciar Pyke *see* **Pyke Glacier**

Pyke Glacier. 64°15' S, 59°36' W. A glacier, 8 km long, flowing southward from the Detroit Plateau toward Larsen Inlet, E of Weasel Hill, between Albone Glacier and Polaris Glacier, on the Nordenskjöld Coast, on the E coast of Graham Land. Surveyed by Fids from Base D in 1960-61, and mapped by FIDS cartographers from these surveys. Named by UK-APC on Feb. 12, 1964, for Geoffrey Nathaniel Pyke (1894-1948), designer of the Weasel (q.v.). US-ACAN accepted the name later in 1964. The Argentines call it Glaciar Pyke.

Punta Pylon *see* **Pylon Point**

Pylon Point. 68°06' S, 65°05' W. A rocky promontory, rising to 868 m, 6 km SW of Three Slice Nunatak, it marks the E end of the main mountainous mass of Joerg Peninsula, and also the SE side of Trail Inlet, on the Bowman Coast, on the E coast of the Antarctic Peninsula. It lies in the area first seen by Wilkins as he flew over on Dec. 20, 1928, and also by Ellsworth as he made his flight of Nov. 21, 1935. It was photographed aerially and roughly mapped by USAS 1939-41. It appears on a 1942 USAAF chart, and on a 1943 U.S. Hydrographic Office photograph. So named by US-ACAN in 1947 because it was a turning point for USAS sledge parties and plane flights on their way S along the E coast of the Antarctic Peninsula. In those days it was plotted in 68°05' S, 65°00' W, and signified the NW point of Joerg Peninsula. It was further photographed aerially in late 1947, during RARE 1947-48, and surveyed from the ground that season by a joint sledging party of RARE personnel and Fids from Base E. On Ronne's 1949 map, still with those coordinates, it is otherwise correctly shown as being the E point of Joerg Peninsula. There was a move, that went nowhere, to have it named Clarkson Point. UK-APC accepted the name Pylon Point on Jan. 28, 1953, but with the corrected coordinates, and it appears that way in the 1955 British gazetteer, and also on the 1979 USGS sketch map of the N part of Palmer Land. On a 1947 Chilean chart it appears as Punta Diego Portales, named after the statesman (*see* **Veier Head**). On an Argentine chart of 1952 it appears as Punta Pylon, but on a 1959 Argentine chart it appears as Punta Concepción, named after the Feast of the Immaculate Conception. The name Punta Pylon was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. This entry must be read in conjunction with that of Punta Clarkson and Joerg Peninsula.

Pyne, Alexander Richard "Alex." b. Feb. 29, 1956, NZ. VUWAE expedition manager, who spent 26 months in Antarctica between 1977-78 (when he first went down as an honors student, involved in the design and management of scientific drilling operations) and 1988. He was science support manager on deep-drilling projects, 1984-86, and fulfilled the same function on the Cape Roberts Project, 1997-2000. He was subsequently drilling science coordinator and drill-site manager for ANDRILL (q.v.). In 2010 he won the NZ Antarctic Medal for his services to Antarctic engineering.

Pyne Glacier. 77°04' S, 162°18' E. The glacier next E of Robson Glacier, it flows N and joins the Mackay Glacier system SW of The Flatiron, in the Gonville and Caius Range. Named by NZ-APC on Nov. 4, 1999, for Alex Pyne. US-ACAN accepted the name in 2000.

Pynten. 71°01' S, 11°03' W. A point in the ice shelf on the N side of the entrance to Norsel Iceport, on the Princess Martha Coast. Name means "the point" in Norwegian.

Pyramid *see* **Khufu Peak**, **Pyramid Island**

[1]**The Pyramid** *see* **Pyramid Island**

[2]**The Pyramid**. 63°26' S, 57°01' W. A pyramidal nunatak, rising to 565 m, 1.5 km E of Mount Carrel, and 2.5 km SE of the head of Hope Bay, near the head of Kenney Glacier, at Trinity Peninsula, at the NE end of the Antarctic Peninsula. Discovered and roughly mapped in 1903, by Dr. J. Gunnar Andersson's party of SwedAE 1901-04, and named by them as Pyramiden, or Nunatak-Pyramide. Surveyed by Fids from Base D in Nov. 1945. It appears on a British chart of 1948 as The Pyramid, and that was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. It appears as such in the 1955 British gazetteer. Re-surveyed by FIDS in Aug. 1955. The Argentines call it Roca Pirámide, but is has also been seen as Cerro Pirámide.

[3]**The Pyramid**. 78°21' S, 163°30' E. Also called Pyramid Nunatak. It is actually a small but distinctive peak, just S of Pyramid Trough, at the W side of Koettlitz Glacier, in Victoria Land. It seems to have been named descriptively by BAE 1910-13. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Mount Pyramid *see* [2]**Pyramid Mountain**

Pyramid Island. 62°25' S, 60°06' W. A conspicuous, pillar-shaped island, rising to 205 m above sea level, 3 km NNE of Williams Point, Livingston Island, in the South Shetlands. Known to early sealers from the 1820-21 period, it was roughly charted in 1820 by Capt. Fildes, who recorded that "a large rock resembling Rock Dondo [i.e., the Rock Dondo in the Caribbean] bore ESE and by us obtained that name, it being easy and safe to approach and too remarkable to be mistaken." Re-surveyed by the personnel on the *Discovery II* in 1934-35, and renamed descriptively by them as Pyramid Island. It appears as such on their 1935 chart, and also as The Pyramid, and as simply Pyramid. It appears as Pyramid Island on a 1948 British chart, and that was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57. On a 1948 Argentine chart it appears as Islote The Pyramid, but on one of their 1953 charts it was Islote Pirámide, on a 1954 chart of theirs as Isla Pirámide, and on yet another, from 1957, as Islote The Piramid. The name Islote Pirámide was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

[1]**Pyramid Mountain** *see* **Mount Rhamnus**

[2]**Pyramid Mountain**. 77°46' S, 160°40' E. Rising to 2120 m, and resembling a pyramid, between Turnabout Valley and the mouth of Beacon Valley, or (to put it another way) between Finger Mountain and Beacon Heights, on the S side of the upper Ferrar Glacier, in the Quartermain Mountains of Victoria Land. Although this mountain must have been seen by BNAE 1901-04, it first seems to appear named on a map drawn up by BAE 1910-13. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

[3]**Pyramid Mountain**. 81°19' S, 158°15' E. A conspicuous pyramidal mountain rising to 2810 m, 6 km N of Mount Albert Markham, in the Churchill Mountains. Discovered and named by BNAE 1901-04. US-ACAN accepted the name.

[1]**Pyramid Peak** *see* **Mount Rhamnus**

[2]**Pyramid Peak**. 72°16' S, 165°35' E. A prominent pyramidal peak in the SE part of the Destination Nunataks, on the Polar Plateau, it rises to 2565 (the New Zealanders say 2590 m), 1.5 km N of Sphinx Peak, 11 km SW of Gless Peak of the Millen Range, in Victoria Land. Named descriptively by the Northern Party of the NZ Federated Mountain Clubs Expedition of 1962-63. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Pyramid Point *see* **Tilt Rock**

Pyramid Ponds. 78°17' S, 163°27' E. The streams of Pyramid Trough join above Trough Lake, forming a series of shallow interconnected ponds, in the area of the Koettlitz Glacier. Named Pyramide Pond by US-ACAN in 1993, in association with the trough. NZ-APC accepted that name on Dec. 1, 1993. In late 2008, US-ACAN changed the name to Pyramid Ponds.

Pyramid Rock. 64°23' S, 63°07' W. Rising to 40 m above sea level, close off the N extremity of Gourdon Peninsula, off the NE coast of Anvers Island, in the Palmer Archipelago. Following a Discovery Investigations survey of 1927, on the *Discovery*, the name was applied to a rock charted in the entrance to Lapeyrère Bay, and appears on their 1929 chart in 64°22' S, 63°05' W. It also appears that way on a 1948 British chart, and on a 1947 Chilean chart (as Roca

Pirámide). As Roca Pirámide, and with those coordinates, it appears in both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer (after the Chileans had rejected the proposed Roca Pyramid). In 1952, US-ACAN accepted the name Pyramid Rock, with the coordinates 64°22' S, 63°09' W, and that was accepted by UK-APC on Sept. 8, 1953, and that is how it appears in the 1955 British gazetteer, and also in the 1956 U.S. gazetteer. However, 1956-57 air photography by FIDASE and ground surveys by Fids from Base O revealed no island in these coordinates, and so the name was re-applied by UK-APC on July 7, 1959, to the present feature. It appears that way on a 1959 British chart. US-ACAN accepted that situation in 1963. Today, the Chileans (at least) plot it with the right coordinates.

Pyramid Trough. 78°18' S, 163°27' E. A deep trough, between 600 and 900 m deep, just W of The Bulwark, through which a part of Koettlitz Glacier formerly flowed N to Walcott Bay. The trough is bifurcated at its S end, the E and W channels being separated by The Almond. Named by VUWAE 1960-61 for its proximity to The Pyramid from Walcott Bay. NZ-APC accepted the name, and US-ACAN followed suit in 1963.

Pyramide Pond *see* **Pyramid Ponds**

[1]**Pyramiden**. 68°54' S, 90°36' W. A small nunatak at the E side of the upper part of Zavadovskijbreen, at the SW corner of Peter I Island. Named descriptively by the Norwegians ("the pyramid").

[2]**Pyramiden** *see* **The Pyramid**, **Pyramiden Nunatak**

Pyramiden Nunatak. 72°17' S, 3°48' W. A nunatak, 3 km E of Knallen Peak, on the E side of the head of Schytt Glacier, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named descriptively by them as Pyramiden (i.e., "the pyramid"). US-ACAN accepted the name Pyramiden Nunatak in 1966.

Pyrite Islands *see* **Pyrites Island**

Pyrites Island. 61°55' S, 57°57' W. Also called Pyrite Islands. The largest, highest, and most conspicuous of 3 small islands SE of Gam Point, at Venus Bay, it forms the NE side of Esther Harbor, off the NE coast of King George Island, in the South Shetlands. Known to early 19th-century sealers. In 1913-14, when David Ferguson explored this area, there were more islands here, and he roughly charted them and named one group the Esther Islands, and another group the Pyritis Islands (also seen as the Pyritic Islands; "Pyritis" is probably a misprint)). This latter group was defined as including this island, Gam Point, and nearby rocks to the NW and SE. Since Ferguson's day the ice cliff behind Gam Point has advanced and swallowed up most of these islands. There are now only 3 remaining islands. Photographed aerially by FIDASE in 1956. This particular one has pyrites and vein quartz contained in the bedrock, and was named by UK-APC on Sept. 23, 1960, in order to avoid confusion with the other Esther names in the area. US-ACAN accepted the name later in 1960. The Argentines call it Islote Pirita. Last plotted by the UK, in late 2008.

Pyritic Islands *see* **Pyrites Island**

Pyritis Islands *see* **Pyrites Island**

Pyritterrasse. 70°42' S, 162°14' E. A terrace on the NE side of Frolov Ridge, in the Bowers Mountains of Oates Land, in Victoria Land. Named by the Germans (i.e., "pyrites terrace").

Pyrox Island. 68°12' S, 66°41' W. At the head of Neny Fjord, it backs onto the terminus of Neny Glacier, in Marguerite Bay, along the Fallières Coast, on the W coast of Graham Land. First surveyed in 1940, by USAS 1939-41. Resurveyed in Dec. 1949 by Fids from Base E, who named it Neny Glacier Island, in association with the glacier. In 1954, Ray Adie mentioned it as Pyrox Islet, named for the pyroxene-rich rock here. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. On an Argentine chart of 1957 it appears as Islote Dos Lomos (i.e., "two-ridge islet"), and that is what the Argentines call it today. On July 7, 1959, UK-APC redefined it as Pyrox Island, and it appears as such on a 1961 British chart. US-ACAN accepted that name in 1963.

Pyrox Islet *see* **Pyrox Island**

Pyroxenite Promontory. 82°37' S, 53°00' W. Rising to about 1150 m, W of Neuburg Peak and the Jaeger Table, and projecting NW toward Rautio Nunatak, near the W end of the Dufek Massif, in the N part of the Pensacola Mountains. USGS surveyed it from the ground during their Pensacola Mountains Project of 1965-66. Named by Art Ford (q.v.), leader of the USGS geological party to the Pensacolas in 1978-79, for the pyroxenite rock which forms a conspicuous dark layer along the cliffs of the promontory. US-ACAN accepted the name in 1979, and UK-APC followed suit on May 21, 1979.

Pythagoras Peak. 66°59' S, 51°20' E. Rising to 1275 m, it is the highest peak in the central Tula Mountains, along the N side of Beaver Glacier, 13 km SE of Mount Storer. It has a prominent notch, the E aspect being a right-angled triangle with a perpendicular N face. It was photographed from Mount Riiser-Larsen by Phil Law's ANARE party in Feb. 1958, and was first visited and surveyed in Dec. 1958, by Graham Knuckey, during a dog-sledge journey from Mawson Station to Amundsen Bay. Named by ANCA on July 22, 1959, for that old Greek right-angle triangle man, Pythagoras. US-ACAN accepted the name in 1961.

The *Pythia*. Built in 1893, for the Castle Line, as the *Raglan Castle*. In 1911 the Dominion Whaling Company, of Sandefjord, Norway, bought her for whaling service off the coast of the Congo and Angola (in 1915 Andreas Nilsen was aboard in those waters). In 1920 Thor Dahl bought her for his Odd Company, and, as a 4239-ton, single-screw steam factory whaling ship, she worked in the South Shetlands and the Palmer Archipelago, 1921-22 (*see also* **The *Minerva***), operating out of Gouvernøren Harbor, under charter to N. Bugge's Hvalen Whaling Company. Lars Andersen was manager that season. She was back in the same waters in 1922-23 (the season she officially replaced the extinct *Guvernøren*), and again in 1923-24. In 1924 she was legally transferred to the Thor Dahl Company. She was back in 1924-25 and 1925-26, and in 1926-27 she was badly damaged early in the season, spending the rest of the season laid up at the South Shetlands. She was back in 1927-28, and in 1928-29 she was operating along the ice-edge. On her return to Norway in 1929 she capsized alongside the quay at Framnaes Vaerksted, and was so badly damaged that she missed the 1929-30 Antarctic whaling season, so, after the repairs, she was sold to the Africa Company which, in 1930-31 sent her south as the *Ready* (q.v.).

Pythia Harbour *see* **Gouvernøren Harbor**

Pythia Island. 64°32' S, 61°59' W. About 320 m long, it is the largest of a group of small islands off the E side of Enterprise Island, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Lying on the NE side of Gouvernøren Harbor, the island (together with Isla Pólvora) protects that harbor from the north. Charted by the British Imperial Antarctic Expedition of 1920-22, who may also have actually named it; it was certainly named for the *Pythia*. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name on Sept. 23, 1960, and it appears on a 1961 British chart. US-ACAN accepted the name in 1965. It appears on a 1962 Chilean chart as Isla Toneles (i.e., "barrels island"), named for its shape, and that was the name accepted by the Chilean gazetteer of 1974.

Pyxis Ridge. 71°16' S, 66°48' W. A narrow ridge of nunataks separated by passes, and running N-S at an elevation of about 950 m, 8 km NNW of Mount Cadbury, from where it projects into the S side of Ryder Glacier, in Palmer Land, at George VI Sound. Surveyed by BAS personnel from Base E between 1962 and 1972. Named by UK-APC on July 21, 1976, for the constellation. US-ACAN accepted the name later in 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Cabo Q *see* **Cabo Abenante**

Qian Shanpo. 69°22' S, 76°22' E. A slope in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Qifeng Yan. 62°13' S, 58°58' W. A rock, on Fildes Peninsula, on the SW end of King George Island, in the South Shetlands. Named by the Chinese.

Qingcheng Shan *see* **Garnet Knob**

Qinglong Gou. 69°32' S, 76°08' E. A valley in the area of the Søstrene Islands, at the N part of Publications Ice Shelf, at the head of Prydz Bay, on the Ingrid Christensen Coast. Named by the Chinese.

Qingren Hu. 69°24' S, 76°06' E. A lake in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Qingshui He. 62°11' S, 58°54' W. A stream on Fildes Peninsula, at the SW end of King George Island, in the South Shetlands. Named by the Chinese.

Qiongjiang He. 62°14' S, 58°59' W. A stream

on Fildes Peninsula, on the SW end of King George Island, in the South Shetlands. Named by the Chinese.

Qixiangta Shan. 69°22' S, 76°22' E. A hill in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Qixiangxuejia Wan. 62°15' S, 58°58' W. A cove on Fildes Peninsula, on the SW end of King George Island, in the South Shetlands. Named by the Chinese.

Qixing Yan. 62°13' S, 58°55' W. A rock, on Fildes Peninsula, on the SW end of King George Island, in the South Shetlands. Named by the Chinese.

Mount Quackenbush. 80°21' S, 156°58' E. A flat-topped mountain rising to 2433 m above sea level, forming a projecting angle along the steep cliffs bordering the N side of Byrd Glacier, just W of Peckham Glacier, and N of Byrd Glacier. The summit is conspicuously ice-covered, but the south- and east-facing sides are relatively ice-free. Mapped by USGS from USN air photos, and named by US-ACAN in 1965, for Capt. Robert S. Quackenbush, Jr. (1903-1985), chief of staff to Admiral Cruzen and the central group of Task Force 68, during OpHJ 1946-47.

The Quadrangle. 71°35' S, 68°36' W. An ice-covered glacial cirque, enclosed on 3 sides by rock ridges, but open to the S, on the W side of Venus Glacier, between that glacier and Mount Umbriel, in the E part of Alexander Island. Surveyed by BAS personnel from Fossil Bluff between 1961 and 1973. Mapped by the (British) Directorate of Overseas Surveys from satellite imagery supplied by NASA and USGS. Named by UK-APC on Dec. 20, 1974, for its shape. US-ACAN accepted the name in 1975.

Quam Heights. 71°03' S, 167°48' E. Mostly snow-covered heights, 24 km long and 6 km wide, rising to over 1000 m, and forming the coastline between Barnett Glacier and Dennistoun Glacier in northern Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for geologist and geographer Louis Otto Quam (1906-2001), chief scientist, Office of Polar Programs, NSF, 1967-72.

Mount Quandary. 64°52' S, 61°34' W. Rising to about 1050 m, on the E side of (and near the head of) Hektoria Glacier, 20 km NW of Shiver Point, on the Oscar II Coast of Graham Land. Surveyed by Fids from Base D in Sept. 1955. When first seen it was not certain if it was part of the central plateau of Graham Land or a detached summit in Hektoria Glacier. Named by UK-APC on Sept. 4, 1957. US-ACAN accepted the name in 1963. Photographed aerially by USN in 1968-69.

Quar, Leslie Arthur. b. March 27, 1923, Croydon, son of Arthur William Quar and Florence Simmons. He left school at 14 (as boys did in those days), and, after a stint at Imperial Airways, joined the RAF in 1939, becoming a radio technician during World War II, mostly in the Middle East. After the war he was in Germany blowing up old Nazi fortifications and U-boat pens. He was corporal radio mechanic, technician, and reserve operator, as well as electrician and general assistant, on NBSAE 1949-52, and died on Feb. 24, 1951 when the Weasel he was in fell over the edge of the Quar Ice Shelf.

Quar Basin. 71°12' S, 11°12' W. A submarine basin off the Quar Ice Shelf, Princess Martha Coast, Queen Maud Land. The name was proposed by Heinrich Hinze in Jan. 1997, in association with the Quar Ice Shelf, and the name was accepted by international agreement in June 1997.

Quar Ice Shelf. 71°20' S, 11°00' W. The ice shelf between Cape Norvegia to the W and Soråsen Ridge to the E, along the Princess Martha Coast of Queen Maud Land. Mapped by NBSAE 1949-52, whose station, Maudheim, was on this ice shelf. Named for Leslie Quar. US-ACAN accepted the name in 1970. The Norwegians call it Quarisen, or Maudheim Shelf Is (i.e., "Maudheim Shelf Ice").

Quarisen *see* **Quar Ice Shelf**

Quarles Range. 85°36' S, 164°30' W. A high and rugged range, extending from the Polar Plateau between Cooper Glacier and Bowman Glacier, to the edge of the Ross Ice Shelf, in the Queen Maud Mountains. Amundsen first saw peaks in this range in Nov. 1911, on his way to the Pole. The range was mapped in detail by ByrdAE 1928-30. Named by US-ACAN in 1966, for Donald Aubrey Quarles (1894-1959), secretary of the Air Force, 1955-57, and deputy secretary of defense, 1957-59 (during IGY).

Quarterdeck Ridge. 72°27' S, 170°16' E. The undulating snow crest of Hallett Peninsula, running in a N-S direction, near to Cotter Cliffs, between Wheatston Hill and Mount Geoffrey Markham. So named by NZGSAE 1957-58, for two reasons. For the most part, this crest is very close to great 1500-meter cliffs falling to the Ross Sea, and the feeling one gets, when traversing this feature, is of walking the quarterdeck of a ship. Also, it reminded the surveyors of a feature with the same name, found at the approaches to Mount Aspiring, in NZ. US-ACAN accepted the name in 1962.

Quartermain, Leslie Bowden "Les." b. June 10, 1895, Hororata, NZ. An English teacher in Christchurch and Wellington, he became co-founder of the NZ Antarctic Society. He was in Antarctica in 1957-58 and 1960-61, the second time as leader of an expedition that set out to restore the old huts at Cape Evans and Cape Royds. He was back in 1968. On retiring from teaching he became information officer for the Antarctic Division of the NZ Department of Scientific and Industrial Research. He died on April 28, 1973. *See* the Bibliography.

Quartermain Glacier. 67°01' S, 65°09' W. A well-defined, highly-crevassed glacier, on the N side of Fricker Glacier, from which it is separated in its upper reaches by Mount Kennett, it flows E from the plateau of Graham Land into Mill Inlet, on the Foyn Coast, on the E coast of the Antarctic Peninsula. Surveyed by BAS personnel from Base E in 1963-64. Named by UK-APC on July 21, 1976, for Les Quartermain. US-ACAN accepted the name later in 1976.

Quartermain Mountains. 77°51' S, 160°45' E. A group of exposed mountains, about 30 km long, S of Taylor Glacier, in the McMurdo Dry Valleys of Victoria Land. They are bounded by Finger Mountain, Mount Handsley, Mount Feather, and Tabular Mountain, and also include Knobhead, Terra Cotta Mountain, New Mountain, Beacon Heights, Pyramid Mountain, Arena Valley, Kennar Valley, Turnabout Valley, and the several valleys and ridges in Beacon Valley. They were explored by BNAE 1901-04, BAE 1907-09, and BAE 1910-13, and given various names by these expeditions. During the IGY period of 1957-59, they were named by the New Zealanders, as the Quartermain Range, for Les Quartermain (q.v.), who was here at that time. In 1977 NZ-APC formally called them the Quartermain Mountains. US-ACAN and UK-APC have both followed suit with the naming.

Quartermain Point. 72°03' S, 170°08' E. A prominent point in the N part of Moubray Bay, between Helm Point and Cape Roget. Named by NZGSAE 1957-58, for Les Quartermain, who took a close interest in the work of this expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Quartermain Range *see* **Quartermain Mountains**

Quartley, Arthur Lester. b. July 23, 1873, Randallstown, near Baltimore, Md., but raised in New York, son of English immigrant Arthur Quartley (born in Paris) by his first wife Laura. His father, who had come down from New York to Baltimore in 1873, to open a studio there, soon returned to New York (when the boy was 2) and became a well-known self-taught marine artist. He died in New York when his son was 12. At first the son was in the U.S. Navy, then became a leading stoker, RN, and was on the *Majestic* when he transferred to the *Discovery* for BNAE 1901-04. He was owner of Poplar, the black cat. Skelton described him as the best physical specimen on the ship. Immediately after the expedition, he married in Lambeth, but was divorced almost immediately. He moved to Portsmouth, and there, in 1906, married again, but again, the marriage did not work out. Finally, he married Mabel Curtis in Portsmouth, in 1916, and they raised a family. He died in Hampstead, London, in 1945, a few months before the end of World War II.

Quartz. Has been found in Antarctica.

Quartz Hills. 85°56' S, 132°50' W. An arcuate group of mainly ice-free hills and peaks immediately S of Colorado Glacier, along the W side of Reedy Glacier, in the Transantarctic Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by John H. Mercer (*see* **Mercer Ridge**) for the many examples of rose quartz found in the superficial deposits of the hills. US-ACAN accepted the name in 1967.

Quartz Pebble Hill. 84°44' S, 113°59' W. A flat-topped hill on the N escarpment of the Buckeye Table, in the Ohio Range, just where Discovery Ridge joins the main escarpment, in the Horlick Mountains. The rock that forms the

hill is composed of sandstone and quartz pebble conglomerate. Named by Bill Long (*see* **Long Hills**). US-ACAN accepted the name in 1964.

Quaternary Glacier *see* **Albatross Glacier**

Quaternary Icefall. 77°18' S, 166°30' E. A western lobe of the Mount Bird Ice Cap, falling steeply from a height of over 600 m into Wohlschlag Bay, 1.5 km S of Cinder Hill, near the S end of the ice-free area on the lower slopes of Mount Bird, on Ross Island. Mapped and named by NZGSAE 1958-59, who found that a contemporary ice-cored terminal moraine located at a height of 548 m on the N side of its upper end contained fragments of marine shells that were apparently scooped up from the floor of McMurdo Sound and deposited high up on the side of Mount Bird by an expended glacier of a Quaternary glacial period. The shell fragments are now being carried down the mountain by the icefall and deposited in terminal moraines. US-ACAN accepted the name in 1964.

Quaver Nunatak. 71°00' S, 70°17' W. A small nunatak, rising to about 250 m, it is the northernmost exposure of the Walton Mountains, in the W part of Alexander Island. Surveyed by BAS personnel from Fossil Bluff, 1974-75. Named by UK-APC on Dec. 8, 1977, for its small size, and in accordance with the composers motif here. US-ACAN accepted the name.

The *Que Sera Sera*. The American R4D-5L aircraft (i.e., a military DC3), No. 12418, built in 1943, and used by the U.S. Navy in World War II. Assigned to VX-6, as #8, it was piloted by Gus Shinn, and took Admiral Dufek to the South Pole on Oct. 31, 1956, to kick off OpDFII. It left behind a U.S. flag and a radar beacon. For a list of the crew and passengers of this flight, *see* **South Pole**. The legendary plane was presented to the Smithsonian in Dec. 1958, but was later moved to the Naval Air Museum, in Pensacola, Fla.

Isla Quebrada *see* **Broken Island**

Punta Quebrada. 63°14' S, 55°03' W. A point on Joinville Island, at the NE tip of the Antarctic Peninsula. Named by the Argentines.

Queen, Walter Kerr. b. April 1, 1880, Newcastle, Ontario, son of Scottish immigrants (from Greenock), spinner George Queen and his wife Agnes. In 1890 the family moved to Needham, Mass., and Walter became a citizen of the USA, in Boston in 1900. From 1900 to 1905 he was chief engineer for the New York and Puerto Rico Steamship Lines, and, from 1905 to 1912, maintenance supervisor for the Boston Elevated Rapid. He founded the Q-P Manufacturing Company at Needham, Mass, engineering supplies, and remained president until he sold it in 1947 and retired. He was a naval officer in World War I, and in 1937 took a trip to the Arctic, as a passenger. He was a naval commander when he became chief engineer on the *Jacob Ruppert*, 1933-34, during the first half of ByrdAE 1933-35. A past master of Needham Lodge, he held the first ever Masonic meeting in Antarctica, at Little America in 1934. On March 26, 1934 he arrived back in San Francisco from Auckland, on the *Monterey*, but would return later in the year to NZ, ready for the 2nd half. He married Gertrude, and died on June 14, 1960, in Stamford, Conn.

Queen Adelaide Island *see* **Adelaide Island**

Queen Alexandra Range. 84°00' S, 168°00' E. Also called Alexandra Range, and also seen spelled (erroneously) as Queen Alexandria Range. Not to be confused with the Alexandra Mountains. The Queen Alexandra Range is one of the major mountain ranges of Antarctica, 160 km long, and consists of dome-shaped mountains interspersed with a few sharp, conical peaks. It borders the entire W side of the Beardmore Glacier from the Polar Plateau to the Ross Ice Shelf (indeed, it overlooks that ice shelf), and lies between the Beardmore and the Queen Elizabeth Range, in the Transantarctic Mountains. It comprises some important features, such as Mounts Kirkpatrick, Darwin, F.L. Smith, Fox, Hope, Bell, Mackellar, Buckley, Wild, Falla, Anne, Adams, Elizabeth, and Sirius, as well as The Cloudmaker, Coalsack Bluff, Fremouw Peak, the MacAlpine Hills, the Marshall Mountains, Blizzard Heights, Blizzard Peak, Storm Peak, Tempest Peak, Prebble Glacier, and Tillite Glacier. Discovered in Dec. 1908, by BAE 1907-09, during Shackleton's trek to the Pole, and named by Shackleton for the queen of England at the time (consort of the king, in this case). US-ACAN accepted the name in 1947. The mid-point was originally plotted in 80°20' S, 168°00' E, but has since been re-plotted.

Queen Bay *see* **Borge Bay**

The *Queen Charlotte*. British sealer out of Plymouth, in South Shetlands waters in 1820-21, under the command of Capt. Morris.

Queen Elizabeth Range. 83°20' S, 161°30' E. A rugged and extensive mountain range, paralleling the E side of Marsh Glacier for about 150 km, from the Nimrod Glacier in the N to Law Glacier in the S. To the W of the Queen Alexandra Range (it was previously thought to be part of that range), it overlooks the Ross Ice Shelf, and includes some important features, such as Mount Markham (at 4350 m, the highest elevation in the range), Mounts Ropar, Picciotto, Weeks, Angier, Counts, Rabot, and Christchurch, as well as Moody Nunatak, the Moore Mountains, Cranfield Peak, and Claydon Peak. Bob Miller and George Marsh, of the NZ party of BCTAE 1956-58, explored this area, and Miller named the range for Queen Elizabeth II, the patron of the expedition. US-ACAN accepted the name in 1962. The mid-point was originally plotted in 83°20' S, 162°00' E, but it has since been re-plotted.

Queen Fabiola Mountains. 71°30' S, 35°40' E. An isolated group of mountains, 50 km long, and ranging between 71°14' S and 71°45' S, and between 35°25' S and 36°05' E. They consist mainly of 7 small massifs, trending in a N-S direction, and forming a partial barrier to the flow of inland ice, 150 km SW of the head of Lützow-Holm Bay, between the Belgica Mountains and Shirase Glacier. Discovered and photographed aerially on Oct. 7, 1960 by BelgAE 1960-61, and named Monts Reine Fabiola, by expedition leader Guido Derom (with, of course, the gracious permission of Roi Baudoin, King of the Belgians) for Doña Fabiola de Mora y Aragón, on the occasion of her wedding with said king. In Nov.-Dec. 1960, JARE surveyors visited the area, and surveyed it, the Japanese giving the mountains their own name, the Yamato-sanmyaku (i,e, "Yamato mountains") (which is not the same as the Belgian meaning; "Yamato" being an old name for "Japan"). The Norwegians call them Dronning Fabiolafjella (a translation of the Belgian name). US-ACAN accepted the name Queen Fabiola Mountains in 1966.

Queen Mary Coast *see* **Queen Mary Land**

Queen Mary Land. 67°00' S, 96°00' E. This is an Australian term, signifying that portion of East Antarctica between Cape Filchner (91°54' E) and Cape Hordern, in the Bunger Hills (100°28' E), on the shores of the Davis Sea, behind the Shackleton Ice Shelf, in the vicinity of Mirnyy Station. Discovered in Feb. 1912 by the *Aurora* party of AAE 1911-14, and named by them for Queen Mary of England (consort of George V). US-ACAN, unwilling to accept any new "land" terms, accepted the name Queen Mary Coast in 1947, and, as such, not recognizing the hinterland behind the coast (as the Australians, for example, do) have plotted its midpoint in 66°45' S, 96°00' E. So, really, Queen Mary Land and Queen Mary Coast are two different concepts. It is also called the Mary Coast. The Russians, during the IGY period (late 1950s) tended to call it the Pravda Coast, but generally, now, they use the same name the Americans do.

Queen Maud Land. 72°30' S, 12°00' E. One of the major features of East Antarctica, its current boundaries are the terminus of Stancomb-Wills Glacier in 20°W and Shinnan Glacier in 44°38' E, i.e., between New Schwabenland and Enderby Land. The original Queen Maud Land (between 37°E and 50°E) was discovered on Jan. 15, 1930 by Riiser-Larsen, who called it Dronning Maud Land for the queen of Norway ("dronning" meaning "queen"), or rather the consort of King Haakon VII of Norway. Riiser-Larsen also explored it in 1930-31. Norway claimed it on Jan. 14, 1939, and it forms the bulk of the Norwegian dependency. US-ACAN accepted the name for the expanded version in 1952. The westernmost part is called Maudheimvidda. *See also* **Fimbulheimen**.

Queen Maud Mountains. 86°00' S, 160°00' W. A major group of mountains, ranges and subordinate features, part of the Transantarctic Horst, it is the group of mountains nearest the Pole, and bounds the Ross Ice Shelf at the S of that mass of ice, between the Beardmore Glacier and Reedy Glacier, and extending as far S as the Polar Plateau. Although Shackleton saw some of the mountains in the W part of this group, they were really discovered by Amundsen on Nov. 11, 1911 (11/11/11), during his trek to the Pole (he went up the Axel Heiberg Glacier, in the middle of this group), and named by him as the Dronning Maudsfjell (i.e., Queen Maud Range), for the

queen of Norway. The feature was later redefined as a group of mountains, rather than a range. Byrd AE 1928-30, ByrdAE 1933-35, and various 1950s expeditions mapped the mountains as a whole. The range-like features to be found within these mountains include: Commonwealth Range, Supporters Range, Dominion Range, Hughes Range, Bush Mountains, Nilsen Plateau, Otway Massif, Prince Olav Mountains, and Watson Escarpment.

Queen Maud Range *see* **Queen Maud Mountains**

Queen Mountain *see* **Queer Mountain**

The *Queen of Bermuda*. A 22,575-ton, 3-funneled, quadruple-screw, British liner, built by Vickers Armstrong in 1933, and owned by Furness, Withy, and Co. She was hired by the Admiralty a few days before World War II broke out, and converted into an armed merchant cruiser, with seven 6-inch guns and two 3-inch H.A. guns. **Oct. 1939**: The captain went sick, and Capt. (later Admiral) Geoffrey Hawkins took over. **1940**: The vessel was refitted at Durban. **Jan. 20, 1941**: Commanded by Capt. Hawkins, the *Queen* left Stanley, in the Falkland Islands, bound for South Georgia, and then the Weddell Sea, the South Orkneys, and the South Shetlands, to protect the British, Norwegian, and Argentine whaling fleets against enemy attack. Cdr. Stanley Burns was navigator. Also aboard was an RN 1st lieutenant, and various other officers, RNR and Merchant, including Pat Toynbee. Altogether 450 men. **Jan. 22, 1941**: The ship arrived at South Georgia, but did not dock. They found the factory ship *Thorshammer.* **Jan. 23, 1941**: At Leith Harbor, they came across the whaler *Ernesto Tornquist*. **Jan. 24, 1941**: The *Queen* was in 58°15' S, 40°20' W, and sighting icebergs. **Jan. 25, 1941**: In the morning, the *Queen* docked at South Georgia. **Jan. 26, 1941**: By noon, the *Queen* was about 150 miles SSW of South Georgia, heading for the South Orkneys. **Jan. 27, 1941**: The *Queen* sighted Laurie Island at 1.45 P.M., from about 40 miles away. In the evening they sighted Órcadas Station. Hawkins sent Morse signals to the station, but got no reply. Neither did he land. **Jan. 28, 1941**: The *Queen* was off Cape Faraday, Cape Valavielle, and Cape Dundas, all on Laurie Island, and then they made for the whaling grounds. **Jan. 29, 1941**: At the whaling grounds they found the *Southern Empress* and the *Ernesto Tornquist*, in 64°S, 47' W. **Jan. 30, 1941**: About 100 miles farther W, they found the *Svend Foyn*. The *Queen* spent the next 12 days between 64°S and 65°S, and between 40°W and 50°W, keeping station with the whalers. **Feb. 6, 1941**: The *Ernesto Tornquist* left the whaling grounds for South Georgia. **Feb. 12, 1941**: The whale catcher *Sobkra* was spotted, in 65°39' S, 50°28' W. **Feb. 14, 1941**: The *Southern Empress*, which had moved S, was spotted in 66°04' S, 49°08' W. For the next 3 days the *Queen* kept the *Empress* in sight. **Feb. 17, 1941**: The *Queen* moved off to an area about 90 miles E of Erebus and Terror Gulf, James Ross Island, keeping out of sight of land. **Feb. 18, 1941**: The *Queen* spotted the *Svend Foyn*, which was working this area. The two vessels kept in sight of each other for a week, during which time the *Southern Empress* was sighted once more. **Feb. 27, 1941**: The *Queen* spotted the *Thorshammer*, in 64°S, 50°W, and she stayed with the *Queen*, which made a course to the S and W. **March 1, 1941**: The *Queen* met with the *Empress*, 90 miles E of James Ross Island, and N of the Weddell Sea. **March 2, 1941**: The *Queen* met the *Thorshammer* in the same area. **March 3, 1941**: The *Queen* met the *Svend Foyn*, again in the same area. The *Queen* was then on a northerly course, and later that day rounded Trinity Peninsula (Trinity Land, as it was then known), passing 20 miles off Joinville Island, and crossing the Bransfield Strait. **March 4, 1941**: The *Queen* was off Livingston Island, in the South Shetlands. **March 5, 1941**: The *Queen* arrived in Port Foster, Deception Island. There the crew destroyed the coal and fuel tanks at the deserted Norwegian whaling station, so the Nazis wouldn't get them. Hawkins left the buildings untouched. The ship then left Deception Island, taking a northerly course through Boyd Strait (between Smith Island and Snow Island), then across Burdwood Bank. **March 8, 1941**: The *Queen* arrived at Port Stanley, in the Falklands. **March 21, 1941**: The *Queen* left Port Stanley, heading south again, for the whaling grounds. From 60°S the *Queen* was in company with the *Lancing*, the *Thorshammer*, and the *Southern Empress*, and 8 whale catchers. In 62°S, 52°W, they saw 61 icebergs in one afternoon, and they saw pack-ice the following day, in 63°30' S. **March 25, 1941**: The *Queen* reached 63°24' S, in company with the *Lancing* and the *Thorshammer*. **March 25, 1941**: Hawkins found the charted position of Clarence Island to be off by a mile. **March 29, 1941**: The *Queen* anchored at South Georgia. **April 5, 1941**: The *Queen* left South Georgia, bound for Freetown, Sierra Leone. **April 23, 1941**: The *Queen* arrived at Freetown. **April 24, 1941**: Hawkins handed over command of the *Queen of Bermuda* to Capt. Allan Thomas George Cumberland Peachey. *See* **Wars** for more details. The *Queen of Bermuda* was broken up in 1967.

Queen Sofia Mount. 62°40' S, 60°23' W. A mountain rising to 274 m, SSE of Juan Carlos I Station, at South Bay, Livingston Island, in the South Shetlands. Photographed by FIDASE 1956-57, it was named in 2003, by the Spanish, as Monte Reina Sofía, for their queen. The name Queen Sofia Mount was accepted by UK-APC on Dec. 16, 2003.

Queen's Bay *see* **Borge Bay**

Mount Queensland. 74°16' S, 163°56' E. A high, prominent peak, rising to 1910 m, E of Mount New Zealand, and 11 km N of Mount Dickason, in the Deep Freeze Range, inland from Wood Bay, and about 40 km NW of Mount Melbourne, in Victoria Land. Discovered by BNAE 1901-04 and named by them out of gratitude to the state of Queensland for its assistance to the expedition. US-ACAN accepted the name in 1950.

Mount Queequeg. 65°39' S, 62°08' W. A conspicuous and partly snow-covered mountain, on Scar Inlet, between the mouths of Starbuck Glacier and Stubb Glacier, on the Oscar II Coast, on the E coast of Graham Land, it has 3 conical summits, the highest being 905 m. Surveyed and photographed by Fids from Base D in Nov. 1947, and named by UK-APC on Sept. 4, 1957, for the *Moby Dick* character. It appears on a British chart of 1961. US-ACAN accepted the name in 1963. Further surveyed by BAS personnel from Base E in 1963-64.

Mount Queer *see* **Queer Mountain**

Queer Mountain. 77°08' S, 161°45' E. Also spelled (erroneously) as Queen Mountain. A conspicuous black nunatak-like mountain rising to 1180 m, with steep slopes showing bands of sandstone above the granite, 1.5 km W of Killer Ridge, between Cotton Glacier and Miller Glacier (it is at the head of that glacier), in Victoria Land. Charted in Jan. 1912, by Frank Debenham of BAE 1910-13, and so named by him because it has all sorts of local rocks in it, including coal beds, even though it is surrounded by glacier. US-ACAN accepted the name in 1952. The Russians have a tendency to call it Mount Queer.

The *Quellón*. Chilean ship used on ChilAE 1992-93 (Captain Eugenio Oliva Bernabé).

Quertal *see* **Cross Valley**

Querthal *see* **Cross Valley**

Quervain Peak. 67°23' S, 66°39' W. Rising to 2030 m, in the central part of the Boyle Mountains, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from FIDS surveys conducted between 1956 and 1959, and from aerial photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Alfred de Quervain (1879-1927), Swiss glaciologist and Arctic explorer, who, in 1909, first applied photogrammetric methods to the measurement of surface glacier flow. US-ACAN accepted the name in 1965.

Query Island. 68°48' S, 67°12' W. A prominent, rocky island lying between the foot of Clarke Glacier and Keyhole Island, on the S side of Mikkelsen Bay, off the Fallières Coast, on the W coast of Graham Land. Surveyed by Fids from Base E in Nov. 1948, and named by them as Query Islet, because of the question as to whether, from a distance, the feature was an islet or part of the mainland. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. On July 7, 1959, UK-APC redefined it as Query Island, and US-ACAN followed suit in 1963. The Argentines call it both Islote Confuso, or Islote Duda (which basically mean the same thing). The confusion (and the original query) returned; by 1977 glacial advance had connected the "island" to the mainland, so it was no longer an island.

Query Islet *see* **Query Island**

[1]**The *Quest***. The ship used by Sir Ernest Shackleton on his 1921-22 expedition (see below, the ***Quest* Expedition**). Formerly a two-masted wooden Norwegian sealing schooner, the *Foca I*, built in Norway in 1917 for Morten Ingebrigtsen, and launched at Risor that year. In 1921

Shackleton bought her from the Royal Yacht Squadron, and changed her name to *Quest*, at the suggestion of his wife. Thornycroft altered her into a brig. She had an 8 mph maximum speed, was 111 feet long, and weighed 205 tons. However her sides were two feet thick with oak, pine and fir, and her bows were shod with steel. Even though she had been tried and tested in the Arctic, she was in disastrous condition. After Shackleton had used her in the Antarctic (and died doing it), British businessman William G. Olliffe sold the *Quest* to Peter Schjelderup, the Norwegian shipowner, for £1740. She was refitted and Schjelderup's son, Ludolf, became her skipper, most of the time sealing in the White Sea, or being chartered out to Arctic hunting or scientific expeditions. In 1928 she took part in the search for Nobile, in the Arctic, and in 1930 was chartered by the British Arctic Air Route Expedition, led by Gino Watkins. During World War II she was requisitioned by the Allies, and after the war went back to sealing. On May 5, 1962, she was beset, and sank, just N of Newfoundland.

[2]**The *Quest***. In 1963 this British survey motor boat was used by the RN Hydrographic Survey Unit in the waters off the Antarctic Peninsula. A.J. Jennings was coxswain.

Canal Quest *see* **Quest Channel**

Quest Channel. 67°48' S, 69°01' W. A marine channel that leads SW from Adelaide Anchorage between Hibbert Rock and Henkes Islands, off the S end of Adelaide Island. Charted by an RN Hydrographic Survey unit in 1963, on the *Protector*. Named by UK-APC on Feb. 12, 1964, for the *Quest* (the motor vessel used by the unit). US-ACAN accepted the name later in 1964. The Argentines call it Canal Quest.

Quest Cliffs. 82°36' S, 155°10' E. Also called Quest Nunatak. A line of steep-sided, east-facing rock exposures, immediately N of The Slot, and N of Endurance Cliffs, near the S end of the Geologists Range. Discovered by the Northern Party of NZGSAE 1961-62, and named by them for the *Quest* (Shackleton's 1921-22 vessel). NZ-APC accepted the name, and US-ACAN followed suit in 1966. Originally plotted by the Australians in 82°37' S, 155°00' E, this feature was later plotted in 82°36' S, 155°06' E, but has since been re-plotted.

***Quest* Expedition**. 1921-22. Otherwise known as the Shackleton-Rowett Antarctic Expedition, or, in full, the Shackleton-Rowett Oceanographical and Antarctic Expedition. Shackleton, who had been reduced to lecturing in London to half-empty houses, was desperate to go on any mission at all, so he inveigled his old school chum, John Quiller Rowett, to finance one for him. Frederick Becker, the paper manufacturer, was another major supporter (£5000). It was conceived as a 3-year mission to the Arctic, but then the destination was changed to Antarctica, the mission being to map 2000 miles of coastline there, to pioneer aviation in Antarctica, to look for lost islands, and to conduct scientific research. **Sept. 17, 1921**: With a small seaplane aboard, the *Quest* was pulled out of London by the tug *Adder*. Shackleton was the leader and Frank Wild was 2nd-in-command. Also on the expedition were: George Vibert Douglas (geologist), Alexander Macklin (medical officer, stores, and equipment), James McIlroy (surgeon and meteorologist), Leonard Hussey (assistant surgeon and meteorologist), Hubert Wilkins (photographer and ornithologist), J.C. Bee Mason (cinematographer and photographer), Charles Carr (aviator), Jimmy Marr and Norman E. Mooney (both Scottish boy scouts), and J.R. Stenhouse. The ship's crew were: Frank Worsley (sailing master and hydrographer), Douglas Jeffrey (navigator), Alexander Kerr (chief engineer), C.E. Smith (2nd engineer), James Dell (bosun and electrician), Gerald Lysaght (amateur helmsman and friend of Shackleton's), Thomas MacLeod (seaman), Petty Officer Harold Watts (radio operator), and Charlie Green (cook). Also aboard were Query, the dog, and Questie, the *Daily Mail* kitten. Mr. Mooney, who was 17, had never even seen a train before he left Kirkwall, in the Orkneys. In the end, Stenhouse did not make the trip, and neither did Wally How (q.v.) or Bill Bakewell (q.v.), both of whom were planning to go. The *Quest* stopped at Plymouth on the way out of the English Channel. **Sept. 24, 1921**: They left Plymouth. **Oct. 4, 1921**: After passing through the Bay of Biscay in a heavy storm, the *Quest* developed a knocking sound, and they were forced to pull into Lisbon for repairs, a stopover they could ill afford timewise. **Oct. 9, 1921**: They left Lisbon, bound for Madeira. **Oct. 16, 1921**: They docked at Madeira, where Mason and Mooney, unable to control their seasickness, left to return home. The seaplane and the polar equipment were sent on separately from here to Cape Town, to await the *Quest*'s arrival. **Oct. 26, 1921**: They arrived at Cape Verde, where Lysaght reluctantly left the expedition. This was as far as he had intended to go anyway. **Oct. 28, 1921**: The expedition had originally intended to cross the Indian Ocean from Cape Town, go to NZ, and look for Dougherty's Island on their way to Antarctica, but they had changed that and now left Cape Verde, heading out across the Atlantic toward Rio. **Nov. 22, 1921**: They arrived at Rio, where S.S. Young (fireman), Christopher Naisbitt (ship's clerk), and Arthur Argles (trimmer) all joined, while Norwegian harpoon expert A. Eriksen left for home. Shackleton had a heart attack in Rio, but pressed on. **Dec. 18, 1921**: The *Quest* left Rio. **Dec. 25, 1921**: Christmas dinner was canceled, due to a violent storm, and the chef served up sandwiches and cocoa. **Dec. 28, 1921**: Kerr found that the furnace was leaking. **Jan. 4, 1922**: They arrived at South Georgia (54°S). **Jan. 5, 1922**: Shackleton died in South Georgia, of angina, at 3.30 A.M. Wild took over the expedition. G.H. Ross joined the expedition, as ship's fireman. **Jan. 18, 1922**: The *Quest*, under Wild, left South Georgia, bound for Bouvet Island, and then, ultimately, for Enderby Land and the Weddell Sea. **Jan. 19, 1922**: Shackleton's body was placed on the whaler *Professor Gruvel*, bound for Montevideo. **Jan. 20, 1922**: The *Quest* reached Zavadovski Island, where they did a survey. Wild realized the *Quest* would never make it to Bouvet Island, and still have time to go into Antarctic waters, so he decided to head south, searching unsuccessfully for the Pagoda Rock supposedly sighted in 1845. **Jan. 29, 1922**: The *Professor Gruvel* arrived in Montevideo. **Feb. 4, 1922**: The *Quest* reached the edge of the pack-ice. **Feb. 14, 1922**: Shackleton's remains were brought to Holy Trinity Church, in Montevideo. **Feb. 15, 1922**: There was a huge memorial service. **Feb. 16, 1922**: Shackleton was placed on the *Woodville*. **Feb. 12, 1922**: In 69°17' S, 17°09' E (their farthest south), Wild was forced to turn back. **Feb. 15, 1922**: The *Quest* finally made its way back through the dense pack-ice into open water, where they headed west along the edge of the ice, looking unsuccessfully for another way south. They now abandoned the attempt on Enderby Land, and turned toward the Weddell Sea, to investigate old reports by Ross of land there which, since Ross's day, had not been seen. **Feb. 27, 1922**: Shackleton's body arrived back at South Georgia, in a blizzard. **March 2, 1922**: A monstrous service was held back in London, at St. Paul's. **March 5, 1922**: Edward Binnie conducted a service at Grytviken. **March 13, 1922**: In 64°11' S, 46°04' W, the *Quest* had found nothing in the Weddell Sea but deep water, and decided to head north toward Elephant Island. **March 25, 1922**: The *Quest* finally arrived at Elephant Island. **March 26, 1922**: Landings were made at Cape Lookout and Minstrel Bay, but weather conditions forced them to head north for South Georgia. **April 5, 1922**: The ship arrived back in South Georgia. **May 2, 1922**: Wild erected a memorial cross to Shackleton, at King Edward Point, on South Georgia. **May 8, 1922**: The *Quest* left South Georgia, bound for Tristan da Cunha and Gough Island. **May 27, 1922**: The *Quest* arrived at Gough Island, only the 2nd ever scientific expedition to reach this island. **June 2, 1922**: The *Quest* left Gough Island. **June 18, 1922**: The *Quest* arrived in Cape Town. **Sept. 16, 1922**: The expedition arrived back in Plymouth.

[1]**Quest Nunatak** *see* **Quest Cliffs**

[2]**Quest Nunatak**. 81°31' S, 28°10' W. Rising to 1065 m, it is the most northeasterly of the Whichaway Nunataks, at the S side of the mouth of Recovery Glacier, at the S side of the Shackleton Range, in Coats Land. Mapped in 1957 by BCTAE and named by them because, while on their way to the South Pole on Dec. 20, 1957, it was the last nunatak visited by them in an effort to find more specimens of fossilized plants of a type similar to ones they had previously found in this area. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Quet Nunatak. 81°22' S, 152°21' E. Rising to 1700 m in the Lonewolf Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for a NZ dog who worked in this area in 1959-60.

Quetin Head. 73°06' S, 169°26' E. A rock headland, rising to 900 m above sea level, and

marking the E extent of Mandible Cirque, 5.5 km SW of Cape Phillips, Daniell Peninsula, on the Borchgrevink Coast of Victoria Land. Named by US-ACAN in 2005, for biologists Langdon B. Quetin and his wife Robin Macurda Ross, of the Marine Science Institute, University of California, at Santa Barbara, originators of the Palmer Long-Term Ecological Research program (LTER), and collaborators in USAP ecological research in the Southern Ocean for 14 field seasons between 1991 and 2004. Before that, in the 1980s, they were diving in Antarctica, studying krill. Mr. Quetin was dive leader at Palmer Station, 2005-06. NZ-APC accepted the name on Sept. 12, 2005.

Isla Quidora *see* **Pfaff Island**

Isla Quijada *see* **Henry Ice Rise**

Monte Quilmes *see* **Mount Quilmes**

Mount Quilmes. 63°14' S, 55°37' W. A mainly snow-covered mountain, rising to 715 m (the Chileans say 658 m), NE of Haddon Bay, and 10 km SSW of King Point, in the central part of Joinville Island. Named Monte Quilmes by ArgAE 1953-54, for the naval battle of 1826, in which Argentine forces under Admiral Guillermo Brown defeated the Spanish. It appears as such on a 1956 Argentine chart, but appears in error on a 1963 Argentine chart as Monte Percy (*see* **Mount Percy**). The name Monte Quilmes appears in the 1970 Argentine gazetteer. It was surveyed by Fids from Base D between 1958 and 1961. UK-APC accepted the name Mount Quilmes on Feb. 12, 1964, and US-ACAN followed suit that year. The Chileans call it Monte Pereira for Julio Pereira Larraín (1907-1978), lawyer, senator and Chilean minister of national defense who went down to Antarctica with ChilAE 1962.

Punta Quilmes *see* **Molina Point**

Rocas Quilp *see* **Quilp Rock**

Quilp Rock. 67°37' S, 67°47' W. A small, isolated rock in water, in Laubeuf Fjord, the larger of two lying 5.5 km SSE of the S tip of Piñero Island, and 2.5 km off the NW side of Pourquoi Pas Island, off the Loubet Coast, on the W coast of Graham Land. First surveyed in 1948 by Fids from Base E, and named by them for the Dickens character, Daniel Quilp, in The *Old Curiosity Shop*. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1957. It appears pluralized on a Chilean chart of 1962 as Rocas Quilp, and as such in the 1974 Chilean gazetteer. The Argentines also call it Rocas Quilp.

Quilty Bay. 69°24' S, 76°13' E. In the Larsemann Hills, W of Stinear Peninsula. Named by ANCA on Sept. 29, 1988, for Dr. Patrick G. "Pat" Quilty, USARP geologist in Ellsworth Land in 1965-66, with the University of Wisconsin survey party, and, from 1980 until he retired in 1999, chief scientist of the Australian Antarctic Division. He was also, occasionally, acting director of the Antarctic Division, and professor of geology at the University of Tasmania. In early 2000 he was in Prydz Bay, on the *Joides Resolution*. The Chinese call it Huaxia Wan.

Quilty Nunataks. 75°45' S, 71°45' W. A group of nunataks, rising to 1165 m in Mount Horne (q.v.), and extending over 13 km, 24 km SW of the Thomas Mountains, WNW of the Hauberg Mountains, on the Orville Coast, in eastern Ellsworth Land. Discovered by RARE 1947-48. Surveyed on the U.S. Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN in 1965-67, and mapped by USGS from these efforts. Named by US-ACAN in 1966, for Pat Quilty (*see* **Quilty Bay**), geologist here with the University of Wisconsin survey party, 1965-66. It was shown on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 24, 1974.

Quin, James *see* **USEE 1838-42**

Quinault Pass. 70°49' S, 69°28' W. A snow pass, running N-S, and separating the Lully Foothills from the LeMay Range, in the central part of Alexander Island. Photographed aerially in late 1947 by RARE 1947-48, and mapped from these photos in 1959-60 by Searle of the FIDS. Surveyed by BAS in 1968. Named by UK-APC on Dec. 8, 1977, for Philippe Quinault (1635-1688), French librettist who collaborated with Jean-Baptiste Lully on 3 operas. It appears in the 1980 British gazetteer. US-ACAN accepted the name.

Quinn, Joseph Anthony "Tony." b. April 15, 1937, Portadown, co. Armagh, son of engineer Bernard Gregory Quinn and his wife, teacher Rose Conway. The father, Bernard, worked on the *Balaena* (q.v.) at Harland & Wolff shipyards, in Belfast, and was part of the commissioning crew aboard when she went down to Antarctica. There are very few fathers and sons who have been to Antarctica. Tony joined FIDS in 1959, as a radio operator, and wintered-over at Base F in 1960, and at Base E in 1961. He later sailed on the *John Biscoe*, again as a radioman, until May 1966, and then became an electronics engineer in England. He married nurse Valerie Freida "Val" Lewis on July 5, 1968, they lived in Hampshire and Surrey for a while, and then moved to NZ with their two sons. After a spell as an electronics engineer there, he and his wife went into business, owning and managing a retirement home for the elderly in Chistchurch, after which they went into garage ownership.

Quinn Gully. 77°32' S, 163°30' E. A mainly ice-free gully, descending between Hjorth Hill and the MacDonald Hills to Explorers Cove, at New Harbor, at the lower end of the Taylor Valley, in Victoria Land. Named by US-ACAN in 1997, for Thomas Quinn, of Antarctic Support Associates, supervisor of continental air operations.

Quinn Rock. 66°14' S, 110°33' E. A tiny longitudinal island running E-W, and measuring about 220 m by 40 m, near Casey Station, on the Budd Coast of Wilkes Land. A steel snow pole about 1.5 m high is embedded in the rock as the station mark. Named by ANCA on March 15, 1984, for Peter W. Quinn, the surveyor who established a geodetic control station on this rock. He wintered-over at Casey in 1978.

Île(s) Quintana *see* **Quintana Island**

Isla Quintana *see* **Quintana Island**

Islas Quintana *see* **Cruls Islands, Quintana Island, Roca Islands**

Islote(s) Quintana *see* **Quintana Island**

Quintana Island. 65°09' S, 64°57' W. A small, isolated island, about 9 km NNE of the Betbeder Islands, and WNW of the Cruls Islands, in the SW part of the Wilhelm Archipelago, and about 27 km WNW of the Argentine Islands, off the W coast of the Antarctic Peninsula. Roughly charted by FrAE 1903-05, and named by Charcot as Île Quintana, for Manuel Quintana (1836-1906), president of Argentina, 1904-06. Charcot charted it in 65°10' S, 64°59' W, and as such, and with that name, the island appears on one of the two 1906 charts from Charcot's expedition. However, on the other chart of that year Charcot grouped this island with the smaller Mazzeo Island (off-lying to the WNW) and Bergel Rock (off-lying to the S), and collectively called all three of them Îles Quintana. Hence, the name Quintana Islands appears on a 1908 British chart. The three islands were surveyed again by FrAE 1908-10, and, still as a group, were mapped in 1935-36 by BGLE 1934-37, as the Quintana Islands. The main island appears on a 1946 Argentine map as Isla Quintana. In 1947 various Chilean names for the group appear on charts — Islas Colo Colo (plotted in 64°57' S, 67°12' W), Rocas Galvarino (65°03' S, 64°52' W), and Islotes Michimalongo (65°12' S, 65°00' W), all named after places in Chile, and all wrongly plotted. UK-APC accepted the name Quintana Islets, on Sept. 22, 1954, for the group, and US-ACAN followed suit in 1956 (they rejected the name Quintana Islands). The group appears as such in the 1955 British gazetteer, and on a British chart of 1957. Two separate 1957 Argentine charts have Islas Quintana and Islotes Quintana, both signifying the Cruls Islands and the Roca Islands collectively. In 1957-58 an RN Hydrographic Survey unit plotted the main island in 65°10' S, 64°59' W, determined that this island was the only one that should bear the name Quintana, and called it Quintana Islet. However, on July 7, 1959, UK-APC renamed it Quintana Island, and US-ACAN followed suit in 1960. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer list Islotes Quintana as referring collectively to Quintana Island, Mazzeo Island, and Bergel Rock, although the main island appears on a 1961 Argentine chart as Islote Quintana. Today, the Argentines tend to call the main island Isla Quintana. It was re-charted from the *Endurance* in 1969-71, and re-plotted.

Quintana Islands *see* **Quintana Island**

Quintana Islet(s) *see* **Quintana Island**

Caleta Quintero *see* **Caleta Prieto**

Glaciar Quinteros. 85°35' S, 37°45' W. A glacier descending from the Polar Plateau, S of the Pensacola Mountains. Named by the Argentines.

Point(e) Quinton *see* **Quinton Point**

Punta Quinton *see* **Quinton Point**

Quinton Point. 64°19' S, 63°41' W. At the N side of the entrance to Perrier Bay, 6 km SW of

Cape Grönland, and 8 km N of Punta Contreras, on the NW coast of Anvers Island, in the Palmer Archipelago. First charted by FrAE 1903-05, and named by Charcot as Pointe Quinton, for naturalist Dr. René Quinton (1866-1925), assistant at the Laboratory of Physiological Pathology, at the Collège de France. Dr. Quinton was known as "the French Darwin," for his theory of constancy, and in 1908 he founded the world's first school for pilots. In 1943 it appears on a U.S. Hydrographic Office chart as Point Quinton. It appears as Punta Quinton on a 1949 Argentine chart, and that was the name accepted by the Argentines, as well as by the Chileans in their 1974 gazetteer. However, on certain 1952 and 1957 Chilean charts the name Punta Quinton appears, but, in error, they show it as the feature that would, in 1962, be named Punta Contreras, 8 km to the S. It was photographed from the air by FIDASE in 1956. UK-APC accepted the name Quinton Point on July 7, 1959, and US-ACAN followed suit in 1971.

Islas Quirihue *see* **Darbel Islands**, **Owston Islands**

Glaciar Quito *see* **Quito Glacier**

Quito Glacier. 62°27' S, 59°47' W. Flows N into the sea at Quayaquil Bay, W of Canto Point, on the N side of Greenwich Island, in the South Shetlands. Named Glaciar Quito on July 6, 1990 by the Ecuadorian Antarctic Expedition of 1990, after their capital city. Its most salient part forms a point called Punta Cuenca. UK-APC accepted the translated name Quito Glacier on July 8, 2003, and US-ACAN followed suit that year.

Quonset Glacier. 85°19' S, 127°05' W. About 30 km long, it flows from the N slopes of the Wisconsin Range, between Mount LeSchack and Ruseski Buttress, and trends WNW to enter the N side of Davisville Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Quonset Point, RI, home (at that time) of VX-6.

Qvenildnova. 74°19' S, 9°41' W. A mountain crag in Helsetskarvet, in Milorgfjella, in the Heimefront Range, in Maudheimvidda, Queen Maud Land. Named by the Norwegians for Arne Qvenild (1909-1984), Norwegian Resistance fighter during World War II.

R4D. Also known as the Dakota, Skytrain, Goony Bird, Gooney Bird, Goon. 18 were used by VX-6 during OpDF. They were all built as C-47s by Douglas for the USAAF during World War II, and during that conflict were transferred to the Navy and Marines. These were the 18: 12407 (*Us to Know How*), 12418 (*Que Sera Sera*, or *Korora*), 12441 (*City of Invercargill*), 17092 (*Would You Believe*), 17107 (*Ahab's Clyde*, or *Deep Freeze Express*), 17154 (*Negatus Perspirus*), 17163 (*Takahe*), 17188 (*Lou Bird II*, or *Big Daddy*, or *The Losers*), 17129 (*Semper Shafters USMC*), 17221 (*Kool Kiwi*, or *Yankee Tiki a Te Hau*, or *Mutha Goose*, or *The Emperor*), 17239 (*SNAFU*, or *Hallmark*), 17246 (*Torono II*, or *Little Horrible*, or *Korora II*), 17253, 17274 (*Charlene*, or *Tawaiki*), 50777, 50778 (*Gotcha*), 50832 (*Spirit of Mc Murdo*), 99853 (*Wilshie Duit*, or *Devine Wind*).

R4D Nunatak. 72°44' S, 162°21' E. A nunatak, 3.2 km SE of Burkett Nunatak, at the SE end of Monument Nunataks. Named by the Northern Party of NZGSAE 1962-63, for the R4D Dakota aircraft used by the U.S. Navy to transport the party to the area, and to re-supply and return the party to Scott Base. US-ACAN accepted the name in 1967.

Raabystupet. 74°43' S, 11°10' W. A partly snow-covered rock face at the head of Johansenbotnen, in the middle part of Sivorgfjella, in the Heimefront Range of Maudheimevidda, in Queen Maud Land. Named by the Norwegians for Torstein Raby (1919-1964), radio technician and Resistance worker during World War II. After the war he was Thor Heyerdahl's radio operator on the raft *Kon-Tiki*. The word "stupet" means "the cliff."

RAAF *see* **Royal Australian Air Force**

Rabben *see* **Mount Rabben**, **Rabben Ridge**

Mount Rabben. 66°27' S, 54°07' E. Rising to 1540 m above sea level, about 4.5 km NE of Mount Griffiths, in the Napier Mountains of Enderby Land. Mapped in 1947 by Norwegian cartographers from aerial photographs taken by LCE 1936-37, and named by them as Rabben (i.e., "the elongated mound of rock"). US-ACAN accepted the name Mount Rabben in 1970.

Rabben Ridge. 71°52' S, 2°49' E. A small isolated ridge, N of Jutulsessen Mountain, and about 8 km N of Stabben Mountain, in the N part of the Gjeslvik Mountains, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and from aerial photographs taken by NBSAE 1949-52, and also from 1958-59 aerial photographs taken during the long NorAE 1956-60, and named by them as Rabben (i.e., "the elongated mound of rock"). US-ACAN accepted the name Rabben Ridge in 1966.

Rabère, Laurent. b. Nov. 17, 1816, Pauillac, France. Ordinary seaman on the *Astrolabe* during FrAE 1837-40.

Rabisha Rocks. 62°26' S, 59°56' W. A group of rocks, 1.5 km NE of the Voluyak Rocks, 1.3 km N of Kabile Island, and 1.8 km W of Ongley Isand, off the N coast of Greenwich Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement and lake (both of that name), in southwestern Bulgaria.

Glaciar Rabot. 64°17' S, 57°20' W. A tiny glacier which falls to the sea in the form of ice cliffs, between Cabo Depot and Cape Foster, on the S side of James Ross Island. This was the glacier that Nordenskjiöld named Rabot Gletscher (*see* **Rabot Point** for history of this), for Charles Rabot (*see* **Rabot Island**), but which, in 1953, the FIDS deemed so small as to be unworthy of a name. The Chileans did not share the British view, and named it Glaciar Rabot. The Argentines also call it that. Sometimes a plotting of 64°26' S, 57°25' W is seen, but this is an error. This is not the same glacier as Swift Glacier.

Île Rabot *see* **Rabot Island**

Isla Rabot *see* **Rabot Island**

Mount Rabot. 83°11' S, 161°17' E. Rising to 3,335 m, 4.8 km SE of Mount Lecointe, it is the southernmost of 3 mountains standing about 72 km inland from the W side of the Ross Ice Shelf, in the Queen Alexandra Range, and about 50 km SSE of Mount Markham. Discovered in 1908 by BAE 1907-09, and named by Shackleton for Charles Rabot (*see* **Rabot Island**). US-ACAN and NZ-APC both accepted the name.

Punta Rabot *see* **Rabot Point**

Rabot Glacier. 83°11' S, 160°10' E. Flows W for 16 km from the W flank of Mount Rabot between Mount Counts and Bartram Plateau to enter the E side of Marsh Glacier, in the Queen Elizabeth Range. Named by NZGSAE 1961-62, in association with Mount Rabot. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Rabot Gletscher *see* **Rabot Point**

Rabot Island. 65°54' S, 65°59' W. An island, 8 km long and 3 km wide, and rising to over 100 m above sea level, about 1.5 km SW of Renaud Island, and separated from the S part of that island by the Rodman Passage, in the Biscoe Islands. It is covered with a very flat cloak of ice, and its coasts, formed by ice cliffs, render it inaccessible. Roughly charted by FrAE 1903-05, and named by Charcot as Île Rabot, for Charles Rabot (1856-1944), French geographer, glaciologist, Arctic explorer, editor of *La Géographie* (the bulletin of the Société Géographique of Paris), and one of the principal supporters of FrAE 1908-10. It appears on a 1908 British chart, with the coordinates 65°43' S, 66°09' W. The name appears as Rabot Islands on a 1947 USAF chart, and on a 1948 Chilean chart as Isla Claudio Gay, after Claude Gay (1800-1872), the French author of *Historia general de Chile*. US-ACAN accepted the name Rabot Island in 1950, and UK-APC followed suit on Sept. 8, 1953, both countries accepting the new coordinates of 65°52' S, 66°10' W. It appears as such in the 1955 British gazetteer. On Feb. 24, 1957, Cadete Guillochón Refugio was established near the SW end of the island by the Argentines. Photographed aerially by FIDASE in 1956-57, the island's coordinates were corrected by UK-APC on Sept. 4, 1957, to 65°54' S, 65°59' W, and US-ACAN followed suit. The name appears as Isla Rabot in both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Rabot Islands *see* **Rabot Island**

Rabot Point. 64°17' S, 57°20' W. A high, rocky point at the head of Markham Bay, on the SE side of James Ross Island, it separates the mouths of Gourdon Glacier and Hobbs Glacier. During SwedAE 1901-04, Nordenskjöld named a small glacier close W of The Watchtower, on the S side of the island, as Rabot Gletscher (i.e., "Rabot glacier"), for Charles Rabot (*see* **Rabot Island**). In 1948 and 1953, Fids from Base D, while surveying the S side of the island, found that this glacier was so small that it did not even warrant a name. UK-APC named the point of this entry on Sept. 4, 1957, in order to preserve the name Rabot in the area. However, *see*

Glaciar Rabot. US-ACAN followed the British lead in 1963. The Argentines call this point Punta Rabot, although it did appear on one of their 1959 maps as Cabo San Luis.

Racer Rocks. 64°04' S, 61°36' W. A small cluster of about 10 insular rocks, the largest rising to about 17 m above sea level, off Auguste Island, midway between that island and Lobodon Island, in the Gerlache Strait, in the Palmer Archipelago, off the Danco Coast. Probably first seen by BelgAE 1897-99. An automatic weather station was installed here, at the summit of the largest rock, in Oct. 1989, by a team from the University of Texas Marine Science Institute, led by Anthony M. Amos. It was replaced with a new one on Dec. 16, 1991, and was finally removed in March 2004. Named by US-ACAN in 1992, as an acronym of Research on Antarctic Coastal Ecosystems and Rates, an NSF-sponsored program that carried out multi-disciplinary studies in the Gerlache Strait. UK-APC accepted the name on Dec. 2, 1993.

Rachel Glacier. 65°37' S, 62°10' W. A glacier, 10 km long, flowing E along the N side of Mount Baleen, into Scar Inlet, at the Larsen Ice Shelf, N of Starbuck Glacier, on the Oscar II Coast, on the E coast of Graham Land. Surveyed by BAS personnel from Base E in 1963-64. Named by UK-APC on July 21, 1976, for one of the ships in *Moby Dick*. US-ACAN accepted the name later in 1976.

Rachinger, Basil Francis Neil. b. Aug. 26, 1921, Melbourne, son of Basil Rachinger. He married Kathleen Teresa White. A flying officer with the RAAF, with 268 Squadron, during World War II, he was officer-in-charge at Mawson Station in 1973. He retired as group captain.

Rachmaninoff Glacier. 72°30' S, 72°35' W. Flows S from Monteverdi Peninsula into Britton Inlet, on Alexander Island, in the Bellingshausen Sea. Named by the USSR Academy of Sciences in 1987, as Lednik Rahmaninova, for the great composer and pianist Sergei Rachmaninoff (1873-1943). The name was accepted by US-ACAN in 2006. However, the glacier may be part of Britten Inlet, and therefore not a separate feature, a worry voiced by UK-APC on May 10, 2006.

Racine Nunatak. 85°28' S, 136°18' W. Rising to 960 m, 5 km W of the lower part of Reedy Glacier, and 11 km ESE of Berry Peaks. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Edward J. "Ed" Racine, crew member on the *Eastwind* during OpDF 1967 (i.e., 1966-67).

Isla Racovitza *see* **Racovitza Islands**

Racovitza, Emil Gustave. His name is more properly spelled Racovita (with a range of Rumanian accent marks). b. Nov. 15, 1868, Iasi, Moldavia. Zoologist who studied science in Paris. He had already studied dredging operations in deep water by the time he was let out of the Rumanian army for BelgAE 1897-99 (the Belgians did not have a qualified zoologist). On the way south he left the *Belgica* at Rio on Oct. 30, 1897, to travel overland to Punta Arenas, where he picked up the ship again. Later in life he spent years at the University of Cluj, in Rumania, dying on Nov. 17, 1947.

Racovitza Islands. 64°31' S, 62°05' W. A group of 3 islands and off-lying rocks just N of Nansen Island, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Roughly charted by Norwegian whalers in 1919-20, the largest and most northeasterly of these islands appears on one of their maps as Cuppel Island (Circus), a misspelling of Cupel, "cupel" being a small, flat, circular dish used in assaying. That same map gives the second largest island erroneously as Delaite Island. Bagshawe's maps from the British Imperial Antarctic Expedition of 1920-22 gives a variety of names for the largest one — Circus Island, Cupola Island, Cuppel Island, Cuppel Dome Island, and Merry-go-round Island. Surveyed and re-charted by Fids from the *Norsel* in April 1955, and photographed aerially in 1956-57, by FIDASE. Named by UK-APC on Sept. 4, 1957, as Racovitza Islets, for Emil Racovitza, but re-defined as Racovitza Islands by UK-APC, on July 7, 1959. They appear as such on a British chart of 1959. US-ACAN accepted the name and new definition in 1963. The Argentines have named the largest of the group, as Isla Racovitza, but on a Chilean chart of 1962 it appears as Isla Munita, named after Capt. Diego Munita Whittaker, leader of ChilAE 1950-51, and, as such, it appears in the 1974 Chilean gazetteer.

Rada Lote Refugio. 64°39' S, 62°34' W. Argentine refuge hut built by the Navy on a rock surface, on Dec. 23, 1953, at Lagarrigue Cove, on the Danco Coast, on the W coast of Graham Land. At that time the Argentines were using the name Puerto Lote for what would later become known as Lagarrigue Cove. The hut lasted two days, and then a storm destroyed it. It has long been covered in ice.

Rada Peak. 78°37' S, 85°13' W. A rounded peak, rising to 4001 m, between Bugueño Pinnacle and Mount Craddock, on the crest of the Craddock Massif, in the Sentinel Range. Named by US-ACAN on Nov. 1, 2006, for Camilo Andrés Rada Giacaman, a Chilean on the Omega High Antarctic GPS expedition to the Sentinel Range, in 2004 and 2005, who, together with Manuel Bugueño in the latter season, obtained GPS data for Mount Craddock and Rada Peak. He was back, with Adventure Network, in 2007-08.

Radev Point. 62°38' S, 61°12' W. The point in the SE extremity of Rugged Island, off the W coast of Byers Peninsula, 1.1 km SW of Vund Point, and 4.5 km E of Benson Point, Livingston Island, in the South Shetlands. Mapped by BAS in 1968, and named by the Bulgarians on Dec. 15, 2006, for Simeon Radev (1879-1967), Bulgarian historiographer, writer, and diplomat.

Radford Island. 76°54' S, 146°36' W. An ice-covered island, surmounted by several peaks, 10 km W of Saunders Mountain, in the E part of the Sulzberger Ice Shelf. Discovered by the Eastern Flight of Dec. 5, 1929, during ByrdAE 1928-30. Mapped as part of the mainland by USAS 1939-41, and named Radford Mountains by Byrd for Vice Adm. Arthur William Radford (1896-1973), USN, deputy chief of Naval Operations (Air) during OpHJ 1946-47. It was determined to be an island by USGS from USN air photos taken between 1962 and 1965. US-ACAN accepted the name Radford Island in 1966.

Radford Mountains *see* **Radford Island**

Radford Road. One of the main roads at McMurdo. Named in May 1956.

Radian Glacier. 78°13' S, 163°00' E. An alpine glacier descending from a high cirque on the lip of the E scarp of the Royal Society Range, just SE of Mount Rucker, and flowing E between Marble Ridge and Dismal Ridge, toward Walcott Glacier, in Victoria Land. In Dec. 1960, during VUWAE 1960-61, this glacier was surveyed, and, quite by chance one of the survey angles was precisely one radian, and so the glacier was named. NZ-APC accepted the name, and US-ACAN followed suit in 1963.

Radian Ridge. 78°14' S, 162°40' E. Extends E along the S side of Radian Glacier from the scarp of the Royal Society Range, in Victoria Land. Named by the New Zealanders in 1980, in association with the glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1994.

Radiant. An appearance noted in clouds (especially cirro-stratus) which seems to radiate from a point on the horizon.

Radiation. More radiation is lost than kept in Antarctica (except in mid-summer) due to the white surface reflecting the sun's rays back into the atmosphere. This heat loss explains in part why it is so cold in Antarctica.

Radibosh Point. 63°46' S, 59°47' W. The point forming the NE extremity of Whittle Peninsula, 2.8 km E of Cape Kater, 6.08 km NE of Tarakchiev Point, 12.65 km NNW of Nikyup Point, and 19.2 km W of Cape Kjellman, on the Davis Coast, on the W coast of Graham Land. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Radibosh, in western Bulgaria.

Radichkov Peak. 62°41' S, 60°02' W. A peak with steep and ice-free E slopes, rising to 500 m on Levski Ridge, 2.25 km SE of Great Needle Peak, 2.8 km S of Helmet Peak, 3.15 km SSW of Plovdiv Peak, it overlooks Srebama Glacier to the SW and Magura Glacier to the NE, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. An offshoot extending 900 m in a S direction ends up in a rocky cliff forming M'Kean Point, 1.5 km to the SSE. Named by the Bulgarians on Feb. 17, 2004, for writer Yordan Radichkov (1929-2004).

Radigan Point. 71°23' S, 74°16' W. A snow covered-point between Verdi Inlet and Brahms Inlet, it marks the NW extremity of Harris Peninsula, Beethoven Peninsula, on Alexander Island. Mapped in 1960 by Searle of the FIDS from air photos taken by RARE 1947-48. Named by US-ACAN for Cdr. Matthew James Radigan (b. 1955), USNR, CO of VXE-6 from May 1983 to May 1984. UK-APC accepted the name on May 13, 1991.

Radio. Scott rejected its use for BAE 1910-13.

The first time radio was used in the Antarctic was by Mawson during AAE 1911-14, and the Hektor Whaling Company's factory ships *Ronald* and *Hektoria* were not far behind. After that time the pioneers erected high radio masts, but these are now covered over by drifting snow and ice. There was a notable radio broadcast from Antarctica in Feb. 1913, when a ship notified Port Stanley that the Norwegian whaler *Pisagua* had been wrecked at Deception Island the week before. Byrd pioneered the use of two-way radio, and the radio set of Little America (1929-30) was so powerful that it could transmit to the North Pole. Byrd's station was called KFZ, and he transmitted a regular weekly broadcast to the States. During that expedition, on Jan. 24, 1929, 15-year-old ham radio operator, Edward Redington, of Falls Church, Va., established radio contact with the *City of New York* in Antarctic waters. May 1, 1956 was the first contact between McMurdo and the US, via ham radio, when Paul L. Blum's RAGS (Radio Amateurs of Greater Syracuse) sent a message to Antarctica informing a Deep Feeeze sailor of the birth of his son. Over the course of the next year, RAGS would process no fewer than 7000 messages to and from Little America and McMurdo (including photos and funny papers). In 1956 the Seabees who were building the Pole Station had a short wave station there, and spoke to the USA via Jules Madey's ham radio. Mr. Madey (*see* **Madey Ridge**) was a schoolboy in the USA. There was a similar link-up during IGY with Newton Kraus, of Warren, RI, Albert Patrick in Chicago, and John K. Baker of Hagerstown, Md. FIDS had a link with Bob Bramwell, in Seascale, Cumberland. In the mid-1960s there was Ike Eichorst (*see* **Eichorst Island**), in the late 1960s there was William Dean, of Pleasanton, Tex. (*see* **Dean Nunataks**), and in the 1970s and 1980s there were Big John Stagnaro (*see* **Mount Stagnaro**) and Ken McLeish (of Tucson). The big ham radio operator in the 1990s was Larry Skilton (*see* **Skilton Ledge**). The Pole's station call letters were KC4USN. The world's most southerly radio station was AFAN McMurdo, at McMurdo Station.

Sopka Radio *see* **Radio Hill**

Radio Hill. 66°33' S, 93°00' E. A small hill, rising to 50 m, 0.7 km SW of Mabus Point, just SW of the main part of Mirnyy Station, on the coast of East Antarctica. Discovered and mapped by AAE 1911-14. Remapped by SovAE 1956, and named by them as Sopka Radio. US-ACAN accepted the translation, Radio Hill, in 1961.

Podlëdnaja Dolina Radiofizikov. 71°00' S, 43°30' E. A valley, SE of Mizuho Station, in Enderby Land. Named by the Russians.

Radiolaria. Radiolarians are a type of microfauna (*see* **Fauna**) found in Antarctic waters. Holoplanktonic protozoa, they are to be found at any depth of ocean. They take their name from the radial symmetry of many forms.

The *Radioléine*. Ship bought by Irvin & Johnson, of Cape Town, and converted by them in 1925 into a factory whaler. Her skipper was Magnus B. Olsen. She operated, with two catchers, off the coast of Enderby Land and Kemp Land, between 45°E and 90°E, in 1928-29 and 1929-30. She almost supplied coal to the *Discovery*, during BANZARE 1929-31, but the arrangement was called off. In her last Antarctic season — Jan. to March, 1930 — after coming down from a few months whaling in the Kerguélen Islands, she caught 217 blue whales, 18 fin whales, and 11 humpbacks. In 1930 she was replaced by the *Tafelberg* (which had the advantage of having a stern slip).

Radiosletta. 68°46' S, 90°40' W. An ice- and snow-plain, 5 km long, in the northernmost part of Peter I Island. Named by the Norwegians. The amateur radio operators had their station on this plain.

Radko Knoll. 62°37' S, 61°17' W. A rocky hill, rising to 102 m, 780 m S of Cape Sheffield, on the N coast of Smyadovo Cove, in the NE part of Rugged Island, in the South Shetlands. Mapped by the Spanish in 1992, and again in 2009 by the Bulgarians, who named it on Nov. 23, 2009, for Ivan "Radko" Mihaylov (1896-1990), leader of the Bulgarian liberation movement in Macedonia.

Mount Radlinski. 82°31' S, 103°34' W. A rounded, smooth, ice-covered mountain, rising to 2750 m, 6 km SE of Mount Seelig, in the NE part of the Whitmore Mountains. Surveyed on Jan. 2, 1959 by William H. Chapman, a member of the Horlick Mountains Traverse of 1958-59, and named by him for William Anthony Radlinski (b. 1921, Salamanca, NY), special assistant (Antarctic) to the chief topographic engineer of USGS. From 1949 to 1979 Mr. Radlinski was a USGS photogrammetrist, and for the last 10 years was also associate director of USGS. US-ACAN accepted the name in 1962.

Radnevo Peak. 62°33' S, 60°11' W. Rising to 481 m, it forms the SW extremity of Vidin Heights, 1.1 km SW of Miziya Peak, 3.1 km NNE of Leslie Peak, and 6.6 km NNW of Melnik Peak, on Livingston Island, in the South Shetlands. Mapped by the Bulgarians during their 2004-05 Tangra survey, and named by them on April 11, 2005, for the town of Radnevo, in southeastern Bulgaria.

Lake Radok *see* **Radok Lake**

Radok Automatic Weather Station *see* **GC41**

Radok Lake. 70°52' S, 68°00' E. A meltwater lake, about 7.5 km long, with a slender glacier tongue feeding it from the W, it lies 5.5 km SW of Beaver Lake and 24 km SE of the Aramis Range, in the Prince Charles Mountains. Plotted by ANARE from air photos taken in 1956 by the RAAF Antarctic Flight. Named by ANCA as Lake Radok, for Uwe Radok (b. Feb. 1916, Germany), head of the department of meteorology at Melbourne University from 1960 (he had been with the department since 1944, coming there immediately from an enemy detention camp in Australia), who greatly assisted ANARE's glaciological program. In 1984 Soviet scientists discovered that it is the deepest lake in Antarctica (1135 feet). US-ACAN accepted the name Radok Lake in 1962. *See also* **Ozero Tëploe** (under **T**).

Radomir Knoll. 62°43' S, 60°12' W. Rising to about 300 m in Prespa Glacier, 2.6 km NE of Yambol Peak, and 2.4 km W of Samuel Point, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. It is formed by the S extremity of an offshoot of Friesland Ridge, extending to the SSE for 2.4 km from St. Cyril Peak. Named by the Bulgarians on Feb. 17, 2004, for the Bulgarian town of Radomir.

Radoy Ralin Peak. 62°38' S, 60°01' W. Rising to 720 m on Levski Ridge, 640 m E of Cherepish Ridge, 1.6 km N of Helmet Peak, and 1.9 km NW of Plovdiv Peak, in the Tangra Mountains, on the E side of Livingston Island, in the South Shetlands. Mapped by the Bulgarians during their 2004-05 Tangra survey, and named by them on April 11, 2005, for writer Radoy Ralin (1923-2004), a pseudonym of Dimitar Syoyanov).

Mount Radspinner. 71°29' S, 164°33' E. The summit of a conspicuous ridge, rising to 1785 m, just E of Mount Freed and Copperstain Ridge, southward of the Posey Range, and 14.5 km W of the N part of the Mirabito Range, in the E part of the Bowers Mountains. Named by US-ACAN in 1964, for Capt. Frank Hanly Radspinner, Jr. (b. April 26, 1934, Darlington, SC. d. Feb. 23, 2009), U.S. Army, helicopter commander in the area in 1962-63, and who flew the first helo to the Pole (Feb. 4, 1963). Flying since he was 11, Radspinner graduated from the Citadel in 1955, was in Vietnam, and after retiring, joined Bell helicopters.

Raduil Point. 63°18' S, 58°45' W. The NE extremity of Astrolabe Island, in the Bransfield Strait, 4.5 km NW of Sherrell Point, off the N tip of the Antarctic Peninsula. Named by the Bulgarians on Nov. 23, 2009, for Raduil, the settlement in southwestern Bulgaria.

Point Rae. 60°46' S, 44°37' W. Marks the NE side of the entrance to Scotia Bay, on the S coast of Laurie Island, in the South Orkneys. Charted in 1903 by ScotNAE 1902-04, and named by Bruce for John Rae (1819-1893), Arctic explorer. It appears on an Argentine chart of 1930, as Punta Rae, and that was the name accepted by the 1970 Argentine gazetteer. The point was further surveyed by the Discovery Investigations, in 1933, and it appears as Point Rae on their 1934 chart. It appears erroneously as Point Rea on a 1943 U.S. Hydrographic Office chart. US-ACAN accepted the name Point Rae in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955.

Punta Rae *see* **Point Rae**

Rae, Henry *see* **Rea, Henry**

The *Rael*. A 17-meter Spanish steel schooner, in Antarctic waters in 1996-97, under the command of Capt. Javier "Bubi" Sanso. She was the first sailing vessel to reach Antarctica from Spain.

RAF *see* **Royal Air Force**

Rafferty, John. b. 1870, Newry, Northern Ireland, but raised in Liverpool. From 1904 onwards, he was a fireman on merchant ships plying between England and Australia, and was on the *Aurora* in 1917, during BITE 1914-17. He

continued to sail on merchant ships, as a greaser and fireman, between NZ and Sydney, into the 1920s.

Roca Raffo. 62°24' S, 59°38' W. A rock that stands out from surrounding rocks because of its size, it lies off the S part of the point that forms the SW side of Mitchell Cove, on Robert Island, in the South Shetlands. Named by the Chileans for Juan Raffo Sinory, crew member on the *Lientur*, who worked in this area.

Rafted ice. One layer of ice riding over another. This is called rafting.

Rafting *see* **Rafted ice**

Raggatt Mountains. 67°42' S, 49°00' E. Also spelled (erroneously) Raggett Mountains. A group of peaks westward from the Scott Mountains, E of Rayner Glacier, and N of Thyer Glacier. Delineated by ANARE from air photos taken by the RAAF Antarctic Flight of 1956. Named by ANCA for geologist Harold George Raggatt (1900-1968), secretary of the Australian Department of National Development, 1951-65. US-ACAN accepted the name in 1961.

Ragged Island *see* **Rugged Island**

Ragged Peaks. 66°59' S, 51°00' E. Also called Rugged Peaks. There are 5 of them over 915 m, in a prominent line extending for 14 km in an almost N-S direction, and containing several spires, the peaks being connected by a greatly serrated ridge, on the E side of Amundsen Bay. Discovered in Oct. 1956 by the ANARE Amundsen Bay party led by Peter Crohn, and named descriptively by ANCA. US-ACAN accepted the name in 1961.

Raggett Mountains *see* **Raggatt Mountains**

Ragle Glacier. 76°28' S, 145°32' W. A small glacier that flows from the W end of the Fosdick Mountains, between Mount Ferranto and Mount Avers, and then NW to Block Bay, in Marie Byrd Land. Photographed by USAS 1939-41, and later mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by Byrd for Dr. Benjamin Harrison Ragle (b. Nov. 15, 1888, Raglesville, Ind. d. May 1, 1956, Boston), Byrd's personal physician in the late 1930s, who was a contributor of first aid supplies and medical equipment to USAS 1939-41, as well being a medical consultant for the expedition. US-ACAN accepted the name in 1970.

Ragotzkie Glacier. 80°02' S, 157°45' E. It flows N for 16 km along the W side of Mount Aldrich, and coalesces with other north-flowing glaciers which enter Hatherton Glacier to the SW of Junction Spur, in the Britannia Range. Mapped by USGS from air photos taken by USN. Named by US-ACAN in 1965, for Robert Austin Ragotzkie (b. Sept. 1924, Albany, NY), project director for USARP studies of lakes in the dry valleys. He was in Victoria Land in 1962-63.

Ragotzkie Icefall. 80°03' S, 158°00' E. An icefall, 4.5 km wide, in the E central part of Ragotzkie Glacier, in the Britannia Range. The icefall is a significant distributary of ice from the Ragotzkie Glacier into Alley Glacier, which occupies the valley to the E. Named by US-ACAN in 2000, in association with Ragotzkie Glacier. NZ-APC accepted the name on Feb. 20, 2001.

Rahi Peak. 77°44' S, 162°49' E. A prominent peak, rising to 1830 m, between the head of Moa Glacier and Goldman Glacier, in the Kukri Hills of Victoria Land. In 1998 NZ-APC named it ("rahi" being a Maori word meaning "big"). US-ACAN accepted the name later in 1998.

Cabo Rahir *see* **Rahir Point**

Cap Rahir *see* **Rahir Point**

Cape Rahir *see* **Rahir Point**

Cape Rahir Peninsula *see* **Rahir Point**

Rahir Point. 65°04' S, 63°14' W. It marks the NE end of a small peninsula which juts out into Flandres Bay just N of Thomson Cove (and thus forms the N entrance point of that cove), and 22 km ESE of Cape Renard, on the Danco Coast, on the W coast of Graham Land. Roughly charted on Feb. 11, 1898, by BelgAE 1897-99, and named by de Gerlache as Cap Rahir for Maurice Rahir (d. 1935), Belgian geographer and assistant librarian (and later secretary general) of the Société Royale Belge de Géographie. It appears on the BAE 1898-1900 chart as Cape Rahir, and again, as such on a 1948 British chart. It appears as Cape Rahir Peninsula on a 1943 U.S. Hydrographic Office chart, on a 1949 Argentine chart as Cabo Rahir, but on a 1954 Argentine chart as Punta Thomson, named in association with the cove. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Rahir Point on Sept. 23, 1960. It appears as such on an American chart of 1963, and US-ACAN followed suit with the naming in 1965. It appears in the 1974 Chilean gazetteer as Cabo Rahir, and that is the name the Argentines also tend to call it today.

Lednik Rahmaninova *see* **Rachmaninoff Glacier**

Railroads. There have never been many in Antarctica, for obvious reasons. The Hektor Whaling Company installed a hand-operated railway at their whaling station at Whalers Bay, Deception Island, in the time they operated there, 1912-31. Dumont d'Urville Station had a ground railway and an overhead railway during IGY.

Rain. Almost unknown in Antarctica. It becomes snow before we see it (*see also* **Snow**, **Atmosphere**).

Mount Rainbow. 80°54' S, 156°55' E. Rising to 2110 m above sea level, along the S side of Byrd Glacier, it surmounts the broad ridge between Zeller Glacier and Sefton Glacier, 38 km SW of Mount Hamilton. Discovered by the Northern Party of NZGSAE 1960-61, and named by them for the rainbow effect given by the multi-colored beds of Beacon Sandstone with probable dolerite sitting on pink-green limestone in this mountain. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Rainbow Ridge. 78°06' S, 165°24' E. A small ridge which forms a distinct W rim to the large crater-like depression high in the central part of Brown Peninsula, in Victoria Land. Investigated by NZGSAE and VUWAE, both in 1964-65, and named descriptively by NZ-APC in the 1960s. The top of the ridge has been planed off by continual glaciation and the surface now exposes two basalt "pipes" (Nubian Formation) within the trachyte. These have altered the trachyte at their margins to various shades of brown, hence the name given to the ridge. US-ACAN accepted the name in 1970.

Rainbows. Rare in Antarctica because rain is rare (*see also* **Phenomena**). However, fog bows (q.v.) are quite common near coasts and on ice shelves.

Rainer Glacier *see* **Rayner Glacier**

Rainey Glacier. 73°40' S, 163°06' E. A tributary glacier on the N side of Archambault Ridge, it flows E from the Deep Freeze Range into Campbell Glacier, in Victoria Land. Named by the Northern Party of NZGSAE 1962-63, for Denys B. Rainey, cartographer with the department of lands and survey, Wellington, who assisted this and other NZ Antarctic expeditions with their mapping problems. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Rainoff's Island *see* **Gibbs Island**

Raised Beach. 74°59' S, 163°47' E. As the name states, a raised beach, near Igloo Snowdrift, at Evans Cove, on the coast of Victoria Land. Named by Campbell's Northern Party, during BAE 1910-13. The term is used locally by NZ to this day, but (apparently) by no one else.

Rakebosten *see* **Rakebosten Ridge**

Rakebosten Ridge. 71°56' S, 7°12' E. A high rock ridge with lateral western spurs, forming the S part of Trollslottet Mountain, in the Filchner Mountains, in the Orvin Mountains of Filmbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted by NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Rakebosten (i.e., "the shaving brush"). US-ACAN accepted the name Rakebosten Ridge in 1967.

Rakekniven *see* **Rakekniven Peak**

Rakekniven Peak. 71°54' S, 7°17' E. Rising to 2365 m, at the N end of Trollslottet Mountain, in the Filchner Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Rakekniven (i.e., "the razor"). US-ACAN accepted the name Rakekniven Peak in 1967.

Poluostrov Raketa *see* **Raketa Peninsula**

Raketa Peninsula. 66°01' S, 101°02' E. A generally low lying peninsula, about 4.5 km by 1.5 km in area, it contains a large number of small hillocks above a plain that lies about 20 m above sea level, about 13 km NE of Thomas Island, and about 8 km W of Remenchus Glacier, in the W end of the Highjump Archipelago, N of the Bunger Hills. The highest point is about 65 m above sea level. Mapped by SovAE 1956, and named by the Russians as Poluostrov Raketa. ANCA translated it.

Rakovski Nunatak. 62°32' S, 60°06' W. A rocky peak, rising to 430 m, in Vidin Heights,

1.5 km W of Sharp Peak, 3.5 km NE of Miziya Peak, and 1.4 km NNE of Madara Peak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for writer Georgi S. Rakovski (1821-1867), leader of the Bulgarian liberation movement.

Rakuda Glacier. 68°03' S, 43°54' E. Flows NW to the Prince Olav Coast, just E of Rakuda Rock, and W of Carstensfjella, in Queen Maud Land. Mapped by the Japanese from ground surveys and air photos taken by JARE in 1962, and named by them on May 1, 1963 as Rakuda-hyoga (i.e., "camel glacier"). US-ACAN accepted the name Rakuda Glacier in 1964. The Norwegians call it Kamelbreen (which means the same thing).

Rakuda-hyoga *see* **Rakuda Glacier**

Rakuda-iwa *see* **Rakuda Rock**

Rakuda Rock. 68°02' S, 43°49' E. A rock (almost a small mountain) that juts out of the Prince Olav Coast, and rises to 104 m above sea level, just to the W of Rakuda Glacier, and 10 km SW of Carstensfjella, in Queen Maud Land. Mapped by the Japanese from ground surveys and air photos taken by JARE in 1962, and named by them on May 1, 1963, as Rakuda-iwa (i.e., "camel rock"). US-ACAN accepted the name Rakuda Rock in 1964. The Norwegians call it Kamelen (i.e., "the camel").

Rakusa Point. 62°10' S, 58°28' W. A promontory between Halfmoon Cove and Suszczewski Cove, 800 m SE of Point Thomas, Admiralty Bay, King George Island, in the South Shetlands. Named by PolAE 1977 as Przyla dek Rakusa, for the great Polish Antarctic researcher Dr. Stanislaw Rakusa-Suszczewski. The Poles officially accepted the name in 1980, and UK-APC followed suit on April 3, 1984, but with the translated name Rakusa Point. US-ACAN also accepted that name. It appears as such in the 1986 British gazetteer.

The *Raleigh* *see* **The *Adventure***

Rallier Channel. 65°04' S, 64°03' W. A narrow marine channel running in a NE-SW direction between Rallier Island and the W end of Booth Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Discovered and charted in 1909, by FrAE 1908-10, and named by Charcot as Chenal Rallier du Baty, in association with Rallier Island. The English-language versions of Charcot's maps show it as Rallier-du-Baty Channel. UK-APC accepted the name Rallier Channel on July 7, 1959, and US-ACAN followed suit in 1965.

Chenal Rallier du Baty *see* **Rallier Channel**

Île Rallier du Baty *see* **Rallier Island**

Îlot Rallier du Baty *see* **Rallier Island**

Islote(s) Rallier du Baty *see* **Rallier Island**

Rallier du Baty, Raymond *see under* **D**

Rallier-du-Baty Channel *see* **Rallier Channel**

Rallier-du-Baty Islet *see* **Rallier Island**

Rallier du Baty Islets *see* **Rallier Island**

Rallier Island. 65°04' S, 64°03' W. A small, low, completely snow-covered island with a small islet off its N side, it lies 0.4 km WNW of Hervéou Point (the NW extremity of Booth Island), in the Wilhelm Archipelago, off the Graham Coast, on the W coast of the Antarctic Peninsula. Discovered by FrAE 1903-05, and named by Charcot as Îlot Rallier du Baty, for Raymond Rallier du Baty. It appears as such on Charcot's 1906 chart, but on his 1908 chart it appears as Île Rallier du Baty. It appears on a 1943 U.S. Hydrographic Office chart as Rallier du Baty Islets, and includes nearby small islands. It appears similarly on a 1953 Argentine chart as Islotes Rallier du Baty, and that is the name and definition accepted by the 1970 Argentine gazetteer. US-ACAN accepted the name Rallier du Baty Islet, for the main island only, in 1956. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Rallier Island, on July 7, 1959, and US-ACAN followed suit in 1960. It appears as such on a British chart of 1960. The name Islote Rallier du Baty appears on a 1962 Chilean chart, and that is the name seen in the 1974 Chilean gazetteer.

Ralls, Claudius Gallio. As a child he was known as Gallio, but as an adult he was known, of course, as "C.G." b. June 26, 1909, Oklahoma, son of city conductor Henry R. Ralls and his wife Kizzie. The family moved to Seattle in 1909, just after C.G. was born, and after a spell as a salesman in an auto supplies company, he went to sea in 1930, as an engineer, and worked his way up through the ranks, including a stint in Antarctic waters as 3rd engineer on the *North Star* during USAS 1939-41. During and after World War II, he continued to ply the waters between Seattle and Vancouver, and between there and China, on the mail ships. He died in May 1961.

Mount Ralph. 76°58' S, 144°32' W. Between Mount Gilmour and Mount McCormick, in the Ford Ranges of Marie Byrd Land. Discovered and mapped by USAS 1939-41. Named by US-ACAN in 1966, for Ralph W. Smith.

Ram Bow Bluff. 80°48' S, 26°42' W. A prominent rock bluff, rising to 1390 m above sea level at the E end of Stephenson Bastion, in the S central part of the Shackleton Range. Visited and surveyed by BCTAE in Oct. 1957, and named descriptively by them for its resemblance to the ram bow of an old battleship. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960.

Ramage Point. 73°39' S, 120°20' W. An ice-covered point, just W of Beakley Glacier, on the N side of Carney Island, along the coast of Marie Byrd Land. Delineated from air photos taken in Jan. 1947 by OpHJ 1946-47. Named by US-ACAN in 1967, for Rear Admiral Lawson Paterson "Red" Ramage (1909-1990), USN, assistant chief of Naval Operations, Ships Operations and Readiness, in the period following IGY. In 1944, as commander of the submarine *Parche*, Red Ramage had won the Medal of Honor in a fight against overwhelming Japanese odds.

Rambler Harbor. 66°28' S, 66°27' W. A small harbor in the N side of Rambler Island, in the Bragg Islands, in Crystal Sound, between the S part of the Biscoe Islands and the Loubet Coast, on the W coast of Graham Land. First mapped by Cdr. Peter Carey on the *Discovery II* in 1930-31, and named by him (no one knows what he had in mind when he named it). Its location was doubted for several years, even though it appears on a 1942 British map and on a 1943 U.S. Hydrographic Office chart, but in 1958 FIDS re-identified it and surveyed it. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit in 1965. Note: The British, of course, spell Harbour with a "u."

Rambler Island. 66°28' S, 66°27' W. The largest of the Bragg Islands, it is a little island surrounded by numerous rocks, in Crystal Sound, about 13.5 km N of Cape Rey, and about 27 km SW of Cape Bellue, opposite Darbel Bay, on the Loubet Coast, on the W coast of Graham Land. ChilAE 1946-47 named it Isla Bío Bío, after the Chilean river Bío Bío (i.e., Río Bío Bío), and it appears as such on their 1947 chart. Surveyed by Fids from Base W in Sept. 1958, and mapped from these surveys. Given that the beautiful humor in the Chilean naming would be lost in the translation, UK-APC named it Rambler Island, on Sept. 23, 1960, in association with Rambler Harbor, which lies on the N side of the island. US-ACAN followed suit with that naming in 1965.

Rambler Rock *see* **Rumbler Rock**

Rambo Refugio *see* **Padre Balduino Rambo Refugio**

Rambo Nunataks. 83°57' S, 66°20' W. A loose chain of nunataks NW of the Patuxent Range, extending along the W side of the Foundation Ice Stream for 27 km in the Pensacola Mountains. Blackburn Nunatak is the highest, at 965 m, and other nunataks in this group include Wagner, Sowle, Oliver, and Kuhn. Surveyed from the ground by USGS in 1961-62, and again by the U.S. Wisconsin traverse of 1963-64, and photographed aerially by USN in 1964. From these efforts, USGS mapped these nunataks. Named by US-ACAN in 1968, for William L. "Bill" Rambo, USARP geophysicist who took part in the USGS Pensacola Mountains Project of 1965-66. UK-APC accepted the name on Nov. 3, 1971. It appears in the British gazetteer of 1974. The British and the Russians have plotted it in 83°54' S, 66°10' W.

Rame Bluff. 62°36' S, 61°11' W. A rocky headland, close to Start Hill, on the ridge running ESE from Start Point, on Ray Promontory, it marks the N limit of President Beaches, on Byers Peninsula, Livingston Island, in the South Shetlands. Named by UK-APC on Dec. 2, 1993, after Rame Head, a feature in Plymouth, England.

Rameau Ice Front. 71°50' S, 75°15' W. The front of Rameau Ice Shelf, in Rameau Inlet, in the SW part of Alexander Island. Named by UK-APC on Dec. 8, 1977, in association with the ice shelf. It appears in the 1980 British gazetteer.

Rameau Ice Shelf. 71°46' S, 75°13' W. The ice shelf in Rameau Inlet, on Alexander Island. Named by UK-APC on Dec. 8, 1977, in associ-

ation with the inlet, and plotted by them in 71°50' S, 75°09' W. US-ACAN accepted the name in 2006, but with new co-ordinates.

Rameau Inlet. 71°46' S, 75°13' W. A partly ice-filled inlet in the SW part of Alexander Island, indenting the NW side of Beethoven Peninsula between Pesce Peninsula and Cape Westbrook (the SW extremity of the island). Delineated by the (British) Directorate of Overseas Surveys from U.S. Landsat images taken on Jan. 29, 1973. Named by UK-APC on Dec. 8, 1977, in association with other features named for musicians in this area, for French composer Jean-Philippe Rameau (1683-1764), and plotted by them in 71°49' S, 75°12' W. US-ACAN accepted the name, but with new co-ordinates. It appears in the 1980 British gazetteer.

Ramenskijhøgda *see* **Mount Ramenskiy**

Mount Ramenskiy. 71°46' S, 12°33' E. A small mountain, rising to 2560 m above sea level, it forms the S end of Isdalsegga Ridge, in the Südliche Petermann Range of the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered aerially by GermAE 1938-39, and photographed by them. It was plotted originally from these photos. During NorAE 1956-60, it was surveyed again, and mapped fresh from new air photos taken in 1958-59. It was mapped yet again by SovAE 1960-61, and named by the USSR in 1966 as Skala Ramenskogo, for botanist Leonty Grigor'yevich Ramenskiy (1884-1953). US-ACAN accepted the name Mount Ramenskiy in 1970. The Norwegians call it Ramenskijhøgda, which means the same thing.

Skala Ramenskogo *see* **Mount Ramenskiy**

Rameris, Theodore *see* **USEE 1838-42**

Cabo Ramírez. 63°35' S, 56°41' W. A cape in Fridtjof Sound, at the NE end of the Antarctic Peninsula. Named by the Argentines.

Isla Ramírez *see* **Ramírez Island**

Lengua de Hielo Ramírez. 62°09' S, 58°48' W. An ice tongue in Collins Harbor, Fildes Bay, King George Island, in the South Shetlands. Named by the Argentines.

Monte Ramírez *see* **Mount Canicula**

Nunatak Ramírez. 66°10' S, 61°47' W. On the N side of Jason Peninsula, E of Medea Dome, in Graham Land, on the Antarctic Peninsula. Named by the Argentines.

Rocas Ramírez. 65°56' S, 66°20' W. Rocks in Pendleton Strait, in the Biscoe Islands. Named by the Argentines.

Ramírez, Fermín. b. Argentina. Cabo 1st class in the Argentine Navy, he was on the *Uruguay* in 1903.

Ramírez, Mateo. Cabo 2nd class in the Argentine Navy, he was on the *Uruguay* in 1903.

Ramírez Island. 69°09' S, 68°28' W. The most northerly of the three Bugge Islands, off the Wordie Ice Shelf, in the S part of Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. ChilAE 1946-47 named it Isla Eleuterio Ramírez, for a member of the expedition, and that is how it appears on their 1947 chart. The name was later shortened to Isla Ramírez, and that is how it appears in the 1974 Chilean gazetteer. UK-APC accepted the translated name, Ramírez Island, on May 21, 1979, and US-ACAN followed suit.

Isla Ramón Cañas *see* **Islote Cañas**

Islotes Ramona. 65°43' S, 65°10' W. A group of small islands, in the W side of Grandidier Channel, in the Biscoe Islands, off the W coast of Graham Land. Named by the Argentines.

Ramorino Glacier. 78°24' S, 85°38' W. Flows NE between Epperly Ridge and Shinn Ridge into Crosswell Glacier, on the E slopes of the Sentinel Range. Named by US-ACAN in 2006, for physicist Dr. Maria Chiara Ramorino (b. 1931), manager of the Italian team that compiled and promulgated the SCAR composite gazetteer of Antarctica, 1998-2006.

Ensenada Ramos. 62°30' S, 59°42' W. An inlet between Fierro Point and Correa Point, on the SW coast of Discovery Bay, Greenwich Island, in the South Shetlands. Named by ChilAE 1946-47, for a sailor named Ramos, signalman aboard the *Iquique* during that expedition.

Ramos, Emilio Fermín *see* **Órcadas Station**, 1945

Ramp. A bank of snow slanting away obliquely on the leeward side of an obstacle.

The Ramp. 77°38' S, 166°26' E. The steep rocky slope, 0.75 km long and rising to 50 m, between two mountain ridges about 0.75 km NE of, and inland from (i.e., behind) Cape Evans on Ross Island. Two waterfalls run down it toward the cape. Named descriptively by BAE 1910-13. US-ACAN accepted the name in 2000, and NZ-APC followed suit on June 19, 2000.

Rampart Ridge. 78°10' S, 161°55' E. A prominent broken ridge extending E from The Spire to Bishop Peak, N of Rutgers Glacier, and 20 km NW of Mount Huggins, on the W side of the Royal Society Range. Surveyed and named descriptively by the NZ Northern Survey Party of BCTAE in Feb. 1957. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Rampart Terrace. 78°11' S, 162°01' E. A terrace on the W side of the Royal Society Range, N of Rutgers Glacier, in Victoria Land. Named by US-ACAN in 1994, in association with nearby Rampart Ridge.

Cerro Ramsay *see* **Mount Ramsay**

Monte Ramsay *see* **Mount Ramsay**

Mount Ramsay. 60°45' S, 44°45' W. Rising to 475 m (the British say 415 m), at the W side of Uruguay Cove, on the N coast of Laurie Island, in the South Orkneys. Charted in 1903 by ScotNAE 1902-04, and named by Bruce that year for Allan Ramsay. There is a 1908 Argentine reference to it as Cerro Ramsay, but it appears on a 1930 Argentine chart as Monte Ramsay, and that was the name accepted by the 1970 Argentine gazetteer. It was re-charted by the Discovery Investigations in 1933, and appears on their 1934 chart, as Mount Ramsay. US-ACAN accepted that name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer.

Ramsay, Allan George. b. 1878, Monifeith, but grew up in nearby Dundee, son of jeweler George Ramsay and his wife Isabelle. He was chief engineer of the *Scotia* during ScotNAE 1902-04. On the way out from Scotland in 1902 he began to suffer heart trouble, but kept quiet about it. During their stay on the ice his condition got worse and worse until finally he died on Aug. 6, 1903, and was buried at the foot of what is now called Mount Ramsay, the piper playing "Flowers of the Forest."

Ramsay Glacier *see* **Ramsey Glacier**

Ramsay Wedge. 80°26' S, 25°43' W. A long, narrow rock spur, 3 km long, with talus (i.e., scree) slopes rising to about 1200 m, 3 km SW of Mount Absalom, in the SW portion of the Herbert Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Scottish geologist Sir Andrew Crombie Ramsay (1814-1891), the first to recognize the glacial origin of rock basins, in 1862. He was director general of the Geological Survey of Great Britain, 1871-81. The name appears in the 1974 British gazetteer. US-ACAN accepted the name.

Ramseier Glacier. 80°30' S, 156°18' E. A steep cirque-type glacier, 8.5 km long, it flows SW to enter Byrd Glacier immediately SE of Mount Rummage. Mapped by USGS from aerial photographs taken by USN. Named by US-ACAN in 1965, for René Otto Ramseier (b. Oct. 23, 1933, Eggiwil, Switzerland. d. Feb. 28, 2008, Alexandria Bay, NY), in Chicago since 1956, and with CCREL in Hanover, NH, from 1959 to 1969, glaciologist at McMurdo and at Pole Station in 1960-61 and 1961-62. From 1969 to 1976 he was working for the Canadians.

Ramsey Cliff. 83°28' S, 54°09' W. A rock cliff, rising to about 1400 m above sea level, along the Torbert Escarpment, 3 km NE of Mount Torbert, in the Neptune Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Robert E. Ramsey, USN, who wintered-over as storekeeper at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Ramsey Glacier. 84°24' S, 179°20' E. Also spelled (erroneously) as Ramsay Glacier. 72 km long, and with a number of tributary glaciers, it comes off the Bush Mountains near the edge of the Polar Plateau, and flows in a general N direction to the Ross Ice Shelf eastward of Den Hartog Peak. Discovered by USAS during Flight C of Feb. 29-March 1, 1940. Named by Byrd for Admiral DeWitt Clinton Ramsey (1888-1961), USN, pioneer naval aviator, commander of the aircraft carrier *Saratoga* at Guadalcanal during World War II, and vice chief of Naval Operations during OpHJ 1946-47. US-ACAN accepted the name in 1962.

RAN *see* **Royal Australian Navy**

The *Rancagua*. Chilean tanker which took part in the following expeditions undertaken by that country in Antarctica: 1947-48 (Captain Alfredo López Costa); 1953-54 (Capt. Vicente Reyes Vargas); 1955-56 (Capt. Juan Otazo Kelly);

1956-57 (Capt. Eduardo Beeche Riofrio); and 1957-58 (Capt. Adolfo Amenábar Castro).

Grupo Rancagua *see* **Niznik Island**

Punta Rancho *see* **Rancho Point**

Rancho Point. 62°58' S, 60°30' W. A conspicuous rock headland, rising from the sea to become a large rock 170 m high, it marks the E extremity of Deception Island, in the South Shetlands. Charted by Lt. Edward N. Kendall in Jan.-March 1829, during the *Chanticleer* Expedition of 1828-31. Named Punta Rancho in 1947 by the commander of the *Granville* (part of ArgAE 1947-48), who saw its resemblance to a hut with a double-pitched roof. It appears as such on their expedition chart of 1948. US-ACAN accepted the name Rancho Point in 1965. The Chileans tend to call it Punta Este (i.e., "east point"). It is often confused with Baily Head (q.v.).

Rand Peak. 80°06' S, 159°30' E. A prominent peak, rising to 1510 m, in the S part of the Nebraska Peaks, in the Britannia Range, in Victoria Land. Named by US-ACAN in 2000, for John H. Rand, with CRREL, who drilled an ice core at J-9 (82°22' S, 168°40' W) during the Ross Ice Shelf Project (RISP) in the summers of 1974-75 and 1976-77. NZ-APC accepted the name.

Mount Randall. 72°48' S, 167°40' E. Rising to 3000 m, 3 km W of Mount Riddolls, and 5.5 km NE of Mount Burrill, it forms the summit area of the S end of Hackerman Ridge, in the Victory Mountains of Victoria Land. Named by US-ACAN in 1994, for geographer and cartographer Richard R. Randall, who, in 1973, succeeded Meredith F. Burrill as executive secretary of the U.S. Board on Geographic Names, a position he held until 1993.

Rocas Randall *see* **Randall Rocks**

Randall, John A. "Randy." b. May 19, 1935. USN construction mechanic. He shipped out of Norfolk, Va., in 1956, through the Panama Canal, to Christchurch, NZ, and then on to McMurdo Sound, where, as construction mechanic 3rd class on Chief Slaton's team, he helped build the base. He wintered-over there in 1956, and on Nov. 20, 1956 was one of the first party of Seabees in at the Pole, to help build the station there. He was one of the last out, on Jan. 4, 1957, and flew back to McMurdo, and was then shipped back to the USA. He was back at McMurdo in 1964-65, and again in 1967-68, to help run the nuclear power plant there. He died on April 5, 2005, in St. Leonard, Md.

Randall, Terence Mark "Terry." b. May 5, 1928, Northallerton, but raised partly in Beverley, Yorks, son of Arthur B. Randall and his wife Mona Bradley. For his national service, he joined the RN as a radio operator, working at Stanley, in the Falklands, was seconded to FIDS in 1946, as a radio operator, and left London later that year, bound for Montevideo, then on to Port Stanley, wintering-over at Base E, one of the few men ever to spend 3 successive winters in Antarctica, 1947, 1948 and 1949. After the expedition, he went to university (electronics), and, after a while working for a company, decided to go into business for himself, and was hugely successful. In 1953, in Holderness, Yorks, he married Sheila Scrowston, and they moved to Hertfordshire. He later lived in Sarasota, Fla., and later still on a lake in Mexico.

Randall Ridge. 71°44' S, 64°38' W. An arc-shaped rock ridge, rising to 1690 m above sea level, at the N side of Guthridge Nunataks, in the Gutenko Mountains of north-central Palmer Land. Mapped by USGS in 1974. Named by US-ACAN in 1976, for Robert H. Randall (1890-1966), cartographic assistant in the U.S. Bureau of the Budget, in the Executive Office of the President, whose responsibility was to coordinate mapping activities of the government, 1941-60. In 1954 he set up the Technical Advisory Committee on Antarctic Mapping, which established a mapping program for Antarctica based on the best technical methods. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Randall Rocks. 68°11' S, 67°17' W. A group of rocks rising to about 18 m above sea level, 0.8 km off the SW corner of Millerand Island, they trend in a NW-SE direction for 1.5 km, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Roughly surveyed in 1936 by BGLE 1934-37, and again in 1948-49 by Fids from Base E. Named by UK-APC on March 31, 1955, for Terry Randall. US-ACAN accepted the name in 1956. The Argentines call them Rocas Randall.

Random Hills. 74°07' S, 164°25' E. Bounded on the W by Campbell Glacier and on the E by Tinker Glacier and Wood Bay, the center of this group is about 24 km NNW of Mount Melbourne, in Victoria Land. So named by the Southern Party of NZGSAE 1966-67, because of the random orientation of the ridges which go to form these rugged hills.

Randy Point. 62°08' S, 58°08' W. A rocky headland, about midway between Lajkonik Rocks and Twin Pinnacles, at the W side of the entrance to King George Bay, King George Island, in the South Shetlands. Named by the Poles on Sept. 1, 1999, for Randall "Randy" Keller, a member of PolAE 1990-91. It is part of what became SSSI #34 (Lions Rump).

Ranebukta. 70°03' S, 9°06' E. A bay on the E side of Breiodden, on the Princess Astrid Coast, in Queen Maud Land. Named by the Norwegians.

Raney, Michele Eileen. b. July 11, 1951, Los Angeles. The first woman to winter-over at the South Pole, she was chosen ahead of all applicants, male and female, to be Pole Station physician for the 1978-79 season. She wintered-over in 1979, and left in Nov. 1979.

Raney Peak. 77°13' S, 160°32' E. A symmetrical peak rising to 2050 m, between Rim Glacier and Sprocket Glacier, in Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Michele Raney. NZ-APC accepted the name on April 7, 2008.

Ranfurly Point. 84°50' S, 169°36' E. A low, but prominent rocky point marking the convergence of the Beardmore Glacier and Keltie Glacier, at the N extremity of the Supporters Range. Named by Denys B. Rainey (*see* **Rainey Glacier**), for Uchter John Mark Knox, 5th Earl of Ranfurly (1856-1933), governor of NZ, 1897-1904. US-ACAN accepted the name in 1966. The point is 40 km E of Plunket Point, which it closely resembles in shape. In 1901 Lord Ranfurly presented to NZ the Ranfurly Shield, which has become a prestigious trophy for domestic rugby union teams. Lord Plunket did something similar with cricket.

Ranges. Different from a "mountains" group in that the peaks of a range tend to form one continuous mass, whereas a "mountains" is broken, and usually, although not always, larger, and may contain several ranges. Most ranges have now been photographed from the air, if not mapped topographically. Sometimes ranges disappear over the course of the centuries. Major ranges include (working from north to south): Imeon, Achaean, Trojan, Osterrieth, Comer, Wall, Nicholas, Schwartz, Princess Royal, Casey, North Masson, Central Masson, Masson, South Masson, David, Leckie, Brown, Eternity, Douglas, Athos, Porthos, Aramis, Explorers, LeMay, Posey, Daniels, Everett, Dunedin, Östliche Petermann, DuBridge, Mittlere Petermann, Lyttelton, Westliche Petermann, Morozumi, Findlay, Homerun, Lanterman, The Petermann Ranges, Mirabito, Pieck, Südliche Petermann, Liebknecht, Shcherbakov, King, Buddenbrock, Nikolayev, Betekhtin, McGregor, Arctic Institute, Gablenz, East Quartzite, West Quartzite, Bundermann, Luncke, Luz, Saxby, Preuschoff, Alamein, Regula, Salamander, Millen, Peck, Cartographers, Barker, Wegener, Ames, Humphries, Carey, Mesa, Arrowhead, Mountaineer, Deep Freeze, Eisenhower, Guettard, Rare, Heimefront, Perry, Demas, Kohler, Flood, Kirkwood, Convoy, Executive Committee, The Ford Ranges, Gonville and Caius, Clare, Saint Johns, Willett, Cruzen, Insel, Olympus, Asgard, Van Allen, Sentinel, Royal Society, Warren, Boomerang, Bastien, Worcester, Conway, Brown, Heritage, Britannia, Shackleton, Surveyors, Swithinbank, Nash, Carnegie, Holyoake, Cobham, Argentina, Geologists, Frigate, Forrestal, Holland, Miller, Queen Elizabeth, Neptune, Queen Alexandra, Separation, Commonwealth, Hughes, Erb, Patuxent, Ohio, Lillie, Supporters, Dominion, Herbert, Quarles, Wisconsin.

Rankin, Angus Fraser. b. Jan. 23, 1863, Dores, Inverness-shire, son of builder Andrew Rankin and his wife Janet Fraser. A meteorologist, he was assistant and then superintendent at the Ben Nevis Observatory for years in the 1880s, 1890s and early part of the 20th century. In the 1890s he married Anne, and had several children. In 1904, through the efforts of Walter G. Davis, head of the Servicio Meteorológico Nacional de Argentina, pretty much all the staff of the Ben Nevis Observatory made their way to Argentina, led by Rankin. In early 1906 he and William Bee left Buenos Aires for Ushuaia, to join Mr. Lind's party for the South Orkneys. Lind was to lead the wintering-over party at Órcadas Station, while Rankin and Bee were to set up a new met

station on Booth Island. On Dec. 7, 1906 the Argentine government made him leader of the 1907 wintering-over party at Órcadas Station itself. He sailed down with the other scientists on the *Austral*, from Ushuaia.

Rankin, David. Captain of the Daniel Bennett vessel *Dove*, in 1823-26. He was 1st mate on the *Magnet*, 1833-34, and after Capt. Kemp fell overboard in the Indian Ocean on April 21, 1834, Rankin took command and brought the ship back to London.

Rankin, James Sidney. b. March 14, 1931, Kumara, NZ. Engineer who wintered-over at Scott Base in 1971 and 1977, the second year as base commander.

Rankin Glacier. 71°41' S, 62°15' W. It flows SE, then E, for 20 km, along the S side of Schirmacher Massif, to join Cline Glacier just inland from the head of Odom Inlet, on the Black Coast, on the E side of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and also from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for USARP biologist John S. Rankin, Jr. (b. Sept. 27, 1911, Manchester, NH. d. Dec. 12, 1987, Ashford, Conn.), director of the Marine Research Lab at the University of Connecticut, who went as biologist on the International Weddell Sea Oceanographic Expeditions of 1968 and 1969. UK-APC accepted the name on July 21, 1976.

Rankine Rock. 82°24' S, 50°35' W. Rising to about 600 m, 1.5 km N of Cox Nunatak, it is the most northeasterly feature of the Dufek Massif, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS from 1956 on, especially during their own Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for David Ford Rankine, Jr. (b. 1941), USN, VX-6 photographer during OpDF 64 (i.e., 1963-64). UK-APC accepted the name on Nov. 3, 1971.

Ranney Nunatak. 76°53' S, 143°55' W. In the SW extremity of the Gutenko Nunataks, in the Ford Ranges of Marie Byrd Land. First mapped by USAS 1939-41. Named by US-ACAN in 1970, for Charles R. Ranney, ionosphere physicist at Byrd Station in 1969.

Ransom, Nelson *see* **USEE 1838-42**

Ranvik *see* **Ranvika**

Ranvik Bay. 69°00' S, 77°40' E. An open bay, 24 km wide, just southward of the Rauer Islands, in the SE part of Prydz Bay, off the Ingrid Christensen Coast. Discovered and charted in Feb. 1935 by Klarius Mikkelsen in the *Thorshavn*. Named for Ranvik, the bay in Norway, at the head of which Lars Christensen, owner of the *Thorshavn*, had his estate. US-ACAN accepted the name in 1947, and ANCA has followed suit.

Ranvik Glacier. 69°10' S, 77°40' E. Also called Ranvik Ice Tongue. A broad glacier flowing N into the S part of Ranvik Bay, between Amanda Bay and the Rauer Islands, in the SE part of Prydz Bay, on the Ingrid Christensen Coast of East Antarctica. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Ranvikbreen (i.e., "Ranvik glacier"), in association with the bay. US-ACAN accepted the name Ranvik Glacier in 1962, and ANCA has followed suit.

Ranvik Ice Tongue *see* **Ranvik Glacier**

Ranvik Island. 68°54' S, 77°50' E. A rocky island, 2.5 km long (the Australians say about 4 km long), and rising to an elevation of 115 m above sea level, the largest in the S part of the Rauer Islands, at the N end of Ranvik Bay, about 5 km NW of Browns Glacier, off the Ingrid Christensen Coast. Photographed by LCE 1936-37, and considered to be part of the mainland by the Norwegian cartographers working from these photos in 1946. They named it Ranviktangen (i.e., "the Ranvik tongue") in association with Ranvik Bay. OpHJ 1946-47 photos enabled U.S. cartographer John H. Roscoe, in 1952, to determine that this is, indeed, an island, and he re-defined it. US-ACAN accepted the name Ranvik Island in 1956. The position of the island was fixed by a 1959 ANARE party led by Chris Armstrong. On Oct. 11, 1960, ANCA named it (for themselves only) as Torckler Island, for Ray Torckler, radio officer who wintered-over at Davis Station in 1959 and at Wilkes Station in 1961. An Australian automatic weather station was installed here, at an elevation of 339 m, on Feb. 4, 2000, and stopped operating in 2002. Today the Norwegian call it Tangøy (i.e., "the tongue island").

Ranvika. 68°44' S, 90°30' W. A cove indenting the coast of Peter I Island, near its NE corner, between Simonovbreen and Tåbreen, on the coast the Norwegians call Von Bellingshausenkysten. Discovered in 1927 by Eyvind Tofte in the *Odd I*, and named by him as Ranvik, for the estate of his boss, Lars Christensen, who was owner of the *Odd I* (*see* **Ranvik Bay**). US-ACAN chose to accept the name Ranvika in 1952. The Chileans call it Caleta Ranvika (i.e., "Ranvik cove"), but plot it in 68°46' S, 90°25' W.

Caleta Ranvika *see* **Ranvika**

Ranvikbreen *see* **Ranvik Glacier**

Ranviktangen *see* **Ranvik Island**

The *Rapa Nui*. Brazilian vessel, named after the indigenous name for Easter Island, which was in Antarctic waters in 1990-91, under the command of Brazilian captain, Hermann Atila Hrdlicka.

Punta Rapa Nui. 62°27' S, 60°48' W. About 1.2 km WNW of Cerro Gaviota, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91, for its resemblance to the Easter Island statue named Rapa Nui.

Islotes Raquelia *see* **Raquelia Rocks**

Raquelia Rocks. 62°39' S, 60°23' W. A small group of rocks protruding in a SW direction from the coast NW of Johnsons Dock, on the E side of South Bay, Livingston Island, in the South Shetlands. They appear as Islotes Raquelia on a 1998 Spanish chart. UK-APC accepted the translated name on Dec. 16, 2003. Plotted by the UK in late 2008.

Punta Rara *see* **Moody Point**

RARE *see* **Ronne Antarctic Research Expedition**

Rare Range. 74°24' S, 64°05' W. A rugged mountain range, rising to a greatest elevation of about 1400 m, between Wetmore Glacier and Irvine Glacier, on the Orville Coast of Palmer Land. The range includes Copper Nunataks, Mount Crowell, and Mount Sumner. Discovered and photographed aerially by RARE 1947-48, and named for them (i.e., the Ronne Antarctic Research Expedition) for its huge contribution toward opening up the Antarctic Peninsula. Mapped by USGS from new aerial photos taken by USN between 1965 and 1967. US-ACAN accepted the name in 1968, and it features on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Raskuporis Cove. 62°40' S, 61°10' W. A cove, 1.6 km wide, which indents the S coast of Byers Peninsula for 700 m, on the coast of Livingston Island, between Sevar Point and Devils Point. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for the Thracian king Raskuporis, 48-42 BC.

Cabo Rasmussen *see* **Rasmussen Island**

Cap Rasmussen *see* **Rasmussen Island**

Cape Rasmussen *see* **Rasmussen Island**

Isla Rasmussen *see* **Rasmussen Island**

Islote Rasmussen *see* **Rasmussen Island**

Sommet Rasmussen *see* **Rasmussen Island**

Rasmussen, Johan Karsten. b. 1878. Norwegian whaling magnate. He and Magnus Konow owned the Rosshavet Company (which, in turn, owned the *Sir James Clark Ross* and the *C.A. Larsen*). He died in 1966.

Rasmussen Island. 65°15' S, 64°05' W. An island of a black color, 244 m high, on the NE side of the entrance to Waddington Bay, on the Graham Coast, on the W coast of Graham Land. The NE entrance to Waddington Bay was named Cap Rasmussen, by de Gerlache during BelgAE 1897-99. It appears as such on the expedition maps. Who Rasmussen was is a bit of a mystery. For a long time it was assumed that it was Knud Rasmussen (*see* **Rasmussen Peninsula**), but as he was only 19 at the time of naming, it seems unlikely. The favored suspect now is Jens Erik Carl Rasmussen (1841-1893), a Danish painter who visited Greenland in 1870 and other years, and who drowned in the North Atlantic on Oct. 1, 1893, and who may have been known to Dr. Frederick Cook of de Gerlache's expedition. The feature appears on Cook's 1900 map of the expedition as Cape Rasmussen. It appears as Sommet Rasmussen on the 1910 map of FrAE 1908-10, so Charcot was obviously beginning to have doubts about the definition of this feature. It appears on a 1946 Argentine map as Cabo Rasmussen. Cape Rasmussen was the name accepted by UK-APC on Sept. 22, 1954, appearing in the 1955 British gazetteer. US-ACAN accepted the name in 1955. FIDASE air photos of 1956-57 showed that there is no such cape, so on July 7,

1959, UK-APC named this feature in order to preserve the name Rasmussen in the area. It appears as Rasmussen Island on a British chart of 1960, and US-ACAN went along with the change in 1960. It appears on a 1962 Chilean chart as Islote Rasmussen, but, despite that, the name accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 was Cabo Rasmussen, despite a wealth of information (nay, proof) that it was not a cape that de Gerlache had seen, but an island. The Chileans even describe it as a cliff. The name Cape Rasmussen, however, has been somewhat preserved, as the location of a cross and plaque erected on Feb. 9, 1977, in commemoration of the three killed on Mount Peary on Sept. 7, 1976 (*see* that date under **Deaths in Antarctica**). A BAS refuge hut was established on the island in 1985.

Rasmussen Peninsula. 68°53' S, 67°13' W. These are the British coordinates (the Americans have not yet accepted the name, as of 2010). The Chileans call it Península Riesco, and plot it in 68°51' S, 67°18' W, and the Argentines, who call it Península Mendoza, plot it in 68°53' S, 67°20' W. A high peninsula, upon which rises a promontory of 1210 m in elevation, notable for its bastion-like appearance, projecting from Marguerite Bay, between Mikkelsen Bay and the Wordie Ice Shelf, on the Fallières Coast, on the W coast of Graham Land. It terminates in Cape Berteaux. Surveyed in 1936 by BGLE 1934-37, and re-surveyed by Fids from Base E in 1948-49. Its first name seems to have been Península Mendoza, named for the famous Argentine city, and it appears as such on a 1978 chart prepared by ArgAE. On Oct. 24, 1979, UK-APC named it Rasmussen Peninsula, for Knud Johan Viktor Rasmussen (1879-1933), the Danish Arctic explorer. It appears as such on a 1983 British chart. The Chilean name commemorates Germán Riesco (1854-1916), president of Chile, 1901-06, who, on July 7, 1906, authorized the charter of the Sociedad Ballenera de Magallanes.

Rasmussen Point *see* **Rasmussen Refuge**

Rasmussen Refuge. 65°15' S, 64°06' W. Also called Rasmussen Point. British refuge hut on Rasmussen Island, in Waddington Bay, on the Graham Coast, occasionally used between March 29, 1984 (when building started; it was completed by early 1985) and Feb. 6, 1996, as an emergency refuge and recreational shelter by the personnel from Faraday Station who built it. It is still used occasionally by Ukrainians from Vernadsky Station.

Rasmussenegga. 74°34' S, 10°03' W. A mountain ridge, at 1929 m above sea level, on the NW side of XU-fjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Einar Korsvig Rasmussen (b. 1895), Norwegian Resistance leader during World War II, who killed himself when arrested (so says the SCAR gazetteer, but one has reason to doubt this. Other sources say he lived until 1964, but then, perhaps he was arrested in 1964).

Rassa Point *see* **Rossa Point**

Gory Rassechënnye. 71°10' S, 65°20' E. An isolated group of nunataks, almost due W of Mount Reu, in the Prince Charles Mountains. Named by the Russians.

Rastorfer Glacier. 71°50' S, 167°06' E. Flows S from the Admiralty Mountains to enter the upper part of Tucker Glacier just E of the Homerun Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for James Raymond "Jim" Rastorfer (b. 1936), USARP biologist at McMurdo in 1967-68, and at Palmer Station in 1968-69.

Rastorguev Glacier. 70°57' S, 163°30' E. A large tributary glacier flowing E from the E slopes of the Explorers Range between Mount Ford and Mount Sturm, and which joins Lillie Glacier via Flensing Icefall, in the central part of the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for meteorologist Vladimir Ivanovich Rastorguev (b. 1925), Russian senior weather forecasting engineer, IGY observer who wintered-over at Weather Central at Little America in 1957. NZ-APC accepted the name. *See also* **Álvarez Glacier**.

Rat-tailed fishes. *Lionarus filicauda*. Of the order Macrouridae. They live at the sea bottom, and are the most abundant of the deep sea fishes here. Relatives of the cod, they are elongated with large heads, and have eyes that are covered with spiny scales.

The *Rata*. A 1500-ton, 60-meter Argentine Merchant Navy ship. In 1933-34, under the command of Capt. Reynaldo Forti, she left Buenos Aires in Jan. 1934, to relieve Órcadas Station. She met the worst possible conditions on the way south, and for 16 days had to try to find a way in to the base. She finally quit trying, and on the way back to Argentina was hit by a new storm. She made it back to Buenos Aires at the end of Feb. 1934. The sealer *Dias* was once again chartered to relieve Órcadas. The *Rata* was later struck off the register, and used as target practice in Bahía Blanca, and sunk.

Mount Rath. 74°19' S, 62°30' W. Rising to about 1300 m, 10 km NNE of Mount Owen, in the Hutton Mountains, on the Lassiter Coast of Palmer Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for Arthur Edward Rath (b. 1939), USN, electronics technician who wintered-over at Pole Station in 1964. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. The name was accepted by UK-APC on Dec. 20, 1974.

Rathbone Hills. 71°39' S, 64°48' W. A line of low hills or nunataks, rising to about 1600 m, and trending E-W for 22 km, 6 km N of Guthridge Nunataks, in the Gutenko Mountains, in the north-central part of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN in 1976, for Major David L. Rathbone (b. 1934), U.S. Marine commander of LC-130 Hercules aircraft with VXE-6 during OpDF 1970 (i.e., 1969-70) and OpDF 1971 (i.e., 1970-71). UK-APC accepted the name on July 21, 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Mount Ratliff. 85°42' S, 137°00' W. Rising to 2520 m, N of the Watson Escarpment, 13 km NNE of Mount Doumani. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Charles E. Ratliff, USN, aviation machinist's mate with VX-6 on several trips to Antarctica between 1963 and 1967.

Raudberg Pass. 72°38' S, 3°22' W. Between Kulen Mountain and Jøkulskarvet Ridge on the one hand, and Raudberget on the other, in Raudberg Valley, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Raudbergpasset, in association with Raudberget. US-ACAN accepted the name Raudberg Pass in 1966.

Raudberg Valley. 72°39' S, 3°26' W. About 30 km long, it is the main ice-filled valley extending SW-NE through the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Raudbergdalen, in association with nearby Raudberget. US-ACAN accepted the translated name Raudberg Valley in 1966.

Raudbergdalen *see* **Raudberg Valley**

Raudberget. 72°38' S, 3°30' W. A prominent partly snow-covered mountain, just NE of Høgskavlen Mountain, in the central part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them ("the red mountain"). US-ACAN accepted the Norwegian name without modification, in 1966.

Raudbergpasset *see* **Raudberg Pass**

Raudvika. 68°50' S, 90°28' W. A small bay on the S side of the glacier the Norwegians call Haelbreen, on the coast they call Von Bellingshausenkysten, on the E side of Peter I Island. Named by the Norwegians (the sea here is reddish-colored).

Rauer Deep. 68°57' S, 77°15' E. A deep about 28 km long and about 10 km wide, and wider toward the SE, in the SE side of Prydz Bay, off Ranvik Bay. On the bathymetric map it is defined as being deeper than 750 m, and the deepest point exceeded 1200 m as measured in 1982. So named by ANCA because it is 30 km due W of the S tip of the Rauer Islands.

Rauer Group *see* **Rauer Islands**

Rauer Islands. 68°51' S, 77°50' E. A group of rocky coastal islands between Sørsdal Glacier Tongue and Ranvik Bay, in the SE part of Prydz Bay, and dominated by the Vestfold Hills, off the Ingrid Christensen Coast. They include (alphabetically) Chubuk Island, Efremova Island, Filla Island, Flag Island, Forpost Island, Hop Island, the Hyslop Islands, Kryuchok Island, Lokot' Island, the Lookout Islands, Lunnyj Island, Ostrov Nerpa, Peters Island, Pchelka Island, Ranvik Island, Sapozhok Island, Shleif Island, Shcherbin-

ina Island, Slon Island, Torckler Island, and Varyag Island. Discovered and roughly charted by Mikkelsen in Feb. 1935, and named by him for the island of the same name in Oslo Fjord, opposite Tønsberg, Norway, the great whaling harbor. US-ACAN accepted the name Rauer Islands in 1947. The Australians call this feature the Rauer Group.

Rauer Islands Hop Refuge. Known as Hop. 68°49' S, 77°41' E. Australian refuge hut built in 1990 on Hop Island, in the Rauer Islands, in the SE part of Prydz Bay. It is used only in the summer, to support field personnel, and can accommodate 5 persons. There is actually a Smartie Hut, for 3 people, and an Apple hut, for 2. Food, fuel, cooking facilities, and a first aid kit are available.

Rauer Rocks *see* **Jebsen Point**

Cerro Raúl. 68°10' S, 65°42' W. A coastal hill at the head of Trail Inlet, on the W coast of the Antarctic Peninsula. Named by the Chileans for Major Raúl Silva Maturana (*see* **Silva Island**) head of the Chilean Army delegation on the *Angamos* during ChilAE 1947, and who was at General Bernardo O'Higgins Station. He wrote a book, *Antártica Blanca*. The Argentines call it Cerro Tortuga.

Rautio Nunatak. 82°37' S, 53°03' W. Rising to about 1020 m, between Neuberg Peak and Hannah Peak, near the W end of the Dufek Massif, at the N extremity of the Pensacola Mountains, overlooking the Ronne Ice Shelf. Following field work by USGS from 1965, during their Pensacola Mountains Project, it was named by US-ACAN for Henry Rautio, USN, VX-6 photographer who obtained reconnaissance photos of the Pensacola Mountains from LC-47 aircraft on Jan. 22, 1964. UK-APC accepted the name on May 21, 1979.

Ravda Peak. 62°39' S, 60°07' W. A rocky peak, rising to 664 m on Levski Ridge, 1.75 km N of Levski Peak. 1.6 km ENE of Zograf Peak, 2.6 km SE of Kuzman Knoll, and 3.6 km S of Atanasoff Nunatak, in the Tangra Mountains of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the Black Sea settlement of Ravda.

Pico Ravel *see* **Ravel Peak**

Ravel Peak. 69°55' S, 71°23' W. A peak rising to 1250 m and which, when seen from the E, is distinctly pyramidal. It surmounts the S side of Debussy Heights, in the NW part of Alexander Island. In 1959-60, Searle of the FIDS mapped it from air photos taken by RARE 1947-48. He plotted it in 69°45' S, 71°17' W, and with those coordinates the feature was named by UK-APC on March 2, 1961, for the French composer Maurice Ravel (1875-1937). It appears as such on a 1961 British chart. US-ACAN accepted the name and the coordinates later in 1961. The coordinates were corrected from U.S. Landsat images of Feb. 1975, and, as such, the feature appears in the 1977 British gazetteer. The Argentines call it Pico Ravel.

Ravelin Ridge. 61°11' S, 54°05' W. At a height of about 1200 m, it extends N-S almost the length of Clarence Island, in the South Shetlands. Surveyed and mapped by the British Joint Services Expedition of 1970-71. Named by UK-APC on Nov. 3, 1971, for its resemblance to a ravelin-type fortification. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer. It appears on a Argentine chart of 1977, as Dorsal Fuerte (i.e., "strong backbone").

Roca Raven *see* **Ravn Rock**

Ravens Mountains. 80°20' S, 155°25' E. A symmetrical group of mountains, about 20 km long, and rising to 2130 m (in Doll Peak), on the W side of Hughes Basin, in the Britannia Range. Other features include: Aldi Peak, Vantage Hill, Adams Crest, Lucia Peak, Casatelli Peak, Pritchard Peak, and Beale Peak. Originally called the Doll Mountains, for Karl Doll (*see* **Doll Peak**), the feature was re-named by US-ACAN in 2001. "The Ravens" is a nickname for the 109 Airlift Wing of the NY National Guard, which provided logistical assistance to USAP for several years beginning in 1988 (when it began to take over that chore from the Navy).

Ravin Bay. 66°32' S, 138°27' E. A small bay between Cape Pépin to the W and the point where Français Glacier flows into the sea, on the coast of East Antarctica. Discovered in 1840 by FrAE 1837-49, and named by Dumont d'Urville as Baie des Ravins, for the ravine-like quality of the coastline at this point. US-ACAN accepted the name Ravin Bay in 1962.

Baie des Ravins *see* **Ravin Bay**

The *Ravn*. Norwegian whale catcher based at Deception Island in 1908-09, working for the *Vesterlide* (q.v. for movements that season). Capt. H. Olsen. She ran aground on Ravn Rock that season, when entering Neptunes Bellows, but was refloated.

Roca Ravn *see* **Ravn Rock**

Ravn Boen *see* **Ravn Rock**

Ravn Klippen *see* **Ravn Rock**

Ravn Rock. 63°00' S, 60°33' W. A hazardous submerged rock, 2.5 m below the surface, 300 m N of Entrance Point, in the middle of Neptune's Bellows, which is the entranceway to Port Foster, Deception Island, in the South Shetlands. Charted by the *Vesterlide* in 1908-09, and named by August Christensen as Ravn Boen, for the *Ravn*, which ran aground here that season. Recharted by FrAE 1908-10. The name also appears as Ravn Klippen. It appears as Ravn Rock on a 1934 chart, and on a British chart of 1945. It appears on a 1944 Argentine chart erroneously as Roca Raven, but on a 1948 Argentine chart as Roca Ravn, and that was the name accepted by the 1970 Argentine gazetteer and by the 1974 Chilean gazetteer. It was re-surveyed by an RN Hydrographic Survey unit in 1948-49, and appears as Ravn Rock on their chart of 1949. Ravn Rock was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953, and it appears that way in the 1955 British gazetteer. The *Southern Hunter* foundered on the rock in 1956. Last plotted by the UK, in late 2008.

Rawin domes. Used to track weather balloons. The name is a combination of radio and wind.

Rawle Glacier. 71°50' S, 164°40' E. A tributary glacier in the Concord Mountains, flowing NW between the Leitch Massif and the King Range, into Black Glacier, in the NW part of Victoria Land. Named by the Northern Party of NZGSAE 1963-64, for Russell Rawle, leader at Scott Base in 1963-64. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Mount Rawson *see* **Rawson Plateau**

Rawson, Kennett Longley. b. June 1, 1911, Chicago, son of Frederick Holbrook Rawson, chairman of the First National Bank of Chicago. At the age of 14 he was cabin boy and extra hand on the third voyage of the *Bowdoin* to the Arctic, under the command of Capt. Donald MacMillan, and wrote *A Boy's-Eye View of the Arctic* (published in 1926). He was a backer of ByrdAE 1933-35, and navigator in the shore party of that expedition. He was later a publisher, and died July 10, 1992, in East Setauket, Long Island, NY.

Rawson Mountains. 86°43' S, 154°40' W. A crescent-shaped range of tabular, ice-covered mountains, rising to about 2700 m, at the SE end of the Nilsen Plateau, of which they are a continuation, and they extend SE for about 28 km to the W side of Scott Glacier, in the Queen Maud Mountains, terminating in Mount Wyatt. Other features within this group are Fuller Dome and Mount Verlautz. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35, and named by Byrd as the Frederick H. Rawson Mountains, for Frederick H. Rawson (*see* **Rawson, Kennett Longley**, above), contributor to Byrd's first two expeditions to Antarctica. The name was later shortened, and as such accepted by US-ACAN and NZ-APC.

Rawson Plateau. 85°52' S, 164°45' W. An ice-covered pateau, 24 km long and rising to 3400 m above sea level, between the heads of Bowman Glacier, Moffett Glacier, and Steagall Glacier, in the Queen Maud Mountains. Discovered and mapped in Dec. 1929, during Byrd's flight to the Pole during ByrdAE 1928-30, and named by him as Mount Kennett Rawson, for, of course, Kennett Rawson. The name was subsequently shortened to Mount Rawson, and finally, after ground surveys and USN air photos taken between 1960 and 1964, it was determined by USGS to be a plateau, and US-ACAN accepted the name Rawson Plateau in 1967. However, and interestingly, the SCAR gazetteer lists Mount Kennett Rawson (under K) and Rawson Plateau as two separate and distinct features, plotting the mountain in 85°55' S, 162°10' W (following the lead of the NZ gazetteer). The New Zealanders apparently describe the mountain as a prominent projecting corner of the massif surmounted by Mount Alice Gade, between Isaiah Bowman Glacier and Moffett Glacier, in the Queen Maud Mountains. Mount Alice Gade does mark the NE extremity of the Rawson Plateau. It is clear that the two features are separate and distinct, and it is odd that US-ACAN and NZ-APC have not reconciled over this matter.

Mount Ray. 85°07' S, 170°48' W. Rising to 3905 m, 2.5 km SE of Mount Fisher, in the

Prince Olav Mountains. Named by US-ACAN in 1966, for Carleton Ray (b. Aug. 15, 1928, NY), USARP zoologist at McMurdo, 1963-64, 1964-65, and 1965-66.

Ray, Charles *see* **USEE 1838-42**

Ray, Nathaniel. b. Oct. 17, 1771, Nantucket, Mass., son of William Ray and his wife Elizabeth Coffin. On Oct. 8, 1795, in Nantucket, he married Merab Bunker, and they had two sons and a daughter. He became a sealer and whaler in 1799, and in 1801 commanded the *Hope* on a trading voyage to China. He was commander of the *Harmony* in the South Shetlands for the 1820-21 season. On Aug. 21, 1821 he was succeeded as captain by Isaac Hodges. He died on Feb. 16, 1830.

Ray Nunatak. 83°28' S, 51°58' W. Rising to 1630 m, just N of Beiszer Nunatak, and 8 km SW of Dyrdal Peak, at the S end of the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground in 1965-66 by USGS, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for James A. Ray, USN, Seabee utilitiesman with MCB Special Detachment Bravo, who wintered-over at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Ray Promontory. 62°36' W, 61°08' W. A promontory extending 6 m NW from Byers Peninsula, and forming the NW termination of that peninsula and also, therefore, of Livingston Island, in the South Shetlands. The promontory itself terminates at the NW in Start Point. BAS did geological work here in 1975-76. Named by UK-APC on Feb. 7, 1978, for Nathaniel Ray. It appears in the 1980 British gazetteer. US-ACAN accepted the name. Last plotted by the UK, in late 2008.

Lednik Raydera *see* **Ryder Glacier**

Rayko Nunatak. 63°45' S, 58°22' W. A rocky peak rising to 540 m off the E extremity of Trakiya Heights, S of Russell East Glacier, 4 km ENE of Papiya Nunatak, 6.1 km E of Mount Daimler, and 4.45 km W of Azimuth Hill, on the coast of the Prince Gustave Channel, at Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the Bulgarian poet Rayko Zhinzifov (1839-1877).

Rayment, Ted. Australian ABC-TV cinematographer, he was movie photographer on David Lewis's *Solo* expedition of 1977-78. His documentary *Voyage to the Ice*, was a report of that expedition. He left ABC in 1985, and joined SBS, and was later national president of the Australian Cinematographers' Society.

Mount Raymond. 85°53' S, 174°43' E. A rock peak, rising to 2820 m (the New Zealanders say 2700 m), on the southernmost ridge of the Grosvenor Mountains, 4 km SE of Mount Cecily. Discovered in Dec. 1908, by Shackleton's party as they were on their way to the Pole, during BAE 1907-09, and named by Shackleton for his eldest son, Raymond Swinford Shackleton (1905-1960). Shackleton thought this feature stood in the Dominion Range. He was wrong (it is separated from that range by Mill Glacier), but he did chart it correctly. US-ACAN accepted the name, as did NZ-APC.

Raymond, John East "Johnny." b. March 27, 1915, in the East End of London, son of John East Raymond and his wife Harriet E. Dennis. A little, short guy, with ginger hair, but a highly-regarded carpenter with the London Carpenters' Company, he was put to bridge-repairing in World War II, and became the best there was, working his way through Italy, Germany, North Africa, and after the war was doing the same thing in the Balkans. He took a contract with Billy Butlin to build a holiday camp in the Bahamas, and in 1953 joined FIDS, as a carpenter, wintering-over at Base F in 1954. He was living in West Norwood when he became carpenter on the first part (1955-57) of the British Royal Society Expedition, during which he was in charge of building the hut, and wintered-over at Halley Bay in 1956. He was brother-in-law of the other carpenter on the expedition, Doug Prior. They both returned to London on the *Magga Dan* on March 13, 1957. He died on April 15, 1977, in Bournemouth.

Raymond Fosdick Mountains *see* **Fosdick Mountains**

Raymond Fosdick Range *see* **Fosdick Mountains**

Raymond Ice Ridge. 81°35' S, 135°00' W. Between Bindschadler Ice Stream and Kamb Ice Stream, on the Siple Coast of Marie Byrd Land. Siple Dome is at the W end of the ridge. Named by US-ACAN in 2003, for Charles F. Raymond, of the geophysics program at the University of Washington in Seattle, who studied the glacial history and evolution of the Marie Byrd Land ice stream system (*see* **MacAyeal Ice Stream**), with work on Siple Dome, Bindschadler Ice Stream, and Kamb Ice Stream, in several field seasons between 1994 and 2002.

Rayna Knyaginya Peak. 62°37' S, 60°13' W. A peak rising to 680 m at the W end of Bowles Ridge, 860 m NW of the summit of Mount Bowles, 930 m SE of Hemus Peak, and 500 m E of Bowles West Peak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians in 2004-05, during their Tangra survey, and named by them on April 11, 2005, for Rayna Knyaginya, pseudonym of Rayna Futekova (1856-1917), a heroine of the Bulgarian liberation movement.

Punta Rayner *see* **Rayner Point**

Rayner, George William. b. Dec. 2, 1906, Strood, Kent. British zoologist researching whales with the Discovery Committee. Chief scientist on the *William Scoresby* from June 1929 to June 1930, and again in 1934-35, 1935-36, and 1937-38. In between he was one of the zoologists on the *Discovery II*'s cruise of 1931-33. He was in the RNVR during World War II, making commander. In 1947 he moved to Australia, as deputy head of the Fisheries Division (from 1948), responsible for initiating the division's program on whales. He would have made head of the division but for two things — his personality, and the fact that he designed an experimental fishing vessel that turned out to be so expensive that the government canceled the project. He later returned to the UK, and died in Penzance, in 1964.

Rayner Glacier. 67°40' S, 48°25' E. Also spelled (erroneously) as Rainer Glacier. A prominent glacier, between 16 and 19 km wide, it flows NNW from the Nye Mountains of Enderby Land into the SE corner of Casey Bay, just W of the Condon Hills. Discovered aerially by Doug Leckie in Oct. 1956, while flying over in an ANARE Beaver. Named by ANCA on April 29, 1958, for geophysicist Jack Maxwell Rayner (1906-1982), deputy director of the geology and geophysics section of the Commonwealth Bureau of Mineral Resources in the Australian Department of National Development, 1952-58, and director, 1958-69. US-ACAN accepted the name in 1961. The Australians plot it in 67°45' S, 48°30' E.

Rayner Peak. 67°24' S, 55°56' E. A prominent peak, rising to about 1270 m, 3 km W of Robert Glacier, and about 56 km (the Australians say 66 km) SSW of the head of Edward VIII Bay, on the Kemp Coast of Enderby Land. Discovered in Feb. 1936 by personnel on the *William Scoresby*, and named by them as George Rayner Peak, for George Rayner. The name was later shortened, and accepted by both US-ACAN (in 1947) and ANCA. The Norwegians call it Kjuringen. An astrofix was ontained here in Nov. 1959, by Chris Armstrong, a surveyor at Mawson Station that year, and the peak was occupied as an ANARE tellurometer station in Feb. 1965.

Rayner Point. 60°39' S, 45°10' W. A point marked by a rock peak, and forming the N side of the entrance to Gibbon Bay, on the E coast of Coronation Island, in the South Orkneys. Charted by Petter Sørlle in 1912-13, and again by personnel on the *Discovery II* in 1933 (it appears on their 1934 chart). The *Discovery II* personnel named it for George Rayner. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1952 Argentine chart as Punta Rayner, and that was the name accepted by the 1970 Argentine gazetteer. It was surveyed by Fids from Signy Island Station between 1956 and 1958.

Rays. Rajidae. As far as Antarctica goes, they are found only in the region of the Antarctic Peninsula (*see* **Fish**).

Raytheon Polar Services. A company, based out of Colorado, that exists specifically to provide logistical services to the NSF. In 2000 they took over the contract from ASA (Antarctic Support Associates). On or around April 1, 2010, they were awarded another year's contract.

Pointe du Raz *see under* **D**

Grjada Razdeljajushchaja. 78°50' S, 24°20' W. A ridge on the SW side of Gora Zametnaja, inland from the Filchner Ice Shelf. Named by the Russians.

Lednik Razdeljajushchij. 73°35' S, 66°41' E. A glacier descending from the W slopes of the

Cumpston Massif, at the junction of the Lambert Glacier with Mellor Glacier, in Mac. Robertson Land. Named by the Russians.

Otmel' Razdel'naja. 67°38' S, 46°10' E. A shallow area of water, lying above the subsurface feature the Russians call Banka Krevetka, immediately NE of Vechernyy Hill and the cape the Russians call Mys Vyvodnoj, at the E end of the Thala Hills, in Enderby Land. Named by the Russians.

Razgrad Peak. 62°33' S, 59°43' W. An ice-covered peak rising to 550 m in Breznik Heights, 650 m SE of Terter Peak, 1.8 km SW of Momchil Peak, 2.9 km W of the summit of Viskyar Ridge, and 1 km N of the summit of Ephraim Bluff, on Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for the city of Razgrad, in northeastern Bulgaria.

Razlog Cove. 62°27' S, 60°00' W. A cove, 2 km wide, indenting the N coast of Greenwich Island for 1.5 km, it is bounded to the S by Archar Peninsula, and is entered between Duff Point and the N extremity of Express Island, that island bounding the cove to the NE, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the town of Razlog, in southwestern Bulgaria.

Mys Razlom *see* **Razlom Point**

Razlom Point. 70°00' S, 12°52' E. An ice point at the W edge of the Lazarev Ice Shelf, about 3 km N of Leningradskiy Island, in Queen Maud Land. Mapped by SovAE 1959, and named by them as Mys Razlom (i.e., "breach point"), for the large old break in the ice shelf nearby. US-ACAN accepted the name Razlom Point in 1971.

Razlomy Grand-Kazms *see* **Grand Chasms**

Razor Ridge. 71°04' S, 71°15' E. In the S part of the Manning Nunataks, on the E side of the S part of the Amery Ice Shelf. The Manning Nunataks were photographed aerially during OpHJ 1946-47, and again by ANARE in 1957, and were visited by SovAE 1965 and the ANARE Prince Charles Mountains survey party in Jan.-Feb. 1969. So named by ANCA because, in plan, this ridge resembles a blade razor.

Mount Razorback. 76°50' S, 161°18' E. A craggy, prominent mountain rising to about 1600 m, just E of Staten Island Heights, on the ridge dividing the NW and SW sources of Benson Glacier, 16 km NE of Mount Gran, in the Convoy Range of Victoria Land. The highest point is near the W end of a long summit ridge, which is steeply cliffed on its N side. Named descriptively in 1957 by the NZ Northern Survey Party of BCTAE. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Razorback Island *see* **Little Razorback Island, Big Razorback Island**

Razorback Islands *see* **Dellbridge Islands**

Razorback Ridge. 77°41' S, 166°22' E. In the west-central part of Tent Island, in the Dellbridge Islands, in McMurdo Sound. Named descriptively by NZ-APC.

Razorback whale *see* **Fin whale**

Razumovskijtoppen *see* **Mount Razumovskiy**

Mount Razumovskiy. 71°29' S, 12°43' E. A high peak, rising to 2285 m, on the S part of Deildegasten Ridge, in the Östliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named by the Russians in 1966, as Gora Razumovskogo, for geologist Nikolai Konstatinovich Razumovskiy (1893-1967). US-ACAN accepted the name Mount Razumovskiy in 1970. The Norwegians call it Razumovskijtoppen.

Gora Razumovskogo *see* **Mount Razumovskiy**

Razvigor Peak. 63°37' S, 58°42' W. A peak rising to 1110 m in Srednogorie Heights, 2.49 km WSW of Mount Ignatiev, 3.7 km SSW of Corner Peak, 6.86 km ESE of Hanson Hill, 2.68 km NE of Ledenika Peak, and 11.76 km N of Sirius Knoll, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Ravigorovo, in northeastern Bulgaria.

Mount Razvilka. 70°39' S, 67°10' E. The central of 3 nunataks standing in row running E-W, close NE of Mount McKenzie, in the Amery Peaks of the Aramis Range, in the Prince Charles Mountains of Mac. Robertson Land. The western one is Gora Sredinnaja and the eastern one is Gora Nedostupnaja. Named by the Russians.

Mount Rea. 77°04' S, 145°30' W. A prominent rock mountain between Arthur Glacier and Boyd Glacier, in the Ford Ranges of Marie Byrd Land. The imposing monolith called The Billboard (q.v.) is on its W side. Discovered during the Eastern Flight of Dec. 5, 1929, during ByrdAE 1928-30, and named by Byrd for Frank Henry Rea (b. 1865) and his wife Katherine (b. 1868), owners of the Gear & Machine Co., of Pittsburgh, contributors to the expedition. US-ACAN accepted the name in 1947.

Point Rea *see* **Point Rae**

Rea, Henry Kean. b. 1797, Ireland. He quite naturally came to Liverpool, and became a mariner and hydrographer. On Nov. 9, 1823, at St. Peter's, Liverpool, he married Sarah Radcliffe, a Yorkshire-born druggist. He seems to have been promoted to lieutenant in the Royal Navy for the express purpose of going on the *Hopefull* expedition of 1833-34 (*see* **The *Hopefull***), and, before the expedition reached Antarctica, he had succeeded Biscoe as commander. He became successively a ship's captain, and in the late 1830s dockmaster at the Waterloo & Victoria Docks, in Liverpool, dying there on April 30, 1862.

Rea Peak. 62°02' S, 58°10' W. Rising to 590 m (the British say it is about 800 m), almost 3 km NE of Mount Rose and about 2.5 km NW of Mount Hopeful, N of King George Bay, in the central part of King George Island (indeed, it is the highest point on the island), in the South Shetlands. Photographed aerially by FIDASE in 1956, and surveyed from the ground by FIDS between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for Henry Rea. US-ACAN accepted the name later in 1960. Last plotted by the UK, in late 2008.

Rea Rocks. 77°05' S, 145°10' W. A group of rocks in the middle of Arthur Glacier, 10 km E of Mount Rea, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Peter C. Rea, USN, construction electrician at Byrd Station in 1967.

Read Mountains. 80°42' S, 24°15' W. A group of rocky summits, the highest rising to 1875 m in Holmes Summit, it extends E from Cornwall Glacier to Swinnerton Ledge, E of Glen Glacier, in the south-central part of the Shackleton Range. The Du Toit Nunataks mark the W end of this group, which also includes Mount Wegener, The Ark, Strachey Stump, Watts Needle, and a number of cirques, crags, screes, and ridges, as well as the Niggli Nunataks near the E end of the group. First surveyed and mapped at their W end in Oct. 1957, by BCTAE, who applied the name Read Mountains to the mountains E of Glen Glacier, and with the E limit undefined, for Herbert Harold Read (1889-1970), professor of geology at the University of Liverpool, 1931-38, and at the University of London, 1939-55, and chairman of the scientific committee and member of the committee of management, of BCTAE 1955-58. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year. The coordinates then were 80°42' S, 24°45' W. The mountains were photographed aerially by USN in 1967, surveyed from the ground over their length by BAS personnel from Halley Bay Station between 1968-71, and USGS mapped them in 1974 from these efforts. The British gazetteer of 1986 has the new coordinates.

Reade Peak. 65°06' S, 63°29' W. Rising to 1060 m, 1.5 km S of Sonia Point and Flandres Bay, W of Lauzanne Cove, on the Danco Coast, on the W coast of Graham Land. Photographed aerially and triangulated by FIDASE in 1956-57, and mapped from these photos by FIDS cartographers in 1959-60. Named by UK-APC on Sept. 23, 1960, for the Rev. Joseph Bancroft Reade (1801-1870), rector of Bishopsbourne, Kent, and photography pioneer. US-ACAN accepted the name in 1965. It appears in the 1986 British gazetteer.

The *Ready*. Formerly the Norwegian whaler *Pythia* (q.v.), she was bought in 1930 by Bjarne Gundersen's Africa Company, and, in the 1930-31 Antarctic whaling season, in company with the *Strombus*, she conducted pelagic whaling in Antarctic waters, between 40°W and 60°E. She was broken up in 1934.

The *Real*. Spanish yacht, skippered by Bubi Sanso, which visited the South Shetlands and the Antarctic Peninsula in 1996-97.

Nunatak Real de Azúa. 66°03' S, 60°33' W. Due S of Cape Framnes, in the NE part of Jason Peninsula, on the Oscar II Coast of Graham Land. Named by the Argentines, for Carlos Real de Azúa (1916-1977), Argentine essayist, critic, and historian.

Ensenada Reales Cédulas *see* **Cabinet Inlet**

Reardon, Leigh. He wintered-over at Casey Station in 1988, at Davis Station in 1990, at Macquarie Island in 1992, at Mawson Station in 1994, and at Casey again in 1995.

Rebholz Nunatak. 74°05' S, 100°13' W. An isolated nunatak, just N of the Hudson Mountains, 13 km NNW of Teeters Nunatak. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1970, for Maj. Edward Rebholz, operations officer of the U.S. Army Aviation Detachment, which supported the Ellsworth Land Survey of 1968-69.

Rebo, Joseph *see* **USEE 1838-42**

Reboul, Jean-Fortune. b. March 26, 1799, Genoa. Magasinier on the *Zélée* during FrAE 1837-40. He died on board on Dec. 26, 1839.

Gora Rebristaja. 70°46' S, 11°37' E. A hill, E of Podprunoye Lake, in the SW part of Sundvassheia (i.e., the S part of the Schirmacher Hills), in Fimbulheimen, in Queen Maud Land. Named by the Russians (name means "hill full of ribs"). The Norwegians call it Rebristajahøgda (i.e., Rebristaja heights").

Rebristajahøgda *see* **Gora Rebristaja**

Rebrovo Point. 62°50' S, 61°29' W. A point, snow-free in summer, on the SW coast of Snow Island, it projects for 200 m into Boyd Strait, 2.8 km SE of Monroe Point, and 2.8 km NW of Cape Conway, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement of Rebrovo, in western Bulgaria.

Rebuff Glacier. 73°58' S, 163°12' E. A tributary glacier descending from the Deep Freeze Range to enter Campbell Glacier 6 km SE of the summit of Mount Mankinen, in Victoria Land. So named by the Northern Party of NZGSAE 1962-63, because they were prevented from getting to it. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

Recely Bluff. 73°10' S, 125°46' W. A snow and rock bluff on the NE slope of Mount Siple, 11 km NE of the summit of that mountain, on Siple Island, off the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Frank J. Recely, Jr. (b. 1938), ionosphere physicist at Byrd Station in 1965.

Caleta Recess *see* **Recess Cove**

Recess Cove. 64°30' S, 61°31' W. A cove, 4 km wide, which forms a recess in the E side of Charlotte Bay, NE of Sepúlveda Point, on the Danco Coast, on the W coast of Graham Land. Surveyed by FIDS from the *Norsel*, in April 1955, and photographed aerially by FIDASE in 1956-57. So named by UK-APC on Sept. 4, 1957, because of its position on the E side of Charlotte Bay. It appears on a British chart of 1959. US-ACAN accepted the name in 1963. The Argentines call it Caleta Recess (which means the same thing). It appears on a 1976 Chilean map as Bahía Frei, named after Presidente Frei Station.

Recess Nunatak. 76°31' S, 144°17' W. A small but conspicuous nunatak, 1.5 km W of Mount Perkins, in the Fosdick Mountains of the Ford Ranges, in Marie Byrd Land. First mapped by USAS 1939-41. Re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. So named by US-ACAN in 1970, because the nunatak is recessed in the ice at the base due to windscooping.

Islotes Rechazo *see* **Reluctant Island**

Reckling Moraine. 76°15' S, 158°40' E. Extending W from Reckling Peak (in southern Victoria Land) for about 12.8 km is a long, narrow patch of bare ice, and at the W end of it is Reckling Moraine, a horseshoe-shaped surface moraine opened to the NE, consisting of rock clasts and fine dust, accumulating in an area of some 8.722 sq km on the East Antarctica ice sheet. A USARP field party collected meteorites here in 1979-80, and it was following this that the feature was named (in association with the mountain) by US-ACAN. ANCA accepted the name on April 27, 1995.

Reckling Peak. 76°16' S, 159°15' E. An isolated peak rising to 2010 m, and surmounting the central part of a ridge located at the icefalls at the head of Mawson Glacier, in southern Victoria Land. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1965, for Lt. Cdr. Darold Louis Reckling (b. Sept. 14, 1923, Firth, Nebr. d. July 29, 2004, Peyton, Colo.), USN, VX-6 pilot in Antarctica in 1961. ANCA accepted the name.

Cabo Reclus *see* **Reclus Peninsula**

Cap Reclus *see* **Reclus Peninsula**

Cape Reclus *see* **Reclus Peninsula**

Península Reclus *see* **Reclus Peninsula**

Reclus Hut *see* **Cape Reclus Refuge**

Reclus Peninsula. 64°33' S, 61°47' W. A peninsula, 11 km long, N of a line joining Bancroft Bay and Giffard Cove, it borders the W side of Charlotte Bay, between that bay and Wilhelmina Bay, on the Danco Coast, on the W coast of Graham Land. Discovered on Jan. 28, 1898, by BelgAE 1897-99, and roughly charted by them on Feb. 7, 1898. The N extremity of the peninsula is a rock hill, ice-free in summer, and, during that expedition, de Gerlache named this hill as Cap Reclus, for French geographer Jean-Jacques-Élisée Reclus (1830-1905; he was known as Élisée Reclus), professor at the Université Nouvelle, Brussels, 1894-1905, known for his mammoth 19-volume work, *Nouvelle Géographie Universelle*. He was also author of the introduction to de Gerlache's account of the expedition. The feature appears erroneously on Dr. Frederick Cook's map of the expedition as Cape Recluse, and that name appears also on a 1901 British map. The Argentines and Chileans translated this as Cabo Reclus (for example, it appears as such on an Argentine map of 1946), and that name was accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. The Argentines also use the name Península Reclus for the entire peninsula. It appears as Cape Reclus on a 1946 USAAF chart, on a 1954 British chart, and was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 20, 1955. Following air photography by FIDASE in 1956-57, and ground surveys by Fids from Portal Point in 1957-58, UK-APC extended the name in 1960 to the entire peninsula. US-ACAN accepted this situation. It appears as such on a British chart of 1961. *See also* **Portal Point**.

Cape Recluse *see* **Reclus Peninsula**

Recluse Nunatak. 70°25' S, 70°22' W. An isolated (hence the name given by UK-APC) rock exposure, rising to about 200 m on the Handel Ice Piedmont, midway between Haydn Inlet to the N and the Colbert Mountains to the S, in the W central part of Alexander Island. Mapped by Searle of the FIDS in 1959, working from air photos taken in Nov. 1947 by RARE 1947-48. He plotted it in 70°18' S, 70°32' W. Named by UK-APC on March 2, 1961. US-ACAN accepted the name later in 1961. It appears on a 1962 U.S. Hydrographic Office chart. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with those new coordinates, the feature appears in the 1977 British gazetteer.

Seno Recodo *see* **Seno Enrique**

Recoil Glacier. 73°46' S, 163°05' E. A tributary glacier flowing E from the Deep Freeze Range, S of Mount Pollock, into Campbell Glacier, in Victoria Land. So named by the Northern Party of NZGSAE 1962-63, because the geologist of the party, contrary to what he had expected, recoiled in horror at finding little of geologic value there. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Glaciar Reconquista *see* **Barcus Glacier**

Recovery Glacier. 81°10' S, 28°00' W. A glacier, at least 100 km long, and 60 km wide at its mouth, it flows WNW along the S side of the Shackleton Range, and N of the Whichaway Nunataks, into the Filchner Ice Shelf. Whereas both the Americans and the British plot this glacier's latitude in 81°10' S, they differ in their longitude. The Americans say 28°00' W, while the British give 25°30' W, based on the stated fact that the glacier runs between 21°W and 32°W. Discovered aerially and examined from the ground by BCTAE in 1957, and named by them for the recovery of the tractors that were continually falling into crevasses in the early stages of the transantarctic crossing. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. An American automatic weather station was installed here in Jan. 1994, at an elevation of 1220 m, but was removed in 1995. It was replaced by AGO-A80.

Recreation. There are several forms of recreation enjoyed in Antarctica. There have been theatrical shows ever since the pioneer days; now there are movies as well (well, there have been since the 1930s, actually). Books were, from the beginning, considered a staple, as were conversation and pipe-smoking. Chess, checkers (draughts), and cards have always been popular

indoor games, and Frank Wild was a popular winner of the shove ha'penny tournament in the winter of 1902, during BAE 1901-04. As far as outdoor activities go, skiing has always been a natural, as have sledging, tobogganing, and skijoring. Rugby, soccer (football), volleyball, softball, baseball, cricket, and basketball have all been played outside. Track and field (athletics) has often been represented (*see* **Scott's Hut Race**). The Pole Bowl Football Game (i.e., American football) on New Year's Day was begun at the South Pole in 1974-75. Jogging has developed as a popular pastime, and the Annual South Pole Golf Tournament was first held in 1979. It has one hole — 237 yards long. An unusual recreation was Charcot's picnic (*see* **Picnics**), and in the winter of 1909, Charcot founded the Antarctic Sporting Club, on Petermann Island, where ski and sledge races were held. While trapped on the ice in 1915, the crew of the *Endurance* created the Antarctic Derby (q.v.). These days, there are other activities available in Antarctica — indoor and outdoor — which would bedazzle Scott (but not Amundsen).

Costa Recta. 62°56' S, 60°31' W. Part of the coast of Deception Island, in the South Shetlands, named by the Spanish for its rectilinear shape.

Rectin, Pierre-Auguste. b. Jan. 4, 1812, Le Gua, France. Ordinary seaman on the *Astrolabe* during FrAE 1837-40. He left the expedition at Valparaíso, on May 29, 1838.

Rector Ridge. 77°54' S, 160°33' E. A bold rock ridge, at an elevation of 2105 m above sea level, at the head of Beacon Valley, between Friedmann Valley and Mullins Valley, in the Quartermain Mountains of Victoria Land. Named by US-ACAN in 1992, for Cdr. (later Capt.) Jack Brown Rector, Jr. (b. April 8, 1946), USN, commanding officer of VXE-6 between May 1987 and May 1988.

Recum *see* **von Recum**

Île Red *see* **Red Island**

Isla Red *see* **Red Island**

Red Bay. 68°18' S, 67°11' W. A small, open bay, close S of the W extremity of Red Rock Ridge, at Marguerite Bay, on the Fallières Coast, along the W coast of Graham Land. First surveyed in 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map of that expedition. Resurveyed in 1948-49 by Fids from Base E, who named it in association with the ridge, and also for the color of the rocks above the shore. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. The Argentines call it Bahía Roja.

Red Buttress Peak. 76°49' S, 162°21' E. A rock peak, rising to 1060 m, on the SW side of the lower Benson Glacier, opposite Tiger Island, and surmounting the bold rock mass between the lower Benson and the lower part of Hunt Glacier, in Victoria Land. Its E face is an immense cliff of red granite descending to glacier level, hence the name given by the NZ Northern Survey Party of BCTAE, who established a survey station on its summit on Oct. 22, 1957. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Red Crag. 62°59' S, 60°32' W. A red lava crag, E of High Window, between Cathedral Crags and South East Point, E of Whalers Bay, Deception Island, in the South Shetlands. Mapped as early as 1961, it was named by the Poles on Sept. 1, 1999.

Red Dike Bluff. 78°48' S, 162°19' E. Also spelled Red Dyke Bluff. A prominent bluff, 450 m high, immediately S of Trepidation Glacier, on the E side of Skelton Glacier, E of Ant Hill, it is distinguished by a dike made up of igneous rock against a black background of the intruded sediments. Discovered in Feb. 1957 by the NZ party of BCTAE, and named descriptively by them. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Red Dyke Bluff *see* **Red Dike Bluff**

Red Hill. 62°14' S, 58°30' W. Rising to about 100 m, between Polar Club Glacier and Windy Glacier, on King George Island, at the Bransfield Strait, in the South Shetlands. Named by the Poles in 1980, for the red sandstone intercalations in basaltic succession.

Red Island. 63°44' S, 57°52' W. A circular, flat-topped island, 1.5 km across, and rising to 494 m (The Monument) above sea level, it has reddish cliffs of volcanic rock, and lies 5.5 km NW of Cape Lachman, between that cape and Church Point, James Ross Island, in the Prince Gustav Channel. Discovered and named descriptively as Rödön, by SwedAE 1901-04, and mapped by them in Oct. 1903. It appears on translated maps of the expedition as Rote Insel (1904) and Red Island (1905). It appears as Isla Red on a Chilean chart of 1908, as Île Red on one of Charcot's charts of 1912 (reflecting his FrAE 1908-10), as Red Island on a British chart of 1921, as Red Øy on a Norwegian chart of 1928, and as Red Islet on a British chart of 1930. On a British chart of 1938, it appears as Red Island, but plotted in 63°49' S, 57°45' W. It was re-surveyed by Fids from Base D between 1945 and 1947. It appears on a Chilean chart of 1947, translated as Isla Roja, and it was that name that was accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. US-ACAN accepted the name Red Island in 1952, and UK-APC followed suit on Sept. 8, 1953. The coordinates were corrected by the time of a 1954 British chart and the 1955 British gazetteer. It was re-surveyed by Fids from Base D between 1959 and 1960.

Red Islet *see* **Red Island**

Red Øy *see* **Red Island**

Red Raider Rampart. 85°09' S, 173°12' W. A rugged ice and rock wall just E of the junction of Gatlin Glacier and McGregor Glacier, in the Queen Maud Mountains. Named by the Texas Tech Shackleton Glacier Expedition of 1964-65, for the student body of Texas Tech, whose athletic representatives are known as the Red Raiders. US-ACAN accepted the name in 1966.

Red Ridge. 77°06' S, 162°08' E. Just W of Robson Glacier, in the Gonville and Caius Range, in Victoria Land. Named descriptively by Frank Debenham during his plane table survey of 1912, during BAE 1910-13. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Red Rock Peak. 71°58' S, 166°05' E. An important geological locality, rising to 2000 m, about 1.5 km NNW of Thomson Peak, in the S part of the Mirabito Range of Victoria Land. Named descriptively by NZGS geologist Bradley Field, a member of an NZARP field party here in 1980-81, for the occurrence of red argillites at the peak and nearby. NZ-APC accepted the name in 1982, and US-ACAN followed suit.

Red Rock Ridge. 68°18' S, 67°06' W. A conspicuous reddish-colored promontory rising to 690 m (the British say about 750 m, and the Chileans say 380 m, or, in other places, the Chileans say 2800 feet), it forms the high land on the peninsula (the peninsula the Argentines call Península Las Heras, and the Chileans Península Gabriel) projecting from the Fallières Coast between Neny Fjord and Rymill Bay, W of Safety Col, on the W coast of Graham Land. Surveyed in 1936 by BGLE 1934-37, and named descriptively by Rymill (for its color). It appears on Rymill's expedition chart of 1938, and on a British chart of 1948. Actually, this ridge was discovered on Jan. 21, 1909, by FrAE 1908-10, and named by Charcot as Île Pavie, or Cap Pavie (*see* **Pavie Ridge**), but BGLE did not know this. It was not until Fids from Base E did a survey in 1948-49 that this feature was thus identified. By that time, however, the name Red Rock Ridge had become so popular that it stuck. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears on a Chilean chart of 1947 as Cerro Roca Roja (i.e., "red rock hill"), but there is also a reference to it that year as "Cerro Rocas Rojas (Red Rock Ridge)," and even as "Red Rock Ridge." It appears on a 1949 Argentine chart as Promontorio Red Rock, but on two 1953 Argentine charts as, respectively Roca Roja and Promontorio Roca Roja, the last mentioned name being the one accepted by the 1970 Argentine gazetteer. It appears on a 1962 Chilean chart as Morro Roca Roja (i.e., "red rock hill"), on a 1966 Chilean chart as Monte Roca Roja, and the name that was accepted by the 1974 Chilean gazetteer was Morro Roca Roja (after they had rejected the names Cabo Pavie, Isla Pavie, and Punta Roca Roja).

[1]**Red Spur**. 62°56' S, 60°35' W. A spur of red lava and agglomerate between Crimson Hill and Mount Chile, at Pendulum Cove, Deception island. Mapped by Don Hawkes in 1961, it was named descriptively by the Poles on Sept. 1, 1999.

[2]**Red Spur**. 85°57' S, 126°44' W. A narrow rock spur, 3 km long, it descends from the S part of the Wisconsin Plateau to Olentangy Glacier, 1.5 km N of Tillite Spur. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. So named by John H. Mercer, USARP geologist here in 1964-65, because the surface of a flat platform on this spur is weathered bright red. US-ACAN accepted the name in 1967.

The *Red Sun*. Japanese yacht, skippered by

Tatesuma Kidekoro, which visited the South Shetlands and the Antarctic Peninsula in 1990-91.

Redcastle Ridge. 72°26' S, 169°57' E. A castle-like ridge of red and black volcanic rocks between Arneb Glacier and the terminal face of Edisto Glacier, at the head of Edisto Inlet. Named by NZGSAE 1957-58, for its color and shape. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Redcliff Nunatak. 77°02' S, 162°03' E. Also called Redcliffs Nunakol. A red granite nunatak, rising to 630 m (the New Zealanders call it a ridge, and say it rises to about 550 m), 6 km E of Mount Suess, along the S flank of Mackay Glacier, in Victoria Land. Charted on Dec. 28, 1912, by Grif Taylor's Granite Harbour Geological Party, during BAE 1910-13, and named by them for its color. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Redcliffs Nunakol *see* **Redcliff Nunatak**

Reddick Nunatak. 76°17' S, 144°01' W. In the E part of the Phillips Mountains, 13 km ENE of Mount Carbone, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41, and remapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Warren W. Reddick, Jr., USN, construction electrician at Byrd Station in 1967.

Redfearn Island. 68°37' S, 77°53' E. A small island just W of Warriner Island, in the Donskiye Islands, 1.5 km off the W coast of Breidnes Peninsula, in the Vestfold Hills. Photographed aerially by LCE 1936-37, and plotted as two even smaller islands by Norwegian cartographers working from these photos in 1946. 1957-58 ANARE air photos showed these two islands to be one, and that was how it was plotted by Australian cartographers. Named by ANCA on June 28, 1972, for Harold Thomas "Harry" Redfearn, who wintered-over as diesel mechanic at Davis Station in 1961. US-ACAN accepted the name in 1970. *See also* **Platcha Huts**.

Mount Redifer. 85°48' S, 160°52' W. Rising to 2050 m, 5 km S of Mount Ellsworth, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Howard D. Redifer (b. Jan. 12, 1922, Fla. d. Aug. 28, 1999, Denver), meteorology electronics technician with the U.S. Weather Bureau, who wintered-over at Pole Station in 1959.

Redman Cove *see* **Rodman Cove**

Redman Pond. 77°33' S, 160°50' E. A frozen freshwater pond in the feature called Labyrinth, it is the smaller of the 2 ponds W of Hoffman Ledge, in Healy Trough, in the Wright Valley, in the McMurdo Dry Valleys of Victoria Land. It is just NW of the larger Rodriguez Pond. Named by US-ACAN in 2004, for Regina Redman, of the USGS at Seattle, who was a member of a USAP field party in Labyrinth in 2003-04.

Redmond Bluff. 71°08' S, 167°03' E. An abrupt, east-facing cliff, rising to 1200 m, 4 km E of Mount Dalmeny, in the Anare Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for James R. Redmond, USARP biologist at McMurdo, 1967-68.

Bahía Redonda. 76°10' S, 26°00' W. A bay, SE of the Dawson Lambton Glacier as it debouches into the Weddell Sea, just to the W of the Brunt Ice Shelf, on the coast of Coats Land. Named by the Argentines. Also known as Redonda Bay, or even Bay Redonda.

[1]**Isla Redonda**. 61°55' S, 58°21' W. A somewhat conspicuous island, rising to an elevation of 65 m above sea level, and occupying the central part of the bay W of Pottinger Point. Its position was fixed by the Discovery Investigations in 1935, and it was later named descriptively (name means "round") by the Chileans. The Argentines uses the same name. *See also* **Davey Point**.

[2]**Isla Redonda** *see* **Owen Island**, [1]**Round Island**

Punta Redonda *see* **Pottinger Point**, **Round Point**, **Roundel Point**

Roca Redonda *see* **Davey Point**

Redonda Bay *see* **Bahía Redonda**

Cabo Redondo *see* **Redondo Point**

[1]**Islote Redondo**. 62°18' S, 59°28' W. A dark brown, completely snow free little island, which, together with Islote Largo, forms the extreme E outlier of the Heywood Islands, about 4 km NNE of Newell Point, on the N coast of Robert Island, in the South Shetlands. Named descriptively by the Chileans ("redondo" means "round").

[2]**Islote Redondo** *see* **Puget Rock**

Redondo Point. 65°12' S, 64°06' W. A small, low, rock point on the E side of Penola Strait, SE of Petermann Island, just W of Blanchard Ridge, and 2.3 km SSE of Duseberg Buttress (at the SW side of Mount Scott), on the Graham Coast, on the W coast of Graham Land. Roughly mapped in 1909 by FrAE 1908-10. Photographed aerially by FIDASE in 1956-57, and surveyed by a FIDS/RN team between 1956 and 1958. ArgAE 1956-57 named it Cabo Redondo (i.e., "round point"), and it appears as such on their 1957 chart. That is the name they call it today. On July 7, 1959, UK-APC named it Moot Point because, since 1909, it has been a moot point whether access to the plateau could be gained from this landing place. It appears as such on a British chart of 1960. It appears on a Chilean chart of 1962 as Punta Moot, and that was the name accepted by the Chilean gazetteer of 1974. US-ACAN accepted the name Redondo Point in 1965. In the intervening years, water has covered one end of the point, and the feature is now an island.

Redpath Peaks. 80°28' S, 81°18' W. A cluster of low, snow-covered peaks, 5 km SE of Mount Shattuck and the Independence Hills, at the S extremity of the Heritage Range, in the Ellsworth Mountains. Named by US-ACAN in 1966, for Bruce B. Redpath, USARP geophysicist on the first South Pole-Queen Maud Land Traverse, 1964-65.

Redshaw Point. 64°19' S, 57°22' W. An ice-free point facing Markham Bay, S of Hobbs Glacier, between that glacier and Ball Glacier, in the SE part of James Ross Island. Named by UK-APC on Dec. 11, 1995, for Susan Margaret Redshaw (b. 1954, Kettering, Northants), BAS general field assistant at James Ross Island in 1990-91, Rothera Station in 1992-93, and a member of the BAS field party in the James Ross Island area in 1994-95. US-ACAN accepted the name in 1996.

Monte Reece *see* **Mount Reece**

Mount Reece. 63°50' S, 58°32' W. A sharp, ice-free peak, rising to 1088 m, 6 km W of Pitt Point, it is the highest point of a northeast-trending ridge forming the S wall of Victory Glacier, on the SE coast of Trinity Peninsula, at the Prince Gustav Channel. Probably discovered (but certainly not named) in 1903, by SwedAE 1901-04. Surveyed and charted in Aug. 1945 by Fids from Base D, and named by them for Alan Reece. It appears on a British chart of 1949, and was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. It appears in the 1955 British gazetteer. It appears on a Chilean chart of 1951, as Monte Reece, and, on a 1953 Argentine chart, as Monte Reede (a sheer error). Monte Reece was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was further surveyed in 1959-60, by Fids from Base D.

Reece, Alan William. b. May 31, 1921, Fulham, London, son of William Reece and his wife Elsie M. Shepherd. After studying geology at Imperial College, London, he became a meteorological officer, 1942-44, during World War II, serving at the RN Air Station in the Orkneys. He was a sub lieutenant, RNVR, when he became chief meteorologist and leader at Base B, on Deception Island, in 1945, during the 2nd phase of Operation Tabarin, and thus became one of the first FIDS. From Jan. 1946 he was FIDS meteorologist and geologist at Base D, and for the winter of 1946. In Jan. 1947 he went to Base G, and then returned to the UK, via Jamaica, on the *Ariguani*, with Jimmy Andrew, arriving in Avonmouth on Aug. 4, 1947. As geologist on NBSAE 1949-52, while taking a rock sample on March 11, 1951, he was hit in the right eye by a flying chip. Dr. Ove Wilson met him 8 days later and examined the eye, but, being 3 weeks journey from Maudheim, they were not in any position to perform an operation. They arrived at Maudheim on May 30, and Wilson contacted eye specialist Sven Larsson by radio in Lund, Sweden, and was advised to remove the eye. Dr. Wilson had never even seen eye surgery performed, nevertheless he fashioned the appropriate instruments from whatever he could find; dog driver Peter Melleby built the operating table and constructed the oxygen mask from spare Weasel parts. On July 21, 1951, Alan Reece walked into the operating room, saying, "You know, I'm scared stiff inside." With photographer Stig Hallgren acting as anesthetist, glaciologist Valter Schytt passing suture and forceps, telegraphist Egil Rogstad taking blood pressure, meteorologist Gösta Liljequist taking

pulse, and geologist Fred Roots as general assistant, Dr. Wilson went to work in front of the camera, for 2 hours and 40 minutes, and successfully performed the operation. Before long Reece was back on a sledge. On Jan. 9, 1952, Wilson fitted Reece with the glass eye that had been ordered tailor-made from London and brought in on the *Norsel*. In 1953 Reece left England for Kenya. He died in the Canadian Arctic (near Resolute) in a plane crash on May 28, 1960.

Reece, Jerry Arnold "Pappy." b. July 15, 1903, Duffau, Tex. (SW of Fort Worth and NE of Waco), as Gerrie A. Reece, son of carpenter Norman Reece and his wife Minnie Arrenne Elkins. As a child Jerry moved with his family to Lubbock, and then over to the NE part of Texas, where his father tried farming for a while, finally winding up in the town of Deport. In 1930 he was in Hawaii with the U.S. Navy. He was the radio operator at West Base during USAS 1939-41. He died on June 10, 1981, in Burke, Va.

Reece Hill. 77°30' S, 169°43' E. A prominent hill of brown granodiorite, about 750 m high, between Football Mountain and Football Saddle. The first reconnaissance views of Tucker Glacier, Whitehall Glacier, and the Victory Mountains, were obtained from this hill. A food and fuel dump was left low on its E slopes, where it merges with Football Saddle. So named by NZGSAE 1957-58, because of the reece made from it.

Reece Pass. 76°32' S, 144°32' W. A pass running N-S, just E of Mount Colombo and Mount Richardson, in the E part of the Fosdick Mountains, in the Ford Ranges of Marie Byrd Land. Discovered aerially by USAS 1939-41 on flights from West Base, and visited by a biological party of the same expedition in 1940. Named by US-ACAN in 1947, for Pappy Reece.

Reece Valley. 72°41' S, 0°22' E. An ice-filled valley between (on the one hand) Roots Heights and Gavlen Ridge and (on the other) Nupskåpa Peak, in the southernmost part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Reecedalen (i.e., "Reece valley") by the Norwegians, for Alan Reece. US-ACAN accepted the name Reece Valley in 1966.

Reecedalen *see* **Reece Valley**

Mount Reed. 67°02' S, 51°38' E. On the N side of Beaver Glacier, 3 km E of Mount Sones, in the Tula Mountains of Enderby Land. Plotted by Australian cartographers from air photos taken by ANARE in 1956. Named by ANCA in 1962, for John E. Reed. US-ACAN accepted the name in 1965.

Reed, John Edward. b. 1886, Sunderland, Durham, but grew up in Bishopwearmouth, son of Elizabeth Hannah Reed. His mother (the former Elizabeth Young) had married Lawrence Reed in Sunderland in 1873, but Mr. Reed, a blacksmith's striker, had died in 1884, aged 32, after having had several children by Elizabeth, not one of whom was John Edward, of course, who was born in 1886. Elizabeth had several more children by the name Reed after Lawrence's death, but there is no evidence of her marriage to another man named Reed (which he would have had to have been). Elizabeth is listed in the 1891 Bishopwearmouth census as a widow, taking in laundry, but died in 1894. John Edward apprenticed as a blacksmith, but became a cook, and served as such on the *Discovery* during the second half of BANZARE, 1929-31. He later lived in West Coburg, Australia.

Reed, Raymond *see* **USEE 1838-42**

Reed Nunataks. 74°49' S, 161°58' E. A cluster of nunataks that form a divide between the upper portions of Reeves Glacier and Larsen Glacier, 10 km W of Hansen Nunatak, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for David E. Reed, USGS topographic engineer at McMurdo, 1964-65.

Reed Ridge. 85°02' S, 91°40' W. A flat-topped, snow-covered ridge extending NW for 5 km from the W part of the Ford Massif, in the Thiel Mountains. It forms the W wall of Compton Valley. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1961. Named by US-ACAN in 1962, for Dale R. Reed (b. 1935, Colo.), ionosphere physicist at Ellsworth Station in 1958 and Byrd Station in 1960. It was during the summer of 1957-58 that he visited Halley Bay Station from the *Wyandot*.

Monte Reede *see* **Mount Reece**

Reedy, James Robert "Sunshine Jim." b. June 16, 1910, Cleveland, son of wholesale machinery and tool salesman James A. Reedy and his wife Mary A. McGinty. A football star at West Tech High School in Cleveland, and also at Annapolis, he was the first commanding officer of Patrol Bomber Squadron 110 during World War II. He was promoted to admiral in 1961, and on Oct. 2, 1962 his brainchild was finally realized, a new passage from Cape Town to McMurdo. He led the historic flight. On Nov. 26, 1962, at a ceremony at the South Pole, Rear Admiral Reedy, USN, took over from Admiral Tyree as commander, U.S. Naval Support Force, Antarctica. He held the job until April 1965, then became chief of the 7th Fleet's aircraft carrier strike force in the Pacific, but in 1966 was transferred to Washington. He died on Jan. 8, 1999, in San Antonio, Tex.

Reedy Glacier. 85°30' S, 134°00' W. A major glacier, over 150 km long, and between 10 and 20 km wide, descending from the Polar Plateau to the Ross Ice Shelf between the Michigan Plateau and the Wisconsin Range. It marks the limits of the Queen Maud Mountains on the W, and the Horlick Mountains on the E. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1965, for Adm. James Reedy.

[1]**Mount Rees**. 76°40' S, 118°10' W. About 11 km NW of Mount Steere, at the N end of the Crary Mountains of Marie Byrd Land. Lichens are to be found here. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Manfred H. Rees, aurora scientist at Byrd Station, 1965-66.

[2]**Mount Rees**. 78°29' S, 162°29' E. Rising to 2314 m above the cliffs at the W side of Koettlitz Névé, 6 km SSW of Mount Talmadge, and due N of Mount Cocks, in the S part of the Royal Society Range, in Victoria Land. Named by US-ACAN in 1994, for Margaret N. Rees, geologist at the University of Nevada, who conducted field studies in the Transantarctic Mountains, including the Skelton Glacier area of Victoria Land during several seasons between 1984 and 1996.

Reeve Hill. 66°17' S, 110°31' E. A triple pinnacle rock outcrop, about 400 m by 200 m in area, running E-W along the coastline, immediately S of Budnick Hill, on the S side of Newcomb Bay, in the Windmill Islands. It is the site of the memorial cross for Geoffrey B. "Geoff" Reeve, the first member of Casey Station to die while serving in Antarctica (Aug. 6, 1979—*see* that date under **Deaths in Antarctica**).

Reeve Island. 64°55' S, 63°58' W. An island, 2.5 km long, between Knight Island and Friar Island, in the western Wauwermans Islands of the Wilhelm Archipelago. Apparently it appears on an Argentine chart of 1950 (but, presumably, unnamed). Charted by an RN Hydrographic Survey unit on the *Protector*, in 1956-57. Named by UK-APC on July 7, 1959, for the *Canterbury Tales* character. US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

Monte Reeves *see* [1]**Mount Reeves**

[1]**Mount Reeves**. 67°07' S, 67°58' W. Rising to 1920 m, just NE of Mount Bouvier, and W of Tickle Channel, on the E side of Adelaide Island. Discovered, surveyed, and roughly charted in Jan. 1909, by FrAE 1908-10. It appears in error on the expedition maps as Massif Bouvier (*see* **Mount Bouvier**). On a 1947 Chilean chart this feature was wrongly identified with Mount Bouvier (q.v. for more details), and named Monte Bruyne. Re-surveyed in Sept. 1948 by Fids from Base E, and named by them for Edward Reeves (*see* **Reeves Bluffs**). UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on British charts of 1957 and 1961. In 1960, it appears in error twice on U.S. Hydrographic Office charts, once as Mount Bouvier, and once as Mount Vélain. The Chileans sorted out their problem with Monte Bruyne, shifting the name to what the British and Americans call Mount Reeves, and it appears as such on a Chilean chart of 1963. The Chilean gazetteer of 1974, after rejecting the name Monte Bouvier (as belonging to the other feature), accepted Monte Bruyne. The Argentines call it Monte Reeves. Don Pedro de Bruyne was born Peter Adrian de Bruyne, in Holland, in 1866, son of Dr. Job Kosten de Bruyne and his wife Judith E. Hober. He emigrated to Chile, and lived in Punta Arenas, where, in 1895, he married Englishwoman Maud Mattock. One of their sons became a physicist (Norman), and another (Gor-

don) became a general in the Army. Don Pedro lived for years in Littlehampton, Sussex, and died in Worthing in 1951. Maud died there in 1956. For (a little) more on Don Pedro, *see* **Sociedad Ballenera de Magallanes**.

[2]**Mount Reeves** *see* **Reeves Bluffs**

Reeves, Joseph *see* **USEE 1838-42**

Reeves Bluffs. 79°36' S, 158°40' E. A line of east-facing rock bluffs, 13 km long, 24 km W of Cape Murray, in the Cook Mountains (the Australians say the Britannia Range). Discovered by Scott during BNAE 1901-04. Scott named a summit along this bluff as Mount Reeves, for Edward Ayearst Reeves (1862-1945), map curator and instructor in survey at the Royal Geographical Society from 1900 to 1933. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1963. In 1965, US-ACAN, on finding no prominent mountain where Scott had claimed, and because the name Mount Reeves was in use elsewhere in Antarctica, extended the name to the whole line of bluffs. ANCA accepted this on Aug. 10, 1966.

Reeves Glacier. 74°45' S, 162°15' E. A broad glacier, about 40 km long and 16 km wide, originating in, and descending from, the interior upland between the Eisenhower Range and Mount Larsen, into the confluent ice of the Nansen Ice Sheet, on the coast of Victoria Land. Discovered in Dec. 1908, by the Northern Party under Edgeworth David, during BAE 1907-09, and named by Shackleton for William Pember Reeves (1857-1932), NZ minister of labour, 1891-96, agent general for NZ, in London, 1896-1905, and high commissioner, 1905-08. From 1908 to 1919 he was director of the London School of Economics. Three times he refused a knighthood. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Reeves Névé. 74°25' S, 160°00' E. An extensive névé, westward of the Eisenhower Range, in Victoria Land. Reeves Glacier, which drains southeastward to the coast, flows out of this névé. Named by NZ-APC, in association with the glacier. US-ACAN accepted the name in 1967, and ANCA followed suit on Jan. 19, 1989.

Reeves Peninsula. 77°24' S, 152°20' W. A snow-covered peninsula along the N side of Edward VII Peninsula, it extends between the lower ends of Dalton Glacier and Gerry Glacier, into the S part of Sulzberger Bay. This area was explored from the air during ByrdAE 1928-30, and rudely mapped by them. Named later by Byrd for John M. Reeves (1887-1976), of Reeves Brothers, Inc., of NY, who contributed cold-weather clothing to ByrdAE 1928-30 and ByrdAE 1933-35. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. US-ACAN accepted the name in 1970.

Reeves Plateau. 79°35' S, 158°35' E. An inclined, ice-covered plateau, 13 km long and 6 km wide, and rising to 1700 m in the E near Reeves Bluffs (which lie to the E), N of Bowling Green Plateau, in the Cook Mountains, in the Transantarctic Mountains. The plateau descends to a height of 1400 m in the west. Named by US-ACAN in 2000, in association with Reeves Bluffs. NZ-APC accepted the name on Feb. 20, 2001.

Reference Island *see* **Reference Islands**

Reference Islands. 68°12' S, 67°10' W. A group of 4 rocky islands and attendant rocks, rising to an elevation of about 13 m above sea level, 3 km WNE of the W tip of Neny Island, and 2.5 km SE of Millerand Island (i.e., it lies between those two islands), in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. First roughly charted in 1936 by BGLE 1934-37. Surveyed by Fids from Base E in 1947, who named the largest of these islets as Reference Islet, because it served as a convenient reference point for survey work and for noting the progress of summer break-up of the ice. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. This feature was redefined by UK-APC on July 7, 1959, as Reference Island, and US-ACAN went along with the new naming. USN air photos taken between 1966 and 1969 confirmed the presence of more than one island, and, accordingly, on Nov. 3, 1971, UK-APC changed the name yet again, to Reference Islands. US-ACAN accepted that name in 1972. It appears as such in the 1974 British gazetteer, and on a British chart of 1982. The Argentines call this group Islotes Reference.

Reference Islet *see* **Reference Islands**

Reference Peak. 67°15' S, 50°29' E. A rougly conical peak, about 5 km across, and rising to 1030 m (the Australians say 1210 m), with a steep face to the W near its crest, 5 km SW of Amundsen Bay, between Mount Weller and Mount Hollingsworth. When seen from the N it is a sharp peak with smooth, clear-cut sides. Discovered in Oct. 1956 by an ANARE party led by Peter Crohn. Named by ANCA on July 22, 1957, for its use as a reference point for magnetic observations at Observation Island. US-ACAN accepted the name in 1961.

Cerro Referencia *see* **Cerro Vaccaro**

Islotes Referencia *see* **Reference Islands**

Referring Peak. 76°56' S, 161°51' E. A conspicuous black peak, rising to over 1200 m, on the N side of Mackay Glacier, 2.5 km W of the mouth of Cleveland Glacier, in Victoria Land. Charted by Grif Taylor of BAE 1910-13, and named by him for its easy identification as a peak, and for its use as a landmark, as well as for the fact that it was used as a zero point for theodolite angles during surveying. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Refsdahlbrekka. 74°50' S, 11°32' W. A slope at the S side of Bonnevie-Svendsenbreen, in the southernmost part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Johan Sigurd Refsdahl (1904-1973), revenue secretary from Bergen, and Resistance leader during World War II.

Isla Refuge *see* **Refuge Islands**

Refuge Huts *see* **Refugios**

Refuge Island *see* **Refuge Islands**

Refuge Islands. 68°21' S, 67°10' W. A small group of rocky islands, snow-free in summer, 1.5 km from the ice cliffs at the SW side of Red Rock Ridge, and which form the NW entrance point of Rymill Bay, off the Fallières Coast, on the W coast of Graham Land. Discovered and surveyed in 1936, by BGLE 1934-37, and so named by Rymill for their use as a depot for sledge journeys south to George VI Sound from the expedition's southern base in the Debenham Islands. There are 1943 references to the largest of these islands, as Isla Refuge, and, on a Chilean chart of 1947, the largest of the group is called Isla Refugio, and the group itself is called Islas Refugio. The name Refuge Islets appears on a 1948 chart prepared by Fids from Base E, who resurveyed them in 1948-49, and who deemed the name Refuge Islets to be more proper than Refuge Islands. That name, Refuge Islets, was the one accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. There is a 1953 FIDS reference to the largest of the islands as Refuge Island. On July 7, 1959, UK-APC redefined them yet again, as Refuge Islands (which is what Rymill had called them in the first place), and US-ACAN accepted this situation in 1963. The group appears on a 1953 Argentine chart as Islotes Refugio, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. In 1953, the Argentines established El Plumerillo Refugio on the largest of these islands.

Refuge Islets *see* **Refuge Islands**

Isla(s) Refugio *see* **Refuge Islands**

Islotes Refugio *see* **Refuge Islands**

Refugios. This is the Spanish word for "refuge huts," and this is a list of Antarctic refugios (south of 60°S), arranged chronologically according to their building date. They all have their own, individual, entries (all are Argentine, unless otherwise stated): **1947-48**: Caleta Péndulo, Ensenada Martel. **1948-49**: Thorne. **1949**: Neko (later called Capitán Fliess). **1950**: Coppermine Cove (Chile). **1951-52**: Petrel. **1952**: Base V (UK hut). **1952-53**: Bahía Dorián, Lasala (i). **1953**: Yankee Bay (Chile), El Plumerillo. **1953-54**: Lasala (ii), Santa Teresita, Martín Güemes, Bryde, Armonía (later called Gurruchaga), Península Ardley (later called Ballvé), Rada Lote, Betbeder, Suecia, Primavera (later called Capitán Cobbett, and later still Primavera Station). **1954-55**: Puerto Mikkelsen (later called Capitán Caillet Bois), Ipólito Bouchard (later called Groussac), Teniente Esquivel (actually in the South Sandwich Islands). **1955**: Cristo Redentor, Libertador General San Martín, Antonio Moro. **1955-56**: Ortiz, Estivariz. **1956**: Cabo Gutiérrez Varas (Chile). **1956-57**: Yapeyú, Chacabuco, Maipú, San Roque, Guillochón. **1957**: 17 de Agosto, Granaderos, Cape Reclus (UK), Orford Cliff (UK). **1957-58**: Paso de los Andes, Salta. **1958**: Islas Malvinas (i), Nogal de Saldán. **1958-59**: Virgen de las Nieves. **1959**: San Antonio, Guaraní, Martín Güemes 2. **1959-60**: Foca Hut, San Carlos, San Juan. **1960-61**: Ameghino, Corrientes. **1961**: Platcha (Australia), Capitán Campbell. **1962**: Yelcho (Chile), Piloto Pardo (Chile), Iceberg Bay (UK), Wilkes Hilton (Australia). **1963**: San Nicolás, Guesalaga (Chile).

1963-64: Mayor Arcondo, Virgen de Loreto, Santa Bárbara, Observador Walter Soto, Cabo Lorenzo Vega. **1964**: Sargento Cabral. **1965**: Fuerza Aerea 1. **1966**: TA-33, Perdenera. **1967**: Abrazo de Maipú. **1967-68**: Independenzia Argentina, Infantería Argentina. **1971**: Islas Malvinas (ii), Macey Island (Australia). **1972**: Jack's Donga (Australia), Brookes (Australia). **1973**: Spring (Chile). **1975-76**: Zapiola, Cisterna. **1976**: Kurzmann, VII Brigada Aérea. **1978**: Cape Denison (Australia), Mount Henderson (Australia). **1979**: Nuestra Señora de Luján. **1980-81**: Sargento Mariani. **1982**: Platcha II (Australia), Fang Peak. **1983**: Bandits (Australia). **1984**: Rasmussen (UK), Ledingham (UK). **1985**: Astrónomo Cruls (Brazil), Engenheiro Wiltgen (Brazil), Padre Balduino Rambo (Brazil). **1988**: Trajer Ridge (Australia), Scullin Monolith (Australia), Colbeck Archipelago (Australia), República del Ecuador (Ecuador), Robinson Ridge (Australia). **1990**: Hop (Australia), Paso del Medio. **1995**: Ona. **1999**: Filla Island (Australia). **2004**: Ardley Refugio (Chile). **2004-05**: Ace Lake. **2007-08**: El Manco.

The *Regain*. French yacht, registered in New Caledonia, and skippered by Vincent Malquit, which visited the Antarctic Peninsula, in 1998-99. Mr. Malquit wrote Regain—*un tour du monde et l'Antarctique*.

The Regal Princess. An 69,845-ton, 245.1-meter tourist ship built in 1990 at the Fincantieri shipyard in Monfalcone, Italy, for Sitmar Cruises, but, as it turned out, she was acquired in 1992 by Princess Cruises, and registered in Liberia. Sister ship of the *Crown Princess*, she was refurbished in 2000, and was in Antarctic waters in 2005-06. In 2007 she became part of the fleet owned by P & O Cruises Australia, and her name was changed to *Pacific Dawn*.

Regent Reef. 67°52' S, 68°38' W. An area of submerged and drying rocks forming the NE limit of the Dion Islands, off the S end of Adelaide Island. Charted by an RN Hydrographic Survey unit in 1963. Named by UK-APC on Feb. 12, 1964, in association with other islands nearby which have regality as a theme. US-ACAN accepted the name later in 1964.

Reger, Josef. b. 1881. Scientist working for the Aeronautical Museum, in Berlin, when he became meteorologist and aerologist on the *Meteor*, during the German Atlantic Expedition, 1925-27. He and Erich Kuhlbrodt would send up the ballons every day, and the kites twice a week. He died in 1948.

Regester, Robin Phillip. b. Feb. 5, 1945. Senior diesel mechanic who wintered-over at Mawson Station in 1972, at Casey Station in 1976, at Davis Station in 1979, and at Macquarie Island Station in 1985.

Mount Regina. 71°27' S, 165°45' E. Rising to 2080 m, 16 km WNW of Mount LeResche, in the S part of the Everett Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Thomas Joseph Regina (b. 1942), USN, photographer's mate on Hercules aircraft in the 1968-69 season. He had been in Antarctica before, at McMurdo, for the winter of 1963.

The *Regina Prima*. Italian liner, chartered by Argentina as a tourist vessel, which made 6 visits to the South Shetlands and the Antarctic Peninsula, between Dec. 27, 1974 and March 5, 1975. From Dec. 16, 1975 to March 6, 1976, she did another 6 cruises, same place. George Nicolaou was skipper both seasons.

Sommets Régnard *see* **Régnard Peaks**

Régnard Peaks. 65°11' S, 63°53' W. A group of rounded, snow-covered peaks probably rising to over 1220 m (the British say about 1100 m), between Hotine Glacier and Wiggins Glacier, 5 km N of Mount Peary, and E of Leay Glacier, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly mapped in 1909, by FrAE 1908-10, and named by Charcot first as The Breasts (a descriptive name—*see also* **Una Peaks**, for a similar story), and then as Sommets Régnard, for Paul Regnard (1850-1927; he did not have an accent mark), physician and photographer who worked with Charcot's father. The feature appears on a 1943 U.S. Hydrographic Office chart as Regnard Peaks (no accent mark). US-ACAN accepted the name Régnard Peaks (with the accent) in 1956, and UK-APC followed suit on July 7, 1959.

Cabo Regreso *see* **Return Point**

Cap Regreso *see* **Return Point**

Isla Regreso *see* **Turnabout Island**

Punta Regreso. 67°48' S, 67°15' W. The E point of Sally Cove, on the NW shore of Horseshoe Island, Square Bay, along the W coast of Graham Land. Named by the Argentines. *See also* **Punta Egreso** (going out and coming back in).

Regula, Herbert. b. 1910, Germany. He was a meteorologist with the German Marine Observatory at Hamburg. He was on the *Friesenland* in 1937, in the Atlantic, and was chief meteorologist on GermAE 1938-39. In 1972 he was head of the Central Forecasting Office of the German Weather Service. He died in 1980.

Regula Kette *see* **Regula Range**

Regula-Kette *see* **Regula Range**

Regula Range. 72°05' S, 3°20' W. A range of summits, including Flårjuven Bluff, Aurhø Peak, Hornet Peak, and Snøhetta Dome, forming the SW portion of Ahlmann Ridge, and also the NE part of the Borg Massif, from Jøkulskarvet Mountain in the SW to Ytstenut Peak in the NE, in Maudheimvidda, in the W part of Queen Maud Land. Somewhere in this very area, GermAE 1938-39 flew over and photographed a vast amount of terrain, but unfortunately there were no ground control checks for this fantastic feat to be of much worth. The Germans named several features here, including one called Regula-Kette (i.e., "Regula range"), for Herbert Regula. This may or may not be the same feature as the subject of this entry, but modern geographers have arbitrarily assumed that it is close enough. The Norwegians call it Regulakjede.

Regulakette *see* **Regula Range**

Regulakjede *see* **Regula Range**

Reichart, Louis T. b. Nov. 11, 1889, Bavaria. He had been a cook 1st class in the U.S. Navy for three years, and was living in Chicago when he became chief steward on the *City of New York* during ByrdAE 1928-30. Midway through the expedition, he left for NZ on that ship, on Feb. 22, 1929, and then returned for the second part of the expedition. He finally arrived back in NYC on the *Eleanor Bolling* in 1930. He continued to ply the merchant marine waters as a chief steward on various ships, until the 1950s.

Cabo Reichelderfer *see* **Cape Reichelderfer**

Cape Reichelderfer. 69°22' S, 62°43' W. A rounded, mainly ice-covered headland, 6 km E of DeBusk Scarp, at the W side of Stefansson Strait, between Cape Hinks and Cape Rymill, E of Bingham Glacier, on the Wilkins Coast, on the E coast of Palmer Land. Discovered aerially by Wilkins on Dec. 20, 1928, it appears on his 1929 map. Photographed aerially in 1940 by USAS 1939-41, who also surveyed it from the ground, and named by them as Cape Rymill, for John Rymill. This was one of two capes that USAS named Cape Rymill that year, the other being just to the SE (*see* **Cape Rymill**). This one (as Cape Rymill) appears on U.S. Hydrographic Office charts of 1943 and 1947. This confusion was cleared up in 1948 after a joint sledging expedition of personnel from RARE 1947-48 and Fids from Base E surveyed it that season (1947-48). Finn Ronne, of RARE, renamed this one for Francis Wilton Reichelderfer (1895-1983), chief of the U.S. Weather Bureau, 1938-63, who assisted RARE. It appears on Ronne's map of 1949. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and on the 1979 USGS sketch map of the N part of Palmer Land. The Argentines call it Cabo Reichelderfer.

Reichelnunatak. 73°07' S, 161°15' E. A nunatak at the S end of the Sequence Hills, in Victoria Land. Named by the Germans.

Reicheltnevet. 74°43' S, 11°47' W. A partly snow-covered crag at the N side of Bieringmulen, in Skjønsbergskarvet, in Sivorgfjella, in the Heimefront Rnage of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for the heroic Reichelt family from Kragerø, who all worked in the Norwegian Resistance in one way or another during World War II. Borti Reichelt (b. 1916), was a businessman, arrested in 1941, and executed at Trandum, in 1944. His brother Erik Reichelt (b. 1917), was a sailor who organized military intelligence and transported refugees, escaped to Britain, returned as a commando, and was caught and killed at Tromsø, in 1943. Their sister, Mathilde "Bittema" Reichelt (b. 1919) was a nurse, worked with the free press, and was caught in 1942, and sent to the camps. She survived the war, became Mrs Knutsen, and wrote a book about her experiences. Their father, Gerhard Andersen Reichelt, was a sea captain (b. 1885), who drowned when his ship was torpedoed in the Atlantic in 1941.

Reichle Mesa. 68°10' S, 65°03' W. An ice-covered tableland, about 5 km in extent, and ris-

ing to about 1160 m, E of Stubbs Pass, between that pass and the Getman Ice Piedmont, on Joerg Peninsula, on the Bowman Coast, on the E side of the Antarctic Peninsula. Photographed aerially by USAS 1939–41, by RARE 1947–48, and by USN in 1966, and surveyed from the ground by Fids from Base E between 1946 and 1948. Named by US-ACAN in 1978, for Richard A. Reichle, USARP biologist, a specialist in seals, who was in Antarctica for 6 summer seasons between 1970 and 1977, the last two seasons being on the *Hero* in the South Shetlands and the Gerlache Strait. It appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on May 21, 1979.

Glaciar Reid *see* **[2]Reid Glacier**

Islote(s) Reid *see* **Reid Island**

Lake Reid. 69°23' S, 76°23' E. An oval lake about 0.4 km N of Law-Racovitza Station, draining S into Lake Scandrett, in the Larsemann Hills. The water is heavily mineralized and unpleasant to taste. Named by ANCA on Sept. 29, 1988. The Chinese call it Daming Hu.

Mount Reid. 83°03' S, 166°01' E. A prominent, mainly ice-free mountain, rising to 3315 m (the New Zealanders say 3096 m), just E of the head of Cleaves Glacier, and about 17.5 km SE of Mount Longstaff, in the Holland Range (the New Zealanders say the Queen Alexandra Range), on the W side of the Ross Ice Shelf. Discovered by BAE 1907–09, and named by Shackleton for Alfred Reid, of 9 Regent Street, London, manager of the expedition. US-ACAN accepted the name in 1949, and NZ-APC followed suit. On Nov. 6, 1907, Mr. Reid arrived in Wellington from Sydney, aboard the *Maheno*, with 15 Manchurian ponies for the expedition. He also worked for Mawson, in a similar capacity, during AAE 1911–14, and tried to screw Mawson out of money.

Reid, James W.E. b. ca. 1813, Georgia, son of South Carolinian judge Robert Raymond Reid (congressman from Georgia, 1819–23, and later, governor of Florida, 1839–41) and his first wife, Anna Margaretta McLaws. After Annapolis, he became a passed midshipman on USEE 1838–42. He started off on the *Relief*, and when Lt. Johnson transferred to the *Sea Gull*, Reid became commander of the *Relief*. He later transferred back to the *Sea Gull*, and was on that vessel when Johnson took her to Deception Island in March 1839. Reid was commander of the *Sea Gull* when she disappeared off the Chile coast on April 29, 1839.

Reid, John Douglas "Jack." b. Oct. 7, 1926, Andover, Hants, but raised in Sussex, son of John C. Reid and his wife Doris M. Timms. At the age of 15 he became an unindentured pupil at a local civil engineering company, at 10 shillings a week. In 1945 he was conscripted into the Royal Navy, went into meteorology, and after the war was sent to Hong Kong to help re-establish the Royal Meteorological Observatory. He was demobbed in 1947, and joined FIDS, as a meteorologist who wintered-over at Base G in 1948. He was with Eric Platt (q.v.) when Platt had his heart attack out on the pass. Reid returned to Antarctica, to winter-over at Base F in 1949. He was a tea planter in northeast India for a few years in the 1950s, and then farmed for a dozen years in the south of England, and even spent a year at the School of Agriculture in East Sussex. In March 1954 he married Marjorie Pipe. In the late 1950s he went into the corn trade, and became a way leave officer with the Central Electricity Generating Board, working with power lines. In July 1990 he retired to Saffron Walden, Essex.

Reid, Joseph. Ordinary seaman on the *William Scoresby*, 1931–32, and on the *Discovery II*, 1932–33. From 1933 to 1937 he was able seaman on the *Discovery II*.

Reid Bluff. 81°40' S, 158°18' E. Rising to 2040 m, at the head of Donnally Glacier, in the Churchill Mountains. Named by US-ACAN in 2003, for Brian Edward Reid, a NZ biologist on the geomagnetic project at Hallett Station in the winter of 1961. NZ-APC accepted the name on Feb. 27, 2003.

[1]Reid Glacier. 66°30' S, 98°40' E. A steep glacier flowing between Melba Peninsula and Davis Peninsula to the Shackleton Ice Shelf, on the coast of Queen Mary Land. Discovered in Nov. 1912 by the Western Base Party of AAE 1911–14, and named by Mawson for Scottish-born Sir George Houston Reid (1845–1918), Australia's 4th prime minister (1904–05) and first high commissioner in London (1910–16). US-ACAN accepted the name in 1947, and ANCA followed suit.

[2]Reid Glacier. 67°29' S, 67°16' W. A glacier, 13 km long and 2.5 km wide, flowing S to enter Bigourdan Fjord opposite The Narrows, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. First roughly charted by BGLE 1934–37. The lower reaches of the glacier were surveyed in 1948–49 by Fids from Base E, and the whole glacier was named by them for Harry Fielding Reid (1859–1944), professor of geology at Johns Hopkins University in Baltimore, 1901–30. He was noted for his studies of glacier flow and stratification in Alaska and the Alps. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. Photographed aerially by FIDASE in 1957. It appears on a British chart of 1961. The Argentines call it Glaciar Reid.

Reid Island. 60°41' S, 45°30' W. At the E side of the entrance to Iceberg Bay, SW of Olivine Point, along the S coast of Coronation Island, in the South Orkneys. In 1912–13 Petter Sørlle charted this island togerher with 2 rocks E of Olivine Point, and named the group Reidholmen (i.e., "Reid islets"). Reidunn (b. Sept. 28, 1909, in Tønsberg; known as Reid) was Petter Sørlle's eldest daughter (*see also* **Gerd Island**, **Mariholm**, and **Signy Island**). She married Olaf Holtedahl (q.v.). It appears as such on Sørlle's 1912 chart, and also on his and Hans Borge's chart of 1913. However, on Sørlle's 1930 chart the main island appears as Reidholm. The Discovery Investigations re-surveyed the group in 1933, and on their 1934 chart the main island appears as Reid Island, and the group appears as Reid Islands. On British charts of 1942 and 1948, the group appears as the Reid Islets, but on an Argentine chart of 1947 only the main island appears, as Isla Reid. Surveyed by Fids from Signy Island Station in 1948–49. The group appears on an Argentine chart of 1952, as Islotes Reid. US-ACAN accepted the name Reid Islet for the main island only, in 1953, and UK-APC followed suit on Sept. 20, 1955. Further surveyed by Fids from Signy between 1956 and 1958. On July 7, 1959, UK-APC redefined the main island as Reid Island, and US-ACAN followed suit in 1963. The main island appears on a 1964 Argentine chart of 1964 as Islote Reid, but the name accepted by the 1970 Argentine gazetteer was Islotes Reid, for the group. However, today, the Argentines generally refer to the main island as Islote Reid.

Reid Islet(s) *see* **Reid Island**

Reid Lake *see* **Lake Reid**

Reid Ridge. 76°57' S, 160°23' E. A narrow rock ridge rising to 1700 m at the W side of the mouth of Cambridge Glacier, in Victoria Land. Named by US-ACAN in 1965, for John R. Reid, Jr., glaciologist at Little America V in 1959–60. NZ-APC accepted the name.

Reid Spur. 84°46' S, 178°30' E. 8 km long, it flows N along the E side of Ramsey Glacier from an unnamed prominence 5 km NW of Mount Bellows, in the Queen Maud Mountains. Named by US-ACAN in 1966, for CWO James S. Reid, member of the U.S. Army Aviation Detachment which explored this area with the Texas Tech Shackleton Glacier Expedition of 1964–65.

Reidholm(en) *see* **Reid Island**

Reilly, James. b. 1876, Dundee, son of Irish jute factory worker Henry Reilly and his English-born wife, Elizabeth Proud. Able seaman on the *Terra Nova* during the 1903–04 relief of BNAE 1901–04.

Reilly, Juan José de Soiza *see under* **De Soiza Reilly**

Reilly Ridge. 71°32' S, 163°18' E. A prominent rock ridge, about 11 km long, on the NE side of the Lanterman Range of the Bowers Mountains, it descends from the heights just E of Mount Bernstein, and forms a part of the SW wall of Sledgers Glacier, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Cdr. Joseph L. Reilly, USN, officer-in-charge of McMurdo, 1964.

Reilly Rocks. 75°09' S, 114°59' W. A cluster of rocks 8 km NNW of Detling Peak, in the NW part of the Kohler Range, in Marie Byrd Land. Named by US-ACAN in 1976, for Gerald E. Reilly, Jr., U.S. Coast Guard machinery technician (*see* **Deaths**, 1976).

Mount Reimer. 77°48' S, 86°12' W. Rising to 2430 m, in the N portion of the Sentinel Range, on the S side of Newcomer Glacier, 8 km SW of Mount Warren, in the Ellsworth Mountains. Named by US-ACAN in 1961, for John D. Reimer, aerial photographer with VX-6 on flights in this area on Dec. 14–15, 1959, during OpDF IV.

Reimers, August. b. Nov. 18, 1876, Tönning,

Schleswig. 1st carpenter on the *Gauss* during GermAE 1901-03.

Monte Reina Sofía *see* **Queen Sofia Mount**

Reinbolt Hills. 70°29' S, 72°30' E. A group of rocky hills, low to moderate in height, 8 km long, between 14 and 17 km E of Gillock Island, on the E margin of the Amery Ice Shelf. Delineated by U.S. cartographer John H. Roscoe in 1952, from air photos taken during OpHJ 1946-47, and named by him for Lt. Fred L. Reinbolt (b. Oct. 5, 1921, Grand Orchards, Wash.), USN, co-pilot of the plane from which these photos were taken. Lt. Reinbolt made 12 mapping flights and another flight to scout the pack-ice. He retired from the Navy in 1961, after 21 years, went into construction, and finally retired in 1982, to New Mexico. US-ACAN accepted the name in 1956, and ANCA followed suit.

Monts Reine Fabiola *see* **Queen Fabiola Mountains**

Mount Reinhardt. 84°12' S, 177°12' E. Rising to 1020 m (the New Zealanders say about 700 m), at the NW portal of Good Glacier, where that glacier flows into the Ross Ice Shelf. It has a spur descending NE from it. Discovered by USAS 1939-41, on Flight C of Feb. 29-March 1, 1940. Named by US-ACAN in 1962, for Cdr. Charles O. Reinhardt, USN, engineer on OpHJ 1946-47, based at Little America IV. NZ-APC accepted the name.

Reinholdz, Axel Julius Reinhold. b. July 25, 1873, Gårdby, Kalmar, Sweden. He was 3rd mate on the *Antarctic* during SwedAE 1901-04.

Reinwarthhöhe. 78°19' S, 46°28' W. Named also seen as Reinwarth Höhe. A rather solitary ice dome on Berkner Island, on the E side of the Ronne Ice Shelf, rising to 700 m. Named by the Germans for Oskar Reinwarth (b. April 12, 1929), German glaciologist. Also called North Dome. *See also* **Thyssenhöhe**.

Reist Rocks. 66°31' S, 107°25' E. A small group of coastal rocks projecting above the continental ice, 13 km W of Snyder Rocks, on the Knox Coast of Wilkes Land. First delineated by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Wilbur H. Reist (b. July 27, 1927), tractor driver on OpW 1947-48. ANCA accepted the name.

Reive, Bert. b. Aug. 23, 1922, Port Sussex, East Falkland, son of shepherd Andrew Reive and his wife Ann Coutts. He joined FIDS in 1945, as a handyman, and wintered-over at Base B in 1946, and at Base F in 1947. He cut his hand and contracted blood poisoning from contaminated seal meat while feeding the dogs, was shipped to the UK, and died in a hospital in Alton, Staffs, in 1950.

The *Rekin*. Polish ship, in Antarctic waters in 1976-77, under the command of skippers Wincenty Kuriata and Andrzej Furmanski.

Rekkjenabbane *see* **Narabi Rocks**

Relay Bay. 71°30' S, 169°32' E. A bay, about 8 km wide, on the SW side of Robertson Bay, it forms an arm of that bay, between Islands Point and Penelope Point, along the N coast of northern Victoria Land. Its SE boundary is Calf Point. First visited on Oct. 14, 1911 by Campbell's Northern Party, during BAE 1910-13. So named by Campbell because they had to relay their sledges due to the heavy pressure ridges here. These ridges are created by Nielsen Glacier, Ommanney Glacier, Crume Glacier, and Reusch Glacier, all flowing into the bay. US-ACAN accepted the name, as did NZ-APC.

Relay Hills. 69°29' S, 67°57' W. A group of low, ice-covered hills, mainly conical, between Mount Edgell and the Kinnear Mountains, SW of the (former) Wordie Ice Shelf, on the Fallières Coast, on the W coast of the Antarctic Peninsula. Helm Peak is the highest elevation, at about 930 m, and also included in this group is Simoom Hill. First roughly surveyed in 1936-37, by BGLE 1934-37, photographed aerially on Nov. 27, 1947, by RARE 1947-48, and re-surveyed by Fids from Base E in Dec. 1958. So named by UK-APC on Aug. 31, 1962, because both of these surveying parties (i.e., BGLE and FIDS) had to relay their sledge loads through this area to the head of Prospect Glacier. US-ACAN accepted the name later in 1962.

Relay Station. An American automatic weather station, installed on the Polar Plateau, at an elevation of 3353 m, in Feb. 1995.

Relaying. Over exceptionally difficult terrain a party of sledgers may have to relay their sledges. Instead of each sledge being pulled by its normal man or group of dogs, it will have to be pulled by everybody together. The group will then have to go back for the next sledge and do the same for that one, and so on. It is a tough, time-consuming process.

Relict Lake. 62°57' S, 60°35' W. A small lake SSE of Pendulum Cove, on Deception Island, in the South Shetlands. ChilAE 1946-47 surveyed it, and named it Laguna Colocolo, for a place in Chile. It appears as such on their 1947 chart. Re-surveyed by Fids from Base B in Dec. 1953, and named by them as Relict Lake, for the fact that this lake is now cut off from the waters of Pendulum Cove. In Jan.-March 1829, when Lt. E.N. Kendall conducted his survey of Deception Island from the *Chanticleer*, the cove extended inland to this lake. It appears as such on Kendall's map of 1831. UK-APC accepted the name Relict Lake on Sept. 4, 1957, and US-ACAN followed suit in 1963. Last plotted by the UK, in late 2008.

The *Relief*. Very slow store ship, designed by Samuel Humphreys, and launched on Sept. 14, 1836, at the Philadelphia Navy Yard. Taken on USEE 1838-42, but sent home in 1839 while en route to Antarctica. Thus, she seems not to have gotten south of 60°S. Commanded first by Lt. Andrew Long, and then by Passed Midshipman James Reid, she had a 468-ton displacement, was 109 feet long, 30 foot in the beam, 12 feet deep in the hold, had 6 guns, could reach 8½ knots, and had a crew of 75. After her part in the expedition, she served mostly in South American waters, took part in the Mexican War (1846-48), and in 1850 was in the Mediterranean. She served in the Civil War, and from 1871 to 1877 was a receiving ship in Washington, DC. She was laid up in 1878, and in 1883 was sold to J.B. Agnew.

Relief Inlet. 75°13' S, 163°45' E. A narrow, winding re-entrant, about 16 km long, in the NE side of the Dryalski Ice Tongue, at the SW corner of Terra Nova Bay. The feature is formed along a shear plane caused by differential ice movement near the coast of southern Victoria Land, involving not only the N edge of the Drygalski Ice Tongue but also the S extremities of the Nansen Ice Sheet. Named by Edgeworth David in 1908, while he was on the South Magnetic Pole trip, during BAE 1907-09. Just as they were about to give up hope of being picked up, the *Nimrod* showed up here on Feb. 4, 1909, to collect the party. US-ACAN accepted the name, and NZ-APC followed suit.

Relief Pass. 79°49' S, 158°23' E. A pass, about 1000 m above sea level (the Australians say 760 m), about 1.8 km NW of Bastion Hill, in the Brown Hills. Explored by VUWAE 1962-63, and so named by them for the relief this pass provided after they had climbed to it. NZ-APC accepted the name, and ANCA followed suit. US-ACAN accepted the name in 1968.

Ozero Reliktovoe. 71°43' S, 67°44' E. A melt lake in the NW portion of the Nilsson Rocks, 14 km S of the Fisher Massif, in the Prince Charles Mountains. Named by the Russians.

Reluctant Island. 67°50' S, 67°05' W. A small island off the E coast of Horseshoe Island, on the Fallières Coast, on the W coast of Graham Land. It was not shown on Rymill's 1938 map of the area, as drawn up during BGLE 1934-37, and between 1948 and 1950, Fids from Base E mapped it as a peninsula. Surveyed by FIDS in 1955-57, and so named by them for the island's reluctance to be recognized. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. The Argentines add to the enigma of this island by pluralizing it as Islotes Rechazo, the word "rechazo" meaning "rejection." "Isla Renuente" would have been a much better name.

Rembiszewski Nunataks. 62°09' S, 58°18' W. Three nunataks, rising to 200 m, 150 m, and 90 m resp., between Glaciar Vieville and Ryback Glacier, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for ichthyologist Jan Maciej Rembiszewski, a member of several Polish Antarctic expeditions, and 1979 winter-over leader at Arctowski Station.

Punta Remedios *see* **Punta Aburto**

Remenchus, John Joseph. b. June 14, 1921, Rockford, Ill., son of Stanislaus (Stanley) Remenchus and his wife Apalonia Sophia Nevinski. He became a pilot in 1943, and was chief aviation pilot during OpW 1947-48. He married secondly Donna Schleus, and died on May 20, 1988, in Fort McCoy, Fla.

Remenchus Glacier. 66°02' S, 101°35' E. A channel glacier, 13 km long and 6 km wide, it flows NW from the continental ice, and terminates in a small, but prominent, tongue close E of the Mariner Islands, and 20 km NE of the Bunger Hills, on the Knox Coast of Wilkes

Land. Delineated by U.S. cartographer Gard Blodgett in 1955, from air photos taken by OpHJ 1946–47. Named by US-ACAN in 1955, for John J. Remenchus. ANCA accepted the name on Oct. 22, 1968, but with the coordinates 66°00' S, 101°25' E.

Remetalk Point. 62°38' S, 60°41' W. A point, formed by an offshoot of Oryahovo Heights, 1.3 km S of Agüero Point, and 3.7 km WNW of Avitohol Point on the coast of Ioannes Paulus II Peninsula, Livingston Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for Remetalk III, the king of Thrace between 38 and 46 AD.

Otrogi Remezova. 82°07' S, 163°20' E. A group of spurs, NE of Babis Spur, in the Nash Range, behind the Shackleton Coast. Named by the Russians.

Mount Remington. 71°46' S, 161°17' E. A conspicuous, ice-free mountain, rising to 1775 m, 6 km NW of Mount Bresnahan, in the NW part of the Helliwell Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Benjamin F. Remington, Jr. (b. Aug. 25, 1932. d. July 26, 2002), U.S. Weather Bureau meteorologist, former USAF meteorological technician, who wintered-over at Little America V in 1957, and at Pole Station in 1959. NZ-APC accepted the name.

Remington Glacier. 78°34' S, 84°18' W. A steep glacier, about 11 km long, in the SE part of the Sentinel Range, it flows ESE from the area just N of McPherson Peak and debouches into the area between Johnson Spur and the terminus of Hough Glacier, in the Ellsworth Mountains. Discovered aerially by VX-6 on Dec. 14-15, 1959, and mapped by USGS from these photos. Named by US-ACAN in 1961, for Maryland glaciologist Edward Wade "Moose" Remington (b. Dec. 1920, Georgia; he was the son of an Army officer. d. Feb. 7, 2007, Johns Island, Ga.), IGY glaciologist who was among the first group ever to winter-over at Pole Station, in 1956-57.

Remnant Lake *see* **Dingle Lake**
Glaciar Remo *see* **Remus Glacier**
Caleta Remolino *see* **Whirlwind Inlet**
Isla Remolino *see* **Vortex Island**
Islote Remolino *see* **Vortex Island**

Roca Remolino. 62°23' S, 59°38' W. A rock, about 700 m from Fort William, it forms part of a reef that extends out in this direction from the coast of Robert Island, in the South Shetlands. Named descriptively by the Chileans (the word "remolino" means a whirlpool.

Bahía Remolinos. 63°21' S, 56°00' W. A bay, SW of Gibson Bay, on the S coast of Joinville Island. Named by the Argentines (name means "bay of whirlpools").

Remplingen *see* **Remplingen Peak**

Remplingen Peak. 72°05' S, 4°18' E. Rising to 2650 m, at the N end of Langfloget Cliff, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Remplingen (i.e., "the calf"). US-ACAN accepted the name Remplingen Peak in 1966.

Remus Glacier. 68°20' S, 66°43' W. About 13 km long, it flows from the N slopes of Mount Lupa, northwestward along the NE side of the Blackwall Mountains, into Providence Cove, at Neny Fjord, on the Fallières Coast, on the W coast of Graham Land. The lower reaches of the glacier were first roughly surveyed in 1936 by BGLE 1934-37, and it appears on Stephenson's 1940 map of the expedition. It was surveyed over its length by Fids from Base E in 1948-49, and, with Roman mythology in mind, named by them in association with Romulus Glacier (the head of which lies near the head of Remus Glacier) and with Mount Lupa. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year.

Renagar Glacier *see* **Renegar Glacier**
Cabo Renard *see* **Cape Renard**
Cap Renard *see* **Cape Renard**

Cape Renard. 65°01' S, 63°47' W. A conspicuous headland of black rock, dominated by 2 steep needles rising to 747 m, the slopes of which are too precipitous to retain snow, this prominent feature rises vertically from the sea and marks the SW entrance point of Flandres Bay, and divides the Danco Coast from the Graham Coast, 1.5 km NE of False Cape Renard (which it resembles in appearance), on the W coast of Graham Land. Discovered and roughly charted between Feb. 9 and Feb. 12, 1898, by BelgAE 1897-99, and named by de Gerlache as Cap Renard, for Prof. Alphonse-François Renard (1842-1903; known as L'Abbé Renard), geologist and mineralogist from the University of Ghent, a member of the Royal Academy of Belgium, and a member of the *Belgica* Commission. Perhaps his greatest contribution to science was the detailed analysis of the geological samples brought back on the *Challenger* Expedition, 1872-76. It appears as such on Lecointe's 1900 map of the expedition, and on Dr. Frederick Cook's 1900 English language version of the map it appears as both Cape Renard and Cape Reynard. On Arctowski's 1900 map of the same expedition, The Needles appears, signifying Cape Renard and False Cape Renard. SwedAE 1901-04 charted it as Kap Renard. On a 1916 British chart it appears as Cap Renard, and on a 1945 British chart as Cape Renard. US-ACAN accepted the name Cape Renard in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a British chart of 1961. Frank Hunt's 1952 chart, reflecting his RN Hydrographic Survey of the year before, shows the summit of the cape (at 745 m) as Mount Renard. The cape was photographed aerially by FIDASE in 1956-57, and that same season was surveyed from the ground by an RN Hydrographic Survey unit on the *John Biscoe*. Both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Cabo Renard. Sometime prior to 2000, ice broke up in this area, and suddenly an island appeared — Renard Island (q.v.) — and Cape Renard found itself the N tip of this island.

Glaciar Renard *see* **Renard Glacier**
Mount Renard *see* **Cape Renard**

Renard Glacier. 64°40' S, 61°38' W. Flows NE into the most southerly part (i.e., the head) of Charlotte Bay, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base W. Named by UK-APC on Sept. 23, 1960, for Charles Renard (1847-1905), dirigible airship pioneer. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Renard.

Renard Island. 65°02' S, 63°47' W. About 2 km long and 1.5 km wide, with Cape Renard at its N end, and separated from False Cape Renard by a channel that appeared following loss of ice in the area prior to 2000. Named by UK-APC on May 20, 2008, in association with Cape Renard. US-ACAN accepted the name on Oct. 21, 2008.

Île Renaud *see* **Renaud Island**
Isla Renaud *see* **Renaud Island**

Renaud, François-Marie. b. May 24, 1814, Saint-Nazaire, France. Ordinary seaman on the *Astrolabe* during FrAE 1837-40. He became a pilot on Jan. 1, 1840.

Renaud Glacier. 67°42' S, 65°37' W. A heavily crevassed glacier flowing SE to enter Seligman Inlet, between Lewis Glacier and Choyce Point, on the Bowman Coast, on the E coast of Graham Land. First photographed aerially by USAS 1939-41. Surveyed by BAS personnel from Base E in 1963-64. Named by UK-APC on Dec. 20, 1974, for André Renaud (1904-1964), Swiss glaciologist. US-ACAN accepted the name in 1975.

Renaud Island. 65°40' S, 66°00' W. An ice-covered island, about 40 km long, and between 6 and 16 km wide, between the Pitt Islands and Rabot Island, it is the largest of the Biscoe Islands. It was among the islands discovered by Biscoe on Feb. 17-18, 1832. Roughly charted in 1904, during FrAE 1903-05, when the name Île Pitt (*see* **Pitt Islands**) was apparently applied to this island by Charcot. Further charted by FrAE 1908-10, and named by Charcot as Île Renaud, for Marie-Joseph-Augustin Renaud (1854-1921), hydrographer, director (from 1913) of the Service Hydrographique. It appears as such on Charcot's 1912 map. On Bongrain's 1914 map of the same expedition, this island with Rabot Island, are collectively shown as Île Rabot (but this concept was never repeated, if indeed it was not an error). On a 1914 British chart Île Renaud appears as Renaud Island. It was further charted in 1935-36, by BGLE 1934-37, and appears as Renaud Island on Rymill's 1938 map of the expedition. US-ACAN accepted the name Renaud Island in 1947, and it appears that way on a 1948 British chart. ChilAE 1946-47 named it Isla Doctor Orrego Luco, after Augusto Orrego Luco (1849-1933), Chilean psychiatrist and politician. It appears that way on a 1948 Chilean map. UK-APC accepted the name Renaud Island on Sept. 8, 1953, and it appears as such in the British

gazetteer of 1955, and on a British chart of 1961. In 1956-57 it was photographed aerially by both FIDASE and ArgAE 1956-57, the latter referring to it as Isla Renaud on their 1957 chart. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Isla Renaud.

Rendezvous Bluff *see* **Discovery Bluff**

Rendezvous Rocks. 69°35' S, 67°38' W. An isolated line of south-facing crags, rising to about 945 m (the British say about 800 m), S of Khamsin Pass, and 8 km SW of the Kinnear Mountains, on the Fallières Coast, on the W coast of Graham Land. Probably seen in Sept. 1936 by BGLE 1934-37, they were surveyed between 1970 and 1972 by BAS personnel from Base E, who so named the rocks because they were used as a rendezvous for 2 sledge parties traveling from opposite sides of the plateau in 1970, and also because they are near the BGLE rendezvous of Nov. 11, 1936 (mentioned by Stephenson and Fleming in 1940). UK-APC accepted the name on Dec. 8, 1977, and US-ACAN followed suit. The feature appears in the 1980 British gazetteer.

Mount Rendu. 67°26' S, 67°05' W. Rising to about 2100 m between Reid Glacier and Heim Glacier, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, surveyed from the ground by FIDS, and mapped by FIDS cartographers from these efforts. Named by UK-APC on Sept. 23, 1960, for Louis Rendu (1789-1859), French bishop and scientist specializing in glacier flow. US-ACAN accepted the name in 1965.

Punta René. 62°27' S, 60°47' W. A point close to the N end of Punta Oliva, on the N coast of Cape Shirreff, on Livingston Island, in the South Shetlands. Named by the Chileans for René Durán Figueroa, a member of the scientific personnel from the Instituto Antártico Chileno, who took part in ChilAE 1984-85.

Renegar Glacier. 78°22' S, 163°08' E. A steep glacier, 5 km long and 1.5 km wide, flowing SE from Mount Dromedary into the Koettlitz Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1963, for Lt. Garland M. "Skip" Renegar (b. Oct. 31, 1918, Eagle Mills, near Harmony, NC. d. Feb. 3, 2007, Ankeny, Iowa), who entered the U.S. Navy in 1937, as a seaman apprentice, and who was R4D aircraft pilot at McMurdo in 1960. He retired in 1968, and spent his last years in the Naval Home, at Gulfport, Miss. NZ-APC accepted the name.

Cap Renier *see* **Renier Point**

Renier Point. 62°37' S, 59°49' W. A narrow, but high and massive point, quite distinctive, rising to 208 m above sea level, and ice-free in summer, forming the SE entrance point of Moon Bay, the SE extremity of Livingston Island, and the W side of the S entrance to McFarlane Strait, in the South Shetlands. Charted by sealers, and known by them as Point Renier as early as 1821 (although no one seems to know why). Palmer refers to it as Dread Point in his log of Nov. 25, 1820. Someone misread this many years later as Duad Point, and, not uncommon in Antarctic research, the myth of Duad Point was perpetuated until it had to be explained. Then someone suggested that "duad" was a error for "dyad" (meaning the number 2), and thus this part of the history of Renier Point became even more cumbersome. In Capt. Davis's log of Feb. 10, 1821, it is called Freezland Point, and in his entry for Feb. 21 of that year as Freesland Point. In his log of Oct. 27, 1821, it appears as Freezeland Point. On Powell's 1822 chart it appears as Point Renier, and on Weddell's 1825 chart it appears as Needles, named in association with the off-lying rocks. On the 1829 chart drawn up by Foster and Kendall during the *Chanticleer* Expedition of 1828-31, it appears as Point Rainier, and on Friederichsen's 1895 German map it appears as Cap Renier. In 1934-35 personnel on the *Discovery II* re-surveyed it, and called it Pin Point, in association with an offshore rock that resembles a safety pin in shape, and it appears as such on their charts of 1935 and 1937. It was the name accepted by US-ACAN and UK-APC, and appears in the 1955 British gazetteer. It appears on an Argentine chart of 1946 as Punta Pin. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1957-58. UK-APC accepted the new (old) name Renier Point, on July 7, 1959, and US-ACAN followed suit in 1960. It appears as such in the British gazetteer of 1961, and also on a 1962 British chart. The Chileans still have a tendency to refer to it by their translated name, Punta Pin (officially in 1959; and it appears in the 1974 Chilean gazetteer), and the Argentines refer to it in the even more translated name, Punta Alfiler (1953 Argentine chart, and in the 1970 Argentine gazetteer).

Renirie Rocks. 71°20' S, 161°20' E. An area of elliptical rock outcrops, 2.5 km long, at the NW side of the terminus (i.e., the lower part) of Gressitt Glacier, 16 km NW of the Morozumi Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Jack Renirie, USARP public information officer at McMurdo for at least 5 seasons from 1962-63 until 1970-71. NZ-APC accepted the name.

Rennell Glacier. 79°23' S, 84°12' W. A glacier, 16 km long, in the Pioneer Heights of the Heritage Range, it flows NW to the E of Inferno Ridge, into Splettstoesser Glacier. Named by the University of Minnesota Geological Party here in 1963-64, for Kelly P. Rennell, biologist on that party. US-ACAN accepted the name in 1966.

Renner, Robert Geoffrey Boshier "Geoff." b. Dec. 24, 1939, Tynemouth, son of clerical assistant Hubert Renner and his wife Edith Crowe. After studying geology at Durham University, he left England on the *John Biscoe* to winter-over as BAS geophysicist at Base E in 1964. He returned to England by stages (he and Noel Downham explored South America) in 1965 on the *John Biscoe* and the *Shackleton*, and worked for BAS until 1989, as a geophysicist, principally in the aeromagnetics division. His sister married Noel Downham (q.v.). He summered-over in Antarctica four seasons from 1973-74, his last being 1988-89. In 1996 Wally Herbert persuaded him to become a "tour guide" on Antarctic-going cruise ships, and he did, doing most summers between then and 2008.

Renner Peak. 70°20' S, 67°51' W. Rising to about 1100 m, it is the dominant peak on the small mountain mass between Chapman Glacier and Naess Glacier, W of Creswick Gap, on the W coast of Palmer Land. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for Geoff Renner. US-ACAN accepted the name later in 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Lednik Rennick *see* **Rennick Glacier**

Shel'fovyi Lednik Rennick. 70°20' S, 161°35' E. An ice shelf NE of Serrat Glacier, and SE of Thompson Point, in the area of the Rennick Glacier. Named by the Russians. Name means Rennick Ice Shelf.

Zaliv Rennick *see* **Rennick Bay**

Rennick, Henry Edward de Parny. Known as Parny Rennick. b. Feb. 1, 1881, 5 Fitjohns Mansions, Netherall Gardens, London, son of Major Edward F.J. de C. Rennick and Caroline Cazalet (the former Lady Norman). In 1907 he married Winifred Drake. He joined the Royal Navy, and was a lieutenant on the *Dryad* when he transferred to the *Terra Nova*, for BAE 1910-13, in charge of hydrographic surveying and deep-sea sounding. Illness prevented him from being part of the shore party. On his return he married (secondly) Isobel Paterson in London, but almost immediately set sail on the *Hogue*, which was sunk in the North Sea by U-9 on Sept. 22, 1914.

Rennick Basin. 69°50' S, 161°00' E. A deep, trough-like depression, about 900 m in depth, and trending N-S, which coincides with the modern graben now occupied by the Rennick Glacier. Originally named Rennick Trough, and plotted in 69°25' S, 162°00' E, the name began to change to Rennick Basin in the mid 1980s, and that was the name accepted by NZ-APC on Nov. 15, 2006, and with new coordinates.

Rennick Bay. 70°06' S, 161°20' E. An extensive indentation into Oates Land, at the terminus of Rennick Glacier, immediately W of Cape Cheetham, in Victoria Land. It is bounded on the W by Belousov Point, and on the E by Stuhlinger Ice Piedmont. The E part of the bay was discovered from the *Terra Nova* in 1911, after that ship had deposited the shore party of BAE 1910-13 at Cape Evans. Named by Harry Pennell, for Parny Rennick. Air photos taken during OpHJ 1946-47 indicated that this bay extends inland for as much as 80 km. US-ACAN accepted the name in 1947, and NZ-APC followed suit. The Russians, who re-photographed it aerially during SovAE 1958, translated it as Zaliv Rennick.

Rennick Glacier. 70°30' S, 160°45' E. A broad glacier, nearly 300 km long (the New Zealanders say it is abour 400 km), and generally 30 to 50 km wide, it is one of the largest glaciers in Antarctica, and the largest outlet glacier in northern Victoria Land, flowing from the Polar

Plateau westward of the Mesa Range, and feeding Rennick Bay, on the coast of Oates Land, where it narrows to 16 km in width. The seaward part of the glacier was photographed aerially by OpHJ 1946–47. It was first visited on Feb. 5, 1960, by the Victoria Land Traverse of 1959–60. They got stuck on this glacier, in 72°38' S, 161°32' E, and had to be pulled out by Lt. Cdr. Robert L. Dale, VX-6 pilot, whose plane then made aerial reconnaissance of the glacier all the way from this point to Rennick Bay. Named by US-ACAN in 1964, in association with the bay. NZ-APC accepted the name.

Rennick Névé. 73°10' S, 160°20' E. At the head of Rennick Glacier, in Victoria Land. Named by NZ-APC in 1966, in association with the glacier (which, in turn, was named in association with Rennick Bay). US-ACAN accepted the name in 1967, and ANCA followed suit on Jan. 19, 1989.

Rennick Trough *see* **Rennick Basin**

Mount Rennie. 64°41' S, 63°35' W. A snow-covered mountain rising to 1555 m, and forming the central part of the ridge which extends southwestward from Mount Français, NW of Börgen Bay, in the S part of Anvers Island, in the Palmer Archipelago. Roughly surveyed from the east by personnel from Port Lockroy Station in 1944, during Operation Tabarin. Re-surveyed and climbed by Fids from Base N on Dec. 2, 1955. Named by UK-APC on Sept. 4, 1957, for Jim Rennie. It appears on a British chart of 1959. US-ACAN accepted the name in 1963.

Rennie, Alexander James "Jim." b. Sept. 23, 1930, Horsforth, near Leeds, son of company director John Rennie and his wife Marion. He left school in 1949, and went into the Army for his 2 years national service, serving most of the time at Sandhurst. After the Army he joined the Ordnance Survey, and was working for them in Troon, in Ayrshire, when a friend suggested FIDS. He had for some years been into rock climbing, and, with his Army experience, he was a natural. On Dec. 24, 1954 he was accepted, and on Jan. 16, 1955 he sailed on the *Norsel* from London, bound for Montevideo and Port Stanley, and then on to Base N on Feb. 28, 1955. He wintered-over there in 1955 as assistant surveyor. He, Arthur Shewry, and Bill Hindson were the first to climb Mount Français. In early 1956 the *Shackleton* came to pick him up, and, after a tour of various bases, he arrived back in Port Stanley, and from there to the UK. While he was collating his records at Tolworth, he was approached by Peter Mott, and joined Hunting Aerosurveys, going down south again for the 1956–57 FIDASE season, on the *Oluf Sven*. He stayed with Hunting until he married Judy Cottam on June 27, 1959, and then he and his wife went to Northern Rhodesia, with the Water Affairs Department. They returned home in July 1962, and Jim went to work in Bradford, in the field of what today would be called wool recycling. He retired in 1991 to Thirsk, in northern Yorkshire.

Cerro Reno *see* **Cerro Revuelta**

Mount Renouard. 67°00' S, 52°26' E. A mountain, about 5 km S of Mount Keyser, and about 7 km SE of Mount Ryder, in the E part of the Tula Mountains of Enderby Land. Plotted by Australian cartographers from air photos taken by ANARE in 1957. Named by ANCA for Horst E. "Eddie" (or "Ed") von Renouard, weather observer at Mawson Station in 1961. US-ACAN accepted the name in 1965.

Punta Renzo. 64°13' S, 61°00' W. A point about 2 km N of Charles Point, and which forms the S limit of the S entrance to Paso Alfaro, on the W coast of the Antarctic Peninsula. Named by the Chileans for Brigadier Renzo de Kartzow Da Bove, of the Chilean Army, who was on the *Lientur* during ChilAE 1953–54.

Repeater Buttress. 67°33' S, 68°09' W. A large buttress, 250 m above sea level, between Exhibition Buttress and Ammo Col, on Reptile Ridge, on the NW part of Rothera Point, on Adelaide Island. Originally known by the local BAS personnel as Irn Bru Buttress. Re-named by UK-APC on Feb. 21, 2005, for the VHF repeater mast which was erected on top of the peak in 1997–98. Irn Bru, the Scottish national non-alcoholic drink, was originally Iron Brew. It tastes very, very guid.

Repeater Glacier. 77°29' S, 162°51' E. A steep glacier, 1.4 km long, flowing E from Ponder Peak, in the Asgard Range of Victoria Land. This glacier, and the Commanda Glacier (close southward), drain the E slopes of the Mount Newall massif before entering lower Newall Glacier. Named by NZ-APC on Oct. 7, 1998, for the radio repeater installed by the New Zealanders on Mount Newall. US-ACAN accepted the name later in 1998.

Gora Rëpke *see* **Iskollen Hill**

Repstat *see* **Casey Station**

Reptile Ridge. 67°33' S, 68°11' W. A ridge rising to about 250 m, it extends NW for more than 3 km from the area of Rothera Point, in a direction parallel to the safe approach course to the ice airstrip, on Adelaide Island. Surveyed by Fids from Base E in 1948, photographed aerially by FIDASE in 1956–57, and re-surveyed by Fids from Base T in 1961–62. So named by UK-APC on Dec. 8, 1977, because it is shaped like a reptile when viewed from either N or S. US-ACAN accepted the name. It appears in the British gazetteer of 1980, and also a British chart of 1982.

Islas República Argentina *see* **Argentine Islands**

República del Ecuador Refugio. 62°08' S, 58°24' W. Ecuadorian refuge hut built on Jan. 13, 1988, on Point Hennequin, Admiralty Bay, King George Island, in the South Shetlands.

Île des Rescapés *see* **Rescapé Islands**

Îles des Rescapés *see* **Rescapé Islands**

Rescapé Islands. 66°49' S, 141°22' E. A small group of half-rocky, half-glaciated islands 0.8 km NW of Cape Margerie, off the coast of Adélie Land. Surveyed by the French in 1949–51, and named by Liotard as Îles des Rescapés, for an incident in 1950 when they landed at Port-Martin and a small craft got carried away. It was rescued. Rescapé means "survivor" in French. US-ACAN accepted the name Rescapé Islands in 1956.

Rescue Nunatak. 69°37' S, 157°27' E. A nunatak, 22 km SSE of Mount Martyn, in the S portion of the Lazarev Mountains, on the W side of the upper reaches of Matusevich Glacier, in Oates Land, in Victoria Land. Plotted by Australian cartographers from air photos taken during OpHJ 1946–47, and also from 1959 ANARE air photos. Visited by NZGSAE 1963–64, who named it for the rescue, in adverse conditions, of a sledge and its dogs that had fallen 10 m into a nearby crevasse. NZ-APC accepted the name, and US-ACAN followed suit in 1964, with ANCA doing the same thing.

Rescue Point. 71°54' S, 99°09' W. An ice-covered point forming the W extremity of Noville Peninsula, on Thurston Island. Named by US-ACAN in 2003. On Jan. 12, 1947, 6 survivors of the Martin Mariner plane crash were rescued here, during OpHJ 1946–47.

Rescuers Hills. 62°10' S, 58°27' W. A group of hills between Ecology Glacier and Sphinx Hill, at Admiralty Bay, King George Island, in the South Shetlands. named by the Poles in 1980, for Wieslaw Kowalski, Lechoslaw Kumoch, and Krzysztof Zubek, who, during PolAE 1977–78, organized rescue operations to save the lives of Krzysztof Birkenmajer and Stanislaw Baranowski, after a serious accident nearby. Mr. Baranowski did not get out of it alive. All these men have features named after them.

The *Resolution*. Small, 462-ton, British corvette, a former Whitby coal ship launched at that town in 1770, as the *Marquis of Granby*. In Nov. 1771 she was bought by the Royal Navy for £4151, and renamed the *Drake*, but on Christmas Day of that year was renamed the *Resolution*. She was Cook's flagship on his 2nd voyage, 1772–75 (*see also* **Cook, James** and **The *Adventure***). The *Resolution* was 110 feet 8 inches long, 35 feet 5½ inches wide, and carried cannon and a large ship's launch. She had a crew of 112. Cook was the captain and John Gilbert was the master (for further crew *see* Cook). Joseph Banks was going to go on the *Resolution*, but Cook ordered his scientific fittings pulled out when the ship became top-heavy. Banks, infuriated, resigned, and with his exit deprived the reader (and the writer of this book) of a good entry under B. The *Resolution* crossed the Antarctic Circle in 1773, and twice more after that, and reached a southing record of 71°10' S. Cook also sailed in the *Resolution* on his last, fatal voyage. After the expeditions, the *Resolution* was converted into an armed transport ship, and was captured by the French in India in 1782. On July 22, 1782, she sailed from the Sunda Strait, bound for the Philippines, and was lost at sea.

Resolution Subglacial Highlands. 73°00' S, 135°00' E. A line of subglacial highlands in the interior of Wilkes Land, running NNW-SSE, and separating Adventure Subglacial Trench from Wilkes Subglacial Basin. The feature was identified by the SPRI-NSF-TUD airborne radio echo-sounding program, 1967–79, and named for Cook's ship the *Resolution*. ANCA accepted the name on July 26, 1983. US-ACAN also accepted the name.

Île (du) Ressac *see* **Ressac Island**

Ressac Island. 66°42' S, 141°14' E. A small rocky island, 1.5 km E of Houle Island, between Port-Martin and Cape Jules, and 6 km NE of the Zélée Glacier Tongue. Photographed aerially during OpHJ 1946-47. Charted by the French in 1949-51, and so named by them in 1950, as Île du Ressac, because the surf breaks over the island ("ressac" means "surf" in French). US-ACAN accepted the name Ressac Island in 1955. The French later shortened their version of the name to Île Ressac.

Rester Peak. 78°10' S, 162°37' E. A peak due W of McConchie Ridge, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1995, for A. Carl Rester, astrophysicist at the Institute for Astrophysics and Planetary Exploration, at the University of Florida, who was responsible for the instrumentation of a huge observation ballooon that was launched over Antarctica in 1988.

Punta Rethval *see* **Rethval Point**

Rethval Company. Norwegian whaling company, Aktieselskabet Rethval, out of Christiania, owned by Hans Fredriksen, which ran the whaling factory ship *Falkland* in the South Orkneys in 1911-12, and thus became the first company to start whaling operations in the South Orkneys. The *Falkland* was back in 1912-13, then, in 1913, was replaced by another ship of the same name, for the 1913-14 season, until wrecked in Nov. 1913. The company had to act fast, and leased the *Polynesia* from the Antarctic Whaling Company for the rest of the season.

Rethval Cove. 60°43' S, 45°36' W. In the S part of Paal Harbor, in Signy island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1950, and photographed aerially by the RN in 1968. Named by UK-APC on Sept. 29, 2004, in association with Rethval Point.

Rethval Point. 60°44' S, 45°36' W. An ice-free point forming the S side of the entrance to Paal Harbor, on the E side of Signy Island, in the South Orkneys. Surveyed in 1933 by personnel from the Discovery Committee, and again in 1947 by FIDS. Named by UK-APC on March 31, 1955, for the Rethval Whaling Company. US-ACAN accepted the name in 1956. It appears in the 1966 British gazetteer. The Argentines call it Punta Rethval.

Retizhe Cove. 63°28' S, 57°25' W. A cove, 5.8 km wide, indenting the S coast of Trinity Peninsula for 6.2 km between Boil Point to the W and Garvan Point to the E. It is actually part of Duse Bay. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the Retizhe River, in Pirin Mountain, in southwestern Bulgaria.

Île du Retour *see* **Retour Island**

Retour Island. 66°46' S, 141°34' E. A rocky island, 1.1 km long, it is the largest of the Curzon Islands, about 160 m N of Cape Découverte. Charted in 1951 by the French, and named by them as Île du Retour, to commemorate the return (le retour) of French exploring parties to the area. US-ACAN accepted the name Retour Island in 1962.

Cape Retreat *see* **Point Retreat**

Point Retreat. 76°55' S, 162°33' E. Also called Cape Retreat. A point at the E extremity of the Kar Plateau, it projects into Granite Harbor from the coast of Victoria Land, between Cape Archer and Mackay Glacier Tongue. Named by BAE 1910-13. US-ACAN accepted the name in 1965.

Retreat Bluffs. 62°09' S, 58°13' W. Three short sections of sub-vertical cliffs rising to a height of about 100 m above sea level from Stwosz Icefall, on King George Island, in the South Shetlands. The sections are separated by a thin tongue and are flanked on both sides by ice cliffs. The cliffs emerged due to the retreat of the icefall, hence the name given by UK-APC on Feb. 15, 1998.

Retreat Hills. 72°59' S, 165°12' E. A group of hills at the S side of the head of Astronaut Glacier, along the S margin of Evans Névé. So named by the Northern Party of NZGSAE 1962-63, because of the hasty retreat they had to make due to blizzards, which had prevented them from getting to these hills. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Retrospect Spur. 84°09' S, 173°12' E. A symmetrical spur about 900 m high, and about 11 km long, descending NNW from the base of the Separation Range, into the east-central side of Hood Glacier, about 40 km from the Ross Ice Shelf. Named by the NZ Alpine Club Antarctic Expedition of 1959-60, for their retrospective panoramic view of Hood Glacier, which they had just traversed. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Punta Return *see* **Return Point**

Return Point. 60°38' S, 46°01' W. A rocky slope forming the SW extremity of Coronation Island, in the South Orkneys. Discovered by Palmer and Powell on Dec. 7, 1821. Powell landed on this point, viewed the coast to the E, and then returned directly to his ship, the *Dove*, hence the name. It appears on his chart of 1822, and also on a British chart of 1839. On Weddell's 1825 chart, it appears as West Cape. On an Argentine map of 1908 it appears as Punta Return. It was surveyed by Petter Sørlle in 1912-13, and appears on his and Hans Borge's chart of that season. On Sørlle's 1930 chart it appears as Return Pynten (which means the same thing). It appears on an Argentine chart translated as Cabo Regreso. It was re-surveyed by the Discovery Investigations in 1933, and appears as Return Point on their 1934 chart. US-ACAN accepted the name Return Point in 1947, and UK-APC followed suit on Sept 8, 1953. It appears as such in the 1955 British gazetteer. Surveyed by Fids from Signy Island Station between 1956 and 1958. It appears on a 1952 Argentine chart as Cabo Regresso (sic), but the name accepted by the Argentine gazetteer of 1970 was Cabo Regreso.

Return Pynten *see* **Return Point**

Mount Reu. 71°09' S, 65°35' E. A partly snow covered mountain, about 29 km E of Mount Hicks, in the Prince Charles Mountains. It consists of a main ridge running E-W, with foothills to the S. Plotted by Australian cartographers from ANARE air photos taken in 1960. Named by ANCA for Ron Reu, radio officer at Wilkes Station in 1962. US-ACAN accepted the name in 1967.

Reuby, Michael John Francis "Mike." b. 1935, London, son of Francis John Reuby and his wife Mildred H. Salter. He joined FIDS in 1956, as a meteorologist, and wintered-over at Base D in 1957 and 1958, also being in charge of the dogs. He was forensic photographer with the police, and later a guide at Robinswood Hill Country Park, in Gloucestershire. In 1964, in Swindon, he married Barbara K. Telling. He died on Oct. 16, 2006, at Tuffley, Glos.

Reuning Glacier. 71°27' S, 72°40' W. On the N side of Beethoven Peninsula, it flows NW and joins Hushen Glacier in discharging into the S part of Mendelssohn Inlet, SE of Dvorák Ice Rise, on the coast of Alexander Island. Mapped by USGS from USN air photos taken in 1967-68, and also from U.S. Landsat images taken in Jan. 1973. Named by US-ACAN for Winifred M. Reuning, of the NSF's Office of Polar Programs, who was editor of the *Antarctic Journal of the United States*, from 1980. UK-APC accepted the name on May 31, 1991.

Reusch Glacier. 71°29' S, 169°29' E. Also seen (erroneously) as Reush Glacier, and Doctor Rusch Glacier. A very small glacier, less than 1.5 km wide, flowing into the W part of Relay Bay (an indentation of Robertson Bay) immediately E of Islands Point, on the N coast of Victoria Land. First charted in 1899, by BAE 1898-1900, and named by Borchgrevink for geologist Hans Henrik Reusch (1852-1951), president of the Norwegian Geographical Society. US-ACAN accepted the name in 1947.

Reush Glacier *see* **Reusch Glacier**

Reuterskiöld, Karl Lennart. b. Oct. 7, 1882, Trolleholm, Sweden, son of inspector C.D. Reuterskiöld and his wife Anna Stenborg. In Dec. 1901 he joined the *Gauss* as an able seaman, for GermAE 1901-03. He married Sonja Dahl, and was alive in the late 1940s.

Reuther Nunataks. 79°10' S, 85°57' W. A ridge-like line of nunataks, 6 km long, 5 km W of Landmark Peak, in the Founders Peaks of the Heritage Range. Named by the University of Minnesota Geological Party here in 1963-64, for Charles J. Reuther, helicopter technical representative with the 62nd Transportation Detachment that season. US-ACAN accepted the name in 1966.

Ensenada Revelle *see* **Revelle Inlet**

Revelle Bay *see* **Revelle Inlet**

Revelle Inlet. 68°40' S, 63°26' W. A broad, ice-filled inlet, which recedes W for about 24 km between Cape Agassiz and Cape Keeler, along the Wilkins Coast, on the E coast of Palmer Land. It lies in the area seen and photographed aerially by Wilkins on Dec. 20, 1928 and by Ellsworth on Nov. 23, 1935, and seems to appear on the map prepared from these photos by U.S. cartographer W.L.G. Joerg in 1936-37.

First surveyed from the ground and charted in Dec. 1940, by members of East Base during USAS 1939–41. It appears on a 1942 USAAF chart. It was photographed aerially in Nov. 1947, during RARE 1947–48, and surveyed from the ground that same month by a joint sledging team of RARE personnel and Fids from Base E. Named by Finn Ronne as Revelle Bay, for Roger Randall Dougan Revelle (1909–1991), who, as a member of the U.S. Navy's Office of Naval Research, helped Ronne during the technical preparations for RARE. Dr. Revelle was an oceanographer at the Scripps Institute of Oceanographic Research, La Jolla, Calif., 1951–64. It appears as such on Ronne's map of 1949. It appears on a 1952 Argentine chart as Bahía Revelle, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. UK-APC accepted the name Revelle Inlet on Jan. 28, 1953, and US-ACAN followed suit that year. It appears as such on a British chart of 1954, and in the 1955 British gazetteer. Today, the Chileans and Argentines both seem to call it Ensenada Revelle. The British plot it in 63°38' S, 63°16' W.

Revsnes. 69°17' S, 39°37' E. The most northwesterly point on Revsnes Island, on the W side of Hamnenabben Head, on the Prince Olav Coast. Named by the Norwegians ("the reef point"; although see the next entry, **Revsnes Island**, for a discussion of the Norwegian naming).

Revsnes Island. 69°17' S, 39°37' E. A distinctive forked island with 2 branches, just off Hamnenabben Head, between that head and the island the Norwegians call Nabbøya, in the E part of Lützow-Holm Bay. Discovered and photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Revsnesøya (i.e., "the fox's nose island"), for its shape. The Norwegian word for a headland is "nes." The word for a nose is "nese." The word "rev" can mean both a reef and a fox. So, this is a multi-level play on words. US-ACAN accepted the name Revsnes Island in 1968.

Revsnesøya *see* **Revsnes Island**

Cerro Revuelta. 63°49' S, 58°42' W. A hill, about 8 km W of Mount Reece, and about 14 km WNW of Pitt Point, on the S coast of Trinity Peninsula. Named by the Chileans for Gumercindo Revuelta Alfaro, soil biologist from the University of Chile, who took part in ChilAE 1970–71. The Argentines call it Cerro Reno.

Monte Rex *see* **Mount Rex**

Mount Rex. 74°54' S, 75°57' W. An isolated mountain, rising to 1105 m above the interior ice surface of Ellsworth Land, S of the English Coast and NW of Cape Zumberge, about 88 km SSE of FitzGerald Bluffs, on the Orville Coast. This is what Ellsworth described as "the isolated nunatak" after his photographic flyover on Nov. 23, 1935. U.S. cartographer W.L.G. Joerg roughly mapped it in 1936–37, from Ellsworth's photos. Finn Ronne, during RARE 1947–48, re-sighted it, and named it Mount Daniel Rex, for Lt. Cdr. Daniel F. Rex, USN, of the Office of Naval Research, who helped Ronne get his scientific equipment together for the expedition. The name of the mountain was later shortened to Mount Rex. US-ACAN accepted that name, and UK-APC followed suit on Dec. 20, 1974. The Chileans call it Monte Rex.

Rexford Glacier. 72°05' S, 100°04' W. Flows NE into the head of Wagoner Inlet, on the N side of Thurston island. Named by US-ACAN in 2003, for Aviation Radioman Phillip Walter Rexford (b. Dec. 15, 1925, Nebraska, but raised partly in Kalispell, Mont., son of a logger), PBM Mariner air crewman in the Eastern Group during OpHJ 1946–47.

Cabo Rey *see* **King Point, Cape Rey**

Cap Rey *see* **Cape Rey**

Cape Rey. 66°36' S, 66°27' W. A dark, rocky cape forming the SW side of Darbel Bay and the NE side of Lallemand Fjord, 35 km E of Cape Mascart (the N extremity of Adelaide Island), it projects into the sea from the Loubet Coast, on the W coast of Graham Land. Discovered and roughly charted by FrAE 1908–10, and named by Charcot as Cap Rey, for Joseph Rey. It appears as such on Charcot's maps of 1906. Further charted by FrAE 1908–10, when the name The Lion was also applied to the feature, due to its shape. It appears as such on Charcot's 1911 chart, but on his 1912 map it appears as Cap Rey again. On Bongrain's 1914 map of the latter expedition, it appears erroneously (and misspelled) as Cap Bellu (*see* **Cape Bellue**). It appears as Cape Rey on a 1946 USAAF chart. ChilAE 1946–47 surveyed it, and named it Punta Lincoyan, after a member of the expedition. It appears as such on their 1947 chart. It appears as Cape Rey on a British chart of 1948, plotted in 66°44' S, 66°30' W, and, as such, the name was accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. Also as such, it appears in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956–57, and surveyed from the ground by Fids from Base W in 1958–59, its coordinates were corrected in time for a 1961 British chart, and, with the new coordinates, the feature appears in the 1986 British gazetteer. It appears on a 1957 Argentine chart as Cabo Rey, and that was the name accepted by the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974.

Rey, Joseph-Jean-Justin. b. 1873, France. He went to sea in 1891, and was the naval lieutenant who served as meteorologist and physicist on the *Français* during FrAE 1903–05.

Bahía Rey Jorge *see* **King George Bay**

Isla Rey Jorge *see* **King George Island**

Rey Juan Carlos I Station *see* **Juan Carlos I Station**

Costa Rey Óscar II *see* **Oscar II Coast**

Punta Reyes *see* **Jurva Point, Reyes Spit**

Reyes Point *see* **Reyes Spit**

Reyes Spit. 62°29' S, 59°41' W. A narrow shingle spit projecting WSW into Discovery Bay from the W extremity of Guesalaga Peninsula, about 1 km SW of Punta Bascopé, on Greenwich Island, in the South Shetlands. ChilAE 1946–47 named a point at the base of the spit as Punta Toro, for the expedition meteorologist, Millán Toro Rojas, of the Chilean Air Force. It appears as such on their expedition chart of 1947. However, later, the Chileans changed the name of this point to Punta Reyes, named for 2nd Navigaton Sgt. Camilo Reyes Ulloa, who was in charge of the gyrocompass and other navigation instruments on the *Iquique*, during ChilAE 1946–47. The name Toro was re-applied, to the spit itself, and called Banco Toro. This situation appears on a Chilean chart of 1951. However, on a 1962 Chilean chart, the name Bajo Toro appears instead of Banco Toro, and Bajo Toro was the name accepted by the 1974 Chilean gazetteer. The name Punta Reyes (for the point) appears on a 1961 Chilean chart, and that was the name accepted by the 1974 Chilean gazetteer (after they had rejected Punta Navegante Reyes). The name Pointe Toro appears (for the point) on a 1954 French chart. The features were further surveyed by an RN Hydrographic Survey unit, on the *Protector*, in 1963–64. The name Reyes Point (for the point) appears in a 1964 reference. The name Reyes Spit (extended to cover the whole feature listed in this entry) was first used by the British in 1965, appears as such on a 1968 British chart, and was the name accepted by UK-APC on Nov. 3, 1971, and by US-ACAN in 1972. It appears in the 1974 British gazetteer.

Cape Reynard *see* **Cape Renard**

Reynard, Ernest. b. 1885, Hartlepool, Durham, son of marine engine fitter William Reynard and his wife Ellen. Like his older brother, he apprenticed as an engine fitter, but then he went to sea as a merchant seaman. On April 7, 1909, in Lyttelton, he signed on to the *Nimrod* as a fireman, for the tail end of BAE 1907–09, thus never got to see Antarctica. We pick him up on the ship's manifest, coming into Sydney on April 20, 1909, from Christchurch. His birth place is listed as Kent, which is not true. He was discharged at Poplar (in London) on Aug. 31, 1909. After the expedition, he returned to Hartlepool, and married a London girl, Ann Sophia Pallett in 1912. He died in Durham in 1955.

[1]**Cape Reynolds**. 75°25' S, 162°34' E. A rocky cape, several hundred feet high, lying along the SW shore of Geikie Inlet, and marking the S side of the terminus of David Glacier, and also marking the W entrance to Clarke Glacier, on the coast of Victoria Land. Discovered by BAE 1907–09, and named by them for Jeremiah N. Reynolds. US-ACAN accepted the name, and it appears in the 1958 NZ gazetteer.

[2]**Cape Reynolds** *see* **Mount Reynolds**

Lake Reynolds. 67°27' S, 61°00' E. The largest freshwater lake on Chapman Ridge, it overflows to the sea, on the coast of Kemp Land, in Enderby Land. Named by ANCA on July 26, 1983, for Alan Reynolds, glaciologist who wintered-over at Mawson Station in 1979, and who spent several weeks dog-sledging to this lake and drilling a hole through the ice to sample it. He had also wintered-over at Casey Station in 1977.

Monte(s) Reynolds *see* **Mount Reynolds**

Mount Reynolds. 72°39' S, 61°20' W. Rising to about 1130 m, and snow-capped, it has steep, rocky lower slopes, at the S side of Violante Inlet,

on the Black Coast, on the E coast of Palmer Land. Discovered aerially on Dec. 30, 1940, by members of East Base during USAS 1939–41, and roughly mapped by them as the S entrance point of the inlet, in 73°10' S, 59°00' W, and named by Dick Black as Cape Poindexter, for Helen Poindexter (1902–2001), a good friend of his and his wife's. Miss Poindexter was the daughter of Joseph Boyd Poindexter, the territorial governor of Hawaii, 1934–42, and his wife Margaret Conger, herself the daughter of the man who led the pursuit party after John Wilkes Booth in April 1865. Helen Poindexter married British mining engineer Clifford Morgan in 1953, but nine years later he was killed by a bull on his farm in Devon. It appears as such on a 1942 USAAF chart, and, consequently, on an Argentine map of 1946 as Cabo Poindexter. Re-named by US-ACAN in 1947, as Cape Reynolds, for Jeremiah N. Reynolds. It appears as such on a U.S. Hydrographic Office chart of 1947, and also as late as 1952, on an Argentine chart (as Cabo Reynolds). It was surveyed from the ground in Dec. 1947, by a joint sledging team of personnel from RARE 1947–48 and Fids from Base E, and identified as a mountain about 65 km NW of its previously reported position (the USAS flight of 1940 had had errors in navigation). It appears on a USAF chart of 1948 as Mount Reynolds, and that name was accepted by US-ACAN, and, on Jan. 28, 1953, by UK-APC, but, in those days, plotted in 72°42' S, 61°16' W. It appears as such on a British chart of 1954 and in the 1955 British gazetteer. Photographed aerially by USN between 1966 and 1969, and its coordinates corrected by USGS. With the new coordinates, the feature appears in the 1977 British gazetteer, and also on the 1979 USGS sketch map of the N part of Palmer Land. It appears on a 1957 Argentine chart as Monte Reynolds, and that name was accepted by both the Argentines and the Chileans.

Roca Reynolds. 65°39' S, 66°24' W. An isolated rock, NW of the Thomsen Islands, in the Biscoe Islands. Named by the Argentines.

Reynolds, George *see* **USEE 1838–42**

Reynolds, Jeremiah N. "J.N." b. 1799, Pa., but raised partly in Ohio. His father died, and his mother married again, to Job Jeffries, who, in 1808 took the family to Clinton Co., Ohio. By dint of sheer hard work and ambition, J.N. raised himself above poverty, taught school, saved his money, and went to Ohio University, in Athens. He then became editor and part-owner of the *Spectator* newspaper in Wilmington, Ohio, but sold out in 1823 to go on the lecture circuit, as a proponent of the hollow earth theory, a theory he later repudiated. He was the most active proponent for a U.S. government expedition to Antarctica in the 1820s, predominantly between 1827 and 1829 when the expedition for which he had so strongly campaigned, failed to go. He was historiographer and commercial investigator on the Palmer-Pendleton Expedition of 1829–31, and after that he stayed in Chile. In Oct. 1832 he joined the U.S. frigate *Potomac*, as private secretary to Commodore Downes. He became a lawyer in NYC, and did much to promote USEE 1838–42, but did not himself go on it. He died in 1858, in NYC. Perhaps his lasting testimony was his account of Mocha Dick, a great sperm whale off the Chilean coast between 1810 and 1838. It was Reynolds' description which inspired Herman Melville to write *Moby Dick*.

Reynolds, William. b. Dec. 18, 1815, Lancaster, Pa., son of John Reynolds and his wife Lydia Moore. He joined the U.S. Navy in 1831, as a midshipman, and in 1837 was promoted to passed midshipman, taking part in USEE 1838–42. On Jan. 16, 1840 he saw Antarctic "land" from the *Peacock*, and later that year he transferred to the *Flying Fish*, at Honolulu. Still later, at Singapore, he transferred to the *Porpoise*, and in 1841 was promoted to lieutenant. In 1851 he was placed on the retired list, due to ill health. In 1862 he was promoted to commander, and given his first ship, the *Vermont*. In 1865 he was promoted to captain, and was skipper of the *Lackawanna*, in the Pacific, and in 1867 he was the officer who formally claimed Midway Atoll for the USA. In 1870 he was promoted to commodore, and placed in command of the Bureau of Equipment. In 1873 he was promoted to rear admiral, and given command of the East India Squadron, retiring, due to ill health, in 1877. He died on Nov. 5, 1879, in Washington, DC. His brother was U.S. Army general John Fulton Reynolds.

Reynolds Bench. 70°35' S, 63°40' W. A nearly flat bench, or mesa-like feature, rising to about 1500 m, 10 km long, and 3 km wide, it has a smooth, snow-covered surface but has rock outcroppings along its steep sides, at the N side of the Kelley Massif, to which it appears to be joined, on the S side of the upper part of Clifford Glacier, in northern-central Palmer Land. Mapped by USGS in 1974, from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Richard L. Reynolds, geologist with the USGS Lassiter Coast geologic and mapping party of 1970–71. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Reynolds Glacier. 77°38' S, 145°55' W. A glacier, 8 km long, flowing eastward from the Haines Mountain, along the S side of Keyser Nunatak, into Hammond Glacier, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Donald K. Reynolds, ionosphere physicist at Byrd Station in 1967–68.

Reynolds Ice Rise *see* **Reynolds Island**

Reynolds Island. 69°04' S, 66°59' W. An island, 5 km ESE of Wade Ice Rise, on the Fallières Coast, on the W coast of Graham Land. U.S. Landsat images taken between 1974 and 1979 were studied intensively by John Michael Reynolds (b. 1955), honorary professor of glaciology at the University of Wales, Aberystwyth, and a BAS glaciologist 1978–83. He defined it as a small ice rise, and it was named for him by UK-APC in 1987, as Reynolds Ice Rise. Following the break-up of the Wordie Ice Shelf, this ice rise was found to have a rock base, with heavy snow and ice cover, and UK-APC renamed it Reynolds Island in 2010.

Reynolds Nunatak. 85°33' S, 149°40' W. At the S side of the terminus of Leverett Glacier, 20 km N of Mount Herr. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Clifford E. Reynolds, electrician who wintered-over at Byrd Station in 1957.

Reynolds Peak. 69°16' S, 157°01' E. A prominent peak. rising to 785 m, 10 km NW of Eld Peak, and about 11 km SSW of Magga Peak, on the W side of Matusevich Glacier, in the Wilson Hills of Oates Land. Two conical peaks were discovered from the *Peacock* on Jan. 16, 1840, during USEE 1838–42, by passed midshipmen William Reynolds and Henry Eld. Wilkes named the NW one for Reynolds, and the other one for Eld. He then charted them where he thought they were, and, due to a mirage, he put them at 200 miles out to sea off what later became known as Mawson Peninsula. This was one of the things which discredited Wilkes upon his return to the USA and in subsequent decades of discovery. In 1959 Phil Law, making investigations in the area, found that Wilkes had seen them all right, but it was just that his plotting was off. Despite this, Law was unable to match the peak named by Wilkes, so he selected one of the peaks to the W of Matusevich Glacier as the one Wilkes had intended. US-ACAN accepted this in 1961, and ANCA followed suit on Dec. 7, 1976.

Reynolds Ridge. 75°40' S, 129°19' W. A rock ridge, 2.5 km long, 8 km NW of Mount Flint, in the McCuddin Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Warren Reynolds of the U.S. State Department, who assisted in work on the Antarctic Treaty in 1959.

Reynolds Strait. 74°15' S, 132°10' W. Between Forrester Island on the N, and (on the S) Shepard Island and Grant Island along the edge of the Getz Ice Shelf. On Feb. 4, 1962, USN personnel on the *Glacier* discovered Forrester Island, thus establishing the existence of this strait, which was then sounded. Named by US-ACAN in 1974, for Lt. Cdr. Ralph R. Reynolds (1938–1973), USN, officer-in-charge of the nuclear power unit at McMurdo in 1970.

Reynolds Trough. 66°50' S, 121°15' E. A subsurface feature beneath the Sabrina Coast of Wilkes Land. A term no longer used.

Reynoso, José *see* **Órcadas Station**, 1921

Rezanov, Ivan. Paymaster on von Bellingshausen's 1819–21 expedition.

Rezen Knoll. 62°38' S, 60°17' W. A low knoll composed of lavas, rising to 433 m, 600 m off the NW extremity of Burdick Peak, 4.09 km W by S of Mount Bowles, 3.43 km E by S of Aleko Rock, 4.64 km ENE of Sinemorets Hill, and 620 m NNW of Burdick West Peak, it is bounded by Perunika Glacier to the E, N, and W, on Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 23, 1995, for Golyam Rezen and Malak Rezen (big and little Rezen),

two of the most spectacular peaks in Vitosha Mountain, in Bulgaria. UK-APC accepted the name on Dec. 11, 1995, and US-ACAN followed suit in 1996.

Rezen Saddle. 62°38' S, 60°16' W. A flat saddle, 600 m long and horseshoe-shaped, between Rezen Knoll and Burdick Ridge, it afford overland access from the Balkan Snowfield to the area of the upper Perunika Glacier and Mount Bowles, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Oct. 29, 1996, in association with the knoll. US-ACAN accepted the name in 1997.

Rezovski Creek. 62°38' S, 60°21' W. A meltwater stream, 500 m long, draining that portion of the NW slope of the Balkan Snowfield, between Hespérides Hill, Atlantic Club Peak, Velchev Rock, and Sinemorets Hill, in the E part of Livingston Island, in the South Shetlands. The arms of the creek encompass the old buildings of the Bulgarian station here, its lower course forms Grand Lagoon, and it has its mouth at the SW extremity of Bulgarian Beach. Named by the Bulgarians on Oct. 29, 1996, for Rezovski, the river in southeastern Bulgaria. US-ACAN accepted the name in 1997.

Mount Rhamnus. 68°11' S, 66°50' W. Also called Pyramid Mountain, and Pyramid Peak. Rising to 865 m, 3 km NE of Mount Nemesis, on the N side of Neny Fjord, on the Fallières Coast, on the W coast of Graham Land. It looks like a mainly snow-covered pyramid when seen from the west. First surveyed in 1936 by BGLE 1934-37, it appears on Rymill's 1938 map of the expedition. Surveyed again in 1947 by Fids from Base E. In association with Mount Nemesis, it was named by Finn Ronne during RARE 1947-48, for the sanctuary of Rhamnus in Attica, in Greek mythology. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year.

Rhea Corner. 71°53' S, 68°48' W. A triangular area of exposed rock in the form of a promontory, on the N side of Saturn Glacier, at the W end of the massif that includes Deimos Ridge, Phobos Ridge, and Pagoda Ridge, in the SE part of Alexander Island. A cliff on the N face is about 500 m high. Surveyed by BAS between 1961 and 1973. Mapped by the (British) Directorate of Overseas Surveys from satellite images provided by NASA and USGS. In association with Saturn Glacier, this feature was named by UK-APC on Dec. 20, 1974, for one of the satellites of the planet Saturn. US-ACAN accepted the name in 1975. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Rhesus Glacier. 64°32' S, 63°17' W. A glacier, 7 km long and 2.5 km wide, flowing northeastward from the E slopes of the Trojan Range, SE of Paris Peak, to enter Fournier Bay S of Thompson Peninsula and N of Predel Point, on Anvers Island, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for the old Thracian king Rhesus, in Homer's *Iliad*.

Rhino Cliffs. 64°13' S, 57°18' W. Concave cliffs rising to between 150 and 250 m above sea level, and extending N for about 4 km from St. Rita Point (*see under* Saint) to Rhino Glacier, on James Ross Island. Named by UK-APC on Nov. 15, 2006, in association with Rhino Corner.

Rhino Corner. 64°12' S, 57°17' W. An ice-capped rocky bluff or bastion, at the termination of Rhino Cliffs, on James Ross Island. It forms a prominent east-projecting corner, and was named by UK-APC on Nov. 15, 2006, after 2 substantial rock spires extending up from its base on the E side. When viewed from the S, these spires resemble the horns of a rhino.

Rhino Horn Rock *see* **Rhino Rock**

Rhino Rock. 69°34' S, 62°32' W. A prominent black rock with steep sides rising to 700 m, 8 km SW of Cape Rymill, opposite the S end of Hearst Island, W of Stefansson Sound, on the Wilkins Coast, on the E coast of Palmer Land. Photographed aerially by Wilkins on Dec. 20, 1928, it appears on his 1929 map. Surveyed and charted from land and air in Dec. 1940, by members of East Base, during USAS 1939-41, and named by them as Rhino Horn Rock for its shape. It appears as such on a 1943 U.S. Hydrographic Office chart, and also on one of their photos. There is a 1944 U.S. reference to it as Rhino Horn Block, but this is probably a misspelling. Re-surveyed in Nov. 1947 by a combined sledging team of Fids from Base E and personnel from RARE 1947-48. The name was later shortened, and accepted by UK-APC on Jan. 28, 1953, and by US-ACAN later that year. It appears in the 1955 British gazetteer, and also on the 1979 USGS sketch map of the N part of Palmer Land.

Islotes Rho *see* **Rho Islands**

Rho Islands. 64°17' S, 63°00' W. A group of small islands and rocks immediately N of Lambda Island, they form the northernmost of the Melchior Islands, in Dallmann Bay, in the Palmer Archipelago. Surveyed by ArgAE 1942, ArgAE 1943, and ArgAE 1946, the latter naming it Islotes Rho, for the Greek letter. The name Rho Islands appears on a 1947 British chart, but on British charts of 1948 and 1950 they appear as Rho Islets, and that latter name was the one accepted by US-ACAN, and by UK-APC on Sept. 20, 1955. ArgAE 1952-53 surveyed the islands, and named them Islotes Boulier, presumably for a member of that expedition. However, ArgAE 1956-57 named them Islotes Soler, for Miguel Estanislao Soler (1783-1849), Argentine soldier who fought in the war of independence. It appears as such in the 1970 Argentine gazetteer. On July 7, 1959, UK-APC renamed them Rho Islands, and they appear as such on a British chart of 1960. US-ACAN followed suit with the new name in 1963. The Chilean gazetteer of 1974 accepted the name Islotes Rho. They had rejected several proposals, all names of famous Chilean newspapers — Islotes El Magallanes, Islotes El Mercurio, Islotes La Nación, Islotes Noticias Gráficas, Islotes La Patria, and Islotes La Unión.

Rho Islets *see* **Rho Islands**

Rhoads, Harmon Tally, Jr. b. Nov. 10, 1911, Hager, Ark., but raised partly in Choteau, Montana, son of Dr. Harmon Tally Rhoads and his wife Jennie. His family later moved to Washington state, and he was surgeon on Ellsworth's 1938-39 expedition. On Feb. 18, 1939 he and Fred Seid, the radio operator, took the *Aorangi* from Sydney, arriving in Vancouver on March 10. He died on May 7, 2001, in St. Petersburg, Fla.

Mount Rhodes. 66°49' S, 51°09' E. Between Mount Hampson and Mount Bond, about 3 km E of Mount Porteus, in the N part of the Tula Mountains, in Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA for George Rhodes. US-ACAN accepted the name in 1965.

Rhodes, George James. b. June 22, 1905, Cairns Bay, near Huon, Tasmania. He married Dorothea, and lived in Albert Park, Vic. Assistant cook on the *Discovery* during the 2nd half of BANZARE 1929-31. In 1935 he was serving on the *Stuart*. He served in World War II.

Rhodes, Michael Derek "Mick." b. Dec. 17, 1935, Birmingham. After Birmingham University he joined FIDS on Oct. 1, 1957, as a meteorological assistant, and wintered-over at Base D in 1958 and 1959. He returned to the UK in April 1960, and went to work on geological mapping at the FIDS geological unit at Birmingham University. He left FIDS on July 14, 1962. He later lived in Shropshire.

Rhodes Bluff. 79°50' S, 83°20' W. A bare rock bluff, 3 km NW of Mount Dolence, it forms the NW end of the Enterprise Hills, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Lt. (jg) Joseph J. Rhodes, USN, in charge of the maintenance program at McMurdo during the winter of 1966. He was killed in Vietnam.

Rhodes Head. 74°42' S, 163°03' E. A prominent headland forming the extremity of McCarthy Ridge, on the SE side of the Eisenhower Range, and overlooking the Nansen Ice Sheet, on the coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Capt. James C. Rhodes, U.S. Marine Corps Reserve, VX-6 LC-130 Hercules aircraft commander for several seasons up to 1967.

Rhodes Icefall. 74°58' S, 136°25' W. An icefall flowing W out of McDonald Heights, through a breach in the middle of Peden Cliffs, and feeding Garfield Glacier, near the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for William L. Rhodes, USN, aviation bosun's mate and crash crew leader at Williams Field during OpDF 68, OpDF 69, and OpDF 70.

Rhodes Peak. 83°20' S, 167°47' E. Rising to 780 m, at the N side of the mouth of Hoffman Glacier, it marks the seaward end of the ridge descending E from Mount Tripp, in the Holland Range. Named by US-ACAN in 1966, for Lt. Cdr. A.G. Rhodes, RNZN, commander of the NZ ship *Pukaki* (q.v.), which was an ocean station vessel on duty between NZ and McMurdo Sound in 1964 and 1965.

Mount Rhone. 79°59' S, 158°44' E. Rising to 2020 m, it is the highest peak in Bucknell Ridge, in the NE part of the Britannia Range. Named by US-ACAN in 2000, for Christopher M. Rhone, communications officer with U.S. Naval Support Force, Antarctica, 1992-94, and director of information systems with ASA, 1994-2000. NZ-APC accepted the name on Feb. 20, 2001.

Rhone Glacier. 77°42' S, 162°14' E. A small glacier, W of Mattherhorn Glacier, it flows S toward the junction of Lake Bonney and Taylor Glacier, between Lake Bonney and Mount J.J. Thomson, in Victoria Land. Charted and named by Grif Taylor's Western Journey Party during BAE 1910-13. US-ACAN accepted the name in 1960, and NZ-APC followed suit.

Islotes Rhyolite *see* **Rhyolite Islands**

Rhyolite Head. 62°10' S, 58°36' W. The headland between Cardozo Cove and Goulden Cove, at Ezcurra Inlet, on the W side of Admiralty Bay, in King George Island, in the South Shetlands. BAS did geological work here in 1975-76. So named by UK-APC on Feb. 7, 1978, because the feature largely results from the indurating effects of a rhyolite intrusion, a rare lithology in the South Shetlands. US-ACAN accepted the name. It appears in the 1980 British gazetteer. *See also* **Barrel Point**.

Rhyolite Islands. 69°40' S, 68°35' W. A group of 6 small islands (including Moore Island and Whitney Island) with offlying rocks, it extends for 6 km in an E-W direction between Cape Jeremy and Niznik Island, close off the Rymill Coast, on the W coast of Palmer Land, opposite the N side of the mouth of Eureka Glacier, in George VI Sound. On Aug. 16, 1936, they were photographed aerially by BGLE 1934-37, who thought they were ice rises in the George VI Ice Shelf. A sledging party in Oct. 1936, during the same expedition, did not recognize them from the surface, and they do not appear on the BGLE maps. By the time ChilAE 1946-47 was there, in early 1947, the front of the George VI Ice Shelf had retreated, and the Chileans charted a group of islands in about 69°54' S, 68°33' W, which they called Grupo Maipo, for the *Maipo*, and which may refer to the present group. It appears as Grupo Maipo on their 1947 chart. Surveyed in 1948 by Fids from Base E, and named by them as Ryholite Islets, for the rhyolite this group is largely composed of. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears as such on a 1955 U.S. Hydrographic Office chart, and also in the 1956 British gazetteer. On July 7, 1959, UK-APC renamed them Rhyolite Islands, and they appear as such on a British chart of 1961. US-ACAN accepted the new name in 1963. On a Chilean chart of 1962, they appear as Islotes Rhyolite, and that was the name accepted by the 1974 Chilean gazetteer, but only after they had rejected the proposed Islas Chacabuco, named after the battle (*see* **Powder Island**). The Argentines call them Islotes Riolita.

Rhyolite Islets *see* **Rhyolite Islands**

Punta Ribes *see* **Hannah Point**

Isla Ricardo *see* **Moss Islands**

Islote Ricardo. 64°52' S, 63°02' W. A tiny island off the W coast of Bryde Island, in the W side of Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. On Nov. 12, 1953 the Argentines built a refugio here, on rock. It was closed in 1954, and by 1958 was in ruins.

Ricarte, Sixto Mario *see* **Órcadas Station**, 1955 and 1960

Rice, James. b. 1858, Troon, Ayrshire, and baptized at nearby Dundonald Church on Nov. 5, 1858, son of Irish immigrant parents, marine seaman James Rice and his wife Mary Jane Milligan. He was raised at 1 Portland Street, Pickens Land, Dundonald. At 21 he finished a 7-year apprenticeship as a ship's carpenter in Troon, and a couple of years later married a Banffshire girl named Annie, and they raised a family on East Union St., Dundee. He was the carpenter on the *Scotia* during ScotNAE 1902-04.

Rice, Lee. b. Dec. 1927, Bangor, Northern Ireland. Mountain climber and sailor, he was a school teacher when he joined FIDS in 1956, and was surveyor and leader at Base D for the winter of 1957. That year he, Wally Herbert, Ken Brown, and Pat Thompson completed the first E-W crossing of the Antarctic Peninsula. In 1958 he wintered-over as (just) a surveyor, at Base D. He returned to the UK in June 1959, on the *John Biscoe*. Having injured his knee on this trip, he missed the chance to go on Bill Tilman's *Mischief*. He later (until 1987) taught geography at Widdifield Secondary School, in North Bay, Ontario, and died at Cassellholme Home for the Aged, in North Bay, on July 5, 2010.

Rice Bastion. 64°27' S, 60°19' W. A substantial mountain mass surmounted by a small crown of exposed rock which appears slightly higher than the plateau behind it, projecting from the edge of Detroit Plateau, in Graham Land, 13 km SW of Mount Elliott. Surveyed by FIDS in 1960-61, mapped from these surveys, and named by UK-APC for Lee Rice. US-ACAN accepted the name in 1964.

Rice Ridge. 73°27' S, 93°50' W. A low ridge with rocky exposures, 1.5 km long, extending from the N side of Anderson Dome, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61. Named by US-ACAN in 1963, for Lt. Cdr. Robert A. Rice, USN, supply and fiscal officer of Mobile Construction Battalion One during OpDF 62 (i.e., 1961-62).

Mount Rich. 79°47' S, 158°48' E. An isolated peak, 8 km NW of Diamond Hill, in the Brown Hills. Named by VUWAE 1962-63 for Charles C. Rich, USARP geologist and deputy leader of the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Rich, William. b. 1800, son of Capt. Obadiah Rich and his wife Salome Lombard. Botanist, one of the scientific corps on USEE 1838-42, He joined the *Peacock* at Callao, and transferred to the *Vincennes* at San Francisco. He died in 1864.

Richard Black Coast *see* **Black Coast**

Baie Richard D'Abnour *see* **D'Abnour Bay**

Richard E. Byrd Memorial. Bronze bust of Admiral Byrd on a polished black Norwegian-marble pedestal donated by the National Geographic Society, and erected in Nov. 1965, just S of the Chapel of the Snows, at McMurdo.

The *Richard G. Matthiesen*. A 39,624-ton, 615-foot oil tanker built in Tampa in 1985 by the American Shipbuilding Company, for Ocean Product Tankers, of Houston, and capable of 16 knots. Named for a seaman of that name killed in the Philippines in 1944. For a long time this vessel was under charter to the U.S. Navy Military Sealift Command, who finally bought her in 2003. She was in Antarctic waters in 1991-92 (skipper unknown); and 1994-95 (Capt. Sven Samuelsen). She was in at McMurdo in 1999-2000 (unknown skipper), arriving at the edge of the ice on Jan. 12, 2000, and being escorted in to the pier by the *Polar Star*. On Jan. 13, 2000, she began pumping 6.2 million gallons of fuel across specially-laid pipes over 3½ miles of ice, to the station, because the sea-ice conditions prevented regular tankers getting in to McMurdo. Three days later she had finished pumping. She got back to Lyttelton, NZ, on Jan. 29, 2000, and then made her way back to the USA. She was back again in 2000-01, 2001-02, 2002-03, 2003-04, and 2004-05.

The *Richard Henry*. Sealing and whaling barque from Stonington, Conn., in the South Shetlands, 1843-45, under Capt. William Beck, and in company with the *Herald*. She was wrecked here in Feb. 1845.

Richard Point. 60°41' S, 45°38' W. The S entrance point to Williams Haven, 0.5 km SW of North Point, Signy Island, in the South Orkneys. Named by UK-APC on May 13, 1991, for Kenneth John "Ken" Richard, BAS terrestrial biology technician who wintered-over at Signy Island Station in 1979 and 1980. US-ACAN accepted the name.

Mount Richard Russell *see* **Mount Russell**

Caleta Richards *see* **Richards Cove**

Richards, Donald Wayne "Squatty Root." b. Feb. 10, 1932, Pittsburgh. Black American parachute rigger 2nd class (PR2), and member of the VX-6 (later VXE-6) para-rescue team, summer of 1959-60, winter of 1960, summer of 1960-61, winter of 1963, summer of 1963-64, summer of 1964-65, winter of 1965, summer of 1965-66, summer of 1970-71, summer of 1971-72, and summer of 1972-73. One can not even begin, in a book of this type, to explain his nickname, but suffice to say it was given him by a representative (and not inconsiderable) section of the NZ population. In 1967 he married a NZ girl named Maggee, and after retirement, he became a bridge crane operator for General Dynamics. In 2004 he moved from Narragansett, RI, to Florida, where he died, on Dec. 24, 2005, at West Marion Community Hospital, in Ocala.

Richards, John. He had already been skipper of the British sealer *George* on two voyages to Buenos Aires, and had also been captain of the *Lady Troubridge*, by the time he again became commander of the *George*, and took her down to the South Shetlands, for the 1820-21 sealing season.

Richards, Peter Anthony "Pete." b. Dec. 1, 1932, Sidlesham, near Chichester, Sussex, son of shopkeeper Ernest Richards and his wife Joyce Bryan. A professional met man from the time he left school, he worked at RAF Tangmere before moving to the Met Office at Dunstable. While at Dunstable he met a met man who had been 3 years in South Georgia; that and Niall Rankin's book *Antarctic Isle* (about South Georgia just after World War II), inspired him to apply for the South Georgia job. Instead, he was aked if he wanted to join FIDS for 3 years, which he did, as a meteorologist, and sailed from Southampton on the *Shackleton*, on Oct. 1, 1957, bound for Montevideo, Port Stanley, and South Georgia. On Nov. 23, 1957 he arrived at Signy Island Station, where he wintered-over as base leader and senior meteorologist in 1958. His ambition was to go to Guam. He was due to do two winters in Antarctica, but in the 1958-59 summer he developed a hernia, and the *John Biscoe* took him off Signy Island on April 20, 1959, for a successful operation at the hospital in Stanley. As he couldn't get back to Signy Island, he was seconded from FIDS to the Falkland Islands government, and on June 24, 1959, sailed on the *Darwin* for King Edward Point, South Georgia, where he served as a meteorologist. On April 14, 1960, he left South Georgia on the *John Biscoe*, arriving back in England on June 12, 1960. He went back to the Met Office, working at RAF Thorney Island, again at Dunstable, and at Gatwick Airport. He also did a 3-year tour in the Falklands, with his wife, Rosemary, and son. He was also involved in ornithology, helping to ring about 1500 black-browed albatrosses in the Falklands. He retired to Chichester.

Richards, Richard Walter "Dick." Also known as Wally, Richie, and Rick. b. Nov. 14, 1893, Bendigo, Victoria. After university in Melbourne, he became lecturer at the Junior Technical School, in Ballarat. In 1914 he answered an ad for a "fit young physicist," and thus went south with BITE 1914-17, on which he was one of the 7 survivors of Mackintosh's depot-laying Ross Sea Party of 10. He won the Albert Medal (in 1971 converted to the George Cross) for his feats, but he had become an old man at 40. A heart attack he had had on the ice, on Sept. 10, 1915, had not helped. He was principal of the School of Mines and Industry, in Ballarat, from 1946 to 1958, and died on May 8, 1985, at Point Lonsdale, NSW, the last survivor. *See* the Bibliography.

Richards, Walter George "Bill." b. March 8, 1929, Stanley, Falkland Islands, eldest son of English mechanic Lewis Moore Richards (who had settled in the Falklands after World War I) and his Falkland Islander wife Ellen Rosemary Davis. In the 1930s the family moved back to England, leaving Bill in the Falklands with his grandparents. As a teenager he worked as a Morse code operator in the Post and Telecommunications Department. He took an active part in the Boys Brigade, and in sport, and was a crack rifle shot, representing the Falklands at Bisley. He joined FIDS in 1947, and wintered-over as a handyman at Port Lockroy Station in 1948, and at Base B in 1949. On Jan. 5, 1951, in Stanley, he married a Falkland Islands girl, Thora Biggs, and they immediately went to Grytviken, in South Georgia, on a 2-year posting, and in 1956 they went to be with Bill's family in England, arriving there on the *Highland Monarch* on June 13, 1956 (at least Bill did; Thora and their son Brian had arrived on the *Reina del Pacifico* in March). Bill joined the Metropolitan Police, and rose steadily through the ranks to become superintendent of Greenwich, controlling "R" Division, before retiring in 1985. During the Falkland Islands War in 1982, he advised the British government on possible landing sites for the British forces, and he later made several trips back to the Falklands to advise on the best ways to re-form the local police force. He was seconded to the Falklands as chief of police, 1983-85, and retired in 1985. His wife died in 1995, and he re-married, to Shirley Middleton (née Jaffray), in 1997, returning to live in the Falklands. He died in Oct. 28, 2002, in Stanley.

Richards Cove. 62°35' S, 61°09' W. A small cove, 1.5 km E of Essex Point, Byers Peninsula, on the N coast of Livingston Island, in the South Shetlands. In 1822 Weddell named an island NE of this cove as Richards Island (probably in honor of Capt. John Richards), not knowing that Powell had already named it Window Island the year before. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1958-59. A colony of fur seals was found here in Feb. 1958. In order to preserve the Richards name in the area, this cove was thus named by UK-APC on July 7, 1959. US-ACAN accepted the name in 1960. The Argentines call it Caleta Richards.

Richards Inlet. 83°20' S, 168°30' E. A large, prominent, ice-filled inlet, into which 2 large glaciers fall from the Bowden Névé. 20 km wide, at the mouth of Lennox-King Glacier, it indents the Ross Ice Shelf for about 30 km just SE of Lewis Ridge, and immediately S of Cape Maude, 24 km N of the Beardmore Glacier. Named by NZGSAE 1959-60, for Dick Richards. NZ-APC accepted the name, and US-ACAN followed suit in 1961.

Richards Island *see* **Richards Cove**, **Window Island**

Richards Nunatak. 75°56' S, 159°45' E. A large nunatak just NE of McLea Nunatak, between that nunatak and Pudding Butte, or (to put it another way) between Sharks Tooth and Beta Peak, about 30 km SE of the Ricker Hills, in the Prince Albert Mountains of Victoria Land. Mapped by the Southern Party of NZGSAE 1962-63, and named by them for David Richards, radio operator at Scott Base that season, who shared field party work and was responsible for the training of the base's dog team in the absence of the base dog handler. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA accepted the name on May 18, 1971.

Cape Richardson *see* **Cape Bickerton**

Mount Richardson. 76°34' S, 144°39' W. Just W of Reece Pass, 5 km S of Mount Colombo, in the SE part of the Fosdick Mountains, in the Ford Ranges of Marie Byrd Land. Discovered aerially by members of West Base during USAS 1939-41, and named for Harrison Richardson. US-ACAN accepted the name in 1947.

Richardson, Edgar A. *see* **USEE 1838-42**

Richardson, Harrison Holt "Jack." b. June 16, 1919, Beaver, Pa., son of lawyer Harry B. Richardson and his wife Jean. While Jack was a teenager, Admiral Byrd came to speak at Beaver College (where Richardson's father was a trustee), Richardson heard him, and besieged the admiral with letters pleading to be taken on as a deck hand on the *Bear*, for the great man's upcoming USAS 1939-41. He got to be meteorological observer and dog driver at West Base during that expedition, and wintered-over, the youngest member. He took a 16-mm camera with him, and became the first American to take color movies in Antarctica. After Antarctica he graduated from Geneva College, and from the University of Pittsburgh Medical College, and became a radiologist. He joined the Navy, and became an officer, working in the Arctic, where he helped open the USAF base in Thule, Greenland. He returned to Beaver, working as a radiologist in two hospitals. He married Sarah Meanor "Sally" Brown. He died on July 17, 1999, at his son's home in Claiborne, Md.

Richardson, Hollis Eugene "Holly." b. June 27, 1904, in Lynn, Mass., son of David Franklin Richardson and his New Brunswick-born wife Lurania May Lyman. He grew up partially on the family's farm in Springfield, Mass., but his parents split up, and Lurania and her older son Harold went into the laundry business in Merrimack, NH, Tilton, and Beverly, Mass. Hollis began work in the lumber yards, as a laborer, when he was 14, but soon went into the family's laundry business (Anything Washable), as a van driver. He married first in 1922, and had two sons, Hollis Eugene, Jr. (known as Eugene) and Lyman Andrew. He married again, on Sept. 22, 1930, to Velma Mary Wilson, and had at least one child (in 1944). In the 1930s he became a trainer of sledge dogs in New Hampshire, and went as a dog driver on USAS 1939-41. He was due to winter-over at East Base, but a stomach ailment sent him back on the *Bear*, in March 1940. He was replaced by Lester Lehrke. From 1943 to 1946 he served in the U.S. Navy (mostly) during World War II, and died on May 4, 1963, in Phoenix, Ariz. Val died in 1959, in Lincoln, Maine, aged 48.

Richardson, John D. *see* **USEE 1838-42**

Richardson, Tony Haydn H. b. 1927, Wakefield, Yorks, son of Arthur Richardson and his wife Florence Morgan. He joined FIDS in 1957, as a meteorologist, left Southampton on the *Shackleton* on Oct. 1, 1957, and arrived in Montevideo on Nov. 1, 1957. That was the season Spanish flu broke out on the *Shackleton* and the same season she was holed below the waterline (see the ship's entry for details). As the Fids were rescued by the *Protector*, Richardson, guitar in hand, declared, "Stiff upper lip, chaps. After all,

we are British." After this episode, he wintered-over at Base D in 1958 and 1959. He later lived in Teddington, Mdsx.

Richardson Bluff. 70°47' S, 166°20' E. A steep, ice-covered rock bluff on the E side of Kirkby Glacier, opposite Frecker Ridge, about 3 km E of Mount Elliot, in the Anare Mountains of Victoria Land. Named by ANCA for Sgt. Alan Keith Richardson (b. April 12, 1930), RAAF, who wintered-over as engine fitter at Mawson Station in 1958, as a member of the Antarctic Flight, and who was also at Davis Station for a short time. He accompanied ANARE on the *Thala Dan* to the coast near this feature in 1962. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Richardson Cove. 60°44' S, 45°42' W. A large west-facing cove, between Conroy Point and Corral Point, on the SW side of Moe Island, off Signy Island, in the South Orkneys. Named by UK-APC on Nov. 15, 2006, for Michael George "Mike" Richardson, head of the Polar Regions Unit within the Foreign and Commonwealth Office, 1992-2006. He had a been a BAS zoologist, wintering-over at Signy Island Station in 1971 and 1972, being base commander the second winter. US-ACAN accepted the name on July 17, 2007. It falls within ASPA #109. Dr. Richardson was responsible for drafting Annex 5 to the Environmental Protocol to the Antarctic Treaty, which established ASPAs and ASMAs.

Richardson Glacier. 70°28' S, 63°42' W. A broad tributary glacier flowing SE from the Columbia Mountains to enter the upper part of the Clifford Glacier just SE of Mikus Hill, in the north-central part of Palmer Land. Mapped by USGS in 1974, from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Harriet Richardson (1874-1958), American zoologist and author of several reports on the crustacea collected by Charcot on his two expeditions (FrAE 1903-05 and FrAE 1908-10). She was known as "the First Lady of Isopods." UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Richardson Hill. 79°48' S, 156°40' E. Also called Richardson Nunatak. An ice-free hill or nunatak, rising to about 500 m above the ice of Island Arena, above the Darwin Glacier, 13 km NE of Mount Ellis, on the N side of the Darwin Mountains. Mapped by VUWAE 1962-63, and named by them for Laurence R. "Larry" Richardson, professor of zoology at the Victoria University of Wellington, an active supporter of the university's Antarctic expeditions. NZ-APC accepted the name, US-ACAN did so in 1965, and ANCA followed suit.

Richardson Island. 69°24' S, 76°04' E. The more westerly of a pair of islands, about 0.6 km W of the NW tip of Stornes Peninsula, and about 1 km S of Knuckey Island, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Sgt. Alan Richardson (*see* **Richardson Bluff**).

Richardson Lakes. 66°45' S, 50°38' E. A small group of meltwater lakes at the foot of Mount Riiser-Larsen on the NW side, just E of Amundsen Bay. Photographed aerially by ANARE in 1956, and first visited in Nov. 1958, by Graham Knuckey's ANARE party. Named by ANCA on July 22, 1959, for Alan Richardson (*see* **Richardson Bluff**). US-ACAN accepted the name in 1961.

[1]**Richardson Nunatak** *see* **Richardson Hill**

[2]**Richardson Nunatak**. 66°22' S, 64°56' W. Rising to about 1500 m, in the S part of Hugi Glacier, between the Bruce Plateau and the head of Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Edward Cleland Richardson (1872-1954), the "father of British skiiing." US-ACAN accepted the name in 1971.

Richardson Peak. 67°20' S, 67°21' W. Rising to about 600 m, at the E side of Vallot Glacier, in the Tyndall Mountains, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1957, and visited by BAS geologists in 1980-81. Named by UK-APC on April 3, 1984, for Hilda Richardson (1924-2000), secretary of the British Glaciological Society, 1953-62; and secretary general of the International Glaciological Society, 1962-93. US-ACAN accepted the name. It appears in the British gazetteer of 1986. In 1993, when Miss Richardson retired, she became the first recipient of the Richardson Medal, named after her.

Riches, Sidney Barnes. b. 1880, at 4 Sidney Street, Plaistow, London (hence his name), son of Welsh dock laborer George Barnes Riches and his wife Ellen Gravney. His mother died when he was three. At Poplar, on July 26, 1907, he signed on to the *Nimrod* as an able seaman and fireman, for BAE 1907-09. He kept a journal, covering the period Jan. 1 to March 8, 1908, and Dec. 1, 1908 to Aug. 30, 1909. The day after his diary ended, he was discharged in Poplar. In 1913, in West Ham, he married Ethel M. Norris, and died in 1929, in Canning Town, London.

Riches, Sidney Herbert. b. Oct. 14, 1871, Newington, London, but grew up in Southwark, son of Suffolk-born laborer Charles Riches and his wife Diana Stone, who was forced to take in laundry when her husband died in 1877. Sidney moved to the Falklands in the 1880s. In 1897 he became a police constable there, and in 1912 a customs officer. He married Albert Newing's sister, Annie Maud, and the Newings and the Richeses lived next door to each other on Allardyce Street. In 1919-20 he was appointed Falkland Islands Dependencies administrator on Deception Island, for the season, and thus customs officer for the South Shetlands. He was in that position again in 1923-24 and 1924-25. His daughter, Vera, was the first girl to marry on South Georgia (to Alfred George Nelson-Jones, clerk to the South Georgia magistrate, on March 12, 1932). Riches took his wife and daughter to London on the *La Paz*, arriving there on April 18, 1932, and there he handed in his retirement notice, on May 1, 1932, aged 60. He died in 1957.

Richieu, Jean-Hippolyte. b. Oct. 28, 1810, Cogolin, France. Pilot on the *Zélée* during FrAE 1837-40.

Richmond, William *see* **USEE 1838-42**

Richmond Peak. 75°48' S, 115°49' W. Rising to 3595 m, it is the central and culminating peak of the Toney Mountain massif, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1971. Named by US-ACAN in 1976, for Addison E. Richmond, Jr. (b. 1933), of the U.S. State Department, chairman of the Interagency Committee on Antarctica, 1971-72.

Mount Richter. 81°58' S, 158°47' E. A mountain rising to 2550 m between Gutenberg Glacier and the upper Starshot Glacier, 5 km N of Mount Hubble, in the N part of the Holyoake Range, in the Churchill Mountains. Named by US-ACAN on Jan. 29, 2003, for physicist Charles F. Richter, of the California Institute of Technology, 1930-70, who, with Beno Gutenberg in 1935, developed the Richter Scale, which measures the magnitude of earthquakes. NZ-APC accepted the name on Feb. 27, 2003.

Richter-Eispiedmont. 70°36' S, 165°15' E. An ice piedmont, W of the Dwyer Escarpment, overlooking the N coast of Victoria Land. Named by the Germans.

Richter Glacier. 77°10' S, 155°25' W. A low-gradient coastal glacier 16 km W of the Scott Nunataks, on the N side of Edward VII Peninsula. It shares a common saddle with Butler Glacier, and flows NW to the sea, where it forms a small glacier tongue. The glacier and tongue are depicted on the map produced by ByrdAE 1928-30, the map indicating that Shirase's Japanese party traversed up this glacier to the summit of the Scott Nunataks in Jan. 1912. Mapped in detail by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Gregory S. Richter, meteorologist and scientific leader at Byrd Station during the winter of 1968.

Richter Peaks. 71°20' S, 70°21' W. A group of peaks rising to about 1385 m, near the S end of the Walton Mountains, on Alexander Island. Named by US-ACAN for Joseph J. Richter, USARP biologist at Palmer Station in 1965-66 and 1966-67. UK-APC accepted the name on June 11, 1980.

Richthofen Pass. 66°01' S, 62°42' W. A pass, 1.5 km wide, running E-W between Mount Fritsche and the rock wall N of McCarroll Peak, at the S end of the Oscar II Coast, on the E coast of Graham Land. Discovered from Borchgrevink Nunatak on Oct. 20, 1902, by SwedAE 1901-04, roughly mapped in 65°55' S, 62°20' W, and named by Nordenskjöld as Richthofens Dal (i.e., "Richthofen Valley"), for Ferdinand Paul Wilhelm, Freiherr von Richthofen (1833-1905), German traveler, geographer, geologist, and (incidentally) uncle of Manfred von Richthofen, the World War I air ace known as the "Red Baron." From 1913 onwards there existed a school of thought that this was a body of water, and it was named Richthofen Strait, or Richthofen Sund ("sund" means "sound"). It appears on a

British chart of 1921 as Richthofen Valley. It was recognized from the air, but not photographed, by Wilkins on Dec. 20, 1928, and again on Dec. 19, 1929. At that stage, it was believed to lie between 65°40' S and 66°05' S. It appears as Richthofen Valley on British charts of 1940 and 1948, and that was the name accepted by US-ACAN in 1947 (after they had rejected Richthofen Sound). During a survey conducted by Fids from Base D in Nov. 1947, poor visibility in the area N and W of Borchgrevink Nunatak prevented identification of the feature, but is was finally identified as a pass during a FIDS re-survey in Sept. 1955. UK-APC accepted the name Richthofen Pass on March 3, 1958, and US-ACAN followed suit in 1960. It appears as such on a British chart of 1961.

Richthofen Sund *see* **Richthofen Pass**

Richthofen Valley *see* **Richthofen Pass**

Bahía Ricke. 64°19' S, 63°38' W. A shallow bay, about 1.5 km SW of Cape Grönland, on the NW coast of Anvers Island, in the Palmer Archipelago. Named by the Chileans for Capitán de navío Arturo Ricke Schwerter, commodore of ChilAE 1966-67. The Argentines call it Bahía Esquivel.

Ricker Canyon. 84°47' S, 115°18' W. A steep-sided, ice-filled canyon, indenting the N escarpment of the Buckeye Table between Darling Ridge and Schulthess Buttress, in the Ohio Range of the Horlick Mountains. Named by US-ACAN in 1962, for John F. Ricker, geologist with the Ohio State University expedition to the Horlick Mountains in 1961-62. *See also* **Ricker Hills**.

Ricker Dome. 82°04' S, 162°43' E. A snow-free summit rising to 1720 m, 5 km E of Smith Bluff, in the Nash Range. Mapped by USGS from tellurometer surveys, and USN air photos taken betwen 1960 and 1962. Named by US-ACAN in 1966, for Karl E. Ricker, USARP biologist at McMurdo in 1961.

Ricker Hills. 75°41' S, 159°10' E. A group of mainly ice-free hills, about 14 km in extent, just W of Hollingsworth Glacier, between Tent Rock and the upper David Glacier, in the Prince Albert Mountains of Victoria Land. Discovered by the Southern Party of NZGSAE 1962-63, and named by them for John F. Ricker (*see also* **Ricker Canyon**), a member of the party. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

Ricker Peak *see* **Ricker Hills**

Rickinson, Lewis Rafael "Ricky." b. April 21, 1883, Lee, Lewisham, Kent, son of traveler Charles Napier Rickinson and his wife Emma Isaac. He made his way back from Las Palmas on the *Highland Glen*, arriving in London on Dec. 29, 1913, and was chosen by Shackleton to be chief engineer on the *Endurance* during BITE 1914-17, during which he had a (non-fatal) heart attack on April 17, 1916, as the party moved onto Cape Wild, Elephant Island. He served out the rest of the war in the RN, and then became a naval architect and consulting engineer. In 1918 he married Marjorie Kate Wrong (the former Marjorie Snell, she had married Colin Wrong in 1915), in Barnet, Herts. He died of lung cancer at Newbury, Berks, on April 16, 1945, while serving as engineer commander on the shore-based *Pembroke*.

Rickmers Glacier. 66°15' S, 64°55' W. Flows WNW into Hugi Glacier, just S of Caulfeild Glacier, on the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these photos. Named by UK-APC on July 7, 1959, for Willi Gustav Rickmer Rickmers (1873-1965), German ski pioneer. US-ACAN accepted the name in 1971.

Ricky Glacier *see* **Blackwelder Glacier**

Riddell Nunataks. 69°54' S, 64°20' E. A group of low, exposed rock ridges, or nunataks, with snow and ice extending nearly to the summits, trending E-W at elevations of between 2140 m and 2260 m above sea level, 8 km NW of the Anare Nunataks, in Mac. Robertson Land. Discovered by the ANARE party led by Bob Dovers in 1954. Named by ANCA for Alfred Davidson "Alfie" Riddell (b. June 10, 1925), carpenter at Mawson Station in 1955. He had also been on Heard Island in 1950 and Macquarie Island in 1952. US-ACAN accepted the name in 1961.

Riddiford Nunatak. 80°59' S, 159°48' E. A small but conspicuous nunatak, rising to about 1200 m, with an adjoining lower outcrop, about 5 km WNW of Abercrombie Crests, in the Darley Hills of the Churchill Mountains. Named by US-ACAN on Jan. 29, 2003, for Charles Ernest Riddiford (1896-1968), British-born *National Geographic Magazine* cartographer and typographer from about 1923 to 1958.

Riddle Islands. 65°39' S, 64°33' W. A group of 4 small islands off the SW end of Chavez Island, in Bigo Bay, off the Graham Coast, on the W coast of Graham Land. First charted by BGLE 1934-37. Surveyed by Fids from Base J in Aug. 1957, and so named by them because these islands were difficult to find among the icebergs frozen into the surrounding sea ice. UK-APC accepted the name on July 7, 1959, and it appears on a 1960 British chart. US-ACAN accepted the name in 1971.

Mount Riddolls. 72°48' S, 167°46' E. A very prominent mountain, rising to 3295 m, directly at the head of Rudolph Glacier, in the Victory Mountains of Victoria Land. Named by the Mariner Glacier Geology Party (i.e., the Northern Party) of NZGSAE 1966-67, for Bruce W. Riddolls, assistant geologist with the party. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

The Ridge *see* **Jabet Peak**

Isla Ridge *see* **Ridge Island**

Monte Ridge *see* **Jabet Peak**

Pico Ridge *see* **Ridge Peak**

Ridge Island. 67°42' S, 67°06' W. A ridge-shaped island, 10 km long, and 2.5 km wide, 5 km E of Pourquoi Pas Island, in the center of Bourgeois Fjord, off the Fallières Coast, on the W coast of Graham Land. Discovered and named descriptively in 1936, by BGLE 1934-37. It appears on Rymill's 1938 map of the expedition, and also on a 1948 British chart. Re-surveyed by Fids from Base E in 1948-49. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a Chilean chart of 1947 as Isla Cerro (i.e., "hill island"), and on a 1949 Argentine chart as Isla Ridge. On a 1953 Argentine chart it appears translated as Isla Cabellete, and that name was accepted by the Argentine gazetteer of 1970. The 1974 Chilean gazetteer accepted Isla Ridge.

Ridge Peak. 63°30' S, 57°03' W. A pyramidal rocky peak, rising to 510 m, with a prominent ridge extending eastward from it (hence the name given to it in March 1946 by Fids from Base D, who surveyed and charted it that month), 4 km SW of Trepassey Bay, between that bay and Duse Bay, and between Cairn Hill and Lizard Hill, on Tabarin Peninsula. First explored by a party from SwedAE 1901-04. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and also in the 1955 British gazetteer. Further surveyed by FIDS in Feb. 1956. It appears on a Chilean chart of 1961 as Pico Ridge, and that name was accepted by the 1974 Chilean gazetteer.

Ridge Summit. 77°53' S, 162°45' E. A ridge, rising to 5032 feet, running in an easterly direction from Cathedral Rocks to Blue Glacier, in Victoria Land. Named by Grif Taylor's Western Journey Party during BAE 1910-13. The name appears in the 1958 NZ provisional gazetteer.

Ridgeway Glacier. 73°24' S, 167°14' E. Also spelled (erroneously) as Ridgway Glacier. A short glacier in the E part of the Mountaineer Range, flowing SE between Spatulate Ridge and Gauntlet Ridge, into Lady Newnes Bay, on the coast of Victoria Land. Named by NZ-APC in 1965, for Norman M. Ridgeway, senior scientist at Hallett Station in 1963-64. US-ACAN accepted the name in 1966.

Ridgway Glacier *see* **Ridgeway Glacier**

Camp Ridley. On Ridley Beach, Cape Adare. This was Borchgrevink's camp for himself and his 9 men during the 1899 wintering-over of BAE 1898-1900. Borchgrevink named it for his English mother, Annie Ridley (b. Aug. 19, 1832, daughter of ironmonger Samuel Ridley and his wife Elizabeth Ranson), who, before she married the explorer's father, had married Carsten Tank Egeberg in Ipswich in 1855.

Isla Ridley *see* **Ridley Island**

Ridley Beach. 71°18' S, 170°13' E. A cuspate beach feature in Robertson Bay, forming a triangle 1.5 km long on each side, 1.5 km S of Cape Adare, on the W side of Adare Peninsula, in northern Victoria Land. During BAE 1898-1900 Borchgrevink and his party camped here, at Camp Ridley (he named the camp for his mother — it was her maiden name — *see* **Camp Ridley**, above). In 1911, during BAE 1910-13, Campbell's Northern Party disembarked here from the *Terra Nova*, and they extended the name Ridley to the whole beach. US-ACAN accepted the name, and NZ-APC followed suit. There is an Adélie penguin rookery here. *See also* **Spit**.

Ridley Head *see* **Ridley Island**

Ridley Island. 61°51' S, 58°01' W. Also called Ridley Head. An island 3 km N of False Round Point, on King George Island, in the South Shetlands. Discovered and roughly charted by Bransfield on Jan. 21-22, 1820, when the name Ridley's Islands was given to the main island, a smaller island, and offlying rocks. It appears as such on Bransfield's 1820 chart, as well as on charts from later sealers in the 1821 and 1822 period. On Capt. Sherratt's 1821 map, it appears as Round Island, and Round Isle. In Capt. John Davis's log of April 1, 1821, it appears as Hannah Island, named after the *Hannah*. It appears as Ridley Island on an 1822 British chart, and on Powell's chart, published in 1822, it appears as Ridley's Isle. It appears on an 1861 Spanish chart as Isla Ridley. The name Ridley Islands appears on an 1894 U.S. Hydrographic Office chart, referring to the main island, the smaller island, and the offlying rocks. On Friederichsen's 1895 German map it is called Ridley Insel. In Jan. 1937, the Discovery Investigations re-surveyed this island, and their 1937 chart shows Ridley Island plotted in 61°48' S, 57°56' W. They also named the summit of the island as Ridley Peak, describing it as the most prominent feature to mariners on the N coast of King George Island. This name did not stick. US-ACAN accepted the name in 1952, and UK-APC followed suit in Sept. 8, 1953. It appears as such in the 1955 British gazetteer. In those days the island was plotted in 61°50' S, 57°57' W. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1958. The coordinates were corrected in time for a British chart of 1962, and, with the new coordinates, the feature appears in the 1977 British gazetteer. Both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Isla Ridley. Last plotted by the UK, in late 2008.

Ridley Peak *see* **Ridley Island**

Ridley's Islands *see* **Ridley Island**

Rieber-Mohnberget. 74°24' S, 10°00' W. A partly snow-covered crag in the ice, in the SW part of Milorgfjella, in the N part of the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for lawyer Fredrik Wesenberg Rieber-Mohn (1892-1944), Resistance leader in Bergen during World War II. Arrested twice, he died in a concentration camp.

Rieckvorgebirge. 70°34' S, 164°15' E. Foothills NW of Buell Peninsula, at the NW end of the Anare Mountains. Named by the Germans.

Riegel. The name signifies a rock bar. There are a few riegels in Antarctica: Bonney, Bridge, Nussbaum, Parish, Sauter, and Todt.

Península Riesco *see* **Rasmussen Peninsula**

Mount Rifenburgh. 82 57 S, 166 20 E. Rising to 2690 m, 3 km E of the head of Davidson Glacier, in the Holland Range. Mapped by USGS from their own 1961-62 tellurometer surveys, and also from USN air photos taken in 1960. Named by US-ACAN in 1966, for Capt. Edward G. Rifenburgh (b. Dec. 29, 1915, NY. d. Dec. 22, 1977, Fla.), commander of the *Arneb* during OpDF 63 (i.e., 1962-63).

The *Riff Raft*. A 12-foot-square plywood raft attached to the land by a steel cable. It had a steel frame and was kept afloat by eight 55-gallon oil drums welded together. It had a 42-inch hole in the middle of the deck through which marine specimens could be brought up from the water in McMurdo Sound. Three research assistants in wet suits formed the crew. Named by its pioneer, Dr. Mary Alice McWhinnie, in 1974.

The *Rig Mate*. A 900-ton Norwegian ship in the area of the Antarctic Peninsula, 1975-76, bringing down a 15-man expedition of mountain climbers and scientists under Prof. Renato Cepparo. Flavio Barbiero was 2nd-in-command. On Dec. 22, 1975 they left Lisbon. After a stop in Montevideo, they arrived at King George Island, in the South Shetlands. One group, a scientific group, stayed on this island, and established at Admiralty Bay, in Jan. and Feb. 1976, a station they called Concha Italia, the station being made of prefabricated buildings. Another group climbed mountains on Wiencke Island.

Mount Rigby. 85°33' S, 154°35' W. Rising to 950 m, 3 km NW of Mount Hastings, just W of the mouth of Scott Glacier, in the Karo Hills. Discovered and roughly mapped by ByrdAE 1928-30. Named by US-ACAN in 1967, for John F. Rigby, geologist at McMurdo, 1965-66.

Mount Rigel. 70°24' S, 66°52' W. Rising to 1910 m, it is the highest peak on the Orion Massif, on the Rymill Coast, on the W coast of Palmer Land, at George VI Sound. Mapped by USGS from USN air photos taken between 1966 and 1969. Named by UK-APC on July 21, 1976, for Rigel, the star in the constellation Orion. US-ACAN accepted the name, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Rigel Skerries. 66°55' S, 57°18' E. A group of islands and rocks in the NW part of the Øygarden Group, in the S part of the entrance to Edward VIII Bay. Kulikowski Skerry is the easternmost one. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named the largest of this group as Utskjera (i.e., "the outer skerry"). Visited by an ANARE party in 1954. The group was named by ANCA on Feb. 18, 1958, as Rigel Skerries, for the star Rigel, which was used for an astrofix near here. US-ACAN accepted the name in 1965.

Riggs Peak. 63°02' S, 62°37' W. Rising to 1680 m, 2.1 km SW of Neofit Peak, 5 km SW of the summit of Mount Foster, and 8.5 km NE of Cape James, it overlooks Letnitsa Glacier to the S and Gramada Glacier to the E and SE, in the Imeon Range, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for Elias Riggs (1810-1901), the American missionary and linguist who contributed greatly to the Bulgarian national revival, and organized the first translation, printing, and dissemination of the Bible in modern Bulgarian.

Right whales. Order: cetacea (whales); suborder: Mysticeti (baleen whales). This is one of the two types of baleen whale, the other being rorquals (q.v.). They were the right whales to catch — slow swimmers, they floated when dead (most whales sink), they had valuable baleen and high quality oil. There are two right whales in Antarctic waters, the southern right whale (q.v.), and the pgymy right whale (q.v.).

Rightangle Peak. 73°31' S, 94°25' W. A small rock peak between Snowplume Peak and Camelback Ridge, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and so named by them because, when seen from the northward (i.e., from Camp Minnesota), this peak presented a right-angle profile facing west. US-ACAN accepted the name in 1963.

Rignot Glacier. 73°06' S, 102°00' W. About 4 km long, it flows N from King Peninsula, into the Abbot Ice Shelf. Named by US-ACAN on Jan. 31, 2003, for geophysicist Eric J. Rignot, of the Jet Propulsion Lab in Pasadena, who used field and remotely sensed data to study Antarctic glacier mechanics from the 1990s.

Islotes Rigsby *see* **Rigsby Islands**

Rigsby Islands. 66°40' S, 67°37' W. A small group of ice-capped islands off the NE coast of Adelaide Island, about 3 km SE of the Sillard Islands, in the entrance to Buchanan Passage. Mapped by FIDS cartographers from air photos taken by RARE 1947-48 and by FIDASE in 1956-57, and also from ground surveys conducted by Fids from Base W in 1958. Named by UK-APC on Sept. 23, 1960, for George Pierce Rigsby (1915-2009), U.S. geologist specializing in the investigation of ice crystal structure and the plasticity of ice. It appears in the 1961 British gazetteer. US-ACAN accepted the name in 1965. The Argentines call this feature Islotes Rigsby.

Pik Rihtgofena *see* **Mount Zuckerhut**

Mount Riiser-Larsen. 66°47' S, 50°40' E. A prominent mountain, rising to 870 m, at the NW end of the Tula Mountains, on the E side of Amundsen Bay, in Enderby Land. Discovered on Jan. 13 or 14, 1930, during BANZARE 1929-31, and named by Mawson for Hjalmar Riiser-Larsen. US-ACAN accepted the name in 1947, and ANCA followed suit. On Feb. 14, 1958, an ANARE party led by Phil Law made a landing from a motor launch at the foot of this mountain.

Riiser-Larsen, Hjalmar. b. June 7, 1890, Oslo. He was entered into the Norwegian Naval Academy in 1909, and in 1915 joined the Norwegian Naval Air Force, becoming a pioneer aviator. In 1925 he was the pilot for Amundsen and Ellsworth's attempt to fly to the North Pole in 2 Dorniers, and the 6 men of the expedition only just got out alive — in one plane. In 1926 he was the pilot of Nobile's airship *Norge* as it became the first flight over the North Pole. In 1928 he was involved in the search for both Nobile and Amundsen in the Arctic. In 1929-31 Captain Riiser-Larsen led the whaling and exploring expedition to Antarctica in the *Norvegia*. He carried 2 airplanes, making his first flight from the ship

on Dec. 7, 1929. On Dec. 22, 1929 he flew to the coast of Enderby Land, and on Jan. 15, 1930 he discovered Queen Maud Land. On Feb. 18, 1930 he discovered the Princess Martha Coast, and in early 1931 the Princess Ragnhild Coast. Major Gunnar Isachsen commanded the *Thorshavn*. Riiser-Larsen was back in the Antarctic in 1932-33, whaling and exploring with Kjelbotn and Devold, with the *Thorshavn*, *Thorshammer*, and *Torlyn*. In 1939 he became manager of the newly-formed DNL Airline, which, by 1946 was the most successful airline in Norway. During World War II he was exiled to London, and then, in Canada, formed and ran Little Norway, the Norwegian Air Force's training camp. In 1941, back in London, he became commander-in-chief of the Norwegian Naval Air Force. His running of the organization was highly controversial, and he resigned, embittered, in 1946, going back with DNL and its successors until he retired in 1955. In 1946, when NBSAE 1949-52 was being planned, he was to have led the expedition. He was in London in April 1947, talking to the Royal Geographical Society about it, but was replaced by John Giaever, and didn't go. He died on June 3, 1965, in Copenhagen. *See* Bibliography.

Riiser-Larsen Basin. 72°06' S, 14°45' W. A submarine feature off the Riiser-Larsen Ice Shelf. It actually runs between 71°48' S and 72°24' S, and between 13°30°W and 16°00' W. The name was proposed by Heinrich Hinze in Jan. 1997, in assocation with the ice shelf, and was accepted by international agreement in June of that year.

Riiser-Larsen Ice Shelf. 72°40' S, 16°00' W. An ice shelf, about 400 km long, on the W coast of Queen Maud Land, it extends from Cape Norvegia in the N, to Lyddan Ice Rise and Stancomb-Wills Glacier in the S. Parts of this ice shelf were discovered variously in 1904 by ScotNAE 1902-04, in 1915 by BITE 1914-17, and in 1930 by Riiser-Larsen. Most of it was photographed aerially in 1951-52, during NBSAE 1949-52, and mapped from these photos by Norwegian cartographers, who named it Riiser-Larsenisen, for Hjalmar Riiser-Larsen. It was also surveyed from the ground by NorAE 1956-60, and, in 1958-59, photographed aerially during the same long expedition. Additional delineation of the S and landward margins of the ice shelf was accomplished from USN air photos taken between 1966 and 1969. US-ACAN accepted the translated name in 1970. The SW limit of the ice shelf was undefined in the original naming, but U.S. Landsat images taken in Feb. 1974 show Lyddan Ice Rise as the natural boundary. The British describe this feature as between the Lyddan Ice Rise and 20°00' W, i.e., only a small portion of that described by the Americans, and plot it in 74°25' S, 20°00' W.

Riiser-Larsen Peninsula. 68°55' S, 34°00' E. Also called Cook Peninsula. A large peninsula projecting into the Haakon VII Sea, and forming not only the divide between the Prince Harald Coast and the Princess Ragnhild Coast, but also the W portal to Lützow-Holm Bay. Discovered on Feb. 21, 1931, on a flight from the *Norvegia*, by Hjalmar Riiser-Larsen, for whom it was named by the Norwegians (as Riiser-Larsenhalvøya). US-ACAN accepted the translated name in 1952.

Riiser-Larsenhalvøya *see* **Riiser-Larsen Peninsula**

Riiser-Larsenisen *see* **Riiser-Larsen Ice Shelf**

Gory Rikhtgofena *see* **Gruber Mountains**

Riksa Islands. 62°23' S, 59°47' W. Three adjacent islands in the Aitcho Islands, 250 m W of Bilyana Island, 650 m NE of Emeline Island, and 2.1 km E of Holmes Rock, on the W side of English Strait, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlements of Kamenna (Stone) Riksa and Lower Riksa, in northwestern Bulgaria.

Rila Point. 62°37' S, 59°58' W. A point forming the E side of the entrance to Bruix Cove, on the coast of Moon Bay, 3.2 km NW of Delchev Peak, 4.3 km NNE of Plovdiv Peak, 7.4 km E of Atanasoff Nunatak, and 8.75 km W of Renier Point, on Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, for Rila Mountain, in Bulgaria. UK-APC accepted the name on Dec. 16, 2003.

Mount Riley. 86°11' S, 147°37' W. Rising to 2100 m, along the NE side of Long Valley, just W of the California Plateau, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. (jg) Stephen G. Riley, VX-6 photographic officer on OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67).

Riley, John *see* **USEE 1838-42**

Riley, Owen. b. 1880, Edinburgh, son of Edward Riley and his Irish wife Elizabeth. When Owen was an infant, the family moved to Newcastle, where the father died, and Elizabeth had to hawk fish for a living. Owen joined the Merchant service, going to work for the Orient Line, and in 1901 joined the crew of the *Ophir* on its run to the Antipodes. He was an able seaman on the *Morning*, in 1902-03, during the relief of BNAE 1901-04.

Riley, Quintin Theodore Petroc Molesworth. b. Oct. 27, 1905, in St Columb, Cornwall, youngest son of antiquarian Athelstan Riley, Seigneur de la Trinité. Educated at Lancing and Cambridge, he was meteorologist on the British Arctic Air Route Expedition, with Rymill in Greenland. He was assistant meteorologist on BGLE 1934-37, and, during that Antarctic expedition, was keeper of the motor boat *Stella*. In 1938 he joined the RNVR, and during World War II served as a commando and in intelligence. He married Dorothy Croft in 1942, and in 1943 was promoted to lieutenant commander. He was technical adviser on the 1948 movie *Scott of the Antarctic* (q.v.), and the same year was secretary of the Olympic yachting regatta. In 1951, during the Festival of Britain, he gave exploring demonstrations in the Dome of Discovery. He was killed in a car crash, near Chelmsford, on Christmas Day, 1980. Col. Jonathon P. Riley wrote a book about him in 1989, *From Pole to Pole: the Life of Quintin Riley, 1905-1980*.

Riley, William A. "Willy." b. 1877, NY. In 1910 he went to Alaska, where he worked as a mechanic in the cannery at Andreafski. In 1914 he married a 13-year old Tongass Eskimo named Martha Williams, and they had a couple of daughters, Ivy and Amy, and a son Buddy. He was taken on the ByrdAE 1928-30 as dog handler, went down on the *Sir James Clark Ross*, got as far as Wellington, and on Nov. 19, 1928 had to go home because his father had died in Trenton, Michigan. At least that was the official story. The truth was he was a drunk. Either way, he never made it to Antarctica. But he wasn't out of the story. On his return he claimed Byrd had commissioned him to go to the Yukon and bring back 37 dogs as replacements for those that had died, but Byrd denied this. Willy returned to his family in Alaska, and became a salmon fisherman.

Riley Glacier. 70°06' S, 67°55' W. A heavily crevassed glacier, about 22 km long and 27.5 km wide, flowing WSW from the W side of Palmer Land, to enter George VI Sound between (to the N) the Traverse Mountains and (to the S) Mount Dixey and Mount Pitman. Discovered and photographed aerially, and surveyed from the ground in Oct. 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map of the expedition. Partially re-surveyed by Fids from Base E in 1949, and named by them for Quintin Riley. The feature they actually named was this glacier and the ice piedmont to the N (that would later become known as Warren Ice Piedmont). UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. In those days it was plotted in 70°03' S, 68°20' W. Following further surveys by BAS personnel from Base E between 1970 and 1972, the name Riley Glacier was limited to this feature by UK-APC on Dec. 8, 1977, and appears as such on the 1979 USGS sketch map of the N part of Palmer Land, as well as in the 1980 British gazetteer. The coordinates have been corrected since this redefinition took place.

Riley Peak. 75°11' S, 69°15' W. A distinctive peak, rising to 1280 m above sea level, on the E spur at the S end of the ridge extending 5 km SSW from Mount Jenkins, in the Sweeney Mountains. Named by UK-APC on Oct. 9, 2009, for Teal Richard Riley (b. 1970, Evesham, Worcs), BAS geologist from 1995, who worked on the theory of the supercontinental break-up. He did not winter-over.

Rileyryggen. 80°33' S, 19°36' W. A small mountain in the Pioneers Escarpment, the most easterly part of the Shackleton Range, in the most southwesterly part of Queen Maud Land. Named by the Norwegians for Norris W. "Rambling Jack" Riley, BAS general assistant at Halley Bay Station for the 1968 and 1969 winters. Name means Riley Ridge. The Russians call it Gora Lavochkina. *See also* **Gallsworthyryggen**, **Carterknattane**, and **Nobleknausane**.

Rils Nunatak. 69°45' S, 75°15' W. A coastal nunatak, rising to 125 m above sea level, and 200 m long, on the N coast of Charcot Island, between Mount Monique and Mount Martine, in

the Marion Nunataks. Discovered in 1910, during FrAE 1908–10, and photographed aerially in 1947 during OpHJ 1946–47. Visited in Jan. 1975 by BAS geologists. Named acronymically by UK-APC on June 6, 2007, for Ronald Ian "Ron" Lewis-Smith (b. 1942), plant biologist with BAS from 1964 to 2002, the first biologist to visit the site, in Dec. 1997, and to recognize the unique flora found here. He had wintered-over at Signy Island Station in 1966.

Rim Glacier. 77°13' S, 160°25' E. A glacier, 16 km long and 3 km wide, flowing N from the Polar Plateau in a deep valley between Robinson Peak and Mount Vishniac, into the Mackay Glacier, in Victoria Land. In keeping with the practice of naming various features in this area after bicycling terms, NZ-APC named this one in 1995. US-ACAN accepted the name in 1996. *See* **Bicycles**.

Picos Rima *see* **Rime Crests**

Rime Crests. 60°38' S, 45°25' W. Five rime-covered crest-like summits, with prominent ice bosses and fluted walls, rising to about 1170 m, and surmounting the E side of Sunshine Glacier, in the E part of Coronation Island, in the South Orkneys. Surveyed by Fids from Signy Island Station in 1948–49, and the highest peak was descriptively named by them as Rime Peak. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. Re-surveyed by Fids from Signy between 1956 and 1958. On July 7, 1959, as a result of these latest FIDS surveys, UK-APC extended the name to all of the summits, and US-ACAN accepted the new name Rime Crests in 1963. The Argentines call them Picos Rima.

Rime Peak *see* **Rime Crests**

Rimebrekka *see* **Rimebrekka Slope**

Rimebrekka Slope. 72°08' S, 13°14' E. A crevassed ice slope (the Norwegians describe it as an icefall, but their naming of it belies that) 6 km S of Rimekalvane Nunataks, in the S part of the Weyprecht Mountains, in the W part of the Hoel Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Rimebrekka ("the frost slope"). US-ACAN accepted the name Rimebrekka Slope in 1966.

Rimekalvane *see* **Rimekalvane Nunataks**

Rimekalvane Nunataks. 72°03' S, 13°38' E. A group of small nunataks 6 km E of the Dekefjellrantane Hills, in the Weyprecht Mountains, in the W part of the Hoel Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938–39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Rimekalvane (i.e., "the frost calves"). US-ACAN accepted the name Rimekalvane Nunataks in 1966. The Russians call them Skaly Amurskie.

Rimington Bluff. 73°35' S, 68°22' E. A rocky bluff at the S end of the Mawson Escarpment, just S of Tingey Glacier. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1960, and 1973. Named by ANCA on Nov. 27, 1973, for surveyor George Robert Lindsay "Rim" Rimington (b. 1908, Kew, Vic.), assistant director of the Division of National Mapping, 1961–66.

Roca del Rincón *see* **Corner Rock**

Rindebotnen *see* **Rindebotnen Cirque**

Rindebotnen Cirque. 72°33' S, 3°20' W. A cirque (or corrie) indenting the NE side of Høgsaetet Mountain, just NE of Raudberget, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and named by them as Rindebotnen ("the mountain cirque"). US-ACAN accepted the name Rindebotnen Cirque in 1966.

Rindehallet *see* **Rindehallet Slope**

Rindehallet Slope. 72°25' S, 1°13' E. An ice slope between Isingen Mountain and Egil Peak, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938–39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Rindehallet (i.e., "the mountan slope"). US-ACAN accepted the name Rindehallet Slope in 1966.

Rinehart Peak. 70°38' S, 160°01' E. A peak rising to 1710 m on a ridge on the E central slopes of the Pomerantz Tableland, in the Usarp Mountains, at the S side of the head of Helfferich Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Floyd J. Rinehart, USARP geophysicist at McMurdo in 1967–68.

Ring, Patrick. b. 1893. Merchant marine engineer, he was 3rd engineer on the *Eagle*, 1944–45, during the 2nd phase of Operation Tabarin.

Ring Rock. 67°39' S, 62°43' E. A coastal rock outcrop, 3 km SE of Nøst Island, at the head of Holme Bay, about 7 km SW of Mawson Station. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Ringøya (i.e., "ring island"). First visited on July 17, 1954, in an ANARE Weasel, during a trip here led by Bob Dovers, and they re-defined it. ANCA accepted the name Ring Island on Feb. 18, 1958, and US-ACAN followed suit in 1961.

Ringe, Michael John "Mike." b. April 5, 1961, Cambridge, son of Ernest Ringe and his wife Barbare Camp. Geologist, Skidoo driver, and mountain climber on the British Joint Services Expedition to Brabant Island in 1984–85. In 1991, in Wales he married Rosalind Barton, and they lived in Bedford.

Ringed Nunatak. 85°13' S, 173°13' W. A small but conspicuous nunatak in the icefall at the head of Gatlin Glacier, in the Cumulus Hills. Named by the Texas Tech Shackleton Glacier Expedition of 1964–65, for the ring of moraine completely surrounding the nunatak. US-ACAN accepted the name in 1966.

Ringed penguin *see* **Chinstrap penguin**

The Ringer. 77°15' S, 162°03' E. A ring-shaped moraine at the mouth of Ringer Glacier as that glacier enters Miller Glacier, in Victoria Land. The name first appears on a NZ map of 1961, and comes from the strikingly symmetrical configuration of the feature. NZ-APC accepted the name, and US-ACAN followed suit in 1995.

Ringer Glacier. 77°15' S, 161°51' E. A glacier, 8 km long, heading on the NE flank of the Saint Johns Range, and flowing NE to Miller Glacier, in Victoria Land. The name first appears on a 1961 NZ map, named in association with The Ringer, i.e., the moraine at the mouth of this glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1995.

Ringer Valley. 77°15' S, 161°51' E. A hanging valley, 10 km long, between Kuivinen Ridge and Stone Ridge, in the Saint Johns Range of Victoria Land. The lower and middle portion of the valley are occupied by Ringer Glacier, while the upper (southern) portion of the valley is ice-free. Named by US-ACAN in 2005, in association with the glacier. NZ-APC accepted the name on Sept. 12, 2005.

Ringfingerbreen. 71°59' S, 2°51' E. A glacier in the area of Troll Station, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Descriptively named by the Norwegians on Oct. 12, 2007 (the name means "the ring-finger glacier).

Ringgold, Cadwalader. b. Aug. 20, 1802, Fountain Rock, Washington Co., Md., son of wealthy politician Samuel Ringgold by his first wife. His brother, Major Samuel Ringgold, "father of the modern American artillery," died at Palo Alto, during the Mexican War, 1846–48. Cadwalader entered the U.S. Navy as a midshipman on March 4, 1819, and in the late 1820s was commanding the *Weazel* as that vessel fought Caribbean pirates. He became a lieutenant on May 17, 1828, and as such was commander of the *Porpoise* during USEE 1838–42. On July 16, 1849 he was promoted to commander, and began the very important survey of the San Francisco Bay area, important because of the gold rush. Then he was one of the officers (along with Matthew Perry) who selected the site for what would become Mare Island Navy Yard. In 1853 he led the North Pacific Exploring and Surveying Expedition (strangely, aboard the *Porpoise* again), until 1854 when he went insane and was forced to return home, Lt. John Rodgers, taking over. He was retired almost immediately, but he recovered, and was put back on the active list in 1858, becoming a captain, and fought in the Civil War. He was promoted to Commodore on July 16, 1862, and searched the seas looking for Confederate raiders, including the *Alabama*. He retired on July 25, 1866, as a rear admiral. He died unmarried and of apoplexy in NYC on April 29, 1867.

Ringgold Knoll. 69°20' S, 157°39' E. A mountain, 14 km S of Archer Point, on the E side of Matusevich Glacier, in Oates Land. On

Jan. 16, 1840, from the *Porpoise*, during USEE 1838–42, Cadwalader Ringgold reported in this direction a large, dark, rounded object resembling a mountain. Wilkes named it Ringgold's Knoll, but his charts were inaccurate. He plotted it in about 67°S, 158°E. In 1959 Phil Law of ANARE selected this one as the one discovered by Ringgold 119 years before, as it seems to be in the correct relationship with Reynolds Peak and Eld Peak (qq.v.). US-ACAN accepted the name in 1967, and ANCA followed suit on Dec. 7, 1976.

Ringgold's Knoll *see* **Ringgold Knoll**

Ringöya *see* **Ring Rock**

Rink Point. 63°53' S, 58°11' W. A rocky point forming the SW entrance point of Whisky Bay, on the NW coast of James Ross Island, 3 km E of Carlson Island. Probably discovered in Oct. 1903, during SwedAE 1901–04. It seems to appear (unnamed) on their maps. Surveyed by Fids from Base D in Dec. 1945. Re-surveyed by Fids from Base D in Aug. 1952, and they found it to be surrounded by a large area of slippery, snow-free sea-ice resembling a skating rink. Fids from Base D were here yet again in 1955–56, and, in reference to a blizzard camp, they called it Lie-Up Point. UK-APC accepted the name Rink Point on Sept. 4, 1957, and US-ACAN followed suit in 1963.

Rinner Trough. 77°40' S, 35°00' W. An undersea trough in the Weddell Sea. The name was proposed by Heinrich Hinze in Jan. 1997, and accepted by international agreement in June 1997. Karl Rinner (1921–1991) was an Austrian geodesist, founder of the journal *Marine Geodesy*.

Cerro Rinoceronte *see* **Cerro Berg**

The *Río Baker*. A 150-foot, 20-passenger Chilean vessel, which accompanied the Spanish Antarctic Expedition of 1987–88. Skipper unknown.

Monte Rio Branco *see* **Mount Rio Branco**

Mount Rio Branco. 65°25' S, 64°00' W. Rising to 975 m, 4 km E of Cape Pérez, N of Beascochea Bay, on the Graham Coast, on the W coast of Graham Land. Discovered by FrAE 1908–10, and named by Charcot as Sommet Rio Branco, for Jose Maria da Silva Paranhos, Baron of Rio Branco (1845–1912), Brazilian minister of foreign affairs, 1902–12. It was he who defined the borders of his country with all the neighboring countries. More to the point, he assisted Charcot's expedition at Rio in Oct. 1908. It appears on Charcot's 1912 map. Re-surveyed in Aug. 1935, by BGLE 1934–37, it appears on Rymill's 1938 map of that expedition. It appears on a 1943 U.S. Hydrographic Office chart as Mount Rio Branco, and that was the name accepted by US-ACAN in 1950. On an Argentine chart of 1946 it appears as Cerro Rio Branco ("cerro" meaning "hill"). UK-APC accepted the (rather odd) name Mount Branco on Sept. 22, 1954, and it appears as such on a British chart of 1960. It was photographed aerially by FIDASE in 1956–57, and in 1958 was surveyed from the ground by a FIDS-RN team. On a Chilean chart of 1962 it appears as Monte Río Branco, and that is how it was accepted by the Chilean gazetteer of 1974. Note: No accent mark in "rio," because it is in Portuguese. However, the Chileans ignored that rule, in order to bring it up to Spanish speed.

Sommet Rio Branco *see* **Mount Rio Branco**

The *Río Tunuyán*. Argentine ship which conducted two tourist cruises to the South Shetlands and the Antarctic Peninsula, in Jan. and Feb. 1970. Captain José Amejeiras Barrére.

Islote Riofrío. 65°06' S, 63°05' W. A snow-covered island, 2.6 km W of Pelletan Point, at Flandres Bay, on the W coast of Graham Land. Named by the Chileans for Capt. Enrique Riofrío Cooke, of the Chilean Army, who took part in ChilAE 1957–58. The Argentines call it Islote Sara.

Islotes Riolita *see* **Rhyolite Islands**

Rios Mountains *see* **Shackleton Range**

The Rip *see* **Tasman Rip**

Punta Rip *see* **Rip Point**

Rip Point. 62°14' S, 58°59' W. A low point on the NE coast of Nelson Island, in the South Shetlands, forming the S side of the E entrance to Fildes Strait, and the NW entrance point of Edgell Bay, 3 km SW of the central point of Ardley Island. Probably named by personnel on the *Discovery II*, who charted it in 1934–35. There is a tidal rip in this locality. It appears on a British chart of 1948, and UK-APC accepted the name on Sept. 8, 1953. It appears in the 1955 British gazetteer. US-ACAN followed suit with the naming in 1965. It appears on an Argentine chart of 1953 as Punta Rip, but, when the 1974 Chilean gazetteer accepted that name, the Argentines changed their naming to Cabo Andrada. Last plotted by the UK, in late 2008. *See also* **Eddy Point**.

Nunatak Ripa. 66°04' S, 60°55' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

Estrecho Ripamonti *see* **Picnic Passage**

Ripamonti Refugio *see* **Julio Ripamonti Base**

Roca Ripín. 62°21' S, 59°43' W. A submerged rock, upon which the sea breaks with force and little undercurrent, N of Chaos Reef, off the W coast of Robert Island, in the South Shetlands. Surveyed and charted by personnel on the *Lautaro*, during ChilAE 1948–49, and named by them for the daughter of José Duarte Villaroel, skipper of the ship. The name was accepted by the Chilean gazetteer of 1974.

Ripple Lake. 68°35' S, 78°02' E. A small lake, about 200 m long, with prominent sand banks on the W side, and a hill to the N, in the Vestfold Hills. So named by ANCA on July 26, 1983, because there are ripples in the sandbanks.

The *Rippling Wave*. A 124-ton sealing schooner built in New York. By 1869 she was operating out of Punta Arenas, Chile, and owned by Messrs Braun and Blanchard, of that town. She ran aground off the coast of South America in 1869, and again in 1872. For the 1902 sealing season she was commanded by Capt. Joseph St. George, and visited the South Shetlands (*see also* **The *Archie***, and **The *Pichincha***). She ran aground off South America again, in 1904, and finally, in 1906, she ran aground once too often, off Cabo Negro.

Rippon Glacier. 66°40' S, 56°29' E. A small glacier, close E of Seaton Glacier, flowing southward into the Edward VIII Ice Shelf, in Enderby Land. Mapped by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA on Oct. 11, 1960, for Sgt. Ralph T. Rippon, RAAF, airframe fitter at Mawson Station in 1959. US-ACAN accepted the name in 1965.

Riptide Cirque. 76°37' S, 160°51' E. A glacial cirque on the S wall of Eastwind Ridge, immediately W of Mount Naab, in the Convoy Range of Victoria Land. Icefalls at the head provide the main ice flow into Towle Glacier. So named by an NZARP field party in 1989–90 to describe the fastest flowing tributary into the Towle. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Bahía Riquelme *see* **Azure Cove**

Isla Riquelme *see* **Riquelme Peak**

Islotes Riquelme *see* **Symington Islands**

Punta Riquelme. 62°28' S, 59°43' W. A point between Punta Ortiz and Labbé Point, on the W coast of Discovery Bay, on Greenwich Island, in the South Shetlands. Named by ChilAE 1946–47 for signalman Riquelme (*see* **Symington Islands**).

Riquelme Peak. 67°51' S, 66°02' W. The most southerly peak of the rocky ridge that forms the E extremity of Tonkin Island, on the Bowman Coast, on the E coast of the Antarctic Peninsula. It seems that this feature was first seen by ChilAE 1946–47, and that it appears on their 1947 chart as Isla Riquelme, presumably named for signalman Riquelme (*see* **Symington Islands**). UK-APC accepted the name Riquelme Peak on Dec. 16, 2003.

The *Riquita*. An Australian yacht, in at Cape Adare and Commonwealth Bay, in 1985–86, under the command of Barry Lewis.

Riscos Rink. 63°54' S, 58°13' W. An Argentine automatic weather station established in 1995, at an elevation of 450 m, on the SW side of Rink Point, on the NW coast of James Ross Island.

Riscos Tumbledown. 64°04' S, 58°25' W. An Argentine automatic weather station established in 2001, on the NE side of Tumbledown Mesa, on James Ross Island.

Risemedet *see* **Risemedet Mountain**

Risemedet Mountain. 72°03' S, 3°10' E. A large, partly ice-capped mountain rising to 2705 m, and marking the E end of the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Risemedet (i.e., "the giant landmark"). US-ACAN accepted the name Risemedet Mountain in 1966.

Risen *see* **Risen Peak**

Risen Peak. 71°58' S, 3°18' E. A peak, 3 km N of Medhovden Bluff, it is the most northeasterly of the peaks in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Mapped

by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Risen (i.e., "the giant"). US-ACAN accepted the name Risen Peak in 1967.

More Riser-Larsena. 68°00' S, 24°00' E. A sea off the Princess Ragnhild Coast of Queen Maud Land. Named by the Russians.

Rish Point. 62°40' S, 60°56' W. An ice-free point projecting 300 m from the S coast of Livingston Island, at the E extremity of South Beaches, 2.3 km NW of Amadok Point. 1.3 km SW of Clark Nunatak, and 1 km NE of Stackpole Rocks, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for the settlement of Rish, in the eastern Balkan Mountains, in Bulgaria.

Roca Risk *see* **Risk Rock**

Risk Rock. 66°09' S, 65°48' W. An isolated rock awash, midway between Cape Evensen and Pesky Rocks, off the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these photos. So named by UK-APC on July 7, 1959, because the rock lies in the way of vessels that have passed SW through the channel between Marie Island and the mainland. It appears on a British chart of 1961. US-ACAN accepted the name in 1971. The Argentines call it Roca Risk.

Risopatrón Refugio *see* **Coppermine Cove Refugio**

Risopatrón Station *see* **Luis Risopatrón Station**

The *Risque*. American yacht, skippered by Lou Morgane, which visited the South Shetlands and the Antarctic Peninsula in 1998-99, and 1999-2000.

Risso, Luis *see* **Órcadas Station**, 1946

Ristebrekka. 71°42' S, 10°06' E. An ice slope S of the Ristkalvane Nunataks, at the N end of the Shcherbakov Range, in the NE part of the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the ridge slope").

Ristelen *see* **Ristelen Spur**

Ristelen Spur. 71°59' S, 5°37' E. A rock spur, about 8 km SE of the summit of Breplogen Mountain, between the flow of Vestreskorve Glacier and Austreskorve Glacier, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Ristelen (i.e., "the plowshare"). US-ACAN accepted the name Ristelen Spur in 1967. The Russians call it Krylov Mountain (actually Gora Krylova).

Ristinghortane. 74°55' S, 11°19' W. Mountain crags at the NE side of the valley the Norwegians call Kibergdalen, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for civil servant Johannes Risting (1910-1987), Resistance leader during World War II.

Ristkalvane *see* **Ristkalvane Nunataks**

Ristkalvane Nunataks. 71°41' S, 10°36' E. A small group of small nunataks NE of Mount Dallmann, and forming the N end of the Shcherbakov Range, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Ristkalvane (i.e., "the ridge calves"). US-ACAN accepted the name Ristkalvane Nunataks in 1970.

Rita Automatic Weather Station. 74°43' S, 164°02' E. An Italian AWS installed in Jan. 1993, 267.67 m above sea level, at Lago Carezza, 2.6 km SE of Mario Zucchelli Station, at Terra Nova Bay.

Ritala Spur. 83°07' S, 48°57' W. A mostly snow-covered spur, rising to about 1000 m, and extending NE from the E side of the Lexington Table, in the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground in 1965-66, by USGS, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1979, for Keith D. Ritala, USARP geophysicist from the University of California, at Los Angeles, who conducted gravity research at Pole Station in the winter of 1972. UK-APC accepted the name on May 21, 1979.

Mount Ritchie. 78°32' S, 158°25' E. Rising to over 1600 m in the SE part of the Warren Range, 5 km NE of Wise Peak, on the W side of Deception Glacier. Named by VUWAE 1970-71, for paleontologist Alexander "Alex" Ritchie, curator of fossils at the Australian Museum, in Sydney, a member of the VUWAE party that discovered important sites of fossil fish in this Skelton Névé area. NZ-APC accepted the name on June 19, 2000, and US-ACAN followed suit on Nov. 12, 2000.

Ritchie Point. 70°25' S, 68°20' E. A well-defined point at the extremity of the large, flat rock feature extending northeastward from the Amery Peaks, in the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for Frederick James "Dick" Ritchie, cook who wintered-over at Mawson Station in 1965. He had also wintered-over at Wilkes Station in 1963, and would do so again in 1968. US-ACAN accepted the name in 1967.

Ritli Hill. 62°40' S, 60°55' W. A rocky hill rising to 45 m on the S coast of Livingston Island, 700 m E of Rish Point, and 600 m SW of Clark Nunatak, in the South Shetlands. Mapped by the Spanish in 1993, and again by the Bulgarians in 2009. Named by the Bulgarians on Nov. 23, 2009, for the rock formation of Ritli, in western Bulgaria.

Ritscher, Alfred. b. May 23, 1879, Bad Lauterberg. He was with the German Merchant Marine until he transferred to the Imperial German Navy in 1912. That year he took part in the ill-fated Schröder-Stranz Expedition to Spitzbergen, and came to fame for his amazing exploit of walking, alone, without food, for over a week, across 200 km of Arctic wasteland, in the moonlight, in Dec. 1912, to get help for stranded members of his party. He flew for the German Navy during World War I, and after the war was chief of aerial navigation for Lufthansa. On May 1, 1933 he joined the Nazi party. He led GermAE 1938-39. He died on March 30, 1963, in Hamburg.

Ritscher Canyon. 66°15' S, 30°00' E. A submarine feature off the Princess Ragnhild Coast of Queen Maud Land. Named for Alfred Ritscher.

Ritscher Gipfel *see* **Ritscher Peak**

Ritscher Hochland *see* **Ritscher Upland**

Ritscher Peak. 71°24' S, 13°20' E. A prominent peak, rising to 2790 m, 11 km WSW of Mount Mentzel, it is the highest peak in the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first mapped from these photos. Named by the expedition as Ritschergipfel, for Alfred Ritscher, leader of that expedition. US-ACAN accepted the translated name Ritscher Peak in 1966. The Norwegians call it Ritschertind (which means the same thing).

Ritscher Upland. 73°00' S, 9°00' W. A large, ice-covered upland, in Maudheimvidda, in the W part of Queen Maud Land. It is bounded by the Kraul Mountains and the Heimefront Range to the W and SW, and by the Borg Massif and the Kirwan Escarpment to the E. Discovered and photographed aerially by GermAE 1938-39, mapped by them from these photos, and named by them as Ritscher-Land, for their leader, Alfred Ritscher. Re-mapped by Norwegian cartographers from air photos taken during NBSAE 1949-52, and translated by them as Ritscherflya. US-ACAN accepted the name Ritscher Upland in 1966. Today the Germans call it Ritscherhochland.

Ritscherflya *see* **Ritscher Upland**

Ritschergipfel *see* **Ritscher Peak**

Ritscherhochland *see* **Ritscher Upland**

Ritscher-Land *see* **Ritscher Upland**

Ritschertind *see* **Ritscher Peak**

Mount Rittmann. 73°27' S, 165°30' E. A caldera, rising gently between 2400 m and 2600 m above sea level over the plateau at the head of Icebreaker Glacier, in the Mountaineer Range, 90 km SE of Mount Overlord, and N of Mount Brabec. Fumarole activity can be seen on its edge, and the results of volcanic activity are abundant here. Named by the Italians on July 17, 1997, for volcanologist Alfred Rittman (1893-1980), who wrote the classic *Volcanoes and their Activity*, 1962.

Riu o Te Ata Valley. 78°22' S, 163°52' E. A valley at the S end of Lake Morning, NNE of Mount Morning, in Victoria Land. A Maori word (or phrase) meaning "valley of the morning"). Named by NZ-APC in 1994. US-ACAN accepted the name later that year.

Rivard Glacier. 78°04' S, 163°55' E. Also

called David Lee Glacier. A small alpine glacier, about 2.5 km long and 1.5 km wide, at the head of Marshall Valley, and adjacent to Garwood Valley on the S, in Victoria Land. Discovered, photographed, and mapped by Troy L. Péwé, American glacial geologist here in 1957–58, and named by him for his assistant on the trip, Norman R. Rivard, a senior student at the University of Alaska, and USGS field assistant. US-ACAN accepted the name in 1960, and NZ-APC followed suit. Note: It is sometimes seen (erroneously) on some maps as a lake.

Rivas Peaks. 83°55' S, 54°25' W. A line of rock peaks rising to about 1200 m, and projecting westward for 3 km from the S part of Torbert Escarpment, in the Neptune Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1968, for Merced G. Rivas (b. 1925), radioman who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Rivenaesnuten. 74°51' S, 11°22' W. A partly snow-covered peak, the southernmost in Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Lars Rivenaes (1878-1943), civil engineer and Norwegian Resistance leader during World War II, who died while being held captive by the Nazi Gestapo in World War II.

Isla Rivera *see* **Apéndice Island**

Rivera Peaks. 73°48' S, 62°50' W. A wedge-shaped range of peaks, 22 km in extent, and rising to about 1500 m, on the N side of Swann Glacier, between that glacier and Watson Peaks, on the Lassiter Coast, on the E coast of Palmer Land. Mapped by USGS from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for James P. Rivera, USARP electronics technician at Pole Station in 1967. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Punta Rivero. 64°33' S, 62°02' W. A point on Bearing Island, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Rivers. Ordinary rivers do exist in Antarctica, but they are, in reality, short-lived streams of glacial meltwater, and are seen occasionally only in the warmer months (*see* **Onyx River**). Ice rivers are called glaciers (q.v.), or ice streams (q.v.). Onyx is the longest river in Antarctica. *See also* **Algae River**, **Alph River**, **Talg River**, **Tierney River**. In 2006 British scientists claimed to have discovered evidence of vast subterranean rivers in Antarctica.

Rivers, John *see* **USEE 1838-42**

Mount Rivett. 67°50' S, 66°15' E. A bare rock mountain, the most northeasterly feature in the Gustav Bull Mountains of Mac. Robertson Land. First seen on Dec. 31, 1929, and again on Jan. 5, 1930, by BANZARE 1929-31, and named by Mawson on Feb. 13, 1931, when BANZARE landed at nearby Scullin Monolith (19 km to the ENE). David Rivett (1885–1961; knighted in 1935) was a chemist, and deputy chairman and chief executive oficer of the Australian Council for Scientific and Industrial Research, 1927–46. US-ACAN accepted the name in 1947, and ANCA followed suit. Dave Carstens, surveyor at Mawson Station in 1962, fixed its position.

Riviera Ridge. 78°24' S, 163°42' E. The western of 2 broad, mainly ice-free ridges that descend northward from Mount Morning, on the Scott Coast of Victoria Land. Mount Hubbard and Lake Morning are located at the N end of the ridge. The name was suggested by NZ geologist Anne Wright, who visited the ridge in balmy weather, in 1985–86, in contrast to terrible wind conditions experienced earlier in the season on Hurricane Ridge. NZ-APC accepted the name, and US-ACAN followed suit in 1995.

Rivolier, Jean. b. March 3, 1923. He was in the Resistance during World War II. He was the French Polar expedition doctor at Pointe Géologie, in 1952, wintering-over that year at Base Marret. From 1955 to 1969 he was chief psychologist for the ongoing French Polar effort in Antarctica, and from 1969 to 1979 was chief doctor. From 1980 until he retired in 1998 he was professor of psychology at the University of Rheims. He wrote *Emperor Penguins* in 1956 (*see* the Bibliography). He died on April 27, 2007, at Lannion, France.

Lednik Rjadovoj. 66°49' S, 89°48' E. A glacier, E of Posadowsky Bay, in Wilhelm II Land. Named by the Russians.

RN *see* **Royal Navy**

RNZAF *see* **Royal New Zealand Air Force**

RNZN *see* **Royal New Zealand Navy**

Roa Ridge. 77°38' S, 162°20' E. A bow-shaped ridge, 8 km long, which, for much of its length, separates Matterhorn Glacier from Lacroix Glacier, in the Asgard Range of Victoria Land. Summits on this ridge, from NW to SE, are: Vogler Peak, Mount Irvine, Hoehn Peak, Webb Peak, and Mattherhorn. Named by NZ-APC in 1998. "Roa" is a maori word meaning "long." US-ACAN accepted the name later in 1998.

Road Bay. 74°42' S, 164°07' E. A small bay, 300 m long and 150 m wide, with an average depth of 150 m, running in a SE-NW direction, 4 km E of Tethys Bay, on the peninsula on which is located Mario Zucchelli Station. Used as an access point to the cliff when unloading the ship (hence the name given by ItAE 1988-89). Mapped in 1986. Italy accepted the name on July 17, 1997.

Roadend Nunatak. 79°48' S, 158°02' E. A conspicuous nunatak, about 6.5 km WNW of Bastion Hill, and 19 km S of Mulgrew Nunatak, along the N side of Darwin Glacier, where that glacier and Touchdown Glacier meet, in the Brown Hills of the Queen Alexandra Range. Discovered by VUWAE 1962-63, and so named by them because of its important use as a landmark for manhauling sledge journeys and aircraft flights which supported the expedition and always landed there. NZ-APC accepted the name, and US-ACAN followed suit in 1965. ANCA also accepted the name.

Roads. Most of the stations in Antarctica have streets around and in them, or what pass for streets. Sometimes there are roads leading from the base to an airfield. The most notable is the "MacWilly Expressway," leading from McMurdo Station to (the old) Williams Field. It was 4 miles long and 25 feet wide, and built on a 4-foot snowpack. It was completed in Nov. 1960. In McMurdo Station itself, the main streets were named in 1956, in mid-May. The main streets became Burke Boulevard and Forrestal Avenue. Perpendicular to these was Radford Road, which led to the Byrd Highway, the road to Hut Point. At the other end of Radford Road was Honeybucket Lane, used to dump waste. Today, Beaker Street runs by the Crary Laboratory. Around McMurdo there are several roads that take rubber-tired vehicles. The main tunnel at Little America V was called Main Street. In 2002 the National Science Foundation funded a project that would carve a 1020-mile ice highway from the coast to the Pole. This was the South Pole Traverse Project.

[1]**The *Roald Amundsen***. Built as the *Quilpé*, a steel barque, at Port Glasgow, by Russell & Co., in 1890, for F.H. Vaughan & Co., of Liverpool. In 1910 the Laboremus Company bought her, and Porsgrunds converted her into a 1480-ton whaling factory ship. In the 1910–11 season, she worked in the South Shetlands, Graham Land, and the South Orkneys, with one catcher (on Jan. 20, 1911, she was anchored in Admiralty Bay, King George Island, in the South Shetlands). In 1911, she was replaced by another ship of the same name (see below), and in 1912 was re-named the *Mimosa*, sold in 1913 to Haldor Virik, and and whaled off the coast of Brazil in 1912–13. In 1915 she was sold to a fishing company in Brazil, and in 1916 sold again, to Fritz Klem, in Sandefjord. She was sold to a Danish company later that year, and was scrapped in 1924.

[2]**The *Roald Amundsen***. A 4390-ton Norwegian whaler, the second factory ship of that name to be owned by the Laboremus Company. Formerly the British ship *Sandhurst*, built in 1890 in Newcastle. She worked in the South Shetlands in 1911–12, 1912–13, 1913–14, 1914–15, 1915–16 (Oskar Amundsen was skipper that season, and Nils Jespersen was 1st mate), and 1916–17. During World War I she was struck by a mine in the English Channel, but was beached at Mucking Flats and repaired. On Jan. 16, 1919, while in the oil refinery dock at Philadelphia, she was damaged by fire. She was bought by the Fandango Company, of Sandefjord, Norway, in 1921, rebuilt at Framnaes Mek., and re-named the *Falk*. Fandango in turn sold her to the Ørnen Company.

[3]**The *Roald Amundsen***. Formerly the British steamship *Cape Breton*, she was bought by the Laboremus Company, renamed the *Roald Amundsen* (she was the third factory ship of that name to be owned by Laboremus), converted into a 4479-ton Norwegian whaling factory ship,

and operated in the South Shetlands and Graham Land between the 1922-23 and 1930-31 seasons. She became the *Labor*.

Roald Amundsen Sea *see* **Amundsen Sea**

Roald Glacier. 60°39' S, 45°13' W. Flows eastward from the vicinity of Mount Noble and Mount Sladen, into Gibbon Bay, on the E coast of Coronation Island, in the South Orkneys. Roughly charted by Petter Sørlle in 1912-13, and named (it seems) by him, as Roaldbreen, possibly for the whaling ship *Roald Amundsen*. Surveyed in 1948-49, by Fids from Signy Island Station. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. Resurveyed by FIDS between 1956 and 1958.

Roaldbreen *see* **Roald Glacier**

Roaring Cliffs. 86°23' S, 159°24' W. The high and precipitous rock cliffs just northward of Kutschin Peak, on the W side of Nilsen Plateau, in the Queen Maud Mountains. So named by Bill Long (*see* **Long Hills**), U.S. geologist here in 1963-64, for the sound of the roaring wind. Standing in the quiet, windless valley below, a roaring noise like that of an approaching train can be heard high up on the cliffs. US-ACAN accepted the name in 1965.

Roaring Ridge. 86°14' S, 146°45' W. A long and outstanding spur that descends from the Watson Escarpment 5.5 km NE of Mount Blackburn. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. So named by NZGSAE 1969-70 because 2 geologists from the expedition who camped nearby experienced roaring gale-force winds rushing down the steep escarpment. NZ-APC accepted the name in 1970, and US-ACAN followed suit that year.

Roaring Valley. 78°16' S, 163°03' E. A moraine-filled valley on the N side of Mount Dromedary, it was formerly occupied by the coalescing glaciers which descend NE and N from Mount Kempe and Mount Dromedary. Named by VUWAE 1960-61 for the incredibly strong winds which hit them at the mouth of this valley that season. NZ-APC accepted the name, and US-ACAN followed suit in 1974.

Robb, William *see* **USEE 1838-42**

Robb Glacier. 82°38' S, 165°00' E. A glacier, 60 km long (the New Zealanders say 24 km), it flows NE from Clarkson Peak, along the E side of Softbed Ridges, between Mount Christchurch and Mount Longstaff, to meet the Ross Ice Shelf at Cape Goldie. It is separated from the Lowery Glacier by a low saddle, and is fed by icefalls and snowfields from the mountain masses on either side. Named by NZGSAE 1959-60, for Rutherglen Murray Robb (known as Murray Robb), an ex-marine and fisherman from Timaru, NZ, born on a cattle station in the outback, leader of the expedition, who traversed this glacier to get to Lowery Glacier. He had also been maintenance officer at Scott Base for the winter of 1958. Robb was killed in his car, hit by a train while blinded by its lights. NZ-APC accepted the name, and US-ACAN followed suit in 1961.

Robben Nunataks *see* **Seal Nunataks**

Robbeninseln *see* **Seal Nunataks**

Robbenspitze *see* **[1]Seal Point**

Robbery Beach *see* **Robbery Beaches**

Robbery Beaches. 62°37' S, 61°05' W. Beaches extending along the NE coast of Byers Peninsula, between Richards Cove and the ice cliff S of Cutler Stack, at Barclay Bay, on Livingston Island, in the South Shetlands. Roughly charted by sealers in 1820-21, and named North Beach (cf **South Beaches**). The feature appears as such on Capt. Fildes' chart of 1821, and on Powell's chart published in 1822. Named by Weddell in 1822, as Robbery Beach, perhaps for a robbery of sealskins which took place in the area during the rush of 1820-22. Specifically Weddell may have had in mind the time the British stole skins collected by the U.S. vessel, *Charity*, in Jan. 1821. The captain of the *Charity*, Charles H. Barnard, became a friend of Weddell's, and told him of his loss. It appears as Robbery Beach on Weddell's map published in 1825. Re-charted by the Discovery Investigations between 1935 and 1937, and photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Robbery Beaches on July 7, 1959, and US-ACAN followed suit in 1960. One of the Chilean Antarctic expeditions named it Penca Beaches, in association with Penca Hill, and there are references to it as such from the early 1970s.

Robbin, William *see* **USEE 1838-42**

Robbins, Edgar F. b. Berwick, NS. Canadian sealing skipper, in the South Shetlands and South Orkneys in 1906-07, on the *Baden Powell*. In 1907-08 he was skipper of the *Village Belle* (not in Antarctica).

Robbins, James Haskins "Robbie." b. 1926. He was part of Operation Nanook, in the Arctic, in 1946. Aviation radioman 3rd class, USN, in the Eastern Group of OpHJ 1946-47. He survived the Martin Mariner crash of Dec. 30, 1946, on Thurston Island, and retired in 1965 as a chief petty officer, to Palm Desert, Calif.

Robbins Glacier. 72°10' S, 98°41' W. A broad glacier flowing into the head of Peale Inlet, on the N side of Thurston Island. Named by US-ACAN in 2003, for James Haskins Robbins.

Robbins Hill. 77°48' S, 164°04' E. A hill, 5 km long, and rising to 1140 m in its W portion, it is the easternmost rock unit on the N side of the terminus of Blue Glacier, on the Scott Coast of Victoria Land. Named by US-ACAN on May 19, 2000, for Rob Robbins, who, in 1999, completed 20 consecutive seasons in Antarctica. He wintered-over at McMurdo in 1981 and 1985; he was construction diver and divemaster at McMurdo and Palmer Station, 1985-86, 1988-89, and 1995-96; scientific diving coordinator at McMurdo and Palmer, 1996-97, 1997-98, and 1998-99. He made over 1000 dives as a usap. NZ-APC had already accepted the name on Nov. 4, 1999.

Robbins Island. 64°47' S, 64°27' W. One of the islands in the SW part of the Joubin Islands, off the SW coast of Anvers Island, in the Palmer Archipelago. USARP personnel from Palmer Station worked here from 1965. Named by US-ACAN in 1975, for Stephen H. Robbins, Jr., able seaman on the *Hero* during that vessel's first trip to Antarctica in 1968. UK-APC accepted the name on Dec. 20, 1974.

Robbins Nunatak. 83°12' S, 57°05' W. A conspicuous nunatak, rising to 1015 m, 8 km NE of Mount Gorecki, in the Schmidt Hills, in the Neptune Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1968, for Edward J. Robbins, who wintered-over as aerographer at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Islote Robbio. 64°23' S, 62°54' W. A small island in the Omicron Islands, in the SE part of the Melchior Islands, in Dallmann Bay, in the Palmer Archipelago. Named by the Argentines.

The *Robert*. A 159-ton ship, captured by the British as a foreign prize, and employed in the trade with North America. After Robert Fildes had his wreck with the *Cora*, in the South Shetlands, his grandfather, Henry Wood, gave him the *Robert* (and named the vessel for him), and on Aug. 13, 1821, Fildes took the *Robert* out of Liverpool, bound for the South Shetlands and the 1821-22 sealing season. However, after a few days she was back in Liverpool, getting a new anchor stock, and then set sail again. Fildes began his diary, ponderously called *Journal of a Voyage from Liverpool Town to New South Shetland in a Sealing and Sea-Elephant Adventure kept on Board Brig* Robert *of Liverpool Robt. Fildes*. On Nov. 20, 1821, she was in at the Falkland Islands, and then made her way down to the South Shetlands. For most of the season she was moored in Clothier Harbor (she was there on Christmas Day, 1821), but was wrecked there on March 7, 1822. Her crew was rescued.

Cap Robert *see* **Cape Robert**

Cape Robert. 66°23' S, 137°39' E. An ice-covered point at the W side of Marret Glacier. Discovered by FrAE 1837-40, and named by Dumont d'Urville as Cap Robert, for a member of his family, probably his last son, a baby when the explorer left Antarctica, and whom he never saw alive again. Roughly charted by AAE 1911-14, and further delineated from air photos taken during OpHJ 1946-47. US-ACAN accepted the name Cape Robert in 1947.

Isla Robert *see* **Robert Island**

Punta Robert *see* **Robert Point**

Robert, Rémond-Pierre. b. Nov. 13, 1804, Toulouse. Gunner on the *Zélée* during FrAE 1837-40.

The *Robert D. Conrad*. Known informally as the *Conrad*. Research vessel operated by the Lamont-Doherty Geological Observatory at Columbia University. She made detailed geophysical and geological measurements in and south of the Drake Passage, in support of the proposed *Glomar Challenger* deep-drilling project, and spent the summer of 1971-72 there, getting as far south as 65°23' S, 71°22' W. Dr. Stephen Eittreim was chief scientist. The vessel did not call in at Palmer Station. She was back in early 1974, between Jan. 5 and April 11 of that year, going

in an out of Antarctic waters, and getting as far south as 68°20' S.

Robert English Coast *see* **English Coast**

Robert Glacier. 67°10' S, 56°18' E. The eastern of two glaciers flowing into the S part of Edward VIII Bay, in Kemp Land. Discovered by Bob Dovers and Georges Schwartz during an ANARE sledge party over the bay in 1954. Named by ANCA on Aug. 11, 1955, for Dovers. US-ACAN accepted the name in 1965.

Robert Island. 62°24' S, 59°30' W. About 17.5 km long and 13 km wide, it is separated from Nelson Island to the NE by Nelson Strait, and from Greenwich Island to the SW by English Strait, in the South Shetlands. Discovered by William Smith in Oct. 1819. Between Jan. and March 1820, Bransfield very roughly charted it together with Nelson Island, Greenwich Island, and the W part of King George Island, as one big island. It appears as such on his 1820 chart. Further charted by von Bellingshausen on Jan. 25, 1821. On von Bellingshausen's 1831 chart it would appear as Ostrov Polotsk, after the Russian town NNE of Minsk (he did not name it thus at the time of his survey). It was first shown as an individual island on Goddard's chart of 1821. Goddard was working from a variety of charts drawn up by other sealers in the area. On Fildes' chart of 1821, it appears as Roberts Island, presumably named by him for his ship, the *Robert*. It appears as such on an 1824 British chart, and also on one from 1844. On Powell's chart, published in 1822, it appears as Robert's Island. Weddell called it Mitchell's Island, for James Mitchell, of London, co-owner of the *Beaufoy of London* (*see* **Mitchell Cove**). It appears as such on his chart published in 1825. It appears as Robert Island on Kendall and Foster's chart of 1829, drawn up during the *Chanticleer* Expedition of 1828-31. On the 1838 chart drawn up by FrAE 1837-40, it appears as Île Roberts, and on an 1861 Spanish chart it appears as Isla Roberts. It appears as Robert Insel on Friederichsen's 1895 German map, and SwedAE 1901-04 charted it as Roberts Ön. Re-surveyed by the Discovery Investigations of 1934-35, it appears on their 1935 chart as Roberts Island, as it does also on a British chart of 1938. It appears on a 1948 Chilean map as Isla Manuel Rodríguez, named after Chilean patriot Manuel Rodríguez Erdoiza (1785-1818). On a 1948 British chart it appears as Robert Island, and that was the name accepted by US-ACAN in 1952 (they had rejected Polotsk Island), and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a British chart of 1962. It was photographed aerially by FIDASE in 1956-57. On a 1951 Chilean chart it appears as Isla Robert, and that was the name accepted by the Chilean gazetteer of 1974. The Argentine gazetteer of 1970 accepted the name Isla Roberts, but today the Argentines call it Isla Robert. *See also* **Mitchell Cove**.

Robert Palmer Bay *see* **Palmer Inlet**

Baie Robert-Pommier. 66°49' S, 141°22' E. A bay between Lacroix Nunatak to the SW and the Port-Martin peninsula to the NE, in the Géologie Archipelago. Named by Paul-Émile Victor, for Robert Pommier (*see* **Port-Martin Station**, 1950). The French accepted the name in 1962.

Robert Point. 62°27' S, 59°23' W. A low rock point, backed by medium-height hills, it marks the SE tip of Robert Island, in the South Shetlands. It was known to sealers in the early 19th century. Surveyed by the Discovery Investigations, and named by them as Roberts Point, in association with Robert Island. It appears as such on their charts of 1935 and 1937. It appears as Cape Roberts on a 1943 U.S. Hydrographic Office chart, and on a Chilean chart of 1947 as Punta Roberts, yet on one of their 1951 charts as Punta Robert. It appears as Robert Point on a 1948 British chart, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The Argentine gazetteer of 1970 accepted the name Punta Roberts, but today the Argentines, like the Chileans, call it Punta Robert. *See also* **Edwards Point**. Last plotted by the UK, in late 2008.

Mount Robert Scott. 83°49' S, 172°48' E. A small, flat, snow-covered mountain, rising to over 1000 m, immediately S of Ebony Ridge, between Mount Harcourt and Mount Kathleen, in the Commonwealth Range, and overlooking the E side of the Beardmore Glacier at its junction with the Ross Ice Shelf. Discovered by BAE 1907-09, and named Shackleton for Scott. US-ACAN accepted the name in 1949, and NZ-APC followed suit.

Robert Scott Glacier *see* **[2]Scott Glacier**

Islote Roberto *see* **Breakwater Island**

[1]Cape Roberts. 77°02' S, 163°12' E. At the S side of the entrance to Granite Harbor, it forms the NE tip of Wilson Piedmont Glacier, near Mount England, on the Scott Coast, on the E coast of Victoria Land. Discovered by Edgeworth David's South Magnetic Pole party in 1908-09, during BAE 1907-09, and named by David for William C. Roberts. In Nov. 1984, NZ built the Cape Roberts Huts here. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

[2]Cape Roberts *see* **Robert Point**

Monte Roberts *see* **Mount Roberts**

Mount Roberts. 64°00' S, 58°49' W. A dark rock peak, mostly ice-free, rising to a flat, sloping top of 955 m above sea level, 5 km S of Aitkenhead Glacier, between that glacier and Diplock Glacier, and isolated from the Detroit Plateau to the W, on the S side of Trinity Peninsula. First surveyed and charted by Fids from Base D in Aug. 1945, and named for Captain David William Roberts (1886-1970), colonial manager of the Falkland Islands Company, 1939-49, who helped the FIDS. Capt. Roberts had been in on the first phase of Operation Tabarin, on the *Fitzroy* in early 1944. He resisted Tabarin's acquisition of the *Fitzroy*, which was the mail ship for the Falklands. The vessel was not insured by Lloyd's for Antarctic work, and her loss would have meant major problems for the Falklands. However, he lost the battle, but insisted on going on board with the Tabarin boys. He did not, of course, winter-over, nor was he part of the operation. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and in the 1955 British gazetteer. It appears on an Argentine chart of 1957 as Monte Roberts, and that was the name accepted by both the 1970 Argentine gazetteer, and the 1974 Chilean gazetteer. It was further surveyed by Fids from Base D in 1960-61.

Pie de Hielo Roberts *see* **Roberts Ice Piedmont**

Punta Roberts *see* **Punta Robert**

Roberts, Brian Birley. b. Oct. 23, 1913. He organized Cambridge undergraduate expeditions to Iceland (1932) and East Greenland (1933), and was ornithologist and assistant biologist on BGLE 1934-37. He left halfway through the expedition to study gentoo penguins on South Georgia (54° S). In Intelligence during World War II, in 1943 he helped create Operation Tabarin (in fact, he named it), and in 1944 he was appointed to the Foreign Office Research Department, in 1945 becoming the first secretary of UK-APC. He was also head of research at the Scott Polar Research Institute. He helped organize NBSAE 1949-52, and kept support going for FIDS. He was involved in drafting the Antarctic Treaty in 1959, and in 1961 became official UK observer on OpDF. He died on Oct. 8, 1978, in Cambridge. There was a book written about him by H.G.R. King and Ann Savours (*see* the Bibliography).

Roberts, Brinley Richard "Brin." b. Sept. 22, 1933, Abertillery, Monmouthshire, son of Lewis Roberts and his wife Evelyn Love. He joined FIDS in 1956, as a radioman, and wintered-over at Base Y in 1957, and at Base E in 1958. After his return to England, he went to South Africa, as a mining student. He later lived in Kent.

Roberts, Colon Harstine "Robbie." b. Nov. 8, 1933, Bulloch County, Georgia, son of farmer Willy Roberts and his wife Mae Bell. The name should have been Colin, but there was an error on the birth certificate, and the spelling stuck. He joined the U.S. Navy in 1952, became a Seabee in the Philippines, and was based at Port Hueneme, Calif., in 1955, sorting mail and flyers at the personnel office, when he saw the notice for "volunteers for the South Pole." He went to Davisville, Rhode Island, for training, and then on to Camp Lejeune in NC, for specialized training. He shipped out of Norfolk, Va., on the *Glacier*, which was towing his vessel, *YOG-34* (q.v.). At Christchurch, NZ, *YOG-34* was taken in town by the *Eastwind*, and Robbie transferred to the *YOG* for the trip to McMurdo Sound, where, as steelworker 3rd class on Chief Slaton's team, he helped build the AirOpFac at which he wintered-over. On Dec. 1, 1956 he was one of the 3rd (and last) party of Seabees to be flown by Gus Shinn in the *Que Sera Sera* to the Pole, to help build the first Pole station. After completion of the Pole, he was one of the first party out, on Dec. 24, 1956, flew back to McMurdo,

from there shipped out to Sydney on the *Arneb*, and then back to California, where he retired from the Navy and hitched a ride east with Bill Goodwin, who had just bought a Triumph TR-3. Back in Georgia he married Sara Eva Morgan, on April 12, 1958, and was with the Naval reserve for many years, while working for the same paper company he had worked for before he joined the Navy. In 1985 his wife died, and in 1988 he married again, to Melinda Waters. He retired in 1992.

Roberts, Henry. Baptized March 17, 1757, in Shoreham, Sussex, son of Henry Roberts and his wife Susanna. He was an able seaman on Cook's 2nd voyage, 1772-75, and drew charts and coastal views. He was back with Cook, on the *Resolution*, for the great navigator's 3rd voyage, and again drew charts. He also kept a diary. In 1780 he became a lieutenant, a commander in 1790, and a captain in 1794. While skipper of the *Undaunted* in the Caribbean, he died of yellow fever on Aug. 25, 1796, two days before his ship sank.

[1]**Roberts, John**. A skipper in the South America trade, he returned home to England after a trip to Africa, and on Sept. 26, 1820 was appointed captain of the Liverpool sealer *King George*. On Sept. 28, 1820, he left Liverpool, bound for the South Shetlands and the 1820-21 sealing season. He left England again, still as skipper of the *King George*, bound for the South Shetlands and 1821-22 season. After this, he took the vessel to Hobart, and then went back to the South America run.

[2]**Roberts, John**. b. 1822, London. On Dec. 24, 1839, at Hobart, he joined the *Zélée* as a 6-piaster sailor for FrAE 1837-40. After a trip to Antarctica he ran on May 3, 1840, in NZ.

Roberts, John Michael. Known as Michael. b. Nov. 11, 1919, Twyford, Hants, son of Dr. George Marsden Roberts (himself a 4th-generation doctor in the same house in Twyford) and his wife Lilian Hemmingway. After Cambridge, he was at Barts, studying to be a doctor, and in Aug. 1946 married Angela A. Greene in London. Brian Roberts suggested he join FIDS, which he did, as a medical officer, and in Nov. 1946 he left England on the *Trepassey*, bound for Montevideo, arriving in Port Stanley on Christmas Eve. Then on to the South Orkneys, and from there to Base D, where he wintered-over in 1947. In 1948 he returned to Port Stanley, where he caught the *Lafonia* for London, arriving there on April 21, 1948. He went into private practice in Twyford, and died there on May 6, 2008.

Roberts, Neil Edwin. b. June 13, 1933. Officer-in-charge at Mawson Station in 1972.

Roberts, Owen *see* **USEE 1838-42**

Roberts, Thomas. b. 1812. He took part in RossAE 1839-43. He lived in NZ for a while, taking part in the Maori War, and died in Melbourne in July 1903, aged 91.

Roberts, William *see* **USEE 1838-42**

Roberts, William Charles. b. 1872, Homerton, Hackney, London, son of carpenter Edward Roberts and his wife Catherine. He went into the hotel business in Whitechapel, first as a refreshment steward in the dining room and then as a chef. He was married to Elizabeth at the time he went on BAE 1907-09. Although strictly speaking he was also assistant zoologist, he cooked throughout the day, and that was his sole job (all the others shared duties).

Roberts, William Henry "Bill." b. Nov. 21, 1922, Stanley, Falkland Islands, son of laborer Charles Roberts and his wife Angelina Smith. As a lad he was apprenticed to the Wireless Station, in Stanley, and when World War II broke out, was posted to South Georgia, in Nov. 1939, as a radio operator, to help keep "continuous watch" at King Edward Point. He didn't return to Stanley until April 1942. But, they asked him to go back, and in Jan. 1943 he was back in South Georgia, until April 1945. In 1946 he joined FIDS, naturally as a radio operator, and wintered-over at Signy Island Station in 1947. In 1949 he was back in South Georgia, and in 1950 was promoted to officer-in-charge there. He returned to Stanley in Jan. 1951. On Jan. 29, 1955, in Stanley, he married Laura May Slade. He continued to work for the Falkland Islands government in radio and telephones, until he retired in 1987. He died in Stanley on Oct. 22, 1997.

Roberts Butte. 72°39' S, 160°08' E. A high, flat-topped, extremely prominent and striking butte, rising to 2830 m, 3 km NW of Miller Butte, in the Outback Nunataks, about 30 km S of Welcome Mountain, and 50 km W of the Monument Nunataks. It is useful as a landmark from great distances. Named by the U.S. Victoria Land Traverse Party of 1959-60. Louis J. Roberts, USGS surveyor and cartographer on the party, named it Flattop Mountain, but there was already a mountain or two with that name, so the name was changed by US-ACAN in 1964, to honor Roberts, who was the first to survey it. NZ-APC accepted the name.

Roberts Cirque. 75°45' S, 115°49' W. It is marked by a sheer rock cliff, just W of Zurn Peak, along the central-north wall of Toney Mountain, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1971. Named by US-ACAN in 1976, for John H. Roberts III, USN, who wintered-over as chief commissaryman at Pole Station in 1974.

Roberts Cliff. 72°24' S, 170°05' E. The 3rd prominent rock bluff S of Seabee Hook, on the E shore of Edisto Inlet, on the coast of Victoria Land. Named by NZGSAE 1959-60, for Charles L. "Charlie" Roberts, Jr., U.S. Weather Bureau meteorologist, USARP scientific leader at Hallett Station for the winter of 1959. He again wintered-over as scientific leader at Pole Station in 1963. He was at Plateau Station for its construction in the summer of 1965-66. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Roberts Ice Piedmont. 69°00' S, 70°20' W. A large ice piedmont, 30 km long in a N-S direction, and 24 km wide, to the N and NW of Mount Calais, and to the E of the Rouen Mountains, it forms the NE corner of Alexander Island. It is broken by Hengist Nunatak and Horsa Nunatak. Discovered from a distance and roughly charted by FrAE 1908-10. Photographed aerially on Aug. 15, 1936, by BGLE, and roughly mapped from these photos. Named by UK-APC on March 31, 1955, for Brian B. Roberts. US-ACAN accepted the name later that year. The Argentines call it Pie de Hielo Roberts.

Roberts Inlet. 79°15' S, 44°00' W. Ice-filled, it is the central of 3 inlets indenting the E side of Berkner Island (*see also* **Spilhaus Inlet** and **McCarthy Inlet**), on the Filchner Ice Shelf. Discovered aerially and roughly mapped by IGY personnel from Ellsworth Station under Finn Ronne in 1957-58. Named by Ronne as Fierle Bay, for Jerry Fierle (*see* **Fierle Peak**, and **McCarthy Inlet**), and plotted in 79°15' S, 45°00' W. In 1960, US-ACAN renamed it Roberts Inlet, for Capt. Elliott B. Roberts, formerly chief of the geophysical branch of the U.S. Coast and Geodetic Survey. He was chairman of the U.S. National Committee for the IGY panel on geomagnetism. It appears as such on an American chart of 1961, and also on the 1970 American Geographical Society's map. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973. UK-APC accepted the name on Feb. 7, 1978, and it appears in the 1980 British gazetteer.

Roberts Island *see* **Robert Island**

Roberts Knoll. 71°27' S, 3°15' W. A snow-covered, dome-shaped coastal knoll with numerous rock outcrops at the E side of the mouth of Schytt Glacier, in the NE part of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Robertskollen, for Brian Birley Roberts. US-ACAN accepted the translated name Roberts Knoll in 1962.

Roberts Massif. 85°32' S, 177°05' W. A remarkable, snow-free massif, rising to perhaps 2900 m above sea level, it occupies an area of 60 sq miles (the New Zealanders say 100 sq miles), at the head of Shackleton Glacier. Visited by the Southern Party of NZGSAE 1961-62, who spent several days here (occupying a survey station at Misery Peak, on the W side of the massif), and named it for Athol Renouf Roberts (d. 1981, Wellington, NZ), mountain climber who had been in the Himalayas in 1953, information officer at Scott Base in 1959-60, and base leader there in 1961-62. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Roberts Peak. 78°14' S, 85°10' W. Rising to 1800 m on the N side of Ellen Glacier, 16 km E of Mount Jumper, in the central part of the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN in 1996, for Carol A. Roberts, deputy director of the NSF's Office of Polar Programs, 1988-96.

Roberts Pike. 80°36' S, 158°45' E. A peak rising to 1630 m, 8 km SE of Mount Tuatara, in the Churchill Mountains. The culmination of several ridges, the summit commands a view of the drainage areas of Judith Glacier, Entrikin Glacier, and Couzens Bay. Named by US-ACAN in 2003, for John "J.R." Roberts, NZ mountain climber and field guide in 12 Antarctic seasons

with USAP, 1987–88 to 2000–01, the last season in the Churchills including work at this peak. NZ-APC accepted the name on Feb. 27, 2003.

Roberts Point *see* **Robert Point**

Roberts Ridge. 86°23' S, 131°30' W. A prominent ridge, 8 km SW of Cleveland Mesa, at the SE end of the Michigan Plateau. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Peter Roberts of the Division of International Scientific and Technical Affairs within the U.S. Department of State.

Robertskollen *see* **Roberts Knoll**

Cape Robertson. 60°44' S, 44°48' W. A cape, 1.5 km E of Route Point, it marks the W side of the entrance to Jessie Bay, in the NW part of Laurie Island, in the South Orkneys. In 1904, Bruce, during ScotNAE 1902–04, named the NW end of Mackenzie Peninsula as Cape Robertson (he had mapped it in 1903), for Thomas Robertson, not knowing that Powell and Palmer had already named it in Dec. 1821 as Route Point. Later geographers kept the 1821 naming and switched Bruce's naming to the NE extremity of the peninsula. It appears as such on a British chart of 1948, and that was the situation accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer.

Isla Robertson *see* **Robertson Island**

Islas Robertson *see* **Robertson Islands**

Monte Robertson *see* [3]**Mount Robertson**

[1]**Mount Robertson** *see* **Christensen Nunatak**

[2]**Mount Robertson**. 72°34' S, 170°12' E. An ice dome about 1600 m high, capping Cape Wheatstone at the S end of Hallett Peninsula. It provides superb panoramic views of the Admiralty Mountains and the Victory Mountains, and also of the Tucker Glacier. Named by NZ-APC for geophysicist Edward I. "Eddie" Robertson, chairman of the NZ committee of IGY, and a prime mover in the organization of NZGSAE 1957–58, who gave this feature its name.

[3]**Mount Robertson**. 74°40' S, 64°11' W. Rising to 1565 m (the British say about 1650 m), in the Latady Mountains, 30 km NW of Mount Austin and the head of Gardner Inlet, on the Orville Coast, on the E coast of Palmer Land. Probably seen from a distance aerially on Dec. 30, 1940, by USAS 1939–41. It seems to appear on a 1943 U.S. Hydrographic Office chart. Discovered aerially on Nov. 21, 1947, by RARE 1947–48, and named by Ronne as Mount James Robertson, for Jimmy Robertson. Ronne plotted it in 74°43' S, 64°08' W. It was surveyed from the ground in Dec. 1947 by a joint sledging team of RARE personnel and Fids from Base E. It appears with the longer name on Finn Ronne's 1948 map, but with the shorter name on a 1948 American Geographical Society map, plotted in 74°41' S, 64°14' W, which is how it appears on Ronne's 1949 map. The shorter name (and those coordinates) was accepted by UK-APC on Jan. 28, 1953, and by US-ACAN later that year. It appears as such on a British chart of 1954, and also in the 1955 British gazetteer. It was mapped by USGS from USN air photos taken between 1965 and 1967, the coordinates were corrected, and, with those new coordinates, the feature appears on the 1969 USGS sketch map of Ellsworth Land–Palmer Land, and also in the 1977 British gazetteer. It appears on an Argentine chart of 1952 as Monte Robertson, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Robertson, Alexander "Sandie." b. 1855, Peterhead. Able boatman on the *Scotia* during ScotNAE 1902–04.

Robertson, Baden Powell. b. May 18, 1900, Brighton, Vic., but raised in Annandale, NSW, son of W. Robertson. On Jan. 21, 1915, at the age of 14, he entered the Royal Australian Navy as a 2nd class boy seaman, and on Sept. 17, 1915, joined the Merchant Marine, as an assistant steward on the *Kokiri*, running between Port Pirie and Sydney. He was 2nd steward on the *Aurora*, 1917, during BITE 1914–17. After his part in the expedition, he joined the *Dimboola*, as 1st steward, plying the Antipodean waters between Fremantle and Sydney. In the 1920s and 1930s he was a bread carter in Melbourne. He was still alive in 1954, living in Flinders.

Robertson, James B. "Jimmy." b. 1915, NJ. Aviation mechanic and ship's engineer's assistant on RARE 1947–48. His divorce came through the day he sailed from the USA. He was blind in one eye.

Robertson, John. He became an acting surgeon in the Navy in 1824, his first ship being the *Meteor*. He was subsequently on the *Romney*, the *Pike*, the *Ganges*, the *Belvedere*, the *Conway*, the *Britannia*, the *President*, and the *Vernon*. In 1836 he was appointed to the *Racer*, being promoted to surgeon while aboard that ship, and from there went as surgeon on the *Terror* during Ross's expedition of 1839–43. He was responsible for zoological and geological research. With Ross, he went on the *Enterprize* to search for Franklin in the Arctic, in 1848–49.

Robertson, Thomas. b. 1854, Peterhead, Scotland. A merchant seaman, and experienced Arctic navigator and whaler, he was skipper of the *Polar Star* in northern waters from 1880. He was captain of the *Active* during DWE 1892–93. In 1897 he was in Franz Josef Land in the Arctic, as skipper of the *Balaena*, and was master of the *Scotia* during ScotNAE 1902–04. He continued to skipper the *Scotia*, even after she was sold in 1905, and died on Dec. 14, 1918, in Dundee.

Robertson, William Alexander. b. Feb. 3, 1911, Aberdeen, Scotland, son of Alexander Robertson, a stone cutter, and his wife Jane. The family left Scotland in Aug. 1919, bound for Canada, and, the following month made their way to Stoughton, Mass., then on to Rowley, Mass., and then to nearby Ipswich. Bill joined the Merchant Marine, and was a seaman on the *Bear of Oakland*, during the first half of ByrdAE 1933–35. He died in Aug. 1968, in Ipswich.

Robertson Bay. 71°25' S, 170°00' E. A large, roughly triangular bay, about 35 km wide, indenting the N coast of Victoria Land for about 40 km between Cape Barrow and Cape Adare. Discovered in 1841 by Ross, who named it for Dr. John Robertson. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Robertson Buttress. 79°51' S, 158°17' E. Rising to 1040 m, it is the westernmost in a series of large rock buttresses on the S side of Darwin Glacier, between Alley Glacier and Gaussiran Glacier. Named by US-ACAN on Nov. 27, 2000, for William Gray Robertson, Jr., of Antarctic Support Associates, a specialist in the design and installation of communications systems for USAP in the McMurdo Sound and McMurdo Dry Valleys areas in 1999–2000. NZ-APC accepted the name on Feb. 20, 2001.

Robertson Channel. 66°19' S, 110°29' E. A marine channel separating Mitchell Peninsula from Pidgeon Island and Warrington Island, in the Windmill Islands, off the Budd Coast. First mapped by air photos taken in 1947 by OpHJ 1946–47, and in 1948 by OpW 1947–48. Named by US-ACAN in 1963, for Richard A. Robertson, glaciologist at Wilkes Station in 1958. ANCA had already accepted the name on Oct. 22, 1962. The Russians call it Proliv Krivoy.

Robertson Glacier. 71°03' S, 165°23' E. A tributary glacier flowing S from the Anare Mountains into Ebbe Glacier, E of Springtail Bluff. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for John W. Robertson, VX-6 photographer's mate at McMurdo, 1967–68 and 1968–69.

Robertson Island. 65°10' S, 59°37' W. An ice-covered island, 21.5 km long in a NW-SE direction, and 10 km wide, at the E end of the Seal Nunataks, off the Nordenskjöld Coast, on the E coast of the Antarctic Peninsula. The island is bounded by the Larsen Ice Shelf except on the E coast, which breaks the ice front. Discovered and roughly charted by Carl Anton Larsen on Dec. 9, 1893, and named by him as Robertson Ø, or Robertsons Ø, for William Robertson, Scottish co-owner of Woltereck and Robertson, the Hamburg company that sent Larsen to Antarctica in 1892–93 and 1893–94. This was immediately translated as Robertson Island, appearing that way on maps and charts over the next several years, including Bruce's 1896 chart, and a 1901 British chart. On Bartholomew's 1898 map this island, Lindenberg Island, and the Seal Nunataks are all shown collectively as the Dirk Gerritz Archipelago. In Oct, 1902, SwedAE 1901–04 charted this island and Christensen Nunatak as a single island, and called it Robertsons Ön. This was the beginning of an erroneous interpretation that would last until the mid-1950s. It appears that way on a 1940 Argentine chart, as Isla Robertson. On a 1948 Chilean map the present feature appears as Isla Cuatro Hermanos (i.e., "four-brothers island"). In 1947, US-ACAN accepted the name Robertson Islands, or Robertson Island Group, for this island, Lindenberg Island, and the Seal Nunataks collectively (which is how it had appeared on a 1943 U.S. Hydrographic Office chart). In Aug. 1947, Fids from Base D surveyed here, and concluded that Christensen Nunatak was, indeed, part of

the island. UK-APC accepted the name Robertson Island (and with Christensen Nunatak included) on Jan. 22, 1951, and it appears as such in the 1955 British gazetteer. Between 1953 and 1955, Fids from Base D surveyed here again, and found that Robertson Island and Christensen Nunatak were two separate islands (sic), just as Larsen had indicated. In 1956, the Argentines established San Roque Refugio here. The 1974 Chilean gazetteer accepted the name Isla Robertson. *See also* **Lindenberg Island** and **Oceana Nunatak**.

Robertson Islands. 60°46' S, 45°09' W. A group of small islands extending 6 km southward off the SE extremity of Coronation Island, and separated from that island by Whale Bay and The Divide, in the South Orkneys. They include, from N to S, Matthews Island (the largest), Coffer Island, Steepholm, Skilling Island, and Atriceps Island. Discovered and roughly charted by Powell and Palmer in Dec. 1821. Further charted in Jan. 1823, by Weddell, who applied the name Robertson Islands, or Robertson's Islands, to those S of Matthews Island and Coffer (both of which were then considered to form the SE peninsula of Coronation Island, a situation that would not be corrected until 1957). On Powell's chart of 1831, and on a British chart of 1839, the name is Robertson Islands, and on Friederichsen's 1895 German map it appears as Robertson Inseln. Petter Sørlle charted them in 1912, as did the Discovery Investigations in 1933-34. They appear on the DI's 1934 chart. US-ACAN accepted the name in 1947 (after rejecting the proposed name Robertson's Islands), plotted in 60°47' S, 45°10' W. UK-APC accepted that on Sept. 8, 1953, and that is how it appears in the 1955 British gazetteer. In Jan. 1957, Fids from Signy Island Station re-surveyed the group, and found that Matthews and Coffer were separate islands (i.e., not part of Coronation Island), and included them in the group. That new situation appears in the 1977 British gazetteer. The Argentines had been calling them Islas Robertson since at least 1908, and that was the name accepted by the Argentine gazetteer of 1970.

Robertson Landing. 66°23' S, 110°26' E. A boat-landing on the N side of Ardery Island, near the W end of the island, in the Windmill Islands, off the Budd Coast. A landing was first made here by the launch *MacPherson Robertson* (sic), carrying Phil Law and his ANARE party, on Jan. 9, 1961. The landing was named by ANCA for Norman Napoleon Robertson (b. 1909) of Melbourne, Chairman of MacRobertson (he was son of Mac. Robertson), the donor of the launch. US-ACAN accepted the name in 1963.

Robertson Massif. 76°22' S, 161°55' E. A rugged, mainly ice-covered massif, 11 km long, N of Pa Tio Tio Gap. The feature includes Mount Gauss and Mount Chetwynd, and forms the N segment of the Kirkwood Range. Named by US-ACAN on May 18, 2000, for William Robertson, CEO and surveyor general of the Department of Survey and Land Information, 1988-96. He directed programs for Antarctic surveying, mapping, and place-naming. Later a member of SCAR.

Robertson Nunatak. 71°54' S, 69°37' E. A small nunatak, 30 km (the Australians say about 44 km) NE of Clemence Massif, on the E side of Lambert Glacier. Photographed aerially by ANARE in 1958. Sighted and mapped by the ANARE Prince Charles Mountains survey parties of 1969 and 1971. Named by ANCA on May 18, 1971, for Malcolm J.M. "Mal" Robertson, geophysicist at Mawson Station in 1970. He took part in the PCM survey of 1971, which mapped this nunatak. US-ACAN accepted the name in 1973.

Robertson Ridge. 77°24' S, 162°12' E. A ridge, circumscribing the NW part of Clark Glacier, in Victoria Land. Named by US-ACAN in 1976, for James D. Robertson, USARP geophysicist at Byrd Station in 1970-71. He also took part in the geophysical survey of the Ross Ice Shelf in 1973-74 and 1974-75.

Robertsoninsel *see* **Robertson Island**

Robertson's Islands *see* **Robertson Islands**

Glaciar Robillard *see* **Robillard Glacier**

Robillard Glacier. 68°18' S, 65°35' W. A narrow glacier flowing ENE into the N side of the head of Solberg Inlet, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Probably discovered aerially by Ellsworth as he flew over on Nov. 21, 1935; the rough map drawn up by U.S. cartographer W.L.G. Joerg in 1936, using Ellsworth's air photos, seems to indicate that. Discovered definitely, from the air and from the ground, by members from East Base, during USAS 1939-41. On a Chilean chart of 1947 it appears (in error; they had Whirlwind Glaciers in mind) as Glaciar Torbellino. Photographed aerially in Aug. 1947, by RARE 1947-48, and surveyed and charted from the ground in Dec. 1947, by Fids from Base E. It appears on Ronne's 1949 map as Lammers Glacier (q.v.), and that name was accepted by UK-APC on Jan. 28, 1953, and by US-ACAN later that year. However, by the time of the 1956 U.S. gazetteer, the name Robillard Glacier had been applied (by Finn Ronne) to this feature, named for Capt. George N. Robillard (1902-1989), USN, of the legal section of the Bureau of Ships, who helped procure Congressional support for the RARE ship, the *Port of Beaumont, Texas*. UK-APC accepted the name on Aug. 31, 1962. Mapped by USGS from USN air photos taken between 1966 and 1969. It appears as such on the 1979 USGS sketch map of the N part of Palmer Land. The Argentines call it Glaciar Robillard. Note: Ronne had originally applied the captain's name to an island in the area, Robillard Island, which was later found not to exist.

Robillard Island *see* **Robillard Glacier**

Robilliard Glacier. 70°13' S, 159°56' E. A valley glacier, 27.5 km long, rising southward of Mount Simmonds, then flowing northeastward through the Usarp Mountains, and emerging from the mountains at Mount Shields, where it joins Kooperatsiya Ice Piedmont, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Gordon Robilliard, USARP biologist at McMurdo, 1967-68 and 1968-69. ANCA accepted the name on July 31, 1972.

Robin, Gordon de Quetteville. b. Jan. 17, 1921, Melbourne, son of an engineer, and nephew of Maj. Gen. Sir Frank Berryman. A geophysicist and glaciologist, he joined the RANVR in 1942, then moved to England, and was posted to the Far East on submarine duties (notably on the *Stygian*). After the war he studied physics, and worked on the Cyclotron project. He was the first leader of Signy Island Station (or Base H, as it was known then), as well as meteorologist, in the winter of 1947. In 1948 he returned to Port Stanley, where he caught the *Lafonia* bound for London, arriving there on April 21, 1948. He was 3rd-in-command of NBSAE 1949-52. He married Jean Fortt in 1953. He was the first person to produce reliable and accurate measurements of Antarctic ice sheet thickness using seismic sounding, and in 1963, with Stanley Evans, developed a radio echo-sounding system which allowed continuous profiling of ice sheets and glaciers. He was the longest serving director of the Scott Polar Research Institute (1958-82), and during that time permanent UK delegate to SCAR (President, 1970-74). In 1967 he led a SPRI/NSF/BAS program of radio echo-sounding of the Antarctic ice sheet. Part 2 of this program was 1969-70. Stan Evans led Part 3 (1971-72). Robin also led the 4th part (1974-75). He died on Sept. 21, 2004, in Cambridge, England.

Robin, Louis. French naturalist who went on ChilAE 1946-47.

Robin Heights. 72°27' S, 0°38' E. A cluster of high rock summits, partly ice- and snow-capped, and including Heikampen Peak (at the SE end), between Hei Glacier and Kvitsvodene Valley, in the central part of the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them for Gordon de Q. Robin. US-ACAN accepted the translated name Robin Heights in 1966.

Robin Peak. 60°41' S, 45°37' W. A sharply defined rocky summit, rising to 260 m, it is the most northerly peak on Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station in 1947. Named by UK-APC on March 31, 1955, for Gordon Robin (q.v.), who made the first detailed survey of Signy Island. US-ACAN accepted the name in 1956.

Robin Rocks. 60°41' S, 45°36' W. A group of partially submerged rocks off the NE coast of Signy Island, NE of Robin Peak, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1950. Photographed aerially by the RN in 1968. Named by UK-APC on Sept. 29, 2004, in association with the peak.

Robinheia *see* **Robin Heights**

Robinsøkket. 73°40' S, 0°45' W. A depres-

sion under the ice, SE of the Neumayer Cliffs, at the NE end of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Gordon Robin.

The *Robinson*. Argentine patrol vessel, built by Hansen & Puccini, in Buenos Aires, and launched on Aug. 18, 1938, same day as the *Seaver*. She was at the Antarctic Peninsula in Aug. 1947 (although not part of an expedition, as such, rather conducting special investigations into the ice conditions of the Drake Passage and the northern Antarctic Peninsula). Captain was Augustín P. Lariño. She was back doing the same thing in late 1948, at the northern tip of the Antarctic Peninsula. Captain Enrique Plater.

Cabo Robinson *see* **Cape Robinson**

Cape Robinson. 66°52' S, 63°43' W. Marks the E end of Cole Peninsula, between Cabinet Inlet and Mill Inlet, on the Foyn Coast, on the E coast of Graham Land. On his flight of Dec. 20, 1928, Wilkins spotted (but did not photograph) an island in about 67°20' S, 61°40' W, which he named Robinson Island, for W.S. Robinson of London and Australia (*see* **Robinson Group**). It appears as such on Wilkins' map of 1929, and also on British charts of 1933 and 1940. There is a 1929 reference to it as New Island. US-ACAN accepted the name Robinson Island, but plotted it in 67°20' S, 63' 40' W. Everyone with a vested interest in this region translated it according to their language, for example a 1940 Argentine chart shows it as Isla Robinson. Following air photography in late 1947, during RARE 1947-48, this cape was given the name Cape Duemler, and the name Robinson was applied (for a very brief while) to Francis Island (q.v.). It appears that way on Finn Ronne's 1949 map. In Dec. 1947, Fids from Base D were surveying here, and could find no island, so, in order to preserve the naming, they re-applied the name Robinson to this cape. UK-APC accepted the name Cape Robinson on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears as such on a British chart of 1952, and also in the 1955 British gazetteer, as well as in the 1956 American gazetteer. On a 1953 Argentine chart it appears as Cabo Robinson, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

[1]**Mount Robinson**. 68°12' S, 49°23' E. About 4 km S of Mount Underwood, in the central part of the Nye Mountains, in Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1957. Named by ANCA on Nov. 24, 1961, for Hartley "Robbie" Robinson, who wintered-over as senior diesel mechanic at Wilkes Station in 1959 (*see* **Deaths**, 1959).

[2]**Mount Robinson**. 71°50' S, 169°49' E. Rising to 2430 m (the New Zealanders say 3048 m), at the head of DeAngelo Glacier, in the Admiralty Mountains of Victoria Land. Discovered on Jan. 15, 1841 (the New Zealanders say Feb. 15, 1841), by Ross, who named it for physicist Rev. Dr. John Thomas Romney Robinson (1792-1882), director of the Armagh Astronomical Observatory, a member of the committee of the British Association which advocated sending out RossAE 1839-43. US-ACAN accepted the name in 1950, and NZ-APC followed suit.

Robinson, Alfred Griffin Bert "Griff." b. 1901, Whangarei, NZ, son of Alfred Robinson and his wife Eliza Lemon, and older brother of Jack and Horace Robinson. He went to sea in 1919, and on Dec. 9, 1929, at Dunedin, while a harbor pilot, was taken on as bosun on the *City of New York* during ByrdAE 1928-30. After the expedition, he and Jack Woolhouse (q.v.) signed on to the *Tusitala*, and on Nov. 29, 1930, on that ship, pulled in to Honolulu. He was back in Antarctica again with Lincoln Ellsworth, for the 1933-34 expedition, signing on at Dunedin to replace Dr. Jorgen Holmboe as seaman (but not in the doctor's other role as meteorologist). He kept a log. He was back in Antarctica yet again on the *Bear of Oakland* for the 2nd half of ByrdAE 1933-35, as 2nd officer. He married Naomi, and they lived in Nelson. He joined the NZ Army in World War II, as an engineer, rose to the rank of sergeant, was mentioned in dispatches, and was killed at Solum, in North Africa on Feb. 3, 1941.

Robinson, Charles. Captain of the London sealer *Pomona*, in the South Shetlands for the 1821-22 and 1822-23 seasons. This may be the same Capt. Robinson who brought the *Susanna Ann* back to London in 1825, after Matt Brown had died on board.

Robinson, Helier James. b. Sept. 25, 1928, St Helier, Jersey, son of Arthur James Robinson and his wife Wanda Casimir (whose real name was Mrwoczynska). Arthur Helier, originally from Manchester, had been an avid cyclist, despite being blind in one eye, and of all the places he cycled (and they were many), Jersey was his favorite, and he settled there as a teacher in 1914. Helier Robinson and his twin brother were raised, partly under German occupation, in Jersey, attending both their father's school (he had started his own) and Victoria College (a school, not a college, as such). Helier went to Imperial College, London, to study engineering, his father's ambition for the boy, not the boy's. Unsure, at that time anyway, of why he joined FIDS, he did so in 1951, and left Southampton on the *John Biscoe*, bound for 2½ unbroken years at Port Lockroy Station, where he wintered-over as diesel electric mechanic in 1952 and 1953. After his time was up, in early 1954, he took the *Biscoe* to Deception Island, stayed there 2 weeks, and then took an RN frigate to the Falklands, where he worked for a little while on a fishing vessel. Then on to Montevideo, then a freighter to Cape Town, and on to Kenya to spend some time with his brother. Then back to Jersey. Between 1955 and 1958 he was in the Canadian Arctic, where he not only developed a rather original philosophy, but found his own ambition — to be a philosopher. He went to the University of Toronto, and in 1962 graduated with a BA, MA in 1963, and PhD in 1965. He married in 1962, to Eleanor Heise. From 1966 to 1993 he was professor of philosophy at the University of Guelph, in Ontario, and retired to the town of Fergus, in that province. His twin brother came to live with him.

Robinson, Horace B. b. Whangarei, NZ. Youngest of seven children of Alfred Robinson and his wife Eliza Lemon, and brother of Griff and Jack Robinson. He was on the *Bear of Oakland* for the 2nd half of ByrdAE 1933-35.

Robinson, John *see* **USEE 1838-42**

Robinson, R.J. "Jack." Also known as "Lofty." b. Whangarei, NZ, son of Alfred Robinson and his wife Eliza Lemon, and younger brother of Alfred "Griff" Robinson. Seaman on the *City of New York* during both halves of ByrdAE 1928-30.

Robinson, R.P. Purser's steward on the *Vincennes* during USEE 1838-42.

Robinson, Russell Shepherd. b. June 11, 1911, Hamilton, NZ, son of farm manager Edward H. Robinson and his wife Edna. He grew up in Sydney, where his father ran a farm, and then moved to New York with his parents. He was the aeronautical engineer on the *Bear of Oakland*, 1933-34, during the first half of ByrdAE 1933-35. He was an inventor, patenting inventions until he died on Oct. 27, 1998, in Tucson.

Robinson, William *see* **USEE 1838-42**

Robinson Bay. 66°34' S, 99°02' E. An indentation, about 24 km wide, into the coast of Queen Mary Land, where the Denman Glacier sweeps past it, on the SE side of Davis Peninsula, just to the S of the E end of the Shackleton Ice Shelf. ANCA accepted the name on March 7, 1991. Originally plotted in 66°38' S, 89°57' E, it has since been replotted by ANARE cartographers.

Robinson Bluff. 85°36' S, 159°47' W. A bold rock bluff overlooking the W side of the lower part of Amundsen Glacier, just N of Whitney Glacier, in the Queen Maud Mountains. Discovered in Dec. 1929 by Larry Gould's geological party during ByrdAE 1928-30. Named by US-ACAN in 1967, for Richard R. Robinson, who wintered-over as station engineer at McMurdo in 1966.

Robinson Glacier. 66°30' S, 107°16' E. A channel glacier flowing into the Knox Coast of Wilkes Land, between Merritt Island and Reist Rocks. Mapped by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for R.P. Robinson. ANCA accepted the name.

Robinson Group. 67°27' S, 63°27' E. A group of small islands which extend 16 km in an E-W direction, about 19 km NW of Cape Daly, off the coast of Mac. Robertson Land. On or around Feb. 13, 1931, they were discovered by BANZARE, and named by Mawson for William Sydney "W.S." Robinson (1876-1963), English-born Melbourne businessman, a supporter (*see also* **Cape Robinson**). Norwegian whalers on the *Thorgaut* discovered the group independently at around the same time, naming them Thorgautøyane (i.e., "the Thorgaut Islands"). In 1947, US-ACAN accepted Mawson's naming, and ANCA followed suit on Nov. 28, 1955. On that latter date, ANCA named the largest island in the group as Thorgaut Island, and US-ACAN

followed suit in 1965 (*see* **Thorgaut Island**). Others in the group include Andersen Island and Macklin Island.

Robinson Heights. 71°22' S, 166°40' E. Rocky heights, but mainly ice-covered, rising to 2170 m, elliptical in plan, and about 24 km long, they stand S of Anare Pass, surmounting the E side of the head of Ebbe Glacier, and forming the NW end of the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Edwin S. "Robbie" Robinson (b. 1935), USARP geophysicist at McMurdo in 1960, who took part in several geophysical traverses, and led the South Pole Station Traverse of 1962-63. NZ-APC accepted the name.

Robinson Island *see* **Francis Island, Cape Robinson**

Robinson Peak. 79°23' S, 83°58' W. A sharp peak rising to 2040 m, on the ridge E of Rennell Glacier, 11 km S of Mount Virginia, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Willard E. Robinson, construction mechanic at Byrd Station in 1965.

Robinson Ridge. 66°22' S, 110°36' E. A rocky coastal peninsula between Sparkes Bay and Penney Bay, connected to the continental ice of the Budd Coast, at the E side of the Windmill Islands. First mapped from air photos taken in Feb. 1947 during OpHJ 1946-47. Named by US-ACAN in 1956, for Lt. Cdr. Frederick G. Robinson, USN, aerological officer on OpW 1947-48. The Australians established a field hut here in 1988. ANCA accepted the name on July 4, 1961.

Robison Glacier. 86°29' S, 148°12' W. A broad tributary glacier flowing NW along the N side of the La Gorce Mountains, to enter Scott Glacier, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35. Named by US-ACAN in 1967, for Lt. Cdr. Layton E. Robison, VX-6 pilot during OpDF 64 (i.e., 1963-64), OpDF 65 (i.e., 1964-65), and OpDF 66 (i.e., 1965-66).

Robison Peak. 77°12' S, 160°15' E. Also spelled (erroneously) as Robinson Peak. A snow-covered peak rising to 2230 m, 5 km NE of Mount Dearborn, near the N end of the Willett Range, in Victoria Land. Named by US-ACAN in 1963, for Leslie B. Robison, USGS engineer who surveyed this peak in Dec. 1960.

Röbke, Karl-Heinz. b. 1909, Germany. Went to sea at 15, and became an able seaman while plying the Atlantic on North German Lloyd Line ships out of Bremerhaven. He was 3rd officer on the *Bremen* when he moved over to the *Schwabenland* as 2nd officer and Nazi snitch, during GermAE 1938-39.

Punta Robles. 64°22' S, 61°27' W. A point on the W side of Caleta Barra (what the Argentines call Caleta Heroína), on the S coast of Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Skaly Roborovskogo. 73°04' S, 66°15' E. A group of rocks due W of Mount Stinear, in the southern Prince Charles Mountains. Named by the Russians.

Robot Gully. 77°31' S, 167°09' E. A gully, at an elevation of about 3675 m, on the NW side of the summit crater of Mount Erebus, on Ross Island. It was used as the access route from a NASA robot called Dante that was carried to the crater rim on Jan. 1, 1993. Named by NZ-APC on June 19, 2000. US-ACAN accepted the name on Oct. 31, 2000.

Robson Glacier. 77°05' S, 162°11' E. A small glacier, about 5 km long, it flows N from the Gonville and Caius Range, along the E side of Red Ridge, and merges with the general flow of ice (mostly from the Mackay Glacier) toward Granite Harbor fronting (and southward of) Redcliff Nunatak, in Victoria Land. Named by Grif Taylor during the Western Journey, while part of BAE 1910-13. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Cabo Roca *see* **Cape Roca**

Cape Roca. 60°45' S, 44°49' W. A cape, 3 km NW of Cape Davidson, between that cape and Route Point, at the W end of Laurie Island, in the South Orkneys. Charted in 1903 by Scot-NAE 1902-04, and named in 1904 by Bruce for Gen. Julio Antonio Roca (1843-1914), president of Argentina, 1880-86 and 1898-1904. Further surveyed by Petter Sørlle in 1912, it appears on his charts named descriptively as Kapp Roed (i.e., "red cape") or Cape Roed. Re-surveyed by the Discovery Investigations in 1933, and charted by them in 1934 as Cape Rock. Whether the DI boys had simply inadvertently translated the name "roca" to "rock" (thinking it was a word, rather than a man's name), or it was a mere typographical error, we don't know, but it set of a chain of errors perpetuated by France (1937; Cap Rock) and Argentine (1947; Cabo Rock). This was particularly embarrassing to the Argentines, as General Roca was their man. It appears as Cape Roca on a British chart of 1938, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. By the time of a 1952 Argentine chart the name had been corrected to Cabo Roca, and that was the name accepted by the 1970 Argentine gazetteer.

Isla Roca *see* **Broken Island**, **Dion Islands**

Islotes Roca *see* **Anagram Islands**, **Guébriant Islands**, **Roca Islands**

Cerro Roca Cuatro Romano *see* **Roman Figure Four Promontory**

Cerro Roca del Paso *see* **Cain Nunatak**

[1]**Roca Islands**. 65°11' S, 64°27' W. Also spelled (erroneously) as Rocca Islands. A group of small islands (including Locator Island) E of the Cruls Islands, between those islands and the Anagram Islands, on the SW side of French Passage, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Discovered and roughly charted by FrAE 1903-05, and named by Charcot as Îles Roca, for the president of Argentina (*see* **Cape Roca**). Roughly re-charted by FrAE 1908-10. It appears as such (and also as Île Roca, in the singular) on Charcot's map of 1906. BGLE 1934-37 partly recharted the area, and incorrectly named the Anagram Islands as the Roca Islands, and this mistake was not cleared up until March 1958, when an RN Hydrographic Survey unit on the *John Biscoe* surveyed the area, also using their helicopter. UK-APC accepted the name Roca Islands on July 7, 1959, and US-ACAN followed suit that year. The feature appears as such on a 1960 British chart. Two separate 1957 Argentine charts have the Roca Islands and the Cruls Islands grouped together erroneously as Islas Quintana and Islotes Quintana (*see* **Quintana Island**). Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Islotes Roca.

[2]**Roca Islands** *see* **Anagram Islands**

Roca Reef *see* **Rocca Islands**

Roca Rock *see* **Rocca Islands**

Islotes Rocca *see* [2]**Rocca Islands**

Rocas Rocca *see* [2]**Rocca Islands**

[1]**Rocca Islands** *see* **Anagram Islands**, **Roca Islands**

[2]**Rocca Islands**. 67°47' S, 68°46' W. A group of small islands and rocks, 5 km E of Avian Island, on the N side of Woodfield Channel, off the S end of Adelaide Island. Discovered in Jan. 1909 by FrAE 1908-10, charted by them as a single rock, and named by Charcot as Rocher Roca, or Rocher Rocca, for M. Rocca, a member of the French community in Punta Arenas at the time. It appears both ways on Charcot's maps of 1910 and 1912. However, on Bongrain's 1914 map of the latter expedition, it appears as Récif Roca, which was translated on a British chart of 1914 as Roca Reef. It appears as Roca Rock on a 1930 U.S. Hydrographic Office chart, and also on a 1933 British chart. On a 1946 Argentine chart it appears as Isla Roca, and on one of their 1949 charts as Islote Roca. It was surveyed by Fids from Base E in Oct. 1948. US-ACAN accepted the name Rocca Reef in 1950, and UK-APC followed suit on March 31, 1955. It appears as such on a British chart of 1961. It appears on a 1963 Chilean chart as Rocas Roca, and that name was accepted by the 1974 Chilean gazetteer. Today they call the feature Rocas Rocca. It was re-surveyed in 1963 by an RN Hydrographic Survey unit on the *Protector*, and determined to be a group of islands. It appears as such on their 1964 chart. UK-APC accepted the name Rocca Islands on March 12, 1964, and US-ACAN followed suit later that year. On an Argentine chart of 1969 it appears as Islotes Rocca, and that was the name accepted by the 1970 Argentine gazetteer.

Roche, Gervais-Rose-Guillaume. b. March 10, 1800, Dinan, France. Ordinary seaman on the *Astrolabe* during FrAE 1837-40.

Roché Glacier. 78°32' S, 85°38' W. A glacier, 5.8 km long and 2 km wide, descending steeply westward from the central part of the Vinson

Plateau, N of Silverstein Peak, to join Branscomb Glacier, in the Sentinel Range, in the Ellsworth Mountains. Its head is bounded by Mount Vinson to the N, Corbet Peak and Clinch Peak to the E, Wahlstrom Peak to the SE, and Hollister Peak to the S. Mapped by the Americans in 1988. Named by the Bulgarians on Sept. 14, 2010, for Anthony de la Roché, who discovered South Georgia in 1675.

Rochefort, Charles. b. Nov. 30, 1817, Bordeaux. Ordinary seaman on the *Zélée* during FrAE 1837–40. He left sick at Valparaíso, on May 28, 1838.

Rochelor. First name unknown. b. Jan. 19, 1811, Bordeaux. On April 18, 1838, at Talcahuano, Chile, he embarked on the *Zélée* not long after the scurvy ship had pulled in to port, as part of FrAE 1837–40.

Le Rocher Gris *see* under **L**

Rochlintoppane. 72°11' S, 14°26' E. A group of nunataks in the southernmost part of the Payer Mountains, in the Hoel Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians.

Rochray Glacier. 72°11' S, 101°21' W. About 8 km long, just E of Hendersin Knob, on Thurston Island, it flows S to the Abbot Ice Shelf in Peacock Sound. First delineated from air photos taken in Dec. 1946, during OpHJ 1946–47. Named by US-ACAN in 1960, for Lt. (jg) Samuel Rochray, USN, helicopter pilot on the *Glacier* in Feb. 1960, during the USN Bellingshausen Sea Expedition.

Cabo Rock *see* **Cape Roca**

Cap(e) Rock *see* **Cape Roca**

Rock Haven. 60°44' S, 45°35' W. A small cove, between Pageant Point and Gourlay Point, on Gourlay Peninsula, on the E coast of Signy Island, in the South Orkneys. It provides a sheltered anchorage for small boats. FIDS built Gourlay Hut here in 1961–62. BAS did biological work here up to 1973. Named by UK-APC on Dec. 20, 1974, for the prominent rock at its entrance. US-ACAN accepted the name in 1975.

The Rock Pile *see* **Bermel Peninsula**

Pico Rock Pile *see* **Rock Pile Peaks**

Rock Pile Peaks. 68°25' S, 65°09' W. A cluster of peaks rising to 1110 m (the British say 340 m), surmounting the E end of Bermel Peninsula between Wilson Pass and Rock Pile Point (what the British call Periphery Point), and projecting from the Bowman Coast, on the E coast of the Antarctic Peninsula, between Mobiloil Inlet and Solberg Inlet. The peaks were photographed aerially on Dec. 20, 1928, by Wilkins, and again by Ellsworth on Nov. 23, 1935. U.S. cartographer, W.L.G. Joerg, working from these photos, roughly mapped the feature in 1936 (when one says "the feature" here, one means the area which includes Bermel Peninsula, Rock Pile Point, and Rock Pile Peaks). The feature was re-photographed aerially in Sept. 1940, by USAS 1939–41, and roughly located from the ground by them in Nov. 1940. They plotted it in 68°16' S, 65°07' W (from the ground anyway; their navigation controls were wrongly adjusted on the flights, so two separate features appear, one aerially, one from the ground). The aerial one appears on a 1943 U.S. Hydrographic Office chart and photo. The one from the ground appears on a 1946 USHO chart (this USAS navigation error was a real mess). From its jumbled appearance, the feature (i.e., the one surveyed from the ground) was accepted by US-ACAN in 1947, as Rock Pile Point (they rejected the proposed name The Rock Pile, which had been its name up to that time), and plotted in 68°18' S, 65°05' W. Surveyed by Fids from Base E in Dec. 1947, and they renamed the feature Rock Pile Peaks. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears as such in the 1955 British gazetteer, and also in the 1956 U.S. gazetteer. Unfortunately, in the 1958 British gazetteer, it appears as Rock Pile Peak, but that error was subsequently corrected. It appears on a Chilean chart of 1962 as Pico Rock Pile, and that name was accepted by the Chilean gazetteer of 1974. *See* **Bermel Peninsula**, and **Rock Pile Point**, for more details.

Rock Pile Point. 68°25' S, 64°58' W. At the E point of the Bermel Peninsula, which also contains Rock Pile Peaks to the W, on the Bowman Coast, between Solberg Inlet and Mobiloil Inlet, on the E coast of the Antarctic Peninsula. Photographed aerially by USAS 1939–41, roughly positioned by them, and named by them as Rock Pile. The name Rock Pile Point was accepted by US-ACAN in 1947, for the entire peninsula (*see* **Bermel Peninsula**). In Nov.–Dec. 1947, Fids from Base E surveyed it from the ground, and on Dec. 22, 1947 it was photographed aerially by RARE 1947–48. Further surveyed by Fids from Base E in Dec. 1958. On Aug. 31, 1962, UK-APC named this present point as Periphery Point because it was on the periphery of 3 separate FIDS surveys. In 1965, US-ACAN also named this present point, but as Rock Pile Point, named in association with the peaks. Photographed aerially by USN between 1966 and 1969, it appears on the 1979 USGS sketch map of the N part of Palmer Land. At one time the Chileans called it Punta Carrera Pinto (*see* **Vesconte Point** for the origin of this name), but they re-applied that name to Vesconte Point, giving a new name to Rock Pile Point, i.e., Punta Rock Pile. The Argentines call it Punta Periferia.

Rock X *see* **X**

Rockefeller Mountains. 78°00' S, 155°00' W. A group of about 13 low-lying, scattered granite peaks and ridges, almost entirely snow-covered, 50 km SSW of the Alexandra Mountains, on Edward VII Peninsula. Discovered aerially by Byrd on Jan. 27, 1929, during ByrdAE 1928–30, and named by him for John Davison Rockefeller, Jr. (1874–1960), the only son of the great industrialist, and a patron of the expedition. US-ACAN accepted the name in 1947, and NZ-APC followed suit. The main features in this group are: Mount Fitzsimmons (the highest), Mount Frazier (the most northerly), Mount Paterson, Mount Schlossbach, Mount Nilsen, Breckinridge Peak, Mount Helen Washington, Mount Butler (the most southerly), Tennant Peak, Mount Franklin, Mount Shideler, Gould Peak, Mount Jackling, the Fokker Rocks, the Melbert Rocks, Strider Rock, and Washington Ridge.

Rockefeller Plateau. 80°00' S, 135°00' W. That extensive portion of the interior ice plateau of Marie Byrd Land lying eastward of the Shirase Coast and the Siple Coast, and S of the Ford Ranges, the Flood Range, and the Executive Committee Range. Obviously ice-covered, it rises to between 1000 and 1500 m above sea level. Discovered in 1934 during ByrdAE 1933–35, and named by Byrd for John D. Rockefeller, Jr. (*see* **Rockefeller Mountains**). US-ACAN accepted the name.

Rockefeller Range *see* **Rockefeller Mountains**

Rockets. Rocketry studies were conducted during IGY, the *Glacier* launching "rockoons" into the ionosphere to gather data on cosmic rays, aurora, and geomagetism. Rockets were not used by the USA between 1963 and 1970, although they were by other countries. *See also* **Arcas rockets**.

Rockfall Cliff. 73°26' S, 93°34' W. A conspicuous rock cliff marking the NW face of Mount Loweth, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960–61, and named by them for the continual rockfalls here which made study of the area rather dangerous. US-ACAN accepted the name in 1963.

Rockfall Valley. 63°52' S, 58°02' W. A valley, extending NNW of Davies Dome, and forming the route down to Phormidium Lake, on Ulu Peninsula, on James Ross Island. So named by UK-APC on Nov. 15, 2006, because there is almost continuous rockfall at the S end of the valley.

Rockford Station *see* **Little Rockford Station**

Rockinson, Lewis L. *see* **Rickinson, Lewis L.**

Mount Rockmore. 80°02' S, 158°09' E. A mound-shaped mountain rising to 1730 m, 6 km N of Mount Aldrich, in the Britannia Range. Named by US-ACAN in 2000, for Mark Rockmore, geographer with the U.S. Defense Mapping Agency and Topographic-Hydrographic Center, 1979–96; with the National Imagery and Mapping Agency (simply the previous organization, renamed) from 1996; secretary of US-ACAN, 1984–93; and a member of that organization from 1994. NZ-APC accepted the name on Feb. 20, 2001.

Rockney Ridge. 75°02' S, 133°45' W. A rock ridge on the NE side of Mount Goorhigian, in the Demas Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Vaughn D. Rockney, meteorologist at Byrd Station in 1968–69.

Rockoons *see* **Rockets**

Rockpepper Bay. 63°08' S, 55°44' W. A bay, 5.5 km wide at its entrance, E of Boreal Point, along the N coast of Joinville Island. Surveyed by Fids from Base D in 1953–54. ArgAE 1955–

56 surveyed it, and named it Ensenada Güemes, for Gen. Martín Güemes (1785-1820), Argentine soldier in the war of independence. *See also* **Martín Güemes Refugio**. It appears as such on their 1956 chart, and that was the name accepted by the 1970 Argentine gazetteer. On Sept. 4, 1957, UK-APC named it Rockpepper Bay, for the very many small islands and rocks in the bay. It appears as such on a 1962 British chart. US-ACAN accepted that name in 1963. The Chileans call it Bahía Maurice, for Sub Lt. Maurice Poisson Eastman (b. June 14, 1926. d. March 30, 2006, Viña del Mar, of a heart attack), who joined the Chilean Navy in 1941, and was adjutant to the skipper on the *Iquique* during ChilAE 1946-47 (he was only 20, and his mother packed him a bottle of brandy to ward off the cold), and who took part in hydrographic work during the expedition. After the expedition, he commanded ships, was an instructor at the War Academy, and in the 1960s was part of the Chilean naval mission in Europe, returning to Chile in 1970 to command more ships. Back to Europe in the 1970s as head of naval missions, he retired as a vice admiral in 1983. For (a little bit) more on Don Maurice, *see* **Poisson Hill** and **Bob Island**.

Rocks. The sun can heat rocks to 59°F. Snow then melts, runs down the rock as water into the shade, and freezes, thus cracking and eroding the rock (*see also* **Erosion**).

Punta Rocky *see* [1]**Bell Island**

Rocky Cove. 62°12' S, 58°56' W. Between Lapidary Point and Suffield Point, Maxwell Bay, King George Island, in the South Shetlands. Surveyed by SovAE from 1968, and named by the Russians as Bukhta Kamenistaja (i.e., "rocky bay"). This was translated as Kamenistaya Inlet. It appears both ways on Russian charts of 1968 and 1971. UK-APC accepted the name Rocky Cove on Feb. 7, 1978, and US-ACAN followed suit. It appears in the 1980 British gazetteer.

[1]**Rocky Point**. 77°30' S, 166°14' E. The N tip of Lichen Promontory, between Horseshoe Bay and Maumee Bight, on the W side of Ross Island. Named descriptively by Shackleton during BAE 1907-09. US-ACAN accepted the name on May 19, 2000, and NZ-APC followed suit.

[2]**Rocky Point** *see* **Bell Point**, **Cape Dunlop**, **Hospital Point**

Isla Rocosa *see* **Tail Island**

Punta Rocosa *see* **Bell Point, Hospital Point, Musialski Point**

Isla Rodeada *see* **Beta Island**

Roderick Valley. 83°30' S, 57°30' W. A large, ice-filled valley, trending in a N-S direction, and separating the Schmidt Hills and the Williams Hills to the W from the main mass of the Neptune Range to the E, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Capt. (later Col.) David Wallon Roderick (b. Nov. 29, 1920, Akron, O. d. Dec. 3, 1999, Easley, SC), USAF, pilot and 2nd-in-command of the U.S. Air Force Electronics Test Unit, 1957-58. Camp Neptune was here (*see under* **Neptune Range**).

UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Mount Rodger. 79°42' S, 83°34' W. A sharp peak, rising to 1410 m, at the NW end of the Collier Hills, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Rodger A. Brown, meteorologist at Little America V in 1958.

Rodger, Alan Stuart. b. Jan. 8, 1951. Ionosphere physicist who wintered-over at Base F in 1973 and 1974. He was at Faraday Station, 1979-80.

Rodger, Thomas A. "Tom." Joined FIDS in 1961 as a diesel electric mechanic, and wintered-over at Signy Island Station in 1962.

Rodgers, George *see* USEE 1838-42

Rodgers Point. 77°46' S, 166°47' E. A point, 4 km NE of Knob Point, on the W side of Hut Point Peninsula, on Ross Island. Named by NZ-APC on June 19, 2000 (ratified on Feb. 20, 2001), for Thelma A. Rodgers, scientific officer, the first woman to winter-over at Scott Base, in 1979. US-ACAN accepted the name on Oct. 25, 2000. *See also* **Women in Antarctica**.

Caleta Rodman *see* **Rodman Cove**

Rodman Cove. 61°07' S, 55°28' W. On the S side of Cape Lindsay, on the W coast of Elephant Island, in the South Shetlands. Named by U.S. geographer Lawrence Martin for Benjamin Rodman, of New Bedford, Mass., owner of whaling ships in the 1820s and 1830s. It appears on a 1943 U.S. Hydrographic Office chart of 1943, but on a 1946 USAAF chart misspelled as Redman Cove. It appears on a Chilean chart of 1947 as Caleta Rodman, and in a 1957 Argentine chart as the same thing. It was surveyed in Dec. 1970, by the British Joint Services Expedition, and named by them as Emma Cove, for the *Emma*. UK-APC accepted the name Emma Cove on Nov. 3, 1971, and US-ACAN accepted Rodman Cove in 1972. The Chilean gazetteer accepted the name Caleta Rodman. It appears on a 1977 Argentine chart as Caleta Emma, and today the Argentines use both names. This cove was last plotted by the UK, in late 2008.

Rodman Passage. 65°53' S, 66°00' W. A maritime passage running NE-SW between Rabot Island and the S end of Renaud Island, in the Biscoe Islands. Charted by FrAE 1908-10, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Hugh Rodman (1859-1940) of the U.S. Hydrographic Office (he was later an admiral), a pioneer in the 1890s of ice movement studies in the North Atlantic. It appears on a British chart of 1960. ChilAE 1961-62 surveyed it, and it appears on their 1962 chart as Paso Covadonga, named for the *Covadonga*. That was the name accepted by the 1974 Chilean gazetteer. US-ACAN accepted the name Rodman Passage in 1971.

Rodolfo Marsh Station *see* **Teniente Rodolfo Marsh Station**

Rödön *see* **Red Island**

Rodopi Peak. 62°38' S, 59°55' W. Rising to about 500 m in Delchev Ridge, 2.95 km ESE of Rila Point, 1.9 km NNE of Delchev Peak, 1 km NW by N of Yavorov Peak, and 1.05 km W of Paisiy Peak, it surmounts Sopot Ice Piedmont to the W and N, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the Rodopi (also spelled Rhodope) Mountains, in Bulgaria.

Rodrigo. Owner and skipper of the *Espíritu Santo*, which was in the South Shetlands, 1819-20.

Cabo Rodríguez *see* **Chaucheprat Point**

Cerro Rodríguez Argumedo *see* **Léal Bluff**

Ensenada Rodríguez. 62°31' S, 59°41' W. An inlet, about 1 km wide, indenting the head (i.e., the S part) of Discovery Bay for about 350 m between Ferrer Point and Correa Point, on Greenwich Island, in the South Shetlands. Surveyed by ChilAE 1946-47, who named it Ensenada Capitán Rodríguez S., after Ezequiel Rodríguez Salazar (see a few entries below). 1951 was the year the Chileans abbreviated all their compound names.

Isla Rodríguez *see* **Terminal Island**

Rodríguez, Ángel. Argentine naval surveyor, captain of the *Primero de Mayo* in 1930, and of the *Chaco* in 1933.

Rodríguez, Benito Petronilo *see* **Órcadas Station**, 1950

Rodríguez, Carlos V. *see* **Órcadas Station**, 1928

Rodríguez, José. b. Argentina. He was a contramaestre (bosun) 1st class on the *Uruguay* when that vessel went to Antarctica in 1903, to rescue SwedAE 1901-04.

Rodríguez, Osmar *see* **Órcadas Station**, 1954

Rodriguez Pond. 77°33' S, 160°50' E. A frozen freshwater pond in the feature called Labyrinth, the larger of 2 such ponds W of Hoffman Ledge, in Healy Trough (*see* **Redman Pond**, which lies just to the NW), in Wright Valley, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for Russell J. "Rusty" Rodriguez (b. 1956), USGS microbiologist at Seattle, who was with a USAP field party that sampled the pond in 2003-04. Note: For over 6 years (at the time of writing this) US-ACAN has listed this name as Rodriquez Pond (i.e., with a "q"). It will be corrected (hopefully).

Rodriquez Pond *see* **Rodriguez Pond**

Rodríguez Salazar, Ezequiel. b. Sept. 10, 1910, Chillán, Chile, son of Ezequiel Rodríguez R. and his wife Josefina Salazar. Graduating from the Escuela Naval in 1930, he was a 1st lieutenant in the Chilean Navy when he became an observer on USAS 1939-41. In 1943, he was promoted to capitán de corbeta, and was on ChilAE 1946-47. He married Rossy O'Reilly, and they later lived in Viña del Mar, near Valparaíso.

Isla Roe *see* **Roe Island**

Mount Roe. 85°08' S, 169°36' W. A flattish, largely ice-covered mountain, overlooking the W side of the Liv Glacier, 1.5 km NE of Mount Wells, at the SE end of the Prince Olav Mountains. Named by US-ACAN in 1966, for Lt. Donald W. Roe, Jr., with VX-6 at McMurdo for

the winter of 1961, and squadron safety officer for VX-6 at McMurdo in 1962-63.

Roe, Geoffrey James. b. Dec. 12, 1933, Glossop, Derbyshire, son of Squire Roe and his wife Ida Roebuck. After Sheffield University, he joined FIDS in 1957, recommended that his friend Barrie Shaw do the same, and the two of them set sail on Oct. 21, 1957, on the *John Biscoe*, as meteorological assistants (*see* **Shaw, John Barrie**, for the trip down). They both wintered-over at Base F in 1958 and 1959, and did glaciological and geological work there. Roe returned to England in 1960, and from Sept. 1960 to March 1961 was at the FIDS geological unit at Birmingham University. Then he left FIDS, went back home to Glossop, and married June Humphrey later that year. He was killed in NZ in 2007, when he pulled out of a junction on a motorcycle, and was swiped by a motorist.

Roe Glacier. 85°36' S, 151°26' W. A tributary glacier, 16 km long, flowing NW through the Tapley Mountains, to enter Scott Glacier just S of Mount Durham. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Derrell M. Roe, at McMurdo in 1963-64 and 1964-65, and station engineer there for the winter of 1966.

Roe Island. 64°00' S, 60°50' W. An island off the entrance to Curtiss Bay, about 3 km W of Cape Andreas, on the Davis Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. It appears on a 1957 Chilean chart as Islote Martín, probably named for Commodore Alfred Martín Díaz, of the Chilean Navy. It appears as such in the 1974 Chilean gazetteer. UK-APC named it Roe Island on Sept. 23, 1960, for Edwin Alliott Verdon Roe (1877-1958; known as Alliott, but more often as "A.V. Roe"; knighted in 1929), aviation pioneer who founded A.V. Roe and Co., Ltd., in Britain in 1910. In 1908 he became the first Englishman to make a powered flight. US-ACAN accepted the name later in 1960. It appears as such on a British chart of 1961. The Argentines call it Isla Roe. Note: A.V. Roe was the son of Dr. Edwin Hodgson Roe and his wife Annie Sophia Verdon. All the children, including A.V., had Verdon as a middle name. Only after he was knighted did A.V. become Alliott Verdon-Roe, with a hyphen.

Cape Roed *see* **Cape Roca**

Pasaje Roepke. 64°53' S, 63°08' W. The channel between Punta Rudolphy (on Bryde Island) and Mount Banck, allowing access to Argentino Channel from the north. Named by the Chileans for Capitán de corbeta Reinaldo Roepke Rudloff, skipper of the *Leocotón* during ChilAE 1952-53. The Argentines call it Pasaje Mastelero.

Mount Roer. 72°18' S, 0°21' E. Rising to 2085 m, and isolated, S of Nils Plain, and 11 km W of Fuglefjellet, in the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39, and again in 1949-52 by NBSAE, who also surveyed it from the ground. It was surveyed again, and again photographed aerially in 1958-59, by members of NorAE 1956-60, and mapped from these efforts by Norwegian cartographers, who named it Roerkulten, for Nils Roer. US-ACAN accepted the name Mount Roer in 1962.

Roer, Nils. b. 1914, Skien, Norway. Topographic surveyor on NBSAE 1949-52.

Roerkulten *see* **Mount Roer**

Rofe Glacier. 72°53' S, 68°11' E. A broad glacier, 16 km long, flowing westward from the N part of the Mawson Escarpment into the Lambert Glacier. Plotted by Australian cartographers from air photos taken by ANARE in 1956, 1960, and 1973. Named by ANCA on Nov. 27, 1973, for Brian Rofe, director of the Antarctic Division, Melbourne, from Oct. 1970 until his death in Aug. 1971. US-ACAN accepted the name on Oct. 20, 2009. The Russians call it Lednik Vetvistyj.

[1]**Mys Rog**. 69°30' S, 75°57' E. A cape, on the W side of Shennong Glacier, on the Ingrid Christensen Coast. Named by the Russians.

[2]**Mys Rog**. 67°39' S, 46°04' E. A point, 10 km E of Molodezhnaya Station, on Alasheyev Bight, in Enderby Land. Named by the Russians. Also called Rog Point.

Rog Point *see* [2]**Mys Rog**

Rogach Peak. 63°19' S, 58°40' W. An ice-covered peak rising to 562 m, and forming the highest point of Astrolabe Island, 2.28 km NE of Sherrell Point (the most southerly point on the island), and 1.9 km SSE of Drumohar Peak (the second highest peak on the island), off Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Rogach, in southern Bulgaria.

Sopka Rogataja *see* **Rogataja Hill**

Rogataja Hill. 66°16' S, 100°50' E. A conical hill, with a prominent ridge trending away to the NE, 3.6 km ENE of Dobrowolski Station, in the Bunger Hills. Charted by SovAE 1956, and named by them as Sopka Rogataja. ANCA translated this.

Proliv Rogatka *see* **Rogatka Strait**

Rogatka Strait. 66°06' S, 101°05' E. A strait running E off the Edisto Channel, between the NE tip of Thomas Island and the W part of Booth Peninsula, in the Bunger Hills. At its narrowest between the 2 landforms, it is 0.4 km wide. Mapped by SovAE 1956, and named by the Russians as Proliv Rogatka. The name was translated by ANCA on March 12, 1992.

The *Roger Revelle*. American oceanographic vessel operated by the Scripps Institution of Oceanography. Beginning with the 1997-98 season, she became an oceanographic cruise ship to Antarctica. She was in Antarctic waters in 2001-02, along with the *Polar Star* and the *Melville*, as part of the SOFEX program.

Mount Rogers. 80°33' S, 29°26' W. Rising to 995 m, on the E side of Blaiklock Glacier, between Williams Ridge and Wedge Ridge, in the Haskard Highlands, in the W part of the Shackleton Range. Surveyed in Oct. 1957 by BCTAE, and named by them for Allan F. Rogers. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Rogers, Allan Frederick. b. Jan. 5, 1918, in Bristol. He qualified as a doctor at Bristol University, and there, in 1942, married Dorothy Davies. In 1952 and 1953 he was a member of two Bristol high-altitude research experiments in the Jungfraujoch. He was medical officer and physiologist on BCTAE 1955-58, with Fuchs, and after the expedition, returned to Wellington, picked up the *Rangitoto*, and arrived back in Southampton on May 12, 1958. He was senior lecturer in physiology at the University of Bristol. He died in June 1990, in Bath.

Rogers, Benjamin Nelson "Ben." Of Montville, Conn. Captain of the New London sealer *Golden West*, in the South Shetlands, 1871-72 and 1872-73. In 1876-77, 1877-78, and 1878-79 he was commanding the sealer *Trinity* in South Georgia. In 1879-80 he was commanding the New London sealer *Mary E. Higgins* in the Kerguélen Islands and the South Shetlands. He was back on the *Trinity* in 1880, again at the Kerguélens, and was wrecked on Oct. 17, 1880, at Heard Island. He was rescued by the U.S. corvette *Marion*, under the command of Silas W. Perry, on Jan. 14, 1882, and taken to Cape Town. In 1883 he became skipper of the New London sealer *Charles Colgate*, and was in the Kerguélens for the 1883-84 and 1884-85 summers.

Rogers Glacier. 69°59' S, 73°04' E. A glacier, about 19 km wide, flowing NW into the E side of the Amery Ice Shelf just N of the McKaskle Hills. Delineated by U.S. cartographer John H. Roscoe in 1952 from air photos taken during OpHJ 1946-47, and named by him for Lt. Cdr. William J. Rogers, Jr., USN, who led VH-4 Squadron during the Bikini Atoll atomic bomb testing, and went straight from there as a "volunteer" into OpHJ 1946-47, as plane commander. US-ACAN accepted the name, and ANCA followed suit on July 22, 1959.

Rogers Peak. 79°21' S, 84°14' W. Rising to 1520 m, at the E side of the terminus of Rennell Glacier, in the Heritage Range. Named by the University of Minnesota Geological Party here in 1963-64, for M. Alan Rogers, geologist to the Hart Hills and Whitmore Mountains areas in that year. US-ACAN accepted the name in 1966.

Rogers Peaks. 72°15' S, 24°31' E. A small group of partly snow-capped peaks just SW of Dufek Mountain, in the south-central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Rogerstoppane, for William J. Rogers, Jr. (*see* **Rogers Glacier**). US-ACAN accepted the name Rogers Peaks in 1966.

Rogers Spur. 74°30' S, 111°12' W. A rocky wedge-shaped spur at the head of Brush Glacier, on Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. First mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1967, for James C. Rogers, electrical engineer at Byrd VLF Station in 1966.

Rogerstoppane *see* **Rogers Peaks**

Cape Roget. 71°59' S, 170°37' E. A steep rock cape at the S tip of Adare Peninsula, it is formed by the termination of Mount Herschel, and

marks the N side of the entrance to Moubray Bay, on the NE coast of Victoria Land. Discovered by Ross on Jan. 15, 1841, and named by him for Peter Mark Roget (1779-1869), British philologist who, in 1852, created the famous thesaurus which bears his name (and which UK-APC resorts to frequently to come up with many of their names). At the time of RossAE 1839-43, Roget was secretary of the Royal Society (1827-48), and, earlier, had been on the committee that planned the *Chanticleer* Expedition of 1828-31. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteeer. The cape is the site of an emperor penguin colony. For more on Roget, *see* **Roget Rocks**.

Rocas Roget *see* **Roget Rocks**

Roget Rocks. 64°20' S, 61°10' W. A small group of offshore rocks, 6 km SW of Spring Point, in Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Surveyed by Ken Blaiklock from the *Norsel* in 1955. Named by UK-APC on Sept. 4, 1957, for Peter Mark Roget (*see* **Cape Roget**). It appears on a British chart of 1959. US-ACAN accepted the name in 1963. In the 1974 British gazetteer, it appears as Roger Rocks, a booboo that was later corrected. The Argentines call this feature Rocas Roget.

Rognnesegge. 74°19' S, 9°38' W. A wall, next to Holstnuten, in Milorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the fish-roe headland edge").

Rogozen Island. 62°20' S, 59°42' W. An island, 760 m long in an E-W direction, it is the conspicuous island off the N coast of Robert Island, 470 m SSW of Heywood Island, and 920 m NNE of Cornwall Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the settlement of Rogozen, in northwestern Bulgaria, in connection with the 5th-century Rogozen Thracian treasure, discovered quite by chance in 1985.

Rogstad, Egil. b. Feb. 23, 1908, Opset, Vinger, Norway, son of Richard Rogstad and his wife Karen. Radio operator on NBSAE 1949-52. He died on May 10, 1987, in Kongsvinger, Norway.

Rogstad Glacier. 72°21' S, 1°19' E. Flows NW along the N side of Isingen Mountain, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially during GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Rogstadbreen, for Egil Rogstad. US-ACAN accepted the translated name Rogstad Glacier in 1966.

Rogstadbreen *see* **Rogstad Glacier**

Skaly Rohlina *see* **Rokhlin Nunataks**

Rohnke Crests. 77°35' S, 168°41' E. Two parallel rock ridges, rising to about 1400 m above the general ice mantle on the SE slopes of Mount Terror, E of the head of Eastwind Glacier, and 6 km NE of Conical Hill, on Ross Island. Named by US-ACAN in 1999, for Capt. (later Rear Adm.) Oscar C. Rohnke, skipper of the *Eastwind*, 1955-56. NZ-APC had already accepted the name on Nov. 4, 1999.

Bahía Röhss *see* **Röhss Bay**

Röhss Bay. 64°13' S, 58°15' W. A bay, about 17.5 km wide at its opening (but narrowing to about 5 km wide at its head), indenting the SW side of James Ross Island for about 20 km in a NE direction between Cape Obelisk and Cape Broms. Discovered and surveyed in Oct. 1903, by SwedAE 1901-04, and named by Nordenskjöld as Röhss' Bukt, for twin brothers August (1834-1904) and Wilhelm Röhss (1834-1900), wholseale dealers of Göteborg, patrons of the expedition. It appears on a British chart of 1921, translated as Röhss Bay, and that name was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was re-surveyed by Fids from Base D between 1952 and 1955. The Argentines had been calling it Bahía Röhss since at least 1908, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Roi Baudouin Station. 70°26' S, 24°19' E. About 16 km inland from Breidvika, on the Princess Ragnhild Coast of Queen Maud Land. Belgium's first scientific station in Antarctica, and the only one until 2008-09, when Princess Elisabeth Station was built. It was built by BelgAE 1957-59, led by Gaston de Gerlache, really as an IGY station, and opened on Dec. 25, 1957. On Jan. 9, 1958, it was inaugurated, and named for King Baudouin of Belgium. It had 16 huts, and could accommodate 25 persons. It had a movie theatre, a library of 5000 books, hundreds of old periodicals and newspapers, indoor games, and a radio link to Brussels. **1958 winter**: Gaston de Gerlache (leader). **1959 winter**: Frank Bastin (leader). **1960 winter**: Frank Bastin (leader). **Jan. 15, 1961**: The station was closed. **Jan. 19, 1964**: The station was re-occupied by the Belgian and Netherlands Antarctic Expedition of 1963-64. **Feb. 8, 1964**: The station was closed. A new station (same name) was built nearby. **Jan. 12, 1965**: The new station was occupied by the Belgian and Netherlands Antarctic Expedition of 1964-65. **1965 winter**: Winoc Bogaerts (of Belgium) (leader). **1965-66**: Tony van Autenboer (of Belgium) led the summer party of the Belgian and Netherlands Antarctic Expedition of that season. **1966 winter**: Tony van Autenboer (leader). **1966-67**: Tony van Autenboer led the summer party of the Belgian and Netherlands Antarctic Expedition of that season. **Feb. 9, 1967**: The station closed.

Île du Roi Georges *see* **King George Island**

Baie Roi Léopold III. 70°20' S, 24°13' E. Part of Breid Bay, on the Princess Ragnhild Coast of Queen Maud Land. This is where BelgAE 1957-58 landed, and named this feature after (and with the permission of) King Leopold III, patron of the expedition.

Terre du Roi Oscar *see* **Oscar II Coast**

Bahía Roja *see* **Red Bay**

Isla Roja *see* **Red Island**

Cerro Rojas *see* **Rojas Peak**

Ensenada Rojas *see* **Rojas Cove**

Punta Rojas. 64°26' S, 62°25' W. A point on Cape D'Ursel, on the SE coast of Brabant Island, in the Palmer Archipelago. Named by ChilAE 1946-47, for Capt. Gabriel Rojas Parker (*see* **Vázquez Island**).

Rojas, Carlos Antonio. b. Argentina. A cabo principal in the Argentine Navy, he wintered-over at Órcadas Station in 1951.

Rojas Cove. 62°29' S, 59°40' W. Between Bascopé Point and Guesalaga Peninsula, Discovery Bay, Greenwich Island, in the South Shetlands. Named by ChilAE 1946-47 as Enesenada Comandante Rojas, for Capt. Gabriel Rojas Parker (*see* **Vázquez Island**). In order to avoid compound names, the shorter name Ensenada Rojas appears on a 1951 chart, and has done so ever since. The Chilean gazetteer of 1974 accepted the name. It was translated as Rojas Bay in 1964, but on March 31, 2004, UK-APC accepted Rojas Cove.

Isla Rojas Parker *see* **Vázquez Island**

Rojas Peak. 64°49' S, 62°55' W. Rising to 675 m, in the central part of Lemaire Island, off the Danco Coast, on the W coast of Graham Land. Roughly charted by ChilAE 1950-51, and named by them as Cerro Rojas, for Sargento de primera clase Ángel Custodio Rojas (*see* **Deaths**, 1949). It appears as such on their 1951 chart. The Chilean gazetteer of 1974 accepted the name. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Rojas Peak on Feb. 7, 1978, and it appears as such in the 1980 British gazetteer.

Picos Rojizos *see* **Russet Pikes**

Rokhlin Nunataks. 72°12' S, 14°28' E. Four nunataks, 10 km S of the Linnormen Hills, at the S extremity of the Payer Mountains, in Queen Maud Land. Discovered by GermAE 1938-39, and first plotted from these photos. This feature was photographed aerially again in 1958-59, during NorAE 1956-60, and mapped from these photos by Norwegian cartographers. It was mapped again by the Russians, from surveys conducted by SovAE 1960-61, and named by them in 1963 as Skaly Rohlina, for geologist M.I. Rokhlin (*see* **Deaths**, 1958). US-ACAN accepted the name Rokhlin Nunataks in 1970.

Mount Rokitanksy *see* **Mount Pico**

Cabo Rol. 75°25' S, 25°10' W. A very isolated cape in the NW part of the Brunt Ice Shelf of Coats Land. Named by the Argentines.

Cape Rol *see* **Cabo Rol**

Bahía Roland *see* **Roland Bay**

Mount Roland. 86°29' S, 145°42' W. Rising to 2210 m, directly N of Mount Mooney, on the N flank of Robison Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. (jg) Charles J. Roland, VX-6 aircraft navigator during OpDF 66 and OpDF 67.

Roland Bay. 65°04' S, 64°03' W. A cove, the S shore of which is Hervéou Point, it indents the W end of the peninsula that forms the W extremity of Booth Island and which separates Port Charcot from Salpêtrière Bay, in the Wilhelm

Archipelago, off the W coast of the Antarctic Peninsula. Charted by FrAE 1903-05, and named by Charcot for F. Rolland [sic]. US-ACAN accepted the name in 1952. The Chileans call it Bahía Roland.

Roland Bonaparte Point *see* **Bonaparte Point**

Rolandpass. 73°32' S, 162°35' E. A pass on the W side of the Exposure Hills, in Victoria Land. Named by the Germans for Dr. Norbert W. Roland, Hanover geologist on GANOVEX III (1982-83).

Rolfe, George William. Sail maker on the *Morning*, during the relief of BNAE 1901-04.

Rolfstind. 71°22' S, 12°20' E. The northernmost mountain peak of the Mittlere Petermann Range, in the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians for Rolf. L. Johnsen [sic] (*see* **Johnson Peaks**).

Rolland, F. Seaman on the *Français* during FrAE 1903-05.

Île(s) Rollet de l'Isle *see* **Rollet Island**

Isla Rollet *see* **Rollet Island**

Rollet Island. 65°02' S, 64°03' W. A small island, 1.5 km NNE of Hervéou Point, on the NW part of Booth Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Discovered by FrAE 1903-05, and named by Charcot as Île Rollet de l'Isle, for Charles-Dominique-Maurice Rollet de l'Isle (1859-1943), French hydrographic surveyor, a member of the scientific commission appointed by the government to publish Charcot's results. It appears as such on Charcot's 1906 chart, but on his 1908 map it appears as Îles Rollet de l'Isle, to include not only this island but also nearby small islands. On a 1943 U.S. Hydrographic Office chart it appears as Rollet de Lisle Isles, and as a consequence it appears on a 1953 Argentine chart as Islas Rollet de Lisle, which was the name accepted by the 1970 Argentine gazetteer. On a 1958 Argentine chart it appears as Isla Rollet de Lisle, which may be a blunder, or it may be their name for the main island. The name Rollet Island was accepted by UK-APC on July 7, 1959, and it appears as such on a British chart of 1960. US-ACAN accepted that name in 1965. The Chileans call it Isla Montaner, for hydrographer Ricardo Montaner Sepúlveda of the Chilean Navy, who took part in ChilAE 1970-71. The Argentines now call it Isla Rollet.

Rolnicki Buttresses. 62°01' S, 57°41' W. Steep, picturesque buttresses built of lava, agglomerate, and tuff from the extinct volcano of Melville Peak, above Sherratt Bay, on the S side of King George Island, in the South Shetlands. Named by the Poles in 1984, for engineer Krzysztof Rolnicki, a member of PolAE 1978-79 and PolAE 1980-81.

Rolnicki Pass. 62°03' S, 58°24' W. A pass, running at an elevation of about 210 m above sea level between Mount Birkenmajer and Tokarski Peak, at Keller Peninsula, leading from Stenhouse Glacier to Domeyko Glacier, in the area of Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1984 for Krzysztof Rolnicki (*see* **Rolnicki Buttresses**).

Bahía Román. 63°20' S, 62°03' W. A bay about 8 km E of Cape Wallace, on the coast of Low Island, in the South Shetlands. Named by the Chileans for Capitán de fragata Jorge Román Pérez, skipper of the *Angamos* during ChilAE 1957-58. The Argentines call it Bahía Migliardo.

Roman Figure Four Promonotory *see* **Roman Four Promontory**

Roman Four Mount *see* **Roman Four Promontory**

Roman Four Mountain *see* **Roman Four Promontory**

Roman Four Promontory. 68°13' S, 66°56' W. A rocky promontory, rising to 830 m (the British say 875 m) above sea level, it marks the N side of the entrance to Neny Fjord, and stands between that fjord and Neny Bay, near Stonington Island, on the Fallières Coast, on the W coast of Graham Land. First charted in 1936, by BGLE 1934-37. Surveyed in 1940 by USAS members from East Base, and named by them as Roman Four Rock. The snow-filled clefts along the face of the promontory make it look like a Roman IV. It appears as such on a British chart of 1946. During World War II it was also known as Figure IV Mountain. It appears on a 1947 Chilean chart as Cerro Roca Cuatro Romano (i.e., "Roman four rock hill"), and on another Chilean chart of the same year as Cuatro Rocas Romanas, which was translated into English as Roman Four Rocks. It was re-surveyed by Fids from Base E, in 1947-48. Bill Latady, of RARE 1947-48, refers to it as Roman Four Mount, but Ronne himself refers to it variously as Roman Figure Four Mountain and Figure Four Mountain. It was also known by some at the time as Roman Four Mountain (Fuchs, for example, in 1952), or as Roman IV Mountain. However, the name finally approved for this feature was Roman Four Promontory, and it appears as such on a British chart of 1948. US-ACAN accepted this name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears on a 1962 Chilean chart as Punta IV, but is listed in their 1974 gazetteer as Punta Cuatro Romano, and that is what they call it today. It appears in the 1978 Argentine gazetteer as Cerro IV Romano, but today they generally call it Promontorio Cuatro Romano.

Roman Four Rock *see* **Roman Four Promontory**

Roman Knoll. 63°42' S, 58°28' W. An ice-covered hill rising to over 800 m, 3,38 km NE of Mount Canicula, between that mountain and Erul Heights, on the SE side of Verdikal Gap, 2.77 km SW of Gigen Peak, 3.38 km of Siniger Nunatak, and 12.98 km SE of Lambuh Knoll, it surmounts Russell East Glacier to the SE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the town of Roman, in northwestern Bulgaria.

Romanes Beach. 77°17' S, 166°22' E. A short, pleasant gravel beach on the N shore of Wohlschlag Bay, just S of Harrison Bluff, at the foot of Alexander Hill, on the shore of McMurdo Sound, on the W side of Mount Bird, on the W side of Ross Island. Named by NZ-APC for famous Auckland mountain climber Walter Romanes (1931-1988), mountain climbing assistant with the Cape Bird party of NZGSAE 1958-59, which mapped this feature while on a visit here from the *Arneb*. They had just previously made unsuccessful attempts to reach McDonald Beach through the ice-pack. US-ACAN accepted the name in 1964.

[1]**Gora Romanovskogo**. 72°59' S, 61°20' E. A nunatak, SW of Schneider Ridge, in the Goodspeed Nunataks, in the southern Prince Charles Mountains. Named by the Russians.

[2]**Gora Romanovskogo**. 81°17' S, 153°15' E. A nunatak, NE of Za Za Bluff, in the Lonewolf Nunataks, W of the Churchill Mountains. Named by the Russians.

Gora Romantichnaja *see* **Mount Pollard**

The *Romeo*. A 149-ton London sealing brig, originally American, but taken as a prize in 1814, in the West Indies, during the war with the USA. She became the property of a Liverpool merchant, who, in Sept. 1821, sold her to Stephen Cleasby, a merchant in Leytonstone (in Essex). James Johnson became her skipper on Aug. 20, 1821, and he took her down to the South Shetlands for the 1821-22 season. She was moored in Clothier Harbor in March 1822, and on April 22 arrived at Rio. On Oct. 17, 1822 she left Buenos Aires for Valparaíso and Callao.

Île Roméo. 66°40' S, 139°57' E. There are two islets very close together in Baie Pierre Lejay, at the extreme SW of the Géologie Archipelago and of Gouverneur Island. Both were named by the French in 1977 — Îlot Roméo and the other, to the south, Îlot Juliette — in association with Shakespeare's play. The French later redefined them as îles rather than îlots.

Îlot Roméo *see* **Île Roméo**

Isla Romeo *see* **Romeo Island**

Romeo Island. 62°23' S, 59°56' W. An island, 5.5 km SW of Table Island, off the N coast of Greenwich Island, W of the Aitcho Islands, in the South Shetlands. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Aug. 31, 1962, for the *Romeo*. It appears on a British chart of 1962. US-ACAN accepted the name in 1965. The Argentines call it Isla Romeo. Last plotted by the UK, in late 2008.

Cerro Romero. 63°17' S, 57°21' W. A hill, about 8 km SSW of Siffrey Point, the extreme N of the head of Trinity Peninsula. Named by the Chileans for Guillermo Romero González, astronomer from the Instituto Geográfico Militar, who was on the *Rancagua* during ChilAE 1947-48. *See also* **Romero Rock**. The Argentines call it Cerro Necochea, presumably for the city of Necochea, near Buenos Aires.

Islote Romero *see* **Romero Rock**

Nunatak Romero. 66°04' S, 60°59' W. One of the numerous nunataks on Jason Peninsula named by Argentines.

Punta Romero. 68°14' S, 65°07' W. A point, NE of Solberg Inlet, in the Larsen Ice Shelf, off

the Bowman Coast, on the E coast of the Antarctic Peninsula. Named by the Argentines.

Roca Romero *see* **Romero Rock**

Romero Rock. 63°19' S, 57°57' W. About 160 m W of Saavedra Rock, in the Duroch Islands, off Trinity Peninsula. Named by ChilAE 1947-48 as Islote Astrónomo Romero, for Guillermo Romero González, the astronomer of the Chilean Army, who was on this expedition, and who did astronomical work in Antarctica. In 1951 this name was shortened to Islote Romero. It appears on a 1962 Chilean chart as Roca Romero, and that was the name accepted by the 1974 Chilean gazetteer. US-ACAN accepted the translated name in 1964. For more on Don Guillermo, *see* **Cerro Romero** (above).

Rømlingane *see* **Rømlingane Peaks**

Rømlingane Peaks. 72°11' S, 1°08' E. A chain of peaks extending from the W side of Vendeholten Mountain, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Rømlingane (i.e., "the runaways"). US-ACAN accepted the name Rømlingane Peaks in 1966.

Rømlingsletta *see* **Rømlingsletta Flat**

Rømlingsletta Flat. 72°16' S, 1°07' E. A flattish, ice-covered area (the Norwegians call it a glacier, but it isn't a glacier) of about 40 sq miles, northward of the foot of Isingen Mountain, in the N part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys nd air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Rømlingsletta (i.e., "the runaway's plain"), in association with Rømlingane Peaks. US-ACAN accepted the name Rømlingsletta Flat in 1966.

Mount Romnaes. 71°31' S, 24°00' E. A prominent isolated mountain rising to 1500 m, between the glaciated plain the Norwegians call Utsteinflya and the ice slope they call Thorshammerhallet, 35 km NW of Brattnipane Peaks and the main group of the Sør Rondane Mountains. Photographed aerially by LCE 1936-36, and mapped from these photos in 1946 by Norwegian cartographers who named it Romaesfjellet, for Nils Romnaes. US-ACAN accepted the name Mount Romnaes in 1952.

Romnaes, Nils. b. Nov. 14, 1902, Baerum, Norway, but raised in Kristiania, son of Nils Romnaes and his wife Marie. A Norwegian pilot, he and Alf Gunnestad formed an aircraft charter company in 1934 (*see* **Gunnestad, Alf**). Romnaes was radio operator and aerial photographer on LCE 1936-37. In 1949 Viggo Widerøe's book *Norway from the Air*, was published, with photos by Nils Romnaes. Romnaes died in 1943.

Romnaesfjellet *see* **Mount Romnaes**

Monte Rompiente *see* **Mount Breaker**

Roca Rompiente *see* **Surf Rock**

Glaciar Rómulo *see* **Romulus Glacier**

Romulus Glacier. 68°23' S, 66°55' W. A glacier, 11 km long and 3 km wide, it flows from the N slopes of Mount Lupa WSW into Rymill Bay between the Blackwall Mountains and Black Thumb, on the Fallières Coast, on the W coast of Graham Land. First surveyed in 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map of the expedition. Re-surveyed in 1948-49 by Fids from Base E, who named it in association with nearby Mount Lupa, and also with Remus Glacier, whose head lies near the head of this glacier. Romulus was the first Roman king. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. The Argentines call it Glaciar Rómulo.

[1]**The *Ronald***. A 3021-ton Norwegian floating factory whaling ship belonging to the Hektor Whaling Company. She was in the South Shetlands and Graham Land in 1910-11, and again in 1911-12, 1912-13, and 1913-14, being anchored at Deception Island those last 3 seasons. Her manager was C. Stugard Christensen (certainly in 1911-12 and 1912-13), and her catchers were *Bransfield*, *T.H. Dahl*, *Mjøfjord*, and *Port Stanley*. She and the *Hektoria* were the first whalers in the South Shetlands to have radio. The *Ronald* was replaced in 1914 by the *Benguela*.

[2]**The *Ronald***. A 6322-ton Norwegian whaler, built by R. Duncan of Port Glasgow, in 1920, for the Hektor Whaling Company, specifically as a whaling factory ship (the first time this had ever happened), at a cost of £350,000. Work was completed by Jarlsø Vaerft, in Tønsberg. She was the second whaler of that name belonging to the company, was the largest factory ship of her day (crew of 216), and operated in the South Shetlands and Graham Land between the 1920-21 season and the 1930-31 season. That first season —1920-21-her catchers were the *Almirante Goni*, the *T.H. Dahl*, the *Port Stanley*, the *Bransfield*, the *Edle*, and the *Ross*. For the first 2 seasons she also operated in the South Orkneys, and in 1921-22 was in at Whalers Bay, Deception Island. Gustav Mathisen was one of the whale catcher captains during the 1923-24 season. The *Ronald* was laid up in 1935.

Monte Ronald *see* **Ronald Hill**

Mount Ronald *see* **Ronald Hill**

Ronald Hill. 62°58' S, 60°34' W. Also called Mount Ronald. A rocky, ice-free hill rising to 105 m, N of Kroner Lake, on the N side of Whalers Bay, on Deception Island, in the South Shetlands. Charted and photographed by Olaf Holtedahl in 1927-28, and named by him as Mount Ronald, for the *Ronald*. There is a 1948 Argentine reference to it as Monte Ronald. UK-APC accepted the name Ronald Hill on Sept. 4, 1957, and US-ACAN followed suit in 1963. Last plotted by the UK, in late 2008.

Ronald Ridge. 79°37' S, 83°20' W. A narrow ridge, 8 km long, 1.5 km W of Donald Ridge, which it resembles, in the Pioneer Heights of the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Ronald C. Taylor, meteorologist at Little America V in 1957.

Ronald Rock. 83°20' S, 49°25' W. A prominent rock, rising to 1145 m, along the cliff next N of Skidmore Cliff, E of the Saratoga Table, in the Forrestal Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Ronald D. Brown, aviation structural mechanic who wintered-over at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Mount Ronca. 82°38' S, 155°15' E. Rising to over 2200 m, on the N side of The Slot, it surmounts the S end of Quest Cliffs, in the Geologists Range, 17 km S of Mount Fyfe. Mapped by USGS from tellurometer surveys, and from USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Luciano Bruno Ronca (b. April 26, 1935, Trieste), USARP geologist at McMurdo, 1960-61. ANCA accepted the name.

Île Ronde *see* **Ronde Island**

Ronde Island. 66°47' S, 141°15' E. A small, rocky isand close to the NE side of Zélée Glacier Tongue, between Cape Jules and the Port-Martin peninsula, just over 4 km WNW of the Rescapé Islands. This area was photographed aerially during OpHJ 1946-47, but this particular island was charted by the French in 1949-51, and named by them as Île Ronde, for its round shape. US-ACAN accepted the translated name in 1956.

Rondel. 62°14' S, 58°28' W. A small, rocky promontory at the NE end of Telefon Point, on the W side of Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles.

Île De Rongé *see* **Rongé Island**

Isla De Rongé *see* **Rongé Island**

Rongé Island. 64°43' S, 62°41' W. Also misspelled as Rouge Island. A high, rugged island, 8 km long, the largest of the group which forms the W side of Errera Channel, that channel separating the island from the Graham Coast, N of Beneden Head, on the W coast of Graham Land. Discovered and roughly charted in Feb. 1898, by BelgAE 1897-99, and, together with offlying islands, the feature was named by de Gerlache as Îles de Rongé, after Madame de Rongé, a patron of the expedition. It appears as such on Lecointe's 1899 map of the expedition, and on de Gerlache's map of the same expedition. On Dr. Frederick Cook's 1900 English language version of these maps, it appears as Rongé Islands (in the plural). On Lecointe's 1903 map of the same expedition, the main island appears as Île de Rongé. Nordenskjöld mapped it as Rongés Ön during SwedAE 1901-04. For years it was often mistaken for Cuverville Island. It appears on a 1949 Argentine chart as Isla de Rongé, and on a Chilean chart of 1951 as Isla Rongé, but it was the name Isla de Rongé that was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It appears on a British chart of 1950,

as Rongé Island, and that was the name accepted by UK-APC on Sept. 8, 1953. It appears as such in the British gazetteer of 1955, and also on a British chart of 1959. It was re-surveyed by Fids on the *Norsel* in April 1955, and photographed aerially by FIDASE in 1956-57. US-ACAN accepted the name in 1960. Madame de Rongé (1826-1906), née Clémence-Marie-Josèph Goffin, was the widow of Charles de Rongé, the former liberal deputy of Brussels.

Rongé Islands *see* **Rongé Island**

Rongel Point. 62°37' S, 60°24' W. An ice-free tipped cape on the NW coast of Emona Anchorage, 75 m NNE of the NE extremity of Rongel Reef, 3.14 km NNW of Hespérides Point, and 2.92 km W of Aleko Rock, on Livingston Island, in the South Shetlands. It only emerged in a recent glacier retreat. Named by the Bulgarians on July 28, 1997, in association with the reef.

Rongel Reef. 62°37' S, 60°24' W. A narrow, crescent-shaped moraine reef off the NW coast of Emona Anchorage, it extends over 600 m in a NE-SW direction, in the E part of Livingston Island, in the South Shetlands. It is partly exposed at low tide, and all of it is submerged at high tide except for the islet rising to nearly 3 m above sea level at its NE extremity. The reef's midpoint is located 2.85 km NNW of Hespérides Point, 3.12 km W of Aleko Rock, and 3.35 km NE by E of Ereby Point. The SW extremity of Rongel Reef is located 300 m SE of the nameless point forming the NW side of the entrance to Emona Anchorage, 3.18 km NW by N of Hespérides Point, and 3.04 km NE by E of Ereby Point. A cove, 710 m wide, indents for 250 m the coast behind Rongel Reef, the NE side of its entrance being formed by Rongel Point, 75 m NNE of the NE extremity of Rongel Reef, 3.14 km NNW of Hespérides Point, and 2.92 km W of Aleko Rock. The reef emerged during a recent glacier retreat. Named by the Bulgarians on Oct. 29, 1996, for the Brazilian ship *Ary Rongel*, in recognition of her logistic support to the Bulgarians.

Bahía Ronne *see* **Ronne Entrance**

Mount Ronne. 77°34' S, 146°10' W. A prominent, flattish mountain projecting from the middle of the E side of the Haines Mountains, in the Ford Ranges of Marie Byrd Land. Probably discovered aerially during ByrdAE 1928-30. Named by US-ACAN in 1966, for Martin Rønne. The Russians call it Gora Golovnina.

Ronne, Edith Anna "Jackie." b. Oct. 13, 1919, Baltimore, Md., daughter of Charles Jackson Maslin and Elizabeth Parlett. On March 18, 1944, while an employee of the State Department, she married explorer Finn Ronne (she had met him on a blind date 2 years before). Carl Eklund was Ronne's best man. She and Jennie Darlington wintered-over on Stonington Island during RARE 1947-48 (*see* **Women in Antarctica**, and the **Ronne Antarctic Research Expedition** for further details of this strange adventure). She was the first American woman to set foot on Antarctica. She shared a single hut with her husband, kept the records of the expedition, and composed press releases for the North American Newspaper Alliance. Her baggage included nylons, high heels, and knitting needles. She was back in Antarctica in 1959, on the *General San Martín*, as part of Argentina's first tourist cruise, during which they visited the South Shetlands and the Antarctic Peninsula. In Dec. 1971 she and Finn stood at the South Pole together (she was only the seventh woman ever to stand at the Pole). In Feb. 1995 she and her daughter Karen were lecturers aboard the *Explorer*. In 1997 she was back at Stonington Island, aboard the *Explorer*, and in 1998 aboard the *Marco Polo*. In that latter year her grandchildren went with her, four generations of the same family having been south of 60°S, perhaps a record. She wrote *Antarctica's First Lady* (*see* the Bibliography), and died on June 16, 2009.

Ronne, Finn. b. Dec. 20, 1899, Horten, Norway, son of Martin Rønne and his wife Maren Gurine (Finn changed the ø into an o when he came to the USA in 1923; he became a U.S. citizen in 1928). From 1924 to 1939 he was a mechanical engineer at Westinghouse, during which time he was invited by Byrd to go down on the *Bear of Oakland* for ByrdAE 1933-35 as ski expert, dog driver, and trail radio operator. This was the first of 9 Antarctic outings for Ronne, one of the greatest figures in Antarctic exploration. He was planning his own expedition to Antarctica, but was persuaded to merge his with Byrd's, and the new expedition became USAS 1939-41, in which he was 2nd-in-command (chief of staff) of the party at East Base. He sledged around Alexander I Land, proving it to be an island (Alexander Island). He also proved that von Bellingshausen did not see the mainland in 1820. He joined the Navy in May 1941, as a lieutenant, and by 1944 was a lieutenant commander. In 1946 he was in Greenland. A captain in the USNR, he organized his own private venture to Antarctica in 1947-48, the Ronne Antarctic Research Expedition (q.v.), better known as RARE, which wintered-over on Stonington Island in 1947. His wife Jackie went along. His disproving of the Ross-Weddell Graben finally proved Antarctica to be a continent (on the surface, at least—*see* **Geology**). He was due to go on OpHJ II 1949-50, but the expedition was canceled. He was the IGY scientific and military leader at Ellsworth Station until Jan. 16, 1958, when he handed over to Paul Tidd and Matthew Brennan. In Dec. 1971 he visited the South Pole with his wife. Ronne wrote several books (*see* the Bibliography). He died on Jan. 12, 1980, in Bethesda, Maryland, and is buried in Arlington National Cemetery.

Rønne, Martin Richard. Nicknamed "Walrus." b. Sept. 15, 1861, Hamar, Norway. A sailor since childhood, he married a Horten girl Maren Gurine, was with Nansen and Amundsen on several Arctic trips, and also with Amundsen on the famous NorAE 1910-12. He was not one of the shore party, but remained on the *Fram* as sailmaker, even though he made the small tent that Amundsen left at the Pole. He was one of the group who returned to London on June 29, 1912, on the *Highland Scot*, from La Plata. At the age of 67 he was sailmaker, ski instructor, dog-driver, and ice-pilot on ByrdAE 1928-30, the only one on that expedition who had been in Antarctica before. He was the father of Finn Ronne. He died on May 23, 1932, in Horten, Norway, of a cerebral hemorrhage.

Ronne Antarctic Research Expedition. Better known by its initials, RARE. 1947-48. The last of the major private ventures in Antarctica, this was Finn Ronne's own expedition, privately financed but with some government aid. It was sponsored by the American Antarctic Association, which had been formed for this purpose. **Jan. 8, 1947**: Finn Ronne arrived in Beaumont, Texas, to supervise loading of stores and men onto the expedition ship, the *Port of Beaumont, Texas*. **Jan. 9, 1947**: Bob Nichols arrived in Beaumont with the 43 dogs he had brought from the Chinook kennels in New Hampshire. **Jan. 10, 1947**: The expedition's planes arrived in Beaumont, a Noordyn called the *Nana*, a Stinson L-5, and a Beechcraft. The Beechcraft would be wrecked while loading. **Jan. 25, 1947**: 21 people left Beaumont, Texas, on the ship *Port of Beaumont, Texas*, bound for Port Arthur, Texas, then Panama and Valparaíso. They were: Ronne and his wife Jackie (Jackie was only going as far as Panama, at that point in time); Bob Nichols (senior scientist, geologist, trailman, and engineer's assistant), Harries-Clichy Peterson (physicist and deckhand), Andy Thompson (geophysicist and deckhand), Larry Fiske (climatologist and engineer's assistant), Bob Dodson (assistant geologist, surveyor, trailman, and deckhand), Don McLean (medical officer and deckhand), Harry Darlington III (pilot and 3rd-in-command of the expedition), and his wife, Jennie (also only going as far as Panama at that time); Jimmy Robertson (aviation mechanic and engineer's assistant), Larry Kelsey (radio operator), and Art Owen (trail man, and deckhand—he was a Boy Scout whom Ronne picked out of two leading candidates to go along at the last moment). The ships's crew consisted of: Ike Schlossbach (captain, and 2nd-in-command of the expedition), Chuck Hassage (chief engineer—joined at the last moment), C.H. Swaddell (2nd engineer and dog handler), Ernest A. "Woody" Wood (1st engineer), Walter "Smitty" Smith (mate, navigator, and trailman), Nelson "Mac" McClary (mate), and Sig Gutenko (cook and steward). Also going along as far as Panama was Charles E. "Charlie" Landry, the runner up in the Boy Scout contest. Three men had stayed behind at Beaumont, hoping to get a new plane to replace the wrecked Beechcraft, and fly it down to Panama. They were Jim Lassiter (chief pilot, who had joined at the last moment), Lt. Chuck Adams (pilot and 2nd engineer, who had also joined at the last moment), and Bill Latady (aerial photographer and deckhand). **Jan. 26, 1947**: The ship left Port Arthur. **Feb. 7, 1947**: Lassiter and Adams flew the new Beechcraft into Balboa. Ronne would later name it the *Ed Sweeney*. On arriving at Colon, Ronne found that Latady had been waiting there for 2 days, and that Lassiter and Adams

were waiting at Balboa with the new plane. **Feb. 8, 1947**: They loaded the new Beechcraft aboard at Balboa. **Feb. 9, 1947**: They cast off from Balboa, heading for Valparaíso. The two ladies went along too, the decision about their going all the way to the ice to be left until they reached the Chilean port. **Feb. 11, 1947**: They crossed the Equator. 2 dogs died, and the rest were sick with distemper. The distemper got worse, and was raging by the time they reached Valparaíso. **Feb. 21, 1947**: They reached Valparaíso. Engineer Swaddell was sent back to Texas because he was not trustworthy. At Valparaíso, at the last minute, they picked up a young Chilean mess cook to help Gutenko. This was Georges de Giorgio. There was also a fracas in a restaurant, where two of Ronne's lads got into a fight with a famous polo player, and were arrested. **Feb. 26, 1947**: The ship left Valparaíso, with 23 people on board, including the ladies. The distemper vaccine had not yet arrived, and Ronne made arrangements to have it flown on to Punta Arenas, their last port of call before heading to Antarctica. The vaccine never arrived, and Ronne would lose half his dogs before the disease ran its course. **March 5, 1947**: They arrived at Punta Arenas, in Chile, at 3 P.M. **March 8, 1947**: They left Punta Arenas at 2 A.M. At 4 P.M. they passed Cape Horn, heading south. **March 12, 1947**: They sighted Antarctica. Prior to entering Neny Fjord, Ronne wanted to go 100 miles farther south, to investigate George VI Sound, near Alexander Island (the following summer—1947-48—he intended to operate down there), and thought that this might be an ideal time to establish caches, in order to save time later, but they were stopped by icebergs in 67°20' S, and so headed back to Neny Fjord. At 3.30 P.M., they arrived at Stonington Island, in Marguerite Bay, off the W coast of the Antarctic Peninsula, with 3 aircraft, 2 Weasels, dog sledges, and a greatly reduced number of dogs. They saw the FIDS buildings at Base E, and they saw several Fids themselves. A small boat was lowered, and Ronne, his wife, Latady, McClary, and Darlington, all rowed the half mile through the brash ice to the rocky beach of Stonington Island. FIDS leader Ken Butler strode down to the beach, and in his best Stanley-Livingstone manner, asked, "Commander Finn Ronne?" They then saw the old East Base (from USAS 1939-41), 100 yards or so over a hill from the FIDS base, but the 3 large buildings and 2 smaller ones had been somewhat vandalized. In 1941 USAS had left the base in perfect condition, but in the intervening years it had really gone downhill, and it would cost RARE a delay of 30 days while they fixed it up. However, the buildings, built to last a half century or more, were in excellent shape (the walls were 6 inches thick and heavily insulated; the doors were heavy; and the floors were double-decked; there was a skylight, but no windows), and the aviation gasoline, diesel oil, and coal supply were intact. Butler said that the Fids had lived there for a week in Feb. 1946, while they built their own base, but it was evident that they'd spent a lot longer there than that. So, RARE set up their Main Base there, and Ronne named it Port of Beaumont Base. The main bunkhouse was 24 feet wide and 64 feet long, and could sleep 24 men. At the back of the bunkhouse was the galley, and the mess table ran down the center of the bunkhouse between the bunks, which were in a row of cubicles on each side, 2 bunks in each cubicle. There was also the science building with a radio room, photo room, library, met observatory and tower, biological and geological space, and geographical plotting tables. The machine shop was next to the bunkhouse, behind the science building, and it had a generator for electric lighting and to supply radio power, as well as machinery and carpentry space. The small building that Ronne had built for himself during USAS was now to be occupied by himself and Jackie. There was also a blubber house, for cutting seals, and a smaller storage hut. **March 13, 1947**: A large RARE party came ashore to begin the clean up. Jennie Darlington and Chuck Hassage had colds. The dogs were brought ashore, and that afternoon Ronne raised the U.S. flag. There was the usual cordial but official protest from Butler (it was, after all, British territory, according to the British). **March 14, 1947**: The friendly banter about the flags continued. Larry Fiske was assigned to make sure the U.S. flag flew every day, come what may. They moved the ship from Neny Fjord to Back Bay Cove, 1200 yards from the camp, and unloading began. They had brought with them a 4-ton motor boat, and they found another one at the camp, and were able to use that as well. **March 14, 1947**: Jennie Darlington went ashore. **March 15, 1947**: Five men unloaded the Stinson airplane from the ship. It had wheels for land, pontoons for sea, and skis for snow. It could land and take off anywhere. **March 16, 1947:** The plane was re-assembled. **March 17, 1947**: Harry Darlington did a test flight. **March 18, 1947**: The Ronnes' 3rd wedding anniversary. This was an Antarctic first. **March 19, 1947**: Darlington and Latady made a reconnaissance flight to George VI Sound. No radio contact. Dissension, which had been brewing aboard ship, finally began to break out among the expeditioners. **March 23, 1947**: The ship sailed south, 25 miles off the coast of Marguerite Bay. They reached 69°20' S, a new ship's southing record in that area. **March 24, 1947**: The ship arrived back at Back Bay Cove. **March 29, 1947:** Another flight to George VI Sound, with Darlington and Schlossbach. Again, no radio contact. **March 31, 1947**: The Weasel was unloaded from the ship, but it sank. The *Trepassey* and the *Fitzroy* arrived at Stonington Island. The governor of the Falklands was aboard the *Fitzroy*, and he invited RARE to go aboard. Finn and Jackie, and Bob Dodson, went. The governor met with Ronne and Ted Bingham, the FIDS leader. Capt. Freddie White entertained Jackie and Dodson. **April 1, 1948**: Lunch with the governor aboard the *Fitzroy*. **April 2, 1947**: Harry Darlington and Latady were ready to quit and go home. **April 5, 1947**: The two British ships left. **April 11, 1947**: Darlington and Schlossbach flew to George VI Sound, this time with radio contact. **April 12, 1947**: The last flight was made over Neny Fjord. **April 13, 1947**: Ronne went up on a flight. **May 2, 1947**: Ice began to consolidate around the *Port of Beaumont, Texas*, and she was frozen in for the winter. **May 6, 1947**: The expedition officially moved from ship to shore, and the 1947 winter-over began. **May 7, 1947**: Jim Lassiter took Jackie up on a flight. **May 11, 1947**: Ronne established the post office, named Oleona (*see* **Post offices**). In fact, he changed the name of the base to Oleona. **July 8, 1947**: Georges hit Gutenko. **July 15, 1947**: The first sledging parties went out. **July 26, 1947**: Harc Peterson went down a crevasse. Dick Butson, of FIDS, got him out. RARE set up an advance base at Cape Keeler (*see* **Cape Keeler Advance Base**) (*see also* **Plateau Weather Station** and **Weddell Coast Sledge Party**). They greatly extended the knowledge of Palmer Land, and explored south of 73°S, and between 35°W and 80°W. A half million square miles were covered by 14,000 trimetrogon aerial photographs, and several scientific investigations were conducted. They finally disproved the existence of the Ross-Weddell Graben. Two women wintering-over with a group of men led to a few problems. Jennie Darlington became pregnant and almost had her daughter in Antarctica (she just made it back to the USA in time) and the two husbands had a violent quarrel (Ronne barely mentions Darlington in his books), and the wives stopped communicating. **Feb. 23, 1948**: The party left Antarctica. **March 12, 1948**: The party stopped in at Valparaíso, where they picked up Knut Walter, a 37-year old Norwegian then living in Chile, who was taken on as a deck hand. **March 18, 1948**: They left Valparaíso, bound for Panama. **April 15, 1948**: The *Port of Beaumont, Texas*, arrived back in NY, with everyone aboard except Lassiter, the Darlingtons, and Georges de Giorgio. **April 16, 1948**: The Darlingtons left Buenos Aires on the *Uruguay*, bound for New York. **May 3, 1948**: The Darlingtons arrived back in New York. The expedition led to a great interest in Antarctica.

Ronne Basin. 74°00' S, 58°00' W. A submarine feature in the Weddell Sea, off the Ronne Ice Shelf. The name was proposed by Heinrich Hinze in Jan. 1997, in association with the ice shelf, and was accepted by international agreement in June 1997.

Ronne Bay *see* **Ronne Entrance**

Ronne Entrance. 72°35' S, 74°30' W. The broad SW entrance to George VI Sound where it opens on the Bellingshausen Sea between the SW side of Alexander Island to the NE and (to the SW) Smyley Island, Spaatz Island, and DeAtley Island. Discovered by Finn Ronne and Carl Eklund while they were on a sledge journey through the sound in Dec. 1940, as part of USAS 1939-41. It was also photographed by the same expedition, on Nov. 4, 1940, and named by them as Ronne Bay, for Finn Ronne and his father, Martin Rønne. It appears as such on a USAAF chart of 1942, and US-ACAN accepted that name in 1947. It appears on a 1946 Argentine

chart as Bahía Ronne. It was further photographed aerially on Dec. 23, 1947, during RARE 1947–48, and appears on Finn Ronne's maps of 1948 and 1949. Fids from Base E surveyed it from the ground in 1948–49, and found that the feature was enlarging eastwards through calving from the front of the George VI Ice Shelf. Consequently, it was no longer a bay, and was redefined as Ronne Entrance, a name accepted by US-ACAN, and by UK-APC on March 31, 1955. It appears on a U.S. Hydrographic Office chart of 1955, and on a British chart of 1957. In 1959–60, Searle of the FIDS mapped it from the RARE photos, and plotted it in 72°30' S, 74°00' W. It was re-plotted from U.S. Landsat images taken in Jan. 1973.

Ronne Ice Front. 76°00' S, 55°00' W. The seaward face of the Ronne Ice Shelf, it extends from the vicinity of Cape Adams to the N end of Berkner Island. On Sept. 20, 1955, UK-APC named this feature and the Filchner Ice Front collectively as the Filchner Ice Front, but, on Feb. 7, 1978, they split this large feature in two, the Filchner Ice Front (q.v.) and the Ronne Ice Front. This came about as the result of delineation from U.S. Landsat images taken in 1973 (and, later, 1978). The Americans do not recognize the term "ice front."

Ronne Ice Shelf. Centers on 78°30' S, 61°00' W. The larger and western of the 2 major ice shelves at the head (i.e., the south end) of the Weddell Sea, the other one being the Filchner Ice Shelf to its immediate east, and partially separated from it by Berkner Island. The Ronne Ice Shelf, which is over 500 feet thick and extends to more than 520 miles inland, is bounded on the W by the Orville Coast (where Ellsworth Land meets the base of the Antarctic Peninsula). The area was claimed by the UK in 1908, by Chile in 1940, and by Argentina in 1942. In Nov. 1947, and again on Dec. 12, 1947, Finn Ronne discovered and photographed it aerially (or rather a thin strip along the N portion of the entire ice shelf, from the Orville Coast SE toward Coats Land) and called it the James Lassiter Ice Barrier, the Lassiter Ice Barrier, or Lassiter Shelf Ice, after Jimmy Lassiter. The huge stretch of land which Ronne presumed lay to the S of the ice shelf he named Edith Ronne Land, for his wife. In 1957-58 Ronne determined that the ice shelf went inland much farther than he had thought, and took in most of what he had mapped as Edith Ronne Land. The Chileans called this Tierra Edith Ronne. In 1968, US-ACAN dropped the name Lassiter (Jimmy already had a coast named after him anyway), and named the entire feature the Ronne Ice Shelf. UK-APC accepted this on July 21, 1976. *See also* **Filchner Ice Shelf** for the history of the nomenclature of this area.

Ronne Weddell Coast Party *see* **Weddell Coast Sledge Party**

Rønneberg, Harald. b. 1918, Norway. He went to sea in 1937, and the following year shipped on the *Wyatt Earp* as an ordinary seaman for Ellsworth's last Antarctic expedition, 1938-39. From there, he transferred to the *Knut Nelson*, for the Vancouver to Seattle run.

Mount Ronniken *see* **Mount Nelson**

Röntgen Peak. 64°02' S, 62°17' W. A peak rising to about 700 m, 1.5 km SE of Cape Cockburn, in the NE part of Pasteur Peninsula, in the N part of Brabant Island, in the Palmer Archipelago. Shown on an Argentine chart of 1953, but not named. Mapped by FIDS cartographers in 1959 from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Wilhelm Konrad von Röntgen (1845-1923), the German physicist who discovered X-rays in 1895 (he won the Nobel Prize for physics in 1901). US-ACAN accepted the name later in 1960.

Rooke, Allen Carey. He wintered-over at Casey Station in 1979 and 1983, at Mawson Station in 1985, at Davis Station in 1987, and at Mawson again in 1992. In 1995 he wintered-over at Macquarie Island.

Rookeries *see* **Penguin rookeries**

Rookery Island *see* **[2]Rookery Islands**

[1]Rookery Islands *see* **Haswell Islands**

[2]Rookery Islands. 67°37' S, 62°31' E. A group of small islands and rocks in the SW part of Holme Bay, 11 km W of Mawson Station, in Mac. Robertson Land. Discovered and photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named this feature Innerskjera (i.e., "the inner skerries"). The islands were visited by ANARE sledging parties in 1954 and 1955, and renamed by ANCA on Feb. 18, 1958, for the large Adélie penguin rookery which occupies the largest island in the group. US-ACAN accepted the name in 1965. The islands were designated an SPA because of the 6 species of birds which breed here. There is a reference to Rookery Island, in pretty much the same coordinates, apparently named by the Russians. If this is true, then they (or someone) named the largest of the islands as well.

Rookery Lake. 68°30' S, 78°04' E. A lake, almost circular in shape, just cut off from the sea, at the W end of Langnes Peninsula, in the Vestfold Hills, on the Ingrid Christensen Coast of Queen Maud Land. It was one of several lakes in the area investigated by ANARE biologists wintering-over at Davis Station, and a hut was established here. So named by ANCA on Aug. 27, 1975, because of its proximity to an Adélie penguin rookery.

Rooney, Felix. b. 1885, Govan, Glasgow, son of Irish ship's stoker Mark Rooney and his wife Mary, a grocer. The father died young, in the 1890s, and Mary married again, to Hugh McGeown (q.v.), an engineer's craneman, and Felix grew up with his mother and stepfather, at 57 Hamilton Street, in Govan, leaving school at 14 to become a bootmaker's apprentice in Govan. He soon joined the Merchant Navy, as a stoker, like his father, and was a fireman on the *Nimrod*, during the first half of BAE 1907-09 (Hugh McGeown was also on the first half of this expedition, as the ship's 3rd engineer and later 2nd engineer). Felix left a log. His mother and stepfather came out to Canterbury, NZ, where they all lived at 87 Jackson Road. Felix served as a private in the NZ forces during World War I, fighting at Gallipoli with the Canterbury Regiment, was wounded, and hospitalized, but went back into the trenches. After the war he married Lilian Lurgan. His mother died in 1942, in Canterbury, and Felix himself died on Nov. 4, 1965, in Christchurch, NZ.

Rooney, G. b. 1882, Wellington, NZ. Able seaman who signed on to the *Nimrod*, at Lyttelton, on Dec. 1, 1908, during the second half of BAE 1907-09. He was discharged at Sydney, on May 1, 1909.

Roos, Sven Edward "Eddie." b. Aug. 19, 1907, in Gothenburg, Sweden. He went to sea at 15 as an apprentice. In 1928, as an employee of the Swedish Bureau of Fisheries, he was involved in a North Sea Survey when, on Aug. 28, 1928, he and John Buys were taken on for ByrdAE 1928-30. They sailed down in the *Eleanor Bolling*. Roos left Little America on the *City of New York* for NZ on Feb. 22, 1929. Rather than spend 6 months in NZ, he and 11 others sailed on the *Tahiti* for San Francisco, arriving there on April 12, 1929. But he was back in Antarctica for the 2nd half of the expedition. He was oceanographer on the *Bear of Oakland* during both halves of ByrdAE 1933-35, returning to the USA from NZ on the *Jacob Ruppert*, as an engine room wiper. On his return to the USA he went back into the Merchant Marine, and in 1938 joined Standard Oil, as a bosun on their oil tankers. He survived two torpedo attacks during World War II, and then joined the Moore-McCormack Line, becoming a skipper. He married Anne, and retired in 1970. He died of a stroke following cancer surgery on May 16, 1984, at Cape Canaveral Hospital, in Cocoa Beach, Fla., which is where he lived.

Roos Glacier. 75°17' S, 110°57' W. A steep glacier flowing from the NW slopes of Mount Murphy, on the Walgreen Coast of Marie Byrd Land. Named by US-ACAN in 1976, for Eddie Roos.

Chenal de Roosen *see* **Neumayer Channel**

Roosen Channel *see* **Neumayer Channel**

Roosenstrasse *see* **Neumayer Channel**

Roosevelt Ice Dome *see* **Roosevelt Island**

Roosevelt Island. 79°25' S, 162°00' W. Also called Roosevelt Ice Dome. An ice-covered island, but not grounded as was once believed, it is about 130 km long in a NW-SE direction, and 60 km wide, in the NE section of the Ross Ice Shelf, not far S of Little America; in fact, the N extremity of this huge island is only 5 km S of where the Bay of Whales used to be. Its main topographic expression is a central ridge about 550 m above sea level (the New Zealanders say its highest point is 377 m). Discovered in 1934 by ByrdAE 1933-35, and named by Byrd for FDR. US-ACAN accepted the name in 1947, and NZ-APC followed suit. The Americans built a refuge hut here in the 1960s, in 80°11' S, 161°39' W. They also installed an automatic weather station here (*see* **Margaret Automatic Weather Station**).

Roosevelt Sea *see* **Amundsen Sea**

Rootes, David Michael "Dave." b. March

13, 1951, Hastings, Sussex, son of Basil J. Rootes and his wife Stella Howe. BAS marine biological assistant who wintered-over at Signy Island Station in 1977 and 1978, the second year as base commander. He went back to England in 1979, but later that year was appointed permanent base commander of that station, and was back down again for the summer of 1979-80. However, the *John Biscoe* couldn't get to the base for the pack-ice, and he had to winter again in 1980, again as base commander. Six other men stayed on too. In 1984, in Ipswich, he married Maureen Alexander, and they lived in Huntingdon.

Rootes Point. 60°41' S, 45°36' W. The N entrance point to Starfish Cove, on the E side of Signy Island, in the South Orkneys. Namd by UK-APC on May 13, 1991, for Dave Rootes. US-ACAN accepted the name.

Roots, Ernest Frederick "Fred." b. July 5, 1923, Salmon Arm, British Columbia. As a 14-year-old he was at Banff Weather Station, as a met observer, for 2 years, and then went lumberjacking in Squamish, BC, and qualified as a skiing expert. At 18 he was a professional prospector for the Kelowna Exploration Co., in BC, and in 1941 and 1942 was surveying for the government in the Rockies. For the rest of the war he was an instructor at the University of British Columbia, and doing geological research for the government. All this time he was in the Canadian Army as well, in Combined Ops and Mountain Warfare. He had done it all by his early 20s, and the only thing left was Antarctica, so he went, as chief geologist on NBSAE 1949-52. In Dec. 1953 he arrived in England to study geology at Cambridge. Later he worked for the Department of Mines and Technical Surveys, in Canada, and was a major figure in Canadian polar activities. He married in 1955. He was back in Antarctica in 2007-08, as a tourist on the *Ushuaia*.

Roots Heights. 72°37' S, 0°27' E. Ice-free heights between Reece Valley and Skarsdalen Valley, in the S part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. The feature includes Horgebest Peak, Oppkuven Peak, and Gavlen Ridge. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Rootshorga, for Fred Roots. US-ACAN accepted the translated name Roots Heights in 1966. *See also* **Fred Cirque**.

Rootshorga *see* **Roots Heights**

Mount Ropar. 83°58' S, 160°29' E. Rising to 2420 m, at the E extremity of Canopy Cliffs, in the Queen Elizabeth Range. Named by US-ACAN in 1966, for Nicholas J. "Nick" Ropar, Jr., Weather Central meteorologist at Little America in 1958.

Ropebrake Pass. 84°45' S, 173°25' W. A steep, narrow snow passage between the S end of the Gabbro Hills and Mount Llano, it allows passage between Barrett Glacier and Gough Glacier. So named by the Southern Party of NZGSAE 1963-64 for the large number of rope brakes used in its crossing. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Mount Roper. 78°07' S, 162°45' E. A prominent peak, rising to 3660 m, between Mount Hooker and Salient Peak, in the Royal Society Range of Victoria Land. Named by NZ-APC in 1994, for Cas Roper. US-ACAN accepted the name in 1995.

Roper, Charles Ashley "Cas." b. April 2, 1919, Christchurch, NZ. Technical officer with the Physics and Engineering Laboratory, of the Department of Scientific and Industrial Research, overseeing the lab programs at Scott Base for over 20 years. He spent 8 summers in Antarctica, and was officer-in-charge and senior scientific officer at Scott Base for the winter of 1980. He retired in 1989, and set up a radio frequency forecasting business in Christchurch, where he died on Dec. 11, 1994.

Roper Point. 76°19' S, 112°54' W. A largely ice-covered point, but with some rocky exposures, at the W extremity of Mount Takahe, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Nathaniel A. Roper, aurora researcher at Byrd Station in 1963.

Ropotamo Glacier. 62°39' S, 59°56' W. A glacier on Burgas Peninsula, bounded to the NW by Asen Peak and Delchev Peak, it flows southeastward into Bransfield Strait, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the Ropotamo River, in Bulgaria.

Cabo Roquemaurel *see* **Cape Roquemaurel**

Cape Roquemaurel. 63°33' S, 58°56' W. A prominent rocky headland forming the NE entrance point of Bone Bay, on the N side of Trinity Peninsula. Discovered and charted on March 2, 1838, by FrAE 1837-40, and named by Dumont d'Urville for Lt. Louis de Roquemaurel (*see under* **D**). It appears on an 1861 Spanish chart as Cabo Roquemaurel, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It appears on a British chart of 1901 as Cape Roquemaurel, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such on a British chart of 1954, in the 1955 British gazetteer, and on a British chart of 1962. Fids from Base D surveyed it in Nov. 1948, and again in 1960-61.

Roquemaurel, Louis-François-Gaston-Marie-Auguste de *see under* **de Roquemaurel**

Playa Roquerío. 62°27' S, 60°47' W. A beach between Punta René and Punta Fidelidad, on the N coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno, during ChilAE 1991-92, because this feature presents a substrate of exposed rock named roquerío.

Roquet, Édouard-Alexandre. b. Oct. 27, 1815, Chandranagor, India. Ordinary seaman on the *Zélée* during FrAE 1837-40.

Mount Rorqual. 65°39' S, 62°20' W. A rocky, precipitous peak rising to 1110 m, between Starbuck Glacier and Stubb Glacier, 8 km W of Mount Queequeg, and separated from Cachalot Peak by a narrow ridge, on the Oscar II Coast, on the E side of Graham Land. Surveyed by Fids from Base D in 1961. Named by UK-APC on July 21, 1976, in continuation of the whaling theme for the features in this area. US-ACAN accepted the name later in 1976.

Rorquals. Order: Cetacea; sub-order: Mysticeti; family: Balaenopteridae (however, the Humpback whale, which is a rorqual, is of the family Megapteridae). These are baleen whales with grooved throats, the grooves or tubes enabling the rorqual to expand its throat during the feeding process. The name rorqual is Norwegian, meaning the groove described. The rorquals are the most abundant and diverse of the baleen whales (the other group being the right whales). Rorquals seen in Antarctic waters are: Blue whales (q.v.), Humpback whales (q.v.), Fin whales (q.v.), Sei whales (q.v.), and Minke whales (q.v.). Bryde's whale, also of the genus Balaenoptera, is not seen in Antarctic waters.

Islote Rosa *see* **Rosa Rock**

Islotes Rosa *see* **Rosa Rock**

Monte Rosa. 70°55' S, 162°51' E. The SCAR Composite gazetteer lists this feature, but tells us nothing about it except its coordinates and that it was named by the Germans. It seems an odd name to be given by the Germans. Anyway, the coordinates would place it in the Explorers Range of the Bowers Mountains.

Rosa Rock. 63°18' S, 57°54' W. A small rock, with attendant outliers, about 160 m W of Agurto Rock, in the Duroch Islands, off Trinity Peninsula. The group was named by the Chilean Presidential Antarctic Expedition of 1948, as Islotes Rosa, for Señora Rosa González de Claro, daughter of the president of Chile, Gabriel González Videla. US-ACAN accepted the name Rosa Rock in 1964.

Cerro Rosales. 62°36' S, 59°52' W. A hill. Named by the Argentines. That much is fairly certain. What is almost definitely wrong, despite the SCAR Composite Gazetteer, is any association with Rosales Rocks, the coordinates of which do not match in any way those of the hill. The coordinates given by the Argentines for the hill match exactly those of both Punta Levalle and Islote Hoffman, the latter feature being the main rock in the group called Rugged Rocks, in the South Shetlands. However, it is possible that this hill lies on either Half Moon Island or Livingston Island.

Rocas Rosales *see* **Rosales Rocks**

Rosales Rocks. 62°27' S, 59°43' W. A group of rocks, between Punta Hermosilla and Punta Troncoso, WNW of Bonert Rock, in the extreme NW of Discovery Bay, on the NE coast of Greenwich Island, in the South Shetlands. Surveyed by ChilAE 1946-47, and named by them as Rocas Sargento Rosales, for Sgt. Rosales, of the Chilean Army, coppersmith on the *Iquique* during that expedition. It appears as such on their 1947 chart. It appears abbreviated to Rocas

Rosales on a Chilean chart of 1951. UK-APC accepted the translated name on May 11, 2005. This feature has nothing whatever to do with the feature the Argentines call Cerro Rosales (see above).

Isla Rosamel *see* **Rosamel Island**

Islote Rosamel *see* **Rosamel Island**

Rosamel Island. 63°34' S, 56°17' W. A circular island, 1.5 km across, it lies W of Dundee Island, between that island and Andersson Island, in the SE entrance of Antarctic Sound, and has precipitous cliffs of volcanic rock rising to a snow-covered peak of 435 m. Discovered and roughly charted on Feb. 27, 1838, by FrAE 1837–40, and named by Dumont d'Urville for Vice Admiral Claude du Campe, Baron de Rosamel (1774–1848), French minister of marine and colonies, 1836–39, under whose orders the expedition sailed. Actually, Dumont d'Urville named this island "île presumée," while applying the name Île Rosamel to Andersson Island and and Jonassen Island collectively. It appears as such on their 1838 map, and also (as Rosamel Island) on an 1839 British chart, and (as Isla Rosamel) on an 1861 Spanish chart. That was the situation for the rest of the century. In Jan. 1902, the island was re-charted by SwedAE 1901–04, and named Jul Ön (i.e., "Christmas island"). However, on other charts from the same expedition, Nordenskjöld applied the name Rosamel Ön to this feature, correcting the previous 1838 French misapplication. On Irízar's 1904 Argentine map, it appears as Isla Navidad. It appears on a 1916 British chart as Rosamel Island. On a 1937 British chart Rosamel Island appears, plotted in 63°21' S, 56°26' W. On a 1943 U.S. Hydrographic Office chart it appears as "Rosamel Island (Christmas Island)." It was surveyed by Fids from Base D between 1945 and 1947, and the coordinates were corrected by the time it appeared on a 1949 British chart. US-ACAN accepted the name Rosamel Island in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1966 Chilean chart as Islote Rosamel, but both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Isla Rosamel.

Rosanova Glacier. 73°15' S, 97°55' W. A glacier, about 13 km long, flowing N from King Peninsula into the Abbot Ice Shelf. Named by US-ACAN on Jan. 31, 2003, for Christine E. Rosanova, with USGS at Flagstaff, Ariz., specialist in the use of satellite imagery for geological and glaciological studies from the early 1990s to 2002. She was a pioneer in the use of imagery for glacier velocity.

Cabo Rosario *see* **Punta Cholchol**, **Cabo Lauro**

Rosciszewski Icefall. 62°10' S, 58°33' W. An outlet of the Warszawa Icefield, at Monsimet Cove, Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Lech Rosciszewski, technical organizer of expeditions to Arctowski Station.

Roscoe, John Hobbie. b. March 23, 1919, Syracuse, NY. After college, he worked in World War II for the Intelligence section of the Army Air Corps, interpreting aerial photos. In 1943 he became a 1st lieutenant in the U.S. Marines. He was the photogrammetric officer in the Central Task Group of OpHJ, 1946–47 (he was on the *Mount Olympus*), and was an observer on OpW 1947–48. Later he was with the Navy's Photo Interpretation Center, and wrote *Antarctic Bibliography* (*see* the Bibliography). He was scientific adviser to the director of U.S. Antarctic Programs, but is best known as being the cartographer who worked off OpHJ photos in 1952 to produce a new series of maps, and who named many new features. He retired to California, as a colonel, and died on Feb. 23, 2007, in Riverside.

Roscoe Glacier. 66°30' S, 95°20' E. A channel glacier, 20 km long, and between 5 and 8 km wide, it debouches from a small valley onto the W portion of the Shackleton Ice Shelf, between Cape Moyes and Junction Corner, and feeds McDonald Bay, on the coast of Queen Mary Land. Charted as a valley depression during a southern reconnaissance in March 1912, by Frank Wild and other members of the Western Base Party, during AAE 1911–14. Correctly identified by John H. Roscoe (q.v.), as he worked from air photos taken during OpHJ 1946–47. Named by US-ACAN in 1955, for Mr. Roscoe.

Roscoe Promontory. 66°52' S, 64°29' W. A massive, ice-capped promontory between Aagaard Glacier and Mitteling Glacier, on the N side (i.e., at the head) of Mill Inlet, NW of Karpf Point, on the Foyn Coast, on the E coast of Graham Land. Photographed aerially by RARE 1947–48, and surveyed from the ground by FIDS in 1947. Named by US-ACAN in 1987, for John Roscoe. UK-APC accepted the name on Feb. 15, 1988.

Roscolyn Tor. 76°42' S, 159°50' E. A high sandstone feature, about 1.5 km SW of Warren Peak, in the Allan Hills of Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, and named by them for a similar feature in Anglesey, Wales. NZ-APC accepted the name, and US-ACAN followed suit in 1965. ANCA accepted the name on Aug. 10, 1966.

Rose *see* **Rose Rock**

The *Rose*. An Enderby Brothers yawl that left London on May 13, 1833, as tender to the *Hopefull* (q.v. for details of the expedition). Capt. John Tobias Mallors commanding.

Mont Rose *see* **Mount Rose**

Mount Rose. 66°40' S, 140°01' E. A rocky hill, rising to 22 m, S of Mount Cervin, on the E side of Pétrel Island, in the Géologie Archipelago. Charted in 1951 by the French, and named by them as Mont Rose, for a mountain in the Alps. US-ACAN accepted the name Mount Rose in 1962. The French, for their part, have discontinued the name.

Rose, Henry *see* **Rowe, Henry**

Rose, John E. He was on the 2nd half of USAS 1939–41, as a crew member on the *North Star*.

Rose, Michael Charles "Mike." b. Dec. 7, 1961. BAS electronics engineer who wintered-over at Halley Bay Station in 1989 and 1990, being deputy base commander in the second year. He then spent another 5 summers there until 1998. Expert in the radar experiment called Dynasonde. He was at Halley Station in 1996–97 and 1997–98 (summer seasons only).

Rose, Paul Ian. b. Sept. 12, 1951, Romford, Essex, son of Jack L. Rose and his wife Ellen R. Cowd. He joined BAS in 1990 as a polar guide, and in Jan. 1993 was made base commander and field ops manager at Rothera Station. Up to 1998 he had been in Antarctica 8 times, for 26 months total. He was a diver.

Rose, Stephen Darwin. b. 1896. Of Clifton, Mass. He graduated from Dartmouth in 1913, joined the Navy in 1915, and was in the Naval Reserves, and living in Boston, when he became 1st officer on the *Bear of Oakland*, 1933–34, and master of the *Jacob Ruppert*, 1934–35, during ByrdAE 1933–35. He won the Navy Cross for his role. He married Dorothy, retired as a captain in 1949, and died on March 14, 1959, at Marblehead, Mass.

Rose Crest. 77°24' S, 160°56' E. A summit rising to about 2000 m at the S end of Wendler Spur, between Papitashvili Valley and the head of Albert Valley, in the Apocalypse Peaks of Victoria Land. Named by NZ-APC on Sept. 12, 2005, for Australian geologist Geoffrey "Toby" Rose, leader of a scientific party that investigated coal measures in the area of Mount Bastion and Sponsors Peak, in 1984–85. They mapped about 1000 sq km of coal measures in one visit. US-ACAN accepted the name in 2006.

Rose Peak. 62°03' S, 58°13' W. Rising to 655 m, nearly 3 km SW of Rea Peak, and 5 km NE of Ternyck Needle, NW of King George Bay, in the central part of King George Island, in the South Shetlands. Photographed aerially by FIDASE in 1956, and surveyed from the ground by FIDS between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for the *Rose*. US-ACAN accepted the name later in 1960. Don Hawkes mapped it in 1961. The Poles named the W ridge of the peak as Andrzej Ridge (q.v.). Last plotted by the UK, in late 2008.

Rose Point. 74°45' S, 136°45' W. A rocky point, 1.5 km E of Cape Burks, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Stephen D. Rose.

Rose Rock. 71°17' S, 170°13' E. This is the southern (inner) of 2 rocks called, jointly, The Sisters, off the N extremity of Cape Adare. The term The Sisters was given by Borchgrevink during BAE 1898–1900, but the 2 individual rocks were named Rose and Gertrude by Victor Campbell, the leader of the Northern Party during BAE 1910–13. Murray Levick suggested the name to Campbell, Rose and Gertrude being two sisters in a comic song of the time. US-ACAN accepted the name in 1962, and NZ-APC followed suit. Gertrude has disappeared.

Rose Valley Glacier. 62°30' S, 60°06' W. A glacier flowing 6 km in a SE–NW direction, then

3.5 km in a SW-NE direction, from the NE slopes of Vidin Heights into Lister Cove and McFarlane Strait between Pomorie Point and Inott Point, on Livingston Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the Valley Of Roses, in central Bulgaria.

Rosemary Plateau. 77°10' S, 160°43' E. On the S side of the upper Mackay Glacier, forming a flat-topped hill joined to the N slopes of Skew Peak only by a narrow ridge, 45 km from the coast of Victoria Land at Granite Harbor. It is composed of weathered dolerite, while an outcrop of Beacon Sandstone occurs on the E portion of the plateau, and debris of this material occurs on the W slopes. Named in the early 1960s by Keith A.J. Wise (*see* **Wise Peak**), for his wife. NZ-APC accepted the name on Aug. 14, 2002.

Rosen Peak. 79°19' S, 83°21' W. Rising to 1220 m in the S part of the Gross Hills, in the Heritage Range, in the Ellsworth Mountains. Named by US-ACAN in 2004, for Lawrence C. Rosen, geologist on a USARP expedition to the Ellsworths in 1979-80.

Rosenau Head. 70°28' S, 162°46' E. A steep, ice-covered coastal headland on the E side of Barber Glacier, in the Bowers Mountains, on the coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Darrell D. Rosenau, USN, electronics technician who wintered over at Pole Station in 1965.

Rosenberg Glacier. 75°44' S, 132°33' W. A steep, heavily crevassed glacier flowing from the W slopes of the Ames Range, between Mount Kosciusko and Mount Boennighausen, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Theodore J. Rosenberg, ionosphere physicist at Siple Station in 1970-71.

Îles Rosenthal *see* **Rosenthal Islands**

Islas Rosenthal *see* **Rosenthal Islands**

Islote(s) Rosenthal *see* **Rosenthal Islands**

Mount Rosenthal. 80°03' S, 83°15' W. A prominent mountain, rising to 1840 m, at the N end of the Liberty Hills, in the Heritage Range, in the Ellsworth Mountains. Named by US-ACAN in 1966, for Lt. Cdr. Ronald "Ron" Rosenthal, USN, navigator on LC-47 aircraft (*see* **Deaths**, 1966).

Rosenthal, Henry *see* **Mount Brecher**

Rosenthal Inseln *see* **Rosenthal Islands**

Rosenthal Islands. 64°36' S, 64°17' W. A group of islands fringing the W coast of Anvers Island, 10 km NNE of Cape Monaco, in the Palmer Archipelago. The main island in the group is Gerlache Island. Discovered and roughly charted by Dallmann in 1873-74, and named by him as Rosenthal Inseln, for Capt. Albert Rosenthal (1828-1882), ship owner, director of the German Society for Polar Navigation, who, with the Society, sponsored Dallmann's expedition. Further charted by FrAE 1903-05, the feature appears on Charcot's 1906 map translated as Îles Rosenthal. On a British chart of 1909 they appear as Rosenthal Islands, on a British chart of 1938 as Rosenthal Islands (plotted in 64°39' S, 64°13' W), on a 1946 U.S. Hydrographic Office chart as Rosenthal Island (sic), and on a Chilean chart of 1947 as Islas Rosenthal. On a 1948 British chart they appear as Rosenthal Islets, and that name was accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. Photographed aerially by FIDASE in 1956. On July 7, 1959, UK-APC redefined them as Rosenthal Islands, plotted (as on the 1938 chart, in 64°39' S, 64°13' W). The coordinates had been corrected by the time of a 1961 British chart, and by the time US-ACAN accepted the new name in 1963. On a 1961 Russian chart they appear as Ostrova Gerlacke (i.e., "Gerlache islands"). The Argentine gazetteer of 1970 accepted the name Islas Rosenthal. The new coordinates appear in the 1977 British gazetteer. The Chileans named the main island as Islote Rosenthal, and ignore the group.

Rosenthal Islets *see* **Rosenthal Islands**

Rosenthal Seamount. 68°38' S, 97°05' W. A submarine feature, with a least depth of 2770 m, to the W of Peter I Island, in the Bellingshausen Sea. Discovered in April 1995, by the *Polarstern*. Named by Heinrich Hinze in Jan. 1997 (some sources say Rick Hagen in Feb. 1997) for Albert Rosenthal (*see* **Rosenthal Islands**). The name was accepted by international agreement in June 1997.

Rosenthalinseln *see* **Rosenthal Islands**

Mount Rosenwald. 85°04' S, 179°06' W. A spectacular mountain, rising to 3450 m, it forms a distinctive landmark between the heads of Gallup Glacier and Baldwin Glacier, in the Queen Maud Mountains. It is completely snow-covered on its SW side, but has nearly vertical exposed-rock cliffs on its NE side. Discovered and photographed by Byrd on the Polar flight of Nov. 1929, during ByrdAE 1928-30, and named by him for Julius Rosenwald (1862-1932), Chicago philanthropist who contributed to this expedition, and also, posthumously, to ByrdAE 1933-35. US-ACAN accepted the name.

Rosetti, Alberto *see* **Órcadas Station**, 1955

The *Rosita*. A Norwegian whale catcher operating out of South Georgia, under the command of Carl Anton Larsen in 1922-23. She relieved Órcadas Station that season.

Rosler Nunatak. 75°00' S, 64°00' E. A low ice ridge with exposed rock along the crest, about 111 km S of Mount Newton, in the southern Prince Charles Mountains. Discovered aerially on an ANARE flight to Komsomol'skiy Peak during the Prince Charles Mountains Survey in 1972. Named by ANCA on Nov. 27, 1973, for Horst J. Rosler, who wintered-over as senior electrical fitter and mechanic at Mawson Station in 1971 and 1975.

Rosler Skerry. 66°55' S, 57°16' E. The most westerly skerry of the Rigel Skerries, off the Kemp Coast of Enderby Land. Named by ANCA on Dec. 7, 1976, for Horst Rosler (*see* **Rosler Nunatak**), a member of the dog sledge party that camped at the Rigel Skerries in 1975.

The *Ross*. Norwegian whale catcher, built in 1912 by Kaldnaes Mek., and belonging to the Hektor Company. She and the *Edle* were the two new catchers in at Deception Island in 1912-13, working for the *Ronald*. In 1920-21 both catchers were working for the new *Ronald*. On March 26, 1925, she hit submerged rocks while towing a whale to Deception Island. No lives were lost. She was found by the catcher *Smith*, and towed to Deception Island.

[1]**Cape Ross** *see* **Moody Point**

[2]**Cape Ross**. 76°44' S, 163°01' E. A granite headland, rising to 54 m above sea level, 14 km N of Cape Archer on the E coast of Victoria Land. Charted by BAE 1907-09, and named by Shackleton for Sir James Clark Ross. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Île Ross *see* **James Ross Island**

Isla Ross *see* **James Ross Island**, **Link Island**

Islas Ross. 64°06' S, 57°46' W. A group of islands separated from the continental coast by the Prince Gustaf Channel. The group consists of the following main islands: James Ross Island, Vega Island, Snow Hill Island, Seymour Island, Cockburn Island, Lockyer Island, and several other smaller islands and rocks.

Islote Ross *see* **Link Island**

Mount Ross *see* **Mount Haddington**

[1]**Punta Ross**. 63°20' S, 57°54' W. A point, directly S of Point Toro, with Unwin Cove separating the two points, to the S of Covadonga Harbor, on Trinity Peninsula, on the W coast of the Antarctic Peninsula. Named by the Chileans for Sir James Clark Ross. Not to be confused with Ross Point.

[2]**Punta Ross** *see* **Ross Point**

Ross, Alastair. b. Dec. 1881, Newington, Edinburgh, son of Andrew Ross (law clerk, and later Ross Herald of Arms), and his wife William Frances Gillon (a curious case: she was born with that name, believe it or not, but, naturally, took the name Frances Isabella. However, she was known as "Wil"). After Royal High School, he was a student of medicine at Edinburgh University, when he became taxidermist on ScotNAE 1902-04. In 1908 he and his brother Andrew (a Rugby player of note) moved to British Columbia, to prospect for gold. Andrew was killed in Europe, fighting with the Canadian Scottish in April 1916. What became of Alastair is not known.

Ross, George Hamlin. b. Sept. 25, 1872, Manchester, Ind., son of cooper Jasper Ross and his wife Elizabeth Millikin. He became a clerk, left home, and moved not far away to the tiny town of Milan, near Versailles, Ind. In 1902 he married Laura, they had one child, Vivian, in 1906, and then moved to Covington, Ky., where George got a job driving a laundry wagon. Later he became the shipping clerk for S.W. Publishing Company, in nearby Cincinnati. He was working in South Georgia in 1921-22, when Wild picked him up as a fireman on the *Quest*. On his return to Covington, he went back to his job with the publishing company. In 1930 his 24-

page book, *The Shackleton-Rowett Expedition on the* Quest, was published by Arthur H. Stockwell, of London. He was a prominent Universalist in the Cincinnati area, and in 1938 wrote a novel called *Beyond the River*, about life along the Ohio River during the Civil War. He died in Covington, on Dec. 26, 1953. Laura died 20 years later, in Covington, and Vivian died in 1996, just north of Cincinnati, aged 90.

Ross, James Clark. b. April 15, 1800, 50 Finsbury Square, London, son of well-placed Scottish parents, wine merchant George Ross and his wife Christian Clark. His father was in a more or less constant state of bankruptcy, but was able to send his sons to Chislehurst Academy. In 1808 the mother died, and on April 5, 1812 James Clark Ross joined the Royal Navy, as a first class volunteer on the *Briseis*, serving under his uncle, Commander John Ross (1777-1856; later knighted). He was 11 years old. Meanwhile, his father went off to South America to be collector of customs at Demerara. In 1818 James Clark Ross accompanied his uncle on the search for the Northwest Passage, and was then in the Arctic again with Parry, on the *Hecla* (1819-20), the *Fury* (1821-23; during which time Ross was promoted to lieutenant on Dec. 26, 1822), and the *Fury* again (1823-25). In 1827-29 he was with Parry again on the *Endeavour*, for their unsuccessful attempt to sledge from Spitsbergen to the North Pole; on Nov. 8, 1827, he had been promoted to commander. He was back in the Arctic with his uncle between 1829 and 1833, and in 1831 they located the North Magnetic Pole. In 1834 he was promoted to captain, and between 1835 and 1838 was working on the magnetic survey of Great Britain. During this period, in 1836, he led a relief of some whalers in Baffin Bay. So, by the time he left for Antarctica on Sept. 30, 1839 (*see* **Ross Antarctic Expedition**), Ross was the most experienced polar captain in history. He was knighted after his Antarctic expedition and, perhaps more important, on Oct. 18, 1843 he married Anne Coulman (*see* **Cape Anne**). Crozier was at the wedding. Ross died on April 3, 1862, in Aylesbury, Bucks.

Ross, Thomas. b. 1874, Dundee. Ordinary seaman on the *Polar Star* during DWE 1892-93.

Ross Antarctic Expedition 1839-43. Abbreviated in this book to RossAE 1839-43. Led by James Clark Ross. **April 9, 1839**: Ross received his commission to command. **Sept. 29, 1839**: The expedition left for Antarctica, its mission — to plant a flag at the South Magnetic Pole for the British Admiralty. Ross left London with two ships, the *Erebus*, which he commanded, and the *Terror*, under Capt. Francis Crozier. All of his sailors were volunteers on double pay. In fact 5 days earlier, they had been paid what was coming to them already, plus 3 months advance. Altogether there were 128 men, 64 complement per ship. There were also 4 scientists. With a few exceptions, we only know the names of the officers and gentlemen. The *Erebus* had: James Clark Ross (captain), Edward Bird, John Sibbald, and James F.L. Wood (lieutenants), Charles T. Tucker (master; he succeeded H. Mapleton before sailing), Robert McCormick (surgeon), Thomas Hallett (purser), Alexander J. Smith, Henry Oakeley, and Joseph Dayman (mates), Joseph Hooker (assistant surgeon), Henry Yule (2nd master), Thomas Abernethy (gunner). Lt. Eardley Wilmot, of the Royal Engineers, was also aboard, but he would be dropped off at St. Helena on the way down, to man the observatory there. The *Terror* had: Francis Crozier (commander; and 2nd-in-command of the expedition), lieutenants Archibald M'Murdo, Charles G. Phillips, and Joseph Kay (*see* **Kay Island**), Pownall Cotter (acting master), John Robertson (surgeon), George H. Moubray (clerk in charge), Peter A. Scott, Thomas E.L. Moore, and William Molloy (mates), David Lyall (assistant surgeon), John E. Davis (2nd master). One of the crewman (not sure which ship) was Thomas Roberts. The two ships got separated in the Channel a couple of days out. **Oct. 20, 1839**: The two ships rendezvoused in Madeira. **Nov. 2, 1839**: They were at the Canary Islands. **Nov. 13, 1839**: They were at Cape Verde, and then heading south. **March 17, 1840**: They reached the Cape of Good Hope. **April 3, 1840**: They left the Cape. **May 12, 1840:** They reached the Kerguélen Islands, which they explored, and then left for Hobart. The bosun of the *Erebus* drowned while between the Kerguélens and Tasmania. **Nov. 13, 1840**: They left Tasmania. Mr. Kay stayed in Hobart, to man the magnetic observatory there. **Dec. 12, 1840**: They left the Auckland Islands, heading toward Antarctic waters. **Jan. 1, 1841**: They crossed the Antarctic Circle, finding the pack-ice in about 66°32' S, 174°34' E. The wind was too fierce for them to enter the relatively easy pack-ice, so they cruised 100 miles to the east. **Jan. 5, 1841**: They pushed into the pack. **Jan. 9, 1841**: They found the sea free again as they became the second expedition ever to enter the Ross Sea (*see* **The *Venus***). **Jan. 11, 1841**: They sighted the Admiralty Mountains (which Ross named on that day), the farthest south land had ever been seen, and, finding his way south blocked he went east, and then south again. **Jan. 12, 1841**: They landed a party on Possession Island, and discovered Victoria Land. They then cruised south, farther into the Ross Sea, toward McMurdo Sound. **Jan. 22, 1841**: They set a new southing record of 79°S. **Jan. 27, 1841**: After 400 miles, Ross claimed Franklin Island for the British Crown. **Jan. 28, 1841**: They discovered Mount Erebus and Mount Terror, and thus Ross Island (although Ross thought it was part of the mainland) and McMurdo Sound. Later that day they came up against the barrier which today is called the Ross Ice Shelf. This blocked their way south again. They cruised along it for 350 miles, mapping the barrier as they went as far eastward as 167°W before giving up any hope of penetrating it. They then returned to Cape Adare, and then to the Balleny Islands. **April 1, 1841**: They arrived at Tasmania. **Nov. 23, 1841**: They left again for Antarctica. **Dec. 17, 1841**: They re-entered the pack-ice, in incredibly cold weather. **Jan. 1, 1842**: They crossed the Antarctic Circle. **Jan. 19, 1842**: A tremedous storm blew up, and for 26 hours they were in grave danger among the icebergs. The *Erebus*'s rudder was shattered, and that of the *Terror* absolutely destroyed. **End of Feb. 1842**: They entered the Ross Sea again, and, once again unable to penetrate the barrier, Ross abandoned the voyage. **1842**: They wintered at the Falklands. **Dec. 17, 1842**: They left for a 3rd Antarctic cruise, this time to the Weddell Sea, but found it too full of pack-ice. **1842-43**: They spent most of that summer exploring Erebus and Terror Gulf and trying to penetrate the Weddell Sea pack-ice. **March 5, 1843**: After having crossed the Antarctic Circle for the 3rd time, they reached 71°30' S, 14°51' W, then left**. April 4, 1843**: They reached the Cape of Good Hope. **Sept. 4, 1843**: They arrived back in England. This was the last of the great polar sailing voyages. Ross had charted over 1000 miles of coastline and had claimed for Britain all he had discovered. Scott later called him the "discoverer of Antarctica," and Ross was knighted not long after his return to England.

Ross Archipelago. 77°30' S, 167°00' E. A fabricated term for the group of islands and peninsulas forming the S and E boundaries of McMurdo Sound, and which include (working from N to S) Beaufort Island (the smallest), Ross Island, the Dellbridge Islands, White Island, Black Island, and Brown Island (now called Brown Peninsula), and the sheet ice in between them. Frank Debenham wrote a report on the feature in 1923, "The Physiography of the Ross Archipelago." Named for Sir James Clark Ross. US-ACAN accepted the name in 1967.

Ross Bank. 76°45' S, 176°00' E. A submarine feature of the Ross Sea. Named by international agreement in 1988, in association with the Ross Sea. US-ACAN accepted the name the same year.

Ross Barrier *see* **Ross Ice Shelf**

Ross Canyon. 75°00' S, 163°00' W. A submarine feature of the Ross Sea. Named by international agreement in 1988, in association with the Ross Sea. US-ACAN approved the name that year. The Ross Canyon is definitely split in two, and some list the S part as Shackleton Canyon.

Ross Dependency. New Zealand's "share" of the Antarctic continent, it lies between 150°00' W and 160°00' E. Named for Sir James Clark Ross and the Ross Sea, it is also called the Ross Sea Dependency. It was claimed by Britain on July 30, 1923, and put in the care of NZ. William Wigmore Stuart was administrator, 1929-53, and he was was succeeded by Harold Ruegg on Aug. 27, 1953.

Ross Desert. Unofficial name for the area of dry valleys in southern Victoria Land. Covering 5000 sq km, it is the largest ice-free region in Antarctica. The Transantarctic Mountains cut off the flow of ice from the East Antarctic Ice Sheet, and this leads to the dry, cold, desert quality of the area. Named for Sir James Clark Ross.

Ross Glacial Episodes *see* **Ross Sea Glaciations I-IV**

Ross Ice Barrier *see* **Ross Ice Shelf**

Ross Ice Shelf. Between 78°00' S and 86°00' S, and between 155°00' W and 160°00' E, it centers on 81°30' S, 175°00' W. The world's largest body of ice, it lies at the head of the Ross Sea, occupying the entire S part of the Ross Sea embayment and ending seaward in a cliffed ice front about 600 km long, and stretching from Ross Island in the W to Edward VII Peninsula in the E. It reaches 1000 km inland from the coast. It is fed from numerous glaciers coming down from the Transantarctic Mountains, including the Beardmore, and is about 200,000 sq miles in area, the size of Texas, and has a gently undulating surface. The whole ice shelf is continually moving, albeit slowly, its velocity averaging 2180 feet per year. The mean ice thickness is 1100 feet to 2300 feet and, although the ice shelf is firmly attached to the continent, it has no bedrock beneath it, and is therefore floating. Its 200-foot-high cliffs barred James Clark Ross's way south when he discovered it on Jan. 28, 1841, and he called it the Victoria Barrier, for the Queen of England (although it is just possible that he first called it Britannia's Barrier). It was subsequently called the Great Ice Barrier, the Great Southern Barrier, the Ice Barrier, the Barrier, the Ross Ice Barrier, and the Ross Barrier. It was called the Ross Ice Barrier even into Byrd's day in the 1920s and 1930s. The term "ice shelf" is fairly recent. The Germans call it Grosse Eisebeine. It has served as the starting point for many explorations. US-ACAN accepted the name in 1953.

Ross Ice Shelf Geophysical and Glaciological Survey. Better known by its initials, RIGGS. A 5-year project in the 1970s.

Ross Ice Shelf Project. Otherwise known by its initials, RISP. A U.S. project with contributions from 9 Antarctic Treaty nations and 3 non-Treaty nations. It was begun in 1973 and investigated the Ross Ice Shelf from the ground and air, making use of coring, sampling, and drilling.

Ross Ice Shelf Traverse. There have been several expeditions with this name, usually abbreviated to RIST. The first one took place between Oct. 1957 and Feb. 1958. They left their base, Little America V, and covered 1440 miles in 113 days. Bert Crary (leader), Walt Boyd (glaciologist), Hugh Bennett (seismologist), Robbie Robinson (geophysicist), Bill Cromie (assistant glaciologist), Frank Layman (mechanic), as well as Tom Morgan (writer) and John Vachon (photographer), both from LOOK magazine. Bill Cromie has written a fun account of this expedition. The second RIST took place between Oct. 1958 and Jan. 1959, and included James Zumberge (leader), Nolan Aughenbaugh, John Reid, James Burnham, Mario Giovinetto, and Ralph Kehle. The third was 1959-60, and was actually the University of Michigan field program in Antarctica for that season (1959-60). Charles Swithinbank was on it. There was one in 1962-63 and one in 1965-66.

[1]**Ross Island** *see* **James Ross Island**

[2]**Ross Island**. 77°30' S, 168°00' E. In the SW corner of the Ross Sea, on the E side of McMurdo Sound, at the N edge of the Ross Ice Shelf, just to the E of southern Victoria Land, it is the world's most southerly land accessible to ships. It is roughly triangular, extending 65 km from Cape Bird in the N to Cape Armitage in the S, and a similar distance from Cape Royds in the W to Cape Crozier in the E. The entire island is a volcanic formation, and is not grounded as was once believed. The main peaks (all volcanoes, active or extinct) are: Erebus (12,451 feet; 3795 m), Terror (10,597 feet; 3230 m), Terra Nova, and Bird (1765 m). There are 6 smaller ones: Caldwell Peak, Oamaru Peak, Paton Peak, Castle Rock, Crater Hill, and Observation Hill. McMurdo Station is here, as is Scott Base, as well as Scott's 1911 hut at Cape Evans and his 1902 hut as well, and Shackleton's Hut at Cape Royds, and a host of other famous sites, owing to the fact that it was the starting point of so many explorations into the interior of Antarctica. Cape Barne, Cape Mackay, Windless Bight, Lewis Bay, Cape Tennyson, Wood Point, Hut Point Peninsula, Aurora Glacier, Barne Glacier, Erebus Glacier Tongue, and Wohlschlag Bay, are all features of this island. Ross discovered it on Jan. 27, 1841, and named it High Island. Subsequently, he came to the conclusion that it was part of the mainland, and the name High Island was deleted. Scott was the next to see it, in 1902, and he determined it to be an island, and re-named it in honor of Ross. US-ACAN accepted the name in 1947.

Ross Peaks. 60°43' S, 44°32' W. A series of elevations, rising to about 450 m, and trending NW-SE between Ferguslie Peninsula and Fitchie Bay, on Laurie Island, in the South Orkneys. Named by UK-APC on Feb. 15, 1988, for Alastair Ross. US-ACAN accepted the name.

Ross Point. 62°21' S, 59°07' W. A low tongue of rock pushing out into the sea, about 3 km SE of Harmony Cove, it forms the SE entrance point of Nelson Strait and also the SW extremity of Nelson Island, in the South Shetlands. Charted by the personnel on the *Discovery II* in 1934-35. They were almost certainly the ones who named it, for James W. Ross, a draftsman in the Admiralty Hydrographic Office at the time. It appears on British charts of 1942 and 1948, and UK-APC accepted the name on Sept. 8, 1953, with US-ACAN following suit that year. It appears in the 1955 British gazetteer, and also on a 1962 British chart. It appears on an Argentine chart of 1948 as Punta Ross, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

Ross Sea. It centers on 75°00' S, 175°00' W. A southern extension of the Pacific Ocean (it is almost due S of NZ), it forms a massive embayment, or bight, of some 370,000 square miles into the continent of Antarctica between Cape Adare on the W and Cape Colbeck on the E, and is dominated by the high ranges of Victoria Land. Its S limit is the Ross Ice Shelf. Relatively shallow (the Pennell Bank is only about 58 fathoms deep), it is one of Antarctica's least-iced and most accessible seas, thus it has been the target of explorers as a starting point for their pushes into the interior. Going north, away from the continent, it drops into the Southeast Pacific Basin. Surface currents generally move westward along the front of the Ross Ice Shelf. It is generally claimed that the Ross Sea was first entered on Jan. 9, 1841, by Ross, but, in fact, Samuel Harvey penetrated the ice into the open Ross Sea as far south as 72°S, in the *Venus*, as early as 1831. The next vessel to do so, after Ross, was the *Antarctic*, in 1895. Scott named the Ross Sea in 1902, for Sir James Clark Ross. In 1947, US-ACAN accepted the name. The Norwegians call it Rosshavet. All its coastal areas are now explored, and tourist ships frequent it.

Ross Sea Dependency *see* **Ross Dependency**

Ross Sea Glaciations I-IV. Ice ages in Antarctica. Expansion of the Ross Ice Shelf into ice sheets, which were largely gounded on the floor of the Ross Sea. Formerly called the Ross Glacial Episodes, and named for Sir James Clark Ross.

Ross seals. Family: Phocidae. Species: *Ommatophoca rossi*. Rarely seen, usually solitary seals which breed exclusively in Antarctica (*see* **Seals**). Named for Sir James Clark Ross, there are now about 50,000, and they feed on cephalopods, fish, and plankton. They have short faces, very large eyes, greenish-gray coarse fur with yellowish stripes on the sides. They grow to about 7½ feet long, and 330 to 470 pounds in weight.

Ross Shelf Ice *see* **Ross Ice Shelf**

Ross-Weddell Graben. A mythical passage in the form of a subglacial trench between the Weddell Sea and the Ross Sea which would split Antarctica in two. This idea had been proposed since the beginning of the 20th century. Bruce, Filchner, Shackleton, and Ronne made the proving or disproving of it a priority. ByrdAE 1933-35 and OpHJ 1946-47 seemed to disprove its existence, and the discovery of the Ellsworth Mountains by Ronne during RARE 1947-48 finally dispelled the idea of such a graben (an elongated trough of land produced by subsidence of the earth's crust between two faults).

Punta Rossa *see* **Rossa Point**

Rossa Point. 65°57' S, 65°14' W. A point, 3 km ENE of Ferin Head, on the S side of Harrison Passage, on the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base J. Named by UK-APC on July 7, 1959, as Rassa Point (sic), for Anders Pavasson Rossa (1844-1917), a Saami Jokkmokk Lapp whose trek across Greenland in 1883 with Pava Lars Tuorda (*see* **Tuorda Peak**) and Baron Nordenskjöld opened the eyes of the world to skiing as means of polar transportation and travel. After 12 years (presumably not 12 years of deliberation) US-ACAN accepted the name in 1971, and still repeated the spelling error. On Dec. 20, 1974, UK-APC corrected the error, and it appears with the right spelling in the 1976 British gazetteer, and also on a British chart of 1984. US-ACAN accepted the new spelling in 1975. The Argentines call it Punta Rossa.

Mont Rossel *see* **Mount Rossel**

Mount Rossel. 72°36' S, 31°02' E. Rising to

2250 m, 5 km SW of Mount Perov, in the Belgica Mountains. Discovered by BelgAE 1957-58, and named by expedition leader Gaston de Gerlache as Mont Rossel, for Mlle. Marie-Thérèse Rossel (b. 1910), editor of the Belgian newspaper *Le Soir* since 1946, and a patron of the expedition. US-ACAN accepted the name Mount Rossel in 1965.

Rosselin, F. Chief engineer on the *Pourquoi Pas?* during FrAE 1908-10.

Rosselin Glacier. 69°16' S, 70°53' W. Flows SW from the Rouen Mountains into Palestrina Glacier, in the N part of Alexander Island. Surveyed by BAS personnel from Fossil Bluff in 1975-76. Named by UK-APC on June 11, 1980, for F. Rosselin. US-ACAN accepted the name in 1995.

Rosser Ridge. 82°46' S, 53°35' W. A rock ridge running E-W for 6 km, and rising to 1140 m, it marks the N limit of the Cordiner Peaks, in the Pensacola Mountains. Named by US-ACAN in 1968, for Earl W. Rosser, USGS topographic engineer in the Pensacola Mountains in 1965-66, during the Pensacola Mountains Project which surveyed this feature at that time. USGS mapped it from these surveys, and also from USN air photos. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Rosshavet *see* **Ross Sea**

Rosshavet Whaling Company. Norwegian whaling company formed in Sandefjord in April 1923 by Magnus Konow, Johan Rasmussen, and Carl Anton Larsen, and owning two major floating factories, the *Sir James Clark Ross* and the *C.A. Larsen*.

Rossini Point. 72°28' S, 73°09' W. A snow-covered point on the SW coast of Alexander Island, it marks the SE side of the entrance to Bach Inlet, the embayment occupied by the Bach Ice Shelf. Discovered and roughly mapped by USAS 1939-41. Re-photographed aerially in Dec. 1948, by RARE 1947-48. Mapped from the RARE photos in 1959-60, by Searle of the FIDS. He plotted it in 72°27' S, 72°39' W. Named by UK-APC on March 2, 1961, for the Italian composer Gioacchino Antonio Rossini (1792-1868). US-ACAN accepted the name later in 1961. It appears as such on a U.S. Hydrographic Office chart of 1962. It appears on an Argentine map of 1966 as Punta Rossini. The Chileans call it Punta Gumercindo, for Gumercindo Revuelta A., soil biologist who took part in ChilAE 1970-71. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, it appears in the 1977 British gazetteer.

Mount Rossman. 79°47' S, 82°48' W. A prominent, wedge-shaped, ice-free mountain, rising to 1450 m at the N end of the Enterprise Hills, between Union Glacier and Henderson Glacier, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Rossman W. Smith, ionosphere physicist at Eights Station in 1965 (there were already too many features in Antarctica with the name Smith, but none with Rossman), and leader at Byrd Station for the winter of 1967.

Otmel' Rossyp'. 67°39' S, 46°06' E. A shoal, just W of Vechernyy Hill, in the E part of the Thala Hills, in Enderby Land. Named by the Russians.

Rostand Island. 66°40' S, 140°01' E. Name also seen as Jean Rostand Island. A rocky island, 330 m long, and 170 m SE of Pétrel Island, in the central part of the Géologie Archipelago. Charted in 1951 by the French, who named it Île Jean-Rostand, for Jean Rostand (1894-1977), the biologist. US-ACAN accepted the shortened name Rostand Island in 1962.

Monte Rotch *see* **Rotch Dome**

Rotch Dome. 62°38' S, 60°53' W. Also called Rotch Ice Dome. An undulating snow dome rising to 1170 feet, immediately E of Byers Peninsula, on the W side of Livingston Island, in the South Shetlands. Named by UK-APC on July 7, 1959, for William Rotch (1734-1828) and his brother Francis Rotch (1750-1822), New England oil merchants, and pioneers of the southern whale fishery. US-ACAN accepted the name in 1960. The Argentines call it Monte Rotch.

Rotch Ice Dome *see* **Rotch Dome**

Rote Insel *see* **Red Island**

Mount Roth. 84°35' S, 172°22' W. A rock peak, rising to 870 m, 5 km E of Mount Justman, in the NE corner of the Gabbro Hills, and at the N extremity of a "peninsula" extending into the Ross Ice Shelf from the Prince Olav Mountains, between two (as yet) unnamed glaciers. Discovered and photographed aerially in Nov. 1929, during ByrdAE 1928-30, and named by Byrd for Ben Roth. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Roth, Benjamin "Ben." b. Jan. 5, 1892, Brooklyn. He enlisted in the Army Air Corps on Nov. 30, 1921, worked his way up to staff sergeant by 1924, and did two years in the Philippines. Byrd borrowed him from the 61st Service Squadron, based at Mitchell Field, Long Island, to go on ByrdAE 1928-30 as the Army's representative, and also as an additional airplane mechanic and ship's fireman. On his return to NYC on the *City of New York* he was promoted to master sergeant. A month after landing, a certain Mrs. Lucas claimed that Benny had married her in Nejyvard, Hungary, but that he had deserted her and the children in 1915. Roth denied this. He died in Sept. 1967, in Queens, NY.

Punta Rothera *see* **Rothera Point**

Rothera, John Michael. b. 1935, Wharfedale, Yorks, son of Ernest Rothera and his wife Emma Smith. He joined FIDS in 1956, as a surveyor, and wintered-over at Base Y in 1957 and at Base W in 1958. In the latter winter he, Jim Young, Frank Oliver, and Dick Hillson, all from Base W, formed a search party to look for the missing Stan Black, Geoff Stride, and Dave Statham. They failed to find the missing three boys. He married Margaret Rose in Weymouth, in 1964.

Rothera Point. 67°34' S, 68°08' W. At the E side of the entrance to Ryder Bay, on Wright Peninsula, on the SE coast of Adelaide Island. Charted by FrAE 1908-10. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground in 1957-58 by Fids from Base Y and Base W. Named by UK-APC on Sept. 23, 1960 for John Rothera. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Punta Rothera. Rothera Station is here. It was designated SSSI #9.

Rothera Station. 67°34' S, 68°08' W. Also known as Base R. British year-round scientific station at Rothera Point, on Adelaide Island, and also the BAS logistics center for the Antarctic Peninsula (given that is has a good runway). It studies geoscience, glaciology, biology, and atmospheric sciences, and also conducts surveys. It was built to replace Adelaide Station. The site was occupied initially, from Oct. 25, 1975, by a camp which housed personnel who built the facility in 3 phases. Phase I was a small accommodation block, not finished until Feb. 1, 1976. The name Rothera station came into official use on Aug. 15, 1977. **1976 winter**: 4 men. Ernest Sheldon (base commander), Alec Hurley (diesel mechanic), and Colin Horton and Andy Turner (builders). **1976-77 summer**: Phase II was built, and consisted of the main accommodation block, a power house, and a tractor shed. An old storage shed from Adelaide Station (Base T) was put up next to the Phase I building, and called the Bingham Building, for E.W. Bingham. Steve Wormald was base commander that summer. **1977 winter**: 16 men. Dog Holden (general assistant and base commander), Stephen Western (meteorologist), Les Sturgeon (geophysicist), Brian Moore and Ian Bateman (radiomen), Justin Hyams (diesel mechanic), Colin Horton, Don Mackay, Patrick Turner, and Alan Stevens (builders), Victor August (electrician), Tony Salmon and Bernard Toole (tractor mechanics), Dick Atkinson and Michael Chantrey (general assistants), and Alan McManus (cook). **1977-78 summer**: Dave Fletcher (base commander). **1978 winter**: Kenn Back (meteorologist and base commander), Alan Cheshire (radioman), Brian Lee (diesel mechanic), John Brindle and Alan Stevens (builders), Victor August (electrician), Alan Tickle (tractor mechanic), John Jewell, Michael Sharp, Nigel Young, and Clive Johnson (general assistants), and Andrew Hall (cook). **1978-79 summer**: Phase III was built, and included the scientific offices, travel store, and a cold room. In 2001 it would be named Fuchs House, for Vivian Fuchs. There has been further building when necessary. Dave Fletcher was base commander that summer. **1979 winter**: John Jewell (general assistant and base commander), Simon Dunn (meteorologist), Laurence Howell (radioman), Stuart Jones (diesel mechanic), Michael Davies and Alan Tickle (tractor mechanics), Andy Turner (builder), Tony Escott (electrician), and Ric Airey, Nigel Young, Geoff Somers, and Timothy Fogg (general assistants). **1979-80 summer**: Michael Sharp (base commander). **1980 winter**: Alan McManus (cook and base commander), Colin Nichol (assistant glaciologist), Rod Duncan (medical officer), Laurence Howell (radioman), Stuart Jones (diesel mechanic), Nick Cox (carpenter), Tony Escott

(electrician), Bob Bowler and Nigel Hadley (tractor mechanics), and Steve Artis, Geoff Somers, Les Sturgeon, and Mike Jaques (general assistants). **1980-81 summer**: Dave Fletcher (base commander). **1981 winter**: Mark Lewis (general assistant and base commander), Peter Lennard-Jones (meteorologist), Anthony Griffiths (medical officer), Andy Hawkins (radioman), Tim Godsmark (diesel mechanic), C.R. Gregory (builder), Victor August (electrician), Nigel Hadley and Alan Tickle (tractor mechanics), John Anderson, Rupert Summerson, and Stephen Tait (general assistants), and Robert Atkinson (cook). **1981-82 summer**: John Hall (base commander). **1982 winter**: Alan McManus (cook and base commander), Kevin Wilson (meteorologist), Martin Green (medical officer), Richard Newstead (radioman), Dave Wallis (diesel mechanic), Richard Phillips (builder), Joseph Hogg (electrician), Barry Finch and Alan Tickle (tractor mechanics), Simon Fraser, Nigel Young, Ash Morton, and Ian Lovegrove (general assistants). **1982-83 summer**: John Hall (base commander). **1983 winter**: Ian Lovegrove (general asssistant and base commander), Chris Bales (meteorologist), John Bell (medical officer), Richard Newstead (radioman), Dave Wallis (diesel mechanic), Richard Phillips (builder), Rob Day and Barry Finch (tractor mechanics), Pete Cleary, Richard McKee, and Ash Morton (general assistants), and Peter Foreman (cook). **1983-84 summer**: John Hall (base commander). **1984 winter**: Peter Cleary (general assistant and base commander), Peter Stark (meteorologist), Adrian Henderson (medical officer), Maurice O'Donnell (radioman), Ron Irons (builder), Vic Young (electrician), Rob Day and Andy Spearey (tractor mechanics), Alisdair Cain, Donny Stewart, Rupert Summerson, and Paul Wood (general assistants), and Peter Foreman (cook). **1984-85 summer**: John Hall (base commander). **1985 winter**: Andy Spearey (tractor mechanic and base commander), Richard Lawther (meteorologist and physicist), John Roberts (medical officer), Maurice O'Donnell (radioman), Colin Bates (diesel mechanic), Ron Irons (builder), Vic Young (electrician), Stephen Heyworth (tractor mechanic), Chris Griffiths, Alistair Simpson, Donny Stewart, Rupert Summerson, and Paul Wood (general assistants), and Clement Collins (cook). **Nov. 1985**: Phase IV was begun. **1985-86 summer**: John Hall (base commander). **1986 winter**: Ash Morton (general assistant and base commander), Richard Lawther (meteorologist and physicist), Alan McPherson (medical officer), Ian Hadden (radioman), Nigel Bennett (diesel mechanic), Mark Bithell (builder), Philip Donnelly (electrician), Steve Burns and Stephen Heyworth (tractor mechanics), Damian Carroll, Chris Griffiths, Alistair Simpson, and William Dark (general assistants), and Clement Collins (cook). **1986-87 summer**: Phase IV was finished. It was basically an extension of Phase II, and in 2001 would be named Bransfield House (for the *Bransfield*). John Hall was base commander that summer. **1987 winter**: William Dark (general assistant and base commander), Mark Row (meteorologist), Philip Hormbrey (medical officer), Joseph Lenartowicz (radioman), Nigel Bennett (diesel mechanic), Mark Bithell, Richard Casson, Steve Dove, David Figg, Simon Gill, Gary Maile, Mike Powell, Dave Probert, Ian Smart, and William Abbey (builders), Philip Donnelly and David Jobes (electricians), Andrew Stott and Michael Taylor (plumbers), Steve Burns and Carl Milner (tractor mechanics), Norman Armstrong, Crispin Day, Peter Marquis, and Damian Carroll (general assistant), and Stephen Goosey (cook). **1987-88 summer**: John Hall (base commander). **1988 winter**: Peter Marquis (general assistant and base commander), Alan Osborne (meteorologist), Philippe Lacoux (medical officer), Jonathan Speakman (radioman), Tim Lawrence and William Stewart (diesel mechanics), Richard Casson and Simon Gill (builders), Trevor French (electrician), Andy Silvester (plumber), Carl Milner (tractor mechanic), Norman Armstrong, Michael Whitford, and Crispin Day (general assistants), Clement Collins (base assistant), Andy MacConnachie (field assistant), and Stephen Goosey (cook). **1988-89 summer**: John Hall (base commander). **1989 winter**: Ash Morton (field assistant and base commander), Alan Osborne (meteorologist), Ian Makkison (medical officer), Jonathan Speakman (radioman), Lee Nixon (diesel mechanic), Iain Love (builder), Trevor French (electrician), Andy Silvester (plumber), Graham Burgess and David White (tractor mechanics), Clement Collins (base assistant), Martin Hignell, Michael Whitford, and Andy MacConnachie (field assistants), and Martin Leader (cook). **1989-90 summer**: Peter Marquis (base commander). **Nov. 30, 1989**: A hut was built on Lagoon Island, as a shelter for those on recreational trips. **1990 winter**: William Dark (field assistant and base commander), Andrew Lacey (meteorologist), Steve McManus and Murray Ludington (medical officers), Christopher Lush (radioman), Lee Nixon (diesel mechanic), Iain Love (builder), John Blissett (plumber), David White and David Wilson (tractor mechanics), John Blunn, Damian Carroll, and Martin Hignell (field assistants), and Mike Butler (cook). **1990-91 summer**: Peter Marquis (base commander). **1991 winter**: Steve McManus (medical officer and base commander), Andrew Lacey (meteorologist), James Bamber (medical officer), Christopher Lush (radioman), Mike Powell (builder), Russell Scott (plumber), Melvyn Lindsay and David Wilson (tractor mechanics), John Blunn, Steven Davies, Dave Routledge, Asty Taylor, and Bruce Crawford (field assistants), and Mike Butler (cook). **1991-92 summer**: From 1975 BAS had flown Twin Otters on to the skiway 300 meters above the station, on the Wormald Ice Piedmont, but in 1991-92 a 3000-foot crushed rock airstrip, hangar, and bulk fuel storage facility were added. There is also a wharf, Biscoe Wharf (named for the *John Biscoe*), from which to take off supplies from incoming ships. The scientists and support staff come in either by ship or by a Dash-7 aircraft from the Falklands. Alan Osborne was base commander that summer. **1992 winter**: Mike Powell (builder and base commander), Stephen Cummins (meteorologist), Richard Hobson (medical officer), Shamus McCaffrey (communications manager), Christopher Whiting (electrician), Nigel Dean (diesel mechanic), Steve Dow (plumber), Graham Burgess and Stuart Hopkins (tractor mechanics), Timothy Bird, Dave Routledge, John Sweeney, Asty Taylor, and Brian Hull (field assistants), and Andrew Whetton (cook). **1992-93 summer**: Alan Osborne (base commander). **1993 winter**: Steve Dow (plumber and base commander), Stephen Cummins (meteorologist), Charles Siderfin (medical officer), Shamus McCaffrey (communications manager), Nigel Dean (diesel mechanic), Barry Wilson and Robert McGlone (builders), Stephen Rumble (electrician), Stuart Hopkins and Allan Smith (tractor mechanic), Karl Farkas, John Sweeney, Alan Smith, and Brian Hull (field assistants), and Andrew Whetton (cook). **1993-94 summer**: Paul Rose (base commander). **1994 winter**: Stephen Rumble (electrician and base commander), Paul Davison (meteorologist), Ian Gemmell (medical officer), Gavin Taylor (communications manager), Trefor Roberts (diesel mechanic), Robert McGlone (builder), Nicholas Kirby (plumber), Martin Bell and Mike Jones (tractor mechanic), Tim Elvin, Alan Smith, Paul Thompson, Paul Farmer, and Patrick Holborn (field assistants), and Dave Bailey (cook). **1994-95 summer**: Paul Rose (base commander). **1995 winter**: Paul Farmer (field assistant and base commander), Paul Davison (meteorologist), Trevor Cattermole (medical officer), Roy Glover (communications manager), Anthony Risdon (diesel mechanic), Richard Casson (builder), Mike Jones and Ian Turner (tractor mechanics), J.S.W. Knight (electrician), Nicholas Kirby (plumber), Tudor Morgan, Andrew Teasdale, Paul Thompson, and Simon Garrod (field assistants), and Dave Bailey (cook). **1995-96 summer**: Paul Rose (base commander). **1996 winter**: Tudor Morgan (field assistant and base commander), Frank Hindle and Jon Evans (meteorologists and physicists), Stuart D'Arcy (medical officer), David Cunningham (communications manager), Anthony Risdon and Ernie Duston (diesel mechanics), Richard Casson (builder), J.S.W. Knight (electrician), Steve Marshall (plumber), Dave Ganiford (tractor mechanic), Simon Garrod, Richard Marchant, Steve White, and Oz Lyman (field assistants), and Nigel Milius (cook). **1996-97 summer**: Two main additions were finished: The Bonner laboratory complex and a transit accommodation block, the latter being named in 2001 as Giants House, after the Rothera sled-dog teams of that name. The Bonner complex was named for W. Nigel Bonner, a British biologist in Antarctica on and off from 1953 until 1986, and Deputy Director of BAS, 1986-88. The complex has a re-compression chamber, a wet lab, and a terrestrial biology lab. Two field huts — the Melon Hut and the Apple Hut — were built on Léonie Island for Rothera Station personnel by the Dutch as a thank-you for BAS co-operation during work

done during the Netherlands Antarctic Program. Paul Rose was base commander that season. **1997 winter**: Dave Ganiford (tractor mechanic and base commander), Lucy Yeomans and Jenny Rust (meteorologists and physicists), Si Brockington (marine biologist), Alice Chapman (assistant marine biologist), Dave Rigg (medical officer), Robert Stannard (communciations manager; Seamus Kirwan had been scheduled), J. Defries and Phil Jones (diesel mechanics), Rob Tulk (builder and carpenter), Steve Leighton (electrician), Mark Smith (plumber), Stuart Wallace (boatman), Robert Wood (diver), Si Abrahams, Steve White, Oz Lyman, Jez Ralph, and Mike Austin (field assistants), Andy Rossack (terrestrial field assistant), and Nigel Milius (cook). **1997-98 summer**: Paul Rose (base commander). **1998 winter**: Rob Tulk (builder and carpenter and base commander), Mark Jeffery and Richard Robinson (meteorologists and physicists), Si Brockington (marine biologist), Alice Chapman (assistant marine biologist), Alison George (environmental microbiologist), Randall McRoberts (medical officer), Andy Cockburn (communications manager), Nigel Blenkharn, Phil Jones, and Chris Hales (diesel mechanics), Danielle Lud (terrestrial research student), Simon Higgins (electrician), Mark Smith (plumber), Martin Warnock (boatman), Steve Dunkerley (diver), Karl Farkas, Jez Ralph, Ian Marriott, Phil Wickens, and Rachel Duncan (field assistant), Andy Rossack (terrestrial field assistant), and Dorian Edwards (cook). **1998-99 summer**: Another Melon hut was built on Two Step Cliffs, Alexander Island. Paul Rose was base commander. **1999 winter**: Maggie Annat (field assistant and base commander), George Fell and Mark Jeffery (meteorologists and physicists), Kieran Fraser (marine biologist), Jenny Beaumont (assistant marine biologist), Kevin Hughes (macrobial eco-physiologist), Lesley Thomson (medical officer), Ian Parsons (communications manager), Nigel Blenkharn and Peter Grey (diesel mechanic), Matt Jobson (builder and carpenter), Paul Martin and Mark Jeffrey (electricians), Chris Thompson (tractor mechanic), Ian McDonald (boatman), Craig Barnes (diver); field assistants Crispin Day (he replaced Karl Farkas at the last moment), Steve Hinde, Phil Wickens, and Nicholas Conn; Paul Geissler (terrestrial field assistant), and Gerard Baker (cook). **1999-2000**: Paul Rose was base commander. **1999-2001**: A new sleeping quarters for 88 people was built, and called Admirals House, for the Rothera sledge-dog teams of that name. **2000 winter**: Kieran Fraser (marine biologist and base commander), Robin Goodhand and George Fell (meteorologists and physicists), Jenny Beaumont (assistant marine biologist), Chris Burrows (medical officer), Ian Parsons (communications manager), Peter Grey (diesel mechanic), Chris Thompson and Ian Turner (tractor mechanics), Matt Jobson (builder and carpenter), Paul Martin (electrician), Steve Ainscough (plumber), Ian McDonald (boatman), Hugh Brown (diver), Maggie Annat, Dave Reynolds, Pete Milner, Steve Hinde, and Nicholas Conn (field assistants), Paul Geissler (terrestrial field assistant), and Keith Walker (cook). **2001 winter**: Mike Powell (carpenter and base commander), Dave Bowden (marine biologist and co-deputy base commander), Pete Milner (field assistant and co-deputy base commander), Felicity Aston and Ian Martin (meteorologists and physicists), Rayner Piper (assistant marine biologist), Jenny Dean (medical officer), Dave Molyneaux (communications manager), Tom Corbett and Steve Le Breton (mobile plant technician, or vehicle mechanics), Jon Leach (fixed plant technician, or generator mechanic), Christopher Hall (electrician), Paul Cryer (plumber), Will Gilchrist (boatman), Phil Horne (diver), Andy Chapman, Dave Routledge, and Asty Taylor (field assistants), Dave Ellis (base assistant), Mairi Nicholson (terrestrial research assistant), and Keith Walker (chef). **2002 winter**: Simon Garrod (base commander and field assistant), Felicity Aston and Richard Flower (meteorologists and physicists), Dave Bowden (marine biologist), Rayner Piper (assistant marine biologist), Jim Olsen (medical officer), Dave Molyneaux (communications manager), Gary Wilson (builder and carpenter), Paul Martin (electrician), Matt Danby and Gary Middleton (mobile plant technicians), Paul Freeman (fixed plant technician), Stewart Hill (mechanical services technician), Jonathan Burleigh (boatman), Phil Horne (diver), Carolyn Bailey, Andy Chapman, Adam Hunt, and Tom Marshall (field assistants), and Mike Wallman (chef manager). **2003 winter**: Richard Flower and Adam Thornhill (meteorologists and physicists), Kirsty Brown (marine biologist), Andy Miller (assistant marine biologist), Jane Nash (medical officer), Eric Thornthwaite (mechanical services technician), Jon Seddon (electronics engineer), Graeme Knott (Lidar engineer), Andy Barker (communications manager), Matt Jobson (builder and carpenter), Andy Porte (electrical services technician), Iain Airth and Chris Jacobs (mobile plant technicians), Ian Heffernan (boatman), John Withers (diver), John Bursnell, Richard Burt, Dave Routledge, Neil Stevenson, and Edward McGough (field assistants), and Isabelle Gerrard (chef manager). **2004 winter**: Steve Hinde (base commander), Hamish Campbell (AFI), Adam Thornhill (meteorologist and physicist), Dan Smale (marine biologist), Andy Miller (assistant marine biologist), Fin O'Sullivan (medical officer), Phil Harding (communications manager), Julian Klepacki (electronics engineer), Graeme Nott (Lidar engineer), Andy Silvester (mechanical services technician), John Riseborough (builder and carpenter), Andy Porte (electrical services technician), Iain Airth and Paul Booth (mobile plant technicians), Anthony Brennan (fixed plant technician), Andy Wilson (boatman), John Withers (diver), Tim Burton, Rob Jarvis, Dougal Ranford, and Paul Torode (field assistants), Kat Snell (terrestrial research assistant), and Cyril Millet (chef manager). **2005 winter**: Andy Barker (base commander and communications manager), Andy Wilson (boatman and deputy base commander), Agnieszka Fryckowska (meteorologist and physicist), Dan Smale (marine biologist), Paul Mann (assistant marine biologist), Jo Caldron (medical officer), Julian Klepacki (electronics engineer), Glen Stewart (builder and carpenter), Michael Porter (electrical services technician), Mike Tattersfield (mechanic services technician), Paul Best and Gary Masters (mobile plant technicians), Andy McConnachie (fixed plant technician), Matt Brown (diver), Simon Herniman, Rob Smith, Andy Lole, Edward McGough, and Kirk Watson (field assistants), Kat Snell (terrestrial research assistant), and Isabelle Gerrard (chef manager). **2006 winter**: Agnieszka Fryckowska (meteorologist and physicist), Jade Berman (marine biologist), Helen Rossetti (assistant marine biologist), Lowri Bowen (medical officer), Mark Saunders (builder and carpenter), Richard Logan (electrical services technician), Kai Parker (mechanical services technician), Jamie Fletcher and Tom Vintner (mobile plant technicians), Mike Prior-Jones and Matt Richardson (fixed plant technicians), Bernard Meehan (boatman), Mark Laidlaw, Bruce Maltman, Tom Marshall, Kirk Watson, and Tom Spreyer (field assistants), Richard Hall (terrestrial research assistant), and Riet Van der Velde (chef manager). **2007 winter**: Mike Maling (base commander), Birgit Obermueller (marine biologist), Alistair Simpson (doctor), Tristan Thorne (communications manager), Matt Balmer (engineer & data management), Scott Jamieson (carpenter), Matthew Churchill, Kenneth Hordon, and Andrew Webb (plant mechanics), Stephen Boulton (mechanical services technician), Richard Logan (electrical services technician), Rob Webster (MOMU), Kelvin Murray (dive officer), James Elliott (boatman), Richard Hall (terrestrial research assistant), Ali Massey (marine assistant), Liz Homer, Roger Stilwell, Andrew Cook, Mark Gorin, and Peter Waite-Shores (field assistants), and Cyril Millet (chef). **2008 winter**: Alison Dean (base commander), Birgit Obermueller (marine biologist), Jason Coventry (doctor), Ian Nightingale (communications manager), Matt Balmer (engineer and data management), John Loines (Bonner Lab manager), Scott Blowman (mechanic services technician), Timothy Booth (electrical services technician), David Adams (plant technician mobile), Al Homer (plant technician mechanic), Matthew Hooper (plant technician static), Rob Webster (MOMU), Graham Young (builder and carpenter), James Elliott (boatman), Nicola Robinson (fish nurse), Ali Massey (marine assistant), Feargal Buckley, Adam Clark, Daniel Fitzgerald, Ian MacNab, and James Wake (field assistants). **2009 winter**: Matthew Brown (base commander), Celine Nyhan (meteorologist), Mel Langridge (marine biologist), Matthew Edwards (doctor), Andrew Webster (communications manager), Martin Corlett (mechanical services technician), Paul Craske (plant technician static), Al Homer (plant technician operator and mechanic), Michael Shortt (electronics engineer), Jonathan Yates (plant mechanic), Shaun Scopes (carpenter and builder), Anthony McLaughlan (electrical services technician),

Matthew von Tersch (Bonner Lab manager), Danny Edmunds (boating officer), Adam Clark, Ian MacNab, David Routledge, James Wake, and Kirk Watson (field assistants), Terri Souster (marine assistant), and Riet van de Velde (chef). **2010 winter**: Richard Hall (base commander), Becky Horne (meteorologist), Colette Mesher (marine biologist), Terri Souster (marine assistant), Claire Lehman (medical officer), Mike Clarke (communications manager), John Wedlake (electrical engineer), Nick Warburton (mechanical services technician), Nathan Bowen (electrical services technician), Darren Skinner, Mike Stainer, and Ian Strachan (plant technicians), Jon James (diving officer), Andy Wilson (boatman), Tom Weston, Ben Tibbets, Alan Hill, Bruce Maltman, and Ian Rudkin (field assistants), and Justin Boulton (chef). Rothera can house 124 people, which it sometimes does during the summer; during the winter the average population is 22. The station also has an aquarium. *See also* **Damoy Point**.

Cape Rothschild *see* **Rothschild Island**
Île de Rothschild *see* **Rothschild Island**
Isla Rothschild *see* **Rothschild Island**
Islote Rothschild *see* **Splitwind Island**
Mount Rothschild *see* **Rothschild Island**

Rothschild Island. 69°36' S, 72°33' W. An island, 40 km long, it is mainly ice-covered and is surmounted by the several prominent peaks of the Desko Mountains. It lies 5 km W of the extreme NW end of Alexander Island, in the N entrance to Wilkins Sound, and, being bounded by the Wilkins Ice Shelf to the SE, it forms the W side of Lazarev Bay. In Jan. 1821, from a distance, von Bellingshausen's 1819-21 expedition sighted Mirnyy Peak (in the N part of the island). In Jan. 1909, FrAE 1908-10, again from a distance, roughly charted it as an island, which Charcot named Île E. de Rothschild, for Baron Édouard-Alphonse de Rothschild (1868-1949), head of the French branch of the Rothschild family, and president of the Rothschild Brothers Bank. It appears as such on Charcot's 1912 map. On Bongrain's 1914 map of the same expedition, it appears misspelled as Île E. de Rotschild. On a 1914 British chart it appears as E. Rothschild Island, and on a 1916 British photograph it appears as E. de Rotschild Island (sic). It was seen from the air by Wilkins in Dec. 1929, and appears on his map of that year as E. de Rothschild Island. On Aug. 15, 1936, and again on Feb. 1, 1937, it was seen aerially by BGLE 1934-37, who reported it as being part of Alexander Island. It appears on Rymill's 1938 map of the expedition as Mount Rothschild, as it does also on Stephenson's 1940 map of the same expedition. It appears on a 1940 U.S. Hydrographic Office chart as Cape Rothschild. USAS 1939-41, by aerial photography (and maps produced from those photos), proved it to be an island. US-ACAN accepted the name Rothschild Island in 1947. RARE 1947-48 again photographed it aerially, and in 1959-60 it was re-mapped from these photos by Searle of the FIDS. UK-APC accepted the name on March 2, 1961. It was re-mapped yet again from U.S. Landsat images taken in 1974. The Chileans and Argentines both call it Isla Rothschild. Once plotted in 69°25' S, 72°30' W, it has since been re-plotted.

Rotifers. A type of microfauna in Antarctica (*see* **Fauna**). There are over 2000 species worldwide, and they are astonishingly varied. Males are unknown in most of the species.

The *Rotoiti*. NZ frigate, named for 2 lakes of that name in NZ, and fitted out by the RNZN as a weather picket ship in 1961. She was on Ocean Station duty between Christchurch and McMurdo Sound between then and Dec. 3, 1963. On Oct. 2, 1961 she left Auckland to provide weather information, and to be on emergency standby for U.S. aircraft plying between Christchurch and McMurdo. She did 3 tours in the summer of 1961-62, and two re-supply tours in late 1962. Her last two re-supply tours were in Nov. and Dec. 1963, during OpDF 64. Skipper was Lt. Cdr. Derek J. Cheney, RNZN (*see* **Cheney Bluff**).

Mount Rotoiti. 82°48' S, 162°14' E. A serrated peak, rising to 2900 m, E of Mount Markham, and 1.5 km NE of Mount Pukaki, at the end of the Frigate Range before that range drops in elevation to Lowery Glacier. Named by the Northern Party of NZGSAE 1961-62 for the *Rotoiti*. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Mount Rotolante. 83°36' S, 168°25' E. Rising to 2460 m, 10 km NW of Mount Fox, in the Queen Alexandra Range. Named by US-ACAN in 1966, for Ralph A. Rotolante, USARP meteorologist who wintered-over at McMurdo in 1962.

Île de Rotschild *see* **Rothschild Island**

Rotten bergs. Icebergs wasted by the winds, ablation, sublimation, and by the waves. They are usually no longer tabular (*see* **Icebergs**).

Røtter, John *see* **Órcadas Station**, 1919

The *Rotterdam VI*. American tourist ship, with a carrying capacity of 1200 persons, in Antarctic waters in from 1999-2000, visiting the South Shetlands, the South Orkneys, and the Antarctic Peninsula, under the command of Capt. J.W. Dyck. She was back in 2005-06.

Rotunda. 78°01' S, 161°34' E. A distinctive butte rising to 2410 m, on the SW side of Rotunda Glacier, in Victoria Land. Named descriptively by NZ-APC. US-ACAN accepted the name in 1994.

Rotunda Glacier. 78°00' S, 161°38' E. A tributary glacier flowing N between Ugolini Peak and La Count Mountain into the upper Ferrar Glacier, in Victoria Land. Named in association with the butte called Rotunda (see the entry above), by Harry Keys, Peter Anderton, and Phil Kyle, in their report "Tephra in Glacier Ice," written following the 1973-74 and 1974-75 seasons. NZ-APC accepted the name, and US-ACAN followed suit.

Rotz Glacier. 69°17' S, 65°43' W. A tributary glacier, 14 km long and 3 km wide, it flows W from Wakefield Highland in the central part of the Antarctic Peninsula, into Airy Glacier, at a point due S of Mount Timosthenes. Photographed from the air on Nov. 27, 1947, by RARE 1947-48, using trimetrogon aerial photography. Surveyed from the ground by FIDS in Dec. 1958 and Nov. 1960. Named by UK-APC on Aug. 31, 1962, for Jean Rotz, 16th-century French chartmaker, and (from 1542) hydrographer to Henry VIII of England and Wales. US-ACAN accepted the name, later in 1962.

Point(e) Rouch *see* **Rouch Point**
Punta Rouch *see* **Rouch Point**

Rouch, Jules-Alfred-Pierre. b. 1884. French naval ensign and 3rd officer on the *Pourquoi Pas?* during FrAE 1908-10. He was also the scientist specializing in meteorology, atmospheric electricity, and physical oceanography. Noted for his feud with Louis Gain (q.v.), he married Luce, Gain's sister. Later he became director of the Oceanographic Institute of Monaco. He died in 1973. Father of African documentary movie maker, Jean Rouch.

Rouch Point. 65°10' S, 64°11' W. Forms the NW end of Petermann Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted in 1909, by FrAE 1908-10, and named by Charcot as Pointe Rouch, for Jules Rouch. It appears as Point Rouch on a 1943 U.S. Hydrographic Office chart, and on a 1953 Argentine chart as Punta Rouch. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Rouch Point on July 7, 1959, and US-ACAN followed suit in 1971.

Macizo Rouen *see* **Rouen Mountains**
Massif Rouen *see* **Rouen Mountains**
Montes Rouen *see* **Rouen Mountains**
Mount Rouen *see* **Rouen Mountains**

Rouen Mountains. 69°10' S, 70°53' W. A prominent mountain range, rising to about 2750 m (in Mount Paris), extending for about 50 km in a NW-SE direction from Mount Bayonne to Care Heights and Mount Cupola, to the N coast of Alexander Island between Bongrain Ice Piedmont and Roberts Ice Piedmont, and to the E coast at Schokalsky Bay. The feature is bounded to the W by Russian Gap, and to the S and SE by Tufts Pass and Hampton Glacier. So, from N to S, the feature includes Mount Bayonne, The Needles, Mount Calais, Mount Sanderson, Mount Hahn, Mount Cupola, and Care Heights. First roughly mapped by FrAE 1908-10, and named by Charcot as Massif Rouen, for the French city which received the expedition upon its return to France. It appears as such on Charcot's map of 1912, and also on Bongrain's 1914 map. On a British chart of 1914, it appears as Rouen Range, and on a British chart of 1916 as Mount Rouen. They were probably seen by Wilkins as he flew over the area in Dec. 1929. Surveyed by FIDS in 1948. Charcot indicated a break in these mountains S of Mount Paris, but Searle of the FIDS, working in 1959-60 from air photos taken in late 1947 by RARE 1947-48, found that the mountains were continuous SE to Mount Cupola. He plotted them in 69°13' S, 70°50' W. UK-APC accepted the name on March 2, 1961, and US-ACAN followed suit that year. Re-mapped from U.S. Landsat images taken in Jan. 1974 and Feb. 1975. The Chileans

call this feature Monte Rouen, and the Argentines cal it Macizo Rouen.

Rouen Range *see* **Rouen Mountains**

Massif Rouge *see* **Mount Rouge**

Mount Rouge. 65°37' S, 63°42' W. A prominent mountain, rising to about 1200 m, between Funk Glacier and Cadman Glacier, at the head of Beascochea Bay, on the Graham Coast, on the W side of Graham Land. Discovered and roughly charted in Jan. 1909, by FrAE 1908-10, and descriptively named by Charcot as Massif Rouge (i.e., "red mountain"). Photographed aerially by FIDASE in 1956-57. On July 7, 1959, UK-APC named it Mount Mellanby, for Sir Edward Mellanby (1884-1955), British biochemist whose work on rickets in 1921 led to the discovery of Vitamin D. It appears as such on a British chart of 1960. US-ACAN accepted the name Mount Rouge in 1965.

Rouge Island *see* **Rongé Island**

Rougier, Jacques. b. Jan. 6, 1812, Toulon. Sailmaker on the *Astrolabe* during FrAE 1837-40.

Rougier Hill. 85°10' S, 174°30' W. An ice-free hill standing just E of LaPrade Valley, in the N part of the Cumulus Hills, and overlooking the S side of McGregor Glacier. Named by the Texas Tech Shackleton Glacier Expedition of 1964-65 for Michael Rougier, staff photographer with *Life* Magazine, who was badly injured while climbing this hill with the expedition. US-ACAN accepted the name in 1966.

Mont Rouillé *see* [1]**Mount Lacroix**

Rouillon, Charles Gaston. Known as Gaston. b. Oct. 11, 1915, Souvigny, France. A mountain climber, he fought as a chasseur with the Free French after the fall of Paris in 1940. Leader of the French Polar Expedition of 1957-59. He relieved Imbert's expedition, and was leader of the 1958 wintering party at Dumont d'Urville Station. He died on March 6, 2007.

Point(e) Roullin *see* **Roullin Point**

Punta Roullin *see* **Roullin Point**

Roullin Point. 65°07' S, 64°01' W. Marks the S tip of Booth Island, and the SW entrance point of Lemaire Channel, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Probably discovered by Dallmann, in 1873-74. Charted in 1904, by FrAE 1903-05, and named by Charcot as Pointe Roullin, for Capitaine de frégate Adrien-Paul-Émile Roullin (b. April 28, 1859), of the French Navy, sometime chef du service du service météorologique au service hydrographique. It appears as such on Charcot's maps of 1906 and 1908. It appears as Point Roullin on a 1943 U.S. Hydrographic Office chart, and on Argentine charts of 1949 it appears variously as Puerto Roulin (sic) and Punta Roullin. US-ACAN accepted the name Roullin Point in 1952, and it appears as such in the 1956 U.S. gazetteer. UK-APC accepted that name on July 7, 1959. It appears on a 1957 Argentine chart as Punta Roulin (sic), but the name Punta Roullin was accepted by the 1970 Argentine gazetteer. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by a FIDS-RN team in 1957-58. The Chileans use the name Punta Roullin.

Isla Round *see* **Davey Point**, [1]**Round Island**

Round, Robert Ebenezer. b. 1906, Wellington, NZ. He was of Heathcote Valley, in Christchurch, working as an engineer at Addington railway workshops, when he went as a fitter on the *Jacob Ruppert*, 1934-35, i.e., during the 2nd half of ByrdAE 1933-35. Retired in Lyttelton.

Round Bay *see* **Rund Bay**

Round Hill. 62°05' S, 58°25' W. A small, round hill, rising to an elevation of 20 m above Speil Point, on the W coast of Keller Peninsula, at Mackellar Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980.

[1]**Round Island**. 65°54' S, 65°33' W. A small island, 0.8 km long, 1.5 km W of Hummock Island, and 11 km NW of Ferin Head, off the Graham Coast, on the W coast of Graham Land. Discovered, charted, and named descriptively in Feb. 1936, by BGLE 1934-37, it appears on Rymill's 1938 map of the expedition, and also on a British chart of 1948. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a Chilean chart of 1947 fully translated as Isla Redonda, and that name was accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. It was surveyed by Fids from Base J in 1957-58. The Chileans, when they found out that the Argentines were also using the name Isla Redonda, changed their naming to Isla Round.

[2]**Round Island** *see* **Davey Point**

Round Lake. 67°01' S, 142°40' E. A small lake, nearly circular, the westernmost lake on Cape Denison, about 200 m ESE of (and the nearest lake to) Mawson's main hut during AAE 1911-14. Named by Mawson, it appears on maps of the expedition. ANCA accepted the name on March 7, 1991.

Round Mountain. 77°41' S, 161°06' E. Rising to 2410 m, and overlooking the N side of Taylor Glacier, at the E side of the Inland Forts, in Victoria Land. Named for its outline by Scott, while on the Ferrar Glacier Journey, during BNAE 1901-04. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Round Point. 61°56' S, 58°25' W. A (now non-existent) point 20 km W of False Round Point, 0.8 km SE of Tartar Point, between that point and Owen Island, W of Pottinger Point, on the N coast of King George Island, in the South Shetlands. Roughly charted and named descriptively by sealers in the area before 1822 (it appears on Powell's chart published that year). It appears as Pointe Round on the 1838 map drawn up by FrAE 1837-40, as Round Point on a British chart of 1844, (translated) as Punta Redonda on an 1861 Spanish chart, on Friederichsen's 1895 German map as Cap Round, and on a 1908 Argentine map as Punta Round. On a British chart of 1937 it appears plotted in 61°55' S, 58°16' W, and that is how it was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears that way in the 1955 British gazetteer. It was photographed by FIDASE in 1956. The coordinates were corrected by the time of a British chart of 1962, and, with the new coordinates, the feature appears in the 1977 British gazetteer. Both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Punta Redonda. By 1984 the point had been subsumed into a gravel spit that links the feature to Tartar Point, and, so, Round Point, as such, no longer exists. Last plotted by the UK, in late 2008.

Roundel Dome. 65°38' S, 63°15' W. A dome, mainly snow-covered, and rising to 1770 m, with a small circular area of dark rock exposed at the summit, on the E side of the Bruce Plateau, between the heads of Crane Glacier and Flask Glacier, on the Oscar II Coast. It is a useful landmark for sledging parties along a proved E-W route from the Larsen Ice Shelf across the Bruce Plateau. Surveyed by Fids from Base D in 1961-62, and named by them for its resemblance to a roundel (the RAF markings on a British airplane). US-ACAN accepted the name in 1962, and UK-APC followed suit on Feb. 12, 1964.

Roundel Point. 64°23' S, 57°26' W. A point, WSW of The Watchtower, on Snow Hill Island. The Argentines named it Punta Redonda. UK-APC accepted the somewhat translated name on April 23, 1998.

Rounsevell, David Elliot "Dave." b. May 11, 1945. Biologist at Davis Station in 1973.

Cape Rouse. 67°45' S, 67°09' E. An ice-covered cape, 13 km E of Murray Monolith, on the Lars Christensen Coast of Mac. Robertson Land. Discovered on Feb. 12, 1931, by BANZARE, and named by Mawson for Edgar John Rouse (1894-1974) of Sydney, at that time Melbourne manager of Kodak, who provided photographic equipment for the expedition. US-ACAN accepted the name in 1947, and ANCA followed suit.

Rouse Islands. 67°35' S, 62°57' E. Also called Rouse Rocks. A group of 4 small islands in the E part of Holme Bay, fringing the coast of Mac. Robertson Land about 2 km S of Welch Island. Discovered on Feb. 13, 1931, by BANZARE, and named by Mawson as Rouse Rocks, for Edgar J. Rouse (*see* **Cape Rouse**). They have since been found to be islands, rather than rocks. US-ACAN accepted the name, and ANCA followed suit on Dec. 7, 1976.

Rouse Rocks *see* **Rouse Islands**

Picacho Rousseau. 62°30' S, 59°37' W. A bare rock pinnacle rising to 272 m, emerging from the mantle of ice that covers Greenwich Island, 3 km SE of Punta Bascopé (the exremity of Ash Point), and about 900 m from the E coast of Discovery Bay, in the South Shetlands. Named by ChilAE 1946–47 as Picacho Capitán Rousseau ARA, for Capitán de corbeta Óscar H. Rousseau, Argentine naval officer invited onto the expedition by the Chilean government. In 1951, in order to avoid compound names, the name was shortened by the Chileans. In 1947-48, Don Óscar was skipper of the *Pampa*, in Antarctic waters.

Rousseau, François-Gustave. b. June 21, 1816, Ville-Fargeoux, France. Junior seaman on the *Astrolabe* during FrAE 1837-40.

Route Point. 60°44' S, 44°49' W. A rocky

point marking the NW point of Mackenzie Peninsula, and therefore the NW extremity of Laurie Island, in the South Orkneys. Discovered, charted, and named by Palmer and Powell in Dec. 1821. Re-charted by FrAE 1837–40, it appears in Vincendon-Dumoulin's 1847 atlas as Pointe Chaumont, for the town of Chaumont-en-Bassigny. It appears as Cape Robertson on the charts and maps drawn up by ScotNAE 1902–04, and Sørlle, on his charts of 1912–13, refers to it as such (*see* **Cape Robertson** for why this happened). On an Argentine chart of 1930, it appears as Punta Rumbo (i.e., "destination point"), on one of their 1945 charts it appears as Punta Route, but on another from 1947 as Punta Ruta. Re-surveyed by the Discovery Investigations in 1933, it appears on their 1934 chart, as well as on a 1942 British chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. The name accepted by the Argentine gazetteer of 1970 was Punta Rumbo.

Routh, Martin H. b. 1921, Hammersmith, London, son of Robert Francis R. Routh and his wife Ida Crowley. Flight navigation officer on the *Balaena*, during that vessel's first (1946–47) whaling expedition to Antarctica. In 1959 he married Marigold Ward in Surrey, and in 2002 married Claire Golden (Greagsbey) in Southend-on-Sea, Essex.

Cabo Roux *see* **Cape Roux**

Cape Roux. 64°01' S, 62°28' W. Marks the NW extremity of Pasteur Peninsula, in the N part of Brabant Island, in the Palmer Archipelago. Discovered and charted by FrAE 1903–05, and named by Charcot as Cap E. Roux, for Pierre-Paul-Émile Roux (1853–1933; known as Émile), a physician and bacteriologist famous for his work on diphtheria. He was then director of the Pasteur Institute, in Paris (1904–33), and was a member of the commission appointed to publish the scientific results of Charcot's expedition. He also signed the instructions for FrAE 1908–10. It appears as such, and also as Pointe E. Roux, on Charcot's 1906 map. On a British chart of 1909 it appears as Cape E. Roux. On Charcot's 1912 map (reflecting FrAE 1908–10), it appears as Cap Roux. On Wilkins' 1929 map it appears as Cape Roux, but on a 1938 British chart as Cape E. Roux, and on a British chart of 1948 as Cape Roux. It appears on a Chilean chart of 1947 as Cabo Roux. It appears as Cape Roux on a British chart of 1949, plotted in 63°59' S, 62°30' W. US-ACAN accepted the name Cape Roux in 1952, with the feature plotted in 64°01' S, 62°36' W, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956–57. The coordinates were corrected in time for a 1961 British gazetteer, and, with the new coordinates, it appears in the 1977 British gazetteer. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Cabo Roux.

Isla Roux *see* **Roux Island**

Roux, Jean-Baptiste. b. March 8, 1795, Toulon. Gunner on the *Astrolabe* during FrAE 1837–40. He died on board on Nov. 5, 1839.

Roux Island. 66°54' S, 66°57' W. An island, 3 km long, 0.8 km off the N end of Arrowsmith Peninsula, it forms the W entrance point of Lallemand Fjord, off the Loubet Coast, on the W coast of Graham Land. Discovered and charted on Feb. 1, 1909, during FrAE 1908–10, and named by Charcot as Île Charles-Roux, for Jules Charles-Roux (1841–1918), Marseillais politician, colonialist, and oceanographer. It appears as such on Charcot's maps of 1910 and 1912. It appears as Charles Roux Island on a 1943 U.S. Hydrographic Office chart. ChilAE 1946–47 surveyed it, and named it Isla Panimávida. It appears as such on their 1947 chart. It appears on a 1948 British chart as Roux Island, and that name was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953, and appears as such in the 1955 British gazetteer and on a British chart of 1961. However, on a British chart of 1955 it appears as Charles Roux Island. On an Argentine chart of 1953 it appears as Isla Roux, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. In 1956–57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base W.

Rouxel, Casimir-Jean-Marie. b. March 27, 1813, Pleurtuit, France. Junior seaman on the *Zélée* during FrAE 1837–40, he died at Talcahuano on April 20, 1838, after the expedition returned riddled with scurvy from Antarctica.

Rove, Thorvald G. He was a whaler, skipper of the *Nor*, 1908–09.

Dolina Rovnaja. 70°57' S, 65°10' E. A valley, on the N side of the Husky Massif, in the Prince Charles Mountains. Named by the Russians.

Gora Rovnaja. 72°59' S, 68°43' E. A nunatak on the Mawson Escarpment, in Mac. Robertson Land. Named by the Russians.

Row Island. 66°31' S, 162°38' E. Also spelled (erroneously) as Rowe Island. A small, flat, ice-covered island, about 1.3 km in diameter (the New Zealanders say it is 0.8 km long), and 180 m high, 1.5 km SE of Young Island, in the Balleny Islands. On Feb. 9, 1839, when John Balleny discovered this group of islands, he found an island 16 km N of Young Island, and called it Row Island, for J. Row, one of the merchants who had gotten together with the Enderby Brothers to send out the expedition. Later explorers could not find that island, so, in 1936, personnel on the *Discovery II* named this little island in order to preserve the name Row. US-ACAN accepted that situation, and NZ-APC followed suit.

Punta Rowe *see* **Rowe Point**

Rowe, Henry. Skipper and part owner of the *Grace*, in the South Shetlands for the 1821–22 sealing season. There is some confusion over this man's name. UK-APC has him as Henry Rowe, as does Bob Headland, who cites historian A.G.E. Jones's *Polar Portraits* as his source. However, Jones quite clearly has Henry Rose, not Rowe. According to Jones, there was, indeed, a Capt. Rowe, who owned another Plymouth vessel — the *Henry*— in at the South Shetlands that season, but he does not give a first name. This is borne out by Lloyd's Shipping Register, which has H. Rowe as the owner of the *Henry* (unfortunately one is unable to find the *Grace* in Lloyd's). This Rowe, although he was owner of the *Henry*, was not the skipper of that vessel, however; that was Capt. Kellick (confirmed by Lloyd's, who call him Killick; this is almost certainly Adam Kellock). There seems no doubt then that Kellick was skipper of the *Henry* that season. Which sort of leaves a Capt. Henry Rowe minus a ship. The best guess is that Jones suffered a lapse of concentration, that everyone else is right, and that the skipper of the *Grace* was, indeed, Henry Rowe and not Rose. This is halfway confirmed by the fact that the 1829 Lloyd's has a Capt. Rowe as skipper of a newer vessel, the *Grace*, which plied Plymouth waters that year.

Rowe, James G. *see* **USEE 1838–42**

Rowe, John. b. ca. 1745. Master's mate on the *Adventure* during Cook's voyage of 1772–75. Related by marriage to Capt. Tobias Furneaux, he was one of the party of 10 men eaten by the Maoris on Dec. 17, 1773, in NZ. All they found was his hand, identifiable by an injury.

Rowe, Maxwell. 2nd cook on the *Eagle* in 1944–45, during the 2nd phase of Operation Tabarin.

Rowe, Peter Richard. b. 1937, Bromley, Kent. One of his grandfathers married the widow of another of his grandfathers, thus making him his own cousin. He joined FIDS in 1957, as a junior radio operator, and wintered-over at Deception Island (Base B) in 1958 and 1959. In fact, he was the sole radio operator at Deception, and doing very well, until Vince O'Neil was transferred from Base O and became senior man (a fact that somewhat displeased Mr. Rowe). He was very popular on the base, partly because he talked so volubly and so clearly in his sleep. On his return to England in 1960, he went to work for a demolition company, and, in 1962, a wall fell on him in Newport, killing him.

Rowe Bluff. 68°01' S, 65°33' W. Rising to about 1200 m on the NW side of Trail Inlet, 8 km NE of Williamson Bluff, on the Bowman Coast, on the E side of the Antarctic Peninsula. Photographed aerially by Ellsworth on Nov. 21, 1935, and mapped by U.S. cartographer W.L.G. Joerg in 1936–37, from these photos. Re-photographed aerially in 1940, by USAS 1939–41, and surveyed from the ground by Fids from Base E between 1946 and 1948. Named by US-ACAN in 1977, for Lt. Cdr. Gary L. Rowe, of the U.S. Coast Guard, engineer officer on the *Burton Island* during OpDF 75 (i.e., 1974–75). It appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on May 21, 1979. Originally plotted in 68°01' S, 58°36' W, it has since been replotted.

Rowe Island *see* **Row Island**

Rowe Nunataks. 78°15' S, 166°07' E. A cluster of nunataks, 5 km NW of Cape Beck, in the SW part of Black Island, in the Ross Archipelago. Named by US-ACAN in 1999, for Charlotte Anne Rowe (b. Feb. 15, 1958), of the Geophysical Institute, at the University of Alaska, Fairbanks, and deputy state seismologist, who

investigated volcanic activity and seismicity at nearby Mount Erebus in 1984–85 and 1985–86. NZ-APC accepted the name on Nov. 4, 1999. By the time this feature was named for her, Dr. Rowe was at New Mexico Tech, and she was later at Los Alamos.

Rowe Point. 62°35' S, 60°54' W. A point projecting into the SE side of Barclay Bay, 13 km SSW of Cape Shirreff, on the N coast of Livingston Island, in the South Shetlands. It was not only photographed aerially by FIDASE in 1956–57, but surveyed by them from the ground. Named by UK-APC on Aug. 31, 1962, for Henry Rowe. It appears on a British chart of 1962. US-ACAN accepted the name in 1965. The Argentines call it Punta Rowe.

Rowell Peak. 71°33' S, 163°19' E. Rising to 1725 m, it is the highest peak on Reilly Ridge, in the Lanterman Range of the Bowers Mountains. Named by NZ-APC in 1983, for NZ geologist Albert John Rowell (b. July 19, 1929, Ely, Hunts, England), formerly of the University of Nottingham, a member of Roger Cooper's NZARP geological party to the area in 1981–82. He was later with the University of Kansas. US-ACAN accepted the name.

Fondeadero Rowett. 61°17' S, 55°10' W. An anchorage, with 18 m of water, NE of Rowett Island, directly E of Cape Lookout, on the S coast of Elephant Island, in the South Shetlands. Named by the Chileans, in association with the island.

Isla Rowett *see* **Rowett Island**

Islote Rowett *see* **Rowett Island**

Rowett Island. 61°17' S, 55°13' W. A rocky island, 0.8 km long, immediately SW of Cape Lookout, on the S coast of Elephant Island, in the South Shetlands. Discovered by the early sealers before 1822. Charted by Shackleton's *Quest* expedition in 1921–22, and named by them for city merchant John Quiller Rowett (b. Sept. 19, 1876. d. Oct. 1, 1924, Hyde Park, London), the major patron of the expedition. Rowett and Shackleton had been day boys at Dulwich College, although Shackleton had been three years older than Rowett. They continued the friendship after schooldays, and in 1911 Rowett allowed Shackleton to use his city address for business purposes. The name Rowett Island appears on the 1923 expedition map, as well as on British charts of 1927 and 1940. It appears on an Argentine chart of 1939 as Isla Rowett. It appears on a British chart of 1948 as Rowett Islet, and again on a British chart of 1949, this latter year being plotted in 61°20' S, 55°20' W. UK-APC accepted the name on Sept. 20, 1955, but with the coordinates 61°20' S, 55°30' W. It appears on a Chilean chart of 1951 as Islote Rowett. US-ACAN followed suit with the British naming in 1963. In Dec. 1970, it was surveyed by the British Joint Services Expedition, and its coordinates were corrected. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Isla Rowett.

Rowett Islet *see* **Rowett Island**

Mount Rowland. 77°13' S, 161°42' E. A mountain with a sharp-pointed summit, rising to 1550 m in the central part of Rutherford Ridge, in the Saint Johns Range of Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Frank Sherwood Rowland (known as F. Sherwood Rowland) (b. 1927), professor of chemistry at the University of California, at Irvine, Nobel Prize winner in 1995 (for his ozone work). NZ-APC accepted the name on April 7, 2008.

Rowland Glacier. 82°46' S, 163°10' E. On the N side of the Frigate Range, flowing E into Lowery Glacier. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Robert W. Rowland, USARP glaciologist at Pole Station in 1962–63 and 1963–64.

Rowles Glacier. 71°17' S, 167°39' E. A tributary glacier, over 30 km long, flowing NW along the E side of the Dunedin Range of the Admiralty Mountains, into Dennistoun Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Desmond S. Rowles of the NZ Department of Scientific and Industrial Research, and a member of the party at Hallett Station in 1964.

Rowley Corridor. 71°25' S, 67°15' W. A pass running N-S in the Batterbee Mountains, and extending from Ryder Glacier to Conchie Glacier, it separates Mount Ness, Mount Unicorn, Mount Bagshawe, and the Butler Peaks to the E from the peaks bordering George VI Sound, along the W edge of Palmer Land. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for David Noel Rowley (b. 1937), senior pilot with BAS, 1969–74. US-ACAN accepted the name later in 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Rowley Massif. 71°35' S, 61°55' W. A prominent mountain massif (rising to 1320 m in Mount Vennum), between Haley Glacier and Cline Glacier, it surmounts the NW side of the head of Odom Inlet, and separates on the Black Coast, on the E coast of Palmer Land. Mapped by USGS in 1974 from aerial photos taken by USN in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972–73. Named by US-ACAN in 1976, for geologist Peter Dewitt Rowley (b. Dec. 6, 1942, Providence, RI) of USGS, a member of the USGS geologic and mapping party to the Lassiter Coast in 1970–71, and leader of the USGS party to the area in 1972–73. He led a USGS party to the Orville Coast, in 1977–78. UK-APC accepted the name on July 21, 1976.

Mount Roy. 72°31' S, 166°15' E. Rising to 2850 m, on the S side of Benighted Pass, 10 km SSW of Mount Aorangi, in the Barker Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Robert R. Roy, cook at Hallett Station in 1957.

Roy, David. b. April 15, 1876, Dundee, but raised in Partick, near Glasgow, son of ship plater James Roy and his wife Jane. In 1900 he married Elizabeth, a Greenock dressmaker. After a spell as a laborer and boilermaker, he entered the RN, and was chief engineer, RN, on the *William Scoresby*, 1927–32.

Roy, Léon-Pierre. b. Jan. 11, 1810, Campe, France. Able seaman on the *Zélée* during FrAE 1837–40.

Royal, Edward M. Eddie." b. 1910, NZ. A tiny engineer (he was 5 feet and weighed 110 pounds) who signed on at Dunedin on Dec. 9, 1929 as a coal passer on the *City of New York* during ByrdAE 1928–30. He was on that ship when he pulled into NYC in 1930 at the end of the expedition. He was awarded American citizenship because of his efforts. Byrd says his name was Theodore, which seems unlikely.

Royal Navy Hydrographic Survey units. From the 1948–49 season onwards, the office of the Hydrographer of the Navy sent down an RN Hydrographic Survey unit to Antarctica on an annual basis. The first one was led by David Penfold, who also led the ones of 1949–50 and 1950–51, all on the *John Biscoe*. The *Biscoe* also carried down the 1951–52 unit, led by Frank Hunt. The 1956–57 and 1957–58 units were carried down on the *Protector* and the *John Biscoe* respectively, and both were led by Cdr. C.J.C. Wynne-Edwards. These differed from the previous expeditions in that the men got off the ship, and were an independent shore-based unit using a 29-foot ice-strengthened launch to get around. The very first feature surveyed was the Bismarck Strait. The 1956–57 6-man unit also had able seamen Arthur Milnes and Wally Walsham as survey recorders; able seamen D. Dickenson and E. Savage (seaman assistants); and O. Lynch (boat engineer). The second (i.e., 1957–58) unit had: Milnes again and able seaman Vincent Bloor (survey recorders); Kenny Kenyon and A. Lloyd (seaman assistants); Bryan Holmes and Fred Wooden (FIDS surveyors, on loan); Robin Curtis (FIDS geologist, on loan), Ted Clapp (FIDS radioman, on loan); Flight Lt. Dave Jones, RAF (FIDS medical officer, on loan); and O. Nash (boat engineer). Since then, other units have gone down, on the new *John Biscoe*, or the *Protector*, or the *Endurance*.

Royal Order of Winter Knights. A society of men who had wintered-over in Antarctica during OpDF I (1956) and OpDF II (1957). 484 military men and scientists received a handsome scroll, designed by the Walt Disney Studios, and signed by Admiral Dufek and Cdr. Herb Whitney, USN, senior members of the wintering-over party, and themselves "knights."

The *Royal Princess*. British tourist ship, owned by Princess Cruises, with a carrying capacity of 1200 passengers, which made one trip into Antarctic waters in 2003–04, with 1022 passengers.

Royal research ships. UK vessels, usually former Merchant Navy, taken over and fitted out by FIDS (or later, BAS) for Antarctic work, and given a Queen's license. Up to 1968 they were owned by the Admiralty and partly managed by the Royal Fleet Auxiliary, under whose command they came. Then NERC took them over. Such ships have RRS before the name. There have been three RRS vessels named *Discovery* (i.e.,

two named *Discovery*, and one named *Discovery II*), and two named *John Biscoe.* Others included the *William Scoresby*, the *Bransfield*, the *James Clark Ross* (which replaced the *John Biscoe* in 1991), the *Ernest Shackleton* (which replaced the *Bransfield* in 1999), the *Charles Darwin*, and the *James Cook* (which replaced the *Charles Darwin* in 2007).

Royal Society Expedition *see* **British National Antarctic Expedition 1901-04**

Royal Society Range. 78°10' S, 162°40' E. A majestic range of mountains along the W shore of McMurdo Sound, between Koettlitz Glacier, Skelton Glacier, and Ferrar Glacier. Ross probably saw this range from his ship in 1841. Scott was the first to explore it, in Jan. 1902, during BNAE 1901-04, and he named it for the Royal Society, one of the major sponsors of the expedition. Scott named many of the individual peaks for members of the Royal Society. US-ACAN accepted the name in 1947, and NZ-APC followed suit. Peaks within this range include The Pimple (this one was not named after one of the society's members), Mount Lister (the highest), Mount Hooker, Mount Rücker, Mount Huggins, Mount Kempe, and Mount Cox.

Mount Royalist. 71°47' S, 168°30' E. A prominent pyramidal peak, rising to 3640 m, 3 km W of Mount Adam, and to the E of Mount Ajax, it rises from the névé of Man-o-War Glacier, in the Admiralty Mountains of Victoria Land. Named by NZGSAE 1957-58, for its regal appearance, and also for the NZ cruiser, the *Royalist* (not in Antarctic waters), in continuation of the ship theme in the area. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Cape Royds. 77°33' S, 166°09' E. A dark rock cape forming the W extremity of Ross Island, it faces on McMurdo Sound. Discovered by Scott in 1902, during BNAE 1901-04, and named by him for Charles Royds. Shackleton built his hut here in 1908, as base for BAE 1907-09. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer. It was designated SSSI #1. The New Zealanders built 2 huts here in 1962, for use in summer research. A new hut was built here by NZ in 1993.

Royds, Charles William Rawson. b. Feb. 1, 1876, Rochdale, Lancs, son of banker Ernest Edmund Molyneux Royds and his wife Blanche Rawson, and nephew of Adm. Sir Harry Rawson, and also of Cdr. Wyatt Rawson, of the Arctic Office. A naval cadet by 1892, on the *Conway*, he was at Ben Nevis Observatory in the winter of 1900, and was first lieutenant and meteorologist on the *Discovery* during BNAE 1910-04. In 1914 he was commander of Admiral Jellicoe's flagship, the *Iron Duke*. In 1918 he married the actress Mary Sebright, widow of Ivo Guy Sebright. From 1919 to 1921 he commanded RN College, Osborne, and then succeeded his brother Percy as director of physical training and sports at the Admiralty. He was commodore of Devonport Barracks for two years, and, on Jan. 1, 1926, was somewhat controversially appointed assistant commissioner of the Metropolitan Police in London, then deputy, then acting commissioner. He was promoted to rear admiral in 1926, was knighted in 1929, and made vice admiral in 1930. He was attending the rehearsal of a charity ball at the Savoy, and was seized with a heart attack, dying en route to the hospital on Jan. 5, 1931. His brother, Vice Admiral Percy M.R. Royds, was superintendent of Chatham Dockyard in the 1920s.

The *Roydur*. Whale catcher, formerly the *Port Stanley* (q.v.). By 1929 she was known as the *Roydur*, and was in at Deception Island in 1929-30. In 1935 she was bought by the Falkland Islands Company, and was requisitioned by the RN during World War II. In 1950 she was sunk off the Falklands, as target practice, by the guns of the *Bigbury Bay.*

Royle, Michael James "Mike." b. 1933, Manchester, twin son of Edward W. Royle and his wife Millicent D. Bailey. He joined FIDS in 1955, as a radioman, and wintered-over at Base G in 1956, and at Base F in 1957. He lives in High Wycombe, Bucks.

Røysa. 72°05' S, 17°08' E. A nunatak NE of Sarkofagen Mountain, in Borchgrevinkisen, in the easternmost part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the pile of stones").

Røysane *see* **Røysane Rocks**

Røysane Rocks. 72°19' S, 23°17' E. Two partly snow-capped rock hills, 6 km SE of Mount Nils Larsen, in the W part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Røysane ("the piles of stones"). US-ACAN accepted the name Røysane Rocks in 1966.

Royster, Cornelius P. b. Nov. 13, 1906, Du Quoin, Ill., son of coal miner William R. Royster and his wife Katie. He was a crewman on submarines at Pearl Harbor with the USNR, and engineer on the *Nautilus* which attempted to go to the North Pole under Wilkins. He was a gyro electrician on the *Bear of Oakland*, during the first half of ByrdAE 1933-35. He died on Jan. 11, 1991.

Isla Rozas *see* **Largo Island**

Islote Rozas *see* **Largo Island**

Rozhen Peninsula. 62°43' S, 60°15' W. A peninsula extending 9 km in a SW direction toward Barnard Point, on Livingston Island, in the South Shetlands. It is bounded by False Bay to the W, and by Brunow Bay and Bransfield Strait to the SE. Mapped by the British in 1968, and again partially by the Spanish in 1991, and yet again by the Bulgarians during their survey of 1995-96. Named by the Bulgarians on March 15, 2002, for the site of Rozhen, in Pirin Mountain, in Bulgaria.

Gora Rozhkova *see* **Mount O'Shea**

Ostrov Rozhnova. 61°30' S, 55°30' W. There are only 2 islands in these general coordinates, SW of Elephant Island, in the South Shetlands. One is this one, and the other is Gibbs Island. This one may well, of course, be the Russians' name for Gibbs Island, but if it is truly an individual island (and it is difficult to imagine an island in this part of the South Shetlands not having been named by someone else years ago) then it lies just to the E of Gibbs.

Rozier Glacier. 64°45' S, 62°13' W. Flows NW into Piccard Cove, at Wilhelmina Bay, N of Sophie Cliff, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Jean-François Pilâtre de Rozier (1756-1785), French pioneer balloonist. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Nunataki Rozmyslova. 71°18' S, 66°00' E. A group of nunataks, SE of Armonini Nunatak, in the Prince Charles Mountains. Named by the Russians.

Rozo. b. ca. 1855 (this estimate only from his photograph). Argentine cook on the *Français* during FrAE 1903-05. He joined the cruise at Buenos Aires in Dec. 1903, at the last moment, and wore a pair of old threadbare slippers during the winter-over of 1904. His meals are remembered for their excellence. He baked fresh bread every other day, and made cakes and croissants on Sundays. No one knew his real name, or age. A character right out of a novel, he had been everywhere, read everything, seen everything. Given that his name was probably not Rozo ("ser de buen rozo" means "to have a good appetite"), pursuit of this gentleman resembles the chase for ignes fatui.

Point Rozo *see* **Rozo Point**

Pointe Rozo *see* **Rozo Point**

Punta Rozo *see* **Rozo Point, Turquet Point**

Rozo Point. 65°03' S, 64°03' W. Also known as Point Rozo. Marks the NW end of Cholet Island, which lies close N of the NW part of Booth Island, in the Wilhelm Archipelago. Discovered by FrAE 1903-05, and named by Charcot as Pointe Rozo, for his chef, Rozo. US-ACAN accepted the name Rozo Point in 1952. The Chileans call it Punta Rozo.

Hrebet Rozy Ljuksemburg *see* **Humboldt Mountains**

Mount Rózycki. 66°17' S, 100°46' E. A hill, rising to 70.9 m above sea level, near Dobrowolski Station, in the Bunger Hills. Named by the Poles in 1985, for Stefan Rózycki (1906-1988), Polish geologist in the Bunger Hills in 1958-59. *See* **Polish Antarctic Expedition, 1958-59**.

RRS *see* **Royal research ships**

The *R.S.A.* Republic of South Africa research vessel of 1550 tons, launched in Japan in 1961. Her first voyage was in early 1962, taking SANAE III down to Antarctica from South Africa. After relieving the station (i.e., Norway Station, which was then being run by the South Africans), on March 8, 1962, she was beset by ice, and was freed on March 23, as the result of the ice breaking up because of a volcanic eruption in the South Sandwich Islands. The skipper was Captain Kenneth Thomas McNish. She continued to relieve Norway Station (from the 1963-64 onwards it was known as Sanae Station) each year, her skipper being McNish until 1973-74, and then Johann Ernst Funk until 1977-78, her last trip down. She was replaced by the *Agulhas*.

Rubaudo, Defundini-Maurice. b. July 1, 1810, Saint-Maurice, in the (what was then part of France) Sardinian Territories. He was an able seaman on the *Zélée* during FrAE 1837-40.

Rubble Glacier. 71°20' S, 68°18' W. An ice-filled valley (sic), trending SE, surrounded by Giza Peak and the ridge connecting it to Baily Ridge to the N and Elephant Ridge to the S, in the area of Fossil Bluff, on Alexander Island. In scientific reports of the early 1960s, this feature is referred to as Man Pack Glacier, in association with Man Pack Hill (which later became known as Elephant Ridge). However, on April 23, 1998, UK-APC accepted the descriptive name Rubble Glacier, named due to the large amount of loose rock found on the surface. It is also seen as Louis Glacier. US-ACAN accepted the name on Jan. 21, 1999.

Rubeli Bluff. 70°26' S, 72°27' E. A prominent bluff at the N end of the Reinbolt Hills, at the E margin of the Amery Ice Shelf. A survey station was established here during the ANARE tellurometer traverse from the Larsemann Hills to the Reinbolts in 1968. Named by ANCA on Oct. 22, 1968, for Maxwell Neil "Max" Rubeli (b. July 26, 1943), surveyor who wintered-over at Mawson Station in 1968, and who was in charge of the traverse. US-ACAN accepted the name in 1971.

Rubey Glacier. 75°11' S, 137°07' W. A broad, heavily crevassed glacier, flowing N to coalesce with the W side of Hull Glacier eastward of Mount Giles, near the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Capt. Ervin B. Rubey, USN, commander of Antarctic Support Activities at McMurdo, 1969-70.

Islote Rubilar. 68°12' S, 66°57' W. A little island, about 150 m W of Beaumont Island, in Neny Bay, off the W coast of Graham Land. Named by ChilAE 1946-47, for Rodolfo Rubilar Visivingue, a member of the crew of the *Angamos* during that expedition.

Mount Rubin. 73°25' S, 65°40' E. A large, gently-domed mountain with a long tail of moraine trending E, NW of Patrick Point, SW of Mount Stinear, and 26 km WNW of the Cumpston Massif, in the southern Prince Charles Mountains, just to the S of Fisher Glacier. Mapped by Australian cartographers from ANARE air photos taken in 1956, 1957, and 1958. Named by ANCA on July 22, 1959, for U.S. Weather Bureau meteorologist Morton Joseph "Mort" Rubin (b. May 15, 1917, Philadelphia), meteorologist at McMurdo, 1955-56, and who worked with Mirabito to set up Weather Central (q.v.) at Little America in 1956-57. In 1958 he wintered-over as exchange scientist at Mirnyy Station. In 1973-74 he was a member of US-ACAN. US-ACAN accepted the name in 1961.

Mount Rubin de la Borbolla. 75°02' S, 135°03' W. An ice-covered mountain rising to 1090 m in the SE extremity of McDonald Heights, and overlooking Johnson Glacier from the W, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for George S. Rubin de la Borbolla, meteorologist at Plateau Station in 1968.

Rubin Peak. 82°10' S, 161°09' E. A prominent rock summit rising to over 1100 m, in the central part of the Carnegie Range, about 18.5 km N of Russell Bluff, in the Churchill Mountains. Named by US-ACAN on Jan. 29, 2003, for Vera Rubin (b. 1928), observational astronomer with the department of terrestrial magnetism, at the Cargenie Institution, in Washington, DC, 1965-2002. With Carnegie colleague Kent Ford, in 1978 she developed the theory that most of the universe consists of dark matter. NZ-APC accepted the name on Feb. 27, 2003.

Punta Rubio. 65°56' S, 65°46' W. A point on the N side of Dodman Island, off Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. Named by the Argentines.

Rubner Peak. 66°44' S, 65°51' W. Rising to about 650 m, it is the highest point on the sharp ridge separating McCance Glacier from Widdowson Glacier, just S of Darbel Bay, on the Loubet Coast, on the W coast of Graham Land. In 1956-57 it was photographed aerially by FIDASE and roughly surveyed from the ground by Fids from Base W. Named by UK-APC on Sept. 23, 1960, for Max Rubner (1854-1932), German physiologist specializing in calorie requirements. It appears in the British gazetteer of 1961. US-ACAN accepted the name in 1965.

Mount Rücker. 78°11' S, 162°32' E. A pointed mountain rising to 3815 m (the New Zealanders say 3432 m), immediately S of Johns Hopkins Ridge, between Mount Hooker and Mount Huggins, in the Royal Society Range of Victoria Land, SW of McMurdo Sound. Discovered by BNAE 1901-04, and named by Scott for Arthur William Rücker (1848-1915; knighted in 1902), honorary secretary of the Royal Society, 1896-1901. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Rücker, Alfred. Supply officer on the *Schwabenland* during GermAE 1938-39.

Rucker, Joseph T. "Joe." b. Jan. 1, 1887, Atlanta. He joined the Universal Newsreel Compay in 1914, filmed the opening of the Panama Canal in 1915, moved to San Francisco in 1922, covered the 1923 Tokyo earthquake, and the civil war in China in 1927, and was the photographer sent by Paramount News on ByrdAE 1928-30. He traveled down on the *City of New York*, with his four cameras and 150,000 feet of film, served as mess boy aboard ship, and was on the shore party. He was with Bull Halsey in the Pacific during World War II, retired in 1955, and died on Oct. 21, 1957, in San Francisco.

Rücker Ridge. 78°12' S, 162°50' E. A high spur, composed predominantly of white marble, descending E from Mount Rücker, in the Royal Society Range of Victoria Land, it forms the divide between Radian Glacier and Walcott Glacier. Named by VUWAE 1960-61, in association with the mountain. NZ-APC accepted the name, and US-ACAN followed suit in 1973.

Rucker Spur. 77°31' S, 146°30' W. A rock spur between Alexander Peak and Mount Ronne, on the E side of the Haines Mountains of Marie Byrd Land. Mapped by USAS 1939-41. Named by US-ACAN in 1966, for Joseph T. Rucker.

Mont Rude *see* **Chaigneau Peak**

Mount Rude *see* **Chaigneau Peak**

Rude Spur. 77°27' S, 160°49' E. A rock spur, 3 km NW of Mount Circe, it descends from the plateau of Victoria Land toward Balham Lake and Balham Valley, in Victoria Land. Named by US-ACAN in 1976, for USARP oceanographer Jeffrey D. Rude (*see* **Deaths**, 1975).

Cabo Rudecindo. 64°01' S, 62°01' W. A cape projecting W from the central part of the W coast of Liège Island, in the Palmer Archipelago. Named by the Chileans for Guardián de primera clase Rudecindo Velásquez Almonacid, stoker on the *Yelcho* during the famous 1916 rescue of Shackleton's men from Elephant Island. The Argentines call it Cabo Molina.

Rocas Rudmose *see* **Rudmose Rocks**

Rudmose-Brown, Robert Neal. b. Sept. 13, 1879, London, son of Robert Brown. Rudmose was his mother's maiden name. From 1900 to 1902 he was assistant professor of botany at University College, Dundee, and was naturalist on ScotNAE 1902-04. He was assistant at the Oceanographic Laboratory, vice-president of the International Polar Congress in 1906, then lecturer in geography at the University of Sheffield, 1908-31, being professor there until 1945. He went on 3 successive Scottish Arctic expeditions, 1908, 1914, and 1919, as naturalist and surveyor, and was a member of the Scott Polar Research Committee, 1939-1941 (*see also* Bibliography). He was with Naval Intelligence during both world wars. He married Edith Johnstone, and died on Jan. 27, 1957, in Sheffield.

Rudmose Brown Peak. 66°22' S, 51°04' E. A peak, 11 km S of the coast, 13 km SW of Mount Hurley, and about 20 km SSW of Mount Biscoe, in Enderby Land. Discovered on Jan. 13 and 14, 1930, by BANZARE, and named by Mawson for Robert Rudmose-Brown. US-ACAN accepted the name in 1947, and ANCA followed suit.

Rudmose Rocks. 60°41' S, 44°34' W. A group of rocks 0.5 km NNW offshore from Cape Geddes, forming the W entrance point of Macdougal Bay, off the N coast of Laurie Island, in the South Orkneys. Charted on Nov. 19, 1903, by ScotNAE 1902-04, and named the following year by Bruce for Robert Rudmose-Brown. It appears on the expedition's maps, and on a British chart of 1938. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. On a 1947 Argentine chart the feature appears as Rocas Rudmose, and that was the name accepted by the 1970 Argentine gazetteer.

Glaciar Rudolph *see* [1]**Rudolph Glacier**

[1]**Rudolph Glacier**. 64°54' S, 62°26' W. Flows N into Andvord Bay, S of Moser Glacier, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Paul Rudolph (1858-

1935), German mathematical optician who developed the first anastigmatic camera lens, in 1889. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Rudolph.

[2]**Rudolph Glacier**. 72°32' S, 167°53' E. A large tributary glacier flowing N between Hackerman Ridge and McElroy Ridge, to enter Trafalgar Glacier opposite the mouth of Hearfield Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for botanist Emanuel David Rudolph (1927–1992), project USARP leader for the study of lichens in the area of Hallett Station, 1961–62, 1962–63, and 1963–64. From 1969 to 1973 he was director of the Institute of Polar Studies, at Ohio State University, and from 1978 to 1987 was chairman of the botany department, at Ohio State. NZ-APC accepted the name.

Punta Rudolphy *see* **Rudolphy Point**

Rudolphy Point. 64°53' S, 63°07' W. The SW point of Bryde Island, off the Danco Coast, on the W coast of Graham Land. Named Punta Rudolphy by ChilAE 1950–51, for Capitán de fragata (later an admiral) Raúl Rudolphy Saavedra, of the Chilean Navy, skipper of the *Angamos* during that expedition. It appears as such on their 1951 chart, and was the name accepted by the Chilean gazetteer of 1974. Surveyed by Fids from Base O in 1957–58. UK-APC accepted the translated name on Feb. 7, 1978, and US-ACAN followed suit. It appears in the 1980 British gazetteer.

Pik Rudovica. 71°57' S, 9°20' E. A peak in the Gagarin Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians.

Rudozem Heights. 67°39' S, 66°42' W. Rising to 1500 m (in Glavinitsa Peak) at the base and in the interior of German Peninsula, they extend 18.5 km in a NE-SW direction and 13.7 km in an E-W direction, and are bounded by Bourgeois Fjord to the N and W, by Dogs Leg Fjord to the S, and to the E by a glacier draining both northward into Bourgeois Fjord and southward into Dogs Leg Fjord, on the Fallières Coast, on the W coast of Graham Land. Mapped by the British in 1978. Named by the Bulgarians on Dec. 6, 2010, for the town of Rudozem, in southern Bulgaria.

Ruecroft Glacier. 78°13' S, 161°40' E. A glacier, due E of Holmes Block, and to the S of Rampart Ridge, in the area of the Skelton Glacier, in Victoria Land. Named by US-ACAN in 1994, for George Ruecroft, USGS cartographic technician in the Special Maps branch, ca. 1960–84, a specialist in Antarctic mapping.

Mount Ruegg. 71°51' S, 170°11' E. Rising to 1870 m, it is the culminating peak on the divide between DeAngelo Glacier and Moubray Glacier, in the Admiralty Mountains of Victoria Land. Named by NZ-APC for Capt. Harold Ruegg, nautical adviser to the Marine Department of NZ. He visited the Ross Sea area in 1956, as administrator of the Ross Dependency (appointed Aug. 27, 1953). US-ACAN accepted the name in 1966.

Ruen Icefall. 62°42' S, 60°16' W. The icefall descending toward False Bay from the circus overlooked by the southernmost 3 out of the 5 summits of Mount Friesland, the midpoint of the feature being located 5.1 km S of Willan Nunatak, and 4.1 km SE of Napier Peak, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Oct. 29, 1996, for Ruen Peak, the summit of Osogovo Mountain, in southwestern Bulgaria. UK-APC accepted the name on April 29, 1997, and US-ACAN followed suit that year.

Cordillera Rufino *see* **Theron Mountains**

Cordón Rufino *see* **Theron Mountains**

Montes Rufino *see* **Theron Mountains**

Rufino Range *see* **Theron Mountains**

Rugate Ridge. 65°01' S, 61°56' W. A high ridge, running ESE-WSW (sic) at an elevation of about 800 m, between Green Glacier and Evans Glacier, on the Oscar II Coast, on the E side of Graham Land. Surveyed by Fids from Base D in 1957–58. Named by UK-APC on Sept. 4, 1957, for its rugate quality (the word means "ridgy," or "wrinkled"), many small ridges and spurs going to make up this feature. US-ACAN accepted the name in 1963.

Rugg Peak. 66°19' S, 65°23' W. Rising to about 1500 m above the E side of Widmark Ice Piedmont, southward of Crookes Peak, on the Graham Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956–57. Named by UK-APC on July 7, 1959, for British ophthalmic surgeon Andrew Rugg-Gunn (1884–1972), pioneer in the design of snow-goggles. US-ACAN accepted the name in 1965.

Isla Rugged *see* **Rugged Island**

Rocas Rugged *see* **Rugged Rocks**

Rugged Harbor *see* **New Plymouth**

Rugged Island. 62°38' S, 61°15' W. An island, 5 km long and 1.5 km wide, and rising to an elevation of 650 feet, off the W coast of Byers Peninsula, Livingston Island, and forming the S side of New Plymouth, it is the smallest of the major islands in the South Shetlands. It was discovered on Jan. 22, 1820, by the crew of the *Hersilia*, and named by Capt. Sheffield in Feb. 1820, as Ragged Island, for its shape. It appears as such in Palmer's log of Nov. 12, 1820. Capt. Burdick's log of Dec. 18, 1820, calls it Raged Island (sic), and Stackpole tells us that Capt. Davis' log spelled it the same way, and that Capt. Burdick spelled it Ragid Island in his log of Jan. 9, 1821, and as Ruged Island on Jan. 20, 1821. Spelling was not the big deal it became later in the century, so these spellings do not in any way imply a lack of education on the part of these captains. Even in the 1820–21 season, just at the time he was calling it Ragged Island, Palmer was also calling it Rugged Island, for its rugged appearance. The name Lloyd was also applied to this island for a while. Powell refers to it as that on his various charts of the 1820s, and as late as 1895, Friederichsen was showing it as an alternative name on his German map. De Gerlache's 1900 map, relecting BelgAE 1897–99, calls it Île Ragged. It appears as Isla Bugged (sic) on Irízar's 1903 Argentine map. On a British chart of 1937 it appears as Rugged Island, plotted in 62°26' S, 61°15' W, and that it is how the feature was accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. On a 1946 USAAF chart it appears both ways, as "Ragged Island (Rugged Island)." On a 1953 Argentine chart it appears translated as Isla Rugosa, and that name was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. However, today, the Chileans call it Isla Rugged. It was photographed aerially by FIDASE in 1956–57. The coordinates were corrected by the time of a 1962 British chart, and, with the new coordinates, it appears in the British gazetteer of 1977.

Rugged Peaks *see* **Ragged Peaks**

Rugged Rocks. 62°36' S, 59°49' W. A small, compact group of 3 principal rocks and several minor ones, rising to 1.5 m above sea level, at the W side of the S entrance to McFarlane Strait, just NW of Renier Point, Livingston Island, in the South Shetlands. Known by the early sealers, this feature was mapped by Powell in 1822. Recharted in 1934–35 by personnel on the *Discovery II*, and named descriptively by them. It appears on a British chart of 1948. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and also on a British chart of 1968. It appears on an Argentine chart of 1948 as Rocas Rugged, but on one of their 1953 charts it was (not very well) translated as Rocas Escarpada. On another 1953 Argentine chart it was translated as Rocas Rugosas, and that name was accepted by the 1970 Argentine gazetteer. The 1974 Chilean gazetteer accepted the name Rocas Rugged. Since 1978, the largest of the group has appeared on Argentine charts as Islote Hoffman, named after a crewman on the *Uruguay* in 1904–05. Last plotted by the UK, in late 2008.

The *Ruggen*. Norwegian whale catcher, working for the *Orwell* in Antarctic waters in 1922–23. *See also* **The *Husvik***.

Isla Rugosa *see* **Rugged Island**

Rocas Rugosas *see* **Rugged Rocks**

Gora Ruhina *see* **Mount Rukhin**

Mount Ruhnke. 72°05' S, 3°38' E. Rising to 2535 m, in the NW part of Festninga Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. A feature in this area was named Ruhnke-Berg (or Ruhnkeberg) by Ritscher, during GermAE 1938–39, for Herbert Ruhnke. If this mountain is not Ruhnke-Berg, it is pretty close to the feature that Ritscher had in mind. Modern-day geographers think that what Ritscher called Ruhnkeberg was in fact the mountain we call Festninga Mountain combined with what we call Øvrevollen Bluff. US-ACAN accepted this situation in 1970. The Russians call it Gora Davydova.

Ruhnke, Herbert. Radio operator on the *Passat* during GermAE 1938–39. There was a Herbert Ruhnke, born on July 13, 1905, who won

the Knights Cross in 1943, and went missing in Minsk in 1944. This may be our man.

Ruhnke-Berg *see* **Mount Ruhnke**

Ruin Point. 62°16' S, 58°56' W. A newly exposed area of ruin-like basaltic stacks (hence the name given by the Poles in 1984), on Nelson Island, in the South Shetlands.

Ruined Castle. 62°02' S, 58°08' W. A large crag in the NE part of the Mount Hopeful massif, in the Arctowski Mountains of King George Island, in the South Shetlands. Named descriptively by the Poles in 1981, as Zrujnowany Zramek, it appears on Tokarski's 1981 map. The name has been translated.

Isla Ruiz *see* **Patella Island**

Nunatak Ruiz. 66°21' S, 61°41' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

Península Ruiz Huidobro *see* **Península Barison**

Ruiz, Manuel J. Carpenter on the *Uruguay*, 1903.

Ruka. 72°06' S, 26°24' E. A nunatak on the W side of Byrdbreen, in the E part of the Sør Rondane Mountains. Named by the Norwegians ("the heap").

Mount Ruker. 73°40' S, 64°30' E. A large, dark outcrop about 7 km SW of Mount Rubin, in the S part of the Prince Charles Mountains. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA on July 4, 1961, for Richard Anthony "Ric" Ruker (b. Feb. 21, 1930), geologist at Mawson Station for the winter of 1960. In Feb.-May 1960, with Syd Kirkby and Ken Bennett, he investigated the Napier Mountains. US-ACAN accepted the name in 1967.

Mount Rukhin. 71°35' S, 15°07' E. A small mountain, rising to 1740 m, 14 km SW of Ekho Mountain, in the Lomonosov Mountains of Queen Maud Land. Mapped by Norwegian cartographers from 1958-59 air photos taken during the long NorAE 1956-60. Re-mapped by SovAE 1960-61, and named by the USSR in 1963, as Gora Ruhina, for Lev Borisovich Rukhin (1912-1959), professor of geology at Leningrad State University, 1935-59. US-ACAN accepted the translated name Mount Rukhin in 1970.

Rukkebreen *see* **Chijire Glacier**

Rukkenutane *see* **Chijire Rocks**

Gora Rukojatka *see* **Parker Peak**

Rulai Feng. 69°25' S, 76°06' E. A peak in the Larsemann Hills. Named by the Chinese.

Rullman Peak. 79°13' S, 84°32' W. Rising to 1910 m, just S of Grimes Glacier, in the Anderson Massif of the Heritage Range. Named by US-ACAN in 1966, for Chief Equipment Operator Gerald D. Rullman, USN, direct supervisor of the crew which first pierced the Ross Ice Shelf, at 160 feet, in 1965-66, near the Dailey Islands.

Rum Cove. 64°06' S, 58°26' W. A cove indenting the NW coast of James Ross Island between Tumbledown Cliffs and Cape Obelisk. Surveyed by Fids from Base D in 1960-61. One of the Argentine Antarctic expeditions named it Bahía Obelisco, and that name began to appear on Argentine charts from 1978. BAS did geological work here between 1981 and 1983. In association with the naming of several features in this area after alcholic spirits, UK-APC named this one on April 3, 1984. US-ACAN accepted the name. Apparently it has also been called Caleta Martínez.

Rum Pond. 76°54' S, 161°07' E. With a diameter of about 200 m, it is the larger, and eastern of 2 closely spaced frozen ponds in the floor of Alatna Valley, in the Convoy Range of Victoria Land. In keeping with naming several features in this area after nautical terms, this one was named by an NZARP field party in 1989-90, after the famous ship's beverage. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Rumania. Also spelled Romania. Emile Racovitza was the first Rumanian we know of who went to Antarctica. The country was ratified as the 17th signatory of the Antarctic Treaty on Sept. 15, 1971. In 1987, the Romanian Program of Polar Research was opened in Bucharest. The first polar efforts were in the Arctic, but occasionally teams would go to Antartcic with the Russians and Chinese. In 2006, the Australians handed over their Law Base to the Rumanians, and it became Law-Racovitza Station. Teodor Gheorghe Negoita (b. 1947), the director of the Rumanian Polar Research Institute, was the first leader there, the first Rumanian to reach the South Pole, and the biggest name in Rumanian Antarctic history since Emil Racovitza. This was the first real Rumanian Antarctic Expedition.

Rumbelow, Arthur Reginald. b. 1933, Mildenhall, Suffolk, son of Malan Victor Rumbelow and his wife Florrie E.M. White. After national service, he joined FIDS in 1956, as a radioman, and left Southampton in Oct. 1956, on the *Shackleton*, bound for Montevideo and Port Stanley. He wintered-over at Base J in 1957. In 1961, in Huntingdonshire, he married Eileen Pauley, and they lived in Ely.

Rumbler Rock. 64°47' S, 64°13' W. A rock awash, SW of Halfway island, and 5.5 km W of Bonaparte Point, off the SW coast of Anvers Island, in the Palmer Archipelago. Surveyed by an RN Hydrographic Survey unit on the *Protector* in 1956-57. Named by UK-APC on July 7, 1959, for the rumble of the heavy seas breaking over this rock caused by the heavy prevailing SW swell. The noise can be heard for a long way, and warns vessels of the danger this rock poses. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. In the 1974 British gazetteer, it appears misspelled as Rambler Rock.

Punta Rumbo *see* **Route Point**

Rumbolds, William Charles. b. 1891, Stoke Ferry, Norfolk, son of Thomas William Rumbolds and his wife Maud Rose Weedon (known as Rose), the landlord and landlady of the *Crown*. In the 1890s the family moved to Little Walsingham, where they took over the *Black Lion*. He moved to the Falklands Islands, and was the Falkland Islands Dependencies customs officer who visited Órcadas Station in the *Orwell* in 1922-23. In 1923 he became Falklands Islands customs officer on South Georgia, and worked every year until 1930 on ships going to the South Shetlands. He married Kate Mary, and was still in South Georgia government service in 1941.

Rumdoodle Air Strip. Mawson Station's air strip. It is dominated by Rumdoodle Peak, which took its name from the air strip. The name came about in 1960, from the book *The Ascent of Rumdoodle*, by W.E. Bowman. This novel was favorite reading at Mawson, and the Rumdoodle of the title was a mountain.

Rumdoodle Automatic Weather Station. 67°43' S, 62°48' E. An Australian AWS, at Rumdoodle Peak, in the North Masson Range of Mac. Robertson Land, at an elevation of 430 m, opened on Feb. 1, 2000. It stopped operating on Dec. 26, 2001.

Rumdoodle Lake. 67°46' S, 62°49' E. An almost circular, permanently frozen lake, about 5 hectares in area, with ice 4 m thick over 80 m of water, adjacent to Rumdoodle Peak, in the North Masson Range, in the Framnes Mountains of Mac. Robertson Land. Named by ANCA on July 26, 1983.

Rumdoodle Peak. 67°46' S, 62°50' E. A prominent peak, 1.5 km SW of Painted Peak, in the NW part of the North Masson Range, in the Framnes Mountains of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Named by ANCA on June 9, 1964, in association with Rumdoodle Air Strip. US-ACAN accepted the name in 1965.

Mount Rummage. 80°29' S, 156°12' E. A conical, bare rock mountain rising to 1510 m at the W side of Ramseier Glacier, it is the most westerly mountain along the N wall of Byrd Glacier. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Chief Quartermaster Laurence A. Rummage, USN, who took part in Christchurch transport and schedule operations for OpDF 65 (i.e., 1964-65). ANCA accepted the name on Aug. 27, 1975.

Rumpa *see* **Rumpa Island**

Rumpa Island. 69°08' S, 39°26' E. In the E part of Lützow-Holm Bay, 8 km NW of Langhovde-kita Point, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Rumpa (i.e., "the rump"). US-ACAN accepted the name Rumpa Island in 1968.

Rumsey, Graham Cyril. b. Feb. 12, 1933, Portsmouth, Hants, son of electrical sub-station builder Cyril Rumsey and his wife Doris Dix. At the age of 2 he moved to Burton-on-Trent, and in 1937 to Manchester. He went to Hume Grammar School, in Oldham, leaving in 1949 to go to the Met Office (there were only 11 universities in England at that time, and competition was fierce). He worked with Tony Vernum (q.v.), and the two of them answered an ad for FIDS, going to London for the interview. Both were accepted, but Rumsey was due to go into the RAF for his two years national service (which he did, as a met man, in England and Germany), and Vernum went south alone (as it were). In

Sept. 1953 Rumsey took the *John Biscoe* out of Southampton, bound for Montevideo and the Falklands, being kitted up by FIDS secretary Frank Elliot at Port Stanley, and then on to Antarctica. He wintered-over as meteorologist at Base G in 1954 and 1955, and as diesel electric mechanic at Base F in 1957. In 1958 he moved to Northampton, where his mother had come from, and in 1959 married Shirley Cole. In 2003 he was notified that the *Polar Star* was going to go to Antarctica in 2005, to inspect FIDS bases, and would he want to come along. He did.

Rumsey, Victor. Oiler and fireman on the *Eagle*, in 1944-45, during the 2nd phase of Operation Tabarin.

Rumyana Glacier. 78°16' S, 85°50' W. A glacier, 11 km long and 4 km wide, flowing northeastward from the E slopes of Mount Giovinetto and the N slopes of Evans Peak to join Ellen Glacier N of Mount Jumper, on the E side of the north-central part of the Sentinel Range, in the Ellsworth Mountains, NW of Patton Glacier. Mapped by USGS in 1988. Named by the Bulgarians on Sept. 14, 2010, for Rumyana Voyvoda, who (we are told) was a 19th-century woman rebel leader in Bulgaria.

Run. A polite term used in the 19th century, meaning "desert from a ship."

Runaway Hills. 73°19' S, 163°33' E. A cluster of hills forming the NW extremity of the Arrowhead Range, in the Southern Cross Mountains of Victoria Land. So named by the Southern Party of NZGSAE 1966-67, because both of their motor toboggans went out of control going down here. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

Runaway Island. 68°12' S, 67°07' W. The main, rocky island in the group of islands and rocks which the Chileans call Islotes Orrego Vicuña, and which the Argentines call Islotes Fuga, it trends N-S for about 350 m, 1.1 km W of the W tip of Neny Island, and 0.3 km NW of Surf Rock, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Roughly charted in 1936 by BGLE 1934-37, but apparently not named by them. ChilAE 1946-47 named it Isla Escritor Orrego Vicuña, for the writer and historian Eugenio Orrego Vicuña (1900-1959), from the University of Chile, who was on this expedition. The name was shortened in 1951 to Islote Orrego Vicuña. In 1947 Fids from Base E surveyed it, and named it Runaway Islet, because the surveyor's dogs uprooted their pickets and returned to the station, leaving him to walk back. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. It appears as such on a 1956 British chart. However, on July 7, 1959, UK-APC redefined it as Runaway Island, and it appears as such on a British chart of 1960. US-ACAN followed suit with this naming in 1963. The group appears on a 1969 Chilean chart as Islotes Orrego Vicuña, and the Argentines also pluralize it, as Islotes Fuga (i.e., "runaway islets"). The group appears on a 1973 British chart as Runaway Islands.

Runaway Islands *see* **Runaway Island**

Runaway Islet *see* **Runaway Island**

Roca Runciman *see* **Runciman Rock**

Runciman Rock. 65°15' S, 64°17' W. A rock marked by breakers, it rises to about 3 m above sea level, about 160 m E of Black Island, at the SE approach to Black Island Channel, in the Argentine Islands, off the Graham Coast, on the W coast of Graham Land. Roughly charted in 1935 by BGLE 1934-37, and named by Rymill for Philip Wood Runciman (1875-1953), shipping magnate, nephew of the 1st Viscount Runciman, chairman of the Anchor Line, and chairman of the board of directors of Whites Southampton Yachtbuilding and Engineering Co., Ltd., where the *Penola* was refitted before sailing to Antarctica in 1934. It appears on a British chart of 1947. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955. It appears on an Argentine chart of 1958 as Roca Runciman, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was re-charted by an RN Hydrographic Survey unit on the *Protector*, in 1964-65.

Runcorn Glacier. 72°06' S, 62°34' W. A glacier to the W of the Hess Mountains, flowing SE to join Beaumont Glacier, near the head of Hilton Inlet, on the Black Coast, on the E coast of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from BASE E in 1972-73. Named by US-ACAN in 1978, for British geophysicist Stanley Keith Runcorn (1922-1995), professor of physics at the University of Newcastle from 1963. He was a pioneer in paleomagnetism. UK-APC accepted the name on May 21, 1979, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Isla Runcumilla *see* **Weertman Island**

Rund Bay. 67°02' S, 57°15' E. A small bay indenting the S shore of Edward VIII Bay, immediately E of Kvarsnes Foreland. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Rundvika (i.e., "round bay"). US-ACAN accepted the name Rund Bay in 1947, while ANCA translated this as Round Bay on Aug. 20, 1957.

Rund Island. 67°24' S, 59°01' E. Near the head of Stefansson Bay, in Kemp Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who called it Rundholmen (i.e., "the round islet"). ANCA named it Rund Island on July 31, 1972.

Rundholmen *see* **Rund Island**

Rundingen *see* **Cape Rundingen**

Cape Rundingen. 68°02' S, 78°50' E. An ice cape, about 5 km wide, about 66 km NE along the coast from Walkabout Rocks (which are at the NE end of the Vestfold Hills). Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Rundingen. ANCA accepted the name Cape Rundingen on March 12, 1992.

Rundle Peaks. 80°44' S, 157°12' E. A cluster of mainly ice-covered peaks at the S side of Byrd Glacier, just E of Sefton Glacier. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Arthur S. "Art" Rundle, who studied the Ross Ice Shelf in 1961-62 and 1962-63. He, Allan Gill, and Mike Bowman, wintered-over at Byrd Aurora Substation in 1963. He was chief scientist with the first wintering-over group at Palmer Station in 1965. ANCA accepted the name on Aug. 27, 1975.

Rundneset *see* **Green Point**

Rundöy *see* **Trevillian Island**

Rundtuva. 71°58' S, 27°18' E. A height in the northwesternmost part of Gropeheia, in Balchen Mountain, in the Sør Rondane Mountains. Named by the Norwegians ("the round height").

Rundvåg *see* **Rundvåg Bay**

Rundvåg Bay. 69°50' S, 39°04' E. A rounded embayment indenting the SE shore of Lützow-Holm Bay, just W of the Rundvågs Hills, between those hills and the glacier tongue made up by Vågsbreen, in the W part of the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Rundvåg (i.e., "round bay"). In those days, the ice situation was different, and the bay was in front of Vågsbreen between the Rundvågs Hills and Rundvågs Head. US-ACAN accepted the name Rundvåg Bay in 1968.

Rundvågs Head. 69°53' S, 39°00' E. A bare rock headland, rising to 160 m above sea level, at the SW margin of Rundvåg Bay, on the E side of Havsbotn, on the SE coast of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Rundvågshetta (i.e., "the round bay cape"), in association with Rundvåg Bay. US-ACAN accepted the name Rundvågs Head in 1966.

Rundvågs Hills. 69°50' S, 39°09' E. Bare rock hills, just E of Rundvåg Bay, on the SE shore of Lützow-Holm Bay, in the W part of the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named this feature Rundvågskollane (i.e., "the round bay hills"), in association with Rundvåg Bay. US-ACAN accepted the name Rundvågs Hills in 1966.

Rundvågshetta *see* **Rundvågs Head**

Rundvågskollane *see* **Rundvågs Hills**

Rundvika *see* **Rund Bay**

Roca Runnelstone *see* **Runnelstone Rock**

Runnelstone Rock. 65°47' S, 65°20' W. A low drying rock, difficult to sight, at the SW end of Grandidier Channel, 5 km NW of Larrouy Island, W of Cat Island, and 26 km WSW of Cape García, off the Graham Coast, on the W coast of Graham Land. Discovered and charted in 1935-36, by BGLE 1934-37, and named by Rymill, for The Runnelstone, off Land's End, in England. It appears on Rymill's 1938 map of that expedition, and also on a 1948 British chart. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a

Chilean chart of 1947 as Roca Runnelstone, and that was the name accepted by the 1974 Chilean gazetteer.

Runyon Rock. 76°56' S, 116°33' W. A prominent rock along the N side of Boyd Ridge, in the Crary Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975, for William E. Runyon, USN, construction electrician at Pole Station in 1969 and 1974.

Ruotolo Peak. 86°04' S, 148°06' W. Rising to 2490 m, it surmounts the N side of Griffith Glacier, close W of the California Plateau and the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. Cdr. Anthony P. Ruotolo, VX-6 aircraft pilot during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67).

Rupite Glacier. 63°00' S, 62°30' W. A glacier on Smith Island, in the South Shetlands, flowing SE for 2.9 km from the SE slopes of Imeon Ridge, E of the summit of Mount Foster, and SE of Evlogi Peak, into the Bransfield Strait. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for Rupite, the settlement and nearby protected area in southwestern Bulgaria.

Ruppert Coast. 75°45' S, 141°00' W. That portion of the coast of Marie Byrd Land behind the Nickerson Ice Shelf, between Brennan Point and Cape Burks. Named by Byrd as the Jacob Ruppert Coast, for New York brewer Col. Jacob Ruppert (1867-1939) of New York, owner of the New York Yankees baseball team, and a supporter of ByrdAE 1933-35, which made the first aerial reconnaissance along this coast. US-ACAN accepted the name in 1947. USGS completely mapped the coast from ground surveys, and USN air photos taken between 1959 and 1965. US-ACAN accepted the shortened name in 1966. *See also* **The *Jacob Ruppert***.

Ruru Crests. 77°14' S, 166°38' E. Two parallel rock ridges, rising to about 1400 m, 3.3 km NW of the summit of Mount Bird, on Ross Island. It is one of several landmarks near Mount Bird that were given the native name of a NZ mountain bird. Named by NZ-APC on June 19, 2000 (ratified on Feb. 20, 2001). US-ACAN accepted the name in 2000.

[1]**Gora Rusakova** *see* **Imingfjellet**

[2]**Gora Rusakova** *see* **Schneider Ridge**

Rusalka Glacier. 65°58' S, 64°57' W. A glacier, 8 km long and 4.6 km wide, on Velingrad Peninsula, NE of Hoek Peninsula, it flows northwestward from the W slopes of Mount Paulcke into Harrison Passage, on the Graham Coast, on the W coast of Graham Land. Mapped by the British in 1971. Named by the Bulgarians on Sept. 14, 2010, for the Bulgarian Black Sea resort of Rusalka.

Mount Rusanov. 71°32' S, 19°38' E. An isolated mountain, N of the Russkiye Mountains, about 56 km NE of Zhelannaya Mountain, in Queen Maud Land. Mapped by Norwegian cartographers from 1958-59 air photos taken during the long NorAE 1956-60. Also mapped by SovAE 1959, and named by them as Gora Rusanova, for geologist and Arctic polar explorer Vladimir Aleksandrovich Rusanov (b. 1875), who disappeared in the Arctic in 1912 (*see also* **Kutchin, Aleksandr**). US-ACAN accepted the name Mount Rusanov in 1971.

Gora Rusanova *see* **Mount Rusanov**

Ruse Peak. 62°39' S, 59°57' W. Rising to over 800 m in the W extremity of Delchev Ridge, next E of Devin Saddle, 1.4 km SW of Delchev Peak, and 2.7 km ENE of Plovdiv Peak, it surmounts Magura Glacier to the SW and Iskar Glacier to the NW and N, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, for the city of Ruse, in Bulgaria.

Rusegropa. 72°00' S, 27°24' E. A depression E of the mountain the Norwegians call De Gerlacheberget, in the S part of Gropeheia, in the westernmost part of Balchen Mountain, in the E portion of the Sør Rondane Mountains. Named by the Norwegians. The word "grop" means a depression ("gropa" means "the depression"). The rest of the name signifies "the place where they race the aircraft engines."

Ruser, Hans. b. June 2, 1862, Burg, Fehmarn Island, Holstein. A captain with the Hamburg-Amerika Line, he was 1st officer on the *Valdivia* during the German Oceanographical Expedition to Antarctica in 1898-99. In the summer of 1900 he did a test run to the Arctic, and then went back to Antarctica as captain of the *Gauss*, during GermAE 1901-03.

Ruseski Buttress. 85°29' S, 124°23' W. A projecting buttress rock or spur, which forms the S portal to Perkins Canyon, on the N side of the Wisconsin Range, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken in 1959-60. Named by US-ACAN in 1962, for Lt. Peter P. Ruseski (b. Aug. 1929, Conn.), a lieutenant in the U.S. Navy, who took over from Brian Dalton on Dec. 8, 1957 as medical officer and military leader of Byrd Station for the winter of 1958.

Glaciar Rush *see* **Rush Glacier**

Rush Glacier. 64°23' S, 62°37' W. A glacier, 6 km long, in the SW part of Brabant Island, it flows W from the Solvay Mountains into Dallmann Bay, between Fleming Point and Humann Point, in the Palmer Archipelago. Shown on an Argentine chart of 1953, but not named. Mapped by FIDS cartographers in 1959 from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Benjamin Rush (1745-1813), one of the signatories of the Declaration of Independence in 1776. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. The Argentines call it Glaciar Rush.

Nunatak Rusina. 83°22' S, 48°30' W. A nunatak, SE of Ritala Spur and due N of Monte Sanavirón, on the E side of the Lexington Table, in the Forrestal Range, in the Pensacola Mountains. Named by the Russians.

Rusket. 71°34' S, 15°12' E. A small nunatak in the SW part of Vorposten Peak, in the easternmost part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the speck of dust").

[1]**Cabo Ruso** *see* **Cabo Arauco**

[2]**Cabo Ruso**. 69°44' S, 73°30' W. A cape to the NE of the Marion Nunataks, on the N coast of Charcot Island. Named by ChilAE 1946-47 (name means "Russian cape").

Rusokastro Rock. 62°24' S, 60°05' W. A rock, at the N entrance to McFarlane Strait, 1.6 km NE of Pyramid Island, 5.7 km NE of Williams Point (which is on Livingston Island), and 5.7 km NW of Duff Point (which is on Greenwich Island), in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement and medieval fortress of Rusokastro, in southeastern Bulgaria.

Russ Point *see* **Point Lola**

Russel *see also* **Russell**

Russel, Elias *see* **USEE 1838-42**

Russel, Morris *see* **USEE 1838-42**

Rüsseleishöcker *see* **Rüsselryggane**

Russell *see also* **Russel**

Cape Russell. 74°54' S, 163°54' E. A rock cape in Terra Nova Bay, along the coast of Victoria Land, it forms the S extremity of the Northern Foothills. Named by US-ACAN in 1968, for Lt. Cdr. R.E. Russell, USN, officer-in-charge of the helicopter unit on the *Glacier* during OpDF IV (i.e., 1958-59).

Mount Russell. 86°17' S, 149°08' W. Rising to 2280 m, on the E flank of Scott Glacier, just S of the mouth of Howe Glacier, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35, and named by Byrd as Mount Richard Russell, for Richard Spofford Russell (1880-1966), Boston manufacturer of woollen goods, one of the expedition's supporters, and his son, Richard S. Russell, Jr. (q.v.), one of the shore party on the expedition. US-ACAN accepted the name in 1947, but accepted the shortened name Mount Russell in 1966.

Russell, Joan. A major figure in women's rights in South Australia, in 1975 she was publicity officer with the Women's Electoral Lobby. She became equal opportunities officer in the South Australian Department of Personal and Industrial Relations, and in 1990 became the first woman to be station leader at Mawson Station. In 1994 she was wintering-over station leader at Macquarie Island.

Russell, Oliver. Captain of the *Constitución*, which got blown off course to 65°S, in 1815. *See* **Brown, Guillermo**, for further details.

Russell, Richard Spofford "Dick," Jr. b. April 2, 1908, North Andover, Mass., son of Richard Spofford Russell (*see* **Mount Russell**) and his wife Mary Gertrude Sutton. A Boston socialite banker product of Groton and Harvard, he went south on the *Bear of Oakland* for ByrdAE 1933-35, and was one of the shore party of that expedition. On March 20, 1937, in NYC, he married Katharine Allen, Ethan Allen's daughter, and they lived in Boston. He died on Oct. 11, 1984, in Dearborn Heights, Mich.

Russell, Solomon. b. Connecticut. Doctor on the *Huron*, 1820-21.

Russell, Victor Ian "Vic." b. Nov. 10, 1918, Scotland. His father, Arthur W. Russell, writer to the Signet, was one of the founders of the National Trust for Scotland. In 1940, after Harrow and Cambridge, Vic was commissioned into the Royal Engineers, and was a captain in 1944 when he was selected for Operation Tabarin, and went to Port Stanley, where he joined the *Eagle*, which took him south as surveyor to Hope Bay (Base D) for the 1945 winter. When Taylor and the others were relieved at the beginning of 1946, Russell stayed, with 7 new men, as FIDS leader for the 1946 winter. On April 10, 1950, in Beirut, he married Helen Dorothea Baird, then worked for oil companies in the Middle East until his retirement. He moved to Inverness-shire, and was president of the Antarctic Club in 1992. He died on Dec. 30, 2000, in Inverness.

Russell Bay. 73°27' S, 123°54' W. A rather open bay in the SW part of the Amundsen Sea, extending along the N sides of Siple Island, the Getz Ice Shelf, and Carney Island, from Pranke Island to Cape Gates. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Adm. James Sargent Russell (1903-1996), USN, vice chief of naval operations during the period after IGY (which was 1957-58).

Russell Bluff. 82°21' S, 161°06' E. An ice-free bluff at the E side of the mouth of Errant Glacier, at the junction of that glacier with the Nimrod Glacier. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for John Russell, USARP traverse specialist at McMurdo in 1959.

Glaciar Russell del Este *see* **Russell East Glacier**

Glaciar Russell del Oeste *see* **Russell West Glacier**

Russell East Glacier. 63°44' S, 58°20' W. A glacier, about 10 km long and 5 km wide, at the N end of the Detroit Plateau, it flows eastward from Mount Canicula into Prince Gustav Channel, on the S side of Trinity Peninsula. This glacier, together with Russell West Glacier (which flows westward into Bone Bay, on the N side of Trinity Peninsula), form a through glacier across the N part of the Antarctic Peninsula. First partially surveyed in 1946 by FIDS. Re-surveyed by Fids from Base D in 1948-49, and named by them as East Russell Glacier, for Vic Russell. UK-APC accepted the name on Sept. 20, 1955, and US-ACAN followed suit in 1956. It appears as such on a 1961 British chart. However, on Sept. 23, 1960, UK-APC renamed it Russell East Glacier, and it appears as such on a British chart of 1962. US-ACAN accepted this new name in 1963. It appears on a Chilean chart of 1962 as Glaciar Russel del Este (sic), and that name was accepted by the Chilean gazetteer of 1974. For more, *see* **Russell West Glacier**.

Russell Glacier *see* **Russell East Glacier**, **Russell West Glacier**

Russell Islands *see* **Balleny Islands**

Russell Nunatak. 67°47' S, 63°19' E. A small group of irregular, rounded, somewhat jagged, and solitary rocks protruding through the plateau ice, 16 km E of the Masson Range, and between 11 and 14 km SE of Mount Henderson, about 27 km SE of Mawson Station, in Mac. Robertson Land. Discovered on Dec. 4, 1954, by an ANARE party led by Bob Dovers. Named by ANCA on Nov. 28, 1955, for John R. Russell, engineer at Mawson Station in 1954. He had also been at Macquarie Island in 1949, and at Heard Island in 1952. US-ACAN accepted the name in 1961.

Mount Russell Owen *see* **Owen Peak**

Russell Peak *see* **Brown Peak**

Russell West Glacier. 63°40' S, 58°50' W. A glacier, about 17.5 km long and 6 km wide, immediately N of the Detroit Plateau, it flows westward from Mount Canicula into Bone Bay, on the N side of Trinity Peninsula. First partially surveyed in 1946 by FIDS, re-surveyed by Fids from Base D in 1948-49, and named by them as West Russell Glacier, for Vic Russell. That name was accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. It appears as such on a 1961 British chart. However, on Sept. 23, 1960, UK-APC had changed the name to Russell West Glacier, and that new name appears on a 1962 British chart. It was accepted by US-ACAN in 1963. For its relationship with Russell East Glacier, see that entry. There is a 1957 British reference to Russell Glacier, signifying this glacier and Russell East Glacier together, and that is repeated (as Glaciar Russell) on a 1962 Chilean chart. It appears on a 1958 Argentine chart as Glaciar Russell Oeste, and that name was accepted by the 1970 Argentine gazetteer. However, a new name — Glaciar Arcondo — was proposed by Gustavo Adolfo Giró Tapper (*see* **Giró Nunatak**) for Major Arcondo (*see* **Arcondo Nunatak**), and the Argentines accepted this in 1978. As for the Chileans, we are told (and this hardly seems believable) that they rejected Glaciar Russel del Weste (sic) in favor of Glaciar Russel Weste (sic). The Chilean descriptor also says that it was named for Russel Owen, newspaper correspondent with ByrdAE 1928-30. These Chileans can be very individualistic.

Rüsselryggane. 70°39' S, 8°07' W. Ice rumples at the front of the Ekström Ice Shelf, in the inner part of Atka Iceport, on the Princess Martha Coast. Named by the Germans as Rüsseleishöcker. The Norwegians call it Rüsselryggane (i.e., "the Rüssel ridges").

Russeskaget. 70°44' S, 11°46' E. The easternmost part of the Schirmacher Hills. Named by the Norwegians. Novolazarevskaya Station is here.

Russet Hills. 72°27' S, 163°47' E. A line of low hills trending E-W for 5.5 km, and forming the S ridge of Gallipoli Heights, in the Freyberg Mountains. Named by P.J. Oliver, NZARP geologist who studied this feature in 1981-82, for the red-colored ignimbrite rock capped on the higher gray dacite-breccia of these hills. NZ-APC accepted the name in 1982, and US-ACAN followed suit.

Russet Pikes. 67°49' S, 67°08' W. A group of peaks, rising to about 1765 m, just E of the mouth of Gaul Cove, on Horseshoe Island, in Square Bay, Marguerite Bay, on the Fallières Coast, on the W coast of Graham Land. Surveyed by FIDS in 1955-57. Named descriptively by UK-APC on July 7, 1959, for the russet color of the slopes of these peaks, which are too steep to retain a snow cover for very long. US-ACAN accepted the name in 1960. The Argentines call them Picos Rojizos, which means the same thing.

Russia. Most of the time between 1917 and 1990 the term "Russia" was misused by foreigners. Russia was the largest component of the USSR, but the two terms were used interchangeably (and that was the inaccurate part). Nevertheless, as with the terms England and Great Britain, and USA and America, most people knew what was meant most of the time. For the Soviet Antarctic expeditions (which began during IGY in the mid 1950s), see under S. There was a Soviet whaling voyage to the South Sandwich Islands (close but not actually south of 60°S), in 1949-50, the *Slava 15*, commanded by Aleksey Nikolayevich Solyanik. In 1990 the Soviet Union fell apart, but it may well get back together again in the near future. In the meantime, the Soviet Antarctic expeditions gave way to the Russian Antarctic Expeditions (q.v.), hardly missing a beat.

Russian Antarctic Expeditions. In 1991, just after the start of SovAE 1991-93, the Soviet Union officially disintegrated, and the Soviet Antarctic expeditions were automatically replaced with the Russian Antarctic expeditions (RussAE). These are the Russian expeditions to Antarctica: **RussAE 1992-94**. Led by Boris Andreevich Krutskitch. The ships were the *Akademik Federov* and the *Akademik Shuelykin*. **RussAE 1993-95**. Led by Arkadiya Mikhaylovich Soshnikov. The ships were the *Akademik Federov*, the *Mikhail Somov*, the *Akademik Shuleykin*, and the *Akademik Aleksandr Karpinskiy*. One man died on the *Somov*. Vostok Station was closed temporarily. **RussAE 1994-96**. Led by Leonid Sergeyevich Alekseev. The ships were the *Akademik Federov*, the *Mikhail Somov*, and the *Akademik Aleksandr Karpinskiy*. Two men died at Molodezhnaya Station, and one at Novolazarevskaya Station. **RussAE 1995-97**. Led by Vladimir Mikhaylovich Piguzov. The ships were the *Akademik Federov* and the *Akademik Aleksandr Karpinskiy*. The *Federov* did not reach Mirnyy Station until June 1996. **RussAE 1996-98**. The ship was the *Akademik Federov*. Victor Zehnder, a Swiss exchange scientist, died in a blizzard at Mirnyy, on July 8, 1997. **RussAE 1997-99**. The ships were the *Akademik Federov* and the *Akademik Aleksandr Karpinskiy*. Five men were fatally injured in a helo crash near Novolazarevskaya Station, on June 1, 1998. One man died at Progress II Station. **RussAE 1998-2000**. The ships were the *Akademik Federov* and the *Akademik Aleksandr Karpinskiy*. **RussAE 1999-2001**. The ships were the *Akademik Federov*, the *Akademik Aleksandr Karpinskiy*, and

the *Professor Multanovskiy*, the last-named relieving Bellingshausen Station. Ther has been a Russian expedition every year since.

Russian Gap. 69°11' S, 71°19' W. An ice-filled pass, rising to about 1900 m, and running in a N-S direction between the Havre Mountains and the Rouen Mountains, in the NW part of Alexander Island. In 1821, from a great distance, von Bellingshausen's expedition of 1819-21 sketched the N coastline of Alexander Island, and on this map there are 3 features, with 2 spaces in between them. It appears that way on their 1831 map. It was photographed aerially on Dec. 23, 1947, by RARE 1947-48, thought to be a glacier, and named by Finn Ronne as Susan Nichols Glacier, after Susan Nichols, daughter of Bob Nichols. It appears as such on the 1948 American Geographical Society's map of 1948. It was mapped by Searle of the FIDS from the RARE air photos, and from ground surveys conducted by FIDS in 1959-60, plotted by him in 69°11' S, 71°13' W, and determined by him to be one of the two spaces on von Bellngshausen's map, rather than the glacier that RARE had thought it was, hence the name given by UK-APC on March 2, 1961. US-ACAN accepted the name later that year. It appears on a British chart of 1961. The coordinates were corrected from U.S. Landsat images taken in Feb. 1975, and, with the corrected coordinates, it appears in the 1977 British gazetteer.

Russkaya Station. 74°46' S, 136°52' W. Russian station, 124 m above sea level, on Cape Burks, on the Hobbs Coast of Marie Byrd Land. **1972-73**: The station was opened (named for the Russian people), occupied that summer, but then closed, due to difficult access. **March 9, 1980**: It was occupied again, and became a winter station as well. **1980 winter**: Vladimir Mikhaylovich Stepanov (leader). **1981 winter**: Lev Valer'yanovich Bulatov (leader). **1982 winter**: Valeriy Filippovich Izgarshev (leader). **1983 winter**: Vladimir Vasil'yevich Kiyselev (leader). **1984 winter**: Vladimir Borisovich Usov (leader). **1985 winter**: Vladimir Vasil'yevich Agafonov (leader). **1986 winter**: Yevgeniy Mikhaylovich Uranov (leader). **1987 winter**: Vladimir Baricovich Ucob (leader). **1988 winter**: Oleg Nikolayevich Struin (leader). **1989 winter**: Leonid Sergeyevich Alekseyev (leader). **1990 winter**: Nikolay Petrovich Dvorak (leader). **March 12, 1991**: Due to lack of funds, and due to the difficulty of access, the station was mothballed (i.e., closed), with a view to re-opening it one day.

Gory Russkie *see* **Russkiye Mountains**

Mys Russkij *see* **Cabo Arauco**

Gory Russkiye *see* **Russkiye Mountains**

Russkiye Mountains. 72°10' S, 18°00' E. A widely scattered group of mountains and nunataks between the Hoel Mountains and the Sør Rondane Mountains, in Queen Maud Land. Mapped by Norwegian cartographers from 1958-59 air photos taken during the long NorAE 1956-60. Observed by SovAE 1958-59, immediately after the landing at Lazarev Station in March 1959, and named by them as Gory Russkiye, or Gory Russkie (i.e., "Russian mountains"). US-ACAN accepted the name Russkiye Mountains in 1971.

Bukhta Russkogo Soldata. 68°45' S, 78°00' E. A bay, NE of Shcherbinina Island, in the Rauer Islands, in the SE part of Prydz Bay. Named by the Russians, to honor their soldiers.

Rust, John Henry. b. 1889, Hobart. Went to sea in 1904 as a pantryman's assistant, plying Antipodean waters on merchant vessels between Hobart and Sydney. On Nov. 28, 1911, at Hobart, he was taken on the *Aurora*, as cook, at £8 per month, for the first part of AAE 1911-14. Left the expedition at Sydney, on April 10, 1912.

Rust Bluff. 82°56' S, 157°42' E. A small bluff or promontory on the E side of the Miller Range, overlooking Marsh Glacier 8 km S of Corner Nunatak. Named by US-ACAN in 1972, for Izak Cornelis Rust, professor of geology at the University of Port Elizabeth, in South Africa. He was an international exchange scientist with the Ohio State University Geological Expedition of 1969-70, and, with John Gunner, collected geological samples at this bluff. With Johan Fourie he wrote *An Introduction to Nature Guiding*.

Rustad, Ditlef Pentz Smith. b. Dec. 20, 1901, Madagascar, son of Norwegian missionary Anders Johannessen Rustad and his wife Mette Margrethe Smith (daughter of Ditlef Pentz Smith). He was a zoology student when he went as biologist on the *Norvegia*, 1927-28, and on that voyage at Bouvet Island, in the South Atlantic, he discovered a "new" fish, the icefish (q.v.). He shared a cabin with Håkon Mosby, and while Mosby played the violin, Rustad played the mandolin he had bought in Cape Town on the way south. In 1931 he married Marie Smith, in Valborg. He died in 1993.

Cape Rusty *see* **Cape Howard, Rusty Bluff**

Rusty Bluff. 60°43' S, 45°36' W. Prominent cliffs rising to a rounded summit of 220 m, on the SW side of Paal Harbor, on Signy Island, in the South Orkneys. Surveyed in 1947 by FIDS, who named it for the color of the bluff, and for a rusty iron post found on the summit. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Rusty Ridge. 69°24' S, 76°20' E. A dark, rust-colored ridge, in the SW part of Broknes Peninsula, in the Larsemann Hills. So named by the 1986-87 ANARE field party because of the staining that gives the ridge its color. ANCA accepted the name on Nov. 24, 1987.

Ruteknausen *see* **Gobamme Rock**

Mount Rutford. 78°36' S, 85°18' W. A sharp peak, rising to 4477 m, just N of Begueño Pinnacle, and about 3 km N of Mount Craddock, it marks the highest point on the Craddock Massif, in the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN on Nov. 1, 2006, for Bob Rutford (*see* **Rutford Ice Stream**).

Rutford Glacier *see* **Rutford Ice Stream**

Rutford Ice Stream. 79°00' S, 81°00' W. A major ice stream, about 280 km long (sic), and over 24 km wide, which flows SE and E between Fletcher Ice Rise and the Sentinel Range (of the Ellsworth Mountains) into the SW part of the Ronne Ice Shelf. Photographed aerially by USN in 1959, and partially mapped by USGS from these photos. Mapped in more detail by the University of Minnesota Ellsworth Mountains Party of 1963-64, who named it Rutford Glacier, for Robert Hoxie "Bob" Rutford (b. Jan. 26, 1933, Duluth), leader of the party. He had been on the same university's expedition of the season before (the one led by Cam Craddock), and even before that, in 1959-60, had been a USGS geologist in the Ross Sea area. He was later at the University of Texas at Dallas, was USARP head of the Ross Ice Shelf Project, from 1975-77 was director of the NSF's Division of Polar Programs, and later was president of SCAR. US-ACAN accepted the name in 1966, and it appears in the 1969 U.S. gazetteer. It was completely mapped from U.S. Landsat images taken in Feb. 1974, and renamed Rutford Ice Stream. It appears as such on the 1976 USGS satellite image map, and in the 1977 U.S. gazetteer. UK-APC accepted the name on Feb. 7, 1978, and it appears as such in the 1980 British gazetteer.

Rutgers Glacier. 78°14' S, 161°55' E. A steep glacier flowing SW from Johns Hopkins Ridge and Mount Rücker, S of Rampart Ridge, to enter Skelton Glacier, in the Royal Society Range. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1963, for Rutgers University, in New Jersey, which has sent researchers to Antarctica. This is in continuation of the academic theme given to place names in this area.

Cabo Ruth *see* **Cape Worsley**

Kap Ruth *see* **Fothergill Point, Ruth Ridge**

Mount Ruth. 86°18' S, 151°45' W. A ridge-shaped mountain, rising to 2170 m, 5 km W of Mount Gardiner, at the SE side of the lower reaches of Bartlett Glacier, in the Queen Maud Mountains. Discovered by Quin Blackburn's party in Dec. 1934, during ByrdAE 1933-35, and named by Byrd as Mount Ruth Black, for Dick Black's wife, Ruth Carolyn Schlaberg (b. 1906), who died on Jan. 21, 1934, while Dick was on the expedition. US-ACAN accepted the name in 1947, but in 1966 accepted the shortened name. NZ-APC followed suit with the shortened name.

Mount Ruth Black *see* **Mount Ruth**

Ruth Bugge Islands *see* **Bugge Islands**

Mount Ruth Gade. 85°37' S, 164°40' W. A pyramidal massif, rising to 3515 m (the New Zealanders say 3645 m), 5 km N of Mount Wedel-Jarlsberg, in the Quarles Range, between Cooper Glacier and Isaiah Bowman Glacier, next to Mount Alice Gade, in the Queen Maud Mountains, at the head of the Ross Ice Shelf. Amundsen named it The Beehive when he discovered it on Nov. 17, 1911, and he later renamed it for one of the daughters of F. Herman Gade (*see also* **Mount Alice Gade**). US-ACAN accepted the name Mount Ruth Gade in 1947, and NZ-APC followed suit.

Ruth Ridge. 64°39' S, 60°48' W. A black, rocky ridge, 2.5 km long in a N-S direction, rising to 1410 m, and terminating at its S end in a small peak, it forms the S end of Detroit Plateau,

marking a change in the direction of the plateau escarpment along the Nordenskjöld Coast, where it turns W to form the N wall of Drygalski Glacier, on the NE coast of Graham Land. In Feb. 1902, during SwedAE 1901-04, the E end of this feature was mapped as a cape, being named by Nordenskjöld as Kap Ruth, for his sister Ruth Anna Gunilla Nordenskjöld (b. 1880). It appears as such on his 1904 map. On a British chart of 1921 it appears as Cape Ruth. On a British chart of 1938, it appears as Cape Ruth, plotted in 64°44' S, 60°24' W. In Nov. 1947, Fids from Base D re-surveyed it, and found it to be the E end of a ridge which centers 9 km inland from the coast. They canceled the name Cape Ruth, and named the ridge Ruth Ridge, a name accepted by UK-APC on Jan. 22, 1951, and by US-ACAN in 1952. It appears as such in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956-57, and further surveyed from the ground by Fids from Base D in 1960-61. On Feb. 12, 1964, UK-APC, based on the more recent surveys and air photos, determined that what Nordenskjöld saw and named had indeed been a cape (well, a point, actually), the E end of Ruth Ridge, and named it Fothergill Point. US-ACAN accepted that name later in 1964 (*see* **Fothergill Point**).

Mount Ruth Siple *see* **Mount Siple**

Rutherford Ridge. 77°13' S, 161°42' E. A transverse ridge, 9 km long, extending SW-NE across the Saint Johns Range, between Wheeler Valley and Lobeck Glacier, in Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Ernest Rutherford (1871-1937), NZ Nobel Prize-winning (1908) chemist, famous as the man who split the atom. NZ-APC accepted the name on April 7, 2008.

Ruthven Bluff. 82°34' S, 42°54' W. A large rock bluff, rising to about 735 m, 1.5 km S of Sosa Bluff, it forms the highest part of the Schneider Hills portion of the Argentina Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1965-66, during their Pensacola Mountains Project, photographed aerially by USN in 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Richard W. Ruthven, USGS surveyor who visited this bluff during the 1965-66 survey. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer. The Russians call it Utës Teplinskogo.

Rutkowski Glacier. 85°11' S, 166°21' E. Flows from the N part of the Dominion Range ice-cap eastward of Mount Mills, then NE into the Meyer Desert, where it terminates without reaching the Beardmore Glacier. Named by US-ACAN in 1966, for Richard L. Rutkowski, meteorological technician at Pole Station in 1962.

Rutland Nunatak. 81°36' S, 156°08' E. A cone-shaped nunatak, rising to 2070 m, and with associated rock outcrops, in the W part of the Chapman Snowfield, in the Churchill Mountains, between 17 and 20 km ENE of the Wilhoite Nunataks. Named by US-ACAN on Jan. 29, 2003, for cartographer Jane Rutland Brown, Antarctic map compilation specialist in the USGS Branch of Special Maps, 1951-71. NZ-APC accepted the name on Feb. 27, 2003.

Ruttle, Jack Fletcher. Also (and, indeed, more commonly) known as Fletcher Ruttle. b. Feb. 15, 1912, Seattle, Wash., son of machinist George Ruttle and his wife Marian F. Fletcher. At 16 he went to sea, as a deckhand. On Oct. 14, 1931, he signed on to the *Bellingham*, as an able seaman, and on March 22, 1932, at Seattle, on to the *Seattle*, plying between Seattle and Vancouver. On Aug. 15, 1933, still in the same waters, he signed on to the *Tacoma*, at Seattle. He was 3rd mate on the *North Star* during USAS 1939-41. After the expedition, and during World War II, he was 1st mate on the U.S. Army transport ship *Crowley*, and also on the *John W. Weeks*. In 1944 he became skipper of the *George W. Julian*, and would stay with that ship for a few years, before becoming a 1st mate again, on the *Lucidor*, in 1946, and working (sometimes as 2nd mate) on that vessel for several years. He was married. He died on Oct. 16, 1985, in Port Townsend, Wash.

Ruvungane *see* **Ruvungane Peaks**

Ruvungane Peaks. 72°54' S, 3°28' W. A group of small peaks just N of Ryvingen Peak, in the S part of Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Ruvungane. US-ACAN accepted the name Ruvungane Peaks in 1966.

Isla Ruy *see* **Guido Island**

Mount Ryan. 78°22' S, 86°02' W. Rising to 3200 m between Mount Shear and Mount Gardner, on the central ridge of the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN in 2006, for Barbara J. Ryan, associate director for geography with USGS; she was the Department of the Interior representative on the U.S. Board of Geographic Names, 2001-05.

Pico Ryan *see* **Ryan Peak**

Ryan, Francis Bernard "Frank." b. July 3, 1934, Ilford, Essex, son of Irish parents, physiotherapist Patrick Joseph Ryan and his wife Anne Clohessey. He was evacuated to the Midlands during World War II, and from 1952 to 1955 did his national service, mostly with the SAS in Malaya, where he did, among other things, a medical course. On his return to the UK he saw an ad for FIDS, and was interviewed in London by Frank Elliott, and taken on as a meteorological assistant. In early 1956 he left Southampton on the *Shackleton*'s maiden voyage, bound for Port Stanley, and wintered-over at Base Y in 1956. He and Jim Exley were traversing a 60 degree ice slope when Frank started to slide, his crampons jammed, and he broke his leg (spiral oblique break). He continued to slide, head first, down the slope, pick-axe still in hand, grazing his arm quite badly as he did so. Somehow he managed to right himself and shove the axe into the slope, which, if he hadn't, would have meant sliding the full 400 feet onto rocks below. Exley climbed down, chipped away a ledge for him to rest on, brought some brandy, put a sleeping bag below him and on top of him, and set off to get a sledge from the base, 5 miles away. Ryan lay for 10 hours in the ice until Exley and others (including Don Atkinson) got back. Frank was meant to stay in Antarctica for 2 years, but the *Protector* took him off in early 1957. They had a portable X-ray machine and a surgeon, but the first effort to set his leg failed. Then the doctor from the whaler *Southern Harvester* came aboard, and they tried again, successfully this time. He finally left Port Stanley on the *John Biscoe*, arriving back in Southampton on June 4, 1957. He hoped to go back to Antarctica, but FIDS wouldn't have him. Likewise a whaling inspector job didn't materialize (an ex-naval guy got it), so he went to work for a church furnishing company in London, for a year, then to George Newnes, the publishers, for 4 years, and then in 1963 left for South Africa, to try his luck there. He was there for 28 years, the last 19 working in an oceanarium at Port Elizabeth. In 1989 he had spinal surgery, and in 1991 returned to the UK, to Essex. He has Parkinson's disease now, but he also still has the crutches made for him by the chippy on the *Protector*.

Ryan, George E. RNR temporary lieutenant (as from Dec. 9, 1915), he was based out of Montevideo, serving on the *Macedonia*, an armed merchant cruiser stationed between the Falklands and Montevideo to transmit radio messages during Shackleton's BITE 1914-17. In 1916, at the the suggestion of the British diplomatic representative in Montevideo, he was seconded to the *Instituto de Pesca I,* as navigator and official British representative, as that vessel made her unsuccessful attempt to rescue Shackleton's men stranded on Elephant Island.

Ryan, Jerry. Fireman and greaser on the *Discovery II*, 1929-32.

Ryan, Michael *see* **USEE 1838-42**

Ryan, T.M. In 1914, at the outbreak of war, he was sent to the high power wireless station at Pennant Hills, NSW, which was then placed under Navy control. From there he was transferred to the flagship of the 2nd Australian contingent, as a warrant officer and radio telegraphist. After serving for 18 months in Thessalonika and the Mediterranean, with Naval Transport, he returned to Australia early in 1916, and was attached to the staff of the Orange Post Office. He was chosen by the naval authorities in Melbourne to fill the post of wireless engineer operator on the *Aurora*, 1917, during BITE 1914-17. He left the expedition at Sydney, on Feb. 19, 1917. In or around June 1919 he was transferred from Orange, NSW, to Brisbane. This is a fairly detailed account of just 5 years in the life of a man this researcher has been otherwise unable to identify.

Ryan Peak. 67°52' S, 67°12' W. A peak, rising to about 810 m, 1.5 km E of Penitent Peak, in the S part of Horseshoe Island, in Square Bay, on the W coast of Graham Land. Surveyed by FIDS in 1955-57, and named by UK-APC (at the suggestion of Searle of the FIDS) on July 7, 1959, for Frank Ryan of the FIDS, who broke a leg while climbing this mountain. US-ACAN accepted the name in 1960. The Argentines call it Pico Ryan.

Ryan Point. 72°18' S, 95°51' W. A bold coastal point in ice-filled Morgan Inlet, at the E end of Thurston Island, it forms the E extremity of the wedge-shaped promontory between Lofgren Peninsula and Tierney Peninsula. Named by US-ACAN in 2003, for A.E. Ryan, chief photographer's mate in the Eastern Group of OpHJ 1946-47.

Mys Rybachij *see* **Cape Rybachiy**

Cape Rybachiy. 68°54' S, 77°56' E. A low, hummocky cape, reaching an elevation of about 80 m, about 2.25 km due E of the easternmost point of Torckler Island, in the Rauer Islands, in the SE part of Prydz Bay. The E edge abuts the ice cap. Charted by SovAE 1956, and named by them as Mys Rybachij. ANCA accepted the name Cape Rybachiy on March 7, 1991.

Rybak Glacier. 62°10' S, 58°18' W. Between Puchalski Peak and Rembiszewski Nunataks, it is an outlet of the Kraków Icefield, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980 (name means "fisherman").

Zaliv Rybij Hvost *see* **Rybij Khvost Gulf**

Rybij Khvost Gulf. 66°14' S, 100°46' E. A gulf with an area about 5.5 by 2.5 km, its entrance lies 11 km SW from the W edge of Fuller Island, and is surrounded by the main bulk of the Bunger Hills. A steep, pointed cape marks the NE entrance to this gulf, while Krylatyy Peninsula forms the N shore of the W side. The gulf has a small group of islands at its SW end, which is about 5 km E of Edgeworth David Station. Mapped by SovAE 1956, and named by them as Zaliv Rybij Hvost. ANCA accepted the name Rybij Khvost Gulf on March 12, 1992.

Bukhta Rybnaja *see* **Rybnaya Inlet**

Rybnaya Inlet. 68°26' S, 78°19' E. An inlet in the NE part of Langnes Peninsula, in the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Photographed aerially again during OpHJ 1946-47, SovAE 1956, and by ANARE in 1957 and 1958. The Russians named it, as Bukhta Rybnaja ("i.e., "fish bay"). ANCA accepted the name Rybnaya Inlet on Nov. 27, 1973.

Rydberg Peninsula. 73°10' S, 79°45' W. A broad, ice-covered peninsula, about 50 km long, between Fladerer Bay (on the Bryan Coast of Marie Byrd Land) and Carroll Inlet (on the English Coast of Ellsworth Land). Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1968, for Capt. Sven Rydberg, USN, commander of the *Eltanin* from Feb. 1962 to June 1963. It appears on the 1968 USGS sketch map of Bryan Coast-Ellsworth Land. UK-APC accepted the name on Dec. 20, 1974, and it appears in the 1976 British gazetteer.

Rydelek Icefalls. 74°27' S, 113°54' W. An area of icefalls between Smythe Shoulder and Coyer Point, on the E side of Martin Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1967, and also from U.S. Landsat images taken in 1972-73. Originally plotted in 74°28' S, 113°50' W. Named by US-ACAN in 1977 for USARP geophysicist Paul Anthony Rydelek of UCLA (b. 1949. He was later at Memphis), who was with the South Pole winter party of 1974.

Bahía Ryder *see* **Ryder Bay**

Mount Ryder. 66°57' S, 52°15' E. Between the Harvey Nunataks and Mount Keyser, about 38 km E of Pythagoras Peak, in the E part of the Tula Mountains of Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1957. Named by ANCA for Brian Paul "Red" Ryder (b. April 15, 1935, South Grafton, NSW), an RAN radio operator from 1953 to 1959, and radio officer who wintered-over at Mawson Station in 1961, and at Wilkes Station in 1963 and 1965. In 1967 he was at Macquarie Island, in 1971 at Davis Station, and in 1973 back at Macquarie Island. US-ACAN accepted the name in 1965.

Ryder, Lisle Charles Dudley. b. Aug. 1902, Eastbourne, older brother of Red Ryder (*see* below). He was commissioned into the Royal Norfolk Regiment in 1922, and was a captain at the time he served as 2nd mate on the *Penola* during BGLE 1934-37. Major Ryder died on May 27, 1940, leading his battalion at Le Paradis, near Bethune, during World War II.

Ryder, Robert Edward Dudley "Red." b. Feb. 16, 1908, India, youngest son of Col. Charles Henry Dudley Ryder, surveyor general of India. He entered the RN in 1927, and was a lieutenant when he served in Hong Kong 1933-34, and arrived back from China in the 54-foot ketch *Taimoshan*, after having sailed it, with 4 other naval officers, across the Pacific, down the west coast of America, through Panama, and to Jamaica, and thence across the Atlantic to England. As a lieutenant commander he went straight into command of the *Penola* for BGLE 1934-37. He volunteered for Q ships in 1939, at the outbreak of World War II, but his first ship, the *Willamette Valley*, was torpedoed in June 1940. He survived, after 4 days in the water, but 15 men drowned, including Lofty Martin (q.v.). His marriage to Miss Woods was called off in 1940, but on April 26, 1941 he married Hilaré Green-Wilkinson. As a Naval commander he won the Victoria Cross for his part in the raid on St. Nazaire, on March 28, 1942. Going into politics (Conservative) Capt. Red Ryder (promoted 1948; retired 1950) won the newly-created parliamentary seat of Merton and Morden in 1950 (served 5 years). Appointed a director of John Lewis & Co., in 1957 (resigned 1959), he died on June 29, 1986, on a sailing trip to France.

Ryder Bay. 67°34' S, 68°20' W. A bay, 10 km wide at its mouth, indenting the SE coast of Adelaide Island for 6 km, W of Rothera Point, 8 km E of Mount Gaudry, and 21 km NNE of Cape Alexandra. The Léonie Islands lie across the mouth (i.e., the southern part) of this bay. Discovered and surveyed in Jan. 1909 by FrAE 1908-10. Re-surveyed in Feb. 1936 by BGLE 1934-37, and again in Oct. 1948 by Fids from Base E. Named by UK-APC on March 31, 1955, for Lisle Ryder, and it appears on a British chart of 1961. US-ACAN accepted the name in 1956. It appears as Bahía Ryder on a Chilean chart of 1962, and in the Chilean gazetteer of 1974. The Argentines also call it Bahía Ryder, but it does appear on a 1978 chart of theirs, as Bahía Mandisoví, after the town in Argentina founded by General Manuel Belgrano.

Ryder Buttress. 67°33' S, 68°12' W. A prominent buttress, rising to about 294 m above sea level, SW of Reptile Ridge, and overlooking Ryder Bay (in association with which it was named by UK-APC, on Feb. 21, 2005), on the SE coast of Adelaide Island.

Ryder Glacier. 71°07' S, 67°20' W. 22 km long and 22 km wide, and gently sloping, it flows W from the Dyer Plateau of Palmer Land into George VI Sound, between Gurney Point on the S and Christie Peaks on the N. First surveyed in Oct. 1936 by BGLE 1934-37. Re-surveyed by Fids from Base E, in 1948-49, and plotted by them in 71°07' S, 67°15' W. Named by UK-APC on March 31, 1955, for Cdr. Red Ryder. US-ACAN accepted the name later in 1955. It appears on a 1961 Russian chart as Lednik Raydera. The feature has since been replotted.

Rye, John *see* **USEE 1838-42**

Rocas Ryge *see* **Ryge Rocks**

Ryge Rocks. 63°40' S, 60°00' W. A group of rocks lying E of Oluf Rocks, in Gilbert Strait, SW of Tower Island, in the Palmer Archipelago. Originally charted roughly by Capt. Johannessen in 1920, and he appears to have included these rocks as part of what he called Trinity Land (q.v. for more details). Photographed aerially by FIDASE 1956-57, mapped from these photos by FIDS, and named by UK-APC on Sept. 23, 1960, for Jan C. Ryge, Danish captain of the *Oluf Sven* during FIDASE. US-ACAN the name later in 1960. It appears on a British chart of 1962. The Argentines call it Rocas Ryge.

Ryghnuten. 74°50°S, 11°26' W. A mountain peak on the S side of Bonnevie-Svendsenbreen, in the S part of Sivorgfjella, in the Heimefront Range of Maudeheimvidda, in Queen Maud Land. Named by the Norwegians for civil engineer, Herlov Rygh (1902-1964), Norwegian Resistance leader during World War II, editor of the anti-Nazi newspaper *London-Nytt* (i.e., London Times). He was captured in 1943.

Gora Rykachëva. 73°05' S, 68°36' E. A nunatak on the Mawson Escarpment. Named by the Russians.

Nunataki Ryleeva. 72°06' S, 2°11' E. A group of nunataks immediately NW of Veslenupen Peak, in the Gjelsvik Mountains of Queen Maud Land. Named by the Russians.

Rymarz Pass. 62°05' S, 58°29' W. A pass, at an elevation of between 160 and 170 m, between Wegger Peak and Kapitan Peak, W of Crépin Point, at Mackellar Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Capt. Wladyslaw Rymarz, skipper of the *Antoni Garnuszewski* during PolAE 1978-79.

Rymer, John Johnson. Name pronounced "rimmer" not "rimer." b. 1869, Southport, Lancs,

son of bootmaker Thomas Rymer and his wife Rebecca Johnson. His mother died when he was two, and his father when he was 7, and he and the other children went to live with their Aunt Ann Moore. He joined the Merchant Navy, as a cook, and in 1905 was 2nd cook on the *Persic*, from Liverpool to Sydney. On Nov. 11, 1913, in Melbourne, he signed on to the *Aurora* as a cook, at £5 per month, for the 3rd and last trip south during AAE 1911-14. He left the expedition on March 19, 1914, with a £5 bonus.

Bahía Rymill *see* **Rymill Bay**

Cabo Rymill *see* **[2]Cape Rymill**

[1]Cape Rymill *see* **Cape Reichelderfer**

[2]Cape Rymill. 69°30' S, 62°25' W. Also called Cabo Rymill. A steep, metamorphic rock cliff opposite the central part of Hearst Island, it projects from the ice-cap along the Wilkins Coast, on the W side of Stefansson Sound, on the E coast of Palmer Land. Photographed aerially by Wilkins on Dec. 20, 1928, and again by Wilkins on Nov. 21, 1935. W.L.G. Joerg, the U.S. cartographer, studied and compared both sets of photos, and roughly located it on his 1937 map. Charted by members of East Base, from ground surveys and air photos, during USAS 1939-41, and named by them in 1940, for John Rymill. It appears on a USAAF chart of 1942, and on a 1943 U.S. Hydrographic Office chart. It appears on an Argentine chart of 1946, and that was the name accepted by the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Cape Rymill in 1947. It was resurveyed by a joint sledging team of Fids from Base E and personnel from RARE 1947-48. UK-APC followed suit with the American naming on Jan. 28, 1953, and it appears as such in the 1955 British gazetteer, and also on the 1979 USGS sketch map of the N part of Palmer Land.

Mount Rymill. 73°03' S, 65°50' E. A fairly massive rock exposure with an undulating surface marked by an extensive formation of stone polygons, about 10 km W of Mount Stinear, in the southern Prince Charles Mountains. Photographed aerially by ANARE in 1956, 1957, and 1958, plotted from these photos by Australian cartographers, and named by ANCA for John Rymill. US-ACAN accepted the name in 1961.

Rymill, John Riddoch. b. March 13, 1905, Penola, South Australia, son of Robert Rymill, farmer (who died in 1906), and his wife Mary Edith Riddoch. He went to England in 1923, and to northern Canada on an expedition in 1929. He went with Gino Watkins to Greenland, as pilot and surveyor, on the British Arctic Air Route Expedition of 1930-31, and was back there with Watkins in 1932, when the latter drowned. He next planned and led BGLE 1934-37, discovering that the Palmer Peninsula (later called the Antarctic Peninsula) was, indeed, part of the Antarctic continent. In 1938 he married Eleanor Francis, the first ever PhD in geography at Cambridge. After naval service during World War II, he settled down in Penola and studied farming techniques. He died on Sept. 7, 1968, after a car crash (his father had also died in a car crash), in South Australia the previous May.

Rymill Bay. 68°24' S, 67°05' W. A bay, generally covered by a thick ice cap, 14 km (so say the Americans; the Chileans say 11 km; the Americans used to reckon it at 20 km) wide at its mouth, it indents for 8 km (the Chileans say 6 km), and 13 km SSE of Red Rock Ridge, being entered between that ridge and the Bertrand Ice Piedmont, in Marguerite Bay, it is bounded on the NW by the Refuge Islands, on the Fallières Coast, on the W coast of Graham Land. Probably first seen from a distance in Jan. 1909, by FrAE 1908-10. Surveyed in 1936 by BGLE, and named by them for John Rymill. It was surveyed again in Oct. 1948, by Fids from Base E. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. The Chileans used to call it Bahía John Rymill, but it appears on a 1962 Chilean chart as Bahía Rymill, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Rymill Coast. 71°00' S, 67°30' W. That portion of the W coast of the Antarctic Peninsula between Cape Jeremy and Buttress Nunataks, on the E coast of George VI Sound. Partially photographed by Ellsworth on Nov. 23, 1935, as he flew over, and it was mapped from these photos by U.S. cartographer W.L.G. Joerg, in 1936-37. In Oct.-Nov. 1936, it was further photographed aerially by BGLE 1934-36, and it appears on the expedition's maps of 1940. Surveyed from the ground in 1940, by USAS 1939-41, it appears on their expedition map published by Finn Ronne in 1945. In late 1947, it was photographed aerially again by RARE 1947-48, and surveyed again by Fids from Base E between 1948 and 1950, appearing on Fuchs' 1951 map. It was photographed aerially yet again, by USN, in 1966. Named by UK-APC on Nov. 13, 1985, for John Rymill. US-ACAN accepted the name.

Rymill's Col *see* **Safety Col**

The *Ryndam*. Holland America tourist ship, with a carrying capacity of 1200 passengers, in Antarctic waters in 2001-02.

Ryrie Rock. 67°03' S, 61°27' E. An isolated rock off the coast of Mac. Robertson Land, 17.5 km NE of Kidson Island and about 47 km NE of Byrd Head. Discovered on or about Feb. 18, 1931, by BANZARE, and named by Mawson for the Australian high commissioner in London at that time, Maj. Gen. Sir Granville de Laune Ryrie (1865-1937). US-ACAN accepted the name in 1947, and ANCA followed suit. The Norwegians call it Ryrieskjeret (which means the same thing).

Ryrieskjeret *see* **Ryrie Rock**

Gora Ryskalina. 70°44' S, 11°28' E. A hill in the mountain area the Norwegians call Krokevassfjellet, in the W part of the Schirmacher Hills, in Fimbulheimen, in Queen Maud Land. Named by the Russians. The Norwegians call it Ryskalinhøgda.

Ryskalinhøgda *see* **Gora Ryskalina**

Punta Ryswyck *see* **Ryswyck Point**

Ryswyck Island *see* **Fournier Island**

Ryswyck Point. 64°34' S, 62°49' W. Marks the E extremity of Parker Peninsula, and therefore also of Anvers Island, in the Palmer Archipelago. Discovered and roughly charted in Feb. 1898, by BelgAE 1897-99, and named by de Gerlache as Cap Van Ryswick. Dr. Frederick Cook's 1900 English language version of the expedition has it as Cape Van Ryswyck. SwedAE 1901-04 charted it as Kap Ryswyck and Kap Van Ryswyck, and Kaap V. Rijswijk, while FrAE 1903-05 charted it as Cap. V. Ryswyck. The Argentines were calling it Cabo Ryswyck as early as 1908. It was re-charted by the Discovery Investigations in 1927, and on their 1929 chart it appears as Van Ryswycke Point. This spelling was copied by several other countries' charts in the 1930s and 1940s, for example on an Argentine chart of 1949 as Punta Van Ryswycke. A Chilean chart of 1947 calls it Punta Ryswycke. The name Van Ryswycke Point appears on a 1952 British chart, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. Photographed aerially by FIDASE in 1956-57. On July 7, 1959, UK-APC abbreviated it to Ryswyck Point, and US-ACAN followed suit in 1960. It appears on a 1953 Argentine chart as Punta Van Ryswyck, and that was the name accepted by the Argentine gazetteer of 1970, and also by the 1974 Chilean gazetteer of 1974. When the Argentines realized that the Chileans had used the same name, they changed their own to Punta Ryswyck. There have been several minor spelling variations (not to mention errors) in the spelling of this name. M. Van Ryswyck, a trim little man with a gray Van Dyke beard, was the popular burgomaster of Antwerp (Anvers), and a patron of the expedition.

Cape Ryugu. 67°58' S, 44°02' E. An exposed rocky cape, 8.2 square km in area, projecting from the Prince Olav Coast of Queen Maud Land, 11 km NE of Rakuda Rock. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on May 1, 1963, as Ryugu-misaki (i.e., "cape of the dragon's palace under the sea"). US-ACAN accepted the name Cape Ryugu in 1964. The Norwegians call it Aegehallneset (i.e., "the hall of Aege," Aege being the god of the oceans in Norse mythology), and the Russians call it Holmy Polkanava. It was surveyed again by JARE in 1977-78.

Ryugu-kita-misaki. 67°57' S, 44°01' E. One of 2 promontories on Cape Ryugu, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on March 22, 1979 (name means "north point of Ryugu"). Further mapped by the Japanese from JARE ground surveys, 1977-78.

Ryugu-misaki *see* **Cape Ryugu**

Ryugu-naka-no-iwa. 67°58' S, 44°02' E. A rock in the central part of Cape Ryugu, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from ground surveys and air photos by JARE between 1957 and 1962, and also from 1977-78 JARE surveys. Named by the Japanese on March 22, 1979 (name means "mid rock of Ryugu").

Ryugu-nisi-misaki. 67°58' S, 43°56' E. One

of 2 promontories on Cape Ryugu, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957–62, and named by them on March 22, 1979 (name means "west point of Ryugu"). Further mapped by the Japanese from JARE ground surveys, 1977–78.

Ryvingen *see* **Ryvingen Peak**

Ryvingen Base. 72°55' S, 3°29' W. Inland from Sanae Station, at Ryvingen Peak, on the S side of the Borg Massif, in Queen Maud Land, and about 190 km SW of Troll Station. It was the base of the Trans-Globe Expedition of 1980–81. It consisted of 2 huts made of two-layer cardboard which could fit easily into the airplane.

Ryvingen Mountain *see* **Ryvingen Peak**

Ryvingen Peak. 72°55' S, 3°29' W. Also called Ryvingen Mountain. A rocky mountain peak, 5 km WSW of Bråpiggen Peak, between the Penck Trough and Frostlendet Valley, in the southernmost part of Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and aerial photographs taken by NBSAE 1949–52, and named by them as Ryvingen. US-ACAN accepted the name Ryvingen Peak in 1966.

Rzepecki Islands. 62°06' S, 58°50' W. Four small islands between Sygit Point and Bell Island, off the Joannes Paulus II Coast, on the NW side of King George Island, in the South Shetlands. Named by the Poles in 1980, for Maciej Rzepecki, engineer, member of PolAE 1980–81, who wintered-over at Arctowski Station in 1981, and who was summer deputy leader in 1980–81.

Mount S. Hassel *see* **Mount Hassel**

The *S.P. Lee* *see* **The *Samuel P. Lee***

Isla Saavedra *see* **Saavedra Rock**

Islote Saavedra *see* **Saavedra Rock**

Punta Saavedra *see* **Punta Guido**

Saavedra Island *see* **Saavedra Rock**

Saavedra Rock. 63°19' S, 57°56' W. Also seen as Saavedra Island. The largest of several rocks at the SW corner of González Anchorage, W of Kopaitic Island, off Cape Legoupil, in the Duroch Islands, off Trinity Peninsula. Charted by ChilAE 1947–48, and named by them as Isla Mayor Saavedra, for Chilean Army Infantry Major (later General) Eduardo Saavedra Rojas (b. Oct. 1, 1909, Antofagasta. d. July 29, 1971, Talca, Chile), technical officer of geodesy and topography with the Instituto Geográfico Militar, who accompanied Presidente González Videla to the Antarctic in 1948. It appears as such on their 1948 chart. During ChilAE 1950–51 he was chief Army delegate on the *Lautaro*. That latter expedition renamed this feature as Islote Saavedra, and it appears as such on their 1951 chart, and on a 1959 chart. It also appeared occasionally as Isla Saavedra. US-ACAN translated it as Saavedra Rock in 1964. UK-APC did not accept the name Saavedra Rock until Dec. 15, 1982, and it appears in the 1986 British gazetteer.

Sàbat Hill. 62°35' S, 61°08' W. An ice-free hill rising to 151 m in Dospey Heights, on Ray Promontory, 540 m SSE of Voyteh Point, and 1.3 km N of Battenberg Hill, it surmounts Richards Cove to the WNW and Barclay Bay to the E and NE, on Byers Peninsula, Livingston Island, in the South Shetlands. Mapped by the Spanish in 1993. Named by the Bulgarians on Sept. 14, 2010, for Francesc Sàbat (*see* **Enrique Hill**).

Mont du Sabbat *see under* **D**

Cape Sabine *see* **Sabine Glacier**

Mount Sabine. 71°55' S, 169°33' E. A prominent and relatively snow-free mountain, rising to 3621 m, between the heads of Murray Glacier and Burnette Glacier, N of Mount Herschel, in the Admiralty Mountains of northern Victoria Land. Discovered on Jan. 15, 1841 by Ross, who named it for astronomer and geodesist Lt. Col. Edward Sabine (1788–1883; knighted in 1869), foreign secretary of the Royal Society and a supporter of the expedition who had, in 1835, presented to the British Association for the Advancement of Science a proposal for an expedition to the South Magnetic Pole. He and Ross had both taken part in a magnetic survey of the British Isles. US-ACAN accepted the name in 1947. *See also* **Sabine Glacier**.

Sabine Glacier. 63°55' S, 59°47' W. Flows NNW into the cove between Wennersgaard Point (to the W) and Cape Kater, on the Davis Coast, on the NW coast of Graham Land. Foster, in Feb. 1829, roughly sketched and named a cape somewhere in the area SE of Cape Kater, as Cape Sabine, for Edward Sabine (*see* **Mount Sabine**), a member of the committee which planned the *Chanticleer* expedition of 1829–31. Modern explorers could not find this cape, so, following ground surveys by Fids from Base D in 1948, and aerial photographs taken by FIDASE 1956–57, UK-APC named this feature thus on Sept. 23, 1960, in order to preserve the naming in this area. US-ACAN accepted the name later in 1960. It appears on a British chart of 1962.

Sable Island *see* **Table Island**

Sable Pinnacles *see* **Noire Rock**

Caleta Saborido *see* [1]**Caleta Valenzuela**, **Eagle Cove**

Saborido, Lorenzo *see* [1]**Caleta Valenzuela**

The *Sabrina*. A 47-ton Cowes cutter, built in Southampton in 1821, she was bought by Enderby Brothers of London on June 12, 1838 for an expedition to Antarctica, on which she was commanded by Captain Freeman (*see* **Balleny Expedition**). She was lost in a gale on March 24, 1839, in 95°E, leaving Balleny alone with the *Eliza Scott* and 178 seal skins.

Sabrina Automatic Weather Station. 84°15' S, 170°00' W. An American AWS, installed on the Ross Ice Shelf on Feb. 2, 2009.

Sabrina Coast. 67°20' S, 119°00' E. Also called Sabrina Land. That portion of the coast of Wilkes Land between the Budd Coast and the Banzare Coast, or, more specifically, between Cape Waldron in 115°33' E and Cape Southard in 122°05' E. Discovered by Balleny on March 2, 1839, and named by him for the *Sabrina*. In Jan. 1840 Wilkes mapped this coast as a part of what he generally called Totten High Land. Mawson was the first to explore it, during BANZARE 1929–31, and he also confirmed Balleny's sighting of land in this area. US-ACAN accepted the name in 1947.

Sabrina Island. 66°57' S, 163°17' E. The largest of 3 small islets lying off Sturge Island, and about 3 km S of Buckle Island, in the Balleny Islands. Originally named Sabrina Islet, for the *Sabrina*, but later re-defined slightly. US-ACAN accepted the name in 1947. It was designated an SPA because of its flora and fauna.

Sabrina Islet *see* **Sabrina Island**

Sabrina Land *see* **Sabrina Coast**

Sabrina Ridge. 80°09' S, 156°20' E. A bare rock ridge between Sabrina Valley and Tamarus Valley, 8 km S of Derrick Peak, in the Britannia Range, in the Transantarctic Mountains. Named by a gelogical field party from the University of Waikato, NZ, in 1978–79, in association with Britannia. Sabrina was the name used by the Romans for the River Severn (in Britain). US-ACAN accepted the name.

Sabrina Valley. 80°09' S, 156°22' E. An ice-free valley between Pontes Ridge and Sabrina Ridge, in the Britannia Range, in the Transantarctic Mountains. The same Waikato party who named Sabrina Ridge (see above) named this feature (the ridge was named first). US-ACAN accepted the name.

Bajo Sabugo. 64°33' S, 61°59' W. A rock shoal almost in the middle of the entrance to Gouvernøren Harbor, on the E coast of Enterprise Island, 220 m south of Punta Abovedada (the extreme SE point of Pythia Island), in Wilhelmina Bay, off the W coast of Graham Land. Named by ChilAE 1960–61, for one of their capitanes de corbeta — Jorge Sabugo Silva.

Saburro Peak. 80°20' S, 155°01' E. Rising to 1930 m, S of Doll Peak, in the S part of the Ravens Mountains, in the Britannia Range, in the Transantarctic Mountains. Named by US-ACAN in 2001, for Richard M. "Rich" Saburro, commanding officer of 109 Airlift Wing, New York Air National Guard, who was the first Guard commander for OpDF.

Sac, John. Son of William Stewart (1776–1851, Scottish sealer, whaler, and cartographer, after whom Stewart Island was named) and a Nga Puhi girl, and in NZ known as Tuati, that name being the local rendering of Stewart. He became a whaler, winding up in the USA in the 1830s when he went on board the *Vincennes* as part of USEE 1838–42, becoming one of the early New Zealanders into Antarctic waters. One of his memorable feats was dancing a mean haka in Fiji, for the fascinated (and rather terrified) spectators. He was discharged at Oahu on Oct. 31, 1840. They say John Sac returned to the Bay of Islands, collected his family, and returned to Hawaii.

Sachse, Walter. b. 1868, Hamburg. German navigation officer with the Hamburg-Amerika Steamship Line, who, with his ship, the *Valdivia*, and skipper Adalbert Krech, was loaned to the German Navy Oceanographic Expedition, 1898–99. He was still working the Hamburg-Amerika Line at the outbreak of World War I.

Sack Island. 66°26' S, 110°25' E. A small rocky island, 0.7 km long, 330 m E of the S end

of Holl Island, in the Windmill Islands. First mapped from aerial photos taken by OpHJ 1946–47. Named by US-ACAN in 1963, as Sack Rock, for Norman F. Sack (b. Aug. 23, 1921, Wisc. d. Feb. 27, 1978, San Bernardino, Calif.), photographer's mate with Central Task Force, during OpHJ 1946–47. He was back in Antarctica, photographing this area in Jan. 1948, during OpW 1947–48. It has been seen erroneously on some charts as Back Rock. The term "rock," for this feature, was considered less appropriate than "island," and so the name was changed.

Sack Rock *see* **Sack Island**

The *Sacra*. British whale catcher, built in 1912, and owned by Christian Salvesen's South Georgia Company. Before Salvesens bought her, she had been the *Sirda*, the *Congre*, and the *Formosa*. On March 29, 1923, under the command of Capt. Hans Winge Sørensen, she struck rocks at the entrance to Neumayer Channel, and sank in 10 minutes. The crew took to the liefeboats, and were rescued by the *Scapa*, the sister catcher.

Sadala Point. 62°26' S, 59°22' W. A point projecting 500 m into the Bransfield Strait from the SE coast of Robert Island, 2.4 km NE of the SE extremity of Robert Point, 3 km SSW of Batuliya Point, and 4.7 km S of Kitchen Point, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for Sadala, the king of Thrace, 87–79 B.C.

Saddle Hill. 72°25' S, 163°45' E. A small, saddle-shaped table rising from the E end of the N ridge of Gallipoli Heights, in the Freyberg Mountains. The descriptive name was suggested by NZARP geologist P.J. Oliver, who studied this hill in 1981–82; when viewed from the N it has the appearance of a saddle. NZ-APC and US-ACAN both accepted the name.

[1]**Saddle Island**. 60°38' S, 44°50' W. Nearly 3 km long, it consists of twin summits almost separated by a narrow channel strewn with boulders, 9 km N of the W end of Laurie Island, and just to the E of Powell Island, in the South Orkneys. Discovered and charted in 1823 by Weddell, and named by him for its shape. It appeared on British charts throughout the 19th and early 20th centuries. SwedAE re-charted it on Feb. 4, 1903. In 1933 the Discovery Investigations surveyed it, and on their 1934 chart it appears as two islands — the Saddle Islands. US-ACAN accepted the name Saddle Island in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1930 Argentine chart as Isla Montura, and that is the name that is listed in the 1970 Argentine gazetteer. The French call it Île Montura (chart of 1947). Other countries over the years have charted it as Saddle or Montura (or spelling variations of this name, all recognizable), and then with their own word for "island."

[2]**Saddle Island** *see* **Delaite Island**

Saddle Island Bay *see* **Jessie Bay**

Saddle Islands *see* **Saddle Island**

Saddle Pass. 63°26' S, 57°01' W. An ice pass between The Pyramid and Saddlestone, leading from Kenney Glacier to Buenos Aires Glacier, at Hope Bay, in the N part of Tabarin Peninsula, on the E extremity of Trinity Peninsula, in the Antarctic Peninsula. Named descriptively by the Poles on Sept. 1, 1999.

Saddle Peak. 70°40' S, 164°40' E. Twin peaks of 960 m, with a distinct saddle between them, 5 km NW of Mount Kostka, and 27 km E of Platypus Ridge, in the W part of the Anare Mountains, in Oates Land, in northern Victoria Land. Named descriptively by ANARE personnel off the *Thala Dan*, who explored this area in 1962. US-ACAN accepted the name in 1964.

Saddleback Ridge. 62°35' S, 59°55' W. A ridge, 1.2 km long, and rising to 125 m above sea level, on the N side of Half Moon Island, in Moon Bay, Livingston Island, in the South Shetlands. BAS did geological work here in 1975–76, and UK-APC named it descriptively on Feb. 7, 1978, the "saddle" referring to a cover of permanent ice on the lower, central, part of the ridge. US-ACAN accepted the name. The Argentines call it Cerro Paglietino, for Mariano E. Paglietino, Argentine naval doctor in the early 20th century. Last plotted by the UK, in late 2008.

Saddler, Edward William. b. July 1900, Bristol, but raised in Cardiff from the time of his birth, son of Church of England scripture reader Edward Albert Saddler and his wife Julia Herriman. He joined the Merchant Navy in 1927, as a steward, and was 2nd steward on the *Discovery II*, 1929–33. During World War II he was steward with Cunard, and after the war with Furness-Withy Line.

The Saddlestone. 63°26' S, 57°02' W. A small nunatak rising to 380 m (the British say 280 m) above sea level, or 45 m above the ice sheet between Mount Carroll (the former Mount Carrel) and The Pyramid, at the head of Kenney Glacier, in the N part of Tabarin Peninsula, on the E extremity of Trinity Peninsula, in the Antarctic Peninsula. Surveyed in Sept. 1955 by Fids from Base D, who named it descriptively. A saddlestone is the stone at the apex of a gable. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963. The Argentines call it Cerro Mirador, for its commanding view.

Kupol Sadko. 70°10' S, 7°20' E. An ice dome on the coast of Queen Maud Land. Named by the Russians for the *Sadko*, the Russian icebreaker of the 1930s. This may be the same feature as Kupol Persej (q.v.).

Sadler, Willis Michael "Mike." b. Feb. 22, 1920, Kensington, London, but grew up in Gloucestershire, elder son of Maj. Albert "En" Sadler, DSO, RASC, and his wife Wilda Margaret Binnie. He left school and England in 1936, to go farming in Rhodesia, and in 1939 joined the Rhodesian forces when World War II broke out, serving in East Africa and Somaliland. He transferred to the Long Range Desert Group, in North Africa, and then to the original SAS, with which he ultimately became a captain. He was in Tunisia in 1943, and won the Military Cross in 1945. At the end of the war, while he was SAS adjutant, a letter crossed his desk asking if anyone would care to join FIDS. Sadler took the letter into his colonel, and volunteered, as a general assistant. He took a boat to Lisbon, shipped over to Montevideo, and, on Dec. 26, 1945, caught the *Trepassey* from there to Port Stanley, and then on to the FIDS bases, first to Deception Island, then to Hope Bay, Port Lockroy, and finally to Stonington Island (Base E), where he wintered-over in 1946. At the end of his tour, he was taken back to Stanley, and from there took a battle cruiser to Montevideo, and then shipped back to England. In 1947, in Penzance (where his parents had retired, to Bird in Hand Farm, Sancreed), he married Merriell Anne Hetherington, and almost immediately left on a sailing trip to the West Indies. On his return to the UK in 1948 he went to work for the U.S. Embassy, in London, for almost 2 years, in their information film program, and then to the Foreign Office, for whom he worked until he retired in 1985, to Cheltenham. In 2000 he and fellow former SAS man Johnny Cooper returned to Tunisia as advisers for the TV show "Commando."

Punta Sadler *see* **Sadler Point**

Sadler Point. 64°42' S, 62°04' W. Juts out into Wilhelmina Bay from the W coast of Graham Land, 4 km E of Garnerin Point, on the S side of Plata Passage. Charted by BelgAE 1897–99. Photographed aerially by FIDASE 1956–57, and surveyed from the ground by Fids from Base O in the same season. Named by UK-APC on Sept. 23, 1960, for James Sadler (1753–1828), an Oxford confectioner, the first English aeronaut, who ascended in a Montgolfier balloon on Oct. 4, 1784, the second man to make such an ascent in England (the first was an Italian, not quite 3 weeks earlier). It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Punta Sadler.

Sadler Stacks. 64°13' S, 56°38' W. On the left side of Silent Valley, Seymour Island, off the coast of the NE tip of the Antarctic Peninsula. Named by the Poles on Sept. 1, 1999, for Prof. Peter M. Sadler, sedimentologist from the department of earth sciences, University of California at Riverside.

Sadous, Alberto. b. Argentina. He graduated from the Naval Aacdemy in 1905. As a teniente de fragata, he was skipper of the *Uruguay* from Jan. 2, 1914 to Oct. 1914.

Saedinenie Snowfield. 62°33' S, 60°14' W. A snowfield extending 5 km inland and extending 16 km in a SW-NE direction, it drains into Hero Bay between Melta Point and Slab Point, on the N side of Livingston Island, in the South Shetlands. On the W it is bounded by Teres Ridge; on the S it is bounded by the glacial divide between the Drake Passage and the Bransfield Strait; on the SE it is bounded by Gleaner Heights, Elhovo Gap, and Leslie Hill; and on the E it is bounded by Vidin Heights. Named by the Bulgarians on Nov. 4, 2005, for the Bulgarian town of Saedinenie (name means "reunification"), in association with the 120th anniversary of the 1885 reunification of the principality of Bulgaria and the province of eastern Rumelia.

Cape Saens Peña *see* **Cape Sáenz**

Mount Saens Valiente *see* **Valiente Peak**

Saens Valiente Peak *see* **Valiente Peak**

Cabo Sáenz *see* **Cape Sáenz**

Cape Sáenz. 67°33' S, 67°39' W. Dominated by a conical peak rising to 1280 m, it forms the N side of the W entrance to Bigourdan Fjord, between that fjord and Laubeuf Fjord, and also forms the S extremity of Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Discovered by FRAE 1908-10, roughly charted by them in Jan. 1909, and named by Charcot as Cap Saens Peña [sic], for Dr. Roque Sáenz Peña Lahitte (1851-1914), president of Argentina, 1910-13. It appears as such on Charcot's expedition charts and maps, and was translated on a 1914 British chart as Cape Saens Peña. Surveyed by Fids from Base E in Oct. 1948, and plotted by them in 67°34' S, 67°32' W. It appears on a 1952 British chart as Cape Sáenz Peña, and that was the name UK-APC accepted on Sept. 20, 1955 (with corrected coordinates). In 1960 UK-APC changed their version of the name to Cape Sáenz, and it appears as such on a 1961 British chart. US-ACAN followed suit with the name Cape Sáenz in 1963. It appears on a 1946 Argentine chart as Cabo Sáenz Peña, and that is the name that appears in the 1970 Argentine gazetteer. It appears on a Chilean chart of 1963 as Cabo Sáenz, and that is the name that appears inthe 1974 Chilean gazetteer.

Nunatak Sáenz. 66°00' S, 60°58' W. On Jason Peninsula, on the E coast of Graham Land. Named by the Argentines.

Sáenz, Dalmiro. b. Argentina. Teniente de navío in the Argentine Navy, he was skipper of the *Uruguay* between Nov. 24, 1915 and Jan. 1, 1917.

Cabo Sáenz Peña *see* **Cape Sáenz**

Saetet *see* **Saetet Cirque**

Saetet Cirque. 72°01' S, 2°42' E. A large cirque stabbing into the N side of Jutulsessen Mountain, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. It was surveyed from the ground and photographed anew from the air by NBSAE 1949-52, and photographed aerially again in 1958-59 during NorAE 1956-60. It was mapped from the efforts of these last two expeditions by Norwegian cartographers, who called it Saetet (i.e., "the seat"). US-ACAN accepted the name Saetet Cirque in 1966.

Saether Crags. 71°52' S, 8°54' E. High rock crags just S of Steinskaret Gap, in the Kurze Mountains of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Saetherrindane, for Håkon Saether (b. 1906), who wintered-over as medical officer at Norway Station in 1957, during NorAE 1956-60. US-ACAN accepted the translated name in 1967. *See also* **Håkon Col**.

Saetherrindane *see* **Saether Crags**

Safety Camp. Scott's camp between the Discovery Hut and One Ton Depot, during BAE 1910-13.

Safety Col. 68°20' S, 66°57' W. A snow-covered col, at an elevation of about 185 m above sea level, between Red Rock Ridge and the Blackwall Mountains, on the Fallières Coast, on the W coast of Graham Land. Surveyed in 1936 by BGLE 1934-37, and traversed by them on Jan. 5, 1937. Surveyed again in 1948-49 by Fids from Base E. Dick Butson, in 1949, referred to it as Rymill's Col (named for John Rymill, of BGLE), and in 1955 there is another FIDS reference to it, but this time as Bingham Col (for E.W. Bingham). It must have been FIDS who named it Safety Col, but when is not clear. It was so named because it affords a safe sledging route during the summer on the pass that runs NNE-SSW between Neny Fjord and Rymill Bay, when there is open water off the W end of Red Rock Ridge. Safety Col was the name accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956.

Safety Island. 67°31' S, 63°54' E. A small coastal island about 5.5 km E of Cape Daly, on the coast of Mac. Robertson Land. Photographed by LCE 1936-37, and mapped 10 years later from these photos by Norwegian cartographers. First visited by Bob Dovers and his 1954 ANARE party, this small island was so named by ANCA because it was the nearest safe campsite to Scullin Monolith. US-ACAN accepted the name in 1961.

Safety Spur. 85°19' S, 168°00' E. A long, low spur of rock projecting SE from a broad isolated nunatak-type prominence between the SW side of Mill Glacier and Vandament Glacier, it is joined to the Dominion Range only by a moraine 6 m high, and therefore, really, is part of the Dominion Range. So named in Nov. 1961, by the Southern Party of NZGSAE 1961-62, because this spur was their landfall after safely crossing the Mill Glacier for the first time, and from here they were able to radio back to base the good news. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Islas Saffery *see* **Saffery Islands**

Saffery, John Hugh. b. Feb. 11, 1907, London, son of chartered accountant Harold Edgar Saffery and his Scottish wife Kathleen Caroline Anna Stirling. A squadron leader with the RAF Volunteer Reserve during World War II, he won the DSO in 1944 for his heroics with 541 Squadron. After the war he became chief pilot, and later flying manager, of Hunting Aerosurveys, and was deputy leader and chief of flying operations of FIDASE, 1955-57. In 1963, in London, he married Margaret, widow of Major Max Bollam, and daughter of A.G. Adams. He died on Jan. 17, 1985, in London.

Saffery Islands. 66°04' S, 65°49' W. A group of islands at the NE end of Crystal Sound, and extending W from Black Head, off the Graham Coast, on the W coast of Graham Land. The group includes (from W to E) Fringe Rocks (which form the W limit of the group), Turtle Island, Marker Rock, and Turnabout Island. Charted by BGLE 1934-37. A 1943 U.S. Hydrographic Office chart of 1943 refers to these islands as the Turtle Islands, named in association with Turtle Island. Similarly, a 1947 Chilean chart has them as Islas Turtle. An Argentine chart of 1953 shows them as Islas Tortuga, but on their 1957 charts the group appears as both Islotes Tortuga and Islotes Tortugas. In 1956-57 this group was photographed aerially by FIDASE, and also surveyed from the ground by Fids from Base J. Named by UK-APC on July 7, 1959, for John Saffery. They appear on a British chart of 1961. US-ACAN accepted the name in 1971. ChilAE 1961-62 charted them as Islotes Tortuga, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer (after the Chileans had rejected Islas Tortuga). However, today the Argentines call them Islas Saffery.

Mount Saga. 77°33' S, 162°26' E. Due W of Loftus Glacier, in Victoria Land. Named by US-ACAN in 1998. NZ-APC accepted the name.

The *Saga Pearl* *see* **The *Explorer II***

The *Saga Rose*. A 24,474-ton, 624-foot tourist ship, built in France in 1964, as the ocean liner and cruise ship *Sagafjord*, for the Norwegian-American Line. In 1983 she was bought by Cunard, and in 1996 by Transocean Tours, who changed her name to *Gripsholm*. In 1997 she was sold to Saga Shipping, and became the *Saga Rose*, carrying mostly older (very rich) British passengers. She was in Antarctic waters in 2003-04, and again in 2005-06. She was basically the sister ship of the *Saga Ruby*. In Oct. 2009 she was taken out of service, and became a floating hotel in London.

The *Saga Ruby*. A 24,492-ton, 627-foot (190-meter) tourist ship, built by Swan Hunter, in the north of England, in 1972, as the ocean liner and cruise ship *Vistafjord*, for the Norwegian-American Line. In 1983 she was sold to Cunard, who changed her name in 1999 to *Caronia*. In Nov. 2004 she was sold to Saga Holidays, and, after a costly refitting in Malta, became the British tourist ship *Saga Ruby*, in March 2005, taking passengers to Antarctica. Her clientele were British, retired, rich. Her cruising speed was 11.1 knots, although she was capable of 14. She was basically the twin of the *Saga Rose*.

Sagbladet *see* **Sagbladet Ridge**

Sagbladet Ridge. 71°47' S, 5°51' E. A rock ridge at the E side of the mouth of Austreskorve Glacier, in the N-central part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sagbladet (i.e., "the saw blade"). US-ACAN accepted the name Sagbladet Ridge in 1967.

Sage Nunataks. 84°33' S, 173°00' W. Two ice-free mountains, 1.5 km apart, at the edge of the Ross Ice Shelf, just N of Mount Justman and the Gabbro Hills. Named by US-ACAN in 1966, for Richard Howard Sage, USN, builder, who wintered-over at Byrd Station in 1959, and at Pole Station in 1964.

Sagehen Nunataks. 86°30' S, 153°15' W. A roughly triangular group of hills, rising to about

150 m above base level, on the E side of Holdsworth Glacier, 8 km N of McNally Peak, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Visited by a USARP-Arizona State University geological field party in 1978-79, and named by them for the sagehen, mascot of Pomona College, Claremont, Calif., alma mater of Scott G. Borg, one of the members of the field party. US-ACAN accepted the name. Originally plotted in 86°30' S, 153°30' W, it has since been replotted.

The *Sagitta*. A 1516-ton Polish Fisheries trawler, built in 1977, she was in Antarctic waters in 1977-78. Skipper Kazimierz Kopanski.

Le Sagittaire *see under* **L**

Sagittate Hill. 77°31' S, 162°58' E. Rising to about 850 m, and with much exposed rock, at the W side of Flint Ridge, in the Asgard Range of Victoria Land. Named by US-ACAN in 1997, for the shape of the hill, which resembles an arrowhead. NZ-APC accepted the name.

Monte Sagues. 63°22' S, 56°08' W. A mountain, about 13 km SW of Cape Alexander, on the SW coast of Joinville Island, near the N shore of Active Sound, in the Weddell Sea. Named by the Chileans for Sub Lt. Héctor Sagues Hermann, of the Chilean Army, skiing instructor with the 2nd Andean Detachment, who was on the *Rancagua* during ChilAE 1947-48. The Argentines call it Monte Café.

Roca Sail *see* **Sail Rock**

Roche Sail *see* **Sail Rock**

Sail Rock. 63°03' S, 60°57' W. An isolated rock rising to 30 m (the British say 28, and the Chileans say 55 m) above sea level, 11 km WSW of the SW part of Deception Island, in the South Shetlands. Roughly charted by Davis on Oct. 20, 1821, and perhaps named by him. From a distance this rock looks like a ship under sail, but on closer inspection it resembles a house with two sloping roofs. It appears on Powell's chart of 1822, on the 1829 chart made by the *Chanticleer* Expedition (they re-surveyed it), and on an 1839 British chart. However, on Weddell's charts of the mid-1820s, it appears as Steeple Rock. BelgAE 1897-99 charted it as Roche Sail, and over the years it has appeared on charts from several different countries, subject to a variety of misspellings, but most of them instantly recognizable. It was re-charted by the Discovery Investigations in 1927. It appears on a 1942 USAAF chart as Sail Rocks, and on a 1951 French chart as Rocher Voile (which means the same thing). It appears on a 1947 Chilean chart as Roca Vela (again, a straight translation), and on a 1948 Argentine chart as Roca Sail, but the name in both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer is Roca Vela. US-ACAN accepted the name Sail Rock in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears on a British chart of 1962. Last plotted by the UK, in late 2008.

Sail Rocks *see* **Sail Rock**

The *Sailor's Return*. American schooner commanded by Smyley on 2 expeditions to the South Shetlands. The first was 1834-35, and they also visited the Falkland Islands. The second left the USA on July 3, 1836, in company with the *Geneva*. At 4°N, 25 °W the two vessels parted company, to meet up again, as pre-arranged, in the Falklands. The third expedition left Newport, R.I., on Aug. 22, 1837, and 20 days out of port the ship was wrecked off the African coast.

Bay of Sails. 77°21' S, 163°34' E. A shallow McMurdo Sound indentation into Wilson Piedmont Glacier, between Spike Cape and Gneiss Point, in southern Victoria Land. So named by the Western Geological Party during BAE 1910-13 because they erected sails on their man-hauled sledge, to increase their speed across the mouth of the bay. US-ACAN accepted the name in 1952, and it appears in the 1958 NZ provisional gazetteer.

The *St Austell Bay*. No period after "St." RN frigate, K-634, built in 1944 by Harland & Wolff of Belfast, as the *Loch Lyddoch*. Re-named after the Cornish bay (*see also* **The *Veryan Bay***). She supplied the 1950 Macquarie Island wintering-over party, and her skipper that year was Commander Norman John Scarlett-Streatfeild. (Cdr. Scarlett-Streatfeild had been born on Aug. 4, 1910, in Farnham, Surrey, son of Air Marshal F.R. Scarlett, and brother of James Rowland Scarlett. In 1938, he married Pamela Oakley. J.R. had changed his name in 1939, and gone on to become a very young air vice marshal. N.J. commanded the *Glorious* and the *Illustrious* during the early stages of World War II, but was captured in 1940, and languished as a POW until the end of the war. J.R. was killed in a plane crash in Norway, in 1945, immediately after the German surrender, and left his entire estate to his brother, provided N.J. also add Streatfeild to his name, which he did. He retired in 1958, and died in Nov. 1993, in Newbury, Berks). In March 1954 the Argentine ship *Les Éclaireurs* secretly left Bahía Blanca with Argentine Minister of Marine, Aníbal O. Olivieri, on board. His mission was to inspect the Argentine scientific stations in Antarctica. The British got wind of this and sent the *St Austell Bay*, under the command of Cdr. Basil Ward, to intercept the intruder, which she did at Deception Island, in the South Shetlands. Ward's signal to the Argentines read, "Welcome to the waters of her Britannic Majesty." Ward paid a visit to Olivieri, and insisted on being his host in British Antarctic waters, while Olivieri insisted on being Ward's host in Argentine Antarctic waters. After a lot of toasts, the two ships sailed to Hope Bay, where the Argentines opened up a new base. The *St Austell Bay* was scrapped on July 4, 1959.

St. Boris Peak. 62°41' S, 60°12' W. Rising to 1665 m, 650 m SSW of Mount Friesland, and 3.75 km SSE of the summit of Pliska Ridge, it surmounts Huntress Glacier to the NW and Macy Glacier to the SE, in the Tangra Mountains, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians in 1995-96, as part of their Tangra survey, and named by them on March 15, 2002, for Czar St. Boris I of Bulgaria, 852-889.

St. Cyril Peak. 62°42' S, 60°13' W. Rising to 1505 m on Friesland Ridge, 1.4 km S of Simeon Peak, 4 km SSW of Mount Friesland, and 4.1 km NW of Samuel Point, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians in 1995-96, as part of their Tangra survey, and named by them on March 15, 2002, for St. Cyril (827-869), who, together with St. Methodius (*see* **St. Methodius Peak**, below), created the Glagolitic alphabet, and translated the holy books into the Bulgarian language.

St. Evtimiy Crag. 62°39' S, 59°56' W. A rocky peak, rising to 350 m in Delchev Ridge, 780 m SSE of Asen Peak, 1.6 km E of Kuber Peak, and 1.4 km S of Delchev Peak, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on April 11, 2005, for the patriarch St. Evtimiy (1327-1404), Bulgarian scholar and spiritual leader.

Saint-Exupéry Guyot. 62°28' S, 153°03' W. A tablemount, near the Pacific-Antarctic Ridge. In Dec. 1998, Frenchman Dr. Louis Géli proposed the name Le Petit Prince Seamount, in honor of Antoine de Saint-Exupéry (1900-1944), the legendary French aviator and writer who created that famous little character. In Jan. 1999 Dr. Géli agreed to honor the author rather than the character, and called it a guyot (a tablemount, i.e., a flat-topped seamount) instead of a seamount.

St. George, Joseph. Skipper of the Chilean sealer *Rippling Wave*, in the South Shetlands in 1902.

Saint George Bay *see* **King George Bay**

Saint George Peak. 69°08' S, 72°12' W. Rising to 1500 m, 5 km NE of Cape Vostok, in the W part of the Havre Mountains, in the NW part of Alexander Island. Discovered and inaccurately charted (in 68°45' S, 73°27' W, which is in the sea) as a very high mountain by von Bellingshausen in 1821, and named by him as Gora Svyatogo Georgiya Pobedonostsa (i.e., "mountain of Saint George the Victor"). In 1959-60, Searle of the FIDS mapped it in detail from air photos taken by RARE 1947-48, and plotted it in 69°06' S, 72°03' W. UK-APC re-named it St George Peak (the British do not put a period after "St"), on March 2, 1961. US-ACAN accepted the name later in 1961, but as Saint George Peak. In 1977 UK-APC re-plotted the feature from U.S. Landsat images taken in Feb. 1975. The Russians have named another mountain after St. George (*see* **Mount Paris**).

Mountain of Saint George the Victor *see* **Saint George Peak**

Baie Saint Georges *see* **King George Bay**

Saint George's Bay *see* **King George Bay**

St. Ivan Rilski Col. 62°40' S, 60°05' W. An ice-covered col in Levski Ridge, linking Great Needle Peak and Levski Peak, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. 2.3 km long, with its axis trending E-W, and with precipitous N and S slopes, it has a slightly higher central portion rising to about 1350 m, from which Kardam Buttress projects northward. It is part of the divide between the glacial catchments of Huron Glacier to the N and the head of Macy Glacier

to the south. Named by the Bulgarians on Feb. 17, 2004, for St. Ivan of Rila (876-946), a Bulgarian hermit who founded the Rila Monastery ("Rilski" is the adjective from "Rila").

Saint Johns Range. 77°17' S, 162°00' E. A crescent-shaped range, 30 km long, extending SE from the watershed between Cotton Glacier and Victoria Upper Glacier to Purgatory Peak, and then NE to Lizards Foot, 20 km SSW of Cape Roberts, in Victoria Land. It is bounded on the N by the upper Cotton Glacier, Miller Glacier, and Debenham Glacier, and on the S by Victoria Valley, Victoria Upper Glacier, and Victoria Lower Glacier. Named peaks in this range include Mount Mahony, Mount Evans, Purgatory Peak, Mount Harker, and Lizards Foot. Named in Nov. 1957 by the NZ Northern Survey Party of BCTAE (they established survey stations on Lizards Foot, Purgatory Peak, and two unamed peaks at the NW end of the range) for St John's College, Cambridge (no period after "St"), an institution meaningful to many members of BAE 1910-13 (*see also* **Gonville and Caius Range**). NZ-APC accepted the name, and US-ACAN followed suit in 1962.

St. Kiprian Peak. 62°32' S, 59°37' W. A rocky peak, rising to 280 m in the SE extremity of Breznik Heights, 700 m NE of Kormesiy Peak, 1.2 km W of Fort Point, 1.3 km S of Ilarion Ridge, and 1.4 km E of Vratsa Peak, and overlooking Musala Glacier to the N, on Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Dec. 15, 2006, for the Bulgarian cleric St. Kiprian Tsamblak (1330-1406), metropolitan of Kiev, Moscow, and all of Russia.

St. Kliment Ohridski Station. 62°38' S, 60°22' W. Bulgarian scientific station on Bulgarian Beach, on the S coast of Livingston Island, in the South Shetlands, only 1.7 km from Rey Juan Carlos I Station. In fact, the Spanish ship *Hespérides* supplied the Bulgarians too, on occasion. Operated by the University of Sofia for the Bulgarian Antarctic Institute, it was originally built as a refuge hut (Sofia University Refugio) in the 1987-88 season, between April 26 and 29, 1988, by a 4-man Bulgarian team supported by the Russian ship *Mikhail Somov*. It was the first time Bulgarians had been to Antarctica (they went as part of Russian and British programs). The site was the 2nd choice, the first — Cape Vostok, at the NW end of Alexander Island — proving inaccessible. In 1993-94 it was re-constructed, upgraded to base status, and inaugurated on Dec. 11, 1993, being named for St. Kliment Ohridski (840-916), Bulgarian bishop and scholar. It has been used by the Bulgarians only as a summer base, never for wintering-over. For a list of Bulgarian personnel, *see* **Bulgarian Antarctic Expeditions**.

Baie Saint Lauzanne *see* **Lauzanne Cove**

Mount St. Louis. 67°09' S, 67°30' W. Mainly ice-covered, and rising to about 1280 m, it forms a prominent landmark immediately E of The Gullet, just N of Lewis Peaks, on the NW part of Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Discovered and roughly charted in 1909 by FrAE 1908-10. Surveyed in Sept. 1948 by Fids from Base E, and named later by them for Canadian bush pilot Peter Borden St Louis (no period, or full stop, after "St") (b. 1923), a flying officer in the Royal Canadian Air Force. He arrived in Liverpool on the *Arcania*, from Montreal, on Sept. 22, 1949, joined FIDS as the Norseman pilot, and shipped down to the Falkland Islands for the 1949-50 season. He flew from the Argentine Islands to Stonington Island, in Jan. and Feb. 1950, to relieve the long-suffering Fids at Base E. UK-APC accepted the name (without the period) on March 31, 1955, and US-ACAN followed suit in 1956 (with the period). It appears on a British chart of 1957, without the period. Pete St Louis (without the period) was later a colonel, and retired to Ottawa. There are occasional references to the Argentines calling it Monte San Luis, but to imply that the Argentines simply, for the sake of it, translated the name literally, with no regard to the man it honors, is a monstrous affront to Argentine intelligence.

St. Marie Peak. 71°56' S, 171°05' E. A small peak, rising to 100 m, at the N end of Foyn Island, in the Possession Islands. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1963. Named by US-ACAN in 1969, for Lt. Cdr. John W. St. Marie, USN, VX-6 co-pilot on the flight of Jan. 18, 1958, which photographed this feature.

Saint Martha Cove. 63°55' S, 57°49' W. A small, almost landlocked cove on the NW side of Croft Bay, close SW of Andreassen Point, James Ross Island. Named by the ArgAE 1948-49 as Bahía Santa Marta, for the saint, it appears on their 1949 chart. It appears on a 1959 Argentine map as Caleta Santa Marta, which is more accurate when describing a cove. Surveyed by Fids from Base D between 1958 and 1961. UK-APC accepted the name St Martha Cove (Note: No period after the "St") on Feb. 12, 1964, and US-ACAN have followed suit, but as Saint Martha Cove. Last mapped by the UK, in late 2008.

St Martha Slopes. 63°55' S, 57°51' W. A wide sloping area, 3 km long, extending NW from Saint Martha Cove, San José Pass, James Ross Island. Named by UK-APC on Dec. 2, 1993, in association with the cove. Note: No period after St, as it is a British name.

Saint-Martin, Pierre-Paul-Adeline. b. Feb. 24, 1814, Paris. Junior seaman on the *Astrolabe* during FrAE 1837-40.

St. Methodius Peak. 62°43' S, 60°15' W. Rising to 1180 m on Friesland Ridge, 2 km SW of St. Cyril Peak, 5 km WNW of Samuel Point, 5.87 km SSW of Mount Friesland, and 6.6 km NE of Barnard Point, and surmounting Ruen Icefall to the N, Charity Glacier to the SW, and Prespa Glacier to the SE, in the Tangra Mountains of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians in 1995-86, as part of their Tangra survey, and named by them on March 15, 2002, for St. Methodius (815-885). For more on this saint, *see* **St. Cyril Peak** (above).

Mount Saint Michael. 67°10' S, 58°21' E. Also called Skagen. A prominent rock outcrop (actually a headland) at the W side of the entrance to Bell Bay, on the Kemp Coast of Enderby Land. Discovered in Feb. 1936 by the Discovery Investigations crew on the *William Scoresby*, and named by them as Mount St Michael, for the French coastal landmark, Mont Saint-Michel. They plotted it in 67°12' S, 58°30' E. US-ACAN accepted the name Mount Saint Michael in 1947. It has since been re-plotted.

St. Naum Peak. 62°42' S, 60°06' W. A rocky peak, rising to 620 m at the E extremity of Peshev Ridge (it is 1.2 km ENE of the central summit of that ridge), 820 m WSW of Silistra Peak, and 3 km S of St. Ivan Rilski Peak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians in 2004-05, during their Tangra survey, and named by them on April 11, 2005, for St. Naum (d. 910), Bulgarian scholar and a student of St. Cyril and St. Methodius, and who worked under the auspices of King Boris I in Pliska and Ohrid.

St. Paul Island. 38°44' S, 77°30' E. Not in Antarctica, Île Saint-Paul lies 53 miles SW of Île Amsterdam, in the S part of the Indian Ocean.

Saint Pauls Mountain. 77°39' S, 161°13' E. A high, steeply-cliffed mountain on the N side of Taylor Glacier, 3 km NE of Round Mountain, to which it is joined by a high ridge. Named by BNAE 1901-04. US-ACAN accepted the name in 1962.

Saint Rita Point. 64°15' S, 57°16' W. It terminates in a steep rock outcrop immediately N of the mouth of Gourdon Glacier, at Markham Bay, on the E coast of James Ross Island. Named Cabo Santa Rita by the Argentines, for the Italian Saint Rita (1381-1457; canonized in 1900), the patron saint of lost causes, it appears on a 1959 Argentine chart, as named by one of the Argentine Antarctic expeditions (probably ArgAE 1958-59). Surveyed by Fids from Base D between 1958 and 1961. UK-APC accepted the name St Rita Point (Note: The British do not put a period — or full stop — after "St," as the Americans do), on Feb. 12, 1964, and US-ACAN followed suit, but as Saint Rita Point. Last plotted by the UK, in late 2008.

St. Sofroniy Knoll. 62°44' S, 61°13' W. A hill rising to 107 m, 1.3 km SW of the W of the extreme NE point of the small, ice-free peninsula of President Head, in the NE extremity of Snow Island, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for St. Sofroniy Vrachanski (Stoyko Vladislavov, 1739-1813), a leading figure in the Bulgarian national revival.

St Valentine's *see* **Taurus Nunataks**

Îlot de la Sainte-Blanche *see under* **D**

Mont Sainte-Jeanne *see* **Jeanne Hill**

Sakai, Heitaro. b. 1869, Aichi, Japan. 3rd mate on the *Kainan Maru* during the first half of Shirase's Japanese South Polar Expedition of 1910-12. For the 2nd half of the expedition he was promoted to 2nd mate, to replace Tomoji Tsuchiya, who had been promoted to 1st mate. He died in 1932.

Sakar Peak. 62°33' S, 60°07' W. Rising to 355 m on Vidin Heights, 540 m NE of Perperek Knoll, 640 m SE of Samuel Peak, 1.25 km SSE of Madara Peak, and 2.2 km WSW of Helis Nunatak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the Sakar Mountains, in the SE part of Bulgaria.

Sakazuki-iwa *see* **Sakazuki Rock**

Sakazuki Rock. 68°43' S, 40°31' E. A small and featureless rock exposure just E of Tama Point, on the W part of the Prince Olav Coast, in Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962, and named by them on Oct. 1, 1962, as Sakazuki-iwa ("iwa" means "island"; "sakazuki" means a small cup for drinking sake warmed to precisely 98.4°F). US-ACAN accepted the name Sakazuki Rock in 1975.

Poluostrov Sakellari *see* **Sakellari Peninsula**

Sakellari Peninsula. 67°10' S, 49°15' E. A large, ice-covered peninsula, immediately W of Amundsen Bay, between that bay and Casey Bay, in Enderby Land. Dingle Dome is on this peninsula. This area was photographed by ANARE in 1956 and 1957, and by the Russians off the *Lena*, in 1957. Named by the USSR in 1957, as Poluostrov Sakellari, for N.A. Sakellari, scientist and navigator. They plotted it in 67°06' S, 48°56' E. US-ACAN accepted the name Sakellari Island in 1965, with the coordinates 67°10' S, 49°15' E, while ANCA plotted it in 67°05' S, 49°07' E.

Sal Glacier. 72°03' S, 25°31' E. A glacier, 11 km long, flowing N between Salen Mountain (to the W) and Mount Bergersen, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by the Americans during OpHJ 1946-47, and named by them as Salbreen (i.e., "saddle glacier"), in association with Salen Mountain. They plotted it in 72°06' S, 25°33' E. US-ACAN accepted the name Sal Glacier in 1966, with the coordinates 72°03' S, 25°31' E.

Salamander Range. 72°06' S, 164°08' E. A distinctive line of peaks in the Freyberg Mountains, between Canham Glacier and Black Glacier, in the area of Rennick Glacier, in Oates Land. Named by the Northern Party of NZGSAE 1963-64 for Lord Freyberg. "Salamander" was Churchill's nickname for him. Like the lizard, Freyberg seemed untouched by fire. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Punta Salas. 63°33' S, 58°25' W. A point in the area of Crown Peak and Marescot Ridge, on the NW coast of Trinity Peninsula. Named by the Argentines.

Salash Nunatak. 62°32' S, 59°45' W. A rocky peak, rising to 220 m, projecting from Wulfila Glacier, in Breznik Heights, 400 m SW of the summit of Oborishte Ridge, and 1.3 km W of Nevlya Peak, on Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, mapped by them in 2009, and named by them on Nov. 23, 2009, for Salash, the settlement in northwestern Bulgaria.

Nunatak Salbatierra. 66°02' S, 60°51' W. One of a large group of nunataks on Jason Peninsula, in Graham Land. Named by the Argentines.

Salbreen *see* **Sal Glacier**

The Salem Expedition. **Aug. 23, 1818**: The *General Knox* and her tender, the *Governor Brooks*, left together from Salem, Mass., for the South Seas, on a sealing expedition, led by William B. Orne. The crew of the *General Knox* were: Orne (captain), William Hammond (1st mate), George Reynolds (2nd mate), John Francis, Jr., James Arrington, Joseph Dewing, Henry P. Millet, Henry Rea, Robert Stevenson, David B. Folett, Abiel S. Roads, Jonathan Thompson, John Stacy, John B.L. Newhall, John Breed, William Huddle, Levi Sherman, Amos Perkins, Peter Jacobs, Burrill Whitman, George Fay, John Willis, William Mitchell, and George Christian. The crew of the *Governor Brooks* were: Nicholas Witham (captain), John P. Babbidge (1st mate), John Edwards (2nd mate), Darin Edminster, and Alfred Augustus Orne (aged 14), son of the expedition leader, but he left the expedition before it got to the South Shetlands. **Aug. 13, 1820**: The brig *Nancy* left Boston, commanded by Benjamin Upton. See that ship for the crew. **1820-21 season**: The *Nancy* met up with the *General Knox* and the *Governor Brooks* at the Falkland Islands, and Upton told Orne of the recent discovery of the South Shetlands, so the 3 ships went there. **Jan. 19, 1821**: The 3 ships arrived at Yankee Bay, in the South Shetlands. **March 10, 1821**: The *Nancy* left the South Shetlands, in company with the *Huntress*, and wintered-over in the Falklands, as did the *Governor Brooks*, while the *General Knox* returned to the USA. **June 5, 1821**: The *General Knox* arrived back in the USA, with 5000 skins and 600 barrels of oil. **1821-22 season**: The *Nancy* and the *Governor Brooks* were back in the South Shetlands, but did not do well. **March 6, 1822**: The *Nancy* and the *Governor Brooks* left the South Shetlands. **May 25, 1822**: The *Nancy* and the *Governor Brooks* arrived back in Salem, Mass., with only 1800 skins and 100 barrels of oil.

[1]**Salen**. 68°48' S, 90°39' W. A mountain at the N side of Lars Christensen Peak, in the NW part of Peter I Island. Named descriptively by the Norwegians, it means "the saddle."

[2]**Salen** *see* **Salen Mountain**

Salen Mountain. 72°05' S, 25°27' E. Rising to 2950 m between Komsa Mountain (to the W) and Sal Glacier, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by the Americans during OpHJ 1946-47, and named descriptively by them as Salen (i.e., "the saddle"). They plotted it in 72°08' S, 25°28' E, but it has since been re-plotted. US-ACAN accepted the name Salen Mountain in 1966.

Salenjus, Charles Hurde "Charlie." b. Aug. 26, 1905, Waterman, Wash., son of carpenter and shipwright John Salenjus, a Finnish immigrant and his equally Finnish wife Rauha Wilhelmina Nordhig. He went to sea at 16, got the obligatory star tattooed on his left wrist, and, on July 10, 1922, finding himself in Newcastle, NSW, signed on to the *Eleanor Bolling*, for a few years, as an able seaman. On Feb. 7, 1925, he signed on to the *Eurana*, and on May 13, 1927, on to the *Eldridge*, where he was not only an able seaman but also the ship's carpenter. This tour included a voyage to China. On Jan. 30, 1930, he signed on to the *President Madison*, in San Francisco. In 1934 he was working for the Coastwise Steamship & Barge Co., as 3rd mate on the *James Griffiths*, plying the waters of the great Northwest, and then became a mate on the *North Star*, under Capt. Isak Lystad, as that vessel made the regular run up from Seattle to Alaska. He married Helen Richardson, and they lived in Seattle. He served as 1st officer on the *North Star*, during USAS 1939-41, and was later skipper of that vessel. After the expedition, he became skipper of the U.S. Army Transport ship *North Coast*, still in the northwest. He died on Jan. 24, 1965, in Seattle, and, later that year, the Department of the Interior gave him a posthumous award for 31 years with the Coast and Geodetic Survey and Bureau of Indian Affairs.

Salient Glacier. 78°06' S, 163°05' E. On the E side of the Royal Society Range, flowing NE from the slopes of Salient Peak and from the main ridge immediately N of the peak, into the head of Blue Glacier. Surveyed in Sept. 1957 by the NZ Blue Glacier Party of BCTAE, and named by them in association with the peak. US-ACAN accepted the name in 1962. Originally plotted in 78°08' S, 163°07' E., it has since been re-plotted.

Salient Nunatak. 84°42' S, 113°24' W. A prominent cusp-shaped nunatak, a distinctive landmark, standing out (hence the name) from the N side of the Ohio Range, 5 km (the New Zealanders say 1 km) E of Mount Glossopteris, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken in 1958-59. Named by NZ-APC following geological work in the area by an NZARP field party in 1983-84. US-ACAN accepted the name.

Salient Peak. 78°09' S, 162°45' E. A buttressed peak of the Royal Society Range, between Mount Rücker and Mount Hooker, and particularly prominent from the upper parts of the Blue Glacier. A ridge descends E from it to Armitage Saddle, and this ridge forms the watershed between tributaries of the Blue Glacier on the N and the head of the Walcott Névé on the S. Explored in Sept. 1957 by the NZ Blue Glacier Party of BCTAE, and so named by them because this peak forms a salient of the Royal Society Range, where the summit turns SW toward Mount Rücker and Mount Huggins. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Salient Ridge. 78°08' S, 163°00' E. A prominent ridge, 10 km long, extending ENE from Salient Peak, along the S side of Salient Glacier, in the Royal Society Range of Victoria Land.

The rather obvious name was suggested by R.H. Findlay, leader of 3 NZARP geological parties to the area between 1977 and 1981, and NZ-APC accepted it in 1982, and US-ACAN followed suit in 1983.

Salient Rock. 62°21' S, 59°21' W. The outermost of numerous rocks in water, fringing the NE end of Robert Island, N of Kitchen Point, and extending into the SW side of Nelson Strait, in the South Shetlands. Named descriptively by ChilAE 1950-51, and charted by them in 1951 as Roca Saliente. Photographed aerially in 1956, by FIDASE. UK-APC accepted the name Salient Rock on Aug. 31, 1962, and it appears as such on a British chart of that year. US-ACAN followed suit with the British naming in 1965. The Argentines also call it Roca Saliente. Last plotted by the UK, in late 2008.

Roca Saliente *see* **Salient Rock**

The *Salisbury*. A 121-ton Liverpool sealer, originally taken by the British as a prize, and by 1820 owned by Messrs Canna, Smith, and Millars. On Sept. 8, 1820, Thomas Hodges was appointed skipper, and she left Liverpool on Sept. 15, 1820, bound for the South Shetlands and the 1820-21 season. She left the South Shetlands on Feb. 16, 1821, bound for Buenos Aires, and arrived back in England on May 13, 1821, and on to London by May 18, with about 9000 skins.

Mount Salisbury. 85°38' S, 153°37' W. An ice-free mountain, rising to 970 m, at the W side of the lower part of Scott Glacier, at the S end of the Karo Hills. Discovered and roughly mapped during ByrdAE 1928-30. Named by US-ACAN in 1967, for James B. Salisbury, cosmic ray scientist at McMurdo in 1965.

Salisbury Bluff. 62°41' S, 60°26' W. Rock cliffs rising to about 120 m above sea level, 4 km SW of Johnsons Dock, Hurd Peninsula, on Livingston Island, in the South Shetlands. In 1970, Scottish geologist Ian Dalziel (q.v.) was here on the *Glacier*, and named it Nappe Point. He only vaguely remembers naming this feature, cannot remember why, and somewhat laments the fact that his suggestions for Antarctic place names were never taken very seriously. On May 13, 1991, UK-APC named it Salisbury Bluff, for the *Salisbury*. US-ACAN accepted that name. Plotted by the UK in late 2008.

Nunatak Saljut-3. 73°08' S, 61°54' E. In the Prince Charles Mountains. Named by the Russians. All these features with the name Saljut were named for the Russian space stations.

Nunatak Saljut-4. 73°08' S, 62°03' E. In the Prince Charles Mountains. Named by the Russians.

Nunatak Saljut-5. 71°12' S, 64°38' E. In the Prince Charles Mountains. Named by the Russians.

Nunatak Saljut-6. 79°25' S, 160°30' E. In the W part of the Ross Ice Shelf. Named by the Russians.

Skaly Saljut-6. 78°47' S, 26°43' W. A group of rocks in Coats Land. Named by the Russians.

[1]**Salknappen**. 68°48' S, 90°40' W. The northernmost peak in Salen, in the NW part of Peter I Island. Named by the Norwegians ("the saddle pommel"). *See* [1]**Salen**.

[2]**Salknappen** *see* **Salknappen Peak**

Salknappen Peak. 72°19' S, 1°02' E. A subsidiary peak on the N side of Isingen Mountain, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Salknappen (i.e., "the saddle pommel"). US-ACAN accepted the name Salknappen Peak in 1966.

Sallee Snowfield. 82°37' S, 50°20' W. A large snowfield, rising to about 1480 m above sea level, between the Dufek Massif and the N part of the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground in 1965-66 during the USGS Pensacola Mountains Project, and mapped by USGS from all these efforts. Named by US-ACAN in 1968, for Lt. Cdr. Ralph W. Sallee (b. 1927), assistant meteorological officer on the staff of the commander, U.S. Naval Support Force, Antarctica, 1967 and 1968. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

The *Sally* *see* **The *Sarah***

Caleta Sally *see* **Sally Cove**

Rocas Sally *see* **Sally Rocks**

Sally Cove. 67°48' S, 67°17' W. A little cove indenting the NW shore of Horseshoe Island, immediately N of Lystad Bay, and SW of Homing Head, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. ChilAE 1947 named it Caleta Javiera, presumably for the girlfriend of one one of the crew, and it appears as such on a Chilean map of that year, and also on one of 1962, and is the name seen in the 1974 Chilean gazetteer. Surveyed by FIDS, 1955-57. The name Caleta Javiera, or even Javiera Cove, was unacceptable to the British, so, on July 7, 1959, UK-APC renamed it Sally Cove, for the fact that all FIDS sledging parties leaving Base Y would sally forth from this cove, going north. It appears on a British chart of 1960. US-ACAN accepted the British naming in 1964. The Argentines tend to call it Caleta Sally. Base Y was established on the SW part of this cove, in 1955.

Sally Glacier. 62°42' S, 60°25' W. A glacial lobe, rather than an actual glacier (hence the name given by the Spanish in 1991, for this feature — Lóbulo Sally Rocks), which flows toward Sally Rocks into the E side of South Bay, at Hurd Peninsula, between Salisbury Point and Miers Bluff, on the S coast of Livingston Island, in the South Shetlands. UK-APC accepted the name Sally Glacier on Dec. 16, 2003, in association with the rocks.

Sally Rocks. 62°42' S, 60°26' W. A group of rocks in South Bay, just N of Miers Bluff, off the W side of Hurd Peninsula, on the S side of Livingston Island, in the South Shetlands. Weddell, during the period 1820-23, named a feature in this area (southward of Johnsons Dock) as Sally's Cove. Air photos taken by FIDASE in 1956-57 failed to show a true cove in this area, however, and although these rocks may have formed an arm of what Weddell took to be a cove (or which, at that time, may indeed have been a cove), in order to preserve Weddell's naming UK-APC named these rocks thus on Aug. 31, 1962, with US-ACAN following suit in 1965. They appear on a British chart of 1968. The Argentines tend to call them Rocas Sally.

Lóbulo Sally Rocks *see* **Sally Glacier**

Sally's Cove *see* **Sally Rocks**

Caleta Salmon *see* **Salmon Cove**

Salmon, Eric Michael Paul. b. June 28, 1927, Bromley, son of auctioneer and valuer Victor E. Salmon and his wife Mildred S. Ryder. After Christs Hospital (public school) he did his national service in the RAF, and joined FIDS on Oct. 10, 1949. He was assistant meteorologist wintering-over at Signy Island Station in 1950, at Base B in 1951, at Base F in 1954, and at Base W in 1956, as 2nd-in-command. From 1956 to 1958 he was FIDS establishment officer in Stanley, in the Falklands. In 1957, in Stanley, he married Freda Cottrill, Frank Elliott's secretary. Fred Byrne was best man at the wedding. In 1958 he became FIDS finance officer in London. Between 1968 and 1986 he spent 7 summers in Antarctica, as met man. In Jan. 1986 he became BAS establishment officer, and finally retired from BAS on July 3, 1987. A notorious practical joker, he died on Aug. 27, 1991, at Ely, Cambridgeshire.

Salmon, Kenneth James "Ken." b. 1926, Rugby, England. He trained as an electrical engineer, and in 1954 moved to Marton, NZ. As the physicist who took over as scientific leader of Hallett Station from James Shear on Jan. 16, 1958, he led the search and rescue party for survivors of the downed Globemaster, in Oct. 1958. He now lives in Karori, Wellington, with his wife Judy. He did not wish to be interviewed for this book. "In my opinion, more than enough has already been written about my IGY effort."

Salmon Bay. 77°56' S, 164°33' E. Just N of Cape Chocolate, along the coast of Victoria Land. Named Davis Bay by BAE 1910-13, in association with Davis Glacier. In 1958 the NZ Northern Survey Party of BCTAE re-named the glacier to avoid confusion with another Davis Glacier. The bay was also re-named. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Salmon Cliff. 72°22' S, 170°06' E. The second prominent rock cliff S of Hallett Station and Seabee Hook, on the W side of Hallett Peninsula, and E of Edisto Inlet, in Victoria Land. Named by NZGSAE 1957-58, for Ken Salmon. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Salmon Cove. 67°06' S, 66°28' W. A cove, 6 km SE of McCall Point, on the E side of Lallemand Fjord, on the Loubet Coast of Graham Land. Surveyed by Fids from Base W in Sept. 1956, photographed from the air by FIDASE in 1957, and mapped by FIDS in 1959 from these efforts. Named by UK-APC on July 7, 1959, for Eric Salmon (q.v.), who visited this cove in 1956.

It appears on a British chart of 1961. US-ACAN accepted the name in 1964. The Argentines tend to call it Caleta Salmon.

Salmon Creek *see* **Salmon Stream**

Salmon Glacier. 77°58' S, 164°05' E. A small glacier 8 km WSW of Cape Chocolate, just to the N of Garwood Valley, and immediately S of Salmon Hill, between Hobbs Glacier and Garwood Glacier, in Victoria Land. Named Davis Glacier by BAE 1910-13, and charted by them as such. Re-named in 1958 (in association with Salmon Hill) by the NZ Northern Survey party of BCTAE to avoid confusion with another glacier of that name. NZ-APC accepted the new name, and US-ACAN followed suit in 1962.

Salmon Hill. 77°57' S, 164°09' E. Immediately N of the snout of Salmon Glacier, between that glacier and Blackwelder Glacier, and between Hobbs Glacier, Garwood Glacier, and Davis Glacier, inland from Cape Chocolate, in Victoria Land. Named by Frank Debenham during BAE 1910-13, for its sandy pink color pink due to the pink limestone here. US-ACAN accepted the name in 1962.

Salmon Island. 66°01' S, 65°28' W. The most westerly of the Fish Islands, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. Surveyed by Fids from Base J in 1957. Named by UK-APC on July 7, 1959, in continuation of the fish motif. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Salmon Stream. 77°56' S, 164°30' E. A small meltwater stream, about 10 km long, which flows from Salmon Glacier into Salmon Bay, on the coast of Victoria Land. BAE 1910-13 called it Davis Creek, in association with Davis Glacier (now called Salmon Glacier). In 1960, at the suggestion of Ian Speden (*see* **Speden Branch**) of the NZGS, NZ-APC changed the name to Salmon Creek, in accordance with the change of name of all the features in this area that had once been called Davis. Shortly thereafter, they changed it to Salmon Stream. US-ACAN accepted the name in 1962.

Bahía Salpêtrière *see* **Salpêtrière Bay**

Baie de la Salpêtrière *see* **Salpêtrière Bay**

Salpêtrière Bay. 65°04' S, 64°02' W. A bay, 1.5 km wide, SE of Hervéou Point, and lying between that point and Poste Point, along the W side of Booth Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted in 1904, by FrAE 1903-05, and named by Charcot as Baie de la Salpêtrière, for l'Hôpital de la Salpêtrière, in Paris, where Charcot's father had founded a clinic to treat nervous disorders. Some of the maps from FrAE 1908-10 show it as Baie de Salpêtrière, and a 1911 British chart, translated from Charcot's, calls it Salpêtrière Bay. The number of minor variants (not to mention spelling mistakes), in various languages, is not only quite impressive, but understandable. Salpêtrière Bay was the name seen on a 1943 U.S. Hydrographic Office chart, and the name accepted by US-ACAN in 1952, and by UK-APC on July 7, 1959. It appears on a 1949 Argentine chart as Bahía Salpêtrière, and that name was also accepted by the Chileans, appearing in their 1974 gazetteer. However, the mere fact that the Chileans were using the name, forced the Argentines to find a new one, which they did in 1957-Bahía de la Salpêtrière, which appears on one of their charts of that year, and also in the 1970 Argentine gazetteer. The feature was photographed aerially by FIDASE in 1956.

Salryggen. 73°25' S, 14°02' W. A small ridge, due S of Grushallet, in the Kraul Mountains, in Maudheimvidda, in Queen Maud Land. Name means "the saddle ridge" in Norwegian.

Salsbury, Francis *see* **USEE 1838-42**

Salta Refugio. 78°01' S, 35°48' W. Argentine summer refuge hut, named for the Argentine province, built 4 km W of the Moltke Nunataks, just to the NE end of the Filchner Ice Shelf, on Nov. 12, 1957 by Army personnel from General Belgrano Station led by Major Jorge Léal. It was abandoned in 1958.

Salter, Willoughby de Carle. b. June 4, 1909, Hendon, Mdsx. He got his MA from Cambridge in 1934, married Rachel Floyd, and lived in Johannesburg, South Africa. He was a lieutenant, RNVR when he went with FIDS as meteorologist, wintering-over at Base E in 1946. In May, 1947, on Salter's return to England, Harold Bayley founded Lochinver House School, a private prep school in Potters Bar, near London, and Salter was the first headmaster. He took over the school in 1953, and retired in 1960, making arrangements to keep the school going by way of a charitable trust. He later lived in Oxfordshire, and later still in Mansfield, Notts. Rachel died in 1983, in Mansfield, and Salter himself in Dec. 1993, same place.

Mount Saltonstall. 86°53' S, 154°18' W. A tabular mountain, rising to 2975 m (the New Zealanders say about 2590 m), 1.5 km (the New Zealanders say about 3 km) S of Mount Innes-Taylor, at the S side of the junction of Poulter Glacier with Scott Glacier, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn's party, during ByrdAE 1933-35, and named by Byrd for John Lee Saltonstall (b. 1878), banker of Beverly, Mass., a contributor to the expedition. US-ACAN accepted the name in 1956.

Saltzman Glacier. 78°39' S, 84°51' W. Flows E from the E slopes of Mount Strybing, between Mount Osborne and Moyher Ridge, into Thomas Glacier, in the S part of the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN in 2006, for Eric S. Saltzman, of the department of earth system science, University of California at Irvine, a USARP investigator of Antarctic ice core records of oceanic emissions. In 2006, he was chairman of the U.S. National Ice Core Working Group for use of Antarctic ice cores for research purposes.

Salusse, Thomas-Pascal. b. April 19, 1802, Toulon. A caulker on the *Zélée* during FrAE 1837-40. He died on board on Nov. 10, 1839.

Salvador Nunatak. 72°34' S, 163°20' E. A nunatak, 3 km N of Schumann Nunatak, in the SW part of the Freyberg Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Anthony Salvador, ionosphere physicist at McMurdo in 1967.

Caleta Salvador Reyes. 61°03' S, 54°50' W. A little cove between Cape Wild and Cape Belsham, on the N coast of Elephant Island, in the South Shetlands (this sector of the South Shetlands — which includes Elephant Island — is called, by the Chileans anyway, Islas Piloto Pardo). Named by ChilAE 1954-55 for Salvador Reyes (1899-1970), Chilean novelist and short-story writer (mainly seafaring themes), diplomat, and Chilean ambassador to Britain.

Salvadori, Guido *see* **Órcadas Station**, 1909

Cabo Salvesen. 64°24' S, 61°20' W. A point on Salvesen Cove (the S extremity of Hughes Bay), along the Danco Coast, on the W coast of Graham Land. Named by the Argentines, in association with the cove.

Caleta Salvesen *see* **Salvesen Cove**

Salvesen Bay *see* **Salvesen Cove**

Salvesen Company. Or Salvesen & Co. Christian Salvesen had come from Norway to Edinburgh in 1851, set up his famous company in Leith, in 1872, and by 1904 was whaling off Shetland, Scotland. In 1907 he sent his first ships to Antarctic waters, and he, himself died, aged 84, in 1911, the year Salvesens reigned as the largest whaling company in the world, and the the same year the company acquired its first floating factory ship, the *Neko*, which they ran in the South Shetlands and Graham Land between 1911 and 1916, and again between 1918 and 1923. Also in that area, they operated the *Horatio*, between 1913 and 1915; the *Sevilla*, between 1922 and 1929; the *Saragossa*, between 1925 and 1932; and the *Salvestria*, between 1929 and 1931. The last two named ships also conducted pelagic whaling. Salvesens got out of the whaling business in 1963, diversified, and was sold in 2007, to a French company.

Salvesen Cove. 64°24' S, 61°20' W. Between Valdivia Point and Brabazon Point, it forms the S extremity of Hughes Bay, 22 km SW of Brialmont Cove, along the Danco Coast, on the W coast of Graham Land. It was partially outlined on the Jan. 1898 charts of BelgAE 1897-99. Further charted by whalers from the 1911-12 season onwards, and named by them as Salvesen Bay, for the Salvesen Company (q.v.), whose whaling ships used this cove, beginning that season. Wilkins refers to it as Salvesen Bay in 1929. It appears as Salvesen Cove on a 1942 USAAF chart, on a British chart of 1945, and on another, 1946, USAAF chart (albeit misspelled as Salveson Cove), and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears in the British gazetteer of 1955, and on a 1959 British chart. It appears as Caleta Salvesen on a 1947 Argentine chart, and that was the name accepted by the 1970 Argentine gazetteer, and the 1974 Chilean gazetteer. It appears as Baie Salveson on a 1951 French chart. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Portal Point in 1957-58. The NW arm of the cove appears in a 1978 Argentine reference

as Seno Campos Urquiza, named for Rear Admiral Jorge Justino Campos Urquiza (1878-1957), of the Argentine Navy, director of the naval arsenal.

Salveson *see* **Salvesen**

The *Salvestria*. The former liner *Cardiganshire*, built in 1913 by Workman, Clark, of Belfast, she was bought by Salvesen's South Georgia Company in 1929, converted into an 11,938-ton, 520-foot factory whaling ship capable of 12 knots, registered in Port Stanley, in the Falkland Islands (and later in Dublin), and conducted pelagic whaling in West Antarctica waters and the South Shetlands every season between 1929-30 and 1939-40. Her catchers over the years included the *Shera*, the *Simbra*, the *Stina*, the *Stefa*, the *Svega*, the *Sukha* and the *Santa*. In 1939 she was registered in Jersey, in the Channel Islands, and, on July 27, 1940, during World War II, she was mined off the coast of Scotland.

Salyer, Herbert Lee, Jr. b. Feb. 6, 1916, Bend, Oreg., but raised mainly in Portland, son of railroad telegrapher Herbert Lee Salyer and his wife Frances. He married Ruth Ann Miller. He joined the U.S. Navy in Aug. 1940, and was a lieutenant commander when he went on OpHJ 1946-47. He was co-pilot and navigator on, particularly, the flight of Feb. 20, 1947, piloted by Trigger Hawkes, that was the first ever to fly over the Cruzen Range. He retired from the Navy in June 1965, and died on March 3, 1999, in Winter Park, Fla.

Salyer Ledge. 77°17' S, 160°50' E. A bold, flat-topped ridge, rising to 1300 m at the W end of The Fortress (the series of ridges and cirques that comprise the W half of the Cruzen Range) in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2005. NZ-APC accepted the name on Sept. 12, 2005. The Cruzen Range (and this ledge too) were first observed and recorded on an R4D flight of Feb. 20, 1947 (Trigger Hawkes pilot), during OpHJ. Herbert Salyer (q.v.) was co-pilot and navigator on this flight.

Salyut Station. 65°32' S, 96°30' E. Soviet summer station opened in 1977-78 for an ice-coring program on the Shackleton Ice Shelf.

Samat, Jean-Paulin. b. June 23, 1803, Toulon. Caulker 2nd class on the *Astrolabe* during FrAE 1837-40.

Samodiva Glacier. 64°05' S, 60°49' W. A glacier, 3.7 km long and 1.8 km wide, E of Mount Pénaud, in the E part of Chavdar Peninsula, it flows NNE to Curtiss Bay W of Seaplane Point, on the W coast of Graham Land. Named by the Bulgarians on June 3, 2010, for the settlement of Samodiva, in southern Bulgaria.

Mys Samojlova. 72°25' S, 77°30' W. A cape, NW of the Stange Ice Front, and NE of Smyley Island, in Ellsworth Land. Named by the Russians.

Gora Samojlovicha *see* **Samoylovich Nunatak**

Poluostrov Samojlovicha *see* **Samojlovicha Peninsula**

Samojlovicha Peninsula. 65°59' S, 100°59' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Poluostrov Samojlovicha, for Rudolf Lazarevich Samojlovich (*see* **Samoylovich Nunatak**). ANCA translated it.

Samokov Knoll. 62°36' S, 60°10' W. A conspicuous landmark, rising to 602 m in the area of Yankov Saddle, 480 m SW of Melnik Peak, 860 m N of Asparuh Peak, 3.25 km E of Hemus Peak, and 2.3 km NW of Atanasoff Nunatak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the town of Samokov, in western Bulgaria.

Samoylovich Nunatak. 71°48' S, 4°55' E. Near the N end of Hamarskaftet Nunataks, in the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped by the Norwegians from ground surveys conducted by NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1961, and named by them as Gora Samojlovicha, for Professor Rudolf Lazarevich Samoylovich (1881-1940), scientist and polar explorer. US-ACAN accepted the translated name Samoylovich Nunatak in 1970.

Sample Nunataks. 70°53' S, 159°52' E. A cluster of nunataks at the convergence of Lovejoy Glacier and Harlin Glacier, N of the Daniels Range, in the Usarp Mountains, in northern Victoria Land. Named by US-ACAN in 1964, for Gerald M. Sample (b. Oct. 28, 1938. d. Dec. 15, 1989, Houston, Texas), aviation electronics technician 1st class, USN, radio operator in R4D aircraft, 1961-62 and 1962-63, in support of the USGS Topo East-West party, including the air and ground survey of these nunataks. ANCA accepted the name.

Mount Samsel. 70°24' S, 63°15' W. Rising to about 1650 m, along the N side of Clifford Glacier, just W of the junction of Kubitza Glacier, on the Wilkins Coast of Palmer Land. Photographed aerially by USN in 1966, and surveyed from the ground by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for Gene Leroy Samsel, Jr. (b. Sept. 12, 1945, Alabama), USARP biologist at Palmer Station, 1969-70 and 1970-71. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

The *Samson* *see* **The *City of New York***

The *Samsón*. Whale catcher belonging to the Corral Company (*see* **Sociedad Ballenera Corral**), which was catching for the *Tioga* in Antarctic waters in 1911-12 and 1912-13.

Samson, Clem. b. Dunedin, NZ. When the *Eleanor Bolling* pulled out of Dunedin on Jan. 20, 1934, heading south for the 4th Antarctic voyage during ByrdAE 1928-30, Clem Samson was 2nd radio operator on board.

The *Samuel*. A 92-foot Nantucket whaler of 287 tons, built at Scituate, Mass., in 1804. Registered on March 30, 1815, in New Bedford, she sailed to the South Shetlands for seals in the 1820-21 season, leaving the USA on Nov. 19, 1820, under Capt. Robert Inott. Due to her late arrival, the expedition was unsuccessful, taking only 1800 barrels of elephant seal oil, and the vessel was condemned at Rio in 1822.

Samuel Nunataks. 79°38' S, 82°30' W. A chain of about 7 nunataks at the SE end of the Nimbus Hills, in the Heritage Range. Higgins Nunatak, which lies at the S end of the chain, is the largest of these nunataks, and the only one individually named (as of 2009). Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Samuel L. Wilson, meteorological electronics technician at Little America in 1957.

The *Samuel P. Lee*. Also known as the *S.P. Lee,* or just the *Lee*. Home port: Redwood City, Calif. A 208-foot oceanographic research vessel. USGS (United States Geological Survey) ship that took Operation Deep Sweep (q.v.) down to Antarctica in 1983-84. Captain McGlenahan.

Samuel Peak. 62°33' S, 60°08' W. Rising to about 600 m, westward of Edinburgh Hill, and WNW of Moon Bay, in the NE part of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1957-59. It appears erroneously as Monte Bowles on a 1957 Argentine chart. Named by UK-APC on July 7, 1959, for the *Samuel*. US-ACAN accepted the name in 1960. It appears on a British chart of 1962. Last plotted by the UK, in late 2008.

Samuel Point. 62°44' S, 60°09' W. It forms the SW side of the entrance to Brunow Bay, 9.3 km ENE of Botev Point, and 5.6 km WSW of Aytos Point, on Livingston Island, on the coast of the Bransfield Strait, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on March 15, 2002, for Czar Samuel of Bulgaria, 980-1014.

Samuelhamaren. 75°08' S, 12°50' W. A mountain crag in the southwesternmost part of the Tottan Hills, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Milne Murray "Sam" Samuel (b. 1941), surveyor who wintered-over at Halley Bay Station for four years, 1963, 1964, 1966, and 1967.

Samuelsen, Ingvard. b. 1872, Nøtterøy, Norway, son of fisherman Samuel Halvorsen and his wife Anna. Able seaman on the *Southern Cross* during BAE 1898-1900.

Samuelsen, Niels Ernst. b. July 31, 1866, Norway. A gunner, he was one (and the oldest; he was 58) of the four Hektor Whaling Company employees who died immediately when the whale catcher *Bransfield* capsized in Whalers Bay, Deception Island, in the South Shetlands (or was it at South Bay, Doumer Island? Sources vary), on March 11, 1924. He was buried in the Whalers Bay Cemetery.

Samuelsen, Samuel A. b. Nøtterøy, Norway. Gunner on the whale catcher *Grib*, in the South Shetlands, in 1907-08.

Gora Samushkova. 70°38' S, 165°44' E. A nunatak, just NW of Cape North, on the N coast of Victoria Land. Named by the Russians.

Nunataki Samutina. 83°11' S, 55°25' W. An isolated group of nunataks in the Neptune

Range, in the Pensacola Mountains. Named by the Russians.

Cerro San Agustín *see* **Scree Peak**

San Antonio Refugio. 64°58' S, 60°02' W. Argentine refuge hut built by Army personnel (led by Capt. Ignacio Carro) from Esperanza Station on March 23, 1959, near Larsen Nunatak, in the Seal Nunataks, on the Larsen Ice Shelf. It lasted until 1961-62, when it was integrated into Teniente Matienzo Station.

Punta San Bernardo *see* **Nebles Point**

Isla San Carlos *see* **Corry Island**

San Carlos Point. 63°50' S, 58°01' W. The SW entrance point of Brandy Bay, James Ross Island. San Carlos Refugio was built here in 1959 by the Argentines, and the point was surveyed by BAS as they were doing geological work here between 1981 and 1983. The British named it Brandy Point, in association with the bay, but on April 3, 1984 UK-APC renamed it San Carlos Point, and US-ACAN have followed suit.

San Carlos Refugio. 63°49' S, 57°59' W. Argentine refuge hut built on a rock surface at San Carlos Point, Brandy Bay, James Ross Island, by Army personnel (led by Capt. Ignacio Carro) from Esperanza Station on Oct. 4, 1959.

Cabo San Eladio *see* **San Eladio Point**

Punta San Eladio *see* **San Eladio Point**

San Eladio Point. 64°50' S, 63°07' W. The extreme NW point of Bryde Island, on the Danco Coast, on the W coast of Graham Land. Charted by ArgAE 1949-50, and called by them Cabo San Eladio, after a staff officer on the *Chiriguano*. It appears as such on an Argentine chart of 1953, and that is the name that is listed in the 1970 Argentine gazetteer. The Fifth Chilean Antarctic Expedition (1950-51) named it Punta Unwin, for Capitán de fragata Tomás Unwin Lambie (q.v.), skipper of the *Lientur* that season. It appears as such on their chart of 1951, and that is how it is listed in the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57. On Feb. 7, 1978, UK-APC accepted the name San Eladio Point, and US-ACAN followed suit. *See also* **Punta Beruti**.

Islotes San Felipe. 67°43' S, 66°58' W. A group of islets, immediately S of Bottrill Head, off Bourgeois Fjord, on the Fallières Coast of Graham Land. Named by the Argentines.

Cerro San Fernando *see* **San Fernando Hill**

San Fernando Hill. 63°57' S, 58°17' W. Rising to about 650 m, on Lagrelius Point, NE of Matkah Point, on the W coast of James Ross Island, anywhere between 2.5 and 6 km S of Carlson Island (in the Prince Gustav Channel). Surveyed by ArgAE 1978-79, and named by them as Cerro San Fernando. UK-APC accepted the translated name San Fernando Hill, on Feb. 15, 1988, and US-ACAN also accepted that name. The Chileans call it Cerro Benavides, for group commander Pedro Benavides Becerra, of the Chilean Air Force, a member of the repair party during ChilAE 1966-67.

Nunatak San Fernando. 82°08' S, 41°42' W. Just NW of Mount Spann, in the Panzarini Hills, in the Argentine Range, at the NE end of the Pensacola Mountains. Named by the Argentines. However, despite USGS mapping of this area, done from USN air photos taken between 1956 and 1967, this nunatak has been named only by the Argentines, which is, in itself suspicious and leads one to believe that this may be another name for Arcondo Nunatak, which seems to stand close by.

The *San Francisco*. One of the two Lockheed Vega planes taken by Wilkins on his 1928-30 expedition.

The *San Giuseppe Due*. A 34-ton, 16-meter, Italian two-masted lateen-rigged motorized felucca, designed by Italian merchant Navy commander Giuseppe Ajmone Cat (1934-2007) [*see* **Ajmonecat Lake** (sic)], and built at Naples. She left Anzio on June 27, 1969 under Capt. Ajmone Cat and his amateur crew of three (G. Martuscelli, navigator; F. Di Jorio, seaman; and P.G. Airoldi, alpinist), and 3 expeditioners, who were making a round-the-world trip flying the Italian flag. The expedition arrived at Deception Island on Dec. 31, 1969, where they met up with the *Hero*, and planted the Italian flag in Antarctica for the first time. On Jan. 19, 1970 they left Deception Island for Almirante Brown Station, and stayed with the Argentines, Jan. 22-25, then on to Palmer Station, with the Americans, Jan. 25-28, then back to Almirante Brown to wait for good weather so they could cross the Drake Passage back to the Falkland Islands, where they arrived on March 4. On Nov. 21, 1970 they arrived back in Anzio. The same vessel, newly refitted, and the same captain, but different crew, and with a much more scientific mission under the aegis of the Italian navy, set out again from Naples on July 1, 1973. There were more people on board this time, as the vessel was the transporter for two separate five-man Italian expeditions — the second Italian Antarctic Expedition of the National Research Council, and also the Naval Institute of Naples Antarctic Expedition (which also represented the Italian Shipping Institute). Arriving once more at Deception Island, on Jan. 4, 1974, then to Port Lockroy on Jan. 12, Palmer Station on Jan. 14, and then they toured the Argentine Islands from Jan. 17 to Jan. 25, conducting geological studies and hydrographic surveys, before being damaged, at which point, on the 25th, they made it to Almirante Brown. To Deception Island again on Feb. 1, then to Órcadas Station on Jan. 9, Signy Island on Feb. 11, then through the South Orkneys to Grytviken, on South Georgia, on Feb. 21, and there they met up with the *Bransfield*. They arrived back in Anzio on June 27, 1974.

Paso San José *see* **San José Pass**

San José Pass. 63°55' S, 57°54' W. A pass trending NW-SE, and running at an elevation of between 150 and 200 m, between Lachman Crags and Stickle Ridge, on James Ross Island. On either side of the pass there are exposures of fossiliferous Cretaceous rocks. Following work in this area by the Argentines, they named it in 1978 as Paso San José, for Saint Joseph. UK-APC accepted the translated name San José Pass on Feb. 15, 1988, and US-ACAN followed suit. The Chileans call it Paso Ardiles, after Capitán de corbeta Jorge Ardiles Rojas, 2nd-in-command of the *Piloto Pardo* in the season that included the dramatic rescue of the *Lindblad Explorer* in 1972.

Nunatak San Juan *see* **Suárez Nunatak**

The *San Juan Nepomuceno*. Argentine sealing brig, owned by Marcel Pagliano, of Buenos Aires. She was probably the first Argentine sealer in Antarctica. On Sept. 18, 1818, Pedro Nelson took command of her, and on Sept. 23 of that year sailed her out of Buenos Aires bound for the Patagonian sealing grounds. On Dec. 2, 1818, while the brig was in Patagonia, a party of British sealers under London merchant Adam Guy got together with Charles Tidblom, and chartered the brig. On Aug. 25, 1819 she left Buenos Aires for Patagonia, and then on to the South Shetlands for the 1819-20 season, under the command of Tidblom. She took 14,600 seal skins and returned to Buenos Aires on Feb. 22, 1820. This was the first load of fur seal skins brought back from the brand new hunting grounds of the South Shetlands. The *Hersilia* arrived back 5 days later.

San Juan Refugio. 64°03' S, 56°21' W. Argentine refuge hut built by Army personnel (led by Capt. Ignacio Carro) from Esperanza Station on Oct. 9, 1959 on a rock surface, to the SW of Hidden Lake, James Ross Island. It is now dismantled.

The *San Lesmes*. It has been proposed by some researchers that the *San Lesmes*, part of Loaisia's expedition of 1525-26, actually got blown off course in the Straits of Magellan, and wound up in or around 62°S. Francisco de Hoces was the skipper of the *San Lesmes*.

The *San Luis*. Destroyer on the Feb. 1948 Argentine naval maneuvers led by Adm. Cappus (q.v. for details). Carlos Suárez Dóriga was skipper of the ship.

Cabo San Luis *see* **Rabot Point**

Monte San Luis *see* **Mount St. Louis** (under **Saint**)

Punta San Luis. 64°32' S, 62°06' W. A point on one of the Racovitza Islands, just N of Nansen Island, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Base San Martín *see* **San Martín Station**

Isla San Martín *see* **Barry Island**

Tierra (de) San Martín *see* **San Martín Land**

San Martín Canyon. 67°20' S, 47°35' W. An undersea feature, part of the Southern Ocean. Named in Oct. 2000, by international agreement, after the Argentine icebreaker *General San Martín*.

San Martín Glacier. 82°24' S, 42°14' W. A broad glacier flowing NW between the Panzarini Hills and the Schneider Hills, into Support Force Glacier, bisecting the Argentina Range as it does so, in the Pensacola Mountains. Seen from the air by Grupo Naval UT 78, during the first Argentine flight to the Pole, in Jan. 1962. They descriptively called it Valle Medio (i.e., "middle valley"), and that name appears on their chart of 1964, and was also the name accepted by the

1970 Argentine gazetteer. Surveyed from the ground by USGS in 1965-66, photographed aerially by USN in 1967, and plotted by USGS from these efforts, it proved to be a glacier, rather than a valley, and US-ACAN renamed it in 1968, as San Martín Glacier, for the famous Argentine icebreaker, *General San Martín*. UK-APC followed suit with that naming on Nov. 3, 1971, and it appears in the 1974 British gazetteer. This has put the Argentines in a bind. Here they have had a major glacier given a great name by the British and the Americans, for a great Argentine ship, and all the time they are stuck with the somewhat boring name Valle Medio, and all because of the Falklands War. Sooner or later they will have to change it to Glaciar San Martín.

San Martín Land. 68°08' S, 67°07' W. This was Argentina's name (actually Tierra San Martín, or Tierra de San Martín) for the Antarctic Peninsula, which they claim. Named for the Argentine liberator, José de San Martín.

San Martín Station. 68°07' S, 67°08' W. Known officially as Base de Ejército General San Martín (General San Martín Army Base), but more popularly called Base San Martín. Argentine year-round base, at Caleta Sanavirón, on Barry Island, in the Debenham Islands, off the W coast of Graham Land. It was built on the site of the former BGLE southern base of 1936-37. **March 21, 1951**: Opened by Infantry Colonel Hernán Pujato (the first base leader), and blessed by Father Juan Monticelli, it was the first ever permanent human settlement south of the Antarctic Circle. **1951 winter**: Col. Pujato (leader — see above), Infantry Captain Jorge Julio Casimiro Mottet (deputy leader; he was a famous mountain climber), Ernesto Natalio Gómez (medical officer), Lt. Luis Roberto Fontana (chemist), sub-officer adjutant radiotelegraphist Juan Heraldo Riella, Cabo Lucas Serrano, and Cabo Telegrafista Hernán Sergio González Supery (Army men), Domingo Ángel Maria Roque Abregú Delgado (meteorologist; he had wintered-over at Órcadas Station in 1948), and Antonio Moro (cook and construction technician). **Dec. 1951**: Vicecomodoro Marambio dropped mail from a plane. **March 1952**: The *Bahía Aguirre* arrived. **1952 winter**: Artillery Major Humberto Bassani Grande (leader). Hugo Jorge Parodi was the pilot. **June 30, 1952**: A fire destroyed the main living quarters, two supply warehouses, the power plant, and the radio station. **1952-53 summer**: The airplane *Santa Cruz* dropped supplies. **1953 winter**: Artillery Major Humberto Bassani Grande (leader). Parodi was pilot again. **1953-54 summer**: The station was relieved by helicopter. **1954 winter**: Cavalry Captain Jorge Edgard Léal (leader). **1955 winter**: Infantry Captain Eudaldo Aníbal Ernesto Valette (leader). **1956 winter**: Engineer Major Jorge Alberto Elizagaray (leader). **1957 winter**: Infantry Captain Rafael Walter Muriel (leader). Abel Moisés Horenstein was the metorologist (he had wintered-over at Órcadas Station in 1949 and 1953). **1958 winter**: Infantry Lt. Gustavo Adolfo Giró Tapper (leader). **Feb. 2, 1959**: The station burned down. **1959 winter**: Infantry Lt. Gustavo Adolfo Giró Tapper (leader). **Feb. 28, 1960**: The station was de-activated, after being maintained continuously, and was evacuated. **March 21, 1976**: The station was re-activated. **1976 winter**: Infantry Lt. Col. Amílcar Oriente Montero (leader). **1977 winter**: Infantry Major José Bilbao Richter (leader). **1978 winter**: Infantry 1st Lt. Gustavo Federico Giménez (leader). **1979 winter**: Communications Major Guillermo Jorge Laborde (leader). **1980 winter**: Cavalry 1st Lt. Manuel Bautista José Ceñal (leader). **1981 winter**: Infantry 1st Lt. Héctor Luis Davel (leader). **1982 winter**: Infantry Lt. Col. Luis Alberto Herrera (leader). There were 3 Japanese exchange scientists. **1983 winter**: Infantry 1st Lt. Enrique Enéas Neirotti (leader). **1984 winter**: Infantry 1st Lt. Mario Gabriel Dotto (leader). **1985 winter**: Infantry Major Raúl Ernesto José (leader). **1986 winter**: Infantry 1st Lt. Rodolfo Barrionuevo (leader). **1987 winter**: Cavalry Major Néstor Orlando Esteller (leader). **1988 winter**: Artillery Captain Eduardo Fernando Ballesteros (leader). **1989 winter**: Infantry 1st Lt. Roberto Óscar Reyes (leader). **1990 winter**: Artillery Captain Víctor Hugo Figueroa (leader). **1991 winter**: Artillery Captain Víctor Alejandro Forster (leader). **1992 winter**: Cavalry 1st Lt. Gustavo María Gómez (leader). **1993 winter**: Artillery Captain Alejandro Héctor Bertotto (leader). **1994 winter**: Engineer Captain Justo Francisco Treviranus (leader). **1995 winter**: Infantry Captain Gustavo Rogelio Campellone (leader). **1996 winter**: Engineer Captain Carlos Félix Flesia (leader). **1997 winter**: Engineer Captain Guillermo Andrés Dolder (leader). **1998 winter**: Infantry Captain Ariel Adrián Ferro (leader). **1999 winter**: Infantry Captain Óscar Santiago Zarich (leader). **2000 winter**: Infantry Captain Miguel Vázquez (leader). **2001 winter**: Communications Captain Carlos Martín (leader). **2002 winter**: Infantry Captain Humberto Salas (leader). **2003 winter**: Medical Captain Paulo Fabián Locastro (leader). **2004 winter**: Medical Major Nicolás Eugenio Bernard (leader). **2005 winter**: Medical Major Guillermo Héctor Salvia (leader). **2006 winter**: Communications Captain Víctor Gabriel Acevedo (leader). **2007 winter**: Infantry 1st Lt. Pablo Damián Paron (leader). **2008 winter**: Engineer 1st Lt. José Nicolás Huayquimil (leader). **2009 winter**: Infantry Captain Guillermo Makaruk (leader). The base continues to be open every winter.

Cerro San Miguel *see* **Cerro Castillo**

Caleta San Nicolás. 63°40' S, 57°50' W. A cove, just to the E of Striped Hill, at the head of Botany Bay, near the S shore of Trinity Peninsula. Named by the Argentines.

San Nicolás Refugio. 63°39' S, 57°50' W. Argentine refuge hut built by the Army in Aug. 1963, at Crystal Hill, on the N coast of the entrance to Prince Gustav Channel. It was inaugurated on Sept. 12, 1963. It is now dismantled.

Cerro San Rafael. 82°14' S, 41°15' W. A hill just NE of Mount Ferrara, in the Panzarini Hills, in the Argentina Range, in the Pensacola Mountains. Named by the Argentines. Not to be confused with Mount Ferrara.

Nunatak San Rafael *see* **Mount Ferrara**

San Rafael Nunatak *see* **Mount Ferrara**

San Roque Refugio. 65°17' S, 59°18' W. Argentine Army refuge hut built by ArgAE 1955-56, on Jan. 25, 1956, on a rock surface, at the SE end of Robertson Island, at the E end of the Seal Nunataks, near Cape Marsh, on the W coast of Graham Land. It was built from Oct. 1, 1956, and inaugurated on Nov. 21, 1956. In 1959 it was occupied by the refugio-building party led by Capt. Ignacio Carro. Now dismantled.

Caleta San Servando *see* **Holluschickie Bay**

San Stefano Peak. 62°38' S, 61°14' W. A rocky peak rising to 240 m in the central part of Rugged Island, off the W coast of Byers Peninsula (on Livingston Island), 3.5 km NE of Benson Point, 4.1 km SE of Cape Sheffield, 860 m S of Cherven Peak, 1.9 km W of Vund Point, and 1.65 km NW of Radev Point, in the South Shetlands. Mapped by the Spanish in 1993. Named by the Bulgarians on Dec. 15, 2006, for the settlement of San Stefano, in connection with the Treaty of San Stefano that restored Bulgaria's statehood on March 3, 1878.

The *San Telmo*. A 74-gun Spanish ship, launched in 1788, that left Cádiz on May 10, 1819, as part of a fleet of three under the command of Captain Rosendo Porlier (q.v.), bound for Lima, along with the *Alexandro Iº* (Captain Antonio de Tiscar), the *Prueba* (Captain Melitón Pérez de Camino), and the *Primeroso-Mariana* (Captain Manuel de Castillo). Captain Joaquín de Toledo (q.v.) actually commanded the *San Telmo*. In the Drake Passage, bad weather forced the fleet south, and, in 61°S, 60°W, the *Primeroso-Mariana* took the *San Telmo* in tow, but could not hold her because the hawsers were not strong enough. The *San Telmo* was left to her fate on Sept. 4, 1819, in about 62°S, with no mast or rudder. Parts of the vessel were found by sealers on Half Moon Beach, Livingston Island, in the South Shetlands, in 1820-21. Aside from the isolated incident of William Camell, in 1719, the (reportedly 644) crew and soldiers aboard the *San Telmo* may well have been the first persons to die in Antarctica. In 1993-94 the Chileans and the Spanish set out to find her remains. *See* **Porlier Bay**.

Glaciar San Telmo. 75°56' S, 62°15' W. A glacier flowing into the Weddell Sea at a point a little S of the Dodson Peninsula, on the E coast of the Antarctic Peninsula. Named by the Hydrographic Institute of the Chilean Navy, for the *San Telmo*.

San Telmo Island. 62°28' S, 60°50' W. An island, 950 m long, up to 200 m wide, and with an area of about 0.1 sq km, it is by far the largest of the San Telmo Islets, which form the W side of Shirreff Cove, on the N coast of Livingston Island, in the South Shetlands. There is a sand and pebble beach on the SE coast, separated from a sand beach to the N by 2 irregular cliffs and narrow pebble beaches. Fur seals and sheathbills breed on the N beach. Fildes not only described it (in 1821), but also mentioned that some spars and an anchor stock of the wrecked *San Telmo* had been found by sealers about that time,

on Half Moon Beach. Named Telmo Island by UK-APC on July 7, 1959. US-ACAN accepted the name San Telmo Island in 1964. The British plotted it anew in late 2008.

San Telmo Islets. 62°28' S, 60°50' W. A small group of low-lying rocky islets, 1200 m W of the Cape Shirreff peninsula, and forming the W side of Shirreff Cove, on the N coast of Livingston Island, in the South Shetlands. The largest islet in the group is called San Telmo Island.

SANAE *see* **South African National Antarctic Expedition**

Sanae Bank. 70°18' S, 3°00' W. A submarine bank, between 200 and 400 deep, out to sea beyond Sanae Station and the Princess Martha Coast of Queen Maud Land. Heinrich Hinze proposed the name in Jan. 1997, in association with Sanae Station, and it was accepted in June 1997, by international agreement.

Sanae Canyon. 68°30' S, 2°45' W. An undersea feature in the Weddell Sea. Named in association with Sanae Station. It stretches between 1°W and 4°W.

Sanae Station. 70°30' S, 2°53' W. Also called Tottenbukta Sanae. South Africa's second scientific station in Antarctica. On Totten Bay, in Polar Circle Bight, on the Princess Martha Coast of New Schwabenland, in Queen Maud Land. **Jan. 1963**: Norway station was relieved, and Andrew M. Venter became the new leader. **1962-63**: Until this time, South Africa had been using Norway Station (q.v.). However, a newer, bigger, better station, was built, 20 km inland from Norway Station. They called it Sanae Station. SANAE, the expeditions' acronym, has all capital letters. The name of the station, which is the same, and which was named for the expeditions, has a capital S, and the rest in lower case. **1963 winter**: Andrew M. Venter (physicist and leader at the new Sanae Station), Dr. C.F. Wagner, J. Labuschagne, C.J. Reynolds, W.J.F. "Franco" du Toit, E.E. Bester, O. Langenegger, André du Plessis, D.G. Torr, G. Vermaak, J. Randall, A.M. van der Meulen, and J. Joubert. **Jan. 1964**: The station was relieved by the *R.S.A.*, and Skroef van Zyl took over as leader. **1964 winter**: 14 men. W.R. "Skroef" van Zyl (leader), Dr M.L. "Tollie" Traut (2nd-in-command), André du Plessis, W.J.F. "Franco" du Toit, Bernie P. Booyens, H.S. "Fanus" du Preez, A.G. "Dries" Brunt, M.B. "Zek" Ezekowitz, G.J. "Deon" Kühn, Pieter de Waal, George W. Bentley, J.F. "Koos" Pretorius, Nöel H. Jay, G. Trevor Robertson. **Jan. 1965**: The station was relieved by the *R.S.A.*, and Sewes van Wyk took over as leader. **1965 winter**: 14 men. T.J. "Sewes" van Wyk (leader), Dr. Wolfgang H. Pollack, D. Johan Joubert, Derek W. Sharwood, Johnny A. Strydom, Hennie J. Joubert, G.P. "Pottie" Potgieter, A.J. "Dries" Steyn, M.B. "Zek" Ezekowitz, Nico S. Smit, E. Ray Statt, Dr. Jan du P. de Wit, J.C. "Danie" Joubert, Wilfred Hodsdon. **Jan. 1966**: The station was relieved by the *R.S.A.*, and Sean Kavanagh took over as leader. **1966 winter**: Sean Kavanagh (surveyor and leader), Dr. Johan A. Schoones, Christo Wolfaardt, Sytze M. Verbeek, S. "Fanie" Venter, R.G. van den Heever, H. Durandt Barnard, Eddie de Ridder, Horst A. Bastin, Harold O. Poole, Dave P. Homann, Jan S. Smith, Huub Czanik, Henry John Fulton, and Willie J. van Staden. **Jan. 1967**: The station was relieved by the *R.S.A.*, and Eddie Rossouw took over as leader. **1967 winter**: Eddie Rossouw (leader), Charles Kingsley, Freddie Mocke, Phil Steyn, Hannes Steyn, Brandt van Rhyn, Maarten Krüger, Gerrit Coetzee, Wilf Hodsdon, Ron Kirkland, Kobus Retief, Allon Poole, Hans Loots, Neels Bezuidenhout, André Nel, and Roelf van Heerden. **Jan. 1968**: The station was relieved by the *R.S.A.* Danie J. Joubert became new leader. **1968 winter**: Danie J. Joubert (leader), Howard Williams, Heinz Rode, Johan Grobbelaar, Fred Clements, Dawie Smith, Eddie Bosman, Gert de Beer, Willem van Zyl, Gerrie Scholtz, Bryan Meyer, Brian Watters, Anton Aucamp, Hennie Aucamp, Clive Spencer, Jan S. Smith. **Jan. 1969**: The station was relieved by the *R.S.A.*, and Henry John Fulton became leader. **1969 winter**: Henry John Fulton (leader), Andries J. "Dries" Niemandt, Peter R. Sutcliff (geomagnetician), Johan R. van der Merwe, Capt. Phil C.L. Steyn, and J. Barry Kock (meteorologists), Rob Johnston, Schalk Engelbrecht (ionosphere physicist), Alphie G. Grobler (medical officer), Pieter König, Clive A. Spencer and Gordon J. Mackie (radio operators). **Nov. 3, 1969**: Gordon Mackie died. **Jan. 1970**: The station was relieved by the *R.S.A.*, and Willem J. van Zyl became leader. A modified Volkswagen was used for local transportation. **1970 winter**: Willem J. van Zyl (leader), Pat Kühn, Helgo Kahle, Pat Vosloo, Marius Minnaar, Harm Moraal, Peter Donald, Digby Scorgie, Prieur du Plessis, Hennie Viljoen, Eugene Els, Tony Woods, Joachim Starke, André Grundling, Dusan Vaclavic, Sandor Rosznya, Fanie Nel, and Gert de Beer. This winter the new Sanae Station was planned. **Jan. 1971**: The station was relieved by the *R.S.A.*, and Jakobus Gustav Nel (known as Gustav Nel) became leader. Sanae II Station was begun. **1971 winter**: Gustav Nel (leader), Louis Wessels (2nd-in-command), Howard Thompson, Dries Muller, Tom Potgieter, Evert Scholtz, Carl Mischke, Mike Martin, Johan Bothma, Peter Bennett, Theo Kruys, Johan Koch, Andy Patterson (actually, he led Borga Station that winter), Ray Haggard, Jan Brendell, Trevor Schaefer, Reigaart "Rickey" van Mazjik. **Jan. 1972**: The station was relieved by the *R.S.A.*, and Reginald John Brandt became leader.

Sanae II Station. The new South African station, still on the Fimbul Ice Shelf. **1972 winter**: 20 men. Reginald John "Buks" Brandt (leader), Rudolf Sevcik, Keith Moir, Johan Kriel, Gordon Hollambe, Albert Naude, Dave Almeida, Kobus Minnaar, Paul van Zyl, Ivor Bennet, Frank Schneider, Dana Coetzee, Brian van Zyl, Johan Jacobs, John Pitcher, Neville Skitt, Jan Taljard, Leon Fourie, John Williams, Hampie Venter. **Jan. 1973**: The station was relieved by the *R.S.A.*, and Dave Keller became leader. **1973 winter**: David Johannes "Dave" Keller (leader), André Pretorius, Cas Willemse, Roland Royce, Willem Smith, Harry Mitchell, Hennie Minnaar, Chris van Zyl, Fred Pohl, Louis Vermaak, Roedie Cevcik, Gert van der Westhuize, Jiri Kucera, Kobus Burger, Eric Rabe, Willie Kuperus, Fanie Schönfeldt, Servaas de Kock, and Dan Craven. **Jan. 1974**: The station was relieved by the *R.S.A.*, and Reigaart van Mazijk became leader. **1974 winter**: Reigaart "Rickey" van Mazijk (leader), Lennis van Schalkwyck, Johann Erasmus, Bernie Bowers, Hennie Barnard, Ulrich Schulz, Dave Buckley, Chris Lambrechts, Terry Terblanche, Willem Smith, Nico van Zyl, Lambert Helberg, Roger Gavshon, John Riley, Derek van Deventer, Guy Linscott, John Scott, Joachim Starke, Arnie Küppen, Steve Mandy, Gerhard Cillié, and Dudley Rowswell. **Jan. 1975**: The *R.S.A.* relieved the station, and Evan Phillip Morkel became leader. **1975 winter**: Evan Phillip Morkel (leader), Gert Meyer, Ken Cleland, Sandor Rozsnyai, Rob Heard, John Rash, Wolfgang Deckler, Stephan Bothma, Mike Perks, Tino Rupping, Donald King, Desmond Duthie, Gert Ochse, Carel Brand, Padraig Culligan, Graham Meineke, Godfrey Knight, Gerhard Barnardo, Richard Otto, Heinz Kramer, Stewart Lund, and the 3 dogs — Ringo, Frosty, and Kerneels. **Jan. 1976**: The station was relieved by the *R.S.A.*, and Gert Johannes van der Westhuisen became leader. **1976 winter**: Gert Johannes van der Westhuisen (leader), Carel van der Merwe, Bevil Bramwell, John Fisher, Gert van der Westhuizen, Johan Kilian, Johan Groenewald, Des van Eyssen, Barry Nugent, Deon van der Walt, Marius Potgieter, Bill Schultz, Mike Lipschitz, Rory Galbraithe, and Bruno Stachel. **Jan. 1977**: The station was relieved by the *R.S.A.*, and Gideon Johannes le Roux became leader. **1977 winter**: Gideon Johannes le Roux (leader), Hennie A. van Deventer, Hein B. Goldshagg, William J. Davis, Warren J. Rosewell, Gordon Hardman, Howard T. Bruwer, Fred A.W. Pohl, John C. Bourke, Charlie C. Whitcomb, Danie L. Le Roux, Gerrit Myburgh, Leon Joubert, Dick A. Raavé, Rob M. Pitman, Geoff P. Evans. **Jan. 1978**: The station was relieved by the *R.S.A.*, on her last run to Antarctica. Stanley "Stan" Roberts became new base leader. **1978 winter**: Stanley Herbert Roberts (leader), Errol de Kock, Wiets Roos, Chris Swart, Johan Steyn, Julius Marschal, Logan Surgeson, Paul Griffin, Riaan Lourens, John Shearman, Hannes Kruger, Alfie Dalton, Lee Hall, Willem Kotze, and Koos Byleveld. **Jan. 1979**: The station was relieved by the *Agulhas*, on her first run in as the *R.S.A.*'s replacement relief ship. David Rundgren became base leader. **1979 winter**: Carl David Rundgren (leader), O. Sakkers, W. Roodman, S. Cawdron, J. van der Merwe, G. Luden, R. van Rooyen, R. Burchell, G. Hull, I. Crichton,, C. Maritz, F. de Beer, I. Dore, R. Sandler, J. Shelly, M. Maurin, J. Stone, D. Levin, and D. Smits. **Jan. 1980**: The station was relieved by the *Agulhas*, and Johannes Kruger became the new base leader of Sanae III.

Sanae III Station. 70°19' S, 2°23' W. The new South African station, again on the Fimbul Ice shelf. **Feb.-March 1980**: The new Sanae III Station was built. **1980 winter**: Johannes Petrus "Hannes" Kruger (leader), Martin Weilbach, Ju-

lian Scales, Rob Key, George Palmer, Garth Slabbert, Piet de Villiers, Gerhard Cilliers, John McChesney, J.C. Botha, Rassie Erasmus, Mike Richardson, Deon Meyer, and Lindsay Lines. **Feb. 1981**: The *Agulhas* relieved the station, and Desmond Douglas Duthie became new leader. **1981 winter**: Des Duthie (leader), Johan du Toit, Alan Bushé, Dave Gilson, Mark St Quintin, Johan Bierman, Alwyn Wolfaardt, John Coetzer, Hedley Hensen, Chris Odendaal, Malcolm Hiom, Martiens Roos, John Webley, Willem de Wet, Tjaart Schutte, and Nic Loubser. **Jan. 1982**: The *Agulhas* relieved the station, and Jacobus François "Koos" du Plooy became leader. **1982 winter**: Koos du Plooy (leader), Willem van Rensburg, Terry Chowles, Rob Fisher, Ian Shaw, Alan Johnson, Alan Moore, Mike Schmidt, Chris van Schalkwyck, Anton Prinsloo, Hannes Raabe, Koos du Plooy, Paul Prinsloo, Tom Momberg, Dolf van Tonder, Jan van Rooyen, and Justin Clarke. **Jan. 1983**: The *Agulhas* relieved the station, and Arnold Vermooten became leader. **1983 winter**: 15 men. Carl Arnold Vermooten (leader), Deon Kriel, Hubertus Mostert, Hans Verlinde, Ghe Waldeck, Kobus Steyn, Gunther Drevin, J.C. Van der Walt, Mark van Aardt, Tony Whittaker, Thys Coetzee, Nigel Briggs, Johnny Truter, Ken Fox, Jose d'Oliviera. **Jan. 1984**: The *Agulhas* relieved the station, and Malcolm Hiom became leader. **1984 winter**: Malcolm David Hiom (leader), Frans Havenga, Danie Ferreira, Andrew Marais, Nick Klerck, Garrett de Villiers, Graham Ducasse, Steve Comfort, John Walker, Anton Coetzee, Bertie Lubbe, Danie Van der Walt, Dave Conway, Mark Tibbenham, Trevor Heath, Hendrik Boshoff. **Jan. 1985**: The *Agulhas* relieved the station, and Lindsay Johnson became base leader. **1985 winter**: Lindsay Johnson (leader), Mark Boekstein (deputy leader), Raoul Scholtz (medical officer), Andre Coetzee, Michael Kosch, Jacques van Niekerk, Martin Visagie, Michael Hocknell, Rory Cunningham, Roger van Ryn, Gregory Duvill, David Ireland, Phil Uys, Roddney Alexander, and Julius Ludwig. **Jan. 1986**: The *Agulhas* relieved the station, and J.N. Ryan became base leader. **1986 winter**: Jeff N. Ryan (leader), Reiner Friedel, Bo Bonnevie, Steven Hatfil, Patrick O'Hara, Mark Allix, Hendrik Breytenbach, Graham Blyth, Mark Steyn, David Hulbert, Johan Opperman, Wim Matthee, Dawid Serfontein, Robert Smith, Andre Joubert. **Jan. 1987**: The *Agulhas* relieved the station, and S.D.G. Comfort became base leader. **1987 winter**: Steve Comfort (leader), Louis Rhoode, Loekie Venter, John Walker, Eugene Burger, Dave McKay, Rob Cole, André Smit, Gavin Hough, Mark Zunkel, Andy Cooper, Dan van der Heever, Jo Daniel, Japie Maré, Phil de Wet. **Nov. 1987**: Emergency medical evacuation by U.S. aircraft to McMurdo. **Jan. 1988**: The *Agulhas* relieved the station, and Ted Barlett became the new leader. **1988 winter**: Ted Barlett (leader), Adriaan van Zyl, Rod Alexander, Greg Duvill, Andy Watson, Bun Booyens, Christo van Rensburg, Stephen Irons, Phil Slier, Bauke Duvenhage, Jannie van der Merwe, Pieter Greyling, Fred van der Merwe, Des Griggs. **1989 winter**: Jacobus "Chris" van Jaarsveld (leader), Johan van Rensburg (doctor), Theo Carter (senior meteorologist), Ian Alleman and Chris Kierkoff (meteorologists), Steve van Niekerk (senior communications man), Craig Butler (communications man), Niall Cameron (radio technician), Chris Potrawiak (senior diesel mechanic), Greeff Slabber (diesel mechanic), Marthinus Kock, Paul van Wyk, John Goetsch, Charles Oertal. **1990 winter**: Rene de Wet (doctor and leader), Paulo Caldiera, Lawrence Kieser, Frank Sokolic, Scarre Celliers, Maans Basson, Dirk Wessels, Pieter Greyling, Pieter Raath, Greg Bodeker, Ivan Dalglish. **1991 winter**: George McFie (leader), Rene de Wet (doctor), Arnoud de Nooy (senior meteorologist), Stephan Terblanche and Anton Schutte (junior meteorologists), Jors Rohlandt (radio technician), Thys Lambrechts (senior diesel mechanic), Danie Swart (diesel mechanic), Hennie Pelzer, Vincent Verway, Bob Steenhof-Snetlage, Nigel Basel. **1992 winter**: Jan Abraham Joubert Hattingh (leader), Wessel Strydom (doctor), Billy van der Poll, Neil Comfort, and Dawie Vorster (meteorologists), Kobus Venter (radio technician), Sean Marex and Lawrence Kieser (diesel mechanics), Patrick Fortuin, Callie Schoeman, Eric Petzer, Craig Butler, Malcolm Smith, Mike Mathews. On Nov. 12, 1992, the leader had a serious injury, and was evacuated from Grunehogna to Pole Station, and from there on to NZ by U.S. aircraft. **1993 winter**: Rory Heather-Clark (leader), Marc Trollop (doctor), Manus Mulder (radio operator), Brindsley Archer (radio technician), Johan Eitner, Jan Joubert, and Leon Snyders (diesel mechanics), Fanie Schoeman, Brendon Grunewald, Mario Del Mistro. **1994 winter**: Johan Saunders (leader), Peter Klaver (doctor), Ken Rice, Peter Snyman, and Dawie Arndt (physicists), Byron Sokolich (communications man), Neville Craig (radio technician), John Huyser (diesel mechanic). **Dec. 1994**: Under the command of summer leader Jakobus Gutav Nel, the station was closed for wintering.

Sanae IV Station. 71°41' S, 2°53' W. Also known as Vesles. The new South African station at Vesleskarvet, on Ahlmann Ridge, in Queen Maud Land, 200 km S of the first 3 Sanae stations. Opened Jan. 19, 1997, under the command of summer leader Jan Hattingh. **1997 winter**: David N. Frank (meteorologist and leader), Burt Wilson (physicist and deputy leader), Aithne Rowse (doctor and first woman SANAE member to winter-over), Pieter "Piet" Swanevelder and André Larisma (physicists), Étienne Hugo (electrical engineer), Hein de Beer (electronics engineer), Fanie "Bez" Bezuidenhout and Jacques la Cock (diesel mechanics), Paul van Staden (mechanical engineer). **1998 winter**: Paul Booysens (leader), Lindsay Dawes (UND scientist), Esmé Nel (doctor), François Hofmeyr (mechanical engineer), Boasa Tladi and Michael Walker (diesel mechanics), Jason Whiting (communications and computer engineer), Barend "Bez" Bezuidenhout (radar), Rossouw Visser (electrical engineer), Johan Nel (PU scientist). **1999 winter**: Duncan Cromarty (leader), Ernest Buitendag (doctor), Neil Malan (Amigo and Anoks scientist), Conrad Mahlase (Amigo scientist), Fanus Olivier (HF radar scientist), Mike Cromhout (electrical engineer), James Kwalepe and André Bothe (diesel mechanics), Ryan Earle (mechanical engineer), Karel Koster (electronics engineer). **2000 winter**: Armin Deffur (medical officer and team leader), David Volschenk (diesel mechanic and deputy leader), Mike Johannes (meteorologist), Morné Smit (communications), Jan Wild (HF radar scientist), Paul van Warmelo (electrical engineer), Michael Rabotho (diesel mechanic), Riaan du Preez (mechanical engineer), Tankiso Modise (Amigo scientist), Jaco Minnie (Amigo and Anoks technician). **2001 winter**: Farouk Parker (medical officer and team leader), Charne Reyneke (meteorologist and deputy leader), Ntembeko "Zinho" Njovane (Anoks scientist), Carl Bellingan (Amigo scientist), Anton Grobler (electronics engineer), Stephan de Wet (electrical engineer), Dirk Uys (HF radar engineer), Robert Inglis (mechanical engineer), Adrian Adonis and Aiden Flack (diesel mechanics). **2002 winter**: Kobus Steyn (meteorologist and team leader), Leon du Plessis (mechanical engineer and deputy leader), Meraai Smit (medical officer), Anton Grobler (electronics engineer), Steven Jansen and Nole Green (diesel mechanics), Joshua Nkosi (electrical engineer), Garron Fish (radar engineer), Willem Truter (mechanical engineer). **2003 winter**: Darren Ritchie (diesel mechanic and team leader), Kobus Steyn (meteorologist), Hansie van Rooyen (mechanical engineer and deputy leader), Matome Sekgala (doctor), Naas Janse van Ressnberg (HF radar engineer), Thamie Njembe (electrical engineer), Ewald Ferreira (electronics engineer), Johan Bijker (mechanical engineer), Vumani Masondo (diesel mechanic). **2004 winter**: Beneke de Wet (team leader), Shorty Terblanche (meteorologist and deputy leader), Rupert Niemand (doctor), Pieter Wolmarans and Struan Cockroft (scientist), Deon Gouvias and Marius Welgemoed (diesel mechanics), Leon Engelbrecht (electrical engineer), Mark Loubser (mechanical engineer). **2005 winter**: Jonathan Starke (medical officer and team leader), Martin Slabber (electrical engineer and deputy leader), Shadrack Podile (meteorologist), Brian Bowier (Anoks/Amigo scientist), Chris van der Merwe (HF radar and seismologist), Mfanukhona Joseph Nhlapo (electronics engineer), August Arnold and Aiden Flack (diesel mechanics), and Gracious Banda (mechanical engineer). **2006 winter**: Rivaaj Garibdass (radio engineer and team leader), Geraldinah Mjali (doctor), Samantha "Sam" Linnerts (meteorologist), Nole Green and Sbu Mtembu (diesel mechanics), Leon Prinsloo and Fritz Grobbelaar (mechanical engineers), Lötter Kock and Kevin Duma (electrical engineers). **2007 winter**: Gert J.J. Benadé (electrical engineer and team leader), Leonard Maree (electronics engineer and deputy leader), Tamara Spinks (medical orderly), Anton Feun (IPY scientist), Andries "Dries" van Staden (meteorologist), Chantal Steyn (Anoks/Amigo

scientist), Zamikhaya Magogotya (HF radar engineer), Ronald Collatz (senior diesel mechanic), Vincent Rademeyer (diesel mechanic), Fritz Grobbelaar (mechanical engineer). **2008 winter**: Rossouw "Ross" Hofmeyr (doctor and leader), Neels Fourie (diesel mechanic and deputy leader), Santjie du Toit (meteorologist), Morgan O'Kennedy (Anoks and Amigo scientist), Llewellyn Kriedemann (HF radar scientist), Daleen Koch (magnetician), Gerhard Laubscher (electronics engineer), Saziso Nginda (electrical engineer), Anton Van Zyl (mechanical engineer), Richard Duncan (diesel mechanic). **2009 winter**: Lötter Kock (electrical engineer and team leader), Alan Huang (electronics engineer and deputy leader), Joanna Thirsk (doctor), Johan Jamneck (senior meteorologist), Erick Minnie (cosmic ray scientist), Willie Nel (mechanical engineer), Rory Meyer (space weather scientist), Keith Browne (radar engineer), Charl van Aardt and Nole Green (diesel mechanics). **2010 winter**: André Harms (mechanical engineer and team leader), Tyrell Sassen (electronics engineer and deputy leader), Lowellen Clarke (doctor), Robert Schoeman (meteorologist), Etienne Kruger (cosmic ray physicist), James Hayes (space weather engineer), Roger van Schie (radar engineer), Ryno Jordaan (electrical engineer), and Johan Nortje and Marlon Manko (diesel mechanics).

The *Sanavirón*. An 835-ton, 143-foot tug, built in Orange, Texas, by the Levingston Shipbuilding Company. Before being used as an American vessel, she was sold to Argentina in 1947, and became the *Sanavirón*. She was used on the following expeditions: ArgAE 1948 (Capt. Luis M. Ambrosini); ArgAE 1948-49 (first captain was Daniel Victorio, and the next captain was Gabino J.A. Santoro); ArgAE 1949-50 (Captain Luis A. Martín); ArgAE 1950-51 (Capt. Laerte J. Santucci); ArgAE 1951-52 (Capt. Aldo L. Molinari); ArgAE 1952-53 (Capt. Ricardo S. FitzSimon); ArgAE 1953-54 (Capt. Jorge E.H. Pernice); ArgAE 1954-55 (Capt. Héctor A. Suffern Moine); ArgAE 1956-57 (Capt. Eduardo H. Fraga).

Caleta Sanavirón. 68°08' S, 67°06' W. A cove on Barry Island, in the Debenham Islands, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Named by the Argentines, for the *Sanavirón*.

Islotes Sanavirón *see* **Sanavirón Island**

Monte Sanavirón. 83°34' S, 48°30' W. An isolated peak in the Pensacola Mountains. Named by the Argentines, for the *Sanavirón*.

Península Sanavirón *see* **Coughtrey Peninsula**

Sanavirón Island. 68°09' S, 67°05' W. Off Northeast Glacier, SE of Audrey Island (one of the Debenham Islands), in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. ArgAE 1950-51 charted this island as two, because an iceberg had grounded nearby, making it look like two islands. It appears thus on their chart of 1952, as Islotes Sanavirón, named for the *Sanavirón*, and that was the name accepted by the 1970 Argentine gazetteer. However, in 1966, an RN Hydrographic Survey unit working off the *John Biscoe*, determined it to be actually one island, and a similar unit on the *Endurance*, in 1972, confirmed it. UK-APC redefined it on Nov. 3, 1971, as Sanaviron Island, and it appears as such on a British chart of 1973, and in the British gazetteer of 1974. By 1986, everyone was using the accent mark, except, of course, the Chileans, who have yet to come up with their own (non-Argentine) alternative name for this feature.

Sancha Hai'an. 62°10' S, 58°58' W. A beach on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Sanchez Peak. 78°38' S, 85°00' W. Rising to 2800 m, 4 km E of Mount Craddock, on the ridge that extends eastward to Mount Osborne, in the S part of the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN in 2006, for Richard D. Sanchez, of USGS, a senior physical scientist and specialist in remote sensing, image analysis, and the use of GPS and GIS in Antarctic mapping.

Sanctuary Cliffs. 64°27' S, 57°12' W. Rock cliffs rising to about 150 m at the N edge of the ice-cap which covers the central part of Snow Hill Island. Discovered, surveyed, and charted in 1902-03 by SwedAE 1901-04, and named by Nordenskjöld as Mittelnunatak (i.e., "middle nunatak"; for its position along the middle of the N coast of the island). He also refers to it as Mittelnuten (which means the same thing). The name was occasionally seen over the years as Middle Nunatak. Re-surveyed and re-defined by Fids from Base D in Sept. 1952. Given that there were too many features already with the name "Middle" in them, this feature was renamed by UK-APC on Sept. 4, 1957, as Sanctuary Cliffs, for the shelter these cliffs provide from the sou'westerlies here. US-ACAN accepted the new name in 1963.

Sanctuary Glacier. 86°00' S, 150°25' W. Almost completely encircled by the Gothic Mountains, it flows W between Outlook Peak and Organ Pipe Peaks into Scott Glacier, in the Queen Maud Mountains. Mapped by USGS in 86°01' S, 150°50' W, from ground surveys, and USN air photos taken between 1960 and 1964. A USARP-Arizona State University geological field party established a base camp on this glacier in Jan. 1981, and, their leader, Ed Stump, proposed this descriptive name, which was accepted by US-ACAN. It has since been replotted.

Sanctuary Islands. 65°37' S, 64°35' W. A group of small islands just off the NW end of Chavez Island, 0.8 km SW of Link Stack, in the Grandidier Channel, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37, photographed aerially by FDASE in 1956-57, and surveyed from the ground by FIDS sledging parties from Base J in 1957-58. So named by UK-APC on July 7, 1959, because the islands provided sheltering camping sites for those Fids, and also for the several small boat anchorages used here by the RN Hydrographic Survey unit's motor launch in 1957-58. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. None of these islands are individually named, yet.

Sanctuary Pinnacle *see* **The Spire**

Sandanski Point. 62°31' S, 60°42' W. The point on the E coast of Ioannes Paulus II Peninsula, formed by an offshoot of Oryahovo Heights, and projecting 500 m into Hero Bay, 2.4 km N of Agüero Point, and 3 km S of Black Point, on Livingston Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the town of Sandanski, in southwest Bulgaria.

Sandau Nunatak. 71°42' S, 67°12' W. A coastal nunatak rising to about 400 m above sea level, it is the southwesternmost of the Steeple Peaks, in the George VI Sound, on the Rymill Coast, on the W side of Palmer Land. Named by US-ACAN in 1976, for Charles L. Sandau (b. 1948), USN, who wintered-over as cook at Palmer Station in 1973. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Sandbakken *see* **Sandbakken Moraine**

Sandbakken Moraine. 71°34' S, 12°08' E. An area of moraine 3 km W of Gråhorna Peaks, between those peaks and Sandseten Mountain, on the W side of the Westliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. First plotted from the aerial photos taken by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sandbakken (i.e., "the sand slope"). US-ACAN accepted the name Sandbakken Moraine in 1970.

Sandbotnen *see* **Sandbotnen Cirque**

Sandbotnen Cirque. 71°44' S, 12°01' E. Indentation into the W side of Zwiesel Mountain, in the Pieck Range of the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Its floor is covered in moraine. First plotted from the aerial photos taken by GermAE 1938-39. Remapped by Norwegian cartographers from ground surveys conducted by NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sandbotnen (i.e., "the sand cirque"). US-ACAN accepted the name Sandbotnen Cirque in 1970.

Sandefiordsbukten *see* **Exasperation Inlet**

Sandefjord *see* **[1]Sandefjord Bay**

Bukhta Sandefjord *see* **Sandefjord Bay, Sandefjord Cove**

Lednik Bukhta Sandefjord *see* **Sandefjord Ice Bay**

Picos Sandefjord *see* **Sandefjord Peaks**

[1]Sandefjord Bay. 60°37' S, 46°03' W. A narrow body of water, 3 km long, extending in a NE-SW direction, between Moreton Point (the W end of Coronation Island) and Sphinx Rock (which is off Monroe Island), in the South Orkneys. The NE entrance is narrow, and has Spine Island in the middle of it. Discovered and roughly charted by Powell and Palmer in Dec. 1821. Named Sandefjordhavna by Petter Sørlle in 1912-13, for the famous Norwegian town of

Sandefjord, one of the main centers of the Norwegian whaling industry. It was also known as simply Sandefjord. In 1933, the Discovery Investigations team surveyed it, and fixed its E limit as Return Point. It appears as such on their 1934 chart. It appears as Sandefjords Bay on a 1942 USAAF chart. It appears as Bahía Sandefjord on a 1945 Argentine chart, and that was the name accepted by the 1970 Argentine gazetteer. On Feb. 19, 1945, Base C (an Operation Tabarin station) was built on the E side of the bay. As we now define it, it was accepted by UK-APC on Sept. 8, 1953, and appears as such in the 1955 British gazetteer. US-ACAN followed suit in 1956. It was surveyed by Fids from Signy Island Station between 1956 and 1958.

[2]**Sandefjord Bay** *see* **Sandefjord Ice Bay, Sandefjord Cove**

Sandefjord Bay Station *see* **Base P**

Sandefjord Bukhta *see* **Sandefjord Ice Bay**

Sandefjord Cove. 68°47' S, 90°42' W. Also called Sandefjord Bay. An open bay between Cape Ingrid (to the N) and the terminus of Tofte Glacier, in the middle part of the W side of Peter I Island, on the coast the Norwegians call Lazarevkysten. Named by the Nils Larsen, on the *Norvegia*, here in Feb. 1929, for the town of Sandefjord (*see* [1]**Sandefjord Bay**). US-ACAN accepted the name in 1947. The Chileans call it Bahía Sandefjord, and the Russians call it Bukhta Sandefjord.

Sandefjord Ice Bay. 69°40' S, 74°25' E. A bay, about 40 km wide, forming the head of Prydz Bay. It is bounded on the E by the Publications Ice Shelf, on the W by the Amery Ice Shelf, and on the S by the mainland. Discovered in Feb. 1935 by Klarius Mikkelsen in the *Thorshavn*, and he named it Sandefjord Bukta, for Sandefjord, in Norway, the home town of Lars Christensen, owner of Mikkelsen's ship. The British and Americans accepted the translated name Sandefjord Bay. The feature was re-defined slightly in later years, partly because that way it could avoid using the name Sandefjord Bay, which was already taken by a feature in the South Orkneys, and also because it was an actual ice bay. The bay has now disappeared, engulfed by the ice of the Amery Ice Shelf.

Sandefjord Peak *see* **Sandefjord Peaks**

Sandefjord Peaks. 60°37' S, 45°59' W. Three conical peaks, the highest 635 m, running in a NW-SE direction, and which mark the SW end of the Pomona Plateau, and rising between that plateau and Fulmar Bay, at the W end of Coronation Island, in the South Orkneys. The most southeasterly was named Sandefjord Peak by personnel on the *Discovery II* in 1933, in association with Sandefjord Bay to the NW. Fids from Signy Island Station surveyed them in 1950, and UK-APC extended the name, on March 31, 1955, to cover all the peaks. US-ACAN followed suit in 1956. The Argentines call them Picos Sandefjord (which means the same thing).

Sandefjordbukhta *see* **Sandefjord Cove**

Sandefjordhavna *see* [1]**Sandefjord Bay**

Sandefjords Bay *see* [1]**Sandefjord Bay**

Sandegga *see* **Sandegga Ridge**

Sandegga Ridge. 71°54' S, 9°43' E. Extends 8 km S from Sandhø Heights, in the Conrad Mountains, in the Orvin Mountains, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sandegga (i.e., "the sand edge"). US-ACAN accepted the name Sandegga Ridge in 1970.

Sandeggtind *see* **Sandeggtind Peak**

Sandeggtind Peak. 71°52' S, 9°45' E. Rising to 3055 m, 1.5 km S of Sandhø Heights, on Sandegga Ridge, in the Conrad Mountains, in the Orvin Mountains, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted by NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sandeggtind (i.e., "sand edge peak"), in association with Sandegga Ridge. US-ACAN accepted the name Sandeggtind Peak in 1970. The Russians call it Gora Kruzenshterna.

Sandeitet *see* **Sandeitet Moraine**

Sandeitet Moraine. 71°39' S, 12°15' E. A pass, covered by moraine, between Gråkammen Ridge and a small rock spur just to its NW, in the Westliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted by NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sandeitet (i.e., "the sand isthmus"). US-ACAN accepted the name Sandeitet Moraine in 1970.

Sandeken. 71°59' S, 9°30' E. A glacier between the Gagarin Mountains and the Conrad Mountains, in the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. The name comes from the Norwegians "sand," which means "sand." The British, Americans, and New Zealanders call it Sandeken Glacier, and that will be the name accepted by US-ACAN, UK-APC, and ANCA.

Sandeken Glacier *see* **Sandeken**

Sandell, Charles Albert. b. 1886, Thornton Heath, Surrey, son of John J. Sandell (general manager of a photographic chemical manufacturing company) and his wife Ellen Oakley. Mechanic and radio operator with the Commonwealth Telegraph Service in Sydney. He was radio operator at Macquarie Island for AAE 1911-14, and thus never got to the Antarctic. However, he was the first ever to use radio in what could loosely be called Antarctic exploration. He died at Esperance, WA, on May 9, 1980.

Mount Sandell *see* **Mount Wood**

Sandercock Island. 69°23' S, 76°07' E. Just N of Stornes Peninsula, in the Larsemann Hills. Plotted by Norwegian cartographers in 1946, from air photos taken by LCE 1935-36, and named by them as Storneskalven (i.e., "Stornes' calf"). ANCA renamed it as Sandercock Island, after Jim Sandercock (*see* **Sandercock Nunataks**), who made the first flight from Davis Station to the end of Prydz Bay, in 1957. The Chinese call it Aomen Dao.

Sandercock Nunataks. 68°32' S, 52°04' E. An isolated group of 4 nunataks (they are not individually named), rising to about 2230 m above sea level and to about 244 m above the surrounding plateau ice, about 72 km ESE of the Nye Mountains, and about 120 km SE of Simpson Peak, in Enderby Land. Discovered and visited in Dec. 1959 by an ANARE airborne survey party. Named by ANCA for Squadron leader James C. "Jim" Sandercock, RAAF, officer commanding the Antarctic Flight at Mawson Station during the winter of 1959. US-ACAN accepted the name in 1962. *See also* **Sandercock Island**.

Sanderpass. 71°55' S, 163°44' E. A pass, almost due N of Galatos Peak, in the NW extremity of the Salamander Range, in the Freyberg Mountains of Victoria Land. Named by the Germans.

Mount Sanders *see* **Mount Saunders**

Sanders Nunatak. 77°34' S, 163°02' E. A prominent nunatak, rising to 850 m above the ice of the upper Commonwealth Glacier, to the S of Noxon Cliff, in the Asgard Range of Victoria Land. Named by US-ACAN in 1997, for Ryan Sanders, a member of the National Ozone Expedition to the McMurdo area in 1986 and 1987, and returning as principal investigator in 1991, 1992, 1994, and 1996.

Mount Sanderson. 69°17' S, 70°47' W. Rising to about 2300 m, in the S portion of the Rouen Mountains, in the N part of Alexander Island. Surveyed by BAS personnel from Fossil Bluff Station, in 1975-76. Named by UK-APC on June 11, 1980, for Timothy John Oliver Sanderson (b. 1954), BAS glaciologist, who worked on the George VI Ice Shelf for summer seasons between 1975 and 1978. US-ACAN accepted the name in 1995.

Sanderson, Thomas George. b. Dec. 1894, at 11 Wolseley Road, Wood Green, London, son of laborer Edward Sanderson and his wife Annie Keech. He joined the merchant navy, as a fireman and trimmer, and, after many ships and many ports, he found himself in Wellington, where he signed on as a fireman on the *Jacob Ruppert*, for the 2nd half of ByrdAE 1933-35.

Sandford, Brian Philip. b. July 13, 1934, Raetihi, NZ, son of carpenter and builder Herbert Douglas Sandford (known as Douglas) and his wife Bertha Elizabeth Kelly. Brother of Neil Sandford. Geophysicist who was senior scientist at Scott Base for the winter of 1959. He spent 2 years in the USA, then returned to NZ. In Jan. 1963 he supervised the installation of the aurora-observing instruments at Scott Base, and also checked various American auroral research equipment. In 1968 he returned to live permanently in Massachusetts.

Sandford, Herbert Neil. Known as Neil Sandford. b. Dec. 31, 1930, Raetihi, NZ, brother of Brian Sandford. Worked as a radio mechanic for the NZ Post and Telegraph Department. He was in the Cook Islands in 1949, supervising the

reconstruction of the radio station there, and was in Wellington when picked to go on the NZ expedition to Antarctica during IGY (1957-58), wintering-over at Scott Base in 1957. Indeed he was one of the men who built the station. He lived in Western Australia, 1992-96, and since then has been in Port Macquarie, NSW. He returned to Scott Base in Jan. 2002, for a 2-day visit.

Sandford, Horace William. b. 1903, Dartmouth, Devon. He was a fireman on the *Discovery*, from Aug. 1925 to Oct. 1927, and on the *William Scoresby*, from April 1929 to April 1930. He was on the *Discovery II*, as a fireman, from April 1930 to 1933, and as a greaser, from 1933 to June 1935. A very handy man with tools. In 1938, in Totnes, Devon, he married Mary H. Oldrieve. He was a member of the Antarctic Club in 1947, and died in Totnes, in 1962.

Sandford, Joseph Perry *see under* **Sanford**

Sandford, Thomas *see* **USEE 1838-42**

Sandford Cliffs. 83°54' S, 159°17' E. Prominent and distinctive clifs, mainly ice-free, rising from Marsh Glacier, and forming the W extremity of Peletier Plateau, in the S portion of the Queen Elizabeth Range, immediately N of Law Glacier. Discovered on Dec. 26, 1957, by the NZ Southern Survey Party of BCTAE in 1957-58, and named by them for Neil Sandford. NZ-APC accepted the name, and US-ACAN followed suit in 1966. Originally plotted in 83°52' S, 159°20' E, this feature has since been replotted. The Australians list its latitude as 159°30' E.

Sandford Glacier. 66°40' S, 129°50' E. A channel glacier flowing westward into the E side of Porpoise Bay, on the Banzare Coast of East Antarctica, about 40 km SSW of Cape Morse. Delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Joseph P. Sanford (q.v. and sic). ANCA accepted the name. Originally plotted in 66°38' S, 129°50' E, it has since been replotted.

Sandhausen. 71°44' S, 9°35' E. A moraine heap in the N part of the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians (the word "sand" means "sand").

Sandhø *see* **Sandhø Heights**

Sandhø Heights. 71°50' S, 9°47' E. Bare rock heights forming the summit area in the middle of the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted by NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sandhø (i.e., "sand heights"). US-ACAN accepted the name Sandhø Heights in 1970.

Sandhøhallet *see* **Sandhøhallet Glacier**

Sandhøhallet Glacier. 71°52' S, 9°50' E. A small glacier flowing SE from the S slopes of Sandhø Heights, in the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sandhøhallet (i.e., "the sand heights slope"). US-ACAN accepted the name Sandhøhallet Glacier in 1970.

Sandhøkalvane *see* **Sandhøkalvane Nunataks**

Sandhøkalvane Nunataks. 71°46' S, 9°55' E. A group of 5 small nunataks, in the glacier the Norwegians call Glopeken, 6 km NE of Sandhø Heights, between the Conrad Mountains and Mount Dallmann, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sandhøkalvane (i.e., "the sand heights calves"), in association with Sandhø Heights. US-ACAN accepted the name Sandhøkalvane Nunataks in 1970.

Sandilands Nunatak. 70°32' S, 67°27' E. A small, solitary nunatak, rising to about 900 m above sea level, 5 km N of Mount Seaton, in the middle of, and near the N end of, Nemesis Glacier, in the Prince Charles Mountains. Discovered in Dec. 1956 by an ANARE sledging party led by Peter Crohn. Named by ANCA for Alexander Hardie "Sandy" (or "Alex") Sandilands (b. April 7, 1928), radio operator at Mawson Station in 1957. US-ACAN accepted the name in 1965.

Sandneset *see* **Sandneset Point**

Sandneset Point. 71°39' S, 9°33' E. The N point of Furdesanden Moraine, in the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during that same long expedition, and named by them as Sandneset (i.e., "the sand point"). US-ACAN accepted the name Sandneset Point in 1970.

Sandneshatten. 71°42' S, 9°40' E. A mountain in the N part of the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians in association with nearby Sandneset Point.

Sandneskalven *see* **Sandneskalven Nunatak**

Sandneskalven Nunatak. 71°40' S, 9°53' E. An isolated nunatak, 10 km E of Sandneset Point, in the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during that same long expedition, and named by them as Sandneskalven (i.e., "the sand point calf"), in association with Sandneset Point. US-ACAN accepted the name Sandneskalven Nunatak in 1970.

Sandnesstaven *see* **Sandnessttaven Peak**

Sandnesstaven Peak. 71°41' S, 9°39' E. Rising to 2030 m, at the N end of the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sandnesstaven (i.e., "the sand point staff"), in association with nearby Sandneset Point. US-ACAN accepted the name Sandnesstaven Peak in 1970. The Russians call it Pik Ventcelja.

Mount Sandow. 67°22' S, 100°24' E. A nunatak, rising to about 1380 m above sea level, and overlooking Denman Glacier, about 18.5 km SW of Mount Amundsen, in Queen Mary Land. Discovered by the Western Base Party of AAE 1911-14, and named by Mawson for the Great Sandow (1867-1925) of London, a strong supporter of the expedition. Eugene Sandow had trained not only Mawson's boys to a physical peak, but also those on Scott's and Shackleton's expeditions. US-ACAN accepted the name in 1947.

Islote Sandra. 64°55' S, 62°58' W. A little island, 200 m W of Stony Point, in the extreme SE of Argentino Channel, which gives access from the S to Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named by ChilAE 1950-51, for a relative of one of the members of the expedition, it appears as such on their 1951 chart. It appears in the 1974 Chilean gazetteer. This is not the same feature as Stony Point.

Sandra Automatic Weather Station. 74°30' S, 160°30' E. American AWS at an elevation of 1525 m. It operated from Jan. 19, 1988 until Feb. 23, 1988, when a new one was put up, and ran until Nov. 1995. Named for the wife of Dave Bresnahan, of the Office of Polar Programs.

Sandseten *see* **Sandseten Mountain**

Sandseten Mountain. 71°33' S, 12°09' E. A flattish mountain, 1.5 km S of Krakken Mountain, and just SW of Gneysovaya Peak, in the Westliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially during GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during that same long expedition, and named by them as Sandseten (i.e., "the sand seat"). US-ACAN accepted the name Sandseten Mountain in 1970.

Nedre Sandvatn *see under* **N**

Øvre Sandvatn *see under* **O**

Mount Sandved. 82°41' S, 161°06' E. Rising to 2440 m, 3 km N of Mount Dougherty, in the N part of the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Kurt George Sandved (1929-1993), information officer at the National Science Foundation.

Sandwich Bluff. 63°50' S, 57°30' W. A flat-topped mountain, rising to 610 m (the British say 645 m), and broken sharply at its W side by a steep, dark bluff, slightly west of the center of Vega Island, in the Prince Gustav Channel, in the James Ross Island group. Discovered and

roughly mapped by SwedAE 1901-04. Surveyed and charted by Fids from Base D in Nov. 1945, and so named by them because a horizontal snow-holding rock ledge breaks the W cliff, giving it the appearance of a sandwich when seen from the north. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer, with the coordinates 63°50' S, 57°33' W.

Sandy Beach *see* **Blacksand Beach**

Sandy Glacier. 77°29' S, 161°57' E. A very small glacier, 600 m long and 75 m wide, about 1 km E of Mount Orestes, in the Olympus Range, near Wright Valley, in Victoria Land. Named by Wakefield Dort (*see* **Mount Dort**) in 1965-66. He analyzed it as being interbedded of ice and sand layers. US-ACAN accepted the name in 1966.

Sanengenrusta. 74°42' S, 11°21' W. A mountain ridge on the NW side of Sivorgfjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Alf Sanengen (1913-1991), Norwegian Resistance worker during World War II.

Sanford, Joseph Perry. Name also seen as Sandford. b. Sept. 13, 1816, Winchester, Va., son of Senator Nathan Sanford. He joined the U.S. Navy, and became a passed midshipman on Feb. 11, 1832, at the extraordinarily young age of 15, and with that rank took part in USEE 1838-42. On June 23, 1838, he was promoted to advanced passed midshipman. He served on the *Vincennes* during the cruise of 1840, and at other times served on other ships of the fleet. He joined the *Porpoise* at Tahiti, the *Flying Fish* at San Francisco, and the *Porpoise* again at Singapore. He kept a journal of the expedition. On Nov. 2, 1842, he was promoted to lieutenant, and served on the *Cumberland* in the Mediterranean, 1842-46. On Jan. 7, 1846 he married Lydia Ransom, and they would have three children over the years. He served on the *Allegheny* during the first stages of the Mexican War, 1946-47, then was posted to the National Observatory in Washington, DC, and was then back in the Mediterranean, 1848-53. He resigned from the Navy on Oct. 8, 1853, and went into the stove and furnace business in Albany, NY. On May 13, 1861, he was commissioned an acting lieutenant in the U.S. Navy, for the Civil War, and on June 6, 1861, was promoted to commander, and ordered to the Mississippi. On Sept. 27, 1866, he was promoted to captain, and in 1868-69 was commandant of the Norfolk Navy Yard. He resigned on March 1, 1869, moved to Springfield, Mass., and died at the home of his daughter in Stamford, Conn., on Dec. 5, 1901.

Sanford Valley. 77°27' S, 162°07' E. Trends N-S between Nottage Ridge and McClelland Ridge, in the E part of the Olympus Range, in Victoria Land. Named by US-ACAN in 1997, for topographic engineer Leroy L. Sanford, a member of the 1971-72 USGS field party that established a network of horizontal and vertical control for the compilation of eight 1:50,000 scale maps of the area of the McMurdo Dry Valleys. NZ-APC accepted the name.
